**APPLICATION FOR LEASE COMMINGLING, CENTRAL TANK BATTERY (CTB)****Commingling procedure for Inland leases:**

Mewbourne Oil Company is requesting approval for lease commingling production from wells located on State leases below in a Central Tank Battery "CTB":

Well Name	Location	API #	Pool #	MCFPD	Dry BTU @ 14.73 PSI
<b>Inland 26/23 B2OJ State Com #001H</b>	191' FSL & 1247' FEL, Sec 26, T21S, R34E	30-025-46931	[28435] Grama Ridge; Bone Spring, NE	~3000	~1250
<b>Inland 26/23 B2PI State Com #001H</b>	205' FSL & 1220' FEL, Sec 26, T21S, R34E	30-025-45283	[28435] Grama Ridge; Bone Spring, NE	~3000	~1250

**Oil, Water, & Gas metering**

The central tank battery is located on the Inland 26/23 B2OJ State Com #001H well pad located in the SESE of Section 26, T21S, R34E, Lea County, New Mexico. The production for all wells will come to its own separator. From the separator production will be allocated as follows:

**Oil Metering:**

Oil volumes from each well producing to the battery will be determined by using an allocation meter at the facility for each well. Oil from each separator will be metered and then sent to a heater treater (HT). Oil from the HT will then flow to a vapor recovery tower (VRT) and then to the 750 BBL oil tanks (OT). Oil production will be allocated on a daily basis based from the oil allocation meter downstream of the separator. This meter will be proven based on API, NMOCD and BLM specifications by tank testing. This process is performed by isolating a well to specific oil tanks and calibrating the meter based on the production numbers. The oil production from these wells listed above will be measured, commingled and then sold via truck haul or LACT.

**Water Metering:**

Water volumes from each well producing to the battery will be determined by using an allocation meter at the facility for each well. Water from each separator will be metered and sent to the 1000 BBL gun barrel (GB). From the GB the water will be sent to the 750 BBL water tanks (WT). Water production will be allocated on a daily basis based from the water allocation meter downstream of the separator. The water production from these wells listed above will be measured, commingled and disposed of via truck haul or pipelined to disposal.

**Gas Metering:**

Gas volumes from each well producing to these batteries will be determined by using an allocation gas meter after the separator at the facility for each well. The gas production from the wells listed above will be measured, commingled, and then sold off lease using the 24 hr. well test method. A 3 Bear Energy common gas sales meter #213008001 will be located on edge of the battery pad. This meter is calibrated on a regular basis per API, NMOCD and BLM specifications.

**Economic Justification**

Well Name	BOPD EST	Oil Gravity @ 60°	Value/bbl	MCFPD	Dry BTU @ 14.73 PSI	Value/MCF

<b>CTB Combined</b>	3000	48	\$60	~6000	1250	\$2.50

**Process and Flow Descriptions:**

The flow of production is shown in detail on the enclosed facility diagram and map which shows lease boundaries, wells, battery, & MM location. The commingling of production is in the interest of conservation and waste and will result in the most effective economic means of producing the reserves in place from the affected wells and will not result in reduced royalty or improper measurement of production.

Working, royalty, & overriding interest owners have been notified of the proposal via certified mail (see attached).

Ladies and Gentlemen:

Mewbourne Oil Company ("Mewbourne") has filed an application with the New Mexico Oil Conservation Division ("Division") seeking authorization for a Central Tank Battery, Lease Commingle, and have Off Lease Measurement, Sales, and Storage for the above captioned wells.

The Inland 26/23 B2OJ State Com #1H and the Inland 26/23 B2PI State Com #1H are on State Leases B-11610 (120 acres), V-5887 (160 acres), B-158 (160 acres), and B-1651 (40 acres) which comprise portions of Section 26 and 23, T21S, R34E, Lea County, New Mexico.
