XTO Energy, Inc (“XTO” or “Applicant”) (OGRID No. 5380), through its undersigned attorneys, hereby files this application with the Oil Conservation Division pursuant to the provisions of NMSA 1978, § 70-2-17, for an order pooling all record title owners in the Wolfcamp formation underlying a standard 1,920-acre, more or less, horizontal well spacing unit comprised of All of Sections 22, 27, and 34, Township 25 South, Range 29 East, NMPM, Eddy County, New Mexico. In support of its application, XTO states:

1. Applicant is a working interest owner in the proposed horizontal spacing unit and has the right to drill thereon.

The completed interval of the **Corral 22-34 Fed Com 203H** well is expected to remain within 330 feet of the adjoining quarter section (or equivalent) tracts to allow inclusion of these proximity tracts within the proposed horizontal spacing unit under 19.15.16.15.B(3)(b) NMAC. All of the wells are anticipated to be at a non-standard location; therefore, XTO has filed for approval administratively.

5. **XTO Exhibit C-2** contains a Form C-102 for each of the wells. This form demonstrates that each of the wells is in the Purple Sage; Wolfcamp (Gas) [98220].

6. **XTO Exhibit C-3** identifies the tracts of land comprising the spacing unit and the lateral trajectory of the wells. The acreage is comprised of federal lands.

7. XTO has reached a voluntary agreement with all working interest owners in this unit but seeks a pooling order for record title owners, which are non-cost bearing interest owners, who have yet to execute the necessary federal communitization agreements. The parties that XTO seeks to pool are highlighted in yellow in XTO Exhibit C-3.

8. XTO has reviewed public records, conducted online computer searches and, where applicable, contacted known relatives to locate contact information for all interest owners that it seeks to pool. XTO has been able to locate addresses for all the owners it seeks to pool.

9. **XTO Exhibit C-4** contains a chronology of the contacts with the record title holders that XTO seeks to pool and XTO's attempts to obtain signatory approval on the federal communization agreement from them. In my opinion, XTO has undertaken good faith, diligent efforts to reach agreement with each interest owner.

10. Because the interest XTO seeks to pool is a non-cost bearing interest, XTO is not requesting to assess a proportionate share of costs, risk charges, or overhead and administrative costs for drilling and producing the well.

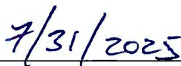

11. XTO has provided the law firm of Holland & Hart LLP with the names and addresses of the record title owners XTO seeks to pool and instructed that they be notified of this hearing.

12. **XTO Exhibits C-1 through C-4** were either prepared by me or compiled under my direction and supervision.

ACREAGE DEDICATION PLATS

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

ACREAGE DEDICATION PLATS

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

ACREAGE DEDICATION PLATS

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

**APPLICATION OF XTO ENERGY, INC  
FOR COMPULSORY POOLING,  
EDDY COUNTY, NEW MEXICO.**

**CASE NO. 25459**

**SELF-AFFIRMED STATEMENT OF MATTHEW KEARNEY**

1. My name is Matthew Kearney, and I am employed by XTO Energy Inc. ("XTO") as a geologist.
2. I have not previously testified before the New Mexico Oil Conservation Division ("Division") as an expert witness in geology matters. I have included a copy of my resume as **XTO Exhibit D-1** for the Division to review and respectfully request that my credentials be accepted as a matter of record, and I be tendered as an expert in geology matters.
3. I am familiar with the application filed by XTO in this case, and I have conducted a geologic study of the lands in the subject area.
4. **XTO Exhibit D-2** is a regional map showing the location of the subject acreage outlined in red.
5. **XTO Exhibit D-3** is a subsea structure map that I prepared on top of the Wolfcamp formation, with contour intervals of 100 feet. XTO's spacing unit is outlined in red, and the general location and trajectory of the drilled wells are identified with a thin red line and circle at the bottomhole location. This exhibit demonstrates that the targeted intervals dip gently to the east. The Wolfcamp structure appears consistent across the wellbore path. I do not observe any faulting, pinchouts, or other geologic impediments in the spacing unit.

Case no. 25459

6. XTO Exhibit D-3 also depicts a line of cross section through the horizontal spacing unit from A to A'. I chose the logs from these wells to create the cross section because they penetrate the targeted interval and are of good quality. In my opinion, these well logs are representative of the geology in the subject area.

7. **XTO Exhibit D-4** is a structural cross section that I prepared using the logs from the representative wells shown on XTO Exhibit D-3. Each well on the cross-section contains gamma ray, resistivity, and porosity logs. The target intervals for the wells are identified on the exhibit with red arrows. The cross-section demonstrates that the targeted interval is continuous across the proposed spacing unit.

8. My geologic study indicates the Wolfcamp formation underlying the subject area is suitable for development by horizontal wells and the acreage comprising the horizontal spacing unit will be productive and contribute proportionately to the production from the wells.

9. In my opinion, the standup orientation of the wells is consistent with existing development in this area and appropriate due to the geologic stress.

10. In my opinion, approval of this application is in the best interest of conservation, the prevention of waste, and protection of correlative rights.

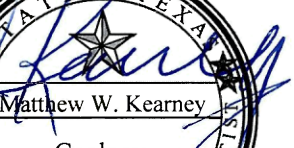

11. **XTO Exhibits D-1 through D-4** were either prepared by me or compiled under my direction and supervision.

12. I affirm under penalty of perjury under the laws of the State of New Mexico that the foregoing statements are true and correct. I understand that this self-affirmed statement will be used as written testimony in this case. This statement is made on the date next to my signature below.

