Re: CASE NO. 7282
ORDER NO. R-6721

Mr. Tommy Roberts, Attorney
Dugan Production Corporation
P. O. Box 208
Farmington, New Mexico 87401

Applicant:

Jerome P. McHugh

Dear Sir:

Enclosed herewith are two copies of the above-referenced Division order recently entered in the subject case.

Yours very truly,

JOE D. RAMEY
Director

JDR/fd

Copy of order also sent to:

STATE OF NEW MEXICO
ENERGY AND MINERALS DEPARTMENT
OIL CONSERVATION DIVISION

IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
DIVISION FOR THE PURPOSE OF
CONSIDERING:

CASE NO. 7282
Order No. R-6721

APPLICATION OF JEROME P. McHUGH
FOR DOWNHOLE COMMINGLING, RIO
ARRIBA COUNTY, NEW MEXICO.

ORDER OF THE DIVISION

BY THE DIVISION:

This cause came on for hearing at 9 a.m. on June 17, 1981, at Santa Fe, New Mexico, before Examiner Daniel S. Nutter.

NOW, on this 1st day of July, 1981, the Division Director, having considered the testimony, the record, and the recommendations of the Examiner, and being fully advised in the premises,

FINDS:

(1) That due public notice having been given as required by law, the Division has jurisdiction of this cause and the subject matter thereof.

(2) That the applicant, Jerome P. McHugh, is the owner and operator of the Apache Well No. 3-E, located in Unit H of Section 19, Township 26 North, Range 3 West, NMPM, Rio Arriba County, New Mexico.

(3) That the applicant seeks authority to commingle Wildhorse-Gallup and Basin-Dakota production within the wellbore of the above-described well.

(4) That from the Wildhorse-Gallup zone, the subject well is expected to be capable of low marginal production only.

(5) That from the Basin-Dakota zone, the subject well is expected to be capable of low marginal production only.

(6) That the proposed commingling may result in the recovery of additional hydrocarbons from each of the subject pools, thereby preventing waste, and will not violate correlative rights.

(7) That the reservoir characteristics of each of the subject zones are such that underground waste would not be caused by the proposed commingling provided that the well is not shut-in for an extended period.

(8) That to afford the Division the opportunity to assess the potential for waste and to expeditiously order appropriate remedial action, the operator should notify the Aztec district office of the Division any time the subject well is shut-in for 7 consecutive days.

(9) That in order to allocate the commingled production to each of the commingled zones in the subject well, 50 percent of the commingled oil and gas production should be allocated to the Wildhorse-Gallup zone, and 50 percent to the Basin-Dakota zone.

IT IS THEREFORE ORDERED:

(1) That the applicant, Jerome P. McHugh, is hereby authorized to commingle Wildhorse-Gallup and Basin-Dakota production within the wellbore of the Apache Well No. 3-E, located in Unit H of Section 19, Township 26 North, Range 3 West, NMPM, Rio Arriba County, New Mexico.

(2) That 50 percent of the commingled oil and gas production shall be allocated to the Wildhorse-Gallup zone and 50 percent to the Basin-Dakota zone.

(3) That the operator of the subject well shall immediately notify the Division's Aztec district office any time the well has been shut-in for 7 consecutive days and shall concurrently present, to the Division, a plan for remedial action.

(4) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year herein-above designated.

EXAMINER HEARING

IN THE MATTER OF:

Application of Jerome P. McHugh for for downhole commingling, Rio Arriba County, New Mexico. CASE 7282

BEFORE: Daniel S. Nutter

TRANSCRIPT OF HEARING

A P P E A R A N C E S

For the Oil Conservation Division: Ernest L. Padilla, Esq.
Legal Counsel to the Division
State Land Office Bldg.
Santa Fe, New Mexico 87501

For the Applicant: Tommy Roberts, Esq.
Dugan Production Corporation
P. O. Box 208
Farmington, New Mexico 87401

I N D E X

TOM DUGAN

E X H I B I T S

MR. NUTTER: Call Case Number 7282.

MR. PADILLA: Application of Jerome P. McHugh for downhole commingling, Rio Arriba County, New Mexico.

MR. ROBERTS: Tommy Roberts, general counsel for Dugan Production Corporation, appearing on behalf of Jerome P. McHugh, and Associates.

I have one witness.

MR. NUTTER: The record will show that Mr. Dugan is still under oath.

Go ahead.

