TESTIMONY AND EXHIBITS OF

R.W. PHILLIPS

TESTIMONY OF R.W. PHILLIPS

Q. Would you please state your name, where you reside, by whom you are employed and in what capacity?

A. My name is R.W. Phillips, I live in Houston and I am employed by Shell Oil Company as a staff production engineer.

Q. Have you previously testified before the Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you briefly describe your educational background and employment experience?

A. I received a B.S. in Mechanical Engineering and a B.S. in Petroleum Engineering from Texas A&M University in 1949. I joined Shell in August of 1949. I have had production engineering type assignments for Shell in Elk City, Oklahoma; Wichita, Kansas; Ardmore, Oklahoma; Oklahoma City; Denver; New Orleans, and Houston. I am a Registered Professional Engineer in the States of Colorado and Louisiana.

Q. Do your duties as production engineer for Shell include responsibilities for Shell's operations in New Mexico and specifically the North Hobbs Unit under discussion today?

A. Yes, they do.

Q. Are you familiar with Shell Oil Company's application in Case Nos. 6652 and 6653?

A. Yes, I am. I have been charged by Shell with the job of coordinator of engineering with responsibility for coordinating the project planning in connection with unitization efforts. In this capacity, I have reviewed the wells to be included in the North Hobbs Unit Area as to their current completion and their proposed utilization in the unit operation. I have also coordinated engineering efforts toward the implementation of this water injection project.

Q. Mr. Chairman, are the witness' qualifications acceptable?

A. [Await answer, assume they are].

Q. I refer you now to what has been marked as Shell's Exhibit No. 23 and ask you to identify it.

A. Exhibit No. 23 is a location plat which shows the following:

1. the location of the proposed injection wells in the Unit Area;

2. the location of all other wells within a radius of two miles from the proposed injection wells;

3. the formation from which these wells are producing or have produced; and

4. the lessees within a radius of two miles from the proposed injection wells.

At the bottom of this Exhibit there exists a legend which shows the status of all wells shown on the plat, for example,

whether a well is a proposed injector, or is plugged and abandoned or what have you. You will also note on the Exhibit on the wall that we have outlined the Hobbs City Limits in red.

Q. Now I refer you to what has been marked as Shell's Exhibit No. 24 and ask you to identify it.

A. Exhibit No. 24 is the well numbering system proposed for the North Hobbs Grayburg-San Andres Unit. This Exhibit has two parts. The first part is a plat showing the method for numbering the unit wells. For example - there are no sections in the Unit that have the same number. Therefore the base unit number is the section's number as shown in the enlargement of Section 28. The individual wells within the section are identified by rows and tiers which match the established 40 acre proration units in which the well or wells are located. The enlargement identifies well No. 28-241. The well is located in Section 28, in Row 2, Tier 4 and is the only well located in this proration unit. If there was another well in this same proration unit, it would be identified as well No. 28-242.

The second part of this Exhibit is a tabulation showing the unit wells identified both by the proposed numbering system and also by the operator.

Q. I now refer you to what has been marked as Shell's Exhibit Nos. 25 and 26 and ask you to identify them.

A. Exhibit No. 25 is a diagrammatic sketch of all wells to be converted to injection wells. These sketches show all casing

string diameters and setting depths, quantities of cement used and tops of cement, completion intervals and total depth of each well. A tabular summary of all wells to be converted to injection is attached as part of this Exhibit and shows the current operator and well number and the proposed unit well number.

Exhibit No. 26 is a series of three different diagrammatic sketches which illustrate the three types of typical completions of producers which we anticipate converting to injectors. These sketches show tubing diameters and packer setting depths. In addition, these sketches show that these injectors will have corrosion inhibited inert fluid in the tubing-casing annulus and that the tubing will be internally lined with a non-reactive corrosion preventing coating. Provisions will be made for monitoring injection pressure and tubing-casing annulus pressures in order to detect any leaks that might occur.

Q. Now I refer you to what has been marked for identification as Shell's Exhibit No. 27 and ask you to identify it.

A. Exhibit No. 27 is a tabulation of wells to be drilled and their proposed location including the unit well number of each of these wells and the proposed use of these wells.

Q. Now I refer you to what has been marked for identification as Shell's Exhibit No. 28 and ask you to explain it.

A. Exhibit No. 28 is a series of four diagrammatic sketches showing how the newly drilled injectors and producers will be completed. In addition, these sketches show that the

injectors will have non-reactive internally lined corrosion protected tubing with a packer set 100 ft. above the upper most perforation. The sketches further show that the tubing-casing annulus will be filled with a corrosion inhibited inert fluid and provision will be made for monitoring injection pressure and tubing-casing annulus pressure.

Both producers and injectors will have a minimum of 350 ft. of surface casing and all casing strings will be cemented to the surface.

Q. Were all available logs with respect to wells proposed for conversion to injection within the Unit previously given to the Commission?

A. Yes they were, under the original application of August 15, 1979.

Q. At this time, Mr. Chairman, I request that the Commission take administrative notice that all these logs were submitted with Shell's application in Case No. 6653 and that the Commission make them a part of the record in these cases.

A. [Await Commission action.]

Q. Are there any wells proposed for conversion to injection for which no logs were available and in this connection, I refer you to what has been marked for identification as Shell's Exhibit No. 29.

A. Yes, there are six such wells and Exhibit No. 29 is a tabulation of these six producers proposed to be converted to injectors for which no logs are available.

Q. I now refer you to what has been marked for identification as Shell's Exhibit No. 30 and ask you to identify it.

A. Exhibit No. 30 is a tabular summary for all wells which penetrate the injection zone and which are located within one-half mile of the proposed injection wells. The tabulation consists of four parts: Part One is a tabulation of all proposed unit wells; Part Two is a tabulation of all active wells completed below the Grayburg-San Andres interval and within the unit boundary; Part Three shows all active wells outside the unit boundary; and Part Four shows all plugged wells. The tabular summary shows all casing strings setting depths, amount of cement used, cement tops, total depth, producing interval and well indentification and location.

Q. I now refer you to what has been marked for identification as Shell's Exhibit No. 31 and ask you to identify it.

A. Exhibit No. 31 is a series of diagrammatic sketches of each plugged and abandoned well which penetrates the injection zone and is located within one-half mile radius of the proposed injectors. These sketches show the position of all cement plugs placed in the well bore during abandonment work.

Q. Now I refer you to what has been marked as Shell's Exhibit No. 32 and ask you to describe it.

A. Exhibit No. 32 is a copy of the water contract that Shell successfully negotiated with the City of Hobbs, New Mexico. The contract provides for the purchase of treated waste

water which will be used for injection water in the Pressure Maintenance Project. Our initial term contract with the City of Hobbs provides for the purchase of 50,000 barrels of water per day at a cent and half per barrel and means an annual income to the City of Hobbs of $274,000.

Q. Do you plan to use any other water source for injection in your Pressure Maintenance Project?

A. Yes, we plan to use water produced by unit operations. We will have about 20,000 barrels of water per day available from this production and therefore will plan to use a total of 70,000 barrels of water per day initially for injection.

Q. I now refer you to what has been marked for identification as Shell's Exhibit No. 33 and ask you to identify it.

A. Exhibit No. 33 is a list of the proposed Special Rules and Regulations for the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project. The proposed rules encompass the method for allowable calculations, establishing drilling well locations, completion of newly drilled and converted wells, restrictions on water injection, monitoring wells for problems, and investigation of formation isolation integrity in injection wells.

Q. It is apparent that the proposed Unit Area for the North Hobbs Grayburg-San Andres Unit does not encompass the entire Hobbs Grayburg-San Andres Pool in Lea County, New Mexico, but only a part thereof. Have there been any negotiations re-

garding the development of line agreements with owners or operators of other properties within the pool, but outside the proposed Unit Area?

A. Yes. There are only two water injection projects which offset the proposed Unit Area. One of them is the Moranco Rice-Hardin Waterflood Project to the north and the other is the Amoco Operated South Hobbs Grayburg-San Andres Unit on the south. We are in the process of negotiating line agreements with both Moranco and Amoco. In the case of the Moranco Rice-Hardin Waterflood Project, we propose to convert to water injection the following wells in the North Hobbs Unit: Well No. 13-331, which is currently Shell-Rice 4; Well No. 18-131, the current Amerada-Hardin 3; Well No. 18-311, the current Gulf-Hardin 7; and Well No. 13-221, the current Conoco-State "B4". Two of these wells are not included in our current application. We will need to obtain the Unit working interest owners' approval for the conversion of these two additional wells and upon securing that approval, we will apply to the Division for administrative approval for these additional injectors.

Q. Do you have an opinion as to whether the North Hobbs Unit operations will have an adverse effect upon other portions of the Hobbs Grayburg-San Andres Pool?

A. With the completion of the North Hobbs Unit, there will be three water injection programs within the Hobbs Pool which will provide proper protection for all parties. In addition,

either the Special Rules and Regulations for the North Hobbs Unit or line agreements will further assure that there will be no adverse effect upon other portions of the Hobbs Pool.

Q. I now refer you to what has been marked for identification as Shell's Exhibit No. 34 and ask you to explain it.

A. Exhibit No. 34 is a diagram depicting the history of the efforts that have gone into developing the project and the projected schedule for implementation of the project.

The top portion of the diagram depicts the work of the Technical Committee and the negotiations of the working interest owners since initial efforts began in July, 1973. This top portion of the diagram also shows the time allocated for planning the unit implementation and the anticipated effective date of unitization.

The second line from the top of the diagram represents the time involved in searching, locating, negotiating and securing a source of make-up water. As I've already indicated, the make-up water will be obtained from the City of Hobbs.

The third line from the top reflects time and effort spent in the planning involved in the design of the production, injection and water source systems and the acquisition of sites and rights-of-way to accomodate these plans.

The bottom line of the diagram represents the planning and effort involved in developing the details of the drilling and well workover programs necessary for the implementation of the Pressure Maintenance Project.

This Exhibit graphically illustrates what the testimony that you've heard today clearly shows, that the magnitude and complexity of this project have been nothing less than monumental. Mr. Campbell has explained what efforts were involved in determining who had ownership interests in the proposed Unit Area and what efforts were involved in locating, contacting and obtaining the consent of the incredibly numerous royalty owners and working interest owners involved. Mr. Lancaster has described the Technical Committee's arduous four-year task of gathering the necessary technical data with accuracy, developing a method of evaluating that data, and in turn compiling that data into the Technical Report which was accepted by all the working interest owners as a basis for their negotiations in reaching agreement as to the fair and equitable distribution of the burdens and benefits to be obtained from the production of over 55 million additional barrels of oil.

Finally, as Mr. Buck has explained, the working interest owners sat down, rolled-up their sleeves and hammered away until they were able to reach fair and equitable formulas for the sharing of these burdens and benefits.

The Exhibit also shows that the efforts just described have only set the stage for the actual implementation of the project. If our efforts here today are successful, there remains much to be done to finally realize the very significant and important gains that the project holds.

Q. Were Exhibits 23 through 34 prepared by you or under your supervision?

A. Yes, all these Exhibits, with the exception of Exhibit No. 32 were prepared by me or under my supervision. With respect to Exhibit No. 32, this represents a copy of the actual agreement that was submitted to and executed by the City of Hobbs.

AGREEMENT

This agreement made and entered into as of the 1st day of June, 1978, by and between the City of Hobbs, a municipal corporation, of Lea County, New Mexico, of the first part (hereinafter known as the City) and Shell Oil Company, a corporation, as prospective operator of the proposed North Hobbs (Grayburg-San Andres) Unit, of the second part (hereinafter known as the Consumer).

WITNESSETH

WHEREAS, the City has constructed an Industrial Water Treatment Plant that produces an effluent of industrial process water from wastewater discharged into it from the Water Reclamation Facility and from the acquifer adjacent to the present Treatment Plants in Hobbs, New Mexico, and after such water is treated it is a desirable product for the Consumer which has a need for such water and can beneficially apply it to industrial usage.

NOW, THEREFORE, for and in consideration of the mutual covenants, promises and agreements herein contained and for other good and valuable consideration, the parties hereto agree as follows:

ARTICLE I

Definitions

Section 1. The term "day" as used in this agreement shall mean a period of twenty-four (24) consecutive hours beginning and ending at seven (7:00) o'clock A.M.

Section 2. The term "month" as used in this agreement shall mean the period beginning at seven o'clock (7:00) A.M. on the first day of a calendar month and ending at seven o'clock (7:00) A.M. on the first day of the next succeeding calendar month.

Section 3. The term "year" as used in this agreement shall mean the period beginning at seven o'clock (7:00) A.M. on the first day of a month and ending at seven o'clock (7:00) A.M. on the first day of the same month of the next succeeding year.

Section 4. The term "barrel" shall mean a volume equivalent to 42 U.S. gallons.

ARTICLE II

Commencement of Deliveries

The City shall have its facilities ready to deliver industrial water to Consumer October 1, 1979 or as the necessary government permits are acquired. Consumer shall begin payments no later than January 1, 1980.

ARTICLE III

Delivery Point and Pressure

Consumer shall provide, construct and maintain all equipment, pipeline and facilities necessary to receive the industrial water at a point in the northwest corner of the City's property on the existing fourteen (14) inch pipeline at a mutually agreeable point. Pressure at the point of delivery is not guaranteed.

ARTICLE IV

Quantity

Section 1. Subject to other articles of this agreement, the minimum quantity of industrial water to be delivered and received under this contract, designated as "annual contract quantity", shall be as listed.

Minimum Annual Contract Quantity:

Contract Year	Contract Quantity (Barrels)
1	18,250,000

Optional Minimum Annual Contract Quantity:

Contract Year	Contract Quantity (Barrels)
2	18,250,000
3	17,520,000
4	17,160,000
5	16,790,000
6	16,430,000
7	12,050,000
8	10,950,000
9	10,950,000
10	7,300,000
11	3,480,000

Optional Minimum Annual Contract Quantity (Continued)

Contract Year	Contract Quantity (Barrels)
12	5,480,000
13	3,650,000
14	3,650,000
15	3,650,000
16	3,650,000
17	3,650,000
18	3,650,000
19	3,650,000
20	3,650,000

Section 2. The Consumer shall not be required to take a continuous equal daily flow of industrial water and the City will not be required to produce a daily minimum quantity of industrial water provided the minimum quantity available for delivery during each monthly period will equal the amount of water that the Consumer covenants to purchase. Unless the City is provided with a tentative schedule of water demand by the Consumer, and acceptable to both parties, it will be assumed that monthly demand will be 1/12 of annual contract quantity.

Section 3. The Consumer shall have the first call on any quantity in excess of contract amounts of industrial water, at the existing contract price, that the City has available for sale, excepting such amounts as may be committed by contracts with other consumers and excepting such excess quantities as may be delivered under contracts heretofore entered into with other consumers.

Section 4. It is appreciated by both parties to this agreement that mechanical failures are possible and that production and delivery problems may be encountered by the Consumer in its pipeline system or injection wells and each agrees to cooperate with the other in efforts to remedy any system failures.

ARTICLE V

Quality

The City will provide industrial processed water with the following minimum quality standards.

Parameter	Maximum Concentration
Cl_2	0.5 Mg/L
SS	25 ppm
Particle Size	25 Microns

ARTICLE VI

Metering

Consumer, at its sole cost, risk and expense shall install and maintain at the point of delivery on the City's property a flow meter of sufficient size and type to measure the contracted quantities of industrial water. Readings shall be taken daily by the City and will be available to the Consumer at its request. These readings will be used to compute the quantity for the billing period.

If for any reason, any of the measuring equipment is out of service, or out of repair, so that the volume of industrial water purchased can not be ascertained or computed from readings thereof, the volume of industrial water purchased during the period such equipment is out of service or repair shall be estimated and agreed upon by the parties hereto on the basis of the best data available.

ARTICLE VII

Price

Section 1. The City will sell and the Consumer will purchase the industrial water quantities indicated in Article IV based on a minimum monthly rate of one-twelfth (1/12) the annual quantity and a price of one and one-half cents (1-1/2¢) per barrel.

Section 2. So long as the Consumer is not in default, any minimum quantity of industrial water paid for but not taken in any monthly period may be accumulated and taken in any succeeding monthly period during the term of the contract at no additional cost to the Consumer, provided, that the City will not be required to produce such industrial water over and above its normal operating capacity to meet such accumulated demand.

Section 3. The City should have available for consumption at the point of discharge into Consumer's facilities, an amount of water equal to the quantity the Consumer agrees to purchase monthly. Any failure of the City to produce and have available such quantity of industrial water during any monthly period shall excuse the Consumer from its covenant to pay the minimum monthly charge for that month, the Consumer being liable only for the quantity consumed.

Section 4. Subject to all other provisions in this Article, Consumer shall pay, or cause to be paid, all taxes that may be appropriate from this sale.

ARTICLE VIII

Term

Section 1. The Consumer shall purchase the mentioned minimum quantities of industrial processed water for a minimum period commencing when Consumer is ready to receive such water, but not later than the date indicated in Article II, and ending December 31, 1980.

Section 2. The Consumer shall have, and the City hereby grants to the Consumer, the right at its option, at any time prior to six (6) months before the expiration of the agreement, to renew and extend this agreement for an additional term of two (2) years or more, and for successive such terms thereafter. In case the Consumer elects to renew and extend this agreement it shall signify its election by written notice mailed to the Hobbs City Manager within the time above limited. All terms, conditions and covenants contained in this agreement shall be applicable to such extensions, excepting that the annual contract quantity may be adjusted downward by Consumer and excepting that the price per barrel of water may be adjusted upward or downward based on any increase or decrease in operational costs or capital investment to supply such water. For purposes of such price adjustment, only such direct operational costs and capital investments as are necessary for production and availability of industrial water at the City's Industrial Water Treatment Plant shall be considered, and only a prorata portion of such costs and investments based on the total quantities of water produced and available (whether or not sold) at said

plant shall be attributed to water sold under this agreement. Consumer shall have a minimum of ninety (90) days notice and be supplied all records and/or design and economic data pertinent to increases in operational costs and additional capital investments and full information as to the total quantities of water produced and available at the plant.

Section 3. If the Consumer should not use the minimum contracted quantities of industrial water in the initial contract period ending December 31, 1980, or in any subsequent contract period, the unused portion will be carried into the next succeeding contract period with the Consumer paying the excess of the current unit (per barrel) price over the previous contract price and using this quantity of industrial water as a credit against the minimum annual contract quantity during the current contract period, with such credit quantity being distributed equally over the number of months involved in the current contract period.

ARTICLE IX

Payment

The Consumer shall pay monthly, within thirty (30) days of billing, for the quantity of industrial processed water consumed during the calendar month; however, at no time shall the cummulative amount paid be a smaller fraction of the total year's contract price than the fraction of the year which has expired. Consumer, at its request, may make monthly payments of 1/12 minimum annual quantities with a six-month adjustment period.

ARTICLE X

Force Majeure

Section 1. The term "force majeure" as employed herein shall mean Act of God, strikes, lockouts, or other industrial disturbances, act of the public enemy, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrests and restraints, and orders of the government, either Federal or State, civil or military, civil disturbances, explosions, sabotage, malicious mischief, breakage or accident to machinery or lines of pipe, freezing of wells or lines of pipe, temporary failure of water supply, temporary or permanent plugging of injection wells, inability of any party hereto to obtain

necessary materials, supplies or permits due to existing or future rules, regulations, orders, laws or proclamations of governmental authorities (both Federal and State), including both civil and military, and any other causes, whether of the kind herein enumerated or otherwise, not reasonably within the control of the party claiming suspension of obligations by reason of force majeure.

Section 2. It is understood and agreed that the settlement of strikes or other labor difficulties shall be entirely within the discretion of the party having the difficulty and that any requirement that force majeure shall be remedied with all reasonable dispatch shall not require the settlement of labor difficulties by acceding to the demands of the opposing party when such course is inadvisable in the discretion of the party having the difficulty.

Section 3. In the event either party hereto is rendered unable, wholly or in part, by force majeure to carry out its obligations under this contract, it is agreed that such party shall give notice and full particulars of such force majeure in writing or by telegraph to the other party; thereupon, the obligations of the party giving the notice, so far as they are affected by force majeure, shall be suspended during, but no longer than, the continuance of the force majeure. The affected party shall use all reasonable means to remedy the force majeure, if possible, with all reasonable dispatch.

Section 4. It is specifically agreed that in the event Consumer is at any time rendered unable, by reason of any action or inaction by Federal or State governmental authorities or other force majeure, to inject into the North Hobbs (Grayburg-San Andres) Unit during any month a quantity of water equal to 1/12 of the current minimum annual contract quantity, such minimum annual contract quantity shall be reduced for the current year by the number of barrels Consumer is unable to inject during each such month. It is further agreed that if such disability continues for any period of six (6) consecutive months or more, Consumer shall have the right, at its option, to terminate this agreement effective upon written notice to the City thereof.

ARTICLE XI

Defaults

Section 1. It is covenanted and agreed that if either party hereto shall fail to perform any of the covenants or obligations imposed upon it under and by virtue of this contract, then in such event the other party hereto may, at its option, terminate this contract by proceeding as hereinafter provided.

Section 2. The party not in default shall cause a written notice to be served on the party in default stating specifically the cause for terminating this contract and declaring it to be the intention of the party giving the notice to terminate the same; whereupon, the party in default shall have thirty (30) days after the service of the aforesaid notice in which to remedy or remove the cause or causes stated in the notice for terminating the contract, and if within said period of thirty (30) days the party in default does so remedy or remove said cause, then such notice shall be withdrawn and this contract shall continue in full force and effect. In case the party in default does not so remedy or remove the cause or causes or does not indemnify the party giving the notice for any and all consequences of such breach, within said period of thirty (30) days, then, at the option of the party giving the notice, this contract shall become null and void from and after the expiration of said period.

Section 3. Any cancellation of this contract pursuant to the provisions of this Article XI shall be without prejudice to the right of the City to collect any amounts then due from the Consumer for industrial water delivered prior to the time of cancellation and shall be without prejudice to the right of the Consumer to receive any industrial water for which it has paid but has not received, although entitled thereto, prior to the time of cancellation, and without waiver of any remedy to which the party not in default may be entitled for violation of this contract.

ARTICLE XII

Miscellaneous

Section 1. Each party shall hold the other party harmless from any and all damages and claims that may arise by reason of any negligence

on the part of the indemnifying party, its agents or employees, in going about the premises in performance of this agreement; and in case any action is brought against such other party for any acts solely involving the employees or agents of the indemnifying party, the indemnifying party shall assume full responsibility for the defense thereof.

Section 2. Neither party to this agreement shall assign this agreement in whole or in part without the written consent of the other, provided that Consumer's rights and obligations hereunder may at any time be formally assigned and transferred to the current operator of the North Hobbs (Grayburg-San Andres) Unit.

Section 3. This agreement is executed by Shell Oil Company as prospective operator of the proposed North Hobbs (Grayburg-San Andres) Unit, in Lea County, New Mexico, acting for and on behalf of the unit working interest owners. It is hereby agreed that unless on or before January 1, 1980, (a) said unit has become effective, (b) this agreement has been approved by said working interest owners and (c) all necessary rights of way have been obtained by the unit, this agreement shall then terminate and be of no further force or effect unless otherwise mutually agreed by the parties hereto. If it should appear to Consumer at any time substantially in advance of said date that said conditions will not be met, Consumer shall notify the City thereof and if requested by the City, this agreement shall then be terminated by mutual agreement of the parties.

Section 4. All notices required under this agreement shall be considered as given when deposited in the U. S. Mail with sufficient postage thereon and addressed as follows:

CITY MANAGER
CITY OF HOBBS
P. O. BOX 1117
HOBBS, NEW MEXICO 88240

SHELL OIL COMPANY
P. O. BOX 991
HOUSTON, TEXAS 77001

IN WITNESS WHEREOF, the parties hereto execute this agreement as of the day and year first above written.

EXHIBIT 33

PROPOSED

SPECIAL RULES AND REGULATIONS
FOR THE
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
PRESSURE MAINTENANCE PROJECT

RULE 1. The project area of the North Hobbs (Grayburg-San Andres) Unit Pressure Maintenance Project shall consist of those basic project areas which are those proration units within the boundaries of the North Hobbs (Grayburg-San Andres) Unit upon which is located an injection well and any directly or diagonally offsetting proration unit which contains a producing well.

RULE 2. The project area shall receive a project area allowable, and said project area allowable shall be the sum of the basic project area allowable plus the water injection credit allowable.

RULE 3. The basic project area allowable shall be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the project area.

RULE 4. The water injection credit allowable shall be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable}} - 1 \right] \times \text{Basic Project Area Allowable}$$

Reservoir Voidage

The water injection credit allowable shall be calculated in accordance with the procedures and parameters depicted on Attachments "A" and "B".

In no event shall the water injection credit allowable be less than zero, i.e., negative numbers derived from application of the above formula shall be ignored.

RULE 5. The weighted average project area reservoir pressure shall be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

RULE 6. The project area allowable may be produced from the wells within the project area in any proportion provided, however, that any proration unit situated on the boundary of the North Hobbs (Grayburg-San Andres) Unit which proration unit is not directly or diagonally offset by a Grayburg-San Andres injection well outside said North Hobbs Unit or on the North Hobbs Unit boundary shall not be permitted to produce in excess of 80 barrels of oil per day.

RULE 7. Those wells within the North Hobbs Unit Area that are not included within the project area as defined above shall be prorated in accordance with the Rules and Regulations of the Division.

RULE 8. The Division Director shall have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the unit boundary, provided however, no unorthodox location

shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the outer boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

RULE 9. No well shall be placed on water injection in the North Hobbs Unit Area unless the Division Director has approved such well for injection. Applications for injection approval shall be filed in accordance with Rule 701 of the Division Rules and Regulations.

RULE 10. Each newly drilled injection or producing well shall be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet) or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and "production" casing run to total depth (approximately 4500 feet) or

c. Other procedures may be used after receiving administrative approval of the Director of the Oil Conservation Division.

All casing strings shall be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the "production" string may be cemented back into the base of the intermediate casing.

RULE 11. Injection shall be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing shall be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well shall be filled with an inert fluid and a surface pressure gauge or approved leak detection device shall be attached to the annulus.

RULE 12. The injection wells or system shall be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon showing by the unit operator that such higher pressure will not result in fracturing of the confining strata.

RULE 13. All wells within the project area shall be equipped with risers or in some other acceptable manner as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

RULE 14. The unit operator shall immediately notify the Supervisor of the Hobbs District Office of the Division of the failure of the tubing or packer in any of said injection wells, the leakage of water or oil from or

around any producing well, the leakage of water or oil from or around any plugged and abandoned well within the project area, or any other evidence of fluid migration from the injection zone, and shall take such timely steps as may be necessary or required to correct such failure or leakage.

RULE 15. Prior to placing any well on injection, other than a newly drilled well drilled under provision of Rule 9, a cement bond log shall be run on said well. Copies of all cement bond logs shall be sent to the Hobbs District Office of the Division. If any well is found to have an inadequate casing-cement bond, such measures as may be necessary to prevent leakage or migration of fluids from the Grayburg-San Andres reservoir shall be taken before placing the well on injection.

Where multiple casing strings prevent technical interpretation of bonding, the cement bond will be deemed adequate when the log shows acoustic coupling with the formation. In addition, radioactive tracer surveys, or any other acceptable survey presently available or developed in the future, that show no fluid migration out of the Grayburg-San Andres reservoir will be acceptable evidence of bonding.

NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
PRESSURE MAINTENANCE PROJECT

HOBBS (GRAYBURG-SAN ANDRES) POOL, LEA COUNTY, NEW MEXICO

WATER INJECTION CREDIT ALLOWABLE CALCULATION DATA

$$\text{Water Injection Credit Allowable} = \left[\frac{W_i - W_p}{BPAA \quad B_o + \frac{(R_p - R_s)}{(1{,}000)} B_g} - 1 \right] \times BPAA$$

W_i = _____ = Average daily water injection during previous month, barrels per day, project area only.

W_p = _____ = Average daily water produced during previous month, barrels per day, project area only.

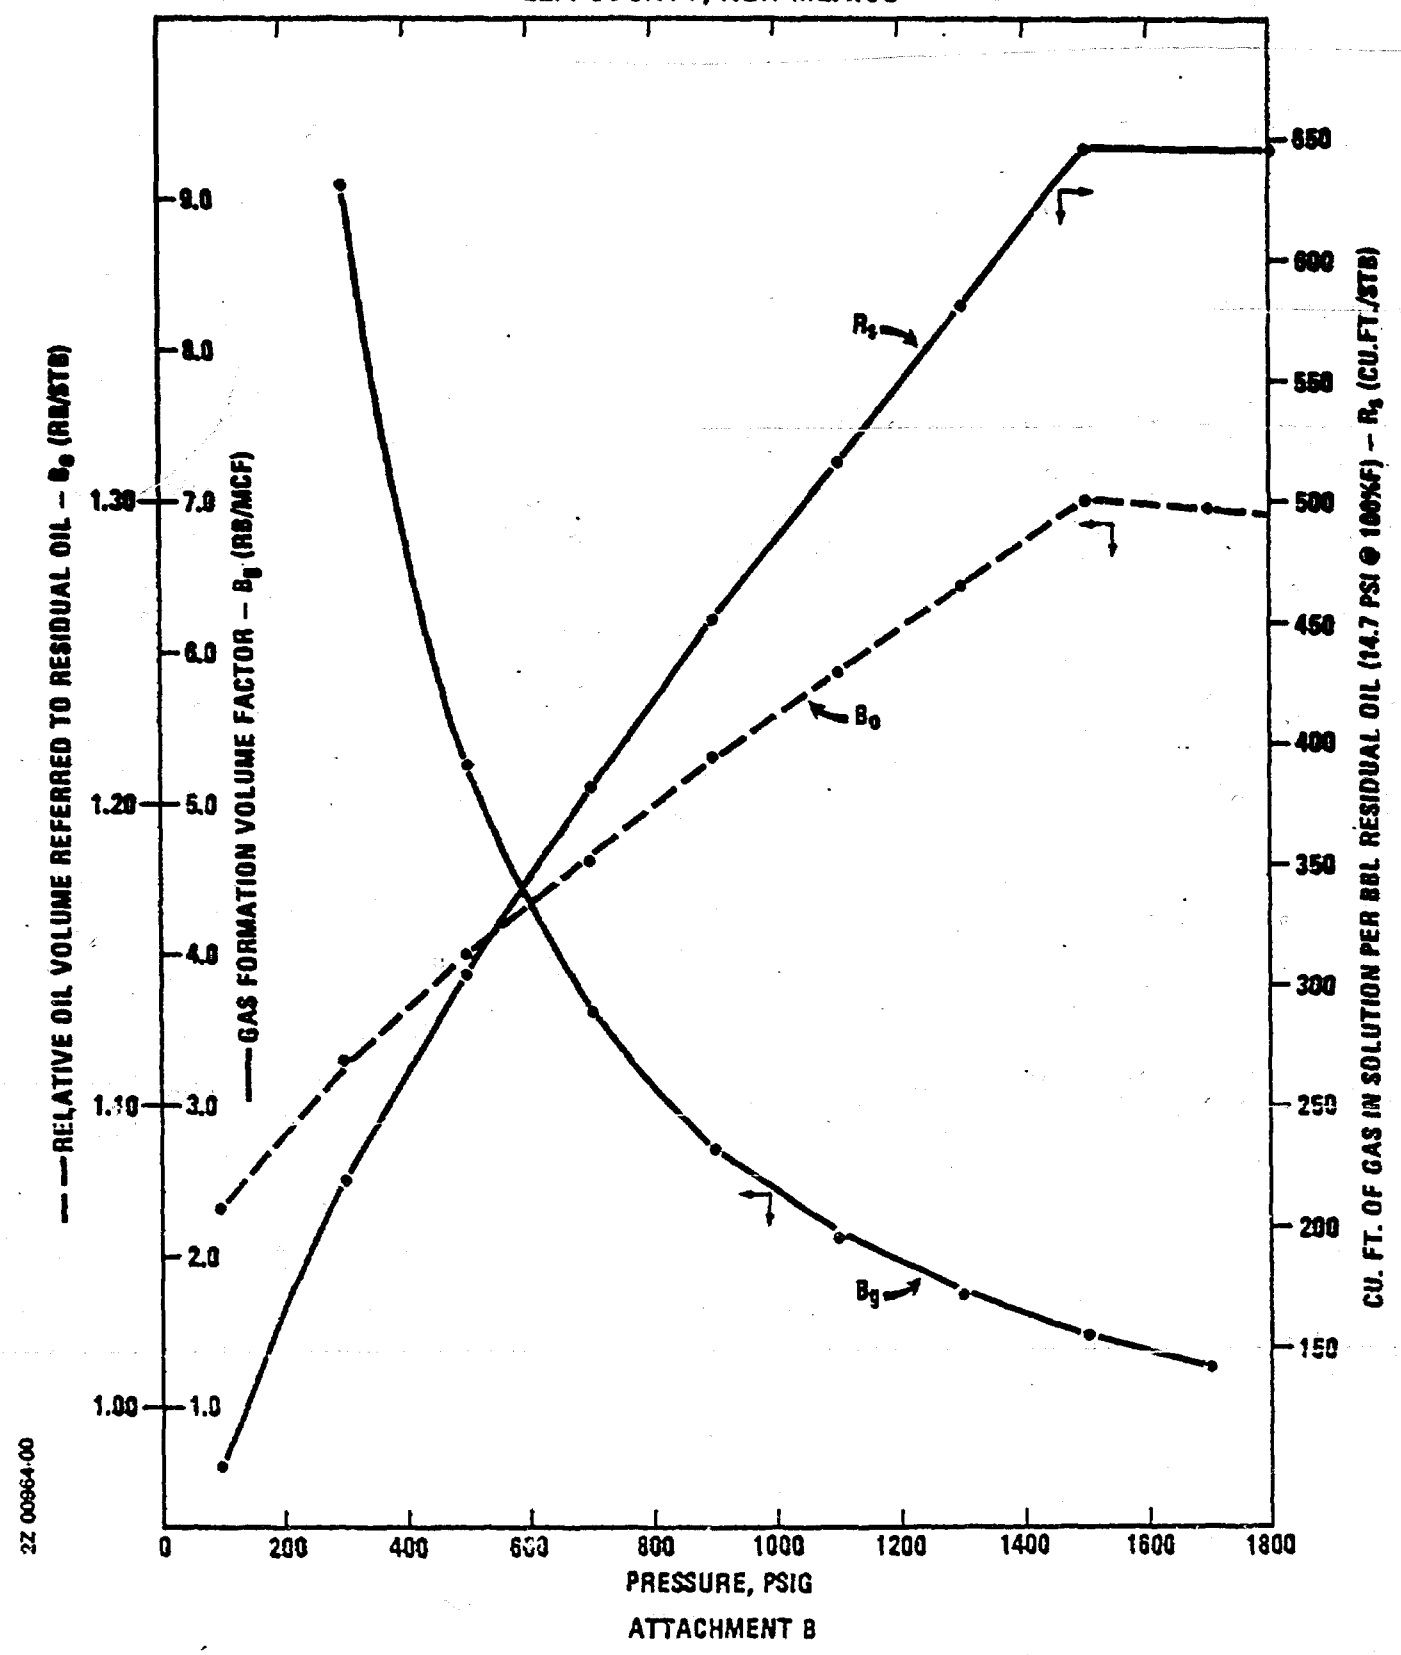
BPAA = _____ = Basic project area allowable, 80 bopd x _____ (number of developed 40-acre tracts in project area).

P = _____ = Weighted average project area reservoir pressure, psig, from _____, 19__, survey data.

B_o = _____ = Oil formation volume factor, reservoir barrels per stock tank barrel (Attachment B).

R_p = _____ = Producing gas-oil ratio, cubic feet per barrel for previous month.

R_s = _____ = Solution gas-oil ratio, cubic feet per barrel (Attachment B).



B_g = _____ = Gas formation volume factor, reservoir barrels per Mcf (Attachment B).

Water injection credit allowable for _____, 19__, = _____ barrels of oil per day.

TESTIMONY AND EXHIBITS OF

BILL LANCASTER

TESTIMONY OF BILL LANCASTER

Q. Would you please state your name, by whom you are employed, and where you reside.

A. My name is Bill Lancaster, I am employed by Shell Oil Company and I reside in Houston, Texas.

Q. Have you previously testified before the Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you then briefly describe your educational background and employment experience?

A. I graduated from Ohio State University in 1954, with a Bachelor of Science in Petroleum Engineering. Upon graduation, I spent two years, from 1954 to 1956, in the Air Force. In 1957, I received a Masters of Science in Petroleum Engineering from Texas A&M. In August of 1957 I was employed by Shell Oil Company. From 1957 to 1968 I worked in Shell's New Orleans Office, as a Production and Reservoir Engineer. From 1968 until 1977 I worked as a Reservoir Engineer in Shell's Rocky Mountain Division. In 1977, I was assigned to the Reservoir Engineering Section of the Mid-Continent Division, where my responsibilities include reservoir engineering work for fields in which Shell has an interest in West Texas and New Mexico.

Q. Mr. Lancaster, are you familiar with the history of the Hobbs Grayburg-San Andres Pool?

A. Yes, I am.

Q. How did you become familiar with this Pool?

A. I am now Chairman of the Technical Committee which was formed by the Working Interest Owner Committee to investigate the feasibility of initiating a pressure maintenance project for the purpose of recovering additional oil reserves in the Hobbs Grayburg-San Andres Pool.

Q. Then I take it that you are familiar with the applications in Case Nos. 6652 and 6653.

A. Yes, I am.

Q. Mr. Chairman, are the witness's qualifications acceptable?

A. (Await Answer, presumably they will be)

Q. Mr. Lancaster, I now ask you to briefly describe the history of this Pool, and in that connection I ask you to refer to what has been marked as Shell Exhibit No. 13.

A. Exhibit No. 13 is a graph showing the production history of the entire Hobbs Grayburg-San Andres Pool from its inception through 1975. As is shown, the Pool was discovered in 1928, and by the end of 1930 was producing about one million barrels of oil per month from 135 wells. This high production rate continued until 1935 when the rate was curtailed because of the reduced demand for oil.

Although a number of wells within the Pool continued to produce at maximum allowables after 1935, declines in production capacity were observed in most wells as a result of a continuing

decline in these wells' bottom hole pressures. By 1975, bottom hole pressures had declined from an initial 1515 pounds per square inch absolute in the Pool to approximately 400 pounds per square inch absolute in what I shall refer to as the Grayburg study zones, approximately 950 pounds per square inch absolute in the San Andres study zone I, and to approximately 800 pounds per square inch absolute in the San Andres study zones II and III. I should mention at this time that the Technical Committee decided it could better describe the past and future performance of the complex reservoir by dividing it into six study zones. In any event, this decline in production and pressure prompted operators to consider ways of supplementing the natural reservoir drive mechanisms so as to achieve greater ultimate recovery from the reservoir.

In 1970, Amoco initiated efforts to unitize the entire Hobbs Grayburg-San Andres Pool. In 1971, Moranco began injecting water into the Grayburg study zones in the northern portion of the Pool on the Moranco-operated Rice and Hardin leases. In 1973, Amoco abandoned its efforts to unitize the entire Hobbs Pool when working interest owners could not reach agreement on a participation formula. Nevertheless, Amoco continued its unitization efforts and subsequently formed a voluntary unit which comprised the southern third of the Pool. This unit became effective on January 1, 1975. When Amoco abandoned its efforts to unitize the entire Pool, Shell Oil Company was selected unit

expeditor for the remaining northern portion of the Pool by the working interest owners. Shell has continued its unitization efforts to date.

Q. What were the initial unitization efforts undertaken after Shell was selected unit expeditor for the northern portion of the Hobbs Pool?

A. All operators within this northern portion of the Hobbs Pool were asked to invite the working interest owners to a meeting on July 31, 1973. At this meeting our Technical Committee was formed by the working interest owners. This Technical Committee was to be comprised of engineering representatives of all working interest owners.

Q. What instructions, if any, were given to the Technical Committee by the Working Interest Owners Committee, and in this connection I refer you to what has been marked as Shell's Exhibit No. 14.

A. As is shown on this Exhibit, the Technical Committee was charged by the Working Interest Owners Committee with the task of determining the feasibility and profitability of instituting a pressure maintenance project for the northern portion of the Hobbs Grayburg-San Andres Pool. In addition, ~~our~~ committee was charged with the responsibility of developing values, tract by tract, for the parameters set forth on this Exhibit. This was done so that the Working Interest Owners Committee could develop a formula for the equitable sharing of the costs and the revenues to be derived from the pressure maintenance project.

Q. Did the Technical Committee in response to this charge determine whether or not the pressure maintenance project would be feasible and profitable?

A. Yes it did.

Q. What was the determination and what was the basis for that determination?

A. The Technical Committee made a comprehensive study of the Pool, including such parameters as the amount of oil in place, its location and its primary recovery efficiency, that is, as you know, the expected recovery from the Pool without a water injection program; and determined that significant volumes of oil would not be recovered under primary operations, and that by initiating a water injection program, there was a potential to increase the ultimate recovery by some 55 million barrels of oil. The committee also determined that a water injection program in this Pool was feasible and that such a program would be profitable and beneficial to the working interest owners and the royalty owners.

Q. Would you describe how the Technical Committee functioned in responding to the charges you just described and in this connection, I refer you to what have been marked for identification as Shell's Exhibits Nos. 15 and 16?

A. Since Amoco's prior attempt was abandoned because the working interest owners could not reach agreement on a method for allocating the Unit production based on the values assigned the

parameters and since Shell's undertaking of the unitization effort for the northern portion of the Hobbs Pool probably represented the last chance to unitize the entire northern portion of this reservoir, the Working Interest Owners Committee instructed the Technical Committee that a simple majority agreement on pertinent matters would not be sufficient, and that they were to reach agreement on these matters by a substantial majority. And if they failed in this endeavor, the Technical Committee was to present the issue to the Working Interest Owners Committee for resolution. To achieve these objectives our Committee proceeded in step by step manner so that a substantial majority agreement could be reached on each issue addressed before proceeding to the next. No decisions were reached unless there was a substantial majority concurrence.

