STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

APPLICATION OF MR NM OPERATING LLC FOR COMPULSORY POOLING, LEA COUNTY, NEW MEXICO.

CASE NO. 25642

NOTICE OF INTERVENTION AND OBJECTION TO PROCEEDING BY AFFIDAVITS

Mack Energy Corp ("Mack") hereby intervenes in the above-referenced case and provides notice that it objects to this case proceeding by affidavit or self-affirmed statement. In support of this notice Mack states:

- 1. This case seeks to pool the Yeso formation underlying the SE/4 of Section 31 and the SW/4 of Section 32, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico and is currently scheduled for a hearing on October 9, 2025.
- 2. Mack has approved drilling permits and development plans that MR NM's proposed development will partially overlap. *See* Exhibit A. Further, Mack recently sent well proposals and AFEs to interest owners and plans to file for compulsory pooling, if necessary, which would compete with MR NM's filed application. *See* Exhibit B.
- 3. Mack received overlapping spacing unit notice from MR NM because it has approved drilling permits¹; however, Mack did not receive notice of MR NM's compulsory pooling application because it does not own an interest in the SE/4 of Section 31, which is the subject partially overlapping acreage. Mack is currently engaged in good faith negotiations with the interest owner in the SE/4 of Section 31.

¹ Mack objected to MR NM's overlapping spacing unit on October 1, 2025. See Exhibit C.

4. Since Mack has approved drilling permits, it is engaged in on-going development plans, and has working interests that will be negatively affected by MR NM's proposed development plans and intends to file a competing pooling application, if necessary, Mack's participation in these cases will contribute substantially to the prevention of waste and the protections of correlative rights. *See* NMRA 19.15.4.11.

Respectfully submitted,

JUNE 26, 2025

SURVEY NO. 10406A

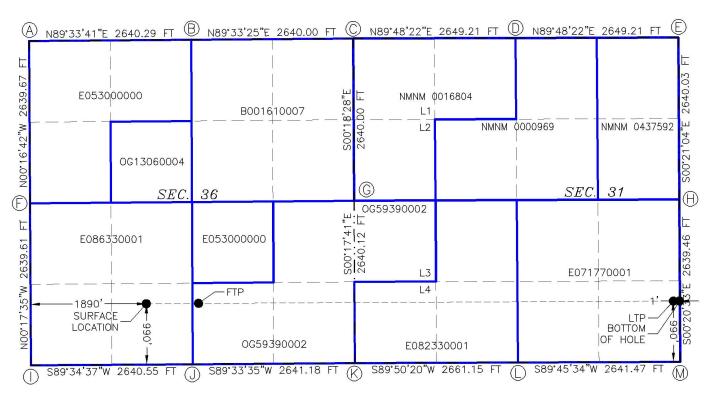

Note: No allowable will be assigned to this completion until all interests have been consolidated or a non-standard unit has been approved by the division.