MR. ROBERTS: Okay.

TOM DUGAN

being called as a witness and being duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

BY MR. ROBERTS:

Q. Mr. Dugan, for the record would you state your name, address, and occupation?

A. Thomas A. Dugan, 907 Hallett Circle, Farmington, New Mexico, Consulting Petroleum Engineer.

Q. What is your relationship to the applicant in this case?

A. I work for him as a consultant.

Q. And are you familiar with this application and its contents?

A. Yes.

Q. And you've testified before the New Mexico Oil Conservation Commission?

A. Yes.

Q. In what capacity?

A. As a petroleum engineer.

MR. ROBERTS: Are the witness' qualifications a matter of record and acceptable?

MR. NUTTER: They are.

Q. Mr. Dugan, what is the purpose of this application?

A. The purpose of the application is to seek approval to commingle production from the Gallup and Dakota formations in the Jerome P. McHugh Apache 3-E Well.

Q. And what pools are we speaking of?

A. The Dakota Pool is in the Basin Dakota and the Gallup horizon is in the Wildhorse-Gallup Pool.

Q. Would you refer to Exhibit Number One and identify that exhibit?

A. It's a map showing the location of the Apache 3-E Well as indicated by the yellow dot and arrow.

It also shows the location of other wells in the area that produce from the Gallup and Dakota horizons.

It also shows on the lefthand side the cumulative production from these wells that are indicated on the map in different colors.

Q. What conclusions significant to this application can you draw from the information contained in this exhibit?

A. That the area is productive in the Dakota horizon and also the Gallup horizon and that it's really not an outstanding Dakota or Gallup area.

Q. Refer to Exhibit Number Two and identify that exhibit.

A. Exhibit Number Two shows the offset operators surrounding Jerome P. McHugh's Apache 3-E Well.

Q. Okay. And now please refer to Exhibits Numbers Three, Four, Five, Six, and Seven, and identify those exhibits and explain their significance.

A. Okay. Exhibit Number Three is a Xeroxed copy of the logs on the Jerome P. McHugh Apache 3-E Well, and shows the Gallup horizon on the second page, and also the Dakota horizon on the third page.

MR. NUTTER: You mean the Gallup is

7400 and some feet here?

A. Yes. Our proposed perforations would be there at 7424 to 30.

MR. NUTTER: Very deep for the Gallup there, isn't it?

A. Yeah, these are deep, expensive wells. And that's a pretty good-looking Gallup sand and the Dakota sands are generally pretty hard and tight; have low productivity.

This well has recently been drilled and is waiting on -- pipe has been set and it's waiting on completion. It has not been perforated or tested at this point.

The remaining logs are the four wells that McHugh drilled in 1969 in this same area, and they show that the wells were dually completed in the Gallup horizon and the Dakota horizon. We have marked the perforations that were on each log.

Q. In comparing the logs on each of these wells, what conclusions, if any, do you draw?

A. The conclusion that we'd like to draw is that -- that the older wells are very similar to the new infill well that has been drilled.

Q. Specifically, and you might refer to Exhibit -- either Exhibit Number One or Exhibit Number Two,

can you point out the locations of the Apache No. 1, No. 2, No. 3, and No. 4 Wells, for the benefit of the Examiner?

A. Yes. On Exhibit One you can see that the Apache 3-E Well is the one with the arrow and the yellow dot, and the 1, 2, 3, and 4, are the wells on the west sides of Sections 18 and 19. They're purple and orange dots.

Q. Okay. Would you refer to Exhibit Number Eight and identify that exhibit?

A. It is a daily drilling report on the work that has been done to date on the Apache 3-E Well, merely showing that it has been drilled and how the casing was run and cemented.

Q. And again, the current status of the well is what?

A. It has casing cemented through the Dakota formation and is awaiting completion.

Q. Okay. Would you refer to Exhibit Number Nine and identify it and explain its significance?

A. This is shut-in pressures that have been recorded on the four Apache wells in this immediate vicinity; what the pressures were originally in the Gallup and Dakota horizons, the Gallup being the upper completion and the Dakota being the lower completion; the dates that these pressures were taken. It also shows the most recent

shut-in pressures that we have on the four wells and how they -- how the pressures that are now -- recent pressures have been taken.

Q. In your opinion, can these pressures contained in this chart reasonably be expected to be comparable to those pressures that we would find in the Apache 3-E Well?