In following these guidelines our Committee met for 22 sessions over a three and a half year period from September 1973 to March 1977. Minutes of each meeting were kept and they are compiled in Shell's Exhibit No. 15. Throughout the meetings, there was outstanding cooperation, and attendance averaged about 83% of the working interest ownership. The final outcome of all this work was the acceptance by the Working Interest Owners Committee of our Committee's Technical Report entitled "Waterflood Feasibility and Unitization Parameters" of the North Hobbs Grayburg-San Andres Unit dated April, 1977. This Technical Report is Shell's Exhibit No. 16.

Q. Did your committee develop any information concerning the geology of the northern portion of the Hobbs Pool?

A. Yes, we did. The entire Hobbs Grayburg-San Andres Pool is a northwest-southeast trending anticline about eight miles long by 3.5 miles wide. Within this Pool there exist two recognized geological strata known as the Grayburg and the San Andres. As I previously mentioned, the Technical Committee decided that breaking these strata into six study zones would facilitate the job of describing the reservoir performance. Now, as is shown on Figure 4 of the Technical Report, this anticline has some 400 feet of structural relief from the crest of the upper Grayburg at 217 feet subsea to the top of an oil-water transitional zone at 614 feet subsea. A large gas cap above 360 feet subsea initially covered the crestal or central portion of the reservoir.

Q. Would you describe for the Commission the six study zones?

A. For purposes of the technical study, the upper portion of the reservoir was divided into two study zones referred to as the upper and lower Grayburg. The total thickness of these two zones varies from 80 gross feet on the southeast flank to 200 feet on the northwest and southwest flanks of the Unit Area. Since the Grayburg is overlain by a large gas cap, most of the oil bearing reservoir is located around the flanks of the struc-

ture. Maximum oil pay development for both of these Grayburg study zones is found on the western flank, and production is from thinly interbedded sandstone, siltstone and dolomite layers, with most of the production coming from the sandstone layers.

Again, for the purposes of the technical study, the lower portion of the reservoir was divided into four study zones referred to as San Andres Zones I, II, III-upper, and III-lower. San Andres Zone I is a crystalline dolomite that is separated from the overlying productive interval by 10 to 80 feet of impermeable dolomite. This zone usually consists of two to three very porous layers, some of which are reported to be cavernous. This is the only study zone known to have experienced significant edge water influx.

San Andres Zone II is a dolomite layer 50 to 90 feet thick which is normally separated from Zone I by a thin shaley bed.

San Andres Zone III is separated from Zone II by a sandy break consisting of 10 to 20 feet of a dense sandy carbonate. Zone III is generally more thin-bedded than Zones I and II, but like Zone II is best developed on the crest of the structure. Based on core and petrophysical studies this zone was further divided into an upper and a lower study zone.

Q. In connection with its technical study, did the Technical Committee make any determinations with respect to the oil and gas in place within the Unit Area?

A. Yes, the Committee did.

Q. How were these determinations made?

A. Most of the wells completed in the Grayburg study zones were drilled in the 1930's and their logging surveys were not suitable for calculating porosity values. Therefore, to determine the oil in place for these particular zones, the Technical Committee developed net pay maps and used an average porosity value of 14 percent that had been determined from analyzing available core and log data. These oil and gas net pay maps are based on a gas-oil contact of 360 feet subsea and are included in the Technical Report as figures 8, 9, 10 and 11.

With respect to the San Andres study zones, there did exist sufficient core and log data in the San Andres intervals to enable the Technical Committee to prepare porosity-feet maps for each of the four San Andres study zones. Table 6 in the Technical Report is a summation of the petrophysical analysis used in constructing the net porosity-feet maps for each of the San Andres study zones. The resulting porosity-feet maps are included in the Technical Report as Figures 23, 24, 25 and 26. These porosity-feet maps were utilized by the Technical Committee to calculate initial oil in place on a tract by tract basis within the Unit Area.

Q. What other kinds of data did the Technical Committee develop with respect to their study?

A. The Committee developed a water-cut map for San Andres Zone I, and gas-oil ratio maps for San Andres Zones II, III-upper and III-lower, all of which are included in the Technical Report as figures 27 through 30 respectively.

Q. How was the data used in meeting the charge of the Working Interest Owners Committee?

A. The data was used as input in determining the remaining primary and secondary reserves, and in determining the economic profitability of instituting a program of water injection in the northern portion of the Hobbs Grayburg-San Andres Pool. This data would also provide a basis upon which the Working Interest Owners Committee could develop a fair and reasonable participation formula for all the working interest owners and royalty interest owners.

Q. How did the Technical Committee finally determine an estimate of primary reserves?

A. The Hobbs Grayburg-San Andres Pool is one of the last major Grayburg-San Andres reservoirs in the New Mexico-West Texas area to be unitized. Two factors that have contributed to the delay in forming a North Hobbs Unit are the complexity of this reservoir and the influx of water into the upper portion of the San Andres, both of which made estimating primary reserves very difficult. In forecasting the remaining primary performance of the North Hobbs Unit wells, the Technical Committee decided to determine the reserves on a well by well basis, separating the

producers into two groups. The first group consisted of those wells with only Grayburg production. The second group consisted of those wells with San Andres production.

Production from wells completed only in the Grayburg study zones is characterized by marginal oil rates, high gas-oil ratios and little or no water. Since these study zones were in the latter stages of depletion, the Technical Committee determined that the remaining reserves could be estimated by extrapolating recent production performance.

However, due to the complex reservoir performance observed in the San Andres study zones, production plots such as decline curves or oil cut-cumulative curves were not suitable for forecasting the reserve potential of the San Andres wells. After considering several proposed methods of determining primary reserves for these study zones, the Technical Committee elected to use a computerized reservoir simulation model because it is the most precise means of describing a complex reservoir performance of this type, and because it is able to utilize detailed well, production, reservoir and geological data effectively. Figure 31 of the Technical Report is a map of the North Hobbs Unit showing which of these two methods, extrapolation or computer simulation, was utilized in determining each well's primary reserves.

Q. What was your committee's final conclusion as to the remaining primary Grayburg reserves within the northern portion of the Hobbs Pool?

A. At the time the Technical Report was finalized, there were 78 wells completed in only the Grayburg study zones. The primary oil reserves from these wells were determined by extrapolating the five-year production trends between January 1, 1972 and January 1, 1977 to an economic limit of one barrel of oil per day per well. The well reserves were then summed by tract and the tract reserves are shown on Table 14 of the Technical Report. Using this method, the total Grayburg primary oil reserves were estimated to be 1.5 million barrels of oil as of January 1, 1977.

Q. How did you calculate the remaining primary reserves with respect to the San Andres study zones?

A. As I explained earlier, the analysis and the data necessary to make the computations with respect to the remaining primary reserves within the San Andres study zones were considerably more complex than those required for the Grayburg study zones. Figure No. 32 in the Technical Report shows the grid overlay that was used for the computer simulation model work in describing the San Andres Zones I, II and III. The model consisted of three layers of 200 blocks each, with each layer describing one of the San Andres study zones. Each of the blocks within the model was assigned particular reservoir characteristics, including zonal thickness, porosity, permeability, and initial oil, gas and water saturations. In addition, the simulation included an aquifer for the upper layer of the model to represent the water influx experienced in the San Andres Zone I.

Within the simulator program, oil, gas and water were withdrawn from each San Andres well located within the entire Hobbs Pool based on each well's reported production history. This, of course, included wells located in that southern portion of the Pool that Amoco unitized. The object was to construct a model so that the reservoir performance as calculated by the computer simulation would match the actual performance evidenced by the historical reservoir data. Once a match was obtained, a prediction of future performance was made starting in September 1976. The results of the simulation model study indicated that the San Andres primary reserves for the North Hobbs wells would be 36.6 million barrels of oil as of January 1, 1977. These well reserves estimates were then summed up by study zone, by tract and by working interest owner, and are presented in the Technical Report as Tables 16 and 23 A and B.

Q. How were the recoverable secondary reserves estimated?

A. Because of differences in reservoir quality, the secondary potential of the Grayburg and San Andres study zones was evaluated separately. Evaluation of the Grayburg secondary recovery potential was done using another reservoir simulation model study. In a depleted reservoir with relatively low permeability, as exists in this Grayburg Reservoir, the injection rates will be low, and the time required to reach maximum response can take a long time. Although there are numerous technical procedures for estimating recoveries and response

times, we believe the use of a simulation model, especially in this case, offers the most precise estimate of future performance. This simulation model consisted of 153 blocks on a 9 x 17 grid in a single layer, with wells located within the model to duplicate the results of installing an 80 acre five-spot water injection program. The reservoir input data was based on the average reservoir characteristics typical of the Grayburg study zones on the north and west flanks of the Pool.

The significant conclusions derived from this study were the following:

(1) Because of the low permeability, 5 millidarcies more or less, injection pressures on the order of 1500 pounds per square inch will be required to inject sufficient water to obtain a successful secondary recovery operation;

(2) Ultimate primary recovery will be 18.7% of the original oil in place and secondary recovery will be 14.4% of the original oil in place using a symmetrical closed 80 acre five-spot injection pattern;

(3) An 80 acre five-spot pattern, using existing wells, is economically attractive and will have a long life of approximately 36 years.

Applying the calculated secondary recovery percentage factor to the oil in place in the patterns surrounding the Grayburg injectors as shown on Figures 35 and 36 of the Technical Report resulted in a secondary recovery estimate of 6.6 million barrels

of oil for th Grayburg study zones. This is equivalent to a secondary to primary recovery ratio of 0.57. The estimated primary and secondary oil recoveries are again listed by zone on Table 16 and by tract and by working interest owner on Tables 24 A and B of the Technical Report.

Based on the simulator results, the anticipated average water injection rates will be 260 barrels of water per day per well into 40 injectors during fillup and 125 barrels of water per day per injector afterwards. This Grayburg water injection program will require approximately 90 million barrels of injection water over a ~~thirty~~-six year life, including 35 million barrels of makeup water which will be obtained through contract with the City of Hobbs. Peak Grayburg production, averaging 30 barrels of oil per day per producing well or about 1000 barrels of oil per day, will occur ten years after the water injection program begins.

Q. What methods were used to evaluate the secondary potential of the San Andres study zones?

A. First, no secondary recovery potential was attributed to San Andres Zone I because the reservoir analysis of its primary performance indicated a high recovery efficiency due to a strong natural water influx. With respect to San Andres Zones II and III, two methods were used to evaluate their secondary potential. These methods were: (1) to use nearby water injection projects in the same San Andres strata as an analogy to determine

what could be expected from the northern portion of the Hobbs Pool and; (2) to use a third computer simulation model to forecast the results of a water injection program. With respect to the analogy with other existing San Andres water injection programs, performance data on eight such projects were reviewed and volumetrically averaged on the basis of original oil in place and this study reflected an average ultimate recovery efficiency of 35% with a secondary to primary recovery ratio of 0.85. The water injection programs included in the study were mature projects having already recovered in excess of 60% of the estimated ultimate secondary oil reserve. In analyzing these analogous water injection programs, it was noted that the higher the permeability within the reservoir, the higher the anticipated secondary recovery efficiency. Only two of the projects studied had average permeabilities as high as the 28 millidarcies encountered in the San Andres portion of the Hobbs Pool and their ultimate recoveries were predicted to be 39.4 and 46.4% of the original oil in place.

In addition to the study of these analogous projects, the secondary potential and performance of the Hobbs Grayburg-San Andres Pool was evaluated using a third reservoir simulation model. The results of this model study confirmed the floodability of the San Andres and indicated that the ultimate recovery with a water injection program would be 44% of the original oil in place. Consequently, based on the results of these two

studies, the Technical Committee determined that the ultimate oil recovery efficiency with a water injection program for the San Andres Zones II and III would be 40% of the original oil in place.

Q. Did the Technical Committee adopt any recommendation with respect to the injection patterns for San Andres Zones II and III?

A. Yes. The recommended water injection patterns for the e zones was an inverted nine spot injection pattern with approximately 160 acre spacing as shown on pages 37 through 39 of the Technical Report. The injection wells were selected on the basis of both location and evidence of non-communication, behind pipe, with San Andres Zone I.

Q. Did the Technical Committee come to any conclusions with respect to the amount of secondary recovery potential based on the recommended injection pattern?

A. The Technical Committee determined that by installing 160 acre inverted nine spot patterns in the San Andres Zones II and III, the recovery efficiency would be increased from about 24% to 40% and that the ultimate oil recovery would be increased by 48.6 million barrels of oil. A breakdown of the secondary recovery by study zone is listed on Table 16 and by tract and working interest owner on Tables 24 A and B of the Technical Report.

Based on the simulation study it was determined that the San Andres production response will reach a peak of 9,000 barrels

of oil per day some eight years after injection begins. This constitutes an average of about 80 barrels of oil per day per producing well. This production forecast is based on an average water injection rate of 2,000 barrels of water per day per well into 30 injectors during fillup which will take approximately 160 million barrels of water. The total water injection requirement is estimated to be 550 million barrels, of which 80 million barrels will constitute makeup volume, and again, will be obtained from the City of Hobbs. The cumulative produced water oil ratio is expected to be 5 to 1.

Q. Mr. Lancaster, did the Technical Committee estimate remaining gas reserves?

A. Yes, the Technical Committee made estimates of both the volumes of the original gas cap gas in place and the remaining gas reserves. The gas cap volumetrics were calculated from the Grayburg net pay isopach maps and the San Andres porosity-feet maps included in the Technical Report as Figures 8, 10 and 22. For the Grayburg, the calculations included an average porosity of 14 percent based on log and core data and a water saturation of 30 percent which was derived from analyzing the available technical data. For the San Andres, our Committee used a water saturation of 22 percent, again based on the analysis of available technical data. The distribution of the calculated 54.2 billion cubic feet of gas by tract and by working interest owner is given on Tables 21 A and 21 B of the Technical Report.

In estimating the remaining gas reserves for the Grayburg, our Committee used the remaining Grayburg primary oil reserves for each tract as of January 1, 1977 and multiplied that figure by the produced gas oil ratio for each tract during the year 1976. For the San Andres, our Committee agreed to use the gas reserves as predicted by the reservoir computer simulator that predicted the San Andres primary recovery. The well by well estimates of the San Andres gas reserve were then summed up on a tract by tract basis. The remaining gas reserves for Grayburg and San Andres thus determined by the Technical Committee were 8.9 and 98.3 billion cubic feet respectively. The distribution of both the gas and oil reserves by tract and by working interest owner is given on Tables 25A and 25B respectively of the Technical Report.

Q. Mr. Lancaster, I now refer you to what has been marked Shell's Exhibit No. 17 and ask you to identify it.

A. Exhibit No. 17 is a summary of the capital requirements to install the North Hobbs water injection program in the event Shell's applications are granted. This tabulation is based on Table 17 of the Technical Report which has been revised using updated cost estimates. The Exhibit is fairly self-explanatory and identifies the various capital requirements allocated to various parts of the project. I might point out that the exhibit reflects the ultimate capital investment to be 33,000,000 dollars

which takes into account future capital requirements that will be necessary during the life of the project.

Q. Now Mr. Lancaster I refer you to what has been marked as Shell's Exhibit No. 18 and ask you to identify it.

A. Exhibit No. 18 is a production schedule for the North Hobbs Grayburg-San Andres Unit. In this exhibit, there are two production forecasts. The lower curve represents the predicted primary production performance of the North Hobbs wells without a water injection project. The upper curve represents the unit performance that we anticipate with the water injection program. It may be noted that the unit production is anticipated to increase to more than ten thousand barrels of oil per day. It is of interest to further note that the projected life of the Unit is on the order of 44 years, or approximately 10 years more than the projected life without unitization. As I have already mentioned we anticipate that this program of water injection will provide an additional 55 million barrels of oil over the life of the project which would not otherwise be recovered.

Q. Mr. Lancaster, I now refer you to Shell's Exhibit No. 19 and ask you to identify it.

A. Exhibit 19 is a tabulation demonstrating the difference in reserves and profitability with and without unitization of the northern portion of the Hobbs Grayburg San-Andres Pool. The first column on the exhibit shows the reserves and profitability

without unitization. The second column shows the same thing with unitization. The third column shows the difference between the first two columns.

You will note that the estimated remaining primary reserves as of January 1, 1980 are 30.3 million barrels of oil. This was obtained by subtracting estimated production between January 1, 1977 and January 1, 1980 of 7.8 million barrels from the primary reserve estimate given in the Technical Report of 38.1 million barrels as of January 1, 1977. The reserves of 85.5 million barrels of oil estimated to be recovered through unitized water injection operations includes the remaining primary of 30.3 million barrels plus the 55.2 million barrels of secondary reserves.

The next line on the Exhibit shows the initial and ultimate investment requirement anticipated for the water injection project. Of the total anticipated capital investment of 33 million dollars, 27 million dollars is forecast to be spent during 1980-81 and an additional 6 million dollars is forecast to be spent during the following eight years to handle the increasing volumes of oil and water.

The third line on this Exhibit shows the difference in profitabililty with and without unitization. The profitability was broken down into two calculations. The first subcategory shows profitability as undiscounted or without any consideration for the time values of revenue. The second subcategory shows profitability on a present value basis with a ten percent

discount which is a more common approach showing the effect of deferring income over an extended period of time. Consequently, as may be seen, the expected profit on an undiscounted basis for continued primary production is 405 million dollars without unitization, 917 million dollars with unitization, resulting in a net profit for this water injection project of 512 million dollars. Using the approach of calculating profitability on a discounted basis, you can again see that the profit without unitizaton is 178 million dollars, and with unitization is 302 million dollars resulting in an additional profit of 124 million dollars which reflects a 421% profit for the water injection project. As shown on the Exhibit, all profits listed do not include the payment of federal income tax.

Q. What factors were used in these calculations?

A. The reserve estimates were taken from the Technical Report with the primary reserves adjusted for estimated production from January 1, 1977 to January 1, 1980. The income schedule for these reserves was based on the production schedules shown in Exhibit No. 19. In addition to the 33 million dollars capital expenditure, the operating costs of unit operations was estimated to be an additional 100 million dollars more than the primary operating costs without unitization.

Revenue and expenditures were based on current unit values and no adjustments were made for future inflationary factors. In developing the profits to be derived from unit and non-unit operations, the following crude oil prices were used: $6.25 per barrel of oil for lower tier production, $14.98 per barrel of oil

for upper tier production and $26.00 per barrel of oil for stripper production.

Q. Mr. Lancaster, realizing that the cost of operations as well as the price of crude oil can change, what is your opinion as to the profit values listed on Exhibit No. 19.

A. In my opinion, the profitabilities given on Exhibit 19 are conservative.

Q. Is it your opinion that the unitized management, operation and development of the North Hobbs Grayburg-San Andres Unit is feasible and will result in a reasonable profit?

A. Yes, that is my opinion.

Q. Why is the unitized management of the North Hobbs Grayburg-San Andres Unit necessary?

A. With a water injection program, oil is forced to move from one property to another. In view of this movement, it is necessary to unitize all interests in order for the owners to receive their fair share of the income from all the oil produced within the Unit. This type of arrangement benefits both the royalty and working interest owners and protects their correlative rights which is especially difficult to achieve in a multi-layered, heterogeneous reservoir. In addition, the elimination of lease line barriers allows flexibility in the use of existing wells and allows variation in injection and withdrawal rates as will be required by the reservoir's actual performance. This flexibility will result in the maximum efficiency of recovery and the elimination of waste.

Q. In addition to determining the feasibility of the project and its profitability, what other charges were directed to the Technical Committee to answer?

A. The committee was charged with developing values of certain specified parameters or characteristics by tract in order to permit the working interest owners to develop an equitable method for the sharing of expenses and revenues from the Unit.

Q. What were these parameters or characteristics which the Technical Committee was charged to develop values for?

A. The list of parameters is included on Exhibit 14 under the subheading (F). Of the ten parameters specifically listed, we were unable to obtain two. The first was the value of the oil and gas production and the second was the floodable net acre feet. We were unable to obtain the values for the oil production parameter with sufficient accuracy because of the wide variations of income per barrel of oil under federal price control regulations. We were unable to obtain the floodable net acre feet because of the poor quality of the logs that exist as a result of the Pool being very old. However, our committee did develop two additional parameters which were (1) the primary gas reserves, and (2) the gas cap volumetrics.

Q. Is this information located in the Technical Committee Report?

A. Yes it is, on Tables 21 through 25. It might be noted that there are two tables for each set of parameters. On Table

A, the parameters are listed by tract and on Table B listed by working interest owner. In each of these tables the parameters are listed as to the magnitude and percent of the total for each tract and for each working interest owner.

Q. Mr. Lancaster, you have described for us how the Technical Committee was charged with certain tasks by the Working Interest Owners Committee and how your committee determined the feasibility and profitability of the Pressure Maintenance Project. What, if anything, was to be done with the Technical Committee's Report?

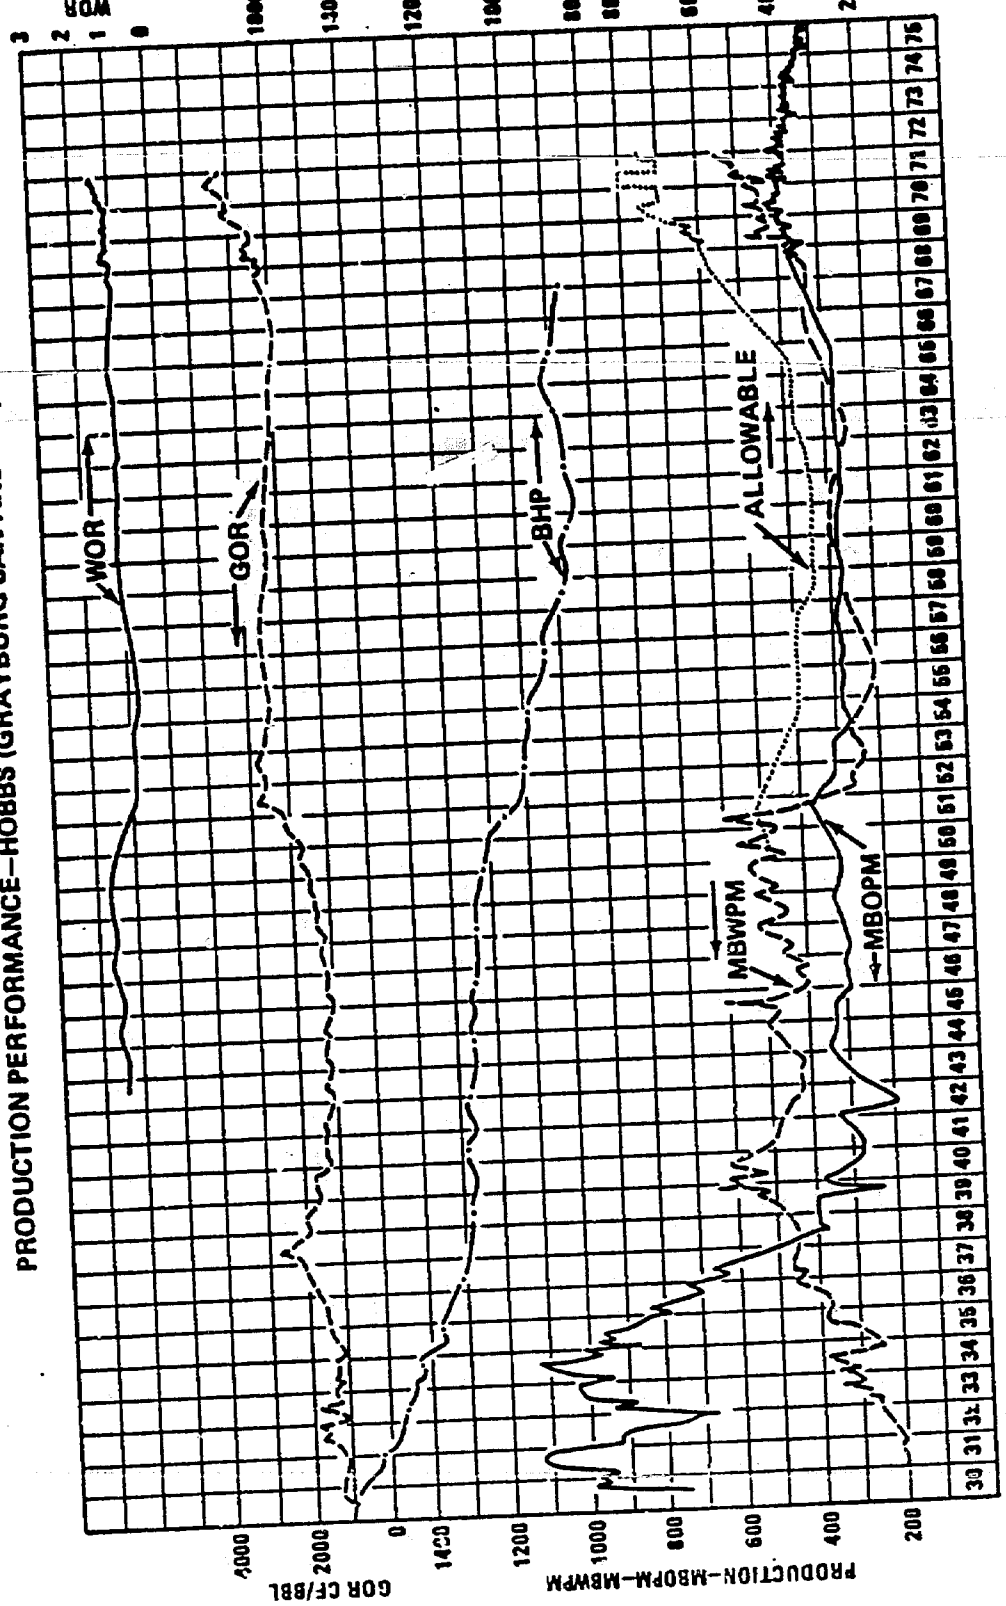
A. As I've indicated, the Technical Committee prepared the Technical Report dated April, 1977. In this report the Committee described the history and geology of the northern portion of the Hobbs Grayburg-San Andres Pool, calculated primary and secondary reserves, demonstrated the feasibility and profitability of this pressure maintenance project, made recommendations as to a plan of secondary recovery based upon water injection and provided the working interest owners with calculated values of certain parameters as a basis upon which to negotiate an equitable formula for the sharing of the expenses and income of the project. With the data from this report, the Working Interest Owners Committee would be able to determine an equitable method of sharing costs and expenses of the project and to prepare a Unit Agreement and Unit Operating Agreement for ratification.

Q. Based upon your technical expertise and your knowledge of the facts concerning the two application being heard here today, is it your opinion that the granting of the applications in these consolidated cases Nos. 6652 and 6653 will result in the prevention of waste and the protection of correlative rights?

A. Yes, that is my opinion.

Q. And is it also your opinion that the granting of these applications is reasonably necessary to carry on supplemental recovery operations so as to substantially increase the ultimate recovery of oil and gas from the Hobbs Grayburg-San Andres Pool?

A. Yes, that is also my opinion.



Q. Were Exhibits 13 through 19 prepared by you or under your supervision?

A. Yes they were.

SHELL OIL COMPANY
PETROLEUM BUILDING
P.O. BOX 1509
MIDLAND, TEXAS 79701

July 20, 1973

Subject: North Hobbs Unit Proposed
Hobbs Field
Lea County, New Mexico

ALL OPERATORS

At the meeting of the Working Interest Owners of the proposed Hobbs (Grayburg-San Andres) Unit held July 12, 1973, it was agreed that efforts would be made to form two Units in the Hobbs Field for purposes of secondary recovery operations instead of one field wide unit previously attempted. It was further agreed that the Hobbs Field would be divided along the Township line between Townships 18S and 19S, R37-38E. Amoco Production Company will be the Unit Expeditor of the area to the south of such line and Shell Oil Company the Unit Expeditor of the area to the north.

A meeting of all Operators of properties to the north of the above stated dividing line is called for 1:30 p.m., July 31, 1973, in the Texas Electric Service Company Reddy Room, 124 North Colorado, Midland, Texas.

The agenda for the meeting will be as follows:

1. Confirm the interest of all Operators of properties to proceed with efforts to unitize and waterflood the properties of the Hobbs Field to the north of the Township line between Townships 18S and 19S, R37 and 38E, Lea County, New Mexico.

2. Discuss plans for further unitization efforts.

3. Organize an Engineering Sub-committee.

4. Develop a charge to the Engineering Sub-committee.

5. Any other business.

This meeting call is being sent only to the Operators of leases, as a list of Working Interest Owners is not as yet available. It is asked that each Operator invite the Working Interest Owners in their properties to attend the meeting if they so desire.

Yours very truly,

W E Buck

For Jack L. Mahaffey
Production Manager
Mid-Continent Division

MINUTES OF OPERATORS MEETING
NORTH HOBBS UNIT PROPOSED
JULY 31, 1973

A meeting of the Operators of the North Hobbs Unit (Proposed) was held July 31, 1973, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck (Shell) opened the meeting by restating the decisions reached by the Working Interest Owners of the proposed Hobbs (Grayburg-San Andres) Unit at the Operators Committee meeting of July 12, 1973. He pointed out that the purpose of the present meeting was to go further with the above decisions in determining the interest of the Operators in proceeding with unitization and secondary recovery efforts for the area of the Hobbs Field north of the township line between Townships 18S and 19S, R37-38E.

Mr. Buck then asked for comments and discussion concerning such unitization efforts. With the exception of Gulf and without motion, all representatives present agreed to proceed and to participate in an effort to form a North Hobbs Unit with Shell acting as Unit Expeditor. Mr. F. W. Moran (Gulf) then stated that while not opposing unitization, Gulf was concerned that such efforts were somewhat premature and therefore would not actively participate at this time. He further advised that Gulf would cooperate in supplying data and would from time to time review their position for possible change.

With this confirmation of interest, plans for further unitization efforts were discussed. Mr. Buck explained that a complete list of Working Interest Owners had not as yet been developed and asked that if an Operator wished the names of any non-operators be added to the mailing list to please so advise. He also stated that arrangements were being made to obtain all pertinent data from the files maintained by Amoco for the field-wide unitization effort. Mr. Buck submitted a schedule of fixed pre-unit expenses and said a ballot would be submitted for approval.

As a first step toward unitization and waterflooding, the organizing of a Technical Committee and the charge to such Committee was discussed. In answer to Mr. Buck's inquiry the following named companies advised that they would have representatives on the Technical Committee: Exxon, Skelly, Marathon, Continental, Amoco, Cities Service, Texas Pacific, Texaco, Amerada, Getty, Sun, and Chevron.

Mr. Buck then introduced Mr. M. A. Thieme (Shell) who would serve as chairman of the Technical Committee. Mr. Thieme then outlined briefly his plans for the Technical Committee. He advised that it would be the intent of the Committee to use as much data as possible from the study proposed by the Hobbs Unit. However, because of the complexity of the reservoir behavior in the north part of the field, he believed the Technical Committee should make a more detailed study in some instances. Mr. Thieme then submitted a suggested charge for the Technical Committee. After some discussion and modification, the following charge to the Technical Committee was approved by all present:

PROPOSED NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT

WORKING INTEREST OWNERS' CHARGE TO THE TECHNICAL COMMITTEE

A. Construct an acceptable base map.

B. Define the vertical interval to be unitized.

C. Recommend a Unit Area or areas.

D. Determine feasibility of waterflooding the Grayburg.

1. Construct Grayburg net pay map and (net Øh, if possible).
2. Determine floodable net acre-feet.
3. Determine secondary oil potential.

E. Determine feasibility of waterflooding the San Andres.

1. Review Øh maps.
2. Review GOR and water-cut maps.
3. Construct continuous pay maps by zone.
4. Determine remaining primary production.
5. Establish secondary oil potential by zones.

F. Tabulate the following parameters by tract, by zones, and by Working Interest Owners:

1. Current oil and gas production rate and value for the most recent representative period.
2. Cumulative oil production.
3. Usable completions.
4. Active producing wells.
5. Total acres.
6. Original oil in place.
7. Floodable net acre-feet.
8. Remaining Primary Reserves.
9. Ultimate Primary Oil.
10. Secondary reserves.
11. Any other parameter considered appropriate by the Engineering Subcommittee.

G. Develop recommended plans of depletion including economic comparisons versus continued primary operations.

It was agreed that every effort would be made to obtain general agreement of the Technical Committee on all items. If such agreement could not be reached, it was decided that the Technical Committee would bring such matter to the attention of the Operators Committee for direction or decision. It was further agreed that decisions reached by vote of Technical Committee would be fully recorded in minutes of meetings.

Through further discussion, the opinion was expressed that although it was scheduled for the Technical Committee to complete the charge by July 1974, such Committee should not be bound by this date if it became apparent that additional time would be required to complete an acceptable study. In this regard, Mr. G. R. Meyers (Texas Pacific) pointed out that one of the significant matters to be resolved is the problem of migration and that it might be necessary for Operators to spend money to help delineate and resolve the problem in certain areas of the field.

Mr. Thieme then advised that he would call the first meeting of the Technical Committee during the last part of August.

There being no further business, the meeting was adjourned.

W. E. Buck
Chairman, Operators Committee

BALLOT

Unitization Expense
North Hobbs Unit
Lea County, New Mexico

The undersigned hereby approves the following listed flat rate unitization expenses and agrees to pay a share of such expense; the share being determined by the method stated below:

1.	Drafting, reporduction, assembling and distribution of Engineering Sub-Committee Report and Tabulations such rate not to include special computer studies or laboratory analysis.	$900.00
2.	Printing and assembling Unit Agreements.	$500.00
3.	Appearance before regulatory bodies to obtain approval of the project.	$600.00
4.	Postage, telephone, telegraph and normal and usual expenses of securing joinder. Does not include expenses of personal contacts if travel required exceeds 100 mile radius from Midland, Texas.	$1,000.00
	Total	$3,000.00
5.	Filing and recording fees and associated travel expenses will be considered Unit Expense and charged to the joint account.	

With the formation of the Proposed North Hobbs Unit, all above stated expense items will be shared on the basis of Unit Participation (Phase I). If the Unit does not become effective, then the expense items which have been incurred will be apportioned on the basis of oil produced during the period January 1, 1973 to July 1, 1973. It is understood that any Working Interest Owner may withdraw at any time by giving the Unit Expeditor written notice of such withdrawal, and by paying his share of expenses incurred prior to withdrawal. The withdrawing Owners share shall be determined on the basis of the production period stated above.

TO: ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(MAILING LIST ATTACHED)

As noted from the minutes of the meeting of September 11, 1974, the North Hobbs Engineering Subcommittee has submitted for the decision of the Working Interest Owners the following recommendation:

> "A cut-off date of January 1, 1975 be established for all well logging data and well test information that is to be considered by the Subcommittee in completing the charges given by the Working Interest Owners."

In order for the Engineering Subcommittee to bring certain facets of their work to a conclusion and to proceed with their charge, it is essential that a cut-off date be established. Therefore, the recommendation of the Subcommittee is hereby submitted for your consideration. Please indicate your decision in the space provided below and return one copy to Shell Oil Company, P. O. Box 991, Houston, Texas 77001, Attention Mr. W. E. Buck.

Yours very truly,

W. J. Conrad

Subject: Computer Analysis
Proposed North Hobbs Unit
Hobbs Field
Lea County, New Mexico

OPERATORS - NORTH HOBBS UNIT
(Mailing List Attached)

The Technical Committee of the North Hobbs Unit has recommended that a computer analysis of the San Andres Reservoir be made. The primary objective of such study is to estimate the Zone I primary reserves that would be recovered, by areas, under the conditions of continued water influx and with the current completion status kept constant. The results will serve as a base case for Zone I primary reserves. Future recoveries can then be allocated by the Technical Committee to respective tracts. In addition, the results of such analysis will provide a more complete understanding of the performance of other zones within the San Andres formation.

Shell has agreed to make such an analysis using their three-phase, three-dimensional, compressible fluid reservoir simulation program. Shell's charge for such work shall be $6,000. This flat charge is Shell's estimate of actual computer running time and the associated contract clerical assistance required to assemble data. Shell shall make no charge for technical and non-technical efforts nor for a program licensing fee. A copy of the input data, results obtained, and an explanation of the calculations will be made available to all Operators. The cost of such study ($6,000) will be shared in the manner stated on the attached ballot.

The Technical Committee feels this study is essential to the completion of the charge made by the Operators Committee. Please indicate your decision on the attached ballot and return one signed copy to Shell Oil Company, P. O. Box 991, Houston, Texas 77001, Attention Mr. W. E. Buck.

Yours very truly,

Jack L. Mahaffey
Division Production Manager
Mid-Continent Division

BALLOT

Unitization Expense
North Hobbs Unit
Lea County, New Mexico
March 13, 1975

The undersigned hereby approves the following listed flat rate charge for a special computer analysis of the San Andres Formation, which is to be made by Shell, and agrees to pay a share of such expense; the share being determined by the method stated below:

1.	Computer Usage Charge	$ 5,000.00
2.	Associated Contract Clerical Costs	$ 1,000.00
	Total	$ 6,000.00

With the formation of the Proposed North Hobbs Unit, all above stated expense items shall be shared on the basis of Unit Participation (Phase I). If the Unit does not become effective, then the expense items which have been incurred will be apportioned on the basis of oil produced during the period January 1, 1973 to July 1, 1973.

Hobbs Field
Lea County, New Mexico

ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(Mailing List Attached).

A meeting of the Working Interest Owners of the proposed North Hobbs Unit is called for 10:00 a.m., May 26, 1977, in the Texas Electric Service Company Reddy Room, 124 North Colorado Street, Midland, Texas.

The agenda for the meeting will be as follows:

1. Formal presentation of the report titled "Waterflood Feasibility and Unitization Parameters", as prepared by the Technical Committee.

2. Consideration of the Report as completing the charge to the Technical Committee.

3. Acceptance of the Report as a basis for Unitization negotiations.

4. Develop a course of action for further unitization efforts.

5. Any other business.

Efforts to unitize and to waterflood the northern part of the Hobbs Field were initiated in July, 1973, when the Operators' Committee charged the Technical Committee to develop a feasibility and parameter study of the area considered for unitization. Due to the different reservoir characteristics evident in the various zones of the Grayburg-San Andres reservoir, it was necessary for the Technical Committe to undertake methods of evaluation not normally required for unitization efforts. Considerable time and expense has been expended in developing the study. With the submittal of the Report to the Working Interest Owners, it appears that a critical point has been reached. All Working Interest Owners are therefore urged to be represented at the called meeting. It is also urged that all representatives attend the meeting prepared to commit their company with regard to the Report and to a course of action for further unitization efforts.

Copies of the Waterflood Feasibility and Unitization Parameters Report for the North Hobbs Unit are transmitted with this call to meeting to all Operators and participants of the Technical Committee as noted on the attached mailing list. Copies will be furnished any other Working Interest Owner upon request.

Yours very truly,

W. E. Buck
Chairman, Working Interest Owners' Committee

Lea County, New Mexico

OPERATORS - NORTH HOBBS UNIT
(Mailing List Attached)

The proposal for a special computer analysis of the San Andres formation of the North Hobbs Unit has received 88.5% approval of the participating operators with only one recorded dissension. With such response, Shell feels it is in order to proceed with the reservoir simulation study. Pending unitization, Shell will bear the costs to be allocated to the dissenting and non-responding parties.

Yours very truly,

Jack L. Mahaffey
Division Production Manager
Mid-Continent Division

Subject: Unitization Parameters
Proposed North Hobbs Unit
Hobbs (Grayburg - San Andres) Field
Lea County, New Mexico

All Working Interest Owners
(Addressee List Attached)

Please be advised that the Unitization Parameter Tables (Nos. 21 to 24), which were included in the Technical Committee Report, are being corrected. Revised copies will be distributed at the Working Interest Owners meeting on May 26, 1977 and also transmitted with the minutes of that session.

The following corrections and additions are being made:

1. Working Interest Ownership

   a. Tract No. 50 - Exxon 50%, Cities Service 25%, and Continental 25%

   b. Tract No. 69 - Amoco 75.43501% and Landreth 24.56499%

   c. Tract No. 75 - Marathon 50% and Atlantic Richfield 50%

2. Oil and Gas Production - Year 1976

The prior tabulation was based on the Monthly Statistical Reports. The Annual Report is now available and reflects the following corrections: oil decreased by 207 barrels and gas increased by 7037 MCF. These changes effect the following parameters: Cumulative Oil (Tables 21 A & B), Year 1976 Oil and Gas (Tables 21 A & B) and Ultimate Oil Recovery (Tables 23 A & B). (No corrections were made to oil production during the last four months of 1976 and consequently the Primary Oil Reserves are not affected.)

3. Productive Acres (Tables 22 A & B)

The tabulation included in the Report was based on the productive acres in the Basal Grayburg Upper Zone oil column and omitted the 2174 acres which lie entirely within the gas cap in that particular zone.

4. Gas Reserves

Continental has requested the addition of a parameter for remaining gas reserves. Therefore, such numbers will be added to the revised tables. This parameter will be calculated in the following manner:

a. Grayburg and/or upper San Andres Stringers - The oil reserves listed on Table 14 will be multiplied by the corresponding average GOR for the year 1976, and

b. San Andres (Main Zones) - The "updated" gas reserves will be calculated in a similar manner as shown for the oil reserves in Table 15; that is, the computed 9/1/76 gas reserves (previously furnished to the Technical Committee) will be updated to 1/1/77 values by subtracting the ensuing actual production.

It is requested that any other discrepancies noted be called to the attention of either Mr. W. E. Buck (713-220-1331) or Mr. H. J. Swartz (713-220-1022).