**Consolidated Resources of America: Cincinnati, OH** (1 yr. 1979 to 1980) – Entry-Level Petroleum Geologist (part-time while attending UC), Appalachian Basin, Lower Silurian Clinton Sandstone, worked a “tight gas sands” drilling program in northeastern OH; assisting a senior geologist by gathering well information such as production data, printing well logs from a microfiche machine and hand tabulating formation tops to construct structure and isopach maps. Observed drilling operations in the field. *In summer 1980, attended geology field camp in Switzerland, completed the B.S. degree in geology, and received a full tuition paid scholarship from SMU to pursue a M.S. degree focused on petroleum geology.*

**Maynard Oil Company: Dallas, TX** (1.5 yr. 1980 to 1981) – Entry-Level Petroleum Geologist (part-time while attending SMU), Appalachian Basin, Silurian rocks subsurface characterization across New York (NY), state prospecting focused on the Grimsby and Whirlpool sandstones in Chautauqua County western NY. Duties included gathering well data on-site from three NY oil and gas agency field offices. Reviewed paper well files and copied regulatory documents, drilling reports, and paper well logs, to make working well files. Then constructed base maps, cross-sections, structure and isopach maps. *Work experience and college education led to a job as a petroleum geologist with a major oil company*

**Sun Exploration and Production Company (SUN E&P) / ORYX Energy: Dallas, TX** (10 yrs. 1982 to 1992) – part-time, Petroleum Geologist until completion of M.S. degree June 1983, then promoted to an Associate Geologist, Senior Geologist, and Staff Geologist. ## Matthew W. Kearney, P.G., C.P.G.

### Geoscientist

- **Northern Appalachian Basin, Lower Silurian Sandstones** (1982 to 1984) – Associate Geologist worked Lower Silurian rocks across New York and Pennsylvania and generated prospects in central New York State resulting in acquisition of approximately 50,000 acres and 450 miles of 2D seismic. No wells were drilled during this time.
- **Northern Appalachian Basin, Upper Devonian Sandstones** (1983 to 1985) – Associate Geologist, worked subsurface characterization of Upper Devonian sandstones in Wetzel County, West Virginia. Industry partner Mobay Chemical Company was looking for a natural gas resource on-site to fuel its chemical production process. SUN E&P provided geology and drilling expertise to earn an interest in natural gas production from wells drilled. Prospects were generated using a structure map, isopach map, and hydrocarbon show map. **Seven wells were drilled; four of the seven wells were completed as natural gas wells.**
- **Eastern Overthrust Appalachian Basin, Lower Devonian Oriskany Sandstone** (1982 to 1986) – Associate Geologist worked Tioga County PA. and Grant County, W. Va. assisted a senior geologist with Oriskany Sandstone geology including Landsat imagery to identify lineaments interpreted to have fractured reservoir rock. Observed 2D seismic data showing thrust faulted structures also having potential fractured rock and hydrocarbon traps. The fractures were needed to enhance the low porosity and permeability in the Oriskany Sandstone. **Wells were drilled with industry partners including Union Drilling and Columbia Gas resulting in the discovery of the Jordan Run Field (Oriskany Sandstone), West Virginia.**
- **Fort Worth Basin / Bend Arch, Pennsylvanian Sandstones** (1986 to 1988) – Senior Geologist conducted subsurface characterization and prospect generation of the Pennsylvanian Strawn Sandstone, Bend Conglomerate, and Mississippian Duffer Limestone in Palo Pinto, Eastland, Erath, and Stephens counties, Texas. Also, well site supervision of wireline logging, and evaluation with recommendation to complete or plug the well. **Successfully generated numerous natural gas prospects, sold to industry partners, and executed the drilling of 29 wells resulting in 19 commercial wells.**
- **Mississippi Salt Basin, Smackover Carbonate and Norphlet Sandstone** (1988 to 1990) – Staff Geologist conducted subsurface characterization of these formations in the Nancy Field, Clark and Jasper counties Mississippi. Utilized 2D seismic data and well control to map facies of the eolian Norphlet Sandstone and noticed that higher porosity in Smackover Carbonate occurred over thicker Norphlet Sandstone deposits or paleo-topographic highs. **Provided geological oversight for the drilling of two successful Smackover development wells in the Nancy Field.**
- **East Texas Salt Basin, Paluxy, Rodessa, Travis Peak and Cotton Valley formations,** (1990 to 1992) – Staff Geologist prospected for hydrocarbons traps adjacent to salt diapirs using 2D seismic data to image salt diapirs across all 3 interior salt basins. The project included regional mapping to understand the deposition related to salt movement. Timing and formation of various salt structures such as salt ridges, salt diapirs, and turtle structures influenced deposition of carbonates and clastics as well as migration and trapping of the hydrocarbons. **Generated a turtle structure prospect, drilled the prospect, and the well discovered the Noonday Field. Well produced natural gas from the Rodessa and Travis Peak formations.**

**Texas Commission on Environmental Quality (TCEQ): Dallas, TX** (3.5 yrs. 1992 to 1995) – Hydrogeologist / Environmental Specialist - specialized in groundwater investigations, included subsurface characterization of near surface rocks to evaluate proper placement of groundwater monitoring wells, screening and installation. Inspected injection disposal wells to ensure compliance.

Generated the company's first 2BSS horizontal well prospect, and successfully drilled the Penny Pincher #1H, this 5K lateral well and has produced 153,000 BO. The success initiated a 10 well drilling program in northernmost BEU. The wells were 5 to 7.5 K laterals that produced oil ranging from over approximately 250,000 to 550,000 BO per well. **Generated and drilled the first BEU 2BSS horizontal wells, two wells have cumulatively produced over 1/2 million barrels of oil each.**
- **Delaware Basin, Sold the Federal Units to ExxonMobil (XTO)** (2010 - 2017) – Part of a team that prepared and presented a sales package including the subsurface characterization and unconventional prospect potential of **Bone Spring sandstones and Wolfcamp formations**.