A. They should be very comparable or -- unless the degree has been depleted some by the older production, which is likely to some small extent.

MR. NUTTER: Now, what's happened to the pressure on the Gallup on the No. 2 and the Dakota on the No. 3 here on this exhibit?

A. They're both -- both horizons have logged off and we've been unable to get them to produce in recent years.

MR. NUTTER: There'd be some pressure there but it's just logged off --

A. Yes, sir.

MR. NUTTER: -- with fluids.

A. That's right.

MR NUTTER: Okay.

A. That's correct.

MR. NUTTER: Okay.

Q. In your opinion are these pressures

compatible with one another and if we found these pressures to be in the -- accurate in the Apache 3-E Well --

A. Yes.

Q. -- would they be compatible?

A. Yes, I'm sure they would be.

Q. Now refer to Exhibit Ten and identify that exhibit, please?

A. These are decline curves on both horizons for -- on the four wells that we have discussed before, the Apache 1 through 4 Wells.

We brought these along to show the type of wells that were completed back in '69 and to indicate that we would anticipate getting a very similar well in the Apache 3-E Well.

Starting with the Apache 1 Well, it's currently producing from the Dakota horizon about 2000 Mcf a month and from the Gallup horizon it's producing 500 Mcf per month. So neither horizon in this particular well is very good.

In the Apache No. 2 Well the Dakota production is around 1200 Mcf per month, in the Gallup, but it's not producing at this time.

The Apache No. 3, the Dakota horizon is not producing and the Gallup horizon is producing about

4-million Mcf per month with the aid of a compressor.

And the Apache No. 4 Well the Dakota horizon is not producing, nor is the Gallup horizon at this time.

Q. How would you characterize the volumes of liquid production from each of these zones? That could be expected from each of these zones?

A. The -- both horizons in the older wells make some condensate. They're both gas wells and both horizons are gas with some associated condensates and they both make about 10 barrels per million of oil.

Q. Is the ownership of each zone common?

A. Yes, it is.

Q. And from an economical standpoint is it necessary to commingle production in this well?

A. It would be most desireable.

Q. Do you propose a formula for allocation of production to the respective zones?

A. Yes. I'd propose that -- that 50 percent of the gas and 50 percent of the oil be allocated to each zone.

Q. And how was that allocation formula arrived at?

A. Mainly experience with the older wells.

Q. How would you propose to achieve commingling in the wellbore of the Apache 3-E Well?

A. To --

Q. If it's approved?

A. To make a -- perforate and frac each horizon separately and then merely commingle them with one string of tubing in the well.

Q. Were Exhibits One through Ten prepared by you or under your direction and supervision?

A. Yes.

MR. ROBERTS: We move that Exhibits One through Ten be admitted into the record.

MR. NUTTER: Exhibits One through Ten will be admitted in the record.

Q. In your professional opinion will commingling of production in the wellbore of the Apache 3-E Well result in the recovery of additional hydrocarbons, the prevention of waste, and the protection of correlative rights?

A. Yes.

MR. ROBERTS: We have no other questions, Mr. Examiner.

CROSS EXAMINATION

BY MR. NUTTER:

Q. Mr. Dugan, now in these exhibits, on Exhibit Ten, what do we show on these? We show current production, that's the zigzag line at the top here.

A. Yes.

Q. And then this is cumulative production --

A. Yeah.

Q. -- the solid line?

A. Yes, sir, uh-huh.

Q. And then on the -- those are the only two lines that are on page one here.

A. Yes, sir.

Q. Which is Dakota for the No. 1.

A. Yes, sir.

Q. Or is there a little curve way over here to the far left that's not indicated or not --

A. That was oil.

Q. That was oil production?

A. Producion, yes.

Q. Okay, then we come to page two, which is the Gallup in the No. 1 Well and the oil production has been constant, not very much, granted, but it has been constant.

A. Yes.

Q. As compared to no well production at all on the -- on the Dakota.

A. Yes, sir.

Q. Now on the next well, which is the third page, we have the No. 2 Dakota, and we had oil production, which has declined almost to nothing.