Yours very truly,

W. E. Buck, Chairman
Working Interest Owners' Committee

Subject: Minutes - Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

WORKING INTEREST OWNERS - (Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held May 26, 1977, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck (Shell) opened the meeting by advising that 90.7 percent of the Working Interest Owners (based on 1976 oil production) were represented at the meeting. He further advised that because of the importance of the meeting, every effort had been made to notify all Working Interest Owners of the meeting. All parties were asked to notify Mr. Buck of any corrections or additions that should be made to the mailing list.

Mr. Buck summarized the previous efforts of unitization in the Hobbs Field. He stated that Amoco initiated an effort in 1970 to form a field wide unit. A feasibility study was completed in March, 1972, and participation negotiations were started. However, it became apparent that agreement could not be reached and in July, 1973, it was decided to divide the Hobbs Field into two parts for unitization and water flooding purposes.

Amoco undertook unitization of the south part of the field and formed the South Hobbs Unit January 1, 1975. Shell acted as Unit Expeditor for the Northern portion of the field. A Technical committee was organized and at a meeting of the Working Interest Owners of the proposed North Hobbs Unit, held July 31, 1973, charged the Technical Committee to develop a waterflood feasibility and unitization parameter study. The Technical Committee has met repeatedly since such date and now have completed and are prepared to submit a report of their study. Mr. Buck pointed out that the attendence and participation of the parties in the Technical Committee was outstanding.

Mr. Buck then turned the meeting over to Mr. H. J. Swartz (Shell), Chairman of the Technical Committee for formal presentation of the "Waterflood Feasibility and Unitization Parameter Report" as prepared by the Technical Committee.

Mr. Swartz started by expressing his appreciation for the excellant cooperation of all parties in the work of the Technical Committee. He stated that the committee held 25 work sessions and that, on the average, 13 operators were represented at each session. He further advised that 22 of the 26 operators had been represented at at least one of the sessions. Mr. Swartz pointed out that it was the aim of the group to reach mutual agreement on all points of the study whenever possible rather than the agreement of only a majority. With only a few exceptions, the group was able to attain this aim.

Mr. Swartz then proceeded to present a summary of the committees work. Salient points of the study were presented with the assistance of projected slides. Several questions were asked and discussed during the presentation. At the end of the presentation Mr. Swartz handed out revised parameter tables which included corrections of production data and ownership. In addition the revised tables included a gas reserve parameter as requested by Continental Oil Company. Copies of revised tables are enclosed with these minutes.

Mr. Buck then asked that the second item of the agenda, completion of the charge of the Working Interest Owners, be considered. After some discussion, Sun Oil Company's representative moved that the report titled "Waterflood Feasibility and Unitization Parameters for the North Hobbs (Grayburg - San Andres) Unit" be accepted as completion of the charge of the Working Interest Owners to the Technical Committee. The motion was seconded by the representative of Amoco Production Company. The motion was passed by the affirmative vote of all present with the qualifications of Continental Oil Company and Exxon Company that their approvals did not include the Gas Reserve Parameter submitted at the meeting as they had not had sufficient time to review such parameter. Marathon Oil Company, passed on the vote at the meeting but advised the chairman of their affirmative vote following the meeting.

Mr. Buck then asked that the third item of the agenda, acceptance of the report as a basis of unitization negotiations, be considered. After discussion, during which Mr. G. R. Meyers, Texas Pacific Oil Company, Inc., expressed concern over some of the relationships, the representative of Amoco Production Company moved that the report be accepted as a basis of unitization negotiations. The motion was seconded by Mobil Oil Company's representative. The motion was approved by the affimative vote of 76.6 percent (1976 production). No negative votes were cast. The affirmative vote of Exxon Company was qualified as to the Gas Reserve Parameter the same as for the previous motion. Continental Oil Company, Russel Estes, and Texas Pacific Oil Company, Inc., passed on the vote on the motion. Mr. Buck asked, and such parties agreed, that he be advised of a decisive vote on the motion at as early a date as possible.

Although a formal vote was not taken, all parties agreed on the basis of the response to the motions to move forward with unitization efforts. After some discussion, it was agreed that a meeting would be called during the first half of July for the purpose of negotiating participation.

In the discussion that followed, some parties expressed concern as to the handling of FEA classified "Stripper" and "Upper Tier" oil after unitization. Mr. Buck advised that it was Shell's general feeling that consideration should be given to parties contributing properties with the more favorable pricing classifications. He further advised that in other unitization efforts provisions had been included in the Unit Agreement rather than in participation negotiations to afford certain considerations to the contributing parties. Upon request, Mr. Buck agreed to include with the minutes of the meeting a provision prepared by Shell for inclusion in other Unit agreements. Such provision is attached hereto. Mr. Buck pointed out that although Shell is in agreement with the general principle of the provision, the submittal of the provision at this time should not be taken as a final Shell proposal in this regard. Shell would want the opportunity to review the problem after participation has been established before making a firm proposal.

Mr. Don Hunter, of Sipes, Williamson & Aycook, Inc., submitted a written proposal on behalf of Moranco for a cooperative waterflood agreement between the North Hobbs Unit and the adjoining Moranco Rice-Hardin Waterflood Unit and the sale of source water from the Moranco water supply system. Mr. Hunter was advised that his proposal would be included in the minutes of the meeting and given consideration by the Working Interest Owners at the appropriate time. The written proposal is included as an attachment to these minutes.

With regard to the water source, Mr. Buck advised that Shell has been negotiating with the city of Hobbs for the purchase of industrial process effluent from its industrial water treatment plant. A draft agreement has been prepared and submitted to the City of Hobbs. At the appropriate time, a negotiated agreement will be submitted to the Working Interest Owners for their consideration.

There being no further business, the meeting was adjourned.

W. E. Buck
Chairman, Working Interest Owners Committee

It is anticipated, at the effective date of unitization, crude oil produced, saved and sold from the _____ Unit will be subject to the rules and regulations of the Federal Energy Administration. Such rules provide for the classification of crude oil for pricing purposes as (1) Stripper Well Crude Oil, (2) Old Oil and (3) Upper Tier Crude Oil.

Under the rules and regulations of the Federal Energy Administration as of October 1976, a unit certification is allowed each month to include in the Upper Tier Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Upper Tier Crude Oil. The unit certification is further allowed each month to include in the Stripper Well Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Stripper Well Crude Oil.

In view of the above, and not withstanding the provisions of Section _____, crude oil produced, saved and sold shall be allocated as follows:

1. Stripper Well Crude Oil - The first oil produced, saved and sold each month up to a quantity equal to the Unit's Imputed Stripper Well Crude Oil shall be allocated to Tracts contributing Imputed Stripper Well Crude Oil to the Unit certification in proportion to their contributions of such Imputed Stripper Well Crude Oil. Should any Tract in any month be allocated out of Unit production in accordance with its Tract Participation as set forth in this Agreement, a total number of barrels of oil that is less than the Imputed Stripper Well Crude Oil that such Tract has contributed to the Unit certification, then such Tract's allocation of

It is anticipated, at the effective date of unitization, crude oil produced, saved and sold from the _____ Unit will be subject to the rules and regulations of the Federal Energy Administration. Such rules provide for the classification of crude oil for pricing purposes as (1) Stripper Well Crude Oil, (2) Old Oil and (3) Upper Tier Crude Oil.

Under the rules and regulations of the Federal Energy Administration as of October 1976, a unit certification is allowed each month to include in the Upper Tier Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Upper Tier Crude Oil. The unit certification is further allowed each month to include in the Stripper Well Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Stripper Well Crude Oil.

In view of the above, and not withstanding the provisions of Section _____, crude oil produced, saved and sold shall be allocated as follows:

1. Stripper Well Crude Oil - The first oil produced, saved and sold each month up to a quantity equal to the Unit's Imputed Stripper Well Crude Oil shall be allocated to Tracts contributing Imputed Stripper Well Crude Oil to the Unit certification in proportion to their contributions of such Imputed Stripper Well Crude Oil. Should any Tract in any month be allocated out of Unit production in accordance with its Tract Participation as set forth in this Agreement, a total number of barrels of oil that is less than the Imputed Stripper Well Crude Oil that such Tract has contributed to the Unit certification, then such Tract's allocation of

Imputed Stripper Well Crude Oil shall be reduced by the amount that the Imputed Stripper Crude Oil exceeds the amount of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Stripper Well Crude Oil. The total Excess Imputed Stripper Well Crude Oil of all Tracts shall be allocated to all Tracts, including Tracts which have not contributed Imputed Stripper Well Crude Oil to the Unit certification, in proportion to the quantities that the Unit production allocated a Tract by its Tract Participation exceeds the quantity Imputed Stripper Well Crude Oil allocated such tract.

2. Imputed Upper Tier Crude Oil - Oil produced, saved, and sold each month from the Unit after a quantity of oil equal to the Imputed Stripper Well Crude Oil is produced, saved and sold, up to a quantity equal to the Imputed Upper Tier Crude Oil, shall be allocated to those Tracts contributing Imputed Upper Tier Crude Oil to the Unit certification in proportion to their contributions of such Imputed Upper Tier Crude Oil. Should any Tract in any month be allocated out of Unit production in accordance with its Tract Participation, as set forth in this agreement, a total number of barrels that is less than the sum of its Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Well Crude Oil as provided in Paragraph 1 of this Article, and its allocated Imputed Upper Tier Crude Oil, then such Tract's allocation of Imputed Upper Tier Crude Oil shall be reduced by the quantity

that the sum of the Tract's Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Crude Oil and its allocated Imputed Upper Tier Crude Oil exceeds the total quantity of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Upper Tier Crude Oil. The total Excess Imputed Upper Tier Crude Oil of all Tracts shall be allocated to all Tracts including Tracts which have not contributed Imputed Stripper Well Crude Oil and/or Imputed Upper Tier Crude Oil to the Unit certification, in proportion to the quantities that each Tract's allocation of Unit production by its Tract Participation exceeds the sum of the Imputed Stripper Well Crude, Excess Imputed Stripper Well Crude Oil and Imputed Upper Tier Crude Oil allocated such Tract.

3. Upper Tier Crude Oil and Old Oil shall each be allocated to each Tract in proportion to the quantities that each Tract's allocation of Unit Production, in accordance with its Participation, exceeds the sum of the allocated Imputed Stripper Well Crude Oil, Excess Imputed Stripper Well Crude Oil, Imputed Upper Tier Crude Oil and Excess Imputed Upper Tier Crude Oil.

This provision shall remain in effect only so long as necessary for the unit to comply with applicable laws, rules, and regulations of appropriate governmental authorities. Should such laws, rules, and regulations hereafter change substantially so as to alter the basis for a certification of unit production as set forth above, then in such event a method of allocating the certification among the unit ownership shall be implemented by the Unit Operator which as nearly as possible achieves the stated intention

hereof. In any event this provision will automatically terminate in its entirety _____.

This provision is deemed supplementary to the other provisions of this Agreement and the provisions of the Unit Operating Agreement so that nothing contained herein shall alter the terms of such agreements, including but not limited to the portions thereof dealing with tract participation, and allocation of unit production, and the allocation of investment and operating costs.

SHELL OIL COMPANY

SHELL OIL COMPANY
P.O. BOX 991
HOUSTON, TEXAS 77001

June 29, 1977

Subject: Proposed North Hobbs Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

By letter of June 8, 1977, a meeting of the Working Interest Owners of the proposed North Hobbs Unit was called for July 12, 1977 for the purpose of negotiating unit participation. Realizing the difficulty in evaluating a participation formula when proposed for the first time at a meeting, Shell hereby submits to all Working Interest Owners the participation formula that will be proposed by Shell at such meeting. It is hoped that this early submittal will allow all Parties, especially those basing their decisions on present worth values, the opportunity to complete an evaluation and to make a decisive response at the meeting.

PARTICIPATION FORMULA TO BE PROPOSED BY SHELL OIL COMPANY

Oil Allocation

Phase I - 100 percent oil production for year 1976. Phase I to be in effect until either the oil production from the unit totals 11,670,070 barrels from the effective date of unitization or for a period of 5 years after the effective date of unitization, whichever occurs first. Limiting production is based on Unit becoming effective January 1, 1979 and is the amount of oil estimated by Technical Committee to be produced during first five years of unitized operations. Estimated annual production is shown on attached table.

Phase II -100 percent Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the Unit oil production totals the estimated remaining primary reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent gas production for year 1976. Phase I gas to be same period as Phase I oil.

Phase II- 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III-Allocation to be same as oil and for same period as Phase III oil.

Expense Allocation

1) Operating and Overhead Expense

All such expenses to be allocated on phase-in-effect basis and based on Oil Allocation only.

2) Capital Expenditures

a) All costs of investment nature associated with injection station, injection lines, water source, drilling and equipping injection wells, and conversion expenses be charged initially on the Phase III Oil Allocation basis. From Tables 17, 18 and 19 of Technical Committee Report, such estimated costs would be: Injection System - $7,000,000; Source, $600,000; Drill Injectors, $2,325,000; Equip converted injectors, $988,000; and, Conversion Expense, $1,002,500.

b) All other costs of a capital expenditure type, including tank battery consolidation costs, be allocated initially on the basis of Phase II oil allocation and adjusted to Phase III oil allocation at the termination of Phase II.

3) Inventory

Inventory value to be allocated initially on the basis of Phase II oil allocation and adjusted to Phase III oil allocation at the termination of Phase II.

Yours very truly,

R. L. Howard
Division Production Manager
Mid-Continent Division

Subject: Minutes - Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held July 12, 1977, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by asking if there were any corrections or additions to the published minutes of the May 26, 1977 meeting. No corrections were submitted and the minutes stand as written.

Mr. Buck then pointed out that at the previous meeting Exxon, Continental Texas Pacific, and Russel Estes, passed on the vote regarding acceptance of the parameter table as a basis for participation negotiations and asked if any of the parties had any change to make in their vote. Exxon changed their vote to yes. Continental sustained the pass vote, stating they were concerned with the shut-in status of some wells during the production period. Texas Pacific retained their pass vote. Estes was not present during the discussion.

Mr. Buck then stated that it was the purpose of the meeting to negotiate a participation formula for Unitization. Before any formula was submitted, Mr. Shepherd, suggested that oil and gas allocation(s) be considered separately from expense allocation(s). After some discussion it was agreed that participation formulas could be proposed with or with out expense considerations.

Mr. Buck then formally proposed the formula previously submitted in writing by Shell. A total of 12 formulas were submitted and considered by the Working Interest Owners. Details of each formula and the resulting vote are shown by attachments hereto.

Prior to submitting Formula No. 12, Mr. Shepherd, Exxon, presented a graph showing the projected performance of the project under unitized operations. He pointed out that under such conditions, an amount of oil equal to the estimated primary reserve would be recovered in less than 1/3 of the time required by non-unitized operations. He also pointed out that with certain formulas, as much as 50 percent of the secondary oil could be produced before secondary parameters become effective. He felt these points should be considered in the development of a participation formula.

As sufficient agreement was not reached on a formula to proceed with other unitization matters, it was agreed to again attempt participation negotiations after all parties had had time to review the negotiations to date.

There being no further business, the meeting was adjourned.

W.E. Buck
Chairman, Working Interest
Owners Committee

Formula No. 1 (Shell)

Oil Allocation

Phase I - 100% Oil Production year 1976 - to be in effect until 11,670, 070 bbls of oil produced after effective date of Unit or 5 years whichever occurs first.

Phase II - 100% Primary Oil Reserve (1/1/77) - to become effective at end of Phase I and to be in effect until production for area equals 38,071,683 bbls from January 1, 1977.

Phase III - 100% Secondary Oil Reserve - to become effective at termination of Phase II.

Gas Allocation

Phase I - 100% Gas Production for year 1976 - Phase I gas to be same period as Phase I Oil.

Phase II - 100% Primary Gas Reserve - Phase II gas to be same period as Phase II Oil.

Phase III - Gas allocation to be same as Oil allocation.

Operating Expenses

Allocation to be on phase-in-effect and based on Oil Allocation only.

Capital Expenditures

(a) All costs of investment nature associated with injection injection station, injection lines, water source, drilling equiping injection wells and conversion expense be charged initially on Phase III Oil Allocation.

(b) All other costs of a capital expenditure type, including tank battery consolidation costs, be allocated initially on Phase II Oil Allocation and adjusted to Phase III Oil Allocation at termination of Phase II.

Inventory

Inventory value to be allocated initially on basis of Phase II. Oil Allocation and adjusted to Phase III Oil Allocation at termination of Phase II.

Formula No. 1 (Shell)

Formula No. 3 (Amerada) Oil and Gas Allocation only - Expense Allocation not included.

Oil

Phase I - To be effective until 38, 071, 683 bbls of oil produced from area after January 1, 1977.
- 1/3 Cumulative Oil Production 1/1/77
- 1/3 Oil Production Year 1976
- 1/3 Remaining Primary Oil Reserve 1/1/77

Phase II - 100% Secondary Oil Reserve

Gas

Phase I - To be same term as Phase I oil
- 100% Remaining Gas Reserve 1/1/77

Phase II - Same as oil allocation.

Voting Results - Based on oil allocation only.

Subject: Formula No. 12 - Correction
Minutes Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

To Working Interest Owners

Formula No. 12 as stated in the minutes of the Working Interest Owners Meeting of July 12, 1977 was in error. Attached is a corrected statement of such formula.

W. E. Buck
Chairman, Working Interest Owner
Committee

WEB:CLM

Attachment

Formula No. 12 (Exxon) Oil and Gas Allocation only - Expense Allocation not included.

Oil

Phase I - To be in effect until 11,670,070 barrell of oil produced from area after date of unitization.
- 75% Oil Production Year 1976
- 25% Remaining Primary Oil Reserve (1/1/77)

Phase II - To be in effect at termination of Phase I and until 38,071,683 bbls of oil produced from area after January 1, 1977.
- 75% Remaining Primary Oil Reserve (1/1/77)
- 25% Oil Production year 1976

Phase III - to be in effect at termination of Phase II
- 100% secondary oil reserve

Gas

Phase I - To be in effect during Phase I oil
- 75% Gas Production Year 1976
- 25% Remaining Gas Reserve (1/1/77)

Phase II - To be in effect during Phase II oil
- 75% Remaining Gas Reserve
- 25% Gas Production Year 1976

Phase III - To be in effect during Phase III oil and same as Phase III oil allocation.

Voting Results - Based on oil allocation only.

Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(MAILING LIST ATTACHED)

Prior to the meeting of the Working Interest Owners of the proposed North Hobbs Unit of July 12, 1977, Shell submitted a participation formula that was to be formally submitted at the called meeting. The purpose of the early submittal was to allow all Parties the opportunity to complete an evaluation of the formula and to make a decisive response at the meeting. Although the proposed formula did not receive sufficient acceptance to proceed with other unitization matters, we feel the response of the Parties justifies a repeat of the procedure. Shell will, therefore, formally submit the following stated participation formula for the consideration of the Working Interest Owners at the meeting called for September 20, 1977.

Oil Allocation

Phase I - Allocation to be based on two parameters, the proportion of each to be determined as stated below. Parameter "A" to be Oil Production for year 1976 and Parameter "B" to be Remaining Primary Oil Reserves (1/1/77). Phase I to be in effect for a period of 5 years from the effective date of unitization. During the term of Phase I, oil shall be allocated to Tracts in the following manner:

First Year - The first 6500 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 6500 barrels per day averaged for a calendar month shall be allocated on the basis of Parameter "B".

Second Year - The first 5200 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 5200 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

77

Third Year - The first 3900 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on the Parameter "A". All oil produced, saved, and sold in excess of 3900 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fourth Year - The first 2600 barrels of oil per day, averaged for a calendar month, and produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 2600 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fifth Year - The first 1300 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 1300 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Phase II - 100 percent Remaining Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the oil production from the Unit Area totals the estimated Remaining Primary Oil Reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve. Phase III to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent Gas Production for Year 1976. Phase I gas to be same period as Phase I oil.

Phase II - 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III - Allocation to be same as oil and for same period as Phase III oil.

The limiting average of daily production of 6500 barrels as used during the first year of Phase I is the projected daily production of the Unit Area for the year 1979. It will be noted from the attached production function forecast for unitized operations that the unit production would start to exceed the limiting production during the second year of unitized operations.

RE: North Hobbs (Grayburg-San Andres)
Proposed Unit
Lea County, New Mexico

2 WEB
10

Shell Oil Company
P. O. Box 991
Houston, Texas 77001

Attention: Mr. W. E. Buck

Gentlemen:

A review of the Shell minutes for the May 26 and July 12, 1977, meetings of the working interest owners in the proposed subject unit reflect that (1) the technical report titled "Waterflood Feasibility and Unitization Parameters for the North Hobbs (Grayburg-San Andres) Unit" has been basically accepted by the working interest owners, and (2) that most of these owners have appeared willing to use, along with an initial period of "current production", the "primary" and "secondary" reserves in the negotiation proceedings thus far. However, no resolution has been made as to the timing of distribution of these "primary" and "secondary" reserves in the formulas considered. The Shell formula presented for consideration in its August 29, 1977 letter likewise does not address this timing factor.

The attached graph "Performance Forecast - Proposed North Hobbs Unit" shows a consolidation for all zones of the "primary" and "secondary" reserves included in the technical report and assumes unitization will be effective January 1, 1979. This chart was shown by Exxon and discussed at the last meeting. The included table gives the technical committee data from which the graph is constructed. As indicated, the committee forecasts secondary oil will be first recovered after some 6.4 million barrels have been produced, followed then by varying ratios of primary and secondary oil production for the life of the project. Exxon believes this projection should be considered in the development of a participation formula for the proposed unit and to such end will introduce the following formula at the called September 20 working interest owner's meeting.

84

A DIVISION OF EXXON CORPORATION

	Oil Reserve	
	Primary MMB	Secondary MMB
Phase 1 for 6.4 MMB after 1-1-79 100% Current Oil Production	6.4	
Phase 2 for the next 26.7 MMB (Cumulative 33.1 MMB) 44.6% Primary Reserves 55.4% Secondary Reserves	11.9	14.8
Phase 3 for remainder (Estimated 55.2 MMB) 26.8% Primary Reserves 73.2% Secondary Reserves	14.8	40.4
Total Primary and Secondary	33.1	55.2

During Phase I and Phase II gas parameters would be substituted in the above formula for allocation of gas production.

Very truly yours,

J. M. Shepherd

PRODUCTION FORECAST
FROM TECHNICAL COMMITTEE REPORT

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001

September 23, 1977

Subject: Minutes - Working Interest Owners' Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held September 20, 1977 in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by advising that Mr. H. J. Swartz, Shell representative on and Chairman of the Technical Committee, had been given a new assignment and would be replaced by Mr. W. R. Lancaster. Mr. Buck then stated that the purpose of the meeting was to negotiate a participation formula for unitization. It was pointed out that participation formulas had been submitted by letter by Shell and Exxon prior to the meeting, and these formulas would be considered first.

A total of 5 formulas were submitted and considered by the Working Interest Owners. Details of each formula and the resulting votes are shown by attachments hereto.

Prior to consideration of Formula No. 14 (Exxon), Mr. Buck stated that it was Shell's feeling that the Shell formula (13) and the Exxon formula (14) offered two different approaches to unitization. He pointed out that Shell's formula offered certain benefits for the remaining primary reserve; whereas, the Exxon formula did not appear to provide appreciable benefits to the primary reserve. Mr. Shepherd, Exxon, again pointed out that the projected performance of the unit indicated that a major portion of the secondary oil would be recovered prior to recovery of the estimated primary reserve and felt that the formula submitted by Exxon recognized this and took it into account.

Before considering Formula No. 16 (Texas-Pacific), Mr. Lyons (Continental) questioned whether the 1976 Oil Production parameter reflected the relationship existing among individual properties. He further advised that Continental believed such parameter, if used, should be given only minimum weight.

As shown by the voting results, Formula No. 17 (Continental) received in excess of 80 percent approval of the Working Interest Owners in attendance. It was therefore agreed to submit Formula No. 17 for a ballot vote to all Working interest Owners.

Formula No. 17, as proposed by Continental, applied only to the allocation of oil and gas production. A brief discussion then followed as to the method of allocating expenses. Although a method of allocation was not formally submitted or voted on, it was generally agreed that a ballot vote would be submitted on the following method of allocating expenses.

Operating & Overhead Expenses

All Operating, Maintenance and Overhead expenses to be borne by Working Interest Owners in proportion to their phase-in-effect Unit Oil Participation.

Capital Expenditures and Inventory

All expenditures of a capital nature and the inventoried value of personal property to be borne initially on the basis of the Phase II Oil Participation and adjusted to Phase III Oil Participation at the termination of Phase II.

Shell, as Unit Expeditor, agreed to submit for ballot vote, Participation Formula No. 17 and the above-stated method of allocating costs.

It was agreed, without vote, that Shell would proceed to develop drafts of the Unit and Unit Operating Agreements for submittal to all Working Interest Owners.

There being no further business, the meeting was adjourned.

Attached for your convenience is a tabulation of gas participation under Formula No. 17.

W. E. Buck
Chairman, Working Interest
Owners' Committee

Attachments

Formula No. 13 (Shell, Oil and Gas Allocation only - Expense Allocation not included.

Oil Allocation

Phase I - Allocation to be based on two parameters, the proportion of each to be determined as stated below. Parameter "A" to be Oil Production for year 1976 and Parameter "B" to be Remaining Primary Oil Reserves (1/1/77). Phase I to be in effect for a period of 5 years from the effective date of unitization. During the term of Phase I, oil shall be allocated to Tracts in the following manner:

First Year - The first 6500 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 6500 barrels per day averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Second Year- The first 5200 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 5200 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Third Year- The first 3900 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on the Parameter "A". All oil produced, saved, and sold in excess of 3900 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fourth Year- The first 2600 barrels of oil per day, averaged for a calendar month, and produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 2600 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B"

Fifth Year- The first 1300 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 1300 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Oil Allocation

Phase II - 100 percent Remaining Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the oil production from the Unit Area totals the estimated Remaining Primary Oil Reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve. Phase III to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent Gas Production for Year 1976. Phase I gas to be same period as Phase I oil.

Phase II - 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III - Allocation to be same as oil and for same period as Phase II oil.

Voting Results - Based on oil allocation only.

'or ıla No. 14 (Exxon) Oil and Gas Allocation only - Expense Allocation not included.

Oil Allocation

Phase I - 100% 1976 Oil Production. To be in effect until 6,400,000 barrels of oil product from Unit Area after effective date of unitization (Est. 1/1/79).

Phase II- 44.6% Remaining Primary Reserves 1/1/77 plus 55.4% Secondary Reserves to be in effect at the termination of Phase I and until 26,700,000 barrels of oil have been produced from the Unit Area after termination of Phase I.

Phase III-26.8% Remaining Primary Reserves 1/1/77 plus 73.2% Secondary Reserves to be in effect from the termination of Phase II until termination of the Unit.

Gas Allocation

Phase I - 100% 1976 Gas Production. Effective period to be same as Phase I oil above.

Phase II- 44.6% Remaining Gas Reserves 1/1/77 plus 55.4% Secondary Oil Reserve. Effective period to be same as Phase II oil above.

Phase III-Same as Phase III oil allocation.

ɔting Results - Based on oil allocation only.

TO: ALL WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

At the Working Interest Owners Meeting of the proposed North Hobbs Unit of September 20, 1977, it was agreed to submit for ballot vote the Participation Formula No. 17 and a method of allocating costs. In accordance with such agreement, the ballots are hereby submitted for the two items in reference. Please indicate your decision on these matters in the spaces provided and return one copy of each to Shell Oil Company, Box 991, Houston, Texas 77001, attention W. E. Buck.

Enclosed for your convenience is a self-addressed, stamped envelope.

PROPOSED NORTH HOBBS UNIT

PARTICIPATION FORMULA NO. 17 (CONTINENTAL)

Oil Allocation

Phase I - 20% 1976 Oil Production plus 80% Remaining Primary Oil Reserve (1/1/77) - to be in effect until the total oil production from the Unit totals 4,000,000 barrels of oil after the effective date of unitization.

Phase II- 100% Primary Oil Reserve (1/1/77) - to become effective at the end of Phase I and to be in effect until production from the Unit Area equals 38,071,683 barrels of oil after January 1, 1977.

Phase III-100% Secondary Oil Reserve - to become effective at termination of Phase II and to remain in effect until termination of the Unit.

Gas Allocation

Phase I - 20% 1976 Gas Production plus 80% Remaining Primary Gas Reserves (1/1/77). Phase I gas to be the same period as Phase I oil.

Phase II- 100% Primary Gas Reserve (1/1/77) - Phase II gas to be the same period as Phase II Oil.

Phase III-Gas allocation to be the same as oil allocation.

The undersigned votes as noted below in regard to Participation Formula No. 17 (Continental):

Re: Proposed Method of Allocating
Operating Cost, Inventory Value
and Capital Expenditure

Ladies and Gentlemen:

A Letter Ballot submitted September 23, 1977, by Shell Oil Company recommended a basis by which Operating Costs, Inventory Value and Capital Expenditures should be allocated to Joint Account. Shell's proposal apportions an unfair share of the inventory value and capital expenditures to the primary oil phase (Phase II) resulting in a disproportionate financial burden on those Working Interest Owners having a low ratio of Phase III to Phase II participation. Approximately 59 percent of the Working Interest Owners (Formula No. 17) have a lesser Phase III participation than Phase II.

Assuming the proposed waterflood responds as predicted, the remaining primary recovery will be accelerated, increasing the present value of these reserves. However, the Unit is being formed primarily for the recovery of secondary oil, and considerable expenditure is required to accomplish this process.

Therefore, we wish to propose the method of allocating Unit costs outlined on the attached Letter Ballot for your consideration. This method does not overburden Phase II but apportions the expenditures to the phases in a more equitable manner.

Please indicate your approval of the attached Letter Ballot and submit it to:

Shell Oil Company
P. O. Box 991
Houston, Texas 77001
Attn: W. E. [illegible]

Very truly yours,

Royce Terry

LETTER BALLOT

PROPOSED NORTH HOUMA UNIT

METHOD OF ALLOCATING COSTS

(Samedan Oil Corporation)

I. Operating Expenses

1. Operating, Maintenance and Overhead expenses incurred in the production, handling and treating of oil and gas shall be charged on the basis of the phase-in-effect oil participation.

2. Operating, Maintenance and Overhead expenses pertaining to the supply of make-up water, injection of water and all injection facilities, including the injection wells, shall be charged on the basis of 33⅓% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above charges shall be made on the basis of Phase III Oil Participation during the Phase III period.

II. Inventoried Value of Personal Property - Capital Expenditures

1. The inventoried value of personal property shall be made on the basis of 33⅓% Phase II Oil Participation plus 67% Phase III Oil Participation with such value, corrected for retirements, to be adjusted on the basis of Phase III Oil Participation within a reasonable time following the effective date of the Phase III period.

2. All expenditures of a capital nature shall be made on the basis of 33⅓% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above expenditures, corrected for retirements, shall be adjusted on the basis of Phase III Oil Participation within a reasonable time after the effective date of the Phase III period.

3. All expenditures of a capital nature made during the Phase III period shall be charged to the joint account on the basis of Phase III Oil Participation.

Lea County, New Mexico

TO: WORKING INTEREST OWNERS (Mailing List Attached)

By letter of September 23, 1977, ballots were submitted to the Working Interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit concerning a participation formula and a cost allocation formula. Tabulated below are the results of the ballots returned as of this date. The percentages shown are the Working Interest Owners' participation based on Formula 17 (Oil Allocation).

Participation Formula (No. 17)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	92.01237	1.46358
Phase II	92.58657	1.30069
Phase III	89.76525	1.27189

Cost Allocation

	Working Interest Owners'%	
	Approved	Disapproved
Phase I	78.13850	15.05034
Phase II	78.33749	15.33648
Phase III	85.16566	5.76775

Following are the results received to date on the cost allocation formula submitted by Samedan Oil Corporation.

Cost Allocation (Samedan)

	Working Interest Owners'%	
	Approved	Disapproved
Phase I	9.07946	30.19928
Phase II	9.53079	29.52246
Phase III	1.72004	28.39264

Shell is currently preparing drafts of the Unit and Unit Operating Agreements and will submit such drafts for your consideration in the near future.

19

Attached for your consideration and use is a tabulation showing the tract interest and tract participation of each Working Interest Owner as calculated from Participation Formula No. 17. Also attached is a summary tabulation showing the unit participation of each Working Interest Owner as calculated from Participation Formula No. 17.

In the near future you will receive a letter from Shell's Land Department requesting confirmation of Working Interests and other data required for the various exhibits that will be included in the Unit and Unit Operating Agreements. Please give such request your earliest consideration so that all the data will be available when needed for preparation of the Agreements in final form.

Yours very truly,

R. L. Howard
Division Production Manager
Mid-Continent Division

Subject: North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS
NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT
(Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs (Grayburg - San Andres) Unit is called for 10:00 A.M. February 2, 1978 in the Midland Room, Midland National Bank, Midland, Texas.

The agenda for the meeting will be as follows:

1. Review drafts of Unit and Unit Operating Agreements.

2. Develop course of action for further unitization efforts.

3. Any other business.

Attached for your review are copies of proposed Unit and Unit Operating Agreements. Exhibits pertaining to tract and unit participation have not been included as current division of interests are not yet available. Tabulations showing the interests as now available have been attached and the exhibits will be prepared as soon as the data is complete.

We would appreciate any written comments prior to the meeting and asked that all parties attend the meeting prepared to render decisions regarding the various provisions of the agreements.

Response to date on the ballots submitted September 23, 1977 is as follows:

Participation Formula (No. 17)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	92.04485	1.46358
Phase II	92.62039	1.30069
Phase III	89.76789	1.27189

Cost Allocation

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	78.13850	15.08282
Phase II	78.33749	15.37030
Phase III	85.16566	5.77039

Cost Allocation (Samedon)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	9.18740	36.47405
Phase II	9.59976	35.82007
Phase III	1.73943	38.79959

Yours very truly,

W. E. Buck
Chairman, Working Interest
Owners' Committee

Working Interest Owners
Proposed North Hobbs Unit
Lea County, New Mexico

Re: Method of Allocating
Operating Costs, Inventory
Value and Capital Expenditure

Ladies and Gentlemen:

Proceedings toward unitization of the North Hobbs Field have resulted in two proposals of methods by which to make charges to the various Tracts within the proposed Unit, such charges pertaining to Operating Costs, Inventory Adjustment and Capital Expenditures.

Shell Oil Company presented a method September 23, 1977, which recommends charging operating costs on the basis of the oil participation phase-in-effect and allocating inventory adjustment and capital expenditures on the basis of 100% Remaining Primary Oil Reserves (Phase II), with readjustment to occur at the beginning of Phase III (100% Secondary Oil Reserve Parameter).

Samedan Oil Corporation proposed a second method for allocating the above charges on October ?, 1977. Samedan contended at the time of their proposal that Shell's recommendation was disproportionately weighted on the remaining primary oil reserves. Samedan's proposal tended to make charges using a combination of Remaining Primary Oil Reserves (Phase II) and Secondary Oil Reserves (Phase III), thereby allocating costs more fairly and more commensurate with the purpose of forming the Unit.

Shell Oil Company has scheduled a Working Interest Owners Meeting on February 2, 1978, at Midland, Texas. In preparation for this meeting, Samedan has conducted an in-depth study of the different proposals for allocating costs, and by this letter we intend to show the inequitable, high development costs incurred by Shell's proposal for those Tracts having a high remaining primary oil parameter and a low secondary oil parameter.

The proposed North Hobbs Unit incorporates basically three distinct types of oil producing Tracts:

(1) Some 31 of the 83 Tracts produce only from the Grayburg zone and have no remaining primary reserves in the San Andres formation.

The current producing rate of these Tracts places them in a "stripper" status, or essentially a depleted state. Conversely, all of these Tracts have secondary reserves. Three of these leases have no current production and no remaining primary reserves, but do have secondary reserves. Tracts having only Grayburg reserves are paying a low development cost for secondary reserves during the early phases of the Unit.

(2) Tracts having San Andres II, San Andres III Upper and San Andres III Lower have a higher producing rate than those having Grayburg only, and consequently, also have a higher remaining primary reserve position. These San Andres zones also are given secondary oil reserves, which brings the Phase II (Remaining Primary Oil) and Phase III (Secondary Oil) parameters closer together. However, these zones are pressure depleting, having a solution gas drive mechanism.

(3) The third category of producing properties includes those Tracts which produce almost entirely from the San Andres I zone, which has no secondary reserves due to the active water-drive reservoir mechanism. There are 17 Tracts which have 70% or more of their remaining primary reserves in the San Andres I zone, but have little or no secondary reserves. There are 6 Tracts which receive 100% of the remaining reserves from the San Andres I zone and have relatively small secondary reserves.

This third category is paying an unfairly high development cost for its negligible secondary reserves during the initial stage of the operations.

Below is a tabulation of all Samedan operated leases showing a comparison of investment and discounted net cash flow before Federal Income Taxes. The assumption is made that a basic 1/8 Royalty Interest exists and that the bulk of the investment or development capital expenditures will be made during the first three years of operations.

Tract No.	Lease Name	Remaining Primary Oil Zone	Development Cost Per Secondary Bbl.		Discounted Primary Phase Income @ 10%	
			Shell Proposal	Samedan Proposal	Shell Proposal (M$)	Samedan Proposal (M$)
32	State 'C'	San Andres I	$ 0.92	$ 0.55	$2,746	$3,135
41	State 'B'	Grayburg	$ 0.09	$ 0.29	$ 56	$ 46
55	Moon 'A'	S.A. I, S.A. II	$ 3.90	$ 1.56	$2,253	$2,611
56	Moon 'B'	S.A. I, S.A. II	$ 9.45	$ 3.39	$2,335	$2,702
64	Turner 'B'	San Andres I	$ 8.54	$ 3.13	$ 289	$ 351
65	Turner 'B-2'	San Andres I	$ 8.93	$ 3.18	$ 343	$ 412
66	Turner 'A'	San Andres I	$ 2.41	$ 1.13	$2,285	$2,646

The above clearly shows the wide range of development costs as they apply from lease to lease, but more significantly, the figures show that Tracts having a high remaining primary position, mainly because of the San Andres I

zone, and a low secondary reserves position are paying for a large share of the development costs which are being made for secondary oil recovery. The principle is totally unacceptable to Samedan.

We believe water injection will enhance the recovery of remaining primary reserves, and consequently, the primary phase should incur a portion of the development costs. However, the Unit is being formed for the recovery of secondary reserves, and the secondary phase is obligated to share its portion of the development costs. Even though an adjustment of the costs are to be made at the beginning of Phase III, there is no assurance that the operations will reach the Phase III period. Should Phase III not become effective, development costs administered against the high percentage remaining primary-low percentage secondary participants will not be recovered. Further, the excessive early high costs charged against the Tracts with a high remaining primary position, requires those Tracts to sustain an unfavorable present value position by, in effect, loaning money to the Tracts having a low remaining primary - high secondary position for the duration of the primary phase. Such loan made today, and repaid at the beginning of Phase III, has little present worth.

Due to the extreme difference in the present worth value of the primary phase Tract income, between Shell's proposal and Samedan's proposal, as a percent of the total primary phase Tract net income, Samedan must take the strong position of refusing to become a part of the North Hobbs Unit should Shell's proposal be adopted. Further, we have an obligation to our joint interest owners to make them aware of this unfair basis of administering expenses. Should Shell's proposal be made a part of the Unit Operating Agreement, Samedan will resort to any available legal means to prevent its enactment.

We request that the agenda for the meeting scheduled for February 2, 1978, be modified to permit renegotiation of a method for allocating costs. This request is in the interest of permitting continued progress toward unitization.

Very truly yours,

SAMEDAN OIL CORPORATION

January 24, 1978

Subject: North Hobbs (Grayburg San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS

By letter of January 16, 1978, Samedan Oil Corporation advised that they considered the cost allocation formula as balloted by letter of September 23, 1977, inequitable. Samedan further requested by their letter that negotiation of a cost allocation formula be included on the agenda for the Working Interest Owners meeting called for February 2, 1978. In view of Samedan's request and as it was agreed at the previous Working Interest Owners meeting that the cost allocation formula would be considered at the time the draft agreements were reviewed, the stated agenda of the meeting called for February 2, 1978, is hereby amended to include consideration of a cost allocation formula.

Shell does not agree that the comparisons set forth by Samedan are acceptable criteria for determining equity. However, Shell has reviewed the effects of both the Samedan and Shell formulas and is concerned that either of the two formulas might result in the secondary recovery project yielding a less-than-acceptable investment opportunity for certain parties. This situation results from the extreme variation in participation of tracts from the primary to secondary phase.

In an effort to evaluate the effect of the two cost formulas, Shell developed a comparison of the incremental present value profit for each tract. Incremental profit as used in the analysis, is the difference between the present value profit to be derived from unit operations (recovery of primary plus secondary oil) and the present value profit resulting from non-unit (primary oil and gas only) operations of any given tract. A discount factor of 10 percent was used in all cases and only the before tax profit was calculated. The production rates and capital and operating cost estimates as developed by the Technical Committee and presented in the "Waterflood Feasibility Study" were used in the evaluation.

The attached graph shows the results of Shell's review. The percent incremental present value profit (incremental present value profit divided by present value capital for each tract) was plotted against the ratio of each tract's primary participation percentage to its secondary participation. To facilitate computer plotting, the natural logarithm of the ratio was used. The results indicate that by using the Samedan formula, the tracts having a high ratio (high primary and relatively low secondary participation) would yield a very favorable return on the capital investment; whereas, the tracts with a low ratio (low primary and relatively high secondary) would yield a low return on investment. With the Shell formula, the reverse is true. Tracts with a high ratio would yield a low

return on investment and tracts with a relatively low ratio would enjoy a high return on investment.