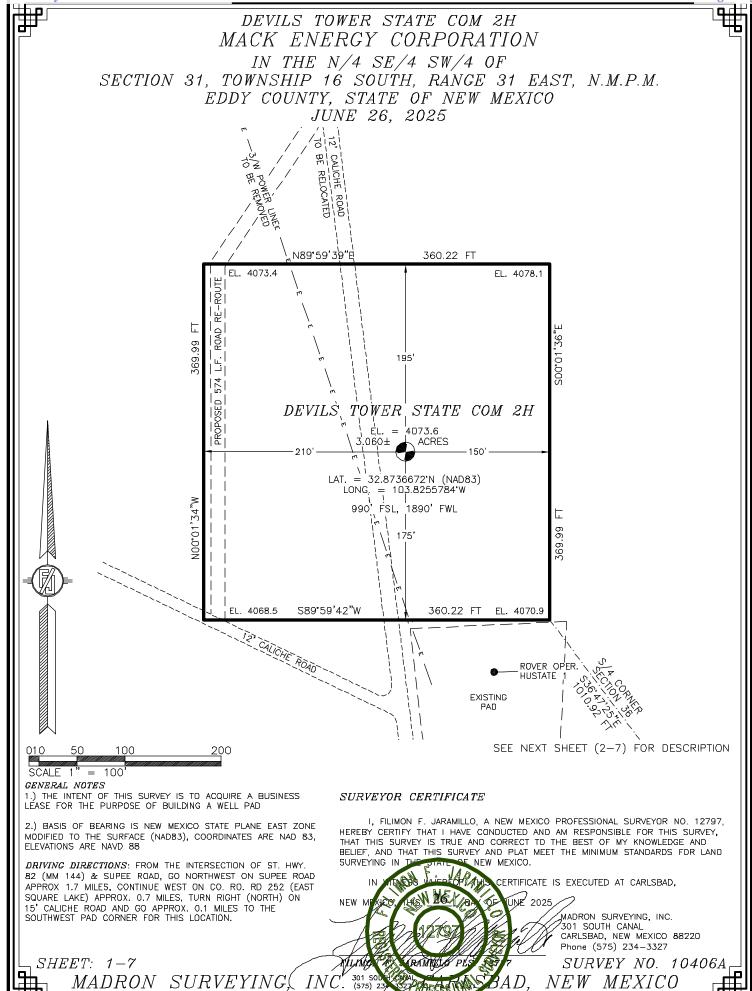

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

VI. Separation Equipmo	e nt: ⊠ Attac	h a complete descri	ption of how Op	perator will size sep	paration	equipmer	it to op	timize gas capture.
VII. Operational Practi Subsection A through F of			ription of the ac	ctions Operator wi	ll take t	o comply	with t	he requirements of
VIII. Best Management during active and planned			te description o	f Operator's best 1	nanage	ment prac	tices to	minimize venting

Section 2 – Enhanced Plan EFFECTIVE APRIL 1, 2022

Beginning April 1, 2022, an operator that is not in compliance with its statewide natural gas capture requirement for the applicable reporting area must complete this section.

Departor certifies that it is not required to complete this section because Operator is in compliance with its statewide natural gas capture requirement for the applicable reporting area.

IX. Anticipated Natural Gas Production:

Well	API	Anticipated Average Natural Gas Rate MCF/D	Anticipated Volume of Natural Gas for the First Year MCF

X. Natural Gas Gathering System (NGGS):

Operator	System	ULSTR of Tie-in	Anticipated Gathering	Available Maximum Daily Capacity
			Start Date	of System Segment Tie-in

XI. Map. Attach an accurate and legible map depicting the location of the well(s), the anticipated pipeline route(s) connecting the
production operations to the existing or planned interconnect of the natural gas gathering system(s), and the maximum daily capacity of
the segment or portion of the natural gas gathering system(s) to which the well(s) will be connected.

XII. Line Capacity. The natural	gas gathering system 🗆 w	vill □ will not have	capacity to gather	100% of the anticipated	natural gas
production volume from the well p	prior to the date of first pro	oduction.			

XIII. Line Pressure. Operator \square does \square does not anticipate that its existing well(s) co	onnected to the same segment, or portion, of the
natural gas gathering system(s) described above will continue to meet anticipated increase	

_								
\Box	A 44 1 4	\sim 4	, 1 ,		1 4	•	4 41 '	sed line pressure
	A Hach I	Inergior	c nian to	manage i	araduction	in rechance	to the increa	cea line nrecciire

XIV. Confidentiality: \Box Operator asserts confidentiality pursuant to Section 71-2-8 NMSA 1978 for the information	on provided in
Section 2 as provided in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and attaches a full description of the speci-	fic information
for which confidentiality is asserted and the basis for such assertion.	

(i)

Section 3 - Certifications Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal: 🗷 Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system: or ☐ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. If Operator checks this box, Operator will select one of the following: Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or Venting and Flaring Plan.

Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including: power generation on lease; (a) power generation for grid; (b) (c) compression on lease; (d) liquids removal on lease; reinjection for underground storage; (e) **(f)** reinjection for temporary storage; **(g)** reinjection for enhanced oil recovery; fuel cell production; and (h)

Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

other alternative beneficial uses approved by the division.