A. Yes.

Q. And no oil production at all shown for the Gallup there on that well.

A. Right. We never did really have that Gallup producing very well, as you can see. Probably both horizons would have produced a lot better if they would have been commingled rather than dually completed. But --

Q. Uh-huh. How have these wells been produced? Have they had pumps on them or has --

A. No.

Q. -- McHugh relied on flow to produce both zones?

A. Yes, sir, that's correct, and none of the wells have been pumped.

Q. Uh-huh.

A. Not either horizon in any of the wells.

Q. And then the No. 3 doesn't show any oil

production from the Gallup -- the Dakota, but it does show a pretty substantial oil production at the beginning for the Gallup, declining to a low rate today.

A. Yes, sir.

Q. And the same is true of No. 4. So I was wondering where you get that 50 percent allocation on oil and 50 percent -- for these wells, when the oil just doesn't seem to be there in the Dakota in several of these wells.

A. Well, it's been my experience in that general area that -- that a well that will lift the liquids, produce liquids, will produce about 10 barrels per million.

Q. Uh-huh.

A. In both horizons. And I think the -- the way they're showing up here is because the wells have not been able to lift the produced fluids well.

Q. Well, do you think the gas reserves are pretty similar on the two zones?

A. Yes, I do.

Q. So if you use a constant gas/oil ratio of 10 barrels per million, you'd have essentially the same amount of oil, then.

A. Yes, sir.

Q. If you have equal reserves of gas,

A. Yeah, I think so. I think probably in reality the Gallup will produce better right at the start but the Dakota will produce over a longer period of time.

Q. I see, and in the long run it would even out pretty well.

A. Yes, sir, that's what I believe. Yes, sir.

Q. Okay.

MR. NUTTER: Are there any further questions of Mr. Dugan? He may be excused.

Do you have anything further, Mr. Roberts?

MR. ROBERTS: No, sir.

MR. NUTTER: Does anyone have anything they wish to offer in Case Number 7282?

We'll take the case under advisement.

(Hearing concluded.)

C E R T I F I C A T E

I, SALLY W. BOYD, C.S.R., DO HEREBY CERTIFY that the foregoing Transcript of Hearing before the Oil Conservation Division was reported by me; that the said transcript is a full, true, and correct record of the hearing, prepared by me to the best of my ability.

This is shut-in pressures that have been recorded on the four Apache wells in this immediate vicinity; what the pressures were originally in the Gallup and Dakota horizons, the Gallup being the upper completion and the Dakota being the lower completion; the dates that these pressures were taken. It also shows the most recent

shut-in pressures that we have on the four wells and how they -- how the pressures that are now -- recent pressures have been taken.

Q. In your opinion, can these pressures contained in this chart reasonably be expected to be comparable to those pressures that we would find in the Apache 3-E Well?

A. They should be very comparable or -- unless the degree has been depleted some by the older production, which is likely to some small extent.

MR. NUTTER: Now, what's happened to the pressure on the Gallup on the No. 2 and the Dakota on the No. 3 here on this exhibit?

A. They're both -- both horizons have logged off and we've been unable to get them to produce in recent years.

MR. NUTTER: There'd be some pressure there but it's just logged off --

A. Yes, sir.

MR. NUTTER: -- with fluids.

A. That's right.

MR NUTTER: Okay.

A. That's correct.

MR. NUTTER: Okay.

Q. In your opinion are these pressures

compatible with one another and if we found these pressures to be in the -- accurate in the Apache 3-E Well --

A. Yes.

Q. -- would they be compatible?

A. Yes, I'm sure they would be.

Q. Now refer to Exhibit Ten and identify that exhibit, please?

A. These are decline curves on both horizons for -- on the four wells that we have discussed before, the Apache 1 through 4 Wells.

We brought these along to show the type of wells that were completed back in '69 and to indicate that we would anticipate getting a very similar well in the Apache 3-E Well.

Starting with the Apache 1 Well, it's currently producing from the Dakota horizon about 2000 Mcf a month and from the Gallup horizon it's producing 500 Mcf per month. So neither horizon in this particular well is very good.

In the Apache No. 2 Well the Dakota production is around 1200 Mcf per month, in the Gallup, but it's not producing at this time.

The Apache No. 3, the Dakota horizon is not producing and the Gallup horizon is producing about

4-million Mcf per month with the aid of a compressor.

And the Apache No. 4 Well the Dakota horizon is not producing, nor is the Gallup horizon at this time.

Q How would you characterize the volumes of liquid production from each of these zones? That could be expected from each of these zones?

A The - both horizons in the older wells make some condensate. They're both gas wells and both horizons are gas with some associated condensates and they both make about 10 barrels per million of oil.