It is recognized that the method of evaluation does not result in absolute values for each tract. However, it is felt that the method offers a realistic means of comparing the trends of the cost allocation formulas and that such trends should be considered in developing an acceptable formula.

Based on the above comparisons, it is Shell's feeling that further consideration should be given to negotiating a cost allocation formula which would provide for a unitized operation that would yield acceptable investment opportunities to all parties. It is, therefore, asked that all Working Interest Owners attend the meeting of February 2, 1978, prepared to render a decision regarding a method of allocating unit costs.

Yours very truly,

February 8, 1978

Subject: Minutes - Working Interest Owners' Meeting
Proposed North Hobbs (Grayburg-San Andres) Un[redacted]
Lea County, New New Mexico

TO: WORKING INTEREST OWNERS (Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit was held February 2, 1978 in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by stating that at the meeting of September 23, 1977, general agreement was reached on an oil and gas allocation formula. Mr. Buck stated that it was also agreed at such meeting for Shell to submit ballots on the oil and gas allocation formula and a cost allocation formula. In addition, Shell was to develop drafts of Unit and Unit Operating Agreements and to submitt such drafts to the Working Interest Owners for review. Mr. Buck advised that the draft agreements had been completed and were submitted with the call to meeting.

Mr. Buck then advised that the results of the ballots on the oil and gas allocation formula were as follows:

	Working Interest Owners' % (Oil Only)	
	Approved	Disapproved
Phase I	92.04485	1.46358
Phase II	92.62039	1.30069
Phase III	89.76789	1.27189

Response to date on the cost allocation formula is as follows:

	Working Interest Owners' % (Oil Only)	
	Approved	Disapproved
Phase I	82.82611	15.0828
Phase II	82.73358	15.37030
Phase III	92.80451	5.77039

Mr. Buck then stated that Samedan Oil Corporation submitted a cost allocation formula in writing to all Working Interest Owners and requested a ballot vote. The ballot response to such formula was as follows:

Working Interest Owners' % (Oil Only)

	Approved*	Disapproved
Phase I	13.86912	36.47405
Phase II	14.30357	35.82007
Phase III	4.55875	38.79959

*Includes Texas Pacific approval stated at meeting.

Mr. Buck went on to advise that the program of unitization and water injection has been submitted to the Commissioner of Public Land, State of New Mexico and to the United States Department of Interior, Geological Survey. Although neither agency has given any written response, Mr. Buck felt from the discussions at the presentations that the program was favorably received by both.

Mr. Buck advised that a review of the division of interests received to date indicated a diversity of working interests above and below 4500 feet in a number of leases. In view of this, it is believed that the base of the unitized formation (Section 2 (h), Unit Agreement) should be defined as the depth of 4500 feet beneath the surface. The depth of 4500 feet is approximately 200 feet below the established water level in the San Andres formation.

Mr. Buck pointed out that some parties advised in writing of their objections to the cost allocation formula and that they would object to an effort to form a unit on such basis under the New Mexico Unitization Statute. In view of this, Mr. Buck felt the Working Interest Owners should decide whether to proceed with unitization efforts based on the cost allocation formula which has an indicated acceptance by more than 75 percent of the Working Interests or to attempt to develop another formula that would receive greater acceptance. It was noted that the Working Interests approving both the participation formula and the Shell cost allocation formula, and which could, therefore, be anticipated to ratify a unit agreement, total 78 percent for each Phase I and Phase II and 85 percent for Phase III. The meeting was then opened for discussion.

Mr. Joe Thorton, Sun Production Company, advised that Sun would oppose an effort to form the unit under the New Mexico Unitization Statute. Mr. Thornton stated that such opposition was not on a matter of equity but as a matter of principle. Sun did not feel the New Mexico Oil Conservation Commission had the authority to act in this particular instance.

Mr. Boyce Perry, Samedan, stated they would oppose unitization if based on present cost allocation formula and that they felt the formula proposed by Samedan was more in keeping with the benefits to be derived from the project. Mr. John Cusack, Cusack interests, advised that he would not accept the formula as presented and favored the one submitted by Samedan. After more discussion in which some parties indicated a preference to proceed with the formula which has received in excess of 75% approval, Mr. Boyce Perry, Samedan, moved that an effort be made to negotiate a cost allocation which would be acceptable to a greater number of the Working Interest Owners. The motion was seconded by Mr. Cusack, Cusack Interests. Voting results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	75.23913	21.67889	0.22719
Phase II	76.07912	21.12195	0.19658
Phase III	62.00388	34.33593	0.43429
	97.14531	97.39765	96.77410

The motion was considered passed and the meeting was opened for suggested cost allocation formulas.

Mr. Boyce Perry, Samedan, requested that the formula submitted in writing be again submitted for vote. The formula was as follows:

I. Operating Expenses

1. Operating, Maintenance and Overhead expenses incurred in the production, handling and treating of oil and gas shall be charged on the basis of the phase-in-effect oil participation.

2. Operating, Maintenance and Overhead expenses pertaining to the supply of make-up water, injection of water and all injection facilities, including the injection wells, shall be charged on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above charges shall be made on the basis of Phase III Oil Participation during the Phase III period.

II. Inventoried Value of personal Property - Capital Expenditures

1. The inventoried value of personal property shall be made on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation with such value, corrected for retirements, to be adjusted on the basis of Phase III Oil Participation within a reasonable time following the effective date of the Phase III period.

2. All expenditures of a capital nature shall be made on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

3. All the above expenditures, corrected for retirements, shall be adjusted on the basis of Phase III Oil Participation within a reasonable time after the effective date of the Phase III period.

4. All expenditures of a capital nature made during the Phase III period shall be charged to the joint account on the basis of Phase III Oil Participation.

Details of the voting are shown on Attachment No. I and the summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	18.42891	78.48903	
Phase II	18.99331	78.17770	
Phase III	8.11158	88.18190	
.33 Phase II + .67 Phase III	11.70255	83.82857	

Mr. R. W. Mullins, Amerada-Hess Corporation, proposed that the Samedan formula be used, only that no adjustment in the investment account be made at the termination of Phase II (Oil). Details of the voting are shown on Attachment No. 2 and summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	6.56696	79.03633	11.54184
Phase II	6.56261	78.89605	11.96893
Phase III	8.60241	73.91749	14.81957
.33 Phase II + .67 Phase III			

Mr. O. V. Stuckey, Getty Oil Company, proposed that all capital expenditures during Phase I and Phase II be allocated on 2/3 Phase II Interest (Oil) plus 1/3 Phase III Interest (Oil) and adjusted to Phase III at termination of Phase II (Oil). Operating expenses were to be based on phase-in-effect. Details of the voting are shown on Attachment No. 3, and the summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	59.97659	36.94135	
Phase II	60.40459	36.76642	
Phase III	56.81526	39.47822	
2/3 Phase II + 1/3 Phase III	59.20220	37.66659	

Mr. Boyce Perry, proposed that all capital expenditures be allocated on 1/3 Phase II (oil) + 2/3 Phase III (oil) during Phase I and II and adjusted to Phase III interests at termination of Phase II (Oil). Operating costs to be based on phase-in-effect. Details of the vote are shown on Attachment No. 4 and the summary results were as follows:

	Working Interest Owners' % (Oil)		
	For	Against	Pass
Phase I	18.42891	78.48903	
Phase II	18.99331	78.17770	
Phase III	8.11158	88.18190	
1/3 Phase II + 2/3 Phase III	11.73764	84.83870	

Mr. Thane Aikens, Arco, proposed that all capital expenditures during Phase I (Oil) and Phase II (Oil) be allocated on .50 Phase II (Oil) plus .50 Phase III (Oil) interest and adjusted to Phase III (Oil) at termination of Phase II. All operating expenses to be allocated on phase-in-effect. Details of the vote are shown on Attachment No. 5 and summary results were as follows:

	Working Interest Owners' % (Oil)		
	For	Against	Pass
Phase I	78.27269	18.64525	
Phase II	78.88410	18.28691	
Phase III	68.56783	27.72595	
.5 Phase II + .5 Phase III	73.72588	23.00645	

Mr. Buck, Shell, proposed a compromise of two previous proposals, (Getty and Arco). Such proposal was that all capital expenditures during Phase I (Oil) and Phase II (Oil) be allocated on 58 percent Phase II (Oil) interest and 42 percent Phase III (Oil) interest and adjusted to Phase III (Oil) at termination of Phase II (Oil). Operating expenses to be allocated on basis of phase-in-effect. Details of the vote are shown on Attachment No. 6 and summary results are as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	82.01563	10.87691	2.63643
Phase II	82.36473	10.72944	2.71879
Phase III	76.86992	13.50522	4.03993
.58 Phase II + .42 Phase III	80.05693	11.89528	2.27367

In view of the favorable response to the last cost formula submitted by Shell, it was agreed to submit the formula for ballot vote. It was understood that all votes were cast subject to management approval.

Time did not permit review of the Unit and Unit Operating Agreements and Mr. Buck advised that a meeting would be called at a later date for such purpose. Comments regarding the agreements have been received from two parties. Based on the comments, Shell proposed certain changes or additions. A list of the changes were given to the Working Interest Owners present and a copy is attached to the minutes.

Mr. Shepherd, Exxon, asked for an explanation of the limiting quantity of 23,000,000 barrels of oil stated in Article 16 (c) of the Unit Agreement. Mr. Buck advised that based on the projected primary performance of the Unit, it was estimated that, without water injection, the unit production would average 10 barrels of oil per day per well after the production of 23,000,000 barrels from January 1, 1979. As all production would qualify as stripper for FEA pricing purposes at such time and under such conditions, it was suggested that this amount be used as the limiting quantity of oil.

All parties who had not done so, were ask to submit as soon as possible the division of interests for their properties in order that the necessary exhibits for the agreements could be completed.

There being no further business, the meeting was adjourned.

Yours very truly,

W. E. Buck
Chairman, Working Interest Owners Committee

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 3: In subsection (h), delete "and 5347 feet" and add at the end "and the depth of 4500 feet beneath the surface".

Page 9: In the third paragraph of Section 12, delete "owner" and insert "party or parties entitled thereto".

Page 10: At the end of the next to last paragraph in Section 13 add:

"Unit Operator shall notify the Supervisor and the Land Commissioner as to the date each phase change occurs".

Page 19: At the end of the first paragraph in Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least eighty percent (80%) as to all Tracts then committed to this Agreement".

Page 24: In the fifth line of the first paragraph of Section 39 after "become parties to this Agreement" insert "or have approved this Agreement in writing".

Page 25: At the end of the first paragraph in the revised Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless within ninety (90) days after the date all other prerequisites for effectiveness of this Agreement have been satisfied, such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least sixty-five percent (65%) as to all Tracts within the Unit Area.

Subject: Proposed Cost Allocation Formula
North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS

At the Working Interest Owners Meeting of the proposed North Hobbs (Grayburg - San Andres) Unit of February 2, 1978, it was agreed to submit for ballot vote a method of allocating unit costs as proposed by Shell Oil Company. Accordingly, a ballot is hereby submitted for such method of allocating unit costs. Please indicate your decision on this matter in the space provided and return one copy to Shell Oil Company, Box 991, Houston, Texas 77001, Attention W. E. Buck.

Enclosed for your convenience is a self-addressed, stamped envelope.

Yours very truly,

W E Buck

NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT
COST ALLOCATION FORMULA - PROPOSED BY SHELL AT
MEETING OF FEBRUARY 2, 1978

I. Operating Expenses

Operating, maintenance, and overhead expenses to be allocated on phase-in-effect unit participation (oil).

II. Capital Expenditures and Inventoried Value of Personal Property

1. The inventoried value of personal property and all expenditures of a capital nature (including injection well conversion costs) made during Phase I (oil) and Phase II (oil) will be allocated on the basis of .58 Phase II (oil) participation plus .42 Phase III (oil) participation.

2. At the termination of Phase II (oil), the inventoried value of personal property and the capital investment account (both adjusted for retirements and including conversion costs) shall be adjusted to Phase III (oil) participation.

3. All expenditures of a capital nature made during Phase III will be allocated on the basis of Phase III (oil) participation.

The undersigned votes as noted below in regard to the above stated cost allocation formula.

Approved _____ Company _____

Disapproved _____ Representative _____

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001

May 3, 1978

Subject: North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: Working Interest Owners
(Mailing List Attached)

A meeting of the working interest owners of the proposed North Hobbs (Grayburg-San Andres) Unit is called for 10:00 A.M., May 18, 1978, in the Reddy Room, Texas Electric Service Company, Midland, Texas.

The agenda for the meeting will be as follows:

1. Review drafts of Unit and Unit Operating Agreements with view to preparing agreements in final form and submitting to working and royalty interests for ratification.

2. Develop further course of action for unitization matters.

3. Any other business

The indicated response to date on the ballot submitted February 9, 1978, is as follows:

Investment Participation

	Working Interest Owners' Participation %	
	Approved	Disapproved
Phase I Oil (Unit Participation)	85.33638	10.18781
Phase II Oil (Unit Participation)	85.79607	9.70702
Phase III Oil (Unit Participation)	83.62214	14.55282
Investment Participation	84.88304	11.74226

(Detailed response is shown on attached tabulation)

The response shown includes, as approved, the indicated acceptance of Samedan Oil Corporation. Samedan has advised that they will accept the formula with the added provision that the investment account be re-adjusted to Phase III Oil Unit Participation at the termination of Phase II (production of 38,071,683 bbls oil after 1/1/77) or at January 1, 1991, which ever occurs first. The date,

January 1, 1991, is the first day of the year following the approximate date that oil production from the unit area after January 1, 1977, totals 38,071,683 barrels as determined from the unit production performance estimated by the Technical Committee. As this is in keeping with the intent and purpose of the proposed formula for investment expenditures, the draft of the Unit Operating Agreement has been revised to include such stipulation.

All working interests owners, who have now indicated acceptance of the cost allocation formula, have previously indicated acceptance also of the gas and oil participation formulas. Shell considers this response sufficient to proceed with finalization of the Unit and Unit Operating Agreements and to submit such agreements for ratification at the earliest possible date.

Drafts of the Unit and Unit Operating agreements were submitted with the call to meeting of December 14, 1977. Due to further negotiation of the cost allocation formula, the drafts were not reviewed at the meeting of February 2, 1978. In the interim, written comments have been received from a number of the working interest owners. The comments have been reviewed and the revisions suggested by Shell are attached. All comments will be discussed at the meeting and representatives are asked to attend the meeting prepared to render decisions concerning the agreements.

A current listing of all working interest owners has been made and, as there have been changes in ownership, a new tabulation showing unit participation (oil and gas) and investment participation (based on .58 -.42 formula) is being prepared. Such tabulation will be mailed to you as soon as completed.

Yours very truly,

W E Buck

W. E. Buck
Chairman, Working Interest Owners
Committee

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 3: In subsection (h), delete "and 5347 feet" and add at the end "and the depth of 4500 feet beneath the surface".

Page 9: In the 5th line of the 1st paragraph in Section 12, after "water" insert "injection plants", and in the next line after "injection" insert "plants".

Page 9: In the 3rd paragraph in Section 12, delete "owner" and insert "party or parties entitled thereto".

Page 10: At the end of the next to last paragraph in Section 13 add:

"Unit Operator shall notify the Supervisor and the Land Commissioner as to the date each phase change occurs".

Page 15: At the end of the 3rd sentence in the last paragraph in Section 16, change the period to a semicolon and add "thereafter all oil produced, saved and sold from the unit shall, as to each and every category into which such production may then or thereafter be classified for pricing or other purposes, be allocated to all qualified Tracts in proportion to Tract Participation in accordance with the provisions of Section 15".

Page 16: At the beginning of Section 18, delete "The State of New Mexico and United States of America and" and insert "Any and".

Page 19: In the 10th and 14th lines in Section 23, change "instrument or transfer" to "instrument of transfer" and delete the comma in the 14th line.

Page 19: At the end of the 1st paragraph in Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least eighty percent (80%) as to all Tracts then qualified under the provisions of Section 14".

Page 21: At the beginning of Section 27 insert "Unless a different representative is designated by Working Interest Owners,".

Page 22: In the 8th line in Section 32 change "interested subject thereto" to "interest subject hereto".

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 24: In the 5th line of the 1st paragraph in Section 39 after "become parties to this Agreement" insert "or have approved this Agreement in writing".

Page 25: At the end of the 1st paragraph in the revised Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless within ninety (90) days after the date all other prerequisites for effectiveness of this Agreement have been satisfied, such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least sixty-five percent (65%) as to all Tracts within the Unit Area.

PROPOSED CHANGES IN UNIT OPERATING AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 1: Add a section in Article 1 as follows:

"1.2 Additional Definitions. For the purposes of this agreement, the following terms and expressions as used herein shall mean:

(a) "Investment Participation" shall mean the sum of .58 Phase II Unit Participation and .42 Phase III Unit Participation.

(b) "Investment Readjustment Date" shall mean the date of termination of Phase II or January 1, 1991, whichever is the earlier date."

Page 1: Change the first sentence in Section 2.1.2 to read "Exhibit E, attached hereto, is a schedule showing the Tract Participation, the Unit Participation, and the Investment Participation of each Working Interest Owner."

Page 6: After the 1st sentence in Section 7.9 insert "Unit Operator shall furnish to a Working Interest Owner, upon written request, a copy of each authority for expenditure prepared by Unit Operator for its own use."

Page 8: In the 7th line of Section 10.3.1 change "Phase II Unit Participation" to "Investment Participation".

Page 9: Make the following changes in Section 10.3.2:

Beginning in the 1st line in the 1st paragraph, change "as of the end of Phase II" to "as of the Investment Adjustment Date".

Beginning in the 8th line in the 1st paragraph change "during Phase I and Phase II Unit Operations" to "prior to the Investment Readjustment Date".

Beginning in the 2nd line in paragraph (b) change "during Phase I and Phase II Unit Operations" to "prior to the Investment Readjustment Date".

Beginning in the 2nd line in paragraph (c) change "prior to the effective date of Phase III Unit Operations" to "prior to the Investment Readjustment Date".

Page 9: Delete the last sentence in Section 10.4.

PROPOSED CHANGES IN UNIT OPERATING AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES UNIT)

Page 10: Make the following changes in Section 10.5:

In the 5th line change "Phase II Unit Participation" to "Investment Participation."

Beginning in the 5th line change "as and while Phase I and Phase II may be effective" to "during the time prior to the Investment Readjustment Date".

In the 7th line change "from and after the time Phase III may hereafter become effective" to "from and after the Investment Readjustment Date."

Page 10: Change Section 11.1.2 to read as follows:

"11.1.2. Investment Cost. The cost of investment items (as described in Section 10.3.2 (b) above) incurred prior to the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Investment Participation. The cost of such investment items incurred after the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Phase III Unit Participation."

Page 12: In the 4th line from the top of the page after "collected from" insert "or otherwise received for the account of".

Page 16: In the 10th line of Section 18.1, after "Working Interest Owners" insert "without regard to plugging and abandonment costs".

Page 17: In the 4th line of Section 20.1.2, after "Working Interest Owners" insert "without regard to plugging and abandonment costs".

Subject: Participation and Cost Allocation Tabulations
North Hobbs (Grayburg-San Andres) Unit
Lea County, New Mexico

To: Working Interest Owners - North Hobbs (Grayburg - San Andres) Unit
(Mailing List Attached)

The call to meeting of May 3, 1978, advised that up-dated tabulations of all working interest owners and their respective unit and investment participation would be furnished as soon as completed. Attached are the following listed tabulations:

1. Tract participation and Investment Participation.

2. Tract Participation and Investment Participation - by tract and working interest in each tract.

3. Unit Participation and Investment Participation - by working interest owner and by tract.

4. Summary of Unit and Investment Participation.

The data shown will be used in preparing the exhibits to the unit and unit operating agreements. It is, therefore, requested that if any errors are noted, Shell be so advised as soon as possible.

Since the call to meeting was issued, Cities Service has indicated acceptance of the cost allocation formula. The current response concerning the investment allocation, including the acceptance of Cities Service, is as follows:

Investment Participation

	Working Interest Owners' Participation %	
	Approved	Disapproved
Phase I Oil (Unit Participation)	88.58519	6.93900
Phase II Oil (Unit Participation)	88.99853	6.50456

Investment Participation	Working Interest Owners' Participation % Approved	 Disapproved
Phase III Oil (Unit Participation)	89.16650	9.00846
Investment Participation	89.06910	7.5562

Yours very truly,

W. E. Buck
Chairman, Working Interest Owners Committee

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001
JUN - 2 1978

Subject: Minutes - Working Interest Owners' Meeting
of May 18, 1978
Proposed North Hobbs (Grayburg - San Andres)Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS
(Mailing List Attached)

A meeting of the Working interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit was held May 18, 1978 in Midland, Texas. The representatives attending the meeting are shown on the attached attendance list.

Mr. Buck, chairman, opened the meeting by stating that the cost allocation formula submitted for ballot consideration by letter of February 9, 1978, had been accepted by Working Interest Owners totaling approximately 89 percent based on the oil unit participation. He further advised that all parties indicating acceptance of the cost allocation formula had also previously indicated acceptance of the unit participation (oil & gas) formula. He stated that Shell, as Unit Expeditor, believed the affirmative response was sufficient to proceed with the development and the submittal for execution of the unit and unit operating agreements.

Mr. Buck pointed out that drafts of the unit and unit operating agreements had been submitted to the Working Interest Owners with the notice of the meeting of February 2, 1978. Comments from a number of Working Interest Owners have been received and reviewed by Shell. Revisions, suggested by Shell and resulting from the comments received, were attached to the notice of this meeting.

As the first agenda item, the unit and unit operating agreements were reviewed. The unit agreement was reviewed first, page at a time. Comments of the Working Interest Owners were discussed and agreement reached on various revisions or deletions.

The unit operating agreement was then reviewed in the same manner. The major items of discussion were as follows:

Article 4.2	Agreement was reached to revise the provision to include the requirement that any request for monetary approval at a meeting must appear as an agenda item.
Article 7.9	Agreement was reached to include a provision requiring the unit operator to furnish informational AFE's to Working Interest Owners for any single capital expenditures in excess of $5000.

Article 10.2 Agreement was reached to provide for the inventory and pricing of items considered non-controllable as determined by the Working Interest Owners.

Article 10.3.2 In answer to questions, Mr. Buck explained that it was Shell's understanding that if any items of personal property and facilities were replaced by new items, the Investment Account would be reduced by the inventory value or actual installation cost of the item replaced and increased by the actual cost, including installation, of the new item. When given a specific example, Mr. Buck replied that if a treating or separation vessel, included in the original inventory, was replaced by a new vessel, the Investment Account would be reduced by the original inventory value of the replaced vessel and increased by the actual cost, including installation, of the new vessel. When asked about costs to deepen wells, Mr. Buck replied that it was Shell's understanding that such costs, being a part of the development program, would be charged on the basis of the investment participation and included in the adjustment of the Investment Account.

Article 18.1
Article 20.1.2 It was agreed that wells no longer needed for unit operations could be taken over by the Working Interest Owner by payment of net salvage value as estimated by Working Interest Owners.

Exhibit F (Accounting Procedure)

Because of the comments concerning the deletion of the word "direct" (Section I (1)) and the addition of the phrase "and related expenses"(Section II 2, A(1)), Mr. Buck offered the following explanation prior to review.

The revisions do not represent a change in Shell's accounting procedures or in the method of handling joint venture properties. The changes in the form are brought about by the use of the 1974-COPAS form.

Shell refers to their field operating Unit as a Production Unit. The employees and/or contract labor engaged in operating and maintaining the properties included in a Production Unit are supervised by a Production Foreman who is assisted by one or more Maintenance Foremen. The Production Unit is the First Level of Supervision. The salaries and related expenses of Production Unit Supervisors are considered as direct charges, since they were excluded from the calculation of overhead rates. All expenses of supervisory employees assigned to offices above a Production Unit, starting with the Division Production Superintendent, are included in Shell's overhead charges.

The COPAS-1974 Accounting Procedure defines First Level Supervisors as employees whose primary function is the direct supervision of other employees and/or contract labor. Previous COPAS Accounting Procedures did not include such a definition. Bulletin No. 8, associated with COPAS-1968 Accounting Procedure, defines First Level Supervisors as employees and their assistants who supervise other employees and/or contract labor. The COPAS-1968 form was acceptable to Shell. As supervision of Production Unit operating employees and/or contract labor by the Production Foreman may not always be direct, it was felt that the definition of the 1974-COPAS form could not be applied to Shell's organization. To avoid an interpretation that the Maintenance Foreman rather than the Production Unit is the First Level of Supervision, Shell felt it essential to delete the word "direct" when using the COPAS-1974 Accounting Procedure.

Related expenses are the expenses necessary for proper performance of the foreman's function. This would include such expenses as office rent, utilities, communication, answering service, and other miscellaneous expenses directly related to the Production Unit.

Although no formal vote was taken, it appeared that the unit and unit operating agreements, revised as discussed, were generally acceptable to the Working Interest Owners present and that it would not be necessary to submit revised drafts of the agreements. Mr. Buck advised that the agreements would be prepared in final form and submitted to the United States Department of Interior, Geological Survey and to the New Mexico State Land Office for review. If no revisions of substance are required by the governmental agencies, the agreements will be submitted to the working and royalty interests for ratification without further review. Depending on the time required for review by the governmental agencies, Mr. Buck estimated that the agreements would be submitted for ratification at some time between July 15, and August 1, 1978.

It was pointed out that ownership and lease data had been furnished to all Working Interest Owners by Shell's Land Department with the request that Shell be notified of any errors. As there are approximately 1500 royalty interests and 74 working interests, considerable time and effort would be required to correct data after the first printing of the agreements. Therefore, all parties are urged to review the data submitted as soon as possible and to advise Shell of any changes or corrections.

Mr. Buck noted that a unit of this size would require considerable preliminary planning and design work in order that injection operations could be commenced as early as possible after the effective date of unitization. As part of this preliminary work, Shell is proceeding to negotiate a water purchase agreement with the City of Hobbs, to purchase key rights-of-way and plant sites, and to design long delivery equipment and facilities. Shell will advise the Working Interest Owners from time to time of the progress of this work and the status of sign-up of working and royalty interests.

There being no further business, the meeting was adjourned.

Yours very truly

W. E. Buck
Chairman, Working Interests Owners' Committee

MINUTES OF ENGINEERING SUBCOMMITTEE MEETING
NORTH HOBBS UNIT PROPOSED
AUGUST 29, 1973

A meeting of the Engineering Subcommittee of the proposed North Hobbs Unit was held in Midland, Texas, on August 29, 1973. The attendance list is attached.

The meeting was called to order at 8:15 a.m. by Mr. Martin A. Thieme, representing Shell Oil Company. Mr. Thieme noted that the meeting would be of an organizational and planning nature. It was the unanimous opinion of those present that secondary oil potential exists in the proposed North Hobbs Unit and that the subcommittee would proceed to fulfill the charges given by the Working Interest Owners in their July 31, 1973, meeting.

Mr. Thieme noted that AMOCO has sent the subcommittee most of the data pertaining to the North Area. The individual well logs will be forthcoming.

Mr. S. B. Pontious, discussed differences in log Øh between his findings and those presented in the March 1972 field-wide study. With no objections, the subcommittee directed Shell as expediter to review all the geological x-sections received from AMOCO and report the results at the next meeting. Shell was further directed to re-evaluate the existing logs with special emphasis on recent logs and report their findings.

The subcommittee will meet in approximately six weeks to determine if more log data are required and, if necessary, recommend a key logging program to the Working Interest Owners.

Mr. W. R. Greene discussed the results of several workovers involving Zone I of the San Andres. He demonstrated that higher water cuts were found in Zone I than depicted in the field-wide study and that the Shell State B-1 (Section 33) tested 100% water.

All companies were requested to send the following information to the chairman of the Engineering Subcommittee at their earliest convenience:

1. Logs run since January 1, 1971, and not previously sent to AMOCO

2. Information on current perforated intervals not previously sent to AMOCO

There being no further business, the meeting was adjourned at 11:30 a.m.

MINUTES OF ENGINEERING SUBCOMMITTEE MEETING
NORTH HOBBS UNIT PROPOSEL
NOVEMBER 26, 1973

A meeting of the Engineering Subcommittee of the proposed North Hobbs Unit was held in Midland, Texas on November 26, 1973. The attendance list is attached.

The meeting was called to order at 10:00 A.M. by Mr. Martin A. Thieme, representing Shell Oil Company. Mr. Thieme noted that the purpose of the meeting was to discuss the method and results of the petrophysical study and the geological study as completed to date, to determine if more log data were required and, if necessary, recommend a key logging program to the Working Interest Owners.

Mr. S. B. Pontious presented a summary of the petrophysical study as detailed in the attachment to the November 15, 1973 letter to the engineering subcommittee. Mr. Pontious discussed the plats of each zone which showed both the geographical areas where better quality logs gave good petrophysical control and the hashered areas where the existing poorer quality logs might require additional log data. It was moved by Shell and seconded by Skelly that the subcommittee accept the petrophysical study and preliminary results as presented. The motion was passed with the voting recorded as follows:

Vote	Companies
Yes	Chevron, Cities Service, Continental, Getty, Samedan, Shell, Skelly, Sun and Texaco
Pass	Amerada, Exxon and TPOC

Mr. F. E. Coupal presented a summary of the geological study as completed to date. East-West cross-sections have been constructed through every well to show the structural and stratigraphic distribution of the major porous beds. Mr. Coupal reported that it is evident from detailed correlation that each zone in the San Andres has one or more relatively high porosity beds that may behave as "thief" zones to water injection. Zone III seems to have the lowest range in permeability and also has a more effective upper seal (sandy break) from the more permeable upper zones. It may be difficult to isolate Zone II from the highly permeable interval at the base of Zone I. In addition, Zone I appears to have other individual porous beds that overlie and are poorly connected with the water drive interval. It appears in Section 31, at least, that the low water-cut production from Zone I in some of these wells may be from one of these "isolated" beds. Mr. Coupal further reported that nine Grayburg sand units can be correlated over most of the field with not more than three or four of the sands appearing to have sufficiently continuous permeability to be floodable. However, adequate data is lacking to quantitatively determine lateral continuity, or even satisfactory net pay values. A review of the Grayburg core analyses from seventeen wells in the North area indicated with reasonable certainty that for a minimum permeability of 0.2 md., a cut-off porosity of not less

than 11 percent should be used for the sands. This would require a reduction of approximately one half of the Grayburg "net pay" values as reported by the previous engineering subcommittee for the field wide study.

After much discussion, the subcommittee determined that there were three alternatives for establishing ϕh in the hashered areas of poor petrophysical control.

Alternative No. 1: Recommend a key logging program to the Working Interest Owners which would involve approximately twelve to fifteen wells.

Alternative No. 2: By utilizing the existing logs establish "net h" values in the areas of poor petrophysical control and extrapolate average porosity from offsetting areas of good petrophysical control to determine ϕh in areas of poor control.

Alternative No. 3: Determine the ratios of the ϕh values in the areas of good control to the ϕh values reported by the previous engineering subcommittee for the field wide study in the same areas. Apply these ratios to the ϕh values in the areas of poor control reported by the previous engineering subcommittee.

It was moved by Shell and seconded by Samedan that the subcommittee attempt to determine the ϕh values in the hashered areas of poor log control by a method other than a key logging program at this time. The motion passed with all companies present voting YES.

The subcommittee instructed Shell to determine the ϕh values under Alternatives Nos. 2 and 3 and report the results at the next subcommittee meeting to be held in February. There being no further business, the meeting was adjourned at 2:00 P.M.

MINUTES OF ENGINEERING SUBCOMMITTEE MEETING
NORTH HOBBS UNIT PROPOSED
APRIL 10-11, 197-

A meeting of the Engineering Subcommittee of the proposed North Hobbs Unit was held in Midland, Texas on April 10-11, 1974. The attendance list is attached.

The meeting was called to order at 9:30 a.m. by Mr. Martin A. Thieme, representing Shell Oil Company. Mr. Thieme noted that the purpose of the meeting was to discuss in detail the results of the geological and petrophysical re-evaluations, to construct Øh maps by zone, to construct water-cut maps by zone, and to construct a zonal completion status map.

Mr. F. E. Coupal discussed the completed geological study in detail; a summary of which was mailed to each member of the subcommittee on March 7, 1974.

The meeting was then turned over to Mr. S. B. Pontious for a discussion of the log analyses. A poll was taken which showed that only 5 of the 13 companies present were prepared to discuss and validate the log analyses on their leases. The chairman reminded the subcommittee that they were requested to be prepared to discuss in detail those items enclosed in the letter dated March 7, 1974 calling this meeting. The chairman then asked the subcommittee what more he or Shell could do to assist them in being prepared for future subcommittee meetings. The consensus of opinion was that Shell could not have done more to assist the members and that the problem was with individual company manpower allocations, etc. It was noted that the 5 companies that had reviewed the log analysis were in agreement with the resulting Øh calculations on their wells. Each company present was given a copy of the log analysis detail on their wells. The subcommittee decided unanimously that each company would check and validate their Øh values by zone by Friday, April 19, 1974, using the method approved by the subcommittee.

A discussion arose concerning the method of contouring the Øh maps. Three companies favored computerized contouring (Getty, TPOC and Skelly) while the other companies favored hand contouring. Skelly volunteered their services for computer contouring. The subcommittee then directed Skelly and/or Shell to contour the Øh maps by computer with payment of any expenses having to be authorized by the Working Interest Owners and that Shell should proceed to refine the existing preliminary Øh maps by hand using the work done by the subcommittee in the meeting. The results will be presented and finalized by the subcommittee at the next meeting which could then be changed only by new log data. Several companies indicated that new logs were forthcoming.

The well-zone completion status map as of January, 1974 was constructed using the available data. Water cuts calculated from the October, November, and December 1973 State Reports were used to initiate the construction of zonal water cut maps. Several anomalous areas developed in water cut trend. The subcommittee decided that each company should be requested to provide two

representative well tests (oil, water, and gas) on each of their wells. The first test being the most recent test just prior to January 1, 1974 and the second test being the most recent test after January 1, 1974. Shell was directed by the subcommittee to refine the water-cut maps by zone using the new well test data and present the results at the next meeting where the subcommittee will finalize the maps. Shell was further directed to construct preliminary GOR maps by zone to be finalized by the subcommittee at the next meeting.

There being no further business the meeting was adjourned at 3:30 p.m.

MINUTES OF ENGINEERING SUBCOMMITTEE MEETING
PROPOSED NORTH HOBBS UNIT
SEPTEMBER 11-12, 1974

A meeting of the Engineering Subcommittee of the proposed North Hobbs Unit was held in Houston, Texas on September 11-12, 1974. The attendance list is attached.

The meeting was called to order at 9:30 a.m. by Mr. Martin A. Thieme, representing Shell Oil Company. Mr. Thieme noted that the purpose of the meeting was to construct and finalize the Øh maps by zone, the water-cut maps by zone, the GOR maps by zone and to discuss various methods of determining remaining oil production by 40-acre tracts in Zone I San Andres.

While discussing the construction of the Øh maps, several companies stated that they would be logging wells in the near future and that these logs would be available for inclusion in the Øh map construction. The following tabulation shows the location of the wells these companies will log and the approximate time that the logs will be available to the subcommittee.

Company	Well Location	Timing
Continental	State A-29 #1 (J)	1 week
Skelly	Section 17 (M)	2 weeks
Amerada	Section 30	4 weeks
Amerada	Section 18	4 weeks
Getty	Section 19	by year end
Getty	Section 29	by year end
TPOC	Section 24 (P) State G-1	3 weeks
Cities Service	Section 31 (B) Fowler #2	by year end

After discussing the relative merits of hand contoured Øh maps and computer contoured Øh maps, the subcommittee decided to combine the hand and computer contoured maps as the finalized Øh maps for each zone. It was moved by AMOCO, seconded by Continental and unanimously approved by all companies present that the engineering subcommittee recommend to the Working Interest Owners that a cut-off date of January 1, 1975 be established for all well logging data and well test information that is to be considered by the engineering subcommmittee in completing the charges given by the Working Interest Owners and that the subcommittee proceed with its work using the best available data. It was resolved that the engineering subcommittee would proceed with its work observing the January 1, 1975 cut-off date unless directed otherwise by the Working Interest Owners.

It was further moved by AMOCO, seconded by Continental and approved that the subcommittee would in constructing the finalized Øh maps use the hand contoured Øh maps as a base and make appropriate revisions as judged necessary from the computer contoured Øh maps. The voting is recorded as follows:

YES Skelly, AMOCO, Amerada, Continental, Exxon, Cities Service, Samedan, TPOC, and Shell
NO Chevron and Getty

It was moved by Skelly and seconded by Cities Service to delete the 0.7 Øh data point in Section 31 (B) on the San Andres Zone II Øh map. The motion failed with the voting recorded as follows:

YES	Skelly, Amerada, Continental, Getty, and Cities Service
NO	Chevron, Exxon, Samedan, TPOC, and Shell
PASS	AMOCO

It was moved by Shell and seconded by Chevron to retain the 0.7 Øh data point in Section 31 (B) on the San Andres Zone II Øh map and that the subcommittee effectively tighten the contour interval on this 40 acre tract and minimize its affect on the surrounding acreage. The motion passed with the voting recorded as follows:

YES	Chevron, Skelly, Continental, Getty, Exxon, Samedan, TPOC, and Shell
NO	Amerada
PASS	AMOCO and Cities Service

(It was noted that Cities Service intends to re-log this well by year end.)

The subcommittee constructed the San Andres Øh maps by zone and approved each map as finalized subject to change only by new log data secured by the subcommittee by the cut-off date of January 1, 1975. The subcommittee approval of the finalized San Andres Øh maps by zone is recorded as follows:

	San Andres Øh Map			
Company	Zone I	Zone II	Zone III$_U$	Zone III$_L$
Chevron	Yes	Yes	Yes	Yes
Skelly	Yes	Yes	Yes	Yes
AMOCO	Pass	Yes	Yes	Yes
Amerada	Yes	Yes	Yes	Yes
Continental	Yes	Yes	Yes	Yes
Getty	Yes	Yes	Yes	Yes
Exxon	Yes	Yes	Yes	Yes
Cities Service	Yes	Pass	Yes	Yes
Samedan	Yes	Yes	Yes	Yes
TPOC	Yes	Pass	Yes	Yes
Shell	Yes	Yes	Yes	Yes

As directed by the subcommittee in its April 10-11, 1974 meeting, Shell had refined the San Andres water-cut maps by zone and presented these maps for finalization by the subcommittee along with a discussion of how they were constructed. Shell noted that the preliminary San Andres GOR maps by zone had also been constructed as directed by the subcommittee in its April, 1974 meeting. Due to the late hour, the subcommittee decided to defer finalization of the water-cut and GOR maps until its next meeting to be held the first week in November, 1974.

Further subcommittee work was then discussed in detail. The general consensus of opinion was that current company work loads did not permit individual subcommittee members sufficient time to do significant subcommittee work outside of subcommittee meetings and that the work would best be done in future meetings. In view of these comments, it was moved by AMOCO and seconded by Cities Service that further subcommittee work on the water-cut and GOR maps be done in

subcommittee meetings and that no additional data tabulations or maps be mailed out to subcommittee members. The motion passed with the voting recorded as follows:

YES	Chevron, Skelly, AMOCO, Amerada, Getty, Cities Service, TPOC and Shell
NO	Continental, Exxon and Samedan

Shell led a brief discussion concerning techniques for determining remaining oil production by 40-acre tracts in San Andres Zone I. Various suggestions were made by subcommittee members with no decisions being made. Due to the late hour, further discussion on Zone I was defered to the next meeting.

There being no further business the meeting was adjourned at 4:00 p.m.

Lea County, New Mexico

The Engineering Subcommittee
North Hobbs Unit
(Addressee List Attached)

Gentlemen:

Attached are the minutes of the North Hobbs Engineering Subcommittee meeting held in Houston, Texas on September 11-12, 1974. Although we did not accomplish all of the items that were set forth on our agenda, we did have a productive and successful meeting. The next subcommittee meeting will be scheduled during the first week of November, 1974.

As a result of reassignments Mr. H. J. Swartz has become the chairman of the Engineering Subcommittee. Please change your mailing lists accordingly.

Yours very truly,

H. J. Swartz
for M. A. Thieme
Chairman Engineering Subcommittee
Proposed North Hobbs Unit

Minutes of Engineering Subcommittee Meeting
Proposed North Hobbs Unit
November 6-7, 1974

A meeting of the Engineering Subcommittee of the proposed North Hobbs Unit was held in Houston, Texas on November 6-7, 1974. The attendance list is attached.

The meeting was called to order at 8:45 a.m. by Mr. H. J. Swartz, representing Shell Oil Company. It was noted that the main purpose of the meeting was to construct water cut and GOR maps for each San Andres zone. Production and completion statistics have been updated and recorded by Shell as follows: 1) Individual well data sheets (zonal completion history and Øh, BHP surveys, monthly production history, well tests and overall assessment of current well status), 2) Updated cross sections, 3) Well status map (current completion zone and whether or not suspicion of behind pipe communication) and 4) State-witnessed "GOR" test sheets (water and gas data posted on appropriate zonal map). While preparing and collecting this data the special problem of frequent behind pipe communication became evident. Most of these wells were initially completed, during the 1930's, as open hole Grayburg - San Andres Zone I producers. Approximately fifteen years later the wells were frequently deepened to Zone III, a liner set and perforated completions made in the lower zones. In many cases the perforated completion interval has been changed several times and been subjected to several stimulation attempts with acid treatments.

Mr. R. W. Phillips presented some examples of Shell's experience with behind pipe communication problems on the McKinley A, McKinley B, Rice and State A leases. Based on the results of production tests, temperature surveys and radioactive tracer logs, Mr. Phillips believes that the water production problems experienced in these wells resulted because of the inability to isolate the production from high permeability in the Zone I San Andres reservoir. Instances of both successful and unsuccessful attempts to eliminate high water producing rates from Zone I were reported. It was concluded that behind pipe communication with Zone I is quite common throughout the field and is generally characterized by high water producing rates.