- (a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or
- (b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.
- 2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

VI. Separation Equipment:

Mack Energy Corporation(MEC) production facilities include separation equipment designed to efficiently separate gas from liquid phases to optimize gas capture based on projected and estimated volumes from the targeted pool of our completion project. MEC will utilize flowback separation equipment and production separation equipment designed and built to industry specifications after the completion to optimize gas capture and send gas to sales or flare based on analytical composition. MEC operates facilities that are typically multi-well facilities. Production separation equipment is upgraded prior to new wells being completed, if determined to be undersized or inadequate. This equipment is already on-site and tied into our sales gas lines prior to the new drill operations.

VII. Operational Practices:

- Subsection (A) Venting and Flaring of Natural Gas. MEC understands the requirements of NMAC 19.15.27.8 which outlines that the venting and flaring of natural gas during drilling, completion or production operations that constitutes waste as defined in 19.15.2 are prohibited.
- 2. Subsection (B) Venting and Flaring during drilling operations. This gas capture plan isn't for a well being drilled.
- 3. Subsection (C) Venting and flaring during completion or recompletion. Flowlines will be routed for flowback fluids into a completion or storage tank and if feasible under well conditions, flare rather than vent and commence operation of a separator as soon as it is technically feasible for a separator to function.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
- 4. Subsection (D) Venting and flaring during production operations o At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
 - Monitor manual liquid unloading for wells on-site or in close proximity (<30 minutes' drive time), take reasonable actions to achieve a stabilized rate and pressure at the earliest practical time, and take reasonable actions to minimize venting to the maximum extent practicable.
 - MEC will not vent or flare except during the approved activities listed in NMAC 19.15.27.8 (D)
 14.
- 5. Subsection (E) Performance standards \circ All tanks and separation equipment are designed for maximum throughput and pressure to minimize waste.
 - If a flare is utilized during production operations it will have a continuous pilot and is located more than 100 feet from any known well or storage tanks.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.

- 6. Subsection (F) Measurement or estimation of vented and flared natural gas o Measurement equipment is installed to measure the volume of natural gas flared from process piping.
 - When measurement isn't practicable, estimation of vented and flared natural gas will be completed as noted in 19.15.27.8 (F) 5-6.

VIII. Best Management Practices:

- 1. MEC has adequate storage and takeaway capacity for wells it chooses to complete as the flowlines at the sites are already in place and tied into a gathering system.
- 2. MEC will flare rather than vent vessel blowdown gas when technically feasible during active and/or planned maintenance to equipment on-site.
- 3. MEC combusts natural gas that would otherwise be vented or flared, when technically feasible.
- 4. MEC will shut in wells in the event of a takeaway disruption, emergency situation, or other operations where venting or flaring may occur due to equipment failures.
- 5. MEC has a gas gathering system in place(CTB-887)a with multiple purchaser's to limit venting or flaring, due to purchaser shut downs.

OPERATOR CERTIFICATIONS

I hereby certify that the information contained herein is true and complete to the best ofmy knowledge and belief, and, if the well is a vertical or directional well, that this organization either owns a working interest or unleased mineral interest in the land including the proposed bottom hole location or has a right to drill this well at this location pursuant to a contract with an owner of a working interest run leased mineral interest, or to a voluntary pooling agreement or a compulsory pooling order here to fore entered by the division.

If this well is a horizontal well, I further certify that this organization has received the consent of at least one lessee or owner of a working interest or unleased mineral interest in each tract (in the target pool or formation) in which any part of the well's completed interval will be located or obtained a compulsory pooling order from the division.

SURVEY NO. 10405A

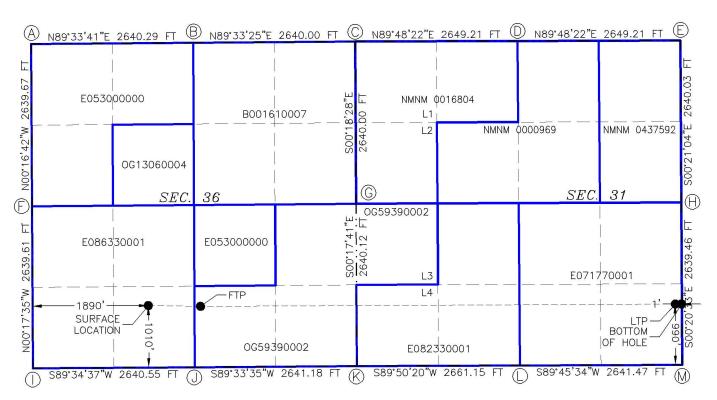

Note: No allowable will be assigned to this completion until all interests have been consolidated or a non-standard unit has been approved by the division.