Q Is the ownership of each zone common?

A Yes, it is.

Q And from an economical standpoint is it necessary to commingle production in this well?

A It would be most desireable.

Q Do you propose a formula for allocation of production to the respective zones?

A Yes. I'd propose that -- that 50 percent of the gas and 50 percent of the oil be allocated to each zone.

Q And how was that allocation formula arrived at?

A Mainly experience with the older wells.

Q How would you propose to achieve commingling in the wellbore of the Apache 3-E Well?

A To --

Q If it's approved?

A To make a -- perforate and frac each horizon separately and then merely commingle them with one string of tubing in the well.

Q Were Exhibits One through Ten prepared by you or under your direction and supervision?

A Yes.

MR. ROBERTS: We move that Exhibits One through Ten be admitted into the record.

MR. NUTTER: Exhibits One through Ten will be admitted in the record.

Q In your professional opinion will commingling of production in the wellbore of the Apache 3-E Well result in the recovery of additional hydrocarbons, the prevention of waste, and the protection of correlative rights?

A Yes.

MR. ROBERTS: We have no other questions, Mr. Examiner.

CROSS EXAMINATION

BY MR. NUTTER:

Q. Mr. Dugan, now in these exhibits, on Exhibit Ten, what do we show on these? We show current production, that's the zigzag line at the top here.

A. Yes.

Q. And then this is cumulative production --

A. Yeah.

Q. -- the solid line?

A. Yes, sir, uh-huh.

Q. And then on the -- those are the only two lines that are on page one here.

Ran IES & CDL logs by Welex. Trip in hole and circ. Prep to lay down drill pipe.

5-13-81 Rigging down rotary tools

1-1/4 hrs - circ.
5-1/4 hrs - lay down D.P.
1/2 hr - rig up csg. crew
5-1/4 hrs - run csg.
3/4 hr - rig up cementers & circ.
1 hr - cement first stage

P.O.B. at 8:00 p.m. Opened stage tool and circ. 3 hrs.
Cemented 2nd stage. 1 hr. P.O.B. at 12:00 midnight.
Circ. 2 hrs. Cement 3rd stage 1 hr. P.O.B. at 3:00 a.m.
Set slips & cut off csg.
2 hrs - nipple down & prep to move.

Ran 35 jts. 4½" OD, 11.6# K-55, 8 Rd, ST&C csg. and 166 jts. 4½" OD, 10.5#, 8 Rd, ST&C csg. T.E. 8208.73' set at 8197' RKB. Cemented first stage w/ 10 bbls mud flush followed by 200 sx class "B" 8% gel followed by 150 sx class "B" w/ 7½# salt per sk. (Total slurry 565.5 cu.ft.) Good mud returns while cementing. Reciprocated csg. OK while cementing. Maximum cementing pressure 600 psi. Bumped plug w/ 1200 psi. Float held OK. POB at 8:00 p.m. 5-12-81. Opened stage tool at 6100'. Circulated three hrs w/ rig pump. Cemented second stage w/ 10 bbls. mud flush followed by 250 sx 65-35 plus 12% gel & ¼# flocele per sk. followed by 50 sx class "B" neat w/ ¼# flocele per sk. (Total cement slurry 714 cu.ft.). Good circ. throughout job. (Cont.)

5-13-81 (cont.) Closed stage tool w/ 2000 psi. Held OK. P.O.B. at [illegible]:00 midnight. Opened stage tool at 3816'. Circ. 2 hrs w/ rig pump. Cemented 3rd stage w/ 10 bbls mud flush followed by 400 sx 65-35 plus 12% gel # ¼# flocele per sk followed by 50 sx class "B" w/ ¼# flocele per sk. (Total cement slurry 1107 cu.ft.) Good mud returns throughtout job. Maximum cementing pressure 900 psi. Closed stage tool w/ 2500 psi. Held OK. Estimated cement top 600'. Job complete at 3:00 a.m. 5-13-81. Set 4½" csg. slips. Cut off csg. and released rig at 5:00 a.m. 5-13-81.

CASE 7279: Application of BCO, Inc. for downhole commingling, Rio Arriba County, New Mexico. Applicant, in the above-styled cause, seeks approval for the downhole commingling of Basin-Dakota and Lybrook-Gallup production in the wellbores of the following wells located in Township 23 North, Range 7 West: Dunn Well No. 3 located in Unit I of Section 3 and State H Wells Nos. 3 and 4, located in Units M and D, respectively, of Section 2.