Those present decided to use the production data from the State-witnessed Annual "GOR" tests, taken during the third quarter of 1974, as the main control points. The completion status and production data posted on the zonal maps were verified and the necessary changes made. If a completion interval included a portion of a dense zone, only the productive zone was posted on the maps. The subcommittee then attempted to construct water cut contour lines for each of the four San Andres zones. The Zone I production performance appears to be indicative of edge water encroachment and a reasonable water cut map was constructed. However, the water cuts from the other zonal completions were erratic and difficult to fit to an edge water concept. It was pointed out that the subsea depth of 614 feet, that is often erroneously

referred to as an original oil-water contact, is actually the depth at which the first water production was obtained in the discovery well. This depth is an arbitrary one which has been used to define productive limits but is not intended to infer an original or current water level. Overlays of the water cut maps that had been prepared for Zones II, III_U and III_L were superimposed on the Zone I water cut map to demonstrate that the control points matched and therefore appeared to be indicative of communication problems. The consensus was that the water source was most likely the lower portion of Zone I. However, there still was disagreement over what degree of water invasion, if any, has occurred in the other zones.

A motion was made by Amerada and seconded by Skelly that all of the current water production be considered to be coming from Zone I and that a water cut map should be prepared for only this reservoir with the lower zones assumed to have no quantifiable water influx. The voting is recorded as follows:

YES: Amerada, Arco, Cities Service, Getty, Samedan, Skelly, TPOC, and Shell

NO: Continental and Exxon

A motion was made by Amerada and seconded by Continental to approve the water cut map for Zone I, as drawn, with the condition that revisions would be made as necessary to correct for new data resulting from future remedial efforts completed prior to the cutoff date of January 1, 1975. The motion was approved unanimously. A copy of this approved water cut map is attached. It is requested that each representative carefully review the completion status depicted on this map and advise Mr. H. J. Swartz, Shell (713-220-1022), of any errors.

The Committee members were advised that Shell, on the behalf of all operators, has requested the Field Permanent Bottom Hole Pressure Committee to confine the selection of key wells to twenty-four flowing producers that are completed in only one zone. Hopefully two or three surveys in each zone can be obtained. It was also requested that the shut in time be increased from 24 to 48 hours. It is believed that these changes will greatly improve the quality of the data that will be obtained during the next annual survey in April, 1975.

Construction of GOR maps for San Andres Zones II, III_U and III_L were commenced but not completed due to lack of time. These maps should be finalized at the next engineering committee meeting which will be held in Midland on December 5, 1974.

Mr. P. J. Gratkowski, Shell, presented a review of the method used by the previous engineering committee to determine primary and secondary reserves by tracts. These calculations are based on the water cut, GOR and pore volume maps in conjunction with a material balance prediction of solution gas drive efficiency and a prediction of waterflood recoveries. Secondary reserves were based on a Stiles approach applied to an 80-acre five-spot

flood pattern. A decision on what changes and adjustments should be made on these techniques will be decided on at the December meeting. Also at this meeting it will be necessary to decide on a method for predicting the remaining primary reserves by tract for Zone 1. Mr. H. J. Swartz, Shell, presented an example calculation which incorporated three arithmetically-weighted factors: distance from the 100 per cent water cut line, water cut and oil production rate. The engineering representatives were asked to consider what weighting should be assigned to a Zone I well that is also completed in other zones. It was requested that everyone prepare a recommended procedure for the apportionment of remaining Zone I reserves and submit it to Shell prior to December 5th if unable to attend the meeting.

Messrs. F. E. Coupal and S. B. Pontious reviewed the results of a study of the basal Grayburg net pay development. (Most of this data was sent to each member of the Engineering Subcommittee on March 7, 1974). The new data presented by Messrs. Coupal and Pontious are: 1) A tabulation of the total net pay determinations by well and 2) a total net pay isopach of this basal Grayburg sand reservoir. A copy of each of these items is attached. The separation between gas cap and oil column thicknesses will be done at a later date. It was their considered opinion that it will not be possible to sufficiently quantify the porosity variations to justify the construction of porosity - feet maps. Therefore the recommendation is to apply an average porosity to the net pay maps.

The meeting was adjourned at 3:30 p.m. on Thursday, November 7, 1974.

Minutes of Engineering Subcommittee Meeting
Proposed North Hobbs Unit
December 5, 1974

The meeting was called to order at 8:45 a. m. by Mr. H. J. Swartz. It was noted that the main purpose of the session was to construct and approve GOR maps for each San Andres zone. There was a discussion of the method of approach (using the State-witnessed GOR tests taken during the third quarter of this year as the main control points) and of the use of these maps for reserve determinations. It was unanimously agreed that a GOR map was not needed for Zone I inasmuch as it is anticipated that the remaining reserves from that reservoir can be recovered by continued water influx. A uniform current gas saturation will be assumed. All known corrections to well completion status were made. Unanimous approval was obtained for the GOR maps that were constructed for San Andres Zones II, III_U and III_L. These maps will be updated and finalized at the next Engineering Committee meeting.

A discussion followed on the technique to be used for calculating remaining primary and secondary San Andres reserves by tracts. It was agreed that a similar method to that used by the previous engineering committee would be preferable and that Shell should prepare the required predictive performance curves (based on material balance and waterflood recovery calculations). The results of these studies will be presented at a future meeting in order to obtain final committee approval before calculating tract reserves.

The need for obtaining BHP buildup surveys on selected wells were discussed. These wells are those which are flowing and which are effectively completed in only one zone. Very few wells meet these prerequisite and it was recommended that surveys be taken as near to year-end as possible in the following wells: Amerada Hess McKinley 3, III_U in Section 30(C); Continental State A-33 No. 1, III_L in Section 33 (M); Exxon Bowers A Federal No. 10, III_U in Section 29 (L); Getty McKinley No. 2, II in Section 30 (H); Gulf Grimes B-1, III_U in Section 33 (I); and Gulf Grimes A-5, III_U in Section 32 (M). It was also agreed that the Engineering Subcommittee would recommend to the Working Interest Owners that an adjustment be made to any production parameter that incurred a production loss because of these BHP surveys. In addition it is requested that each operator furnish Shell with a copy of all BHP build up data with sufficient information to make a Horner-type interpretation.

The subject of ~~procedure for apportioning by 40-acre tracts the Zone I reserves were then discussed in detail.~~ Potential factors considered were: ~~distance from the 100 percent water cut line, oil production rate,~~ water cut, ~~current recoverable oil in place~~ and ~~areal sweep efficiencies.~~ In addition, Mr. Leon Veeder, Samedan Oil Corporation, presented hypothetical calculations that predicted recoveries based on assigning different areal sweep efficiencies (between 65 and 95 percent), depending on the water cut. ~~It was unanimously agreed that a "correct" solution to this complex problem of~~ future oil migration ~~must consider the effects of different oil rates, porosity-feet,~~

well spacing and strength of the aquifer. Simplifying assumptions could include the simultaneous opening of the entire Zone 1 productive interval in each well bore and uniform permeability, swept zone residual oil and current formation volume factor. It appeared to those present that this "correct" solution would best be done by the use of a reservoir simulation model. Shell volunteered to investigate this possibility and prepare an estimated cost for this type of study.

The question of completion intervals in Zone I affecting the production performance was discussed. Some of the representatives felt that additional work should be done to determine if various correlatable members in Zone I appeared to contain the bulk of the water. Shell volunteered to make a cursory review of the data and present the findings at the next engineering committee meeting. At that time the Engineering Committee will determine the feasibility of further study to better define the Zone I water influx.

The meeting was adjourned at 4:30 p. m.

MINUTES OF THE ENGINEERING SUBCOMMITTEE MEETING
PROPOSED NORTH HOBBS UNIT
JANUARY 22-23, 1975

The meeting was called to order at 8:45 a.m. by Mr. H. J. Swartz. Eleven companies, which operate 70 percent of the current producers, were represented (attendance list attached). The main purpose of this meeting was to finalize the porosity-feet, water cut and GOR maps for each of the four San Andres zones and to develop an approach for apportioning the San Andres Zone I reserves.

The first order of business was the finalization of the porosity-feet maps. Since the construction of the maps at the engineering subcommittee meeting of September 11-12, 1974, Shell has received 13 usable new logs. In addition, top of zone correlation changes in three wells required adjustments to the individual zonal values and a core analysis was obtained on Sweet McKinley B 1-A-G, Section 20 (I). Also, it is necessary to differentiate the Zone I porosity-feet between original gas and oil columns. All of the San Andres zonal porosity-feet maps were finalized and approved unanimously. Attached are copies of these maps and a tabulation summarizing all of the petrophysical interpretatons by wells. The original oil and gas in place in the San Andres for each lease will be determined by using the grid technique (ten-acre blocks) at the next engineering subcommittee meeting.

Grayburg net oil, net gas pay and total net pay isopach maps have been prepared by Shell. Copies of these are attached and we request that each representative review these in detail and be prepared to finalize these at the next meeting. Individual well porosity determinations cannot be made because of the lack of petrophysical data.

At the December 5 subcommittee meeting, Shell had volunteered to make a cursory review of the occurrence of net pay development with respect to completion intervals in order to determine if further study was warranted to better define San Andres Zone I water influx. The results of such a geological review were presented by Mr. F. E. Coupal. He has constructed a map with a schematic representation for each well of the vertical location of the net pay, streaks of higher than average porosity development (and presumably higher permeability), dense streaks separating pay zones, and the thickness of the argillaceous zone which separates Zone I and Zone II net pay. The location of the completion intervals was then superimposed on the pay development and attempts were made to explain anomalous water cut performance between offsetting wells. ~~It was concluded that this reservoir could not be subdivided into correlatable and extensive subzones.~~ Also presented was an isopachous map of the thickness of the argillaceous zone separating Zone I and Zone II net pay. It was the consensus of the subcommittee that there is more areal separation existing between the zones than previously believed to be present.

The subcommittee then directed their attention to the finalization of the water cut maps. These maps will be used to determine the volumes of each reservoir that have been swept by natural water influx in order to ascertain tract and total reserves. The current completion status has been reviewed and many changes made. Each company representative should carefully examine the zones shown to be open to production for his wells and advise me (713-220-1022) of any disagreements. Some of these changes in completion status helped explain two anomalous areas on the Zone I water cut map drawn by the subcommittee on November 7. Firstly, the zero contour

ne in Sections 25 and 30 could be eliminated because two of the clean wells, exaco State C 1 and 2, were determined to be completed in the Grayburg only and therefore did not constitute control points. In addition, although Amerada Hess McKinley 4 is currently a clean producer from upper Zone I, production prior to ebruary 1973, was at a high water cut when all of Zone I was produced. This portion of the map was adjusted accordingly. Similarily, Mobil Berry 2, is also a Grayburg only producer and not a control point. Significant changes were also made round the Chevron lease located in Section 29. A southern offset to the Chevron ease, Amerada State A-1, was worked over in December 1974 to open the entire Zone I section to production with three other zones and is now producing at 76 percent ater cut. Based on this additional point and a study of Mr. Coupal's geologic eview, the contours in this area were adjusted accordingly. A copy of the finalized map is attached and was approved by everyone present except for a negative ote by the Amoco representative.

The question of whether or not water cut maps should be constructed for the other San Andres zones was re-examined. At the November subcommittee meeting water cut maps were drawn for each zone but because the control was sparse and questionable (behind pipe communication with Zone I?), it was decided to assume that all water production was from Zone I and that the other zones would be considered to be at the initial water saturation. The voting on this motion was eight in favor and two (Continental and Exxon) opposed. This is the only significant disagreement in the subcommittee to date and consequently considerable time was devoted at this meeting to discussing the "best" method of determining whether any significant water influx has curred in these other San Andres zones. It was concluded that whereas water has tered these reservoirs either by direct communication naturally (between I and II where no argillaceous separation exists) or because of mechanical failure (behind pipe communication), it is not possible to quantify the degree of influx on a lease basis. A statement was formulated at this meeting as follows: "It is apparent from the study of San Andres zonal production performance that Zone I is the major source of water production and encroachment and that only Zone I water saturation can be reasonably estimated on the areal basis, by the construction of water cut maps. Consequently, current water saturations for Zones II, IIU and IIIb will be estimated on a reservoir basis." This approach was approved by everyone present except for Amoco. These values for current water saturations will be approved at the next engineering subcommittee meeting.

The next order of business was the apportionment of Zone I primary reserves by tracts, assuming continued water influx. To date two methods for approximating these reserves have been presented but neither has been accepted. At the last meeting Shell volunteered to investigate the feasibility of using a reservoir simulation model to resolve the problem. Mr H. J. Swartz reported the results of consultation with Shell's computer experts. In summary, it appears that a "proven" Shell program could be used and a study completed within a reasonable period of time. However, because of the anomalous behavior of some wells (clean wells offset by high water cut producers), it is strongly recommended that a history match be attempted in order to match the general influx pattern and approximate the aquifer strength. It is recommended that this history match be attempted on a very coarse grid (10 by 15) and include the entire field. An arbitrary and quick allocation of production between ne I and other reservoirs would be necessary. It was therefore recommended by Shell hat the coarse grid approach be tried immediately and the results reported to the subcommittee in order to better ascertain the feasibility and costs of such an endeavor. The prediction mode would require a much more detailed grid and would require a ballot for approval by each working interest owner to share in the associated expenses. Each company representative present expressed the belief that the reservoir

simulation approach appeared to offer the only acceptable method of apportionment that is recognized at this time but that they would like to have the insight to future costs and complexity of resolution that can be obtained by a quick coarse grid run to be performed by Shell. Following a review of the preliminary results, a specific recommendation will be made to the Working Interest Owners Committee.

During the discussions on the feasibility of reservoir simulation, the question was raised concerning the variations in reservoir pressure between zones and areally within zones. Unfortunately, none of the requested historical BHP buildup data had been received before the meeting but based on the key well BHP statics and the analyses of four special buildup surveys, it can be tentatively concluded that the BHP in the proposed northern unit area is highest in Zone I, about 100 psi lower in Zone II, and another 150 psi lower in Zone III. It is again requested that each operator submit all BHP buildup data on all Grayburg-San Andres completions. The additional data should enable the construction of zonal pressure history with time and areal kh variances in conjunction with core analyses. The year 1974 BHP data received to date is summarized on an attachment.

Mr. P. J. Szatkowski then presented a detailed review of the planned method for calculating reserves. Key assumptions will include: current GOR, initial and current water saturations, relative permeability relationships, current pressure and abandonment pressure. Water cut (I) and GOR (II, IIIU, and IIIL) values will be determined by 40-acre tracts by "gridding" these maps at the next engineering sub-committee meeting. It was agreed at the December meeting to accept the relative permeability curves, initial water saturation and the abandonment pressure (100 psi) used in the Amoco report.

The GOR maps that were constructed at the December meeting were then finalized with unanimous approval. The only new data resulted from two Arco wells, Grimes 1 and 2, which are located in Section 28 and were both recently perforated in Zone II so that they are now producing from II and IIIU. This work resulted in overall lower GOR's which were consistent with the previously depicted GOR's for these zones. Copies of the finalized maps are attached. A reservoir-wide average GOR will be assigned to Zone I at a later date.

The meeting was adjourned at 3:00 p.m., Thursday, January 23, 1975.

MINUTES OF THE TECHNICAL COMMITTEE MEETING
PROPOSED NORTH ROBERTS UNIT
MARCH 5&6, 1975

The meeting was called to order at 9:15 a.m. by Mr. R. J. Swartz. Fifteen companies, which operate 87 percent of the current producers were represented during at least a portion of the two-day session. (Attendance list attached.) The main purposes of this meeting were to formulate a recommendation for determining Zone I reserves and to establish a procedure for determining San Andres zonal tract values for original oil and gas in place, average producing GOR (II, IIIU & IIIL) and average water cut (I..

At the January meetings it had been decided that Shell should make preliminary computer runs with their three-dimensional, three-phase, compressible fluid program in order to better evaluate the feasibility and costs for making an anlysis of future Zone I production by the use of reservoir simulation. The results of the preliminary efforts were discussed with the committee and are summarized as follows. The reservoir model used for these preliminary runs consisted of three non-communicating San Andres layers (I, II and III) covering the entire field with the structural location and porosity-feet values as determined by the Technical Committee. Fluid properties and relative permeability relationships were the same as those in the previous Technical Committee report. A five by ten grid was superimposed on the structure in a manner which resulted in all of the producers being located in 27 grid blocks. The wells in each grid block were summarized by completion interval and represented by one composite well, in the center of the block, containing the total zonal millidarcy-feet open to production in that grid block. An infinite and radial aquifer was placed in communication with only Zone I and input at three westerly-located points. The cumulative field production was represented as being produced at a constant rate over life. Several initial or Phase 1 runs have been made, based on the aforementioned conditions. Adjustments to the data are now being made, but in the opinion of the Shell computer experts the proposed application is feasible and Shell is willing to make the complete analysis for one set of predictive premises for a flat rate charge of $6000. This amount was determined by estimating the actual computer time needed to complete all phases of the study ($5000) and includes a $1000 estimate for contract clerical help, needed to prepare data and assemble annual production statistics for about 350 wells over a 40-year period. No charges will be made for professional or non-professional overhead nor would a charge be made for a program licensing fee. Continuation of this study, for the purposes of predicting Zone I reserves for a given set of conditions, would consist of inputting actual well production with time, and adjusting the permeabilities and various constraints until a satisfactory history match is obtained. Following this a similar history match would be obtained using a finer grid system. An analysis would then be made of future production performance for a given set of conditions. Shell would then present the Technical Committee with a report of the assumptions made and results with an interpretation of their meaning. Shell made a motion, which was seconded by Samedan, that the Technical Committee recommend to the Working Interest Owners that a computer analysis of Zone I reserves be made, for a given set of predictive conditions, on the Shell reservoir simulation program for a flat rate of $6000. The voting on this proposal was:

FOR: Amerada, Amoco, Arco, Cities Service, Continental, Getty Exxon, Samedan, Skelly, Texaco, Texas Pacific and Shell

PASS: Gulf

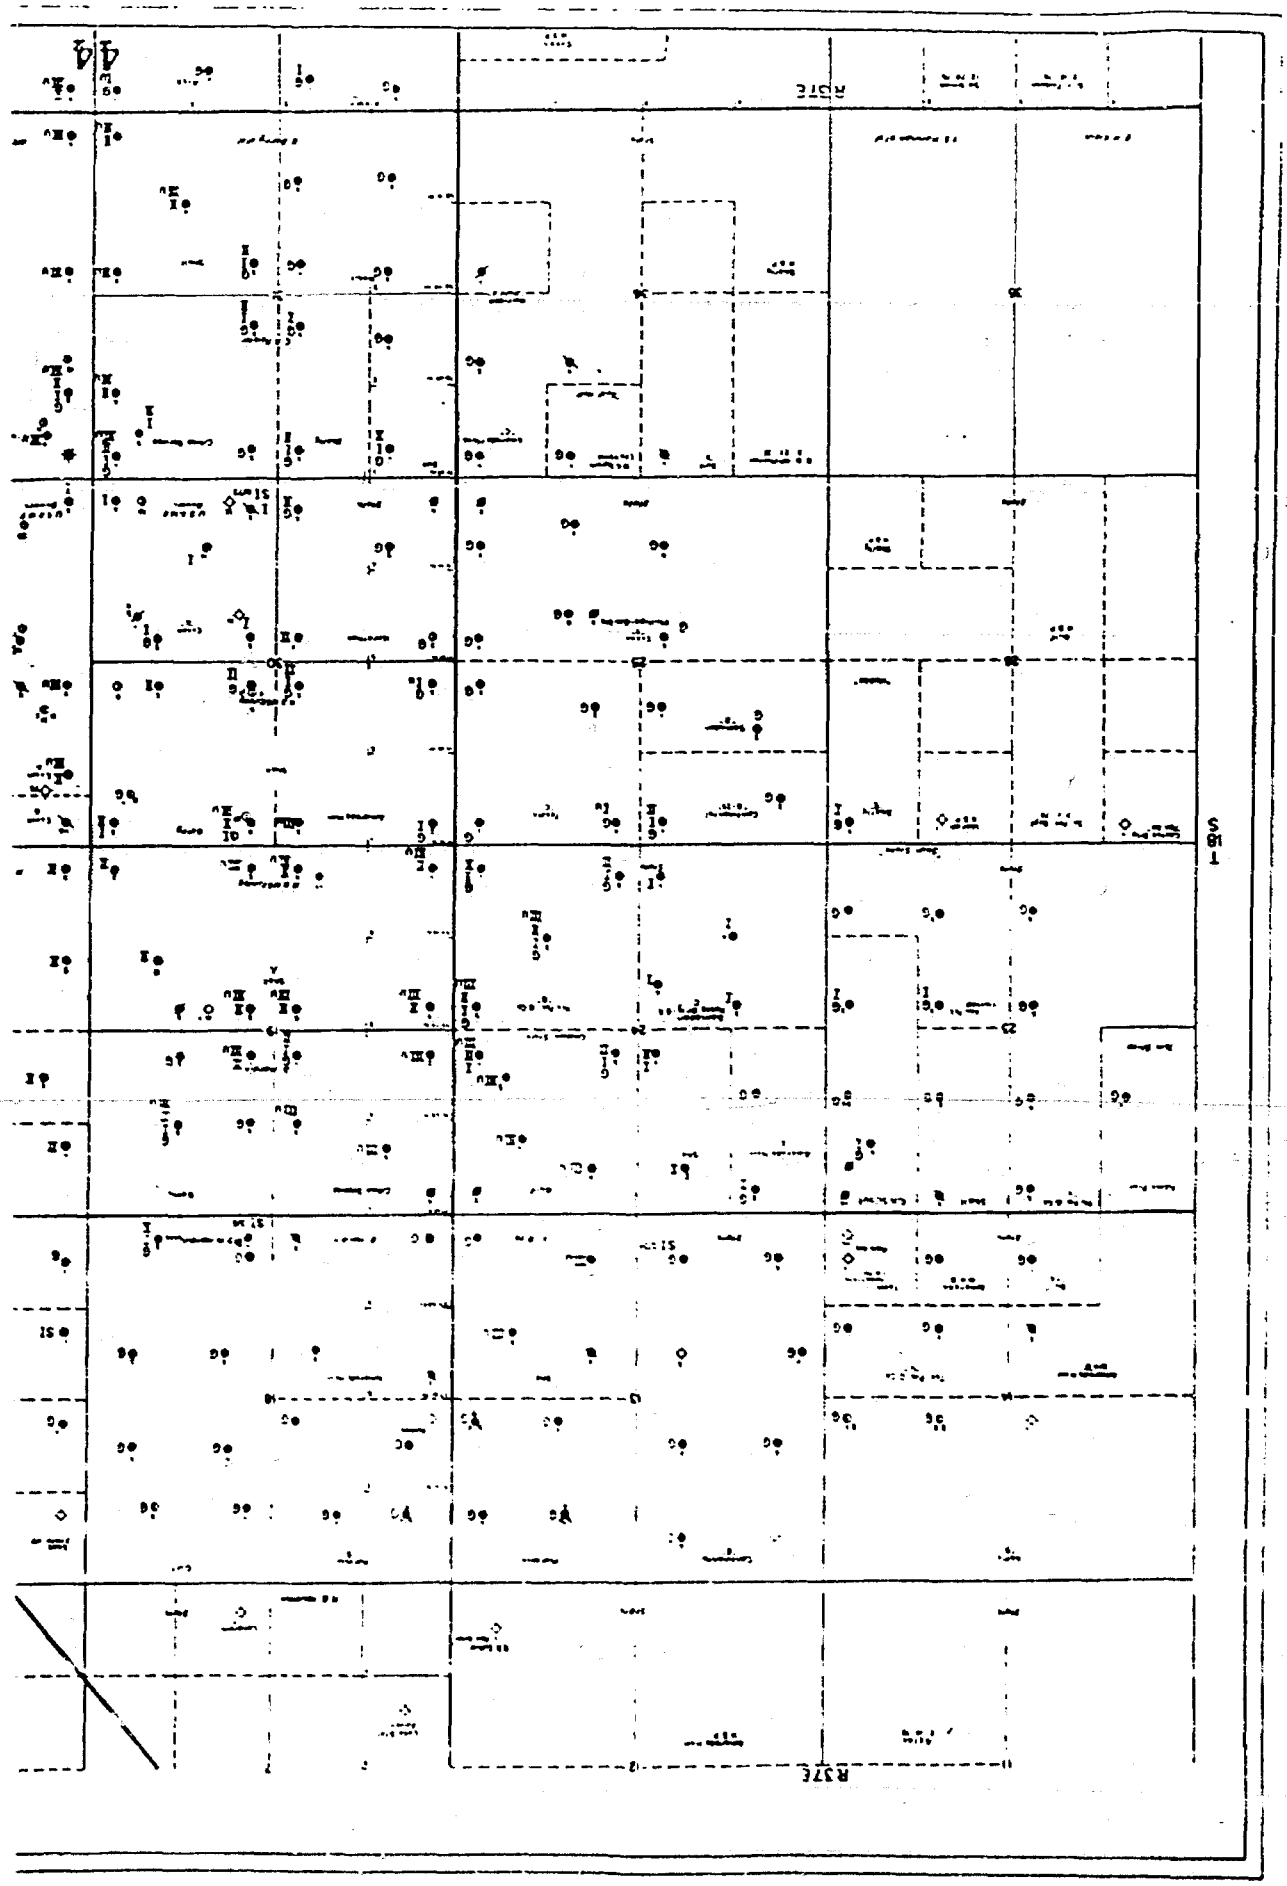
A ballot for sharing these costs will be mailed, under separate cover, to the operators. It was also recommended by the Technical Committee that the prediction mode of this study should be based on the premises that the current completion intervals are maintained status quo. This would serve as a base case and it is recognized that apportionments will then have to be made to the results in order to credit leases which have Zone I reserves but no current drainage points. Attached is a map which depicts the current completion status of each well in the proposed North Unit Areas as described in our records. It is imperative that each operator verify this description and notify me (713 220-1022) of any discrepancies.

The next order of business was a presentation of average zonal porosity and permeability values. Average porosity values have been obtained from both log and core analyses and are considered to be reliable inasmuch as they are generally accurately measured and represent excellent areal coverage of the proposed unit area. The average permeability values are more questionable because of the wide range in values and the limited data. Permeability values were averaged from three sources: cores, buildup pressure analyses and those used by the previous Technical Committee. The core-derived values exhibited large differences and the data were averaged both arithmetically and geometrically for all available core analyses from wells within one mile of the proposed unit area. Arbitrarily the average of these two summations (arithmetic and geometric) was used as representative of the cored values. Stratification analyses, using the Dykstra-Parsons variance approach have been made and will be used as a guide for the reservoir simulation study. Shell has measured 83 BHP buildup surveys in 24 different wells. Only 29 of these, taken in 10 wells, are representative of single zone performance. In addition three of the four buildup surveys that were requested by the Technical Committee, at year-end, were usable for permeability determinations. Since no other company has ever taken buildup surveys in the proposed unit area, the resulting averages from this source are representative of only limited portions of the reservoirs. The previous Technical Committee used zonal permeability values which were derived from cores and adjusted to fit performance. A comparison was also made, by Shell, of the initial potential tests of all wells completed by 1931. This data was recorded on a map and iso-potential lines drawn. These date can only be used in a qualatative manner but strongly indicate that the lowest productivities are in the south unit area whereas a fairway which generally follows the structural highs is located in the northern unit area and average to good productivities occur in the remainder of the wells. The resulting average permeabilities, which are summarized in the attachment, are therefore considered to be tentative. Additional insight into actual values should result from the reservoir simulation study and will be incorporated with these aforementioned values.

At the last meeting it was decided to assign reservoir average current water saturation values to the Grayburg and San Andres (II, IIIU & IIIL) and reservoir average current gas saturations to the Grayburg and Zone I.

These values were in lieu of tract determinations and would be used in calculating reserves in conjunction with relative permeability relationships. Producing data from "key wells" are being assembled but it is believed that valuable insight as to the degree of water influx into the lower San Andres will be gained from the computer analysis. In addition, similar relative permeability relationships should be used for estimating current gas and water saturations from producing gas-oil ratios and water cuts. It is therefore recommended that the determination of these average values be made at a later date.

Approval of the Grayburg net oil, net gas and total net pay isopaches maps was deferred at the request of one of the representatives in order to permit a more detailed check of the values used.



The Technical Committee then decided to determine tract values from the approved San Andres porosity-feet and Zone I water cut contour maps by using a ten-acre grid system whereas the GOR values would be based on a 40-acre grid. Values were selected for each grid block and were based on mechanical interpolation between contour lines. The determinations of tract value for original oil and gas in place, current saturations and remaining primary and secondary reserves will necessarily be made at a later date and then presented for review.

SHELL OIL COMPANY
HOBBS (GRAYBURG-SAN ANDRES) FIELD
WELL STATUS

Minutes of the Technical Committee Meeting
Proposed North Hobbs Unit
June 4, 1975

The meeting was called to order at 8:45 a.m. by Mr. H. J. Swartz. Thirteen companies, which operate 85 percent of the current producers were represented. (Attendance list is attached.) The main purposes of this meeting were to:

1) describe the reservoir simulation models and techniques that are currently being used by Shell for this unitization effort and

2) determine a method for constructing acceptable Grayburg net pay isopach maps.

Mr. W. C. Miller, supervisor of the reservoir simulation group at Shell Development Company, presented a detailed description of the reservoir simulation model being used by Shell to analyze the San Andres reservoir performance and in particular to determine Zone I reserves. The model can be briefly described as a three-phase, three-dimensional, compressible fluid reservoir simulation program. A relatively coarse grid of 150 blocks (ten by five areally with three zones vertically) is being used in the initial phase of this study. Each block contains about 500 acres and the anticlinal structure is included by digitized data on the top of Zone I porosity and the gross thicknesses for each San Andres Zone (I, II and III) for each block. Similarily, each block's zonal net pay was determined from porosity-feet isopach maps (constructed by the current Technical Committee for the North Unit area and by the previous Technical Committee for the South Unit wells) and the average porosity attributed to each zone. The initial gas-oil-contacts and water-oil contacts are 360 feet subsea and 614 feet subsea respectively. This mathematical representation contains an original oil-in-place for the San Andres of 835 million STB, which compares favorably to the 819 million STB calculated by the previous Technical Committee.

Input gas-oil relative permeabilities are the same as the rock curves previously used, but the oil-water relative permeabilities have been adjusted to reflect the Dykstra-Parsons stratification calculated from cores in the North Unit area. The aquifer is strategically located at three locations and communicated only with Zone I.

Oil production and zonal completion history have been input by well in five-year increments up to 1970, then the next three-year period and finally 1974 production. The latter is actually based on the rates reported in the State-witnessed annual gas-oil ratio tests taken in mid-1974. These tests have been judged, by the Technical Committee, to be the most reliable indicators of current conditions. Each well's oil rate is automatically allocated by the simulation program to the zones open to production during its entire history. The pertinent factors such as each zone's pressure, permeability, fluid saturation are accounted for in the calculations for each well. Zonal production rates are computed and a history match, for each well, is based on a comparison of cumulative oil, cumulative water, BHP history and current rates; with emphasis on current conditions.

Once a satisfactory history match is obtained, the predict mode will be run with the current completion intervals open. Each well's primary reserves will be computed by the simulator. A similar simulation, history match and comparable predict mode will then be made using a finer grid system in order to check the sensitivity of the results to this parameter. These results will then be presented to the Technical Committee at which time it will be determined what additional work is required to assign Zone I reserves by tract.

Following Mr. Miller's presentation, Shell requested an expression of opinion from those present as to whether or not there were any objections to the assumptions made or techniques being used or any suggestions. Mr. Joseph C. Solari, Chevron, suggested that the computed current tract saturations by zone, be compared to the water cut and GOR maps, prepared by the Technical Committee. It was also brought out that the computed ultimate recoveries should furnish additional insight into both primary and secondary recovery efficiencies and the crossflow volumes with time into the various San Andres layers. It may also be desirable to use this reservoir model as a basis for waterflood predictions.

Concurrent with this major reservoir simulation effort Shell plans to investigate waterflood recoveries with the use of reservoir model work on both the Grayburg and the Zone III lower San Andres reservoirs. The Grayburg analysis will be based on a five-spot 40-acre symmetry element which is representative of the Grayburg reservoir considered to be floodable (northern and western flanks). The history match will be made by comparing current average well producing characteristics. It is intended to simulate the performance of the San Andres III Lower reservoir by modeling the entire reservoir, as described by the current Technical Committee work, and comparing the results of water injection under at least two different injection patterns. The benefits of infill drilling will also be examined with this model.

An error in the productive limits of the Zone I oil column porosity-feet map was shown to the Committee. The problem was caused by a miscorrelation of the top of the San Andres in that area and results in only a slight adjustment to the original oil-in-place values for the Gulf Hardin (Section 18 A, B and H) and Moranco State (Section 17E) leases. To date only twelve of the twenty-five operators have returned the forms for verification of tract original hydrocarbon-in-place values. A revised tabulation will be distributed as soon as all of the necessary corrections have been received. Three minor adjustments are also required to contours on the Zone I water cut map. These concern the 25 percent water cut line in the SE/4 of Section 34 (should curve north of Samedan Turner B-2) and the 50 and 75 percent water cut lines in the NE/4 of Section 30 (75% should be west of Getty McKinley 1 and the 50% bowed accordingly). It was also pointed out that Mobil Berry No. 4 (Section 31M) is currently completed in both the basal Grayburg and an upper Zone I (four net feet of pay) stringer. During the 1974 annual GOR State Test the well produced 30 BOPD plus 18BW but it is mapped, by the Technical Committee, to be completely

watered out in Zone I. Following a discussion and further review of the situation it was unanimously decided that the map is correct as drawn. If anyone knows of any descrepancies on any of the maps distributed to date, please advise me as soon as possible inasmuch as we intend to soon have these maps drafted for the Technical Committee report.

Mr. F. E. Coupal presented net pay continuity maps for each of the four San Andres reservoirs. These representations are based on determining how much of the net pay in each well zone is correlatable with the net pay development in each of the direct offsets. The net pay continuity appears to be very good and the reservoir averages are: Zone I, 94 percent; Zone II, 93 percent, Zone III_u, 90 percent; and Zone III_l 93 percent.

The current well status tabulation, furnished to each operator with our letter of May 14, 1975, should be checked carefully and returned to me as soon as possible. Particular attention should be paid to the completion interval and that the elevation shown is compatible with these measurements. Logs run in these wells have used every imaginable elevation datum and some are unique. If you have any questions about this tabulation please call either Frank Coupal (220-1333) or Hank Swartz (220-1022). Your cooperation in carefully verifying this tabulation and that of the original hydrocarbon-in-place is greatly appreciated.

Exxon Company, U.S.A. had previously expressed concern that the Grayburg net pay values selected from logged wells might include some siltstone or nonproductive rock. (See their letter dated May 2, 1975.) Mr. John M. Clayton, Exxon, summarized his work on the problem and pointed out that the production statistics on the western flanks of the proposed unit area seem to indicate that the southern wells have performed much better than the northern producers in contrast with Shell's net pay depiction which shown both areas to have similar net pay development. In summary, Exxon feels that these net pay representations should be modified. Mr. F. E. Coupal then reviewed the geologic premises used and pointed out that the nine zones at the top of the basal Grayburg are correlative across the entire field whereas the underlying wedge of net pay is more erratic in occurrence. He then distributed statistics which geographically summarized the distribution of net pay based on data from 18 cored wells. The tabulation included comparisons of cored well net pay with log-interpreted net pay and a break-out of non-permeable (less than 0.2 md) rock over 11% porosity. A tentatively revised Grayburg net pay map was presented based only on core data and a few logged wells with net pay estimates compatible with nearby cored wells. The revised map did not reflect the differences in productivity along the west flank as interpreted by Exxon. Inasmuch as no other suggestions were made, Shell volunteered to:

1) prepare Grayburg net pay isopach maps of both only the nine correlatable zones and only the underlying wedge and

2) recompile the Grayburg production statistics, in a similar fashion as that presented by Exxon, but adjusted to remove the volumes which are believed to have been produced from the San Andres reservoirs.

It was requested that Shell furnish the other operators estimates of the timing of unitization and the amounts of capital investment that will be required for secondary recovery operations. In response to this we tentatively predict the following schedule:

December 1, 1975, publish the Technical Committee report;
October 1, 1976, effective date of unitization;
and May 1, 1977, initiate water injection.

Preliminary estimates of the capital investment requirements are $12,000,000 initially and another $3,000,000 within the following two years.

MINUTES OF THE TECHNICAL COMMITTEE MEETING
PROPOSED NORTH HOBBS UNIT
OCTOBER 14 and 15, 1975

A meeting of the Technical Committee was held on October 14 and 15 in Midland, Texas. The major objectives of these sessions were to review net pay isopach maps of the Grayburg formation and to determine primary reserves of the Grayburg and upper stringer San Andres producers by the extrapolation of production performance. Fourteen companies, which operate 79 percent of the current producers were represented on Tuesday and eleven companies (76 percent of the wells) were represented on Wednesday. Attendance lists for both sessions are attached.

A brief review of previous Grayburg studies prepared by Shell for the Technical Committee was presented for reference. These include a report distributed on March 7, 1974 and an update which was presented at the Technical Committee meeting held on November 6, 1974. Net pay isopach maps, based on log and core data, were prepared by Shell and distributed to Committee members on February 10, 1975. Discussion of these maps are included in the minutes of the Technical Committee meetings held on March 6, 1975 and June 4, 1975. At the June meeting it was recommended that Shell prepare revised net pay isopach maps that would be based only on core and selected log data. It was also requested that the basal Grayburg horizon be subdivided into an upper interval (comprised of nine correlatable sands) and the lower ("wedge") interval. In addition it was recommended that Shell evaluate the amount of cumulative oil production attributable to the Grayburg, by wells, particularly along the northern and western flanks.

Mr. E. W. Kitchen who has replaced Mr. F. E. Coupal as Shell's Geological Engineering representative on the Technical Committee then presented the four revised net pay isopach maps (oil and gas pay maps for both basal Grayburg zones. These maps were based only on the data from cored well and selected logs (good quality logs which indicated similar net pay/gross interval thickness ratio to those calculated from "nearby" core control points). The enclosed type logs on Shell Rice 4 and Amoco State G5 show the stratigraphic intervals that were mapped. He then presented structure maps on the top of the Grayburg and the four San Andres subzones. Maps were also presented which reflected the cumulative oil production believed to be definitely from the Grayburg and an arbitrary allocation between zones where the Grayburg and San Andres production had been commingled. These determinations indicate that whereas the differences in production performance between areas is not as great as indicated by Exxon at the last meeting, it does appear that the wells along the southwestern flank, particularly those located in Sections 25, 31 and 36 have been the most prolific Grayburg producers.

Considerable discussion followed and revolved primarily about the problem of interpolating or contouring net pay values in areas of limited control. It was concluded that an attempt should be made to first construct percent net pay to gross thickness ratio contour lines for each map which could then be used in conjunction with the gross thickness of each well (determined from logs and/or structure maps) in order to develop the isopach of net pay maps. These percent net to gross ratio maps were constructed and reviewed and considerable discussion followed on the techniques used and whether or not these ratio maps should be segregated on the basis of fluid content or drawn irrespective of contacts. The Technical Committee members finally decided that the percent net to gross ratio maps are a reflection of rock quality and should be independent of fluid content. Therefore, it was recommended that Shell should construct these maps, using only the core and selected log control points applicable to each stratigraphic interval, for each of the two basal Grayburg zones. It was also agreed that Shell should submit these two percent net pay to gross thickness ratio maps to each Committee member in order to obtain approval prior to constructing the net pay oil and gas maps for each zone.

The techniques to be used for determining the remaining primary reserves were then discussed. The enclosed map shows the location of eight groups of wells that are within the proposed unit area and have remaining primary reserves. The majority of the wells are currently producing from one or more of the San Andres zones and the primary reserves for this group will be determined with the use of the reservoir simulation study which is now in progress. The remaining wells are producing from the Grayburg formation and/or the upper San Andres stringer zones. It is recommended that the primary reserves for these wells be determined by extrapolating production performance or by a similar type approximation. Individual decline curves have been prepared for 62 of these wells and each well has been categorized into one of six groups based on similar geographic location and producing characteristics. A composite production curve has also been prepared for each of the six groups and all lease production curves have been updated.

Each Committee representative present analyzed the production performance of these 62 wells, six composite group and eleven lease curves. The annual decline rate and corresponding initial rate was estimated for each of these curves. The reserves determined from these estimates will then be averaged for each curve and the results distributed to all of the Technical Committee members.

The "Well Status" tabulation has once again been revised and a corrected copy will be distributed. One of these elevation changes, to Continental State A-33 No. 4 (33 J), resulted in a redistribution of the amount of porosity-feet in the Zone I gas and oil columns and consequently contour changes to the porosity-feet maps in Zone I. These changes result in a net increase of 201 MMCF for the OGIP and a net decrease of 395,658 BO for the OOIP. Corrected sheets will be sent out to reflect these changes. These and all previous changes to the porosity-feet maps were shown to the Committee.

The need for determining current GIP, by tracts, was discussed. This parameter will be based on tract values of GOR (determined from previously constructed GOR contour maps for II, IIIU and IIIL zones and an average reservoir value for Grayburg and I) and water cut values (determined from contour map on I and estimated average reservoir values for the other zones). In addition to possible use as a parameter, these values will be used as the basis for apportioning secondary reserves to each tract.