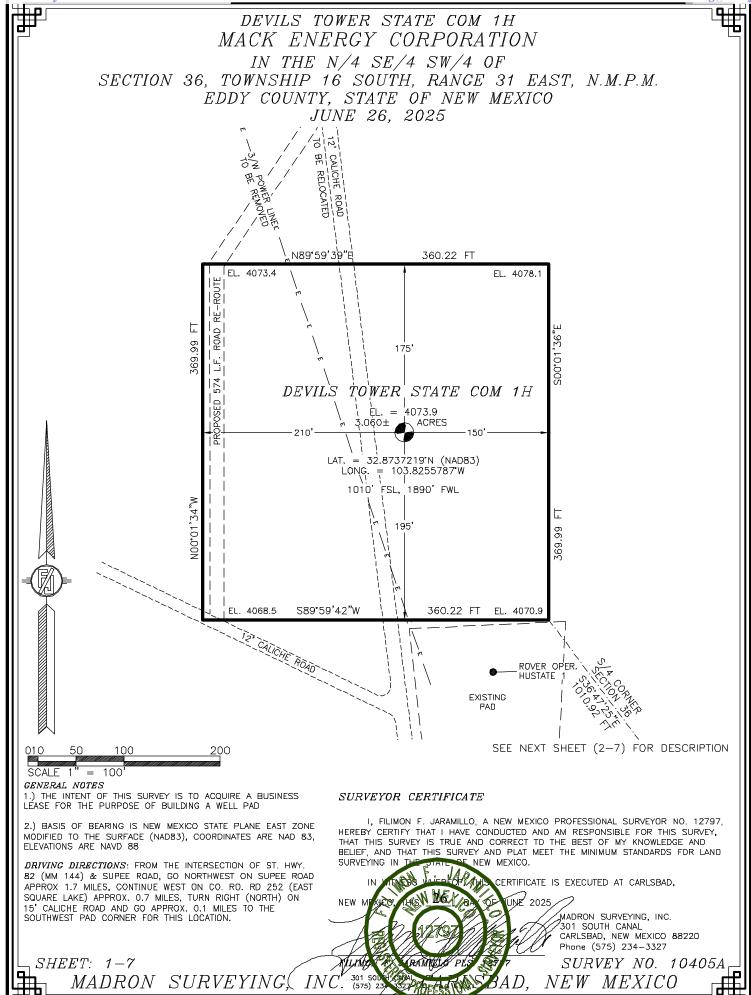

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

DEVILS TOWER STATE COM 1H MACK ENERGY CORPORATION

IN THE N/4 SE/4 SW/4 OF SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M. EDDY COUNTY, STATE OF NEW MEXICO JUNE 26, 2025

DESCRIPTION

A CERTAIN PIECE OR PARCEL OF LAND AND REAL ESTATE LYING IN STATE OF NEW MEXICO LAND IN THE N/4 SE/4 SW/4 OF SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M., EDDY COUNTY, NEW MEXICO.

BEGINNING AT THE SOUTHEAST CORNER OF THE PARCEL, WHENCE THE SOUTH QUARTER CORNER OF SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M. BEARS S36'47'25"E, A DISTANCE OF 1010.92 FEET;

THENCE S89°59'42"W A DISTANCE OF 360.22 FEET TO THE SOUTHWEST CORNER OF THE PARCEL; THENCE N00°01'34"W A DISTANCE OF 369.99 FEET TO THE NORTHWEST CORNER OF THE PARCEL; THENCE N89°59'39"E A DISTANCE OF 360.22 FEET TO THE NORTHEAST CORNER OF THE PARCEL; THENCE S00°01'36"E A DISTANCE OF 369.99 FEET TO THE SOUTHEAST CORNER OF THE PARCEL, THE POINT OF BEGINNING;

CONTAINING 3.060 ACRES MORE OR LESS.