CASE 7280: Application of Northwest Pipeline Corporation for a dual completion and downhole commingling, Rio Arriba County, New Mexico. Applicant, in the above-styled cause, seeks authority to dually complete its Rosa Unit Well No. 77 located in Unit L of Section 33, Township 31 North, Range 5 West, to produce gas from the Mesaverde formation and commingled Gallup and Dakota production through separate strings of tubing.

CASE 7281: Application of Dugan Production Corporation for downhole commingling, San Juan County, New Mexico. Applicant, in the above-styled cause, seeks approval for the downhole commingling of undesignated Gallup and Basin-Dakota production in the wellbore of its Windfall Well No. 10 located in Unit F of Section 31, Township 26 North, Range 11 West.

CASE 7282: Application of Jerome P. McHugh for downhole commingling, Rio Arriba County, New Mexico. Applicant, in the above-styled cause, seeks approval for the downhole commingling of Wildhorse-Gallup and Basin-Dakota production in the wellbore of his Apache Well No. 3-E located in Unit H of Section 19, Township 26 North, Range 3 West.

CASE 7254: (Continued from May 20, 1981, Examiner Hearing)

Application of Mesa Petroleum Company for compulsory pooling, San Juan County, New Mexico. Applicant, in the above-styled cause, seeks an order pooling all mineral interests in the Mesaverde formation underlying the W/2 of Section 15, Township 30 North, Range 11 West, to be dedicated to a well to be drilled at a standard location thereon. Also to be considered will be the cost of drilling and completing said well and the allocation of the cost thereof as well as actual operating costs and charges for supervision, designation of applicant as operator of the well, and a charge for risk involved in drilling said well.

CASE 7270: (Continued from June 3, 1981, Examiner Hearing)

Application of Southland Royalty Company for compulsory pooling, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an order pooling all mineral interests in the Wolfcamp and Pennsylvanian formations underlying the N/2 of Section 21, Township 19 South, Range 27 East, to be dedicated to its Pecos River Federal 21-A Com Well No. 1 drilled at a standard location thereon. Also to be considered will be the cost of drilling and completing said well and the allocation of the cost thereof as well as actual operating costs and charges for supervision, designation of applicant as operator of the well, and a charge for risk involved in drilling said well.

CASE 7250: (Continued from June 3, 1981, Examiner Hearing)

Application of Southland Royalty Company for compulsory pooling, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an order pooling all mineral interests in the Pennsylvanian formation underlying the N/2 of Section 22, Township 18 South, Range 29 East, to be dedicated to a well to be drilled at a standard location thereon. Also to be considered will be the cost of drilling and completing said well and the allocation of the cost thereof as well as actual operating costs and charges for supervision, designation of applicant as operator of the well, and a charge for risk involved in drilling said well.

Dockets Nos. 20-81 and 21-81 are tentatively set for July 2 and 15, 1981. Applications for hearing must be filed at least 22 days in advance of hearing date.

DOCKET: EXAMINER HEARING - WEDNESDAY - JUNE 17, 1981

9 A.M. - OIL CONSERVATION DIVISION CONFERENCE ROOM,
STATE LAND OFFICE BUILDING, SANTA FE, NEW MEXICO

The following cases will be heard before Daniel S. Nutter, Examiner, or Richard L. Stamets, Alternate Examiner:

ALLOWABLE: (1) Consideration of the allowable production of gas for July, 1981, from fifteen prorated pools in Lea, Eddy, and Chaves Counties, New Mexico.

(2) Consideration of the allowable production of gas for July, 1981, from four prorated pools in San Juan, Rio Arriba, and Sandoval Counties, New Mexico.

CASE 7273: Application of Blanks Energy Corporation for an unorthodox oil well location and possible directional drilling, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval for the unorthodox location of a well to be drilled 330 feet from the South line and 900 feet from the East line of Section 16, Township 18 South, Range 35 East, South Vacuum-Devonian Pool, the S/2 SE/4 of said Section 16 to be dedicated to the well. If commercial production is not obtained at said location, applicant proposes to come back up the hole and directionally drill in a westerly direction and bottom the well in the Devonian formation at a standard location in the SW/4 SE/4 of said Section 16.