Minutes of the Technical Committee Meeting
Proposed North Hobbs Unit
January 13-14, 1976

The meeting was called to order at 9:30 AM. Fifteen companies, which operate 86 percent of the current producers, were represented (Attendance List is attached). The sole purpose of this meeting was to redetermine tract primary reserves for those wells producing from the Grayburg and/or upper San Andres stringers.

Mr. Swartz initiated the meeting with a review of work done to date for determining primary reserves. In summary, the primary reserves for the proposed North Hobbs Unit is being determined by two methods: (1) by analysis of production performance for all wells which are currently considered to be producing from the Grayburg and/or upper San Andres stringers and (2) by a reservoir simulation study (currently in progress) for all wells currently producing predominantly from the San Andres reservoir(s). There will be no overlap as each well has been placed in only one of the above categories.

A plan of attack was then developed by the Committee members. It was decided to first assign reserves to all of the applicable lease and composite groupings. Then wherever the lease production performance curve could not be used (i.e. when most of the current production on a lease is from wells completed in the San Andres reservoir); the reserves were estimated from the individual well decline curves. These curves have all been updated to include at least the production between January, 1972 and October, 1975. In many cases the November and December, 1975 production figures were also available as well as the production prior to January, 1972 for all of the one-well leases. The sum of all the wells within a group (groupings are described in prior correspondence) were then compared to the extrapolation of the applicable Composite Group curve as a check of the reserves so estimated.

All of these production performance curves were projected with a view graph and an annual decline rate (dy) and an initial 1/1/76 rate (q) was determined by those present. Complete agreement was obtained for each curve and the 1/1/76 reserves were calculated using an economic limit of one BOPD/well. These determinations are summarized on the attached tabulation and are considered to be final.

Subject: Technical Committee Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

Technical Committee
(Addressee List Attached)

Gentlemen:

Attached are the minutes of the Technical Committee meeting which was held in Midland, Texas on January 13 and 14, 19[illegible].

At this meeting the primary reserves were finalized for all wells which are currently producing from the Grayburg and/or upper San Andres stringers. This totals about 1.3 million barrels for 63 producers. Primary reserves for the remaining wells, which produce predominantly from the San Andres reservoir(s), are being determined with the use of a reservoir simulation computer program.

It would be greatly appreciated if each Company would return the ballots on the revised percent net pay to gross thickness ratio maps for the upper and lower Basal Grayburg Zones. (These were sent with letter dated December 31, 1975.) Once the volumetrics on the Grayburg are completed we will finalize a waterflood plan for this reservoir.

Yours very truly,

H. J. Swartz

H. J. Swartz, Chairman
Technical Committee

MINUTES OF THE TECHNICAL COMMITTEE MEETING
PROPOSED NORTH HOBBS UNIT
MARCH 25, 1975

The meeting was called to order at 9:15 AM. Fourteen companies, which operate 79 percent of the current producers, were represented. (Attendance list is attached). The main purposes of this meeting were to: (1) finalize net pay isopachs of the Grayburg formation, (2) present the results of a Grayburg waterflood evaluation on a 40-acre symmetry element and (3) decide on a waterflood plan for the Grayburg reservoir.

Mr. E. W. Kitchen presented a brief review of the method and decisions involved in the construction of the four Grayburg net pay isopach maps. Copies of these maps were mailed to each representative with the letter calling the meeting. After a brief discussion the maps were unanimously approved as drawn. It was requested that committee members review all maps submitted to them today for accuracy of information and data since these maps will be sent for drafting in final form shortly. The tract values of original hydrocarbons-in-place will be determined from these maps by use of the "gridding" technique with a ten-acre grid. Tabulations of the tract values and copies of the gridded maps will be sent to each operator for verification.

Mr. R. J. Swartz presented the results of a reservoir simulation study of the Grayburg formation. This analysis was done with the use of a three-phase, three dimensional, compressible fluid reservoir simulation program using a 40-acre symmetry element and a 9 by 17 grid system. The reservoir volume represented was 1028 NAF with an average porosity of 14 percent, water saturation of 30 percent and average permeability of 5 millidarcies. The value of permeability was determined by trial and error by comparing recent production history and water injectivities using the Moranco waterflood experience as a guide. Pseudo relative permeability curves were constructed using a Dykstra-Parsons variance factor of 0.7 (determined from 256 core samples) and a five layer stratification.

Based on the production history of 69 wells which were producing predominantly from the Grayburg, the average producing characteristics at January 1, 1975 were estimated to be 15 BOPD per well with a GOR of 5035 cubic feet per barrel. Fractional flow equations were used in conjunction with the pseudo relative permeability curves to relate this GOR to an average gas saturation of 19 percent and an average oil saturation of 51 percent. These values represent a cumulative oil recovery of 16.23 percent of the OOIP or about 10.2 million barrels, which fits prior estimates of cumulative oil production allocated to the Grayburg. The average reservoir pressure at January 1, 1975 was estimated to be 400 psig at 400 feet subsea.

Using these initial conditions, a base case was run to establish the results to be expected for continued primary depletion as a function of time. This analysis indicates that ultimate primary recovery (to an economic limit of one BOPD per well) would be 1098 STB per NAF or 18.7 percent of the OOIP. The January 1, 1975 reserves are 14.9 STB per NAF. Assuming that water injection would be initiated in mid-1978, this base case indicated that the average oil saturation at that time would be 48.6% and the reservoir pressure would be 220 psig.

A waterflood program using a five-spot pattern resulted in an ultimate recovery efficiency of 33.1 percent. This reflects an additional 84 STB/NAF (14.4%) of secondary oil per five-spot pattern. Economic analyses were made for this case and infill drilling. The effects of pattern skewness and shutting in producers to conserve reservoir energy were also evaluated with the computer program.

The conclusions reached from this study and discussions with the Technical Committee are summarized as follows:

(1) Because of the low permeability of the Grayburg reservoir it will be necessary to use a pressurized injection system (about 1500 psig surface) and a ratio of one injector per producer (five-spot or line drive pattern).

(2) An 80-acre five-spot waterflood is economically attractive. However, a complete infill program (40-acre five spot) cannot be economically justified at this time. The flood performance is improved if high GOR-low oil rate producers are shut-in while injecting water during the 5-year fillup period.

(3) Final pattern selection and well utilization should be made after the San Andres water injection program is finalized.

At the Technical Committee meeting of December 5, 1974, special BHP buildup surveys were requested in four selected wells. It was agreed that the Technical Committee would recommend to the Working Interest Owners that an adjustment be made to any production parameter that incurred a production loss because of these BHP surveys. Several methods were discussed at this meeting and it was then decided to adjust any parameter affected by averaging each well's production for two months prior to the survey and two months afterwards and subtracting the actual production obtained during the survey month(s). The well involved and the adjustment are:

Well	Location	Date Shut-In	Hours SI	Adjustment (Bbls.)
Amerada McKinley 3	30C	1/06/75	67	240
Exxon Fed. Bow. 10	29L	12/30/74	70	200
Getty McKinley 2	30H	12/11/74	72	0
Marathon State 30-1	30K	12/02/74	67	589

It was requested that all Technical Committee representatives carefully review the "Well Status Summary" (last revised 10/15/75) mailed with our letter dated October 31, 1975, and advise H. J. Swartz (713-220-1022) whether or not the data are correct as shown.

Minutes of the Technical Committee Meeting
Proposed North Hobbs Unit
October 13, 1976

The meeting was called to order at 9:00 a.m. Seventeen companies, which operate 90 percent of the current producers, were represented. (Attendance list attached). The main purpose of this meeting was to present the results of Shell's reservoir simulation study of primary recovery performance from the San Andres.

Mr. Swartz presented a brief review of the history of Technical Committee progress and emphasized the following points:

1. Attempts to form a fieldwide unit were aborted during 1973, primarily because of disagreement over the determination of remaining primary reserves.

2. Resolution of the problem of determining tract reserves (both primary and secondary) for the proposed North Unit should eliminate the last major hurdle for the Technical Committee.

3. The main complication for determining tract primary reserves is the existence of strong water influx into the upper San Andres (Zone I). This water drive is primarily from west to east and has caused an unusually large amount of oil migration and maintained the reservoir pressure and consequently the productivity of Zone I at higher levels than in the other productive intervals. This is particularly evident along the eastern flank of the proposed North Unit area.

4. Two prior methods for allocating tract primary reserves for the San Andres have been presented to the committee at meetings held on October 5, 1974 and November 7, 1974. Both were rejected and subsequent discussions led to the conclusion that the problem would best be resolved with the use of a reservoir simulation study.

5. A letter ballot, dated March 13, 1975, for a Shell computer study at a flat rate of $6000 (estimate based on computer time and outside clerical help only) was approved by 88.52 percent of the operators with only one dissenting vote.

6. Consequently Shell made a feasibility study and at a Technical Committee meeting held on June 4, 1975, Mr. W. C. Miller, section leader of the reservoir simulation group in Shell's research organization, presented a description of the mathematical model and techniques that would be used.

7. Primary reserves have already been determined by the use of production decline analysis for 62 wells which produce from the Grayburg and/or upper San Andres stringers. Please refer to the enclosed map (Figure 1) which shows those wells included in the reservoir simulation study.

8. Prior to completing the reservoir simulation study it was thought that it would be necessary for the Technical Committee to reallocate reserves to wells located in a common grid block. However, because of differences in completion zones and well model characteristics, it is believed by Shell that representative and equitable primary reserve determinations have been simulated on an individual well basis.

Mr. W. C. Miller then reviewed the premises, model description and the results of the history match. Discussion centered about the following points:

1. A 10 by 20 grid system, depicted in Figure 2 was superimposed on all completions in the field using a three-layer representation for the San Andres reservoirs (I, II and III_U/III_L).

2. All of the Technical Committee data developed to date were input for reservoir description. These include: Structure maps (fitted with curvilinear coordinates for a smooth surface as shown in Figure 3), individual well zonal porosity determinations, zonal original hydrocarbons-in-place (using the previous Engineering Committee work for the South Hobbs Unit area) and rock relative permeability curves modified to pseudo curves by stratification effects.

3. Oil production history, from initial completion to January 1, 1976, was input for every completion in the field after factoring out a minor amount attributed to the Grayburg formation on the basis of relative permeabilities and well storage differences in the completed intervals.

4. The actual well completion history (zone changes) were input in five-year intervals and the "current" (January 1, 1976) completion zones are shown in Figure 1. As previously decided by the Technical Committee, all wells producing in excess of 100 BWPD but not completed in Zone I were assumed to have behind pipe communication with that zone.

5. As previously discussed at previous sessions there are many indications of preferential flow channels. One obvious example is between two wells (29P and 28M) which although they are located about 700 feet apart and are both apparently completed in equivalent Zone I sections, one is a clean oil producer and the other makes in excess of 70 percent water cut. In view of this and other anomalous production performances it was necessary to establish flow channels (in Zone I only) in order to obtain a satisfactory history match. The transmissibilities of these flow channels were varied but it was found necessary to use a value of zero. The flow channels or barrier locations are depicted in Figure 4.

6. The quality of the history match was evaluated primarily by comparing the calculated zonal water production rates for each well to those reported to the New Mexico Conservation Commission during the year 1975. Attention was also focused on current zonal and areal reservoir pressure variations and comparisons with measured data reported at prior meetings. Figures 5 thru 10 represent both qualitative and quantitative comparisons of these data.

7. Shell believes that a good history match has been obtained, especially considering the interzonal interactions resulting from multicompletions, variations in reservoir pressure and selective completions intervals.

Following these discussions, Mr. W. C. Miller then presented the results of the prediction phase and emphasized the following points:

1. As decided by the Technical Commettee, the predict was run with each well retaining the current completion interval for the remaining life.

2. A top allowable well was assigned a January 1, 1976 bottom hole flowing pressure of 300 psi whereas the remaining wells were assumed to have 100 psi flowing bottom hole pressures. These top allowable wells are designated on Figure 11.

3. The permeability - thickness product of each well in each zone had been automatically varied throughout the history match to simulate actual performance. The last adjusted zonal kh for each well was kept constant during the predict mode.

4. The economic limit was arbitrarily selected to be 5 BOPD and/or 95 percent water cut and the prediction terminated at the end of year 2024.

5. It was assumed that those wells which contain a Grayburg completion with the main San Andres would not obtain any future primary reserves from the Grayburg because of the significant differences in permeability - thickness products and static reservoir pressures.

6. The predicted performance of each well was then summed into field, lease and operator totals which are summarized in Figures 12 thru 15 The estimated future rates were plotted on the enclosed lease production graphs. The previously estimated (by decline curve analysis) production for Grayburg and/or Upper San Andres producers has been added to the simulated predictions for the main San Andres wells where a lease contains wells in both categories.

Shell believes that the resulting predictions are reasonable and equitable projections of future performance. The economic limit was subsequently recalculated at the decontrolled stripper oil price and is 3 BOPD or 99 percent water cut, whichever is reached first. The results using the higher economic limit is labelled "Set A" whereas the recommended runs with the lower economic limit are designated as Set B. Figures 16 thru 19 are summary tables of actual and estimated primary oil performance from the San Andres reservoir for both the field and the proposed North Unit by zones and in total. Figure 20 is a summary of recent production statistics for the North Unit.

The Technical Committee members were asked to suggest variations to the simulation runs presented. None were suggested at the meeting but it was left open so that any Technical Committee representative wishing a variation in the assumptions should call the Chairman of this committee. It was requested that every one come to the next meeting on November 4, 1976, be prepared to vote on acceptance of this simulation study as the basis for tract primary reserves for those wells in the study area. Shell recommends using the San Andres primary reserves which are summarized in Set B. We feel that these represent equitable estimates and are much more representative than those obtained by methods previously suggested to the Technical Committee.

ATTENDANCE LIST
(10/13/76)

Name	Company	Location
Kassim Y. Kassim	Amerada Hess	Seminole
Paul Kossmann	Amoco	Houston
Bob Malaise	Arco	Midland

MINUTES OF THE TECHNICAL COMMITTEE
PROPOSED NORTH HOBBS UNIT
NOVEMBER 4, 1976

The meeting was called to order at 8:15 a.m. Thirteen companies, which operate 82 percent of the number of current producers, were represented. (Attendance list attached). The main purpose of this meeting was to vote on the acceptance of Shell's reservoir simulation study as the basis for the determination of primary reserves from the main San Andres reservoirs.

After considerable discussion and vote taking it was decided to take the following course of action:

1. Accept Shell's reservoir simulation approach as the best method for determining primary reserves from the main San Andres reservoirs.

2. Approve the techniques and mathematical descriptions used by Shell and as presented to the Technical Committee at the October 13, 1976 meeting by Mr. W. C. Miller of Shell Development. (Skelly registered the only no vote based on the results obtained for their Turner lease relative to offsetting tracts.)

3. Approve the approach that the primary reserves parameter for those wells included in the reservoir simulation study would be based on the assumption that the current completion status (shown in Figure 1 attached to minutes of October 13, 1976 meeting) would be constant over the remaining life.

4. Update the reservoir simulation history match to include the first eight months of 1976 oil production. The determination of each well's permeability thickness (kh) should be based on the last twelve months of history. (Wells that have been shut in during July and August 1976 due to overproduction of gas would use the prior ten months (9/75 to 6/76) as the base for determining kh. These wells are: Arco Grimes SOC 1 and 2 (28E&F), Conoco Grimes 1, 2 and 4 (28O, P and I) and Conoco State A-29-3 (29K).)

5. Rectify an apparent discrepancy between actual production and computed production for the Getty Hardin Lease in Section 19.

6. Move the two Skelly Turner wells (34C and F) from grid block 12, 2 to grid block 12,1 in order to obtain a better match and representation.

7. Use an economic limit of 3 BOPD or 99 percent water cut and all production stopped on December 31, 2024.

Shell agreed to make the preceding changes and distribute the results of this analysis to all Technical Committee members (in approximately one week). Shell pointed out to the Committee representatives that this would be the final simulation run under the agreement set forth in the letter dated March 13, 1975 about the computer analysis for this field.

It was decided to reconvene in two weeks (November 17 and 18) to cover the agenda scheduled for this meeting.

In response to several requests for information on other participation parameters determined to date, a tabulation of ten parameters was distributed and a copy is enclosed with these minutes. Also a summary of a conservative economic analysis of a unitized waterflood was shown; a copy of that summary is also attached.

PRELIMINARY ECONOMIC ANALYSIS
PROPOSED NORTH HOBBS UNIT

ASSUMPTIONS:

1. ADDITIONAL OIL BY WATERFLOODING IS 30 MMB OR ABOUT 7% OF THE OOIP IN GB, II, III_U, III_L ZONES. (THE SECONDARY OIL RECOVERY OF 30 MMB IS EQUIVALENT TO A SECONDARY TO PRIMARY ULTIMATE RATIO OF 0.28 FOR THESE ZONES.) THE WATERFLOOD LIFE IS 35 YEARS.

2. CAPITAL INVESTMENT IS $16,000,000 INITIALLY AND $4,000,000 TWO YEARS LATER.

3. A CRUDE OIL PRICE OF $5.911 PER BARREL IS USED THROUGHOUT. THERE IS NO ESCALATION FOR OPERATING COSTS. THE OPERATING COSTS USED FOR THE WATERFLOOD ARE 44% HIGHER THAN THE EQUIVALENT FOR PRIMARY OPERATIONS TO PROVIDE FOR AN INCREASED AMOUNT OF WORKOVERS AND WATER COSTS (PURCHASING AND HANDLING).

RESULTS:

1. THE ADDITIONAL OCI (UNDISCOUNTED AND BEFORE FIT) IS $3.80 PER BARREL OF OIL. THE ADDITIONAL OCI (DISCOUNTED AT 10% AND BEFORE FIT) IS $1.75 PER BARREL OF OIL. THE AVERAGE ANNUAL EARNING POWER (BEFORE FIT) IS 33% AND THE PAYOUT OF THE CAPITAL INVESTMENT IS 4.1 YEARS. THE UNDISCOUNTED PROFIT IS $94 MILLION OR 470% OF THE REQUIRED CAPITAL INVESTMENT.

NOTE: THIS IS AN INTENTIONALLY CONSERVATIVE PROFITABILITY TO DEMONSTRATE AN ECONOMICALLY ATTRACTIVE PROSPECT EVEN WITH LOW OIL RECOVERIES AND HIGH COSTS.

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001

November 8, 1976

Subject: Technical Committee Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

Technical Committee
Proposed North Hobbs Unit
(Addressee List Attached)

A two-day meeting of the Technical Committee is called for Wednesday and Thursday, November 17 and 18, 1976, at 8:00 a.m. in Conference Room 19109, Entex Building, 1200 Milam Street, Houston, Texas.

The agenda for this meeting is:

1. Vote on approval of Shell's reservoir simulation study for determining San Andres primary reserves by tracts. (See attached minutes).

2. Review primary reserve determinations made from decline curve analyses of wells producing from the Grayburg and/or upper San Andres stringers. (See Minutes of January 13 and 14, 1976, Technical Committee meeting). The production performance curves have been updated and there are some wells that have not yet been analyzed.

3. Discuss the procedure to be adopted for allocating secondary reserves to tracts.

4. Other business.

This agenda is the same as scheduled for the Technical Committee meeting held on November 4, 1976. Attached are the minutes of that session which show that only the first agenda item was discussed in detail. Whereas there is agreement with the assumptions and techniques used by Shell in their reservoir simulation study, sufficient modifications to the October 18, 1976 analysis (summarized in Figures 14 and 15 of the enclosures sent with the minutes of the October 13, 1976 meeting) were approved by the Technical Committee to justify an additional run. The results of this final run will be distributed to all Technical Committee representatives as soon as available (in approximately one week). We request that each Company representative attending the November 17 and 18, 1976 meeting be prepared to vote on the acceptance of the forthcoming computer analysis as the basis for the primary reserves unitization parameter.

Shell Oil Company now feels that they have fulfilled the intent and requirements set forth in our letter dated March 13, 1975 discussing the computer analysis for this field.

Yours very truly,

H. J. Swartz

HJS:ELP

H. J. Swartz, Chairman

#15

MINUTES OF TECHNICAL COMMITTEE MEETING
PROPOSED NORTH HOBBS UNIT
NOVEMBER 17 AND 18, 1976

The meeting was initiated with a brief review of the agenda and in particular the modifications that had been made to the Shell reservoir simulation study of the San Andres reservoirs primary performance. These changes had been requested by the Technical Committee at the November 4, 1976, meeting, are outlined in the minutes, and were at the time intended as the final computer run. The results of this analysis were transmitted to all members with letter dated November 10, 1976.

Shell moved that the results of the reservoir simulation study, summary of equity transmitted to all Operators on November 10, 1976, be used for the San Andres (main zones) tract primary reserve parameter. This motion was seconded by Amoco and the results of the vote were:

FOR (11) : Amerada, Amoco, Chevron (by telegram), Exxon, Getty, Gulf, Mobil, Samedan, Sun, Texas Pacific and Shell.

OPPOSED (3): Cities Service, Conoco and Skelly

The reasons for these objections were discussed and the respective positions are appended as follows: Cities Service (Attachment No. 1), Continental (Attachment No. 2) and Skelly (Attachment No. 3). Shell's response to each of the exceptions is noted at the end of each attachment.

A motion was made by Skelly that their two Turner wells (located in Section 34C and F) be assigned a Zone I primary reserve value of 540,000 barrels each (rather than the 319,000 and 321,000 barrel determination made by the last Shell computer run). All other wells would retain the assigned values shown in this final analysis. Samedan seconded the motion and the resulting vote was as follows:

FOR (2) : Getty and Skelly.

OPPOSED (11): Amerada, Amoco, Cities Service, Continental, Exxon, Gulf Mobil, Samedan, Sun, Texas Pacific and Shell.

A motion was then made by Shell that the Zone I primary oil reserves determined for the two Skelly Turner wells and three directly offsetting wells: Shell Sanger 2(27N), 514,000 barrels; Shell Turner 2(34B), 352,000 barrels; and Shell Turner 1(34G) 576,000 barrels; be arithmetically averaged and the resulting value (approximately 416,400 barrels) be assigned to each of these five wells. No other reserve values would be changed from those determined in the final run. Amoco seconded this motion and the results of the vote were:

FOR (7) : Amerada, Amoco, Gulf, Mobil, Sun, Texas Pacific and Shell

Opposed (4): Cities Service, Conoco, Exxon and Skelly

PASS (2) : Getty and Samedan

Getty requested the inclusion of their comments in the minutes. (See Attachment 4). Mr. W. E. Nolan stated Exxon's preference that no arbitrary adjustments affecting the tract reserve determinations be made.

After additional discussions about alternative proposals to resolve the disagreements (none were finalized as motions), it was decided by the Chairman of the Technical Committee that the results of the "final" Shell reservoir simulation study (first motion) would be submitted to the Working Interest Owners as the San Andres (main zones) primary reserve parameter. This decision was based on the observation that no constructive alternatives had been recommended and whereas it was a controversial determination it had received the most support from the representatives. Furthermore, based on current and prior discussions it appeared that all of the objections were directly related to equity and the disagreements could therefore best be resolved by the Working Interest Owners. The Technical Committee should now continue with their assigned task to determine the economic feasibility of unitized Supplemental Recovery operations and the development of additional parameters. Meanwhile Shell will continue to search for an alternative solution to the primary reserves parameter that would be acceptable to everyone.

The next agenda item was to review primary reserve determinations made from decline curve analyses of those wells producing from the Grayburg and/or upper San Andres stringers. (See minutes of January 13 and 14, 1976, Technical Committee meeting.) The production performance of these wells had been updated to include an additional ten months of history and there were several wells that had not previously been analyzed. Viewgraphs of each updated production performance graph marked with the previously determined initial oil rate (at 1/1/76) and the annual decline rate assigned were shown and reviewed for any necessary adjustments. The results of these evaluations are tabulated in Attachment No. 5. As noted in this summary, twelve revisions were made. Also, seven graphs were classified as erratic performance requiring further analysis and one new lease was added. This tabulation of course represents the current analysis and replaces the summary previously transmitted with the minutes of the January 13 and 14, 1976 Technical Committee meeting.

A description of the problems involved with determining the tract secondary reserve potential for the Grayburg reservoir were presented. The meeting was then adjourned for the day. The Thursday meeting began with a quick review of the results of Shell's reservoir simulation study of the Grayburg waterflood potential. These results had been presented and accepted at the

Technical Committee meeting held on March 25, 1976. That presentation included only the results expected from a five-spot waterflood pattern of the Grayburg formation using the average reservoir characteristics found along the northern and western flanks of the field. Those areas are currently developed by 67 Grayburg wells which can conveniently be converted to an 80-acre five-spot waterflood pattern. Because of the low permeability of the Grayburg net pay it will be necessary to use a pressurized water injection system with an expected surface injection pressure of about 1500 psig. Because of this fact and the small casing sizes it appears impractical to either simultaneously or dually inject water into both the Grayburg and San Andres in the same wellbore. Herein lies the problem. The availability of "Grayburg only" wells will permit the secondary recovery development of about one-half of the original-oil-in-place. The remaining potential is underlain and developed by more prolific San Andres producers. In light of past history it is doubtful that high pressure water injection could be mechanically confined to the Grayburg in most of these wells.

It was decided by the Technical Committee that Shell should make the following determinations:

(1) Quantify the volume of Grayburg reservoir that can be affected by an 80-acre five-spot waterflood pattern with currently available wells. This volume should include the expected encroachment of water beyond the normal well pattern in accordance with a 1955 report by Caudle et al. (See Page 57 of the AIME Monograph Volume 3 by Forrest F. Craig, Jr.)

(2) Evaluate the economic feasibility of drilling Grayburg water injectors but utilizing existing producers for drainage points in the reservoir volume not encompassed in Item 1. This evaluation would also be based on an 80-acre five-spot pattern, upper tier oil price, constant revenue and costs, before federal income taxes, and values discounted at 10 percent and undiscounted. It will be assumed that water injection would be initiated in mid-1979 and the reservoir pressure at that time in this area would be 400 psig.

These determinations should establish what volumes of the Grayburg reservoir can economically be exploited with a waterflood.

Considerable discussion then ensued on the best method to be used in determining the San Andres waterflood potential. Shell had planned to make a reservoir simulation study by modelling the Zone III_L reservoir in its entirety in the northern unit area. Average oil saturations at the start of water injection were to be determined for each floodable zone (II, III_U and III_L) from the recently completed San Andres primary performance simulation study by Shell.

Waterflood recovery would then be evaluated for several cases with different location and number of injectors and producers. However, in view of the previously described controversies about that primary performance simulation study (see Attachments 1, 2, 3 and 4) it was decided that it would be preferable to evaluate the secondary recovery potential of the San Andres by analogy with existing waterfloods in similar reservoirs the West Texas - New Mexico area. Consequently, each representative was requested to supply the Chairman with data on this type of project. However, in order to avoid duplication of effort and incomplete data, Shell will send out a letter requesting specific data from the operator of specific selected projects. Shell will then summarize and average these data and the Technical Committee will then determine the San Andres secondary reserves volumes to be used for the North Hobbs Unit by applying a recovery factor to the OOIP (Zones II, III_L and III_U) for each tract.

It was requested by the Committee that Shell review the computed saturations and reservoir pressures in the latest simulation run to ascertain that significant differences do not exist between grid blocks during mid-1979. Subsequent to the meeting, it was established by Shell that the pressure gradient existing between grid blocks in the North Unit Area averaged 21 psi in Zone II and 16 psi in Zone III and that the saturation differences were not significant for these floodable San Andres zones. The average reservoir pressure in both zones is 580 psig at mid-1979. Shell will continue to design a waterflood plan and present a recommendation to the Technical Committee.

It was estimated that the next meeting would be held in mid-January and be relative to the aforementioned waterflood analyses.

ATTACHMENT NO. 1

OBJECTION BY CITIES SERVICE OIL COMPANY

Cities Service Oil Company believes that the computed San Andres primary reserves for their B. Hardin lease (NW/4 Section 19) are too low and do not properly reflect the remaining value of this lease. This contention is based on the observation that this tract has higher equity values (percent in the proposed North Hobs Unit) in the following parameters: useable wells 2.075%, active wells 1.810%, cumulative oil production (to 1/1/76) 2.079%, current oil production (1st 7 mos. 1976) 1.058%, San Andres OOIP 2.984% whereas the computed primary reserves are equivalent to only 0.693% of the unit total.

SHEL OIL COMPANY RESPONSE TO CITIES SERVICE OIL COMPANY'S OBJECTION

It is recognized that there is a considerable range in the many parameters -- that is the very reason for developing them. The history match for the 4 wells on this lease is quite adequate. One well is now at the economic limit applied to all wells in the simulation (3 BOPD) and is not credited with any reserves. The remaining wells average only 26 B/D oil production by solution gas drive in Zone 3. The predicted reserve of 86,000 barrels per well gives a reserve to production ratio of a reasonable 9.1 years.

ATTACHMENT NO. 2

OBJECTION BY CONTINENTAL OIL COMPANY

Continental Oil Company objects to the use of an arbitrary time cutoff in the reservoir simulation study for determining San Andres primary reserves, which in effect produces some wells to the economic limit while many others are producing at rates above the economic limit at the cutoff date. Continental believes each well should be carried to the economic limit and thereby credited with reserves in a manner consistent with every other well.

SHELL OIL COMPANY'S RESPONSE TO CONTINENTAL OIL COMPANY OBJECTION

Continental Oil Company raises a valid point when they suggest that all wells should be treated alike and be allowed to produce until they reach an economic limit of 3 BOPD or 99 percent water cut. However if this is done for this study some of the well lives would probably be extended an additional 50 years or a total future life of about 100 years. Shell feels that it is not realistic to expect this type of well service. The cutoff time chosen (2025.0) is arbitrary and was based on several factors such as: now is mid-point in life, recovery efficiencies are already high, discounted values after 50 years are extremely low, and reservoir pressure at 2025.0 in the depletion drive reservoirs are very low (251 psi in Zone II and 170 psi in Zone III).

ATTACHMENT NO. 5

OBJECTION BY SKELLY OIL COMPANY

Skelly Oil Company does not approve the techniques and mathematical descriptions used for the determination of the San Andres Zone 1 primary reserve parameter. Skelly believes that its B.H. Turner Lease, which has two flowing 80 BOPD and 0 BWPD wells, is not being treated justly. The following is an illustration of this stated inequity using only the comparison of second row San Andres Zone 1 producers:

Operator	Lease & Well No.	Cur. Prod. Rate*	% Wtr. Cut	Zone 1 Rem. Prim. Resr.*
Samedan	Moon "A" #2	64 BOPD & 19 BWPD	23%	475,000 Bbls.
Samedan	Moon "B" #1	67 BOPD & 0 BWPD	0%	656.000 Bbls.
Shell	Sanger #3	80 BOPD & 7 BWPD	8%	638.000 Bbls.
Shell	Sanger #1	80 BOPD & 10 BWPD	11%	513,000 Bbls.
Skelly	Turner #2	80 BOPD & 0 BWPD	0%	319.000 Bbls.
Skelly	Turner #1	80 BOPD & 0 BWPD	0%	320,000 Bbls.
Samedan	Turner"A"#1	50 BOPD & 19 BWPD	28%	460,000 Bbls.
Samedan	Turner"A"#2	57 BOPD & 19 BWPD	25%	495,000 Bbls.
Other Operator's Average Well		66 BOPD & 12 BWPD	15%	540,000 Bbls.
Skelly's Average Well		80 BOPD & 0 BWPD	0%	320,000 Bbls.

Note: The two Sekly wells are the only 80 BOPD, zero water cut, flowing, Zone 1 wells in this portion of the field,
*Based on Aug. Prod. Figures & Shell's Run "C" on the simulator.

A previous indication of this inequity for the Skelly Turner wells was noted in the committee after review of stimulator run "B" which allocated only 403,000 BBLS. per well for Zone 1 remaining primary reserves. At that time the committee agreed to move the two Skelly Turner wells to another grid block in order to obtain better representation of the Skelly Wells. (See Item No. 6 in the minutes of the November 4, 1976 Technical Committee Meeting which was prepared by Shell).

SHELL OIL COMPANY'S RESPONSE TO SKELLY OIL COMPANY OBJECTION

The migration of oil in Zone I has been clearly established as being controlled by edge water encroachment which is from the southwest in the vicinity of the Skelly Turner lease. This natural water influx negates structural advantages and places a premimum on distance from the watered out area, placing the Skelly lease at an unfavorable geographical location. Also the Skelly wells should not be compared to the two Samedan Moon wells which are located 6000 and 4500 feet from the nearest Skelly producer and are affected by different migration characteristics.

It should be noted that Skelly Turner 1 is no longer a top allowable producer. During the first eight months of 1976 this well has produced 88,295 MCF of gas or an overproduction of 19,973 MCF. The well will have to be shut in for 71 days to makeup for the excessive gas and Skelly has advised us that this well also overproduced the gas allowable during September. Clearly a top allowable oil producer, even if it is pumped because it makes some water production, is more desirable than a clean flowing oil well that is GOR penalized. Furthermore, if an adjacent lease is producing water it is indicative that the clean wells will soon produce water if they are opened to production in correlatable zones.

ATTACHMENT NO. 4

COMMENTS BY GETTY OIL COMPANY

Getty Oil Company requests the following comments be included in the minutes of the Technical Committee Meeting of the proposed North Hobbs, Lea County, New Mexico for consideration by the working interest owners' management representatives:

Getty Oil Company believes that numerical reservoir simulation is one of the most valuable tools available in the petroleum industry today for prediction of reservoir behavior. We use this tool often. We recognize both advantages and disadvantages of the tool. We believe that overall Shell Oil has done a good job in the numerical reservoir simulation of the proposed unit. However, some local discrepancies, such as in the area of the Skelly Turner lease, do exist and are not to be unexpected in this particular simulation for the following reasons:

(1) Although a three-dimensional model was used, there are only three layers in the vertical dimension; each representing a completely separate lithologic zone. This is offset to a degree by the use of pseudo relative permeabilities to represent stratification in each of the zones.

(2) A large areal grid size was used. In the majority of the cases, not only are there no grid blocks between wells, there is more than one well in most grids.

(3) Actual data shows that in some cases there are high water producers adjacent to low water or clean producers. Many no-flow boundaries were used during the history match to account for these occurrences.

(4) History matching does not present a unique solution. Even though the simulator accurately performs the calculations of the applicable physical phenomena, the simulator user inputs his own judgement decisions as to modifications of the original input so that computed and actual past performance are as close as practicable.

In summary, Getty Oil Company believes that overall the Shell Oil numerical reservoir simulation provides the best estimates of remaining primary recovery by tracts or wells and fluid saturations for determination of distributions to waterflood recovery. However, for the above stated reasons, the subject simulation results should be tempered by other available data in order to avoid obvious errors such as, but not necessarily restricted to, the area of the Skelly Turner lease.

SHELL OIL COMPANY'S RESPONSE TO GETTY OIL COMPANY COMMENTS

Shell appreciates Getty's concurrence that overall, the simulation provides the best estimates of remaining primary recovery by tracts or wells. As we have emphasized in Committee Meetings, for determination of primary reserves under the conditions which prevail at Hobbs, adequate detail is provided by the model, described by Getty under their points 1 to 4. The key features of Hobbs' performance are represented by the use of three distinct zones, 127-acre grid blocks, and flow channels in Zone I (whose boundaries are represented mathematically as no-flow interfaces between certain grid blocks). As Shell stated in these meetings, for other objectives, e.g., to evaluate supplemental recovery by pattern waterflooding, smaller grid blocks would be required. Finally, it is not apparent that there are errors in the area of the Skelly Turner lease. Certainly, the history match obtained on the two Skelly wells and on the offset wells is quite adequate.

Well	Operator		Production Rates Oil B/D	Gas MCF/D	Water B/D	Completion Zones
34C	Skelly	Calc.	79	73	21	1,2
		Actual*	79	85	0	
34F	Skelly	Calc.	80	74	21	1,2
		Actual*	80	310!	0	
34B	Shell	Calc.	80	47	21	1
		Actual*	80	93	13	
34G	Shell	Calc.	80	236	29	1,2
		Actual*	80	87	16	
27N	Shell	Calc.	80	56	21	1,2
		Actual*	80	215	7	

* Arithmetic average of last 12 months of production available (Sept. 1975 thru Aug. 1976).

One possible exception is in the comparison of some calculated and reported gas rates. The simulation does not reflect either the gas rate in Shell's 27N or even higher gas rate in Skelly's 34F (which subjects the latter well to shut-down in the latter part of 1976). Although the net effect upon predicted reserves is somewhat favorable to the Skelly well, we believe that such very localized regions of higher than average gas saturations have only a second order.

Finally, with regard to water rates, on the basis of an examination of the well records of all the wells producing from the several zones in the field, there is little significant distinction between wells making 20 B/D water or less (in this case, between 0 B/D water and 16 B/D).

RESERVES OF WELLS PRODUCING FROM GRAYBURG &/OR UPPER SAN ANDRES STRINGERS

#1.

Minutes of the Technical Committee Meeting
Proposed North Hobbs Unit
January 13, 197[illegible]

Thirteen companies, which operate 81 percent of the current producers, were represented. (Attendance list is attached). The main purpose of this meeting was to finalize the tract-secondary reserves for the unit.

Discussion was initiated with a brief review of the reservoir simulation study by Shell of the Grayburg waterflood potential. These results had been previously presented to the Technical Committee at a meeting held on March 25, 1976. The main conclusions are:

(1) Because of the low permeability it is necessary to use a pressurized water injection system (1500 psig surface) and a five-spot waterflood pattern.

(2) Primary ultimate recovery efficiency is 18.7 percent and secondary recovery efficiency is 14.4 percent for a symmetrical closed five-spot pattern.

(3) An 80-acre five-spot pattern waterflood, using existing wells, is economically attractive but will have a long life (43 years) and a relatively low response. A complete infill drilling program to obtain 40-acre five-spot patterns cannot be economically justified. The questions that needed to be resolved at this meeting are:

(1) What reserves should be assigned to the unit to discount the recovery efficiency of 14.4 percent for idealized conditions by the factors of well availability, non-symmetrical five-spots and incomplete patterns? and (2) On what basis should the unit secondary reserves be assigned to each tract?

A study was presented by Shell to show the expected encroachment of injected fluids beyond the normal well pattern (based on studies by Caudle et al, Petroleum Transactions, AIME (1955) 204, 79-85) and reduced sweep efficiencies due to incomplete patterns (based on results published by Craig, AIME Monograph, Volume 3, Chapter 5). The application of these techniques was approved by the Committee and resulted in unit secondary oil reserves of 6,560,000 barrels for a recovery efficiency of 10.6 percent of the OOIP. This is equivalent to a secondary reserve to primary ultimate ratio of 0.57 and requires the drilling of one injector at location 29D. It was decided by the Committee that this volume of secondary reserves should be apportioned to each tract on the basis of the tract OOIP.

It was pointed out that apparently the 320-acre Noranco Rice (Section 13) and Hardin (Sec. 18) leases were experiencing favorable response to Grayburg water injection. The October 1976 oil production from the Hardin tract is 1211 barrels (3 producers) which is the highest production level since 1963. In addition, the GOR has significantly decreased to 2695 cubic feet per barrel oil. Waterflood response from the Rice lease is not as pronounced but still encouraging. Water injection was started in August 1971, but has not been continuous.

At the last Technical Committee meeting it had been decided that San Andres secondary reserves should be determined by analogy with existing San Andres waterfloods in the vicinity that exhibited similar reservoir characteristics. Performance data on 8 such projects were reviewed and averaged a total recovery efficiency of 35 percent with a secondary to primary ratio of 0.85. It was noted that the volumetrically weighted permeability for these projects was 11 millidarcies whereas only two of the projects had average permeabilities as high as the North Hobbs Unit average for Zones II, III_L and III_U (28 millidarcies) and the ultimate recovery efficiency for those two floods are predicted to be 39.4 and 46.4 percent. Their secondary to primary ultimate recovery ratios are 0.43 and 0.68.

A Shell reservoir simulation study of the Zone III_L resulted in a primary recovery efficiency of 24 percent and a secondary recovery efficiency of 20 percent. The ultimate recovery efficiency is 44 percent and a secondary to primary ratio of 0.82. This study assumed a residual oil saturation of 35 percent in the swept zone and the final average saturation of 39 percent is equivalent to a sweep efficiency of 89 percent. It was pointed out that the San Andres Zone III_L is probably the most amenable to waterflooding because of the localized area and shape of the reservoir development.

Based on the foregoing, the Technical Committee determined that the ultimate oil recovery efficiency for the San Andres Zones II, III_U and III_L will be 40 percent. This should result in a secondary reserve for these zones of 48,640,000 barrels of oil. These recoveries are equivalent to an average residual oil saturation of 41.4 percent with a sweep efficiency of 85.1 percent. The ultimate recoveries for each zone in the proposed unit area are summarized in the attached tabulation. The Technical Committee also decided that the secondary reserves for the San Andres should be allocated to each tract on the basis original oil in place for each of the three zones.

Discussion then revolved about the scheduling of future work required for the Technical Committee to complete the charges by the Working Interest Owners. The following tentative schedule was developed: (1) determine the economics of waterflooding of both the Grayburg and San Andres reservoirs, (2) finalize the Grayburg primary reserves, by decline curve analysis, as soon as the production statistics are available through December 1976, and (3) prepare the Technical Committee report (tentatively scheduled for April 1977).

Minutes of the Technical Committee Meeting
Proposed North Hobbs Unit
March 2, 1977

Twelve companies, which operate 83 percent of the current producers, were represented. (Attendance list is attached.) The main objectives of this meeting were to finalize the primary reserve determinations and to review the capital investment requirements and economics of waterflood operations.

The first agenda item was to finalize tract primary reserves for wells producing from the upper San Andres stringers and/or the Grayburg reservoirs. The last estimates had been made on November 11, 1976 and were based on production through August 31, 1976. The production performance graphs have now been updated to include the results through December 31, 1976. The oil reserves for the proposed North Unit area (as of January 1, 1977) were determined to be 1,485,275 barrels and are summarized by tracts on an attachment.