GENERAL NOTES

- 1.) THE INTENT OF THIS SURVEY IS TO ACQUIRE A BUSINESS LEASE FOR THE PURPOSE OF BUILDING A WELL PAD
- 2.) BASIS OF BEARING IS NEW MEXICO STATE PLANE EAST ZONE MODIFIED TO THE SURFACE (NAD83), COORDINATES ARE NAD 83, ELEVATIONS ARE NAVD 88

SURVEYOR CERTIFICATE

I, FILIMON F. JARAMILLO, A NEW MEXICO PROFESSIONAL SURVEYOR NO. 12797, HEREBY CERTIFY THAT I HAVE CONDUCTED AND AM RESPONSIBLE FOR THIS SURVEY, THAT THIS SURVEY IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF, AND THAT THIS SURVEY AND PLAT MEET THE MINIMUM STANDARDS FOR LAND SURVEYING IN THE STATE OF NEW MEXICO.

CENTERLINE SURVEY OF AN ACCESS ROAD CROSSING SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M. EDDY COUNTY, STATE OF NEW MEXICO JUNE 26, 2025

DESCRIPTION

A STRIP OF LAND 30 FEET WIDE CROSSING STATE OF NEW MEXICO LAND IN SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M., EDDY COUNTY, STATE OF NEW MEXICO AND BEING 15 FEET EACH SIDE OF THE FOLLOWING DESCRIBED CENTERLINE SURVEY:

BEGINNING AT A POINT WITHIN THE NE/4 SW/4 OF SAID SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M., WHENCE THE WEST QUARTER CORNER OF SAID SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M. BEARS N55*01'49"W, A DISTANCE OF 2217.31 FEET;

THENCE \$33°50'42"W A DISTANCE OF 204.34 FEET TO AN ANGLE POINT OF THE LINE HEREIN DESCRIBED; THENCE \$00'01'17"E A DISTANCE OF 369.98 FEET TO AN ANGLE POINT OF THE LINE HEREIN DESCRIBED; THENCE \$63'02'57"E A DISTANCE OF 214.13 FEET TO AN ANGLE POINT OF THE LINE HEREIN DESCRIBED; THENCE \$07'32'18"E A DISTANCE OF 511.31 FEET THE TERMINUS OF THIS CENTERLINE SURVEY, WHENCE THE SOUTH QUARTER CORNER OF \$AID SECTION 36, TOWNSHIP 16 SOUTH, RANGE 31 EAST, N.M.P.M. BEARS \$73'28'03"E, A DISTANCE OF 722.57 FEET;

SAID STRIP OF LAND BEING 1299.75 FEET OR 78.77 RODS IN LENGTH, CONTAINING 0.895 ACRES MORE OR LESS AND BEING ALLOCATED BY FORTIES AS FOLLOWS:

NE/4 SW/4 42.63 L.F. 2.58 RODS 0.029 ACRES SE/4 SW/4 1257.12 L.F. 76.19 RODS 0.866 ACRES

PERMIT CONDITIONS OF APPROVAL

Operator Name and Address:	API Number:		
MACK ENERGY CORP [13837]		30-015-56931	
P.O. Box 960		Well:	
Artesia, NM 882110960		DEVILS TOWER STATE COM #001H	

OCD Reviewer	Condition
jeffrey.harrison	If using a pit for drilling and completion operations, operator must have an approved pit form prior to spudding the well. If a closed loop is to be utilized, please submit a form C-103A change of plans stating such.
jeffrey.harrison	Notify the OCD 24 hours prior to casing & cement.
jeffrey.harrison	A [C-103] Sub. Drilling (C-103N) is required within (10) days of spud.
jeffrey.harrison	File As Drilled C-102 and a directional Survey with C-104 completion packet.
	Once the well is spud, to prevent ground water contamination through whole or partial conduits from the surface, the operator shall drill without interruption through the fresh water zone or zones and shall immediately set in cement the water protection string.
jeffrey.harrison	Cement is required to circulate on both surface and intermediate1 strings of casing.
jeffrey.harrison	If cement does not circulate on any string, a Cement Bond Log (CBL) is required for that string of casing.
	Oil base muds are not to be used until fresh water zones are cased and cemented providing isolation from the oil or diesel. This includes synthetic oils. Oil based mud, drilling fluids and solids must be contained in a steel closed loop system.
jeffrey.harrison	Surface casing shall be set a minimum of 25' into the Rustler Anhydrite, above the salt, and below usable fresh water and cemented to the surface. If salt is encountered set casing at least 25 ft. above the salt.