CASE 7274: Application of Bass Enterprises Production Company for directional drilling, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks authority to directionally drill its James Ranch Unit Well No. 13 from an unorthodox surface location 660 feet from the South line and 1340 feet from the East line of Section 36, Township 22 South, Range 30 East, in such a manner as to bottom said well in the Morrow formation at a standard location at least 660 feet from the South line and 1980 feet from the West line of Section 31, Township 22 South, Range 31 East, the S/2 of said Section 31 to be dedicated to the well.

CASE 7275: Application of S. P. Yates for compulsory pooling, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an order pooling all mineral interests in the Wolfcamp-Pennsylvanian formations underlying the N/2 of Section 21, Township 19 South, Range 27 East, to be dedicated to a well to be drilled at a standard location thereon. Also to be considered will be the cost of drilling and completing said well and the allocation of the cost thereof as well as actual operating costs and charges for supervision, designation of applicant as operator of the well, and a charge for risk involved in drilling said well.

CASE 7263: (Continued from June 3, 1981, Examiner Hearing)

Application of Yates Petroleum Corporation for amendment of Order No. R-5527, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the amendment of Division Order No. R-5527, which approved an unorthodox Morrow location, to permit the recompletion of its Blevins "IK" Well No. 1 in Unit D of Section 35, Township 17 South, Range 26 East, as an unorthodox gas well location in all Wolfcamp and Pennsylvanian formations.

CASE 7276: Application of Mobil Producing Texas & New Mexico Inc. for the extension of the vertical limits of the Langlie Mattix Pool, Lea County, New Mexico. Applicant, in the above-styled cause, seeks the contraction of the vertical limits of the Jalmat Pool and the upward extension of the vertical limits of the Langlie Mattix Pool to the following depths underlying the following 40-acre tracts in Township 25 South, Range 37 East: NE/4 SE/4 of Section 4: 3327 feet; NE/4 SW/4 of Section 3: 3215 feet; and NE/4 NW/4 of Section 15: 3206 feet.

CASE 7277: Application of Holly Energy, Inc. for an unorthodox oil well location, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks approval for the unorthodox location of its Beeson Well No. 2 to be drilled 1100 feet from the North line and 2300 feet from the West line of Section 29, Township 17 South, Range 30 East, Grayburg-Jackson Pool, the NE/4 NW/4 of said Section 29 to be dedicated to the well.

CASE 7278: Application of Pollution Control, Inc. for an oil treating plant permit, Lea County, New Mexico. Applicant, in the above-styled cause, seeks authority for the construction and operation of an oil treating plant for the purpose of treating and reclaiming sediment oil at a site in the E/2 NW/4 of Section 18, Township 20 South, Range 33 East.

Re: Application for Downhole Commingling
Apache #3-E Well (Basin Dakota Pool and
Wild Horse Gallup Pool)
Rio Arriba County, New Mexico

Dear Mr. Ramey:

Enclosed please find three copies of the above referenced Application.

I previously verbally requested this matter be placed on the June 17, 1981 Docket and was advised by the New Mexico Oil Conservation Division that this request would be honored. I was also advised that written application must be filed with the NMOCD on or before June 7, 1981.

Please advise if you need any further information.

Sincerely,

Tommy Roberts

OIL CONSERVATION DIVISION

STATE OF NEW MEXICO

IN THE Matter of the Application of Jerome P. McHugh for Downhole Commingling of the Apache #3-E Well in Rio Arriba County, New Mexico

Case 7282

APPLICATION

Pursuant to Rule 303 C of the Rules and Regulations of the State of New Mexico Oil Conservation Division, The Applicant, Jerome P. McHugh by and through its agent, Thomas A. Dugan, hereby makes application for approval of downhole commingling in the well bore of the Apache #3-E Well in Rio Arriba County, New Mexico.

The Applicant further states:

1. The Operator of the Apache #3-E Well will be the Applicant, Jerome P. McHugh, whose address is P.O. Box 208, Farmington, NM 87401.

2. The Apache #3-E Well will be located on Jicarilla Tribal Contract No. 98 insofar as said lease covers the following described lands:

Township 26 North, Range 3 West, NMPM
Section 19: SE/4 NE/4 (Basin Dakota Pool)
Section 19: SE/4 NE/4 (Wild Horse Gallup Pool)
Rio Arriba County, New Mexico

3. The legal location of the well will be as follows:

Township 26 North, Range 3 West, NMPM
Section 19: Unit Letter H
Rio Arriba County, New Mexico

4. The Apache #3-E Well is not currently dually completed in the Basin Dakota Pool and the Wild Horse Gallup Pool.

5. The Apache #3-E Well will be capable of only low marginal production from the Basin Dakota Pool, and will be capable of only low marginal production from the Wild Horse Gallup Pool.