The next agenda item was to determine the method to be used to allocate the oil production from the last four months of 1976 in order to update tract primary reserves computed for wells producing from the main San Andres reservoirs. These reserves have been determined (as of September 1, 1976) with the use of a reservoir simulation program. (Please refer to the minutes of the Technical Committee meeting held on November 17 and 18, 1976.) Two alternatives were considered: 1) Use of computer program predict mode to estimate the zonal allocation of actual production for the last four months of 1976 on a unit basis and determine the tract zonal reserves by applying the same tract percentages previously determined or 2) use the computer program predict mode to estimate the zonal allocation of actual production for the last four months of 1976 on a tract basis and determine the tract zonal reserves by subtracting those values from the previously determined tract reserves (as of September 1, 1976). The latter method was selected; this may result in a slight change in the ratio of tract reserves to unit reserves that were previously furnished to you. Copies of the revised tract values will be mailed to you as soon as available.

A discussion was then initiated about an alternative solution to the computed reserves for the Getty (Skelly) Turner lease located in Section 34. The problem is described in the minutes of the Technical Committee meetings held on November 4, 1976, and November 17 and 18, 1976. The following motion was made by Samedan and seconded by Shell: The Technical Committee accepts the remaining primary oil reserves for the main San Andres zones as determined by the reservoir simulation run of November 8, 1976 (summary of equities transmitted to all Operators with letter dated November 10, 1976) except for a manual adjustment to the zone I primary oil reserves for five direct offset wells (Getty-Skelly Turner 1 (34F) and 2 (34C), Shell Turner 1 (34G) and 2 (34B) and Shell Sanger 2 (27N)) to correct an anomaly in misalingment of the simulator grid in that zone. The remaining zone I primary oil reserves (as of September 1, 1976) for each of those five wells is 416,437 barrels. The results of the vote were:

FOR (10): Amerada, Amoco, Exxon, Getty, Gulf, Mobil, Samedan, Sun, Texas Pacific and Shell
OPPOSED (1): Continental
PASS (1): Cities Service

The primary reserve parameter will therefore reflect this adjustment.

The next agenda item was a review of the economics of secondary recovery operations for this unit. A total capital investment of $24,600,000 will be required to waterflood the Grayburg and San Andres Zones II_L, III_L, and III_U reservoirs. This amount includes $11,000,000 for centralized production facilities with fourteen satellite stations, $7,000,000 for the injection system and $600,000 for the source water gathering system. The Grayburg flood design is based on an 80 - acre five - spot pattern consisting of 40 injectors and 44 producers. One injector will be drilled. The expected waterflood recovery of 7.6 million barrels (6.6 secondary and 1.0 primary) should be produced in 36 years with a peak production rate of 1298 barrels of oil per day reached after 10 years of water injection. The San Andres flood design is based on a modified nine - spot injection pattern with an approximate spacing of 160 acres and consisting of 27-1/2 injectors (60 well zones) and 116 producers (192 well zones). Five unit producers and 14-1/2 unit injectors will be drilled which includes five (2-1/2 unit) injectors drilled along the common boundary with the Amoco-operated South Hobbs Unit. The expected waterflood recovery of 61.9 million barrels (48.6 secondary and 13.3 primary) should be obtained in 35 years with the peak oil production rate of 9280 barrels of oil per day occurring 8 years after the start of water injection and remaining flat for seven years. The oil and water production rates and volumes and water injection requirements are based on reservoir simulation studies on both the Grayburg and San Andres Zone III_L which have been previously reported. Copies of detailed cost estimates (captial and operating costs) and production functions were handed out to all in attendance and are available on request to those not attending.

The differential profitability analysis for the combined Grayburg - San Andres secondary oil additions of 55.2 million barrels yeild an undeferred before tax profit of $334 million (1359 percent) and a before tax profit, discounted at 10 percent, of $80 million (350 percent) based on constant dollars. Payout occurs in 6 years and the before tax earning power is 28 percent.

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001

March 8, 1977

Subject: Technical Committe Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

Technical Committee
(Addressee List Attached)

Attached are the minutes of the Technical Committee meeting held in Houston on March 2, 1977.

At this session the Technical Committee updated the primary oil reserve determinations to include production through December 31, 1976. In addition it was agreed to make a manual adjustment to the reserves calculated with the reservoir simulation program for five offsetting wells in Section 27 and 34. The Technical Committee also reviewed the estimates of capital investments requirements and the economics of waterflood operations.

This will probably be the final meeting of the Technical Committee prior to the publication of the Report in April. Attached is copy of the Well Status tabulation which has been updated to reflect the conditions as of January 1, 1977. It would be appreciated if each operator would again review this summary and advise me of any errors.

Yours very truly,

H. J. Swartz

H. J. Swartz, Chairman

TESTIMONY AND EXHIBITS OF

W.E. BUCK

TESTIMONY OF W.E. BUCK

Q. Would you please state your name and where you reside?

A. W.E. Buck, I reside in Houston, Texas.

Q. Where are you employed and in what capacity?

A. I am employed by Shell Oil Company in Houston, Texas as a staff engineer in the business coordination group.

Q. Have you previously testified before this Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you briefly describe your educational background and employment experience.

A. I graduated from the University of Oklahoma, February 1941, with a B.S. Degree in Petroleum Engineering. I performed military service from March 1941 to February of 1946 and was employed by Shell Oil Company as an exploitation engineer in February of 1946; my assignment with Shell Oil Company has included various engineering and supervisory positions directly associated with the development and production of oil and gas reserves. During the past nine years I have directed and have been responsible for Shell's efforts to unitize properties for supplemental recovery purposes. During this period I have also represented Shell in other operators' efforts to unitize properties for supplemental recovery purposes. I have been registered as a professional engineer in the State of Texas, since July 29, 1958.

Q. Are you familiar with the applications of Shell Oil Company in Case Nos. 6652 and 6653?

A. Yes, I am as I have represented Shell and acted as Chairman of the Working Interest Owners Committee during its negotiations in connection with the unitization of the proposed North Hobbs Grayburg-San Andres Unit.

Q. Mr. Chairman, are the witnesses qualifications acceptable?

A. [Await answer, assume that they are.]

Q. Mr. Buck, did the Working Interest Owners Committee hold meetings during your chairmanship?

A. Yes, they did.

Q. Were minutes taken at those meetings?

A. Yes.

Q. Let me refer you to what has been marked as Shell's Exhibit No. 20 and ask you to identify it.

A. Exhibit No. 20 is a bound series of copies of the minutes of the Working Interest Owners Committee meetings and related correspondence. These minutes and this correspondence were prepared by me in my role as chairman of the committee.

Q. Have you reviewed these minutes?

A. Yes, I have.

Q. Do they accurately report the actions of the Working Interest Owners Committee in those respective meetings?

A. Yes, they do.

Q. How were efforts to form the North Hobbs Unit initiated and how was the program for unitization and water injection developed?

A. As Mr. Lancaster previously has stated, Amoco Production Company initiated an effort in 1970 to form a pool wide unit of the Hobbs Grayburg-San Andres Pool for the purpose of supplemental recovery operations. It became apparent that agreement could not be reached on a pool wide basis because the working interest owners could not reach agreement on a method for allocating the Unit production based on the values assigned the parameters.

At a meeting held by Amoco on July 12, 1973, all of the working interest owners in the Hobbs Pool decided to abandon efforts to form a pool wide unit and to divide the Pool into two parts for future unitization efforts. Amoco undertook a program of unitization of the south portion of the Pool and was successful in forming the South Hobbs Unit on January 1, 1975.

Shell called a meeting of all Operators on July 31, 1973, to determine what interest, if any, all of them had in undertaking a program for the unitization and water injection for the northern part of the Pool. The Operators attending this meeting actually represented a major portion of the working interests in the northern portion of the Pool. They agreed to proceed with the program of unitization and water injection and to participate in an effort to form the North Hobbs Grayburg-San Andres Unit

with Shell Oil Company acting as Unit Expeditor and Unit Operator if the efforts toward unitization were successful.

As Mr. Lancaster discussed, the Operators in attendance at this meeting charged a Technical Committee with the task of developing a technical study for the proposed North Hobbs Grayburg-San Andres Unit. The Operators instructed the Technical Committee to obtain general agreement on all items considered. The Technical Committee was instructed to bring any matter upon which general agreement could not be reached to the Working Interest Owners Committee for direction or decision. This Technical Committee consisted of representatives of all working interest owners who wished to participate and Shell's representative acted as Chairman of the committee.

Q. What actions were taken by the Working Interest Owners Committee during the time the study was being developed by the Technical Committee?

A. No further meetings of the Working Interest Owners Committee were held until May 26, 1977. However, in the meantime, the Technical Committee asked our committee to act on two of its recommendations.

Our first action was to approve the recommendation of the Technical Committee to adopt a cut-off date of January 1, 1975 for all well logging data and well test information which they were going to consider in completing their charge. The need to adopt a cut-off date is fairly self-evident. As was stated in

the ballot submitted to the working interest owners, a cut-off date was necessary in order to bring certain facets of the Technical Committee's work to a conclusion so that they could proceed with answering their charge. Our approval of this recommendation was arrived at by a written ballot vote on September 26, 1974. The second action our committee took was to adopt the Technical Committee's recommendation to approve a computer analysis of certain study zones using Shell's three-dimensional, compressible fluid reservoir simulation program. This recommendation was approved by 88.5 percent of the working interest owners involved in the northern portion of the Hobbs Pool, again by written ballot on March 15, 1975. This percentage approval was based on each working interest owner's respective percentage of oil production from the northern portion of the Hobbs Pool during the year ~~1976.~~ 1973

Q. When did the Technical Committee complete their charge and what action was then taken by the Working Interest Owners Committee?

A. The Technical Report which has been previously introduced as Shell's Exhibit No. 16 was formally submitted to the Working Interest Owners Committee at a meeting on May 26, 1977. This Technical Report was accepted by the Working Interest Owners Committee as the completion of their charge.

76.6 percent of the working interest owners, again based on 1976 oil production, accepted the study as a basis for unitiza-

tion negotiations. Exxon's acceptance was qualified because Exxon was not yet ready to accept the gas reserve parameters. Exxon later accepted without qualification the Technical Report as the basis for unit negotiations. Ultimately, not one working interest owner objected to the use of the Technical Report as the basis for unit negotiations.

Q. Was a method developed for allocating all of the oil and gas to be produced from the Unit Area, and if so, in what manner was it developed?

A. At a meeting of the Working Interest Owners Committee on July 12, 1977, efforts were initiated to develop a participation formula or method of allocating the oil and gas to the various tracts within the Unit Area. The meeting was attended by working interest owners representing more than 92 percent of the unit participation based on the lowest participation of any of the formulas considered at the meeting.

At this meeting a total of twelve different participation formulas were proposed by ten different working interest owners. Each proposal was considered and a roll-call vote was taken of the working interest owners in attendance. None of the 12 formulas received more than 58 percent approval of the working interest owners in attendance.

In the absence of agreement, the meeting of the Working Interest Owners Committee was adjourned with the intent of renewing efforts at a later date after all parties had had time to review the efforts to date.

The Working Interest Owners Committee again met on September 20, 1977 in its continuing effort to develop an acceptable participation formula. Five additional formulas or methods of allocation were proposed at this meeting. Each new formula was considered by the committee and a roll call vote of the working interest owners present was taken on each formula.

Continental Oil Company presented the fifth formula considered at this meeting, and the seventeenth proposed in all. Continental's formula received in excess of 83 percent approval of the working interest owners on a roll-call vote. At the request of the working interest owners a written ballot on this formula was submitted and returned by mail. This formula provided for participation by the working interest owners during three specified phases of the life of the project and, based on each working interest owner's respective oil participation in each phase, the results of the ballot were: Phase I, 92.01 percent working interest owners' approval with only 1.46 percent disapproval; Phase II, 92.58 percent approval with only 1.30 percent disapproval; and Phase III, 89.76 percent approval with only 1.27 percent disapproval.

Q. Would you state what is the participation formula which received the percentage approval you just described and also tell the Commission how it works and in this connection I refer you to what has been marked as Shell's Exhibit No. 21.

A. Actually, participation was made up of two formulas - one for oil and one for gas - each divided into three parts or phases.

As shown on this Exhibit the formula for oil allocation in Phase I participation was based on 20 percent of the ratio of the quantity of 1976 oil production from each tract to the total quantity of 1976 oil production from all tracts within the Unit Area, plus 80 percent of the ratio of the quantity of remaining primary oil reserves of each tract within the Unit Area as of January 1, 1977, as set forth in the Technical Report to the total quantity of remaining primary oil reserves of all tracts within the Unit Area as of the same date.

In Phase II, participation was based on 100 percent of the ratio of the quantity of remaining primary oil reserves for each tract within the Unit Area again as of January 1, 1977, to the total quantity of remaining primary oil reserves of all tracts within the Unit Area as of the same date.

In Phase III, participation was based on 100 percent of the ratio of the quantity of secondary oil reserves for each tract within the Unit Area as set forth in the Technical Report, to the total quantity of secondary oil reserves of all tracts within the Unit Area.

The gas participation formula is the same in principle as the formula for oil participation.

In Phase I, participation was based on 20 percent of the ratio of the volume of 1976 gas production from each tract within the Unit Area to the total volume of 1976 gas production from all tracts within the Unit Area, plus 80 percent of the ratio of the volume of remaining primary gas reserves of each tract within the Unit Area as of January 1, 1977 as set forth in the Technical Report to the total volume of remaining primary gas reserves of all the tracts within the Unit Area as of the same date.

In Phase II, participation was based on 100 percent of the ratio of the volume of remaining primary gas reserves for each tract within the Unit Area again as of January 1, 1977, to the total volume of remaining primary gas reserves of all the tracts within the Unit Area as of the same date.

In Phase III, participation was based on 100 percent of the ratio of each tract's quantity of secondary oil reserves within the Unit Area as set forth in the Technical Report to the total quantity of secondary oil reserves of all tracts within the Unit Area.

Q. Mr. Buck, now that you have described how unit oil and gas production will be allocated to each tract during three phases, would you explain the duration of each phase?

A. With respect to the duration of each phase, Phase I is to start on the effective date of unitization and continue until the first day of the month following the month in which the total number of barrels of oil produced from all tracts within the Unit

Area after the effective date of unitization equals four million barrels.

Phase II starts at the termination of Phase I and continues until the first day of the month following the month in which the total number of barrels of oil produced after January 1, 1977, from all tracts within the Unit Area equals 38,071,683 barrels which is the quantity of remaining primary oil reserves of the Unit Area as of January 1, 1977 as set forth in the Technical Report.

Phase III begins with the termination of Phase II and continues for the remainder of the term of unitization or life of the project.

Q. Is then the oil and gas that is produced from the Unit Area less that used in the conduct of Unit operations or unavoidly lost, to be allocated to the separately owned tracts within the Unit Area on the basis of the participation formulas just stated?

A. Yes. This method of allocation is set forth in Section 13, page 9, of the Unit Agreement for the North Hobbs Grayburg-San Andres Unit, which has been introduced as Shell's Exhibit No. 3.

Q. Why is there a split formula with respect to Phase I of the unit operations?

A. The relationship of a tract's production to the production of other tracts or to the total of all tracts at a given

time or for a relatively short period is not necessarily the same as the relationship of the remaining primary reserves of such tract to the total of all tracts. Therefore, a rate of production for a fixed period was used as a parameter in Phase I to provide some adjustment. Phase I is for only a short period of time, the time it takes to produce four million barrels of oil. By the time four million barrels of oil are produced, it is anticipated that the rate of production of the unit will begin to increase, so that soon thereafter all tracts will be allocated oil at a rate greater than that they enjoyed prior to unit operations.

Q. Do you have an opinion as to whether or not the participation formula contained in the Unit Agreement allocating the produced and saved unitized hydrocarbons to the separately owned tracts in the Unit Area does so on a fair, reasonable and equitable basis?

A. Yes, I believe it does. As may be noted, the first two phases are based fundamentally on the remaining primary reserves of each tract as determined by the Technical Committee .... a committee on which all Working Interest Owners were invited to be represented. By using this factor as the basis for the allocation of oil and gas produced, under the proposed Unit Agreement, each tract would receive first from the Unit's operations an amount of oil and an amount of gas equal to the amounts each tract would have received if primary operations had continued

without unitization. Phase III, being based entirely on a given tract's secondary recovery potential, allows each tract to recover its contributed share of the added reserves. This condition is very desirable, in that it places any risk of recovery upon the supplemental oil - or that additional oil that is made possible by a unit operation. With the amount of oil involved in the North Hobbs Unit, royalty interest owners, working interest owners, and the State of New Mexico can all feel quite certain that they will receive at least as much oil and gas from unit operations as they would have received from continued operations without unitization, ... and know they all stand to benefit from the additional oil recovered by water injection.

Placing the risk of recovery on the anticipated secondary potential is quite reasonable and fair when one considers the fact that the tracts differ in their share of primary and secondary reserves contributed to the unit. Some tracts have a smaller share of the remaining primary recovery than their share of the secondary or supplemental oil, and by the same token, some tracts have a higher share of the remaining primary than their share of the secondary reserves.

For example, two tracts might be allocated the same total amount of oil from unit operations. Assume one of these tracts receives most of its oil by reason of its primary contribution and very little from its secondary contribution, and that the other tract receives its oil allocation based upon the opposite

mix of its primary and secondary contribution. It is therefore reasonable that the first tract, with possibly less incentive for unitization and water injection, should bear only that risk of recovery which is in proportion to its incentive or secondary potential. Conversely, the second tract, which has a greater incentive for unitization and water injection by virtue of the greater secondary recovery potential should bear the risk related to that potential benefit. The participation formula achieves this desirable and necessary result.

Q. How were procedures developed for allocating unit expenses to the various separately owned tracts?

A. The procedures for allocating unit expenses were developed in a manner similar to that involved in developing the participation formula, that is, by the working interest owners. Unit expenses were considered as two separate items - Operating Expense which is comprised of the costs associated with actual unit operations and Investment Cost which is comprised of the cost of the facilities, including the construction costs required for the water injection program.

At a meeting of the Working Interest Owners Committee on February 2, 1978, consideration was given to the methods to be used for allocating unit expenses. Six methods were proposed and considered at the meeting. A roll call vote was taken on each method proposed. The sixth proposal considered received in excess of 76 percent approval of the working interest owners on a

roll call vote. The working interest owners then agreed to submit by mail the sixth proposal for ballot vote.

The results of the written ballot, again based on each working interest owner's respective oil participation in each phase, were: Phase I, 85.3 percent approval with only 10.2 percent disapproval; Phase II, 85.8 percent approval with only 9.7 percent disapproval; Phase III, 83.6 percent approval with only 14.6 percent disapproval. In addition, based on their initial share of the investment cost, this formula received 84.9 percent approval with only 11.7 percent disapproval.

Q. What was the method developed for the sharing of unit expenses and in this connection I refer you to Shell's Exhibit No. 22.

A. The method of allocating unit expenses finally agreed upon is shown on this Exhibit. The unit operating expenses which are referred to in Article 11 of the Unit Operating Agreement are to be shared by the working interest owners in proportion to their Phase I, Phase II, or Phase III unit participation based on oil, depending on which phase is in effect at the time a particular expense is incurred.

The cost of investment items incurred prior to the Investment Readjustment Date, which is defined in Article 1.2 of the Unit Operating Agreement as the termination of Phase II or January 1, 1991, whichever occurs first, is to be shared by working interest owners in proportion to their Investment

Participation which again is defined in the Unit Operating Agreement as .58 of Phase II unit participation, plus .42 of Phase III unit participation. The cost of investment items incurred after the Investment Readjustment Date will be shared by working interest owners in proportion to their Phase III unit participation.

At the time of the Investment Readjustment Date, all investment costs incurred prior to such time are to be adjusted among all the working interest owners in accordance with their respective Phase III Unit Participation.

Q. Is this the method stated in the Unit Operating Agreement for allocating unit expenses to the working interest owners?

A. Yes. Article 11 of the Unit Operating Agreement which is Shell's Exhibit 4 sets forth the method of allocating the costs of unit operations, including capital investments, in the manner I have just described.

Q. Do you consider these methods of allocating unit expenses to be fair, reasonable and equitable?

A. Yes. The proposed water injection program in conjunction with the participation formula results in the accelerated recovery of an amount of oil equivalent to each tract's remaining primary reserve as well as allowing for the recovery of the supplemental reserve. In view of the fact that benefits will result from the accelerated recovery, it is fair and reasonable that this accelerated recovery should be considered in the allocation of unit expense. Therefore, the allocation of operating costs on

the basis of the phase in effect at the time the costs are incurred, and the weighting between primary and secondary reserves in the initial allocation of investment costs, as well as the provisions for the readjustment to Phase III Unit participation, allocates the expense burdens in proportion to the benefits to be derived from the project.

Q. How are credits or charges to be made for such items as wells, tanks, pumps, machinery, and equipment contributed to unit operations?

A. Consideration was given to such items by the Working Interest Owners Committee at the same time and in association with the development of methods for allocating unit expense. As noted in Article 10 of the Unit Operating Agreement, all items contributed to unit operations by the working interest owners are to be inventoried and a value assigned immediately after the effective date of unitization. The value of the inventoried items will be adjusted initially among the working interest owners in proportion to their Investment Participation - just as for investment costs. At the Investment Readjustment Date - the value of the inventoried items, less the value of any items retired, is to be readjusted among all working interest owners in accordance with their respective Phase III Unit Participation.

Q. Does the Unit Operating Agreement provide for the situation where a working interest owner does not pay his share of unit expense?

A. Yes. Article 11.5 of the Agreement provides that in this case the Unit Operator shall have a lien on the Unit oil and gas owned by that working interest owner and the Unit Operator shall have the right to collect the proceeds from the sale of that oil and gas until the reimbursable amount owed plus interest has been paid.

Q. Does the Unit Agreement and the Unit Operating Agreement provide for the designation and removal of the Unit Operator?

A. Section 6 of the Unit Agreement and Article 6.1 of the Unit Operating Agreement designate Shell as the Unit Operator. Also Article 6.2 of the Unit Operating Agreement and Sections 7 and 8 of the Unit Agreement provide a procedure for the removal of the Unit Operator and the selection of a successor.

Q. Does the Unit Operating Agreement provide a method for voting on Unit matters?

A. Yes. Article 4 of the Unit Operating Agreement sets forth the voting procedures for voting on matters to be decided by the working interest owners.

Q. Does the Unit Agreement provide for putting the Unit into effect and terminating it?

A. Yes, the Unit is to become effective as provided by Section 39 of the Unit Agreement. The Unit Agreement may be terminated as provided in Section 24 of the Unit Agreement. I might further add that this Section of the Unit Agreement to

which I just referred provides by its own terms for its own ipso facto expiration on January 1, 1980, if the Unit does not become effective by that date.

Q. Is it your opinion that the granting of these applications is in the interest of prevention of waste and protection of correlative rights?

A. Absolutely.

Q. And is it also your opinion that the granting of these applications is reasonably necessary to carry on supplemental recovery operations so as to substantially increase the ultimate recovery of oil and gas from the Hobbs Grayburg-San Andres Pool?

A. Yes, that is my opinion.

Q. Mr. Buck, one final question, based on your very intense and extensive involvement in the unitization effort you have just described, do you have an opinion as to whether unitization would be undertaken again in the forseeable future if the application for unitization is not approved as presented?

A. Naturally, I hope this question will be moot - but I might comment that our efforts to date have all been to form the North Hobbs Unit - and in view of the overwhelming response we have had from the 80 working interest owners and the 905 royalty interest owners - it just hasn't seemed appropriate or necessary - nor was time available - to develop a "what-if" program.

Nevertheless, I think that when one considers:

1) that Amoco was unable to reach agreement and form a unit in spite of the tremendous time and effort they expended in their attempts to include the northern portion of the Pool in the unit;

2) the complexity and history of the reservoir;

3) the methods, the time, and the expense required to evaluate the reservoir - remembering that the Technical Committee spent nearly four years in gathering data, developing a method of evaluation and obtaining acceptance of their report by the Working Interest Owners Committee;

4) that a Unit Expeditor is not compensated for its time - engineers, lawyers, accountants, clerks, landmen, etc. - when a unit is not formed - but only by his share of added oil when a unit is formed;

5) when I think of the number of interested parties involved - 80 working interest owners, and 905 royalty interest owners - and think about what it takes to get all or most to agree on anything, much less a method of sharing over 85 million barrels of oil, of which over 55 million barrels constitute oil that would not otherwise be recovered;

6) that the incentive for a water injection program decreases with time - both from a reservoir recovery stand point and from an actual construction and operational standpoint; for example, part of the Unit Area is within the city limits of Hobbs and the growth of the city's residential areas makes it increas-

ingly difficult to do the necessary construction and drilling work; and,

7) the fact that this effort has had an excellent response - ratification or acceptance by more than 92 percent of the working interest owners and 97 percent of the royalty interest owners - and in my judgment there is little or no assurance of improving upon this level of acceptance .... if unitization is not brought about by such an effort and response, then the risk of another attempt to unitize would be extremely high - too high maybe.

Considering all of these things - Shell or any other operator, would have to think long and hard before again undertaking such a monumental task when there is no reason to believe that the commitment of additional time, money and professional talent would produce a better result than we have achieved to date.

Q. Were Exhibits 20 through 22 prepared by you or under your supervision?

A. Yes, they were.

TENDER EXHIBITS

EXHIBIT 20

SUBMITTED SEPARATELY AS

Minutes of Working Interest Owners Committee

EXHIBIT 21

NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT
OIL & GAS ALLOCATION FORMULA

/

OIL ALLOCATION

PHASE I

- 20 PERCENT OF THE RATIO OF OIL PRODUCTION FOR YEAR 1976 FROM EACH TRACT TO THE TOTAL 1976 OIL PRODUCTION FROM ALL TRACTS

PLUS

- 80 PERCENT OF THE RATIO OF REMAINING PRIMARY OIL RESERVES AS OF JANUARY 1, 1977, OF EACH TRACT TO THE TOTAL REMAINING PRIMARY OIL RESERVES AS OF JANUARY 1, 1977 OF ALL TRACTS.

PHASE II

- 100 PERCENT OF THE RATIO OF THE REMAINING PRIMARY OIL RESERVE AS OF JANUARY 1, 1977 OF EACH TRACT TO THE TOTAL REMAINING PRIMARY OIL RESERVES OF ALL TRACTS.

PHASE III

- 100 PERCENT OF THE RATIO OF THE SECONDARY OIL RESERVES OF EACH TRACT TO THE SECONDARY OIL RESERVES OF ALL TRACTS.

GAS ALLOCATION

PHASE I

- 20 PERCENT OF GAS PRODUCTION FOR YEAR 1976 FROM EACH TRACT TO THE TOTAL 1976 GAS PRODUCTION FROM ALL TRACTS.

PLUS

- 80 PERCENT OF THE RATIO OF REMAINING GAS RESERVES AS OF JANUARY 1, 1979 OF EACH TRACT TO THE TOTAL REMAINING GAS RESERVES AS OF JANUARY 1, 1977 OF ALL TRACTS.

PHASE II

- 100 PERCENT OF THE RATIO OF REMAINING GAS RESERVES AS OF JANUARY 1, 1979 OF EACH TRACT TO THE TOTAL REMAINING GAS RESERVES AS OF JANUARY 1, 1977 OF ALL TRACTS.

PHASE III

- 100 PERCENT OF THE RATIO OF SECONDARY OIL RESERVES OF EACH TRACT TO THE TOTAL OIL RESERVE OF ALL TRACTS.

DURATION OF PHASES

PHASE I

TO START AT DATE OF UNITIZATION AND CONTINUE UNTIL THE TOTAL OIL PRODUCTION FROM ALL TRACTS EQUALS 4,000,000 BARRELS.

PHASE II

TO START AT TERMINATION OF PHASE I AND TO CONTINUE UNTIL THE TOTAL OIL PRODUCTION FROM ALL TRACTS AFTER JANUARY 1, 1977 EQUALS 38,071,683 BARRELS.

PHASE III

TO START AT TERMINATION OF PHASE II AND TO CONTINUE FOR THE REMAINDER OF THE TERM OF UNITIZATION.

EXHIBIT 22

STATE OF NEW MEXICO
ENERGY AND MINERALS DEPARTMENT
OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING CALLED BY THE OIL CONSERVATION COMMISSION FOR THE PURPOSE OF CONSIDERING:

Case No. 6653
Order No. R-6199

APPLICATION OF SHELL OIL COMPANY FOR A PRESSURE MAINTENANCE PROJECT, LEA COUNTY, NEW MEXICO.

CCP Draft

ORDER OF THE COMMISSION

By The Commission:

This case and cause of action came on for hearing at 9 a.m. on October 3, 1979, at Santa Fe, New Mexico, before the Oil Conservation Commission of New Mexico, hereinafter referred to as the Commission.

NOW, on this ____ day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record, and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law and the Commission has jurisdiction of this case and cause of action and the subject matter hereof.

(2) That by Commission Order No. R-6198 dated November __, 1979, statutory unitization was approved for the North Hobbs Grayburg-San Andres Unit Area, Lea County, New Mexico.

(3) That the applicant herein, Shell Oil Company, seeks authority to institute a pressure maintenance project for the aforesaid North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through 70 wells at orthodox and unorthodox locations, 52 of which are producing wells which will be converted to injection wells in 1980;

(4) That during 1980 for the pressure maintenance project, applicant proposes to drill five producing wells and 18 injection wells at orthodox and unorthodox locations as specified below:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

Township 18 South, Range 38 East, NMPM

33	332	J	2540' FSL & 2540' FEL
33	342	O	100' FSL & 1420' FEL

(5) That all of the wells referred to in Findings Nos. (3) and (4) above, being the 70 injection wells and the five producing wells, together with wells currently completed in the Grayburg San-Andres formation, will provide a thorough and efficient sweep of hydrocarbons throughout the unit area, and will result in the recovery of otherwise unrecoverable oil and gas, thereby preventing waste.

(6) That the above-described injection and producing wells, some of which will be at unorthodox locations along the unit

boundary in accordance with lease-line agreements with operators of offsetting lands, will not impair but will protect correlative rights.

(7) That the applicant further seeks the designation of a project area for said pressure maintenance project for the North Hobbs Grayburg-San Andres Unit, and for the promulgation of special rules and regulations governing said project, including special allowable provisions, which is in the interest of conservation and should be approved, subject to certain provisions set forth herein.

(8) That the project area should consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area as described in Order R-6198 upon which are located wells completed in the Hobbs Grayburg-San Andres Pool.

(9) That the ~~project~~ area allowable should be equal to the sum of the basic project area allowable plus the water injection credit allowable as hereinafter defined.

(10) That the basic project area allowable should be equal to 80 barrels of oil per day times the number of ~~developed~~ 40-acre proration units in the North Hobbs Grayburg San Andres Unit Area. upon which are ~~completed wells~~ located wells in the Hobbs Grayburg-San Andres Pool.

(11) That the water injection credit allowable should be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1 \right] \times \text{Basic Project Area Allowable}$$

and should be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached hereto. ~~to this Order, and incorporated by reference;~~

(12) That a weighted average project area reservoir pressure should be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

(13) That the project area allowable should be permitted to be produced from the wells within the project area in any proportion, of the Oil Conservation Division.

(14) That the ~~Division~~ Director should have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the boundary of the

North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application;

provision should be made whereby the same could

(15) Application for approval of additional wells to be used for injection should be filed in accordance with Rule 701 of the Division Rules and ~~may~~ be approved administratively by the Division Director without notice and hearing.

(16) That each newly drilled injection or producing well should be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and production casing run to total depth (approximately 4500 feet). ~~or~~

c. The Division Director should have authority to approve

~~or~~ exceptions to the aforesaid casing programs ~~may be granted by administrative approval of the Division Director,~~ for good cause shown.

All casing strings should be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing.

(17) That injection should be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing should be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well should be filled with an inert fluid and a surface pressure gauge or approved leak detection device should be attached to the annulus.

(18) That the injection wells or system should be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director should have authority to ~~may~~ administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata

(19) That all wells within the unit area should be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

(20) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which have previously been plugged and abandoned in a manner which may permit waters injected into the Grayburg-San Andres formation to escape into other formations, including the Salado formation and the shallow fresh water-bearing formations unless remedial action is taken on said wells prior to injection in their near vicinity.

(21) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which penetrate the Hobbs Grayburg-San Andres Pool and are completed in deeper pay zones, but which are cased and cemented in such a manner as may permit the escape of waters injected into the Grayburg-San Andres formation into other formations as described in the preceding paragraph.

(22) That those wells referred to in Findings Nos. (20) and (21) above which are inadequately plugged and abandoned or are inadequately cased and cemented, or are suspected of being so, include, but are not necessarily limited to, the wells listed in Exhibit "C" attached hereto. ~~and incorporated by reference.~~

(23) That no injection at greater than hydrostatic pressure should be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

IT IS THEREFORE ORDERED:

(1) That the applicant, Shell Oil Company, is hereby authorized to institute and operate a pressure maintenance project in the North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through certain wells which will be administratively approved for water injection by the Division Director.

(2) That said project shall be designated the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project.

(3) That the following orthodox and unorthodox locations are hereby approved for the drilling of new injection and producing wells:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

33	342	O	100' FSL & 1420' FEL

(4) That Special Rules and Regulations governing the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project are hereby promulgated as follows:

SPECIAL RULES AND REGULATIONS
FOR THE
NORTH HOBBS GRAYBURG-SAN ANDRES UNIT
PRESSURE MAINTENANCE PROJECT

RULE 1. That the ~~unit~~ project area shall consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area upon which is completed a well in the Hobbs Grayburg-San Andres Pool.

RULE 2. The project area shall receive a project area allowable, and said project area allowable shall be the sum of the basic project area allowable plus the water injection credit allowable.

RULE 3. The basic project area allowable shall be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the project area.

RULE 4. The water injection credit allowable shall be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1 \right] \times \text{Basic Project Area Allowable}$$

The water injection credit allowable shall be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached hereto and incorporated herein by reference. In no event shall the water injection credit allowable be less than zero. Therefore, negative numbers derived from the application of the above formula shall be ignored.

RULE 5. A weighted average project area reservoir pressure shall be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

RULE 6. The project area allowable may be produced from the wells within the project area in any proportion.

RULE 7. The ~~Division~~ Director of the Oil Conservation Division shall have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

RULE 8. Application for approval of additional wells to be used for injection shall be filed in accordance with Rule 701 of the Division Rules and Regulations and may be approved administratively by the Division Director without notice and hearing.

RULE 9. Each newly drilled injection or producing well shall be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and production casing run to total depth (approximately 4500 feet), ~~or~~

c. Exceptions to the aforesaid casing programs may be granted by administrative approval of the Division Director upon good cause shown.

All casing strings shall be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing.

RULE 10. Injection shall be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing shall be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well shall be filled with an inert fluid and a surface gauge or approved leak detection device shall be attached to the annulus.

RULE 11. The injection wells or system shall be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata.

RULE 12. All wells within the unit area shall be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

RULE 13. The Unit Operator shall immediately notify the Supervisor of the Hobbs District Office of the Division of the failure of the tubing or packer in any of the injection wells, the leakage of water or oil from or around any producing well, the leakage of water or oil from or around any plugged and abandoned well within the unit area, or any other evidence of fluid migration from the injection zone, and shall take such timely steps as may be necessary or required to correct such failure or leakage.

RULE 14. Prior to placing any well on injection, a cement bond log shall be run on said well; also at any time the tubing is pulled from any producing well in the unit area, a cement bond log shall be run on said well. Copies of all cement bond logs shall be sent to the Hobbs District Office of the Division. If any well is found to have an inadequate casing-cement bond, such measures as may be necessary to prevent leakage or migration of fluids within the wellbore shall be taken before placing the well on injection or restoring it to production.

Where multiple casing strings prevent technical interpretation of bonding, the cement bond shall be deemed adequate when the log shows acoustic coupling with the formation. In addition, radioactive tracer surveys, or any other acceptable survey presently available or developed in the future, that show no fluid migration out of the Grayburg-San Andres formation shall be acceptable evidence of bonding.

RULE 15. Each month the Unit Operator shall submit to the Division a Pressure Maintenance Project Operator's Report, on a form prescribed by the Division, outlining thereon the data required and requesting a project area allowable.

RULE 16. The Division shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for the project area for the next succeeding month in accordance with these rules. The allowable so calculated shall be assigned to the unit area and may be produced from the wells in the project area in any proportion.

IT IS FURTHER ORDERED: attached hereto and by reference herein incorporated,

(1) That no injection at greater than hydrostatic pressure shall be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well, or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

(2) That the rules in this order concerning project allowables and the transfer thereof shall not be applicable until actual water injection begins in the North Hobbs Grayburg-San Andres Unit Area, provided however, that pending commencement of water injection activities, those wells in the said unit area which directly or diagonally offset injection wells in any other proje water injection project in the Hobbs Pool or which directly or diagonally offset producing wells in any other water injection project in the Hobbs Pool, which [illegible]

[illegible] transfer [illegible] allowable and are producing at a rate in excess of top unit allowable for the pool, shall be eligible to nominate and produce transferred allowable.

(3) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove described.

NORTH HOBBS GRAYBURG-SAN ANDRES UNIT AREA
PRESSURE MAINTENANCE PROJECT

HOBBS GRAYBURG-SAN ANDRES POOL

LEA COUNTY, NEW MEXICO

Water Injection Credit Allowable Calculation Data

$$\text{Water Injection Credit Allowable} = \left[\frac{W_i - W_p}{BPAA\left(B_o + \frac{R_p - R_s}{1{,}000} B_g \right)} \right] \times BPAA$$

W_i = Average daily water injection during previous month, barrels per day unit area

W_p = Average daily water produced during previous month, barrels per day unit area

BPAA = Basic project area allowable, 80 bopd × _____ (number of developed 40-acre proration unit in unit area)

P = Weighted average unit area reservoir pressure, psig, from _____, 19___, survey data

B_o = Oil formation volume factor, reservoir barrels per stock tank barrel (Exhibit B)

R_p = Producing gas-oil ratio, cubic feet per barrel for previous month

R_s = Solution gas-oil ratio, cubic feet per barrel (Exhibit B)

B_g = Gas formation volume factor, reservoir barrels per Mcf (Exhibit B)

Water injection credit allowable for _____, 19___, = _____ barrels of oil per day

SHELL OIL COMPANY
PETROLEUM BUILDING
P.O. BOX 1509
MIDLAND, TEXAS 79701

July 20, 1973

Subject: North Hobbs Unit Proposed
Hobbs Field
Lea County, New Mexico

ALL OPERATORS

At the meeting of the Working Interest Owners of the proposed Hobbs (Grayburg-San Andres) Unit held July 12, 1973, it was agreed that efforts would be made to form two Units in the Hobbs Field for purposes of secondary recovery operations instead of one field wide unit previously attempted. It was further agreed that the Hobbs Field would be divided along the Township line between Townships 18S and 19S, R37-38E. Amoco Production Company will be the Unit Expeditor of the area to the south of such line and Shell Oil Company the Unit Expeditor of the area to the north.

A meeting of all Operators of properties to the north of the above stated dividing line is called for 1:30 p.m., July 31, 1973, in the Texas Electric Service Company Reddy Room, 124 North Colorado, Midland, Texas.

The agenda for the meeting will be as follows:

1. Confirm the interest of all Operators of properties to proceed with efforts to unitize and waterflood the properties of the Hobbs Field to the north of the Township line between Townships 18S and 19S, R37 and 38E, Lea County, New Mexico.

2. Discuss plans for further unitization efforts.

3. Organize an Engineering Sub-committee.

4. Develop a charge to the Engineering Sub-committee.

5. Any other business.

This meeting call is being sent only to the Operators of leases, as a list of Working Interest Owners is not as yet available. It is asked that each Operator invite the Working Interest Owners in their properties to attend the meeting if they so desire.

Yours very truly,

W E Buck

for Jack L. Mahaffey
Production Manager
Mid-Continent Division

MINUTES OF OPERATORS MEETING
NORTH HOBBS UNIT PROPOSED
JULY 31, 1973

A meeting of the Operators of the North Hobbs Unit (Proposed) was held July 31, 1973, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck (Shell) opened the meeting by restating the decisions reached by the Working Interest Owners of the proposed Hobbs (Grayburg-San Andres) Unit at the Operators Committee meeting of July 12, 1973. He pointed out that the purpose of the present meeting was to go further with the above decisions in determining the interest of the Operators in proceeding with unitization and secondary recovery efforts for the area of the Hobbs Field north of the township line between Townships 18S and 19S, R37-38E.

Mr. Buck then asked for comments and discussion concerning such unitization efforts. With the exception of Gulf and without motion, all representatives present agreed to proceed and to participate in an effort to form a North Hobbs Unit with Shell acting as Unit Expeditor. Mr. F. W. Moran (Gulf) then stated that while not opposing unitization, Gulf was concerned that such efforts were somewhat premature and therefore would not actively participate at this time. He further advised that Gulf would cooperate in supplying data and would from time to time review their position for possible change.

With this confirmation of interest, plans for further unitization efforts were discussed. Mr. Buck explained that a complete list of Working Interest Owners had not as yet been developed and asked that if an Operator wished the names of any non-operators be added to the mailing list to please so advise. He also stated that arrangements were being made to obtain all pertinent data from the files maintained by Amoco for the field-wide unitization effort. Mr. Buck submitted a schedule of fixed pre-unit expenses and said a ballot would be submitted for approval.

As a first step toward unitization and waterflooding, the organizing of a Technical Committee and the charge to such Committee was discussed. In answer to Mr. Buck's inquiry the following named companies advised that they would have representatives on the Technical Committee: Exxon, Skelly, Marathon, Continental, Amoco, Cities Service, Texas Pacific, Texaco, Amerada, Getty, Sun, and Chevron.