VI. Separation Equipme	ent: ⊠ Attac	h a complete descri	ption of ho	ow Op	perator will size sep	aration	equipmer	nt to op	timize gas capture.
VII. Operational Practi Subsection A through F of			ription of	the ac	ctions Operator wil	l take t	o comply	with t	he requirements of
VIII. Best Management during active and planned			te descript	tion o	f Operator's best n	nanagei	ment prac	tices to	minimize venting

Section 2 – Enhanced Plan EFFECTIVE APRIL 1, 2022

Beginning April 1, 2022, an operator that is not in compliance with its statewide natural gas capture requirement for the applicable reporting area must complete this section.

Departor certifies that it is not required to complete this section because Operator is in compliance with its statewide natural gas capture requirement for the applicable reporting area.

IX. Anticipated Natural Gas Production:

Well	API	Anticipated Average Natural Gas Rate MCF/D	Anticipated Volume of Natural Gas for the First Year MCF

X. Natural Gas Gathering System (NGGS):

Operator	System	ULSTR of Tie-in	Anticipated Gathering	Available Maximum Daily Capacity
			Start Date	of System Segment Tie-in

XI. Map. \square Attach an accurate and legible map depicting the location of the well(s), the anticipated pipeline route(s) connecting the
production operations to the existing or planned interconnect of the natural gas gathering system(s), and the maximum daily capacity of
the segment or portion of the natural gas gathering system(s) to which the well(s) will be connected.

XII.	Line Capacit	y. The natural	gas gathering	system \square] will □ wil	l not have	e capacity to	gather	100% of the	anticipated	natural	gas
prod	uction volume	from the well	prior to the da	te of first	production.							

XIII. Line Pressure. Operator \square does \square does not anticipate that its existing well(s) connected to the same segment, or portion,	of the
natural gas gathering system(s) described above will continue to meet anticipated increases in line pressure caused by the new we	

- · · ·						
Attach Operato	or's plan to n	ianage produ	iction in re	sponse to the	increased line	nressure

XIV. Confidentiality: \square Operator asserts confidentiality pursuant to Section 71-2-8 NMSA 1978 for the information provides	vided in
Section 2 as provided in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and attaches a full description of the specific info	rmation
for which confidentiality is asserted and the basis for such assertion.	

(i)

Section 3 - Certifications Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal: 🗷 Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system: or ☐ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. If Operator checks this box, Operator will select one of the following: Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or Venting and Flaring Plan.

Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including: power generation on lease; (a) power generation for grid; (b) (c) compression on lease; (d) liquids removal on lease; reinjection for underground storage; (e) **(f)** reinjection for temporary storage; **(g)** reinjection for enhanced oil recovery; fuel cell production; and (h)

Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

other alternative beneficial uses approved by the division.

- (a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or
- (b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.
- 2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

VI. Separation Equipment:

Mack Energy Corporation(MEC) production facilities include separation equipment designed to efficiently separate gas from liquid phases to optimize gas capture based on projected and estimated volumes from the targeted pool of our completion project. MEC will utilize flowback separation equipment and production separation equipment designed and built to industry specifications after the completion to optimize gas capture and send gas to sales or flare based on analytical composition. MEC operates facilities that are typically multi-well facilities. Production separation equipment is upgraded prior to new wells being completed, if determined to be undersized or inadequate. This equipment is already on-site and tied into our sales gas lines prior to the new drill operations.