6. The ownership of the above mentioned Pools is common.

7. The proposed commingling from the above Pools will result in recovery of additional hydrocarbons, the prevention of waste and the protection of correlative rights.

8. All operators of leases offsetting the dedicated acreage for this well, the U.S. Geological Survey and the Supervisor of the District III Office of the New Mexico Oil Conservation Division have been mailed a copy of this Application.

WHEREFORE, the Applicant requests this Application be set for hearing on June 17, 1981, and that after said hearing the New Mexico Oil Conservation Division grant this Application by giving approval to the downhole commingling of the Apache #3-E Well in Rio Arriba County, New Mexico.

Respectfully submitted,

Thomas A. Dugan

STATE OF NEW MEXICO
ENERGY AND MINERALS DEPARTMENT
OIL CONSERVATION DIVISION

IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
DIVISION FOR THE PURPOSE OF
CONSIDERING:

CASE NO. 7282

Order No. R-6221

APPLICATION OF JEROME P. McHUGH

FOR DOWNHOLE COMMINGLING, RIO ARRIBA

COUNTY, NEW MEXICO.

ORDER OF THE DIVISION

BY THE DIVISION:

This cause came on for hearing at 9 a.m. on June 17, 19 81, at Santa Fe, New Mexico, before Examiner Daniel S. Nutter.

NOW, on this _____ day of June, 19 81, the Division Director, having considered the testimony, the record, and the recommendations of the Examiner, and being fully advised in the premises,

FINDS:

(1) That due public notice having been given as required by law, the Division has jurisdiction of this cause and the subject matter thereof.

(2) That the applicant, Jerome P. McHugh, is the owner and operator of the Apache Well No. 3-E, located in Unit H of Section 19, Township 26 North, Range 3 West, NMPM, Rio Arriba County, New Mexico.

(3) That the applicant seeks authority to commingle Wildhorse-Gallup and Basin-Dakota production within the wellbore of the above-described well.

(4) That from the Wildhorse-Gallup zone, the subject well is expected to be capable of low marginal production only.

(5) That from the Basin-Dakota zone, the subject well is expected to be capable of low marginal production only.

(6) That the proposed commingling may result in the recovery of additional hydrocarbons from each of the subject pools, thereby preventing waste, and will not violate correlative rights.

(7) That the reservoir characteristics of each of the subject zones are such that underground waste would not be caused by the proposed commingling provided that the well is not shut-in for an extended period.

(8) That to afford the Division the opportunity to assess the potential for waste and to expeditiously order appropriate remedial action, the operator should notify the Aztec district office of the Division any time the subject well is shut-in for 7 consecutive days.

(9) That in order to allocate the commingled production to each of the commingled zones in the subject well, 50 percent of the commingled oil and gas production should be allocated to the Wildhorse-Gallup zone, and 50 percent ~~of the commingled production~~ to the Basin-Dakota zone.

~~(ALTERNATE)~~

~~(9) That in order to allocate the commingled production to each of the commingled zones in the wells, applicant should consult with the supervisor of the Aztec district office of the Division and determine an allocation formula for each of the production zones.~~

IT IS THEREFORE ORDERED:

(1) That the applicant, Jerome P. McHugh, is hereby authorized to commingle Wildhorse-Gallup and Basin-Dakota production within the wellbore of the Apache Well No. 3-E, located in Unit H of Section 19, Township 26 North, Range 3 West, NMPM, Rio Arriba County, New Mexico.

~~(2) That the applicant shall consult with the supervisor of the Aztec district office of the Division and determine an allocation formula for the allocation of production to each zone in each of the subject wells.~~

~~(ALTERNATE)~~

(2) That 50 percent of the commingled oil and gas production shall be allocated to the Wildhorse-Gallup zone and 50 percent ~~of the commingled production shall be allocated~~ to the Basin-Dakota zone.

(3) That the operator of the subject well shall immediately notify the Division's Aztec district office any time the well has been shut-in for 7 consecutive days and shall concurrently present, to the Division, a plan for remedial action.

(4) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.