VII. Operational Practices:

- Subsection (A) Venting and Flaring of Natural Gas. MEC understands the requirements of NMAC 19.15.27.8 which outlines that the venting and flaring of natural gas during drilling, completion or production operations that constitutes waste as defined in 19.15.2 are prohibited.
- 2. Subsection (B) Venting and Flaring during drilling operations. This gas capture plan isn't for a well being drilled.
- 3. Subsection (C) Venting and flaring during completion or recompletion. Flowlines will be routed for flowback fluids into a completion or storage tank and if feasible under well conditions, flare rather than vent and commence operation of a separator as soon as it is technically feasible for a separator to function.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
- 4. Subsection (D) Venting and flaring during production operations o At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.
 - Monitor manual liquid unloading for wells on-site or in close proximity (<30 minutes' drive time), take reasonable actions to achieve a stabilized rate and pressure at the earliest practical time, and take reasonable actions to minimize venting to the maximum extent practicable.
 - MEC will not vent or flare except during the approved activities listed in NMAC 19.15.27.8 (D)
 14.
- 5. Subsection (E) Performance standards \circ All tanks and separation equipment are designed for maximum throughput and pressure to minimize waste.
 - If a flare is utilized during production operations it will have a continuous pilot and is located more than 100 feet from any known well or storage tanks.
 - At any point in the well life (completion, production, inactive) an audio, visual and olfactory inspection be performed at prescribed intervals (weekly or monthly) pursuant to Subsection D of 19.15.27.8 NMAC, to confirm that all production equipment is operating properly and there are no leaks or releases.

- 6. Subsection (F) Measurement or estimation of vented and flared natural gas o Measurement equipment is installed to measure the volume of natural gas flared from process piping.
 - When measurement isn't practicable, estimation of vented and flared natural gas will be completed as noted in 19.15.27.8 (F) 5-6.

VIII. Best Management Practices:

- 1. MEC has adequate storage and takeaway capacity for wells it chooses to complete as the flowlines at the sites are already in place and tied into a gathering system.
- 2. MEC will flare rather than vent vessel blowdown gas when technically feasible during active and/or planned maintenance to equipment on-site.
- 3. MEC combusts natural gas that would otherwise be vented or flared, when technically feasible.
- 4. MEC will shut in wells in the event of a takeaway disruption, emergency situation, or other operations where venting or flaring may occur due to equipment failures.
- 5. MEC has a gas gathering system in place(CTB-887)a with multiple purchaser's to limit venting or flaring, due to purchaser shut downs.

RE:

Horizontal Well Proposals - Devils Tower State Com #1H & #2H

Proposed Spacing Unit: S2SE4 Sec. 36-T16S-R31E, S2S2 Sec. 31-T16S-R32E

Eddy & Lea County, New Mexico

Dear Working Interest Owner:

Mack Energy Corporation, an affiliate of Chase Oil Corporation, proposes to drill and complete the permitted Devils Tower State Com #1H & #2H as horizontal Yeso wells to the approximate total vertical and measured depth at the following locations as shown below:

Devils Tower State Com #1H

- Surface Hole Location 1010' FSL, 1890' FWL, Section 36-T16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,433'
- o MD: ~ 13,733'

Devils Tower State Com #2H

- o Surface Hole Location 990' FSL, 1890' FWL, Section 36-16S-R31E
- Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- TVD: ~ 5,952' 0
- o MD: ~ 14,182'

Mack Energy Corporation will also propose a new and superseding Operating Agreement, being a modified 1989 AAPL form with horizontal modifications, covering the S2SE4 Section 36-T16S-R31E & S2S2 Section 31-T16S-R32E, limited to the Yeso formation. The Operating Agreement will contain the following provisions:

- Effective Date: March 1, 2026
- o 100%/300%/300% non-consent penalties
- \$8,000/\$800 drilling/producing monthly overhead rate (COPAS)
- Mack Energy Corporation as named Operator

Please provide your election on the following page within thirty (30) days. If you elect to participate, please also return a signed AFE to the undersigned's attention at the letterhead address, via email to deriks@mec.com or by facsimile to 575-748-7374.

If you do not wish to make an election in this well, but would like to divest of your interest, please mark the appropriate election on the attached election page and return to my attention in the same manner as above.

Should you have questions of a technical nature, please contact Cole Ponce by email at ColePonce@mec.com or by calling (575) 748-1288. I can also be reached at the same number.

Sincerely,

Mack Energy Corporation

Derik Smith Landman

RE: Horizontal Well Proposals – Devils Tower State Com #1H & #2H

Proposed Spacing Unit: S2SE4 Sec. 36-T16S-R31E, S2S2 Sec. 31-T16S-R32E

Eddy & Lea County, New Mexico

Dear Working Interest Owner:

Mack Energy Corporation, an affiliate of Chase Oil Corporation, proposes to drill and complete the permitted Devils Tower State Com #1H & #2H as horizontal Yeso wells to the approximate total vertical and measured depth at the following locations as shown below:

Devils Tower State Com #1H

- o Surface Hole Location 1010' FSL, 1890' FWL, Section 36-T16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,433'
- o MD: ~ 13,733'

Devils Tower State Com #2H

- Surface Hole Location 990' FSL, 1890' FWL, Section 36-16S-R31E
- o Bottom Hole Location 990' FSL, 1' FEL, Section 31-T16S-R32E
- o TVD: ~ 5,952'
- o MD: ~ 14,182'

Mack Energy Corporation will also propose a new and superseding Operating Agreement, being a modified 1989 AAPL form with horizontal modifications, covering the S2SE4 Section 36-T16S-R31E & S2S2 Section 31-T16S-R32E, limited to the Yeso formation. The Operating Agreement will contain the following provisions:

- o Effective Date: March 1, 2026
- o 100%/300%/300% non-consent penalties
- o \$8,000/\$800 drilling/producing monthly overhead rate (COPAS)
- Mack Energy Corporation as named Operator

Please provide your election on the following page within thirty (30) days. If you elect to participate, please also return a <u>signed AFE</u> to the undersigned's attention at the letterhead address, via email to <u>deriks@mec.com</u> or by facsimile to 575-748-7374.

If you do not wish to make an election in this well, but would like to divest of your interest, please mark the appropriate election on the attached election page and return to my attention in the same manner as above.

Should you have questions of a technical nature, please contact Cole Ponce by email at ColePonce@mec.com or by calling (575) 748-1288. I can also be reached at the same number.

Sincerely,

Mack Energy Corporation

Derik Smith Landman

Re:

Notice of Overlapping Spacing Unit

Shrek State Com #1H and 2H Lea County, New Mexico

To Whom It May Concern:

MR NM Operating LLC ("MR NM") has proposed the above-referenced wells for the initial development of the Yeso formation under the SE/4 of Section 31 and the SW/4 of Section 32, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico.

This letter is to advise you that this proposed development plan will require the formation of a 320 acre, more or less, spacing unit comprised of the SE/4 of Section 31 and the SW/4 of Section 32, Township 16 South, Range 32 East, NMPM, Lea County, New Mexico, which will initially be dedicated to:

i. MR NM's Shrek State Com #1H, to be drilled from a surface location within the SE/4 SW/4 of Section 32, T16S-R32E, to a bottom hole location within the SW/4 SE/4 of Section 31, T16S-R32E. This well is targeting the Yeso formation, with an approximate TVD of 5,707'.

MR NM's proposed 320-acre spacing unit will overlap the following proposed spacing unit and well:

ii. Mack Energy Corporation's Devils Tower State Com #1H (API No. 30-015-56931), drilled from a surface location within the SE/4 SW/4 of Section 36, T16S, R31E to a bottom hole location within the SE/4 SE/4 of Section 31, T16S, R32E. This well is targeting the Yeso formation, with an approximate TVD of 5,502'.

Pursuant to NMAC 19.15.16.15.B(9) and 19.15.15.12.B, you have a right to object to the overlapping spacing unit by delivering a written statement of objection to our office within twenty (20) days of the mailing of this notice. If no objection is received within this period, we will proceed with obtaining any remaining approvals for the proposed spacing unit.

Should you have questions or concerns, please contact the undersigned directly at (214) 354-5414 or via email at blake@mr-nm.com.

Regards.

Blake Simmons Land Manager