Mr. Buck then introduced Mr. M. A. Thieme (Shell) who would serve as chairman of the Technical Committee. Mr. Thieme then outlined briefly his plans for the Technical Committee. He advised that it would be the intent of the Committee to use as much data as possible from the study proposed by the Hobbs Unit. However, because of the complexity of the reservoir behavior in the north part of the field, he believed the Technical Committee should make a more detailed study in some instances. Mr. Thieme then submitted a suggested charge for the Technical Committee. After some discussion and modification, the following charge to the Technical Committee was approved by all present:

PROPOSED NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT

WORKING INTEREST OWNERS' CHARGE TO THE TECHNICAL COMMITTEE

A. Construct an acceptable base map.

B. Define the vertical interval to be unitized.

C. Recommend a Unit Area or areas.

D. Determine feasibility of waterflooding the Grayburg.

1. Construct Grayburg net pay map and (net Øh, if possible).
2. Determine floodable net acre-feet.
3. Determine secondary oil potential.

E. Determine feasibility of waterflooding the San Andres.

1. Review Øh maps.
2. Review GOR and water-cut maps.
3. Construct continuous pay maps by zone.
4. Determine remaining primary production.
5. Establish secondary oil potential by zones.

F. Tabulate the following parameters by tract, by zones, and by Working Interest Owners:

1. Current oil and gas production rate and value for the most recent representative period.
2. Cumulative oil production.
3. Usable completions.
4. Active producing wells.
5. Total acres.
6. Original oil in place.
7. Floodable net acre-feet.
8. Remaining Primary Reserves.
9. Ultimate Primary Oil.
10. Secondary reserves.
11. Any other parameter considered appropriate by the Engineering Subcommittee.

G. Develop recommended plans of depletion including economic comparisons versus continued primary operations.

It was agreed that every effort would be made to obtain general agreement of the Technical Committee on all items. If such agreement could not be reached, it was decided that the Technical Committee would bring such matter to the attention of the Operators Committee for direction or decision. It was further agreed that decisions reached by vote of Technical Committee would be fully recorded in minutes of meetings.

Through further discussion, the opinion was expressed that although it was scheduled for the Technical Committee to complete the charge by July 1974, such Committee should not be bound by this date if it became apparent that additional time would be required to complete an acceptable study. In this regard, Mr. G. R. Meyers (Texas Pacific) pointed out that one of the significant matters to be resolved is the problem of migration and that it might be necessary for Operators to spend money to help delineate and resolve the problem in certain areas of the field.

Mr. Thieme then advised that he would call the first meeting of the Technical Committee during the last part of August.

There being no further business, the meeting was adjourned.

W. E. Buck
Chairman, Operators Committee

BALLOT

Unitization Expense
North Hobbs Unit
Lea County, New Mexico

The undersigned hereby approves the following listed flat rate unitization expenses and agrees to pay a share of such expense; the share being determined by the method stated below:

1.	Drafting, reporduction, assembling and distribution of Engineering Sub-Committee Report and Tabulations such rate not to include special computer studies or laboratory analysis.	$900.00
2.	Printing and assembling Unit Agreements.	$500.00
3.	Appearance before regulatory bodies to obtain approval of the project.	$600.00
4.	Postage, telephone, telegraph and normal and usual expenses of securing joinder. Does not include expenses of personal contacts if travel required exceeds 100 mile radius from Midland, Texas.	$1,000.00
	Total	$3,000.00
5.	Filing and recording fees and associated travel expenses will be considered Unit Expense and charged to the joint account.	

With the formation of the Proposed North Hobbs Unit, all above stated expense items will be shared on the basis of Unit Participation (Phase I). If the Unit does not become effective, then the expense items which have been incurred will be apportioned on the basis of oil produced during the period January 1, 1973 to July 1, 1973. It is understood that any Working Interest Owner may withdraw at any time by giving the Unit Expeditor written notice of such withdrawal, and by paying his share of expenses incurred prior to withdrawal. The withdrawing Owners share shall be determined on the basis of the production period stated above.

(Mailing List Attached)

Attached are the minutes of the North Hobbs Unit (Proposed) Operators Committee meeting held July 31, 1973, in Midland, Texas.

Also attached for your consideration is a ballot pertaining to fixed pre-unitization expenses as discussed in the meeting of July 31, 1973. Please indicate your approval by signing and returning one copy to Shell Oil Company, P. O. Box 1509, Midland, Texas 79701.

We would also appreciate you advising us of your representatives on the Operators and Technical Committees, by completing and returning one copy of the attached forms.

Yours very truly,

TO: ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(MAILING LIST ATTACHED)

As noted from the minutes of the meeting of September 11, 1974, the North Hobbs Engineering Subcommittee has submitted for the decision of the Working Interest Owners the following recommendation:

> "A cut-off date of January 1, 1975 be established for all well logging data and well test information that is to be considered by the Subcommittee in completing the charges given by the Working Interest Owners."

In order for the Engineering Subcommittee to bring certain facets of their work to a conclusion and to proceed with their charge, it is essential that a cut-off date be established. Therefore, the recommendation of the Subcommittee is hereby submitted for your consideration. Please indicate your decision in the space provide below and return one copy to Shell Oil Company, P. O. Box 991, Houston, Texas 77001, Attention Mr. W. E. Buck.

Yours very truly,

W. J. Conrad

Subject: Computer Analysis
Proposed North Hobbs Unit
Hobbs Field
Lea County, New Mexico

OPERATORS - NORTH HOBBS UNIT
(Mailing List Attached)

The Technical Committee of the North Hobbs Unit has recommended that a computer analysis of the San Andres Reservoir be made. The primary objective of such study is to estimate the Zone I primary reserves that would be recovered, by areas, under the conditions of continued water influx and with the current completion status kept constant. The results will serve as a base case for Zone I primary reserves. Future recoveries can then be allocated by the Technical Committee to respective tracts. In addition, the results of such analysis will provide a more complete understanding of the performance of other zones within the San Andres formation.

Shell has agreed to make such an analysis using their three-phase, three-dimensional, compressible fluid reservoir simulation program. Shell's charge for such work shall be $6,000. This flat charge is Shell's estimate of actual computer running time and the associated contract clerical assistance required to assemble data. Shell shall make no charge for technical and non-technical efforts nor for a program licensing fee. A copy of the input data, results obtained, and an explanation of the calculations will be made available to all Operators. The cost of such study ($6,000) will be shared in the manner stated on the attached ballot.

The Technical Committee feels this study is essential to the completion of the charge made by the Operators Committee. Please indicate your decision on the attached ballot and return one signed copy to Shell Oil Company, P. O. Box 991, Houston, Texas 77001, Attention Mr. W. E. Buck.

Yours very truly,

Jack L. Mahaffey
Division Production Manager

BALLOT

Unitization Expense
North Hobbs Unit
Lea County, New Mexico
March 13, 1975

The undersigned hereby approves the following listed flat rate charge for a special computer analysis of the San Andres Formation, which is to be made by Shell, and agrees to pay a share of such expense; the share being determined by the method stated below:

1.	Computer Usage Charge	$ 5,000.00
2.	Associated Contract Clerical Costs	$ 1,000.00
	Total	$ 6,000.00

With the formation of the Proposed North Hobbs Unit, all above stated expense items shall be shared on the basis of Unit Participation (Phase I). If the Unit does not become effective, then the expense items which have been incurred will be apportioned on the basis of oil produced during the period January 1, 1973 to July 1, 1973.

ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(Mailing List Attached).

A meeting of the Working Interest Owners of the proposed North Hobbs Unit is called for 10:00 a.m., May 26, 1977, in the Texas Electric Service Company Reddy Room, 124 North Colorado Street, Midland, Texas.

The agenda for the meeting will be as follows:

1. Formal presentation of the report titled "Waterflood Feasibility and Unitization Parameters", as prepared by the Technical Committee.

2. Consideration of the Report as completing the charge to the Technical Committee.

3. Acceptance of the Report as a basis for Unitization negotiations.

4. Develop a course of action for further unitization efforts.

5. Any other business.

Efforts to unitize and to waterflood the northern part of the Hobbs Field were initiated in July, 1973, when the Operators' Committee charged the Technical Committee to develop a feasibility and parameter study of the area considered for unitization. Due to the different reservoir characteristics evident in the various zones of the Grayburg-San Andres reservoir, it was necessary for the Technical Committe to undertake methods of evaluation not normally required for unitization efforts. Considerable time and expense has been expended in developing the study. With the submittal of the Report to the Working Interest Owners, it appears that a critical point has been reached. All Working Interest Owners are therefore urged to be represented at the called meeting. It is also urged that all representatives attend the meeting prepared to commit their company with regard to the Report and to a course of action for further unitization efforts.

Copies of the Waterflood Feasibility and Unitization Parameters Report for the North Hobbs Unit are transmitted with this call to meeting to all Operators and participants of the Technical Committee as noted on the attached mailing list. Copies will be furnished any other Working Interest Owner upon request.

Yours very truly,

WEBuck

W. E. Buck
Chairman, Working Interest Owners' Committee

Subject: Computer Analysis
Proposed North Hobbs Unit
Hobbs Field
Lea County, New Mexico

OPERATORS - NORTH HOBBS UNIT
(Mailing List Attached)

The proposal for a special computer analysis of the San Andres formation of the North Hobbs Unit has received 88.5% approval of the participating operators with only one recorded dissension. With such response, Shell feels it is in order to proceed with the reservoir simulation study. Pending unitization, Shell will bear the costs to be allocated to the dissenting and non-responding parties.

Yours very truly,

Jack L. Mahaffey
Division Production Manager
Mid-Continent Division

Subject: Unitization Parameters
Proposed North Hobbs Unit
Hobbs (Grayburg - San Andres) Field
Lea County, New Mexico

All Working Interest Owners
(Addressee List Attached)

Please be advised that the Unitization Parameter Tables (Nos. 21 to 24), which were included in the Technical Committee Report, are being corrected. Revised copies will be distributed at the Working Interest Owners meeting on May 26, 1977 and also transmitted with the minutes of that session.

The following corrections and additions are being made:

1. Working Interest Ownership

   a. Tract No. 50 - Exxon 50%, Cities Service 25%, and Continental 25%

   b. Tract No. 69 - Amoco 75.43501% and Landreth 24.56499%

   c. Tract No. 75 - Marathon 50% and Atlantic Richfield 50%

2. Oil and Gas Production - Year 1976

The prior tabulation was based on the Monthly Statistical Reports. The Annual Report is now available and reflects the following corrections: oil decreased by 207 barrels and gas increased by 7037 MCF. These changes effect the following parameters: Cumulative Oil (Tables 21 A & B), Year 1976 Oil and Gas (Tables 21 A & B) and Ultimate Oil Recovery (Tables 23 A & B). (No corrections were made to oil production during the last four months of 1976 and consequently the Primary Oil Reserves are not affected.)

3. Productive Acres (Tables 22 A & B)

The tabulation included in the Report was based on the productive acres in the Basal Grayburg Upper Zone oil column and omitted the 2174 acres which lie entirely within the gas cap in that particular zone.

4. Gas Reserves

Continental has requested the addition of a parameter for remaining gas reserves. Therefore, such numbers will be added to the revised tables. This parameter will be calculated in the following manner:

a. Grayburg and/or upper San Andres Stringers - The oil reserves listed on Table 14 will be multiplied by the corresponding average GOR for the year 1976, and

b. San Andres (Main Zones) - The "updated" gas reserves will be calculated in a similar manner as shown for the oil reserves in Table 15; that is, the computed 9/1/76 gas reserves (previously furnished to the Technical Committee) will be updated to 1/1/77 values by subtracting the ensuing actual production.

It is requested that any other discrepancies noted be called to the attention of either Mr. W. E. Buck (713-220-1331) or Mr. H. J. Swartz (713-220-1022).

Yours very truly,

W. E. Buck, Chairman
Working Interest Owners' Committee

Subject: Minutes - Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

WORKING INTEREST OWNERS - (Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held May 26, 1977, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck (Shell) opened the meeting by advising that 90.7 percent of the Working Interest Owners (based on 1976 oil production) were represented at the meeting. He further advised that because of the importance of the meeting, every effort had been made to notify all Working Interest Owners of the meeting. All parties were asked to notify Mr. Buck of any corrections or additions that should be made to the mailing list.

Mr. Buck summarized the previous efforts of unitization in the Hobbs Field. He stated that Amoco initiated an effort in 1970 to form a field wide unit. A feasibility study was completed in March, 1972, and participation negotiations were started. However, it became apparent that agreement could not be reached and in July, 1973, it was decided to divide the Hobbs Field into two parts for unitization and water flooding purposes.

Amoco undertook unitization of the south part of the field and formed the South Hobbs Unit January 1, 1975. Shell acted as Unit Expeditor for the Northern portion of the field. A Technical committee was organized and at a meeting of the Working Interest Owners of the proposed North Hobbs Unit, held July 31, 1973, charged the Technical Committee to develop a waterflood feasibility and unitization parameter study. The Technical Committee has met repeatedly since such date and now have completed and are prepared to submit a report of their study. Mr. Buck pointed out that the attendence and participation of the parties in the Technical Committee was outstanding.

Mr. Buck then turned the meeting over to Mr. H. J. Swartz (Shell), Chairman of the Technical Committee for formal presentation of the "Waterflood Feasibility and Unitization Parameter Report" as prepared by the Technical Committee.

Mr. Swartz started by expressing his appreciation for the excellant cooperation of all parties in the work of the Technical Committee. He stated that the committee held 25 work sessions and that, on the average, 13 operators were represented at each session. He further advised that 22 of the 26 operators had been represented at at least one of the sessions. Mr. Swartz pointed out that it was the aim of the group to reach mutual agreement on all points of the study whenever possible rather than the agreement of only a majority. With only a few exceptions, the group was able to attain this aim.

Mr. Swartz then proceeded to present a summary of the committees work. Salient points of the study were presented with the assistance of projected slides. Several questions were asked and discussed during the presentation. At the end of the presentation Mr. Swartz handed out revised parameter tables which included corrections of production data and ownership. In addition the revised tables included a gas reserve parameter as requested by Continental Oil Company. Copies of revised tables are enclosed with these minutes.

Mr. Buck then asked that the second item of the agenda, completion of the charge of the Working Interest Owners, be considered. After some discussion, Sun Oil Company's representative moved that the report titled "Waterflood Feasibility and Unitization Parameters for the North Hobbs (Grayburg - San Andres) Unit" be accepted as completion of the charge of the Working Interest Owners to the Technical Committee. The motion was seconded by the representative of Amoco Production Company. The motion was passed by the affirmative vote of all present with the qualifications of Continental Oil Company and Exxon Company that their approvals did not include the Gas Reserve Parameter submitted at the meeting as they had not had sufficient time to review such parameter. Marathon Oil Company, passed on the vote at the meeting but advised the chairman of their affirmative vote following the meeting.

Mr. Buck then asked that the third item of the agenda, acceptance of the report as a basis of unitization negotiations, be considered. After discussion, during which Mr. G. R. Meyers, Texas Pacific Oil Company, Inc., expressed concern over some of the relationships, the representative of Amoco Production Company moved that the report be accepted as a basis of unitization negotiations. The motion was seconded by Mobil Oil Company's representative. The motion was approved by the affimative vote of 76.6 percent (1976 production). No negative votes were cast. The affirmative vote of Exxon Company was qualified as to the Gas Reserve Parameter the same as for the previous motion. Continental Oil Company, Russel Estes, and Texas Pacific Oil Company, Inc., passed on the vote on the motion. Mr. Buck asked, and such parties agreed, that he be advised of a decisive vote on the motion at as early a date as possible.

Although a formal vote was not taken, all parties agreed on the basis of the response to the motions to move forward with unitization efforts. After some discussion, it was agreed that a meeting would be called during the first half of July for the purpose of negotiating participation.

In the discussion that followed, some parties expressed concern as to the handling of FEA classified "Stripper" and "Upper Tier" oil after unitization. Mr. Buck advised that it was Shell's general feeling that consideration should be given to parties contributing properties with the more favorable pricing classifications. He further advised that in other unitization efforts provisions had been included in the Unit Agreement rather than in participation negotiations to afford certain considerations to the contributing parties. Upon request, Mr. Buck agreed to include with the minutes of the meeting a provision prepared by Shell for inclusion in other Unit agreements. Such provision is attached hereto. Mr. Buck pointed out that although Shell is in agreement with the general principle of the provision, the submittal of the provision at this time should not be taken as a final Shell proposal in this regard. Shell would want the opportunity to review the problem after participation has been established before making a firm proposal.

Mr. Don Hunter, of Sipes, Williamson & Aycook, Inc., submitted a written proposal on behalf of Moranco for a cooperative waterflood agreement between the North Hobbs Unit and the adjoining Moranco Rice-Hardin Waterflood Unit and the sale of source water from the Moranco water supply system. Mr. Hunter was advised that his proposal would be included in the minutes of the meeting and given consideration by the Working Interest Owners at the appropriate time. The written proposal is included as an attachment to these minutes.

With regard to the water source, Mr. Buck advised that Shell has been negotiating with the city of Hobbs for the purchase of industrial process effluent from its industrial water treatment plant. A draft agreement has been prepared and submitted to the City of Hobbs. At the appropriate time, a negotiated agreement will be submitted to the Working Interest Owners for their consideration.

There being no further business, the meeting was adjourned.

W. E. Buck
Chairman, Working Interest Owners Committee

FEA PRICING

It is anticipated, at the effective date of unitization, crude oil produced, saved and sold from the _____ Unit will be subject to the rules and regulations of the Federal Energy Administration. Such rules provide for the classification of crude oil for pricing purposes as (1) Stripper Well Crude Oil, (2) Old Oil and (3) Upper Tier Crude Oil.

Under the rules and regulations of the Federal Energy Administration as of October 1976, a unit certification is allowed each month to include in the Upper Tier Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Upper Tier Crude Oil. The unit certification is further allowed each month to include in the Stripper Well Crude Oil portion thereof, a constant number of barrels described by FEA Regulations as Imputed Stripper Well Crude Oil.

In view of the above, and not withstanding the provisions of Section _____, crude oil produced, saved and sold shall be allocated as follows:

1. Stripper Well Crude Oil - The first oil produced, saved and sold each month up to a quantity equal to the Unit's Imputed Stripper Well Crude Oil shall be allocated to Tracts contributing Imputed Stripper Well Crude Oil to the Unit certification in proportion to their contributions of such Imputed Stripper Well Crude Oil. Should any Tract in any month be allocated out of Unit production in accordance with its Tract Participation as set forth in this Agreement, a total number of barrels of oil that is less than the Imputed Stripper Well Crude Oil that such Tract has contributed to the Unit certification, then such Tract's allocation of

Imputed Stripper Well Crude Oil shall be reduced by the amount that the Imputed Stripper Crude Oil exceeds the amount of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Stripper Well Crude Oil. The total Excess Imputed Stripper Well Crude Oil of all Tracts shall be allocated to all Tracts, including Tracts which have not contributed Imputed Stripper Well Crude Oil to the Unit certification, in proportion to the quantities that the Unit production allocated a Tract by its Tract Participation exceeds the quantity Imputed Stripper Well Crude Oil allocated such tract.

c. Imputed Upper Tier Crude Oil - Oil produced, saved, and sold each month from the Unit after a quantity of oil equal to the Imputed Stripper Well Crude Oil is produced, saved and sold, up to a quantity equal to the Imputed Upper Tier Crude Oil, shall be allocated to those Tracts contributing Imputed Upper Tier Crude Oil to the Unit certification in proportion to their contributions of such Imputed Upper Tier Crude Oil. Should any Tract in any month be allocated out of Unit production in accordance with its Tract Participation, as set forth in this agreement, a total number of barrels that is less than the sum of its Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Well Crude Oil as provided in Paragraph 1 of this Article, and its allocated Imputed Upper Tier Crude Oil, then such Tract's allocation of Imputed Upper Tier Crude Oil shall be reduced by the quantity

that the sum of the Tract's Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Crude Oil and its allocated Imputed Upper Tier Crude Oil exceeds the total quantity of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Upper Tier Crude Oil. The total Excess Imputed Upper Tier Crude Oil of all Tracts shall be allocated to all Tracts including Tracts which have not contributed Imputed Stripper Well Crude Oil and/or Imputed Upper Tier Crude Oil to the Unit certification, in proportion to the quantities that each Tract's allocation of Unit. production by its Tract Participation exceeds the sum of the Imputed Stripper Well Crude, Excess Imputed Stripper Well Crude Oil and Imputed Upper Tier Crude Oil allocated such Tract.

3. Upper Tier Crude Oil and Old Oil shall each be allocated to each Tract in proportion to the quantities that each Tract's allocation of Unit Production, in accordance with its Participation, exceeds the sum of the allocated Imputed Stripper Well Crude Oil, Excess Imputed Stripper Well Crude Oil, Imputed Upper Tier Crude Oil and Excess Imputed Upper Tier Crude Oil.

This provision shall remain in effect only so long as necessary for the unit to comply with applicable laws, rules, and regulations of appropriate governmental authorities. Should such laws, rules, and regulations hereafter change substantially so as to alter the basis for a certification of unit production as set forth above, then in such event a method of allocating the certification among the unit ownership shall be implemented by the Unit Operator which as nearly as possible achieves the stated intention

hereof. In any event this provision will automatically terminate in its entirety _____.

This provision is deemed supplementary to the other provisions of this Agreement and the provisions of the Unit Operating Agreement so that nothing contained herein shall alter the terms of such agreements, including but not limited to the portions thereof dealing with tract participation, and allocation of unit production, and the allocation of investment and operating costs.

SHELL OIL COMPANY

HOUSTON, TEXAS 77001

June 8, 1977

Subject: Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit is called for 10:00 A.M. July 12, 1977 in the Texas Electric Service Company Reddy Room, 124 North Colorado Street, Midland, Texas.

The agenda for the meeting will be as follows:

1. Negotiation of a participation formula.

2. Any other business.

W. E. Buck
Chairman, Working Interest Owner's Committee

SHELL OIL COMPANY
P.O. BOX 991
HOUSTON, TEXAS 77001

June 29, 1977

Subject: Proposed North Hobbs Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

By letter of June 8, 1977, a meeting of the Working Interest Owners of the proposed North Hobbs Unit was called for July 12, 1977 for the purpose of negotiating unit participation. Realizing the difficulty in evaluating a participation formula when proposed for the first time at a meeting, Shell hereby submits to all Working Interest Owners the participation formula that will be proposed by Shell at such meeting. It is hoped that this early submittal will allow all Parties, especially those basing their decisions on present worth values, the opportunity to complete an evaluation and to make a decisive response at the meeting.

PARTICIPATION FORMULA TO BE PROPOSED BY SHELL OIL COMPANY

Oil Allocation

Phase I - 100 percent oil production for year 1976. Phase I to be in effect until either the oil production from the unit totals 11,670,070 barrels from the effective date of unitization or for a period of 5 years after the effective date of unitization, whichever occurs first. Limiting production is based on Unit becoming effective January 1, 1979 and is the amount of oil estimated by Technical Committee to be produced during first five years of unitized operations. Estimated annual production is shown on attached table.

Phase II -100 percent Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the Unit oil production totals the estimated remaining primary reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent gas production for year 1976. Phase I gas to be same period as Phase I oil.

Phase II- 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III-Allocation to be same as oil and for same period as Phase III oil.

Expense Allocation

1) Operating and Overhead Expense

All such expenses to be allocated on phase-in-effect basis and based on Oil Allocation only.

2) Capital Expenditures

a) All costs of investment nature associated with injection station, injection lines, water source, drilling and equipping injection wells, and conversion expenses be charged initially on the Phase III Oil Allocation basis. From Tables 17, 18 and 19 of Technical Committee Report, such estimated costs would be: Injection System - $7,000,000; Source, $600,000; Drill Injectors, $2,325,000; Equip converted injectors, $988,000; and, Conversion Expense, $1,002,500.

b) All other costs of a capital expenditure type, including tank battery consolidation costs, be allocated initially on the basis of Phase II oil allocation and adjusted to Phase III oil allocation at the termination of Phase II.

3) Inventory

Inventory value to be allocated initially on the basis of Phase II oil allocation and adjusted to Phase III oil allocation at the termination of Phase II.

Yours very truly,

R. L. Howard

Subject: Minutes - Working Interest Owners Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held July 12, 1977, in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by asking if there were any corrections or additions to the published minutes of the May 26, 1977 meeting. No corrections were submitted and the minutes stand as written.

Mr. Buck then pointed out that at the previous meeting Exxon, Continental Texas Pacific, and Russel Estes, passed on the vote regarding acceptance of the parameter table as a basis for participation negotiations and asked if any of the parties had any change to make in their vote. Exxon changed their vote to yes. Continental sustained the pass vote, stating they were concerned with the shut-in status of some wells during the production period. Texas Pacific retained their pass vote. Estes was not present during the discussion.

Mr. Buck then stated that it was the purpose of the meeting to negotiate a participation formula for Unitization. Before any formula was submitted, Mr. Shepherd, suggested that oil and gas allocation(s) be considered separately from expense allocation(s). After some discussion it was agreed that participation formulas could be proposed with or with out expense considerations.

Mr. Buck then formally proposed the formula previously submitted in writing by Shell. A total of 12 formulas were submitted and considered by the Working Interest Owners. Details of each formula and the resulting vote are shown by attachments hereto.

Prior to submitting Formula No. 12, Mr. Shepherd, Exxon, presented a graph showing the projected performance of the project under unitized operations. He pointed out that under such conditions, an amount of oil equal to the estimated primary reserve would be recovered in less than 1/3 of the time required by non-unitized operations. He also pointed out that with certain formulas, as much as 50 percent of the secondary oil could be produced before secondary parameters become effective. He felt these points should be considered in the development of a participation formula.

As sufficient agreement was not reached on a formula to proceed with other unitization matters, it was agreed to again attempt participation negotiations after all parties had had time to review the negotiations to date.

There being no further business, the meeting was adjourned.

Formula No. 1 (Shell)

Oil Allocation

Phase I - 100% Oil Production year 1976 - to be in effect until 11,670, 070 bbls of oil produced after effective date of Unit or 5 years whichever occurs first.

Phase II - 100% Primary Oil Reserve (1/1/77) - to become effective at end of Phase I and to be in effect until production for area equals 38,071,683 bbls from January 1, 1977.

Phase III - 100% Secondary Oil Reserve - to become effective at termination of Phase II.

Gas Allocation

Phase I - 100% Gas Production for year 1976 - Phase I gas to be same period as Phase I Oil.

Phase II - 100% Primary Gas Reserve - Phase II gas to be same period as Phase II Oil.

Phase III - Gas allocation to be same ás Oil allocation.

Operating Expenses

Allocation to be on phase-in-effect and based on Oil Allocation only.

Capital Expenditures

(a) All costs of investment nature associated with injection injection station, injection lines, water source, drilling equiping injection wells and conversion expense be charged initially on Phase III Oil Allocation.

(b) All other costs of a capital expenditure type, including tank battery consolidation costs, be allocated initially on Phase II Oil Allocation and adjusted to Phase III Oil Allocation at termination of Phase II.

Inventory

Inventory value to be allocated initially on basis of Phase II. Oil Allocation and adjusted to Phase III Oil Allocation at termination of Phase II.

Formula No. 1 (Shell)

Proposed North Hobbs Unit
Lea County, New Mexico

To Working Interest Owners

Formula No. 12 as stated in the minutes of the Working Interest Owners Meeting of July 12, 1977 was in error. Attached is a corrected statement of such formula.

W. E. Buck
Chairman, Working Interest Owner
Committee

WEB:CLM

Attachment

Formula No. 12 (Exxon) Oil and Gas Allocation only - Expense Allocation not included.

Oil

Phase I - To be in effect until 11,670,070 barrell of oil produced from area after date of unitization.
- 75% Oil Production Year 1976
- 25% Remaining Primary Oil Reserve (1/1/77)

Phase II - To be in effect at termination of Phase I and until 38,071,683 bbls of oil produced from area after January 1, 1977.
- 75% Remaining Primary Oil Reserve (1/1/77)
- 25% Oil Production year 1976

Phase III - to be in effect at termination of Phase II
- 100% secondary oil reserve

Gas

Phase I - To be in effect during Phase I oil
- 75% Gas Production Year 1976
- 25% Remaining Gas Reserve (1/1/77)

Phase II - To be in effect during Phase II oil
- 75% Remaining Gas Reserve
- 25% Gas Production Year 1976

Phase III - To be in effect during Phase III oil and same as Phase III oil allocation.

Voting Results - Based on oil allocation only.

Subject: Proposed North Hobbs Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS - PROPOSED NORTH HOBBS UNIT
(MAILING LIST ATTACHED)

Prior to the meeting of the Working Interest Owners of the proposed North Hobbs Unit of July 12, 1977, Shell submitted a participation formula that was to be formally submitted at the called meeting. The purpose of the early submittal was to allow all Parties the opportunity to complete an evaluation of the formula and to make a decisive response at the meeting. Although the proposed formula did not receive sufficient acceptance to proceed with other unitization matters, we feel the response of the Parties justifies a repeat of the procedure. Shell will, therefore, formally submit the following stated participation formula for the consideration of the Working Interest Owners at the meeting called for September 20, 1977.

Oil Allocation

Phase I - Allocation to be based on two parameters, the proportion of each to be determined as stated below. Parameter "A" to be Oil Production for year 1976 and Parameter "B" to be Remaining Primary Oil Reserves (1/1/77). Phase I to be in effect for a period of 5 years from the effective date of unitization. During the term of Phase I, oil shall be allocated to Tracts in the following manner:

First Year - The first 6500 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 6500 barrels per day averaged for a calendar month shall be allocated on the basis of Parameter "B".

Second Year - The first 5200 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 5200 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

77

Third Year - The first 3900 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on the Parameter "A". All oil produced, saved, and sold in excess of 3900 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fourth Year - The first 2600 barrels of oil per day, averaged for a calendar month, and produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 2600 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fifth Year - The first 1300 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 1300 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Phase II - 100 percent Remaining Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the oil production from the Unit Area totals the estimated Remaining Primary Oil Reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve. Phase III to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent Gas Production for Year 1976. Phase I gas to be same period as Phase I oil.

Phase II - 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III - Allocation to be same as oil and for same period as Phase III oil.

The limiting average of daily production of 6500 barrels as used during the first year of Phase I is the projected daily production of the Unit Area for the year 1979. It will be noted from the attached production function forecast for unitized operations that the unit production would start to exceed the limiting production during the second year of unitized operations.

R. L. Howard

RE: North Hobbs (Grayburg-San Andres)
Proposed Unit
Lea County, New Mexico

2 WEB
10

Shell Oil Company
P. O. Box 991
Houston, Texas 77001

Attention: Mr. W. E. Buck

Gentlemen:

A review of the Shell minutes for the May 26 and July 12, 1977, meetings of the working interest owners in the proposed subject unit reflect that (1) the technical report titled "Waterflood Feasibility and Unitization Parameters for the North Hobbs (Grayburg-San Andres) Unit" has been basically accepted by the working interest owners, and (2) that most of these owners have appeared willing to use, along with an initial period of "current production", the "primary" and "secondary" reserves in the negotiation proceedings thus far. However, no resolution has been made as to the timing of distribution of these "primary" and "secondary" reserves in the formulas considered. The Shell formula presented for consideration in its August 29, 1977 letter likewise does not address this timing factor.

The attached graph "Performance Forecast - Proposed North Hobbs Unit" shows a consolidation for all zones of the "primary" and "secondary" reserves included in the technical report and assumes unitization will be effective January 1, 1979. This chart was shown by Exxon and discussed at the last meeting. The included table gives the technical committee data from which the graph is constructed. As indicated, the committee forecasts secondary oil will be first recovered after some 6.4 million barrels have been produced, followed then by varying ratios of primary and secondary oil production for the life of the project. Exxon believes this projection should be considered in the development of a participation formula for the proposed unit and to such end will introduce the following formula at the called September 20 working interest owner's meeting.

A DIVISION OF EXXON CORPORATION

	Oil Reserve	
	Primary MMB	Secondary MMB
Phase 1		
for 6.4 MMB after 1-1-79		
100% Current Oil Production	6.4	
Phase 2		
for the next 26.7 MMB (Cumulative 33.1 MMB)		
44.6% Primary Reserves	11.9	
55.4% Secondary Reserves		14.8
Phase 3		
for remainder (Estimated 55.2 MMB)		
26.8% Primary Reserves	14.8	
73.2% Secondary Reserves		40.4
Total Primary and Secondary	33.1	55.2

During Phase I and Phase II gas parameters would be substituted in the above formula for allocation of gas production.

Very truly yours,

J. M. Shepherd

PRODUCTION FORECAST
FROM TECHNICAL COMMITTEE REPORT

SHELL OIL COMPANY
P.O. BOX 991
HOUSTON, TEXAS 77001

September 23, 1977

Subject: Minutes - Working Interest Owners' Meeting
Proposed North Hobbs Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

A meeting of the Working Interest Owners of the proposed North Hobbs Unit was held September 20, 1977 in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by advising that Mr. H. J. Swartz, Shell representative on and Chairman of the Technical Committee, had been given a new assignment and would be replaced by Mr. W. R. Lancaster. Mr. Buck then stated that the purpose of the meeting was to negotiate a participation formula for unitization. It was pointed out that participation formulas had been submitted by letter by Shell and Exxon prior to the meeting, and these formulas would be considered first.

A total of 5 formulas were submitted and considered by the Working Interest Owners. Details of each formula and the resulting votes are shown by attachments hereto.

Prior to consideration of Formula No. 14 (Exxon), Mr. Buck stated that it was Shell's feeling that the Shell formula (13) and the Exxon formula (14) offered two different approaches to unitization. He pointed out that Shell's formula offered certain benefits for the remaining primary reserve; whereas, the Exxon formula did not appear to provide appreciable benefits to the primary reserve. Mr. Shepherd, Exxon, again pointed out that the projected performance of the unit indicated that a major portion of the secondary oil would be recovered prior to recovery of the estimated primary reserve and felt that the formula submitted by Exxon recognized this and took it into account.

Before considering Formula No. 16 (Texas-Pacific), Mr. Lyons (Continental) questioned whether the 1976 Oil Production parameter reflected the relationship existing among individual properties. He further advised that Continental believed such parameter, if used, should be given only minimum weight.

As shown by the voting results, Formula No. 17 (Continental) received in excess of 80 percent approval of the Working Interest Owners in attendance. It was therefore agreed to submit Formula No. 17 for a ballot vote to all Working interest Owners.

Formula No. 17, as proposed by Continental, applied only to the allocation of oil and gas production. A brief discussion then followed as to the method of allocating expenses. Although a method of allocation was not formally submitted or voted on, it was generally agreed that a ballot vote would be submitted on the following method of allocating expenses.

Operating & Overhead Expenses

All Operating, Maintenance and Overhead expenses to be borne by Working Interest Owners in proportion to their phase-in-effect Unit Oil Participation.

Capital Expenditures and Inventory

All expenditures of a capital nature and the inventoried value of personal property to be borne initially on the basis of the Phase II Oil Participation and adjusted to Phase III Oil Participation at the termination of Phase II.

Shell, as Unit Expeditor, agreed to submit for ballot vote, Participation Formula No. 17 and the above-stated method of allocating costs.

It was agreed, without vote, that Shell would proceed to develop drafts of the Unit and Unit Operating Agreements for submittal to all Working Interest Owners.

There being no further business, the meeting was adjourned.

Attached for your convenience is a tabulation of gas participation under Formula No. 17.

W. E. Buck
Chairman, Working Interest
Owners' Committee

Formula No. 13 (Shell, Oil and Gas Allocation only - Expense Allocation not included.

Oil Allocation

Phase I - Allocation to be based on two parameters, the proportion of each to be determined as stated below. Parameter "A" to be Oil Production for year 1976 and Parameter "B" to be Remaining Primary Oil Reserves (1/1/77). Phase I to be in effect for a period of 5 years from the effective date of unitization. During the term of Phase I, oil shall be allocated to Tracts in the following manner:

First Year - The first 6500 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 6500 barrels per day averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Second Year- The first 5200 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 5200 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Third Year- The first 3900 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on the Parameter "A". All oil produced, saved, and sold in excess of 3900 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Fourth Year- The first 2600 barrels of oil per day, averaged for a calendar month, and produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 2600 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B"

Fifth Year- The first 1300 barrels of oil per day, averaged for a calendar month, produced, saved, and sold from the Unit shall be allocated to Tracts based on Parameter "A". All oil produced, saved, and sold in excess of 1300 barrels per day, averaged for a calendar month, shall be allocated on the basis of Parameter "B".

Oil Allocation

Phase II - 100 percent Remaining Primary Oil Reserves (1/1/77). Phase II to be in effect from the end of Phase I to the time the oil production from the Unit Area totals the estimated Remaining Primary Oil Reserve of 38,071,683 barrels from January 1, 1977.

Phase III - 100 percent Secondary Oil Reserve. Phase III to be in effect after the termination of Phase II.

Gas Allocation

Phase I - 100 percent Gas Production for Year 1976. Phase I gas to be same period as Phase I oil.

Phase II - 100 percent Primary Gas Reserve (1/1/77). Phase II gas to be same period as Phase II oil.

Phase III - Allocation to be same as oil and for same period as Phase II oil.

Voting Results - Based on oil allocation only.

'or ula No. 14 (Exxon) Oil and Gas Allocation only - Expense Allocation not included.

Oil Allocation

Phase I - 100% 1976 Oil Production. To be in effect until 6,400,000 barrels of oil product from Unit Area after effective date of unitization (Est. 1/1/79).

Phase II- 44.6% Remaining Primary Reserves 1/1/77 plus 55.4% Secondary Reserves to be in effect at the termination of Phase I and until 26,700,000 barrels of oil have been produced from the Unit Area after termination of Phase I.

Phase III-26.8% Remaining Primary Reserves 1/1/77 plus 73.2% Secondary Reserves to be in effect from the termination of Phase II until termination of the Unit.

Gas Allocation

Phase I - 100% 1976 Gas Production. Effective period to be same as Phase I oil above.

Phase II- 44.6% Remaining Gas Reserves 1/1/77 plus 55.4% Secondary Oil Reserve. Effective period to be same as Phase II oil above.

Phase III-Same as Phase III oil allocation.

oting Results - Based on oil allocation only.

Phase I - 20% 1976 Oil Production
- 80% Remaining Primary Oil Reserve (1/1/77)
To be in effect until 38,071,683 barrels of oil are produced from Unit Area after January 1, 1977.

Phase II- 100% Secondary Oil Reserve
To be in effect from termination of Phase I until termination of Unit.

Gas Allocation

Phase I - 20% 1976 Gas Production
80% Remaining Gas Reserve 1/1/77
Effective Period to be same as Phase I oil.

Phase II- Same as Phase II oil.

Voting Results - Based on oil allocation only.

Subject: Proposed Participation Formula
North Hobbs Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS (MAILING LIST ATTACHED)

At the Working Interest Owners Meeting of the proposed North Hobbs Unit of September 20, 1977, it was agreed to submit for ballot vote the Participation Formula No. 17 and a method of allocating costs. In accordance with such agreement, the ballots are hereby submitted for the two items in reference. Please indicate your decision on these matters in the spaces provided and return one copy of each to Shell Oil Company, Box 991, Houston, Texas 77001, attention W. E. Buck.

Enclosed for your convenience is a self-addressed, stamped envelope.

PROPOSED NORTH HOBBS UNIT

PARTICIPATION FORMULA NO. 17 (CONTINENTAL)

Oil Allocation

Phase I - 20% 1976 Oil Production plus 80% Remaining Primary Oil Reserve (1/1/77) - to be in effect until the total oil production from the Unit totals 4,000,000 barrels of oil after the effective date of unitization.

Phase II- 100% Primary Oil Reserve (1/1/77) - to become effective at the end of Phase I and to be in effect until production from the Unit Area equals 38,071,683 barrels of oil after January 1, 1977.

Phase III-100% Secondary Oil Reserve - to become effective at termination of Phase II and to remain in effect until termination of the Unit.

Gas Allocation

Phase I - 20% 1976 Gas Production plus 80% Remaining Primary Gas Reserves (1/1/77). Phase I gas to be the same period as Phase I oil.

Phase II- 100% Primary Gas Reserve (1/1/77) - Phase II gas to be the same period as Phase II Oil.

Phase III-Gas allocation to be the same as oil allocation.

The undersigned votes as noted below in regard to Participation Formula No. 17 (Continental):

Re: Proposed Method of Allocating
Operating Cost, Inventory Value
and Capital Expenditure

Ladies and Gentlemen:

A Letter Ballot submitted September 23, 1977, by Shell Oil Company recommended a basis by which Operating Costs, Inventory Value and Capital Expenditures should be allocated to Joint Account. Shell's proposal apportions an unfair share of the inventory value and capital expenditures to the primary oil phase (Phase II) resulting in a disproportionate financial burden on those Working Interest Owners having a low ratio of Phase III to Phase II participation. Approximately 59 percent of the Working Interest Owners (Formula No. 17) have a lesser Phase III participation than Phase II.

Assuming the proposed waterflood responds as predicted, the remaining primary recovery will be accelerated, increasing the present value of these reserves. However, the Unit is being formed primarily for the recovery of secondary oil, and considerable expenditure is required to accomplish this process.

Therefore, we wish to propose the method of allocating Unit costs outlined on the attached Letter Ballot for your consideration. This method does not overburden Phase II but apportions the expenditures to the phases in a more equitable manner.

Please indicate your approval of the attached Letter Ballot and submit it to:

Shell Oil Company
P. O. Box 991
Houston, Texas 77001
Attn: W. B. [illegible]

Very truly yours,

Royce Perry

LETTER BALLOT

PROPOSED NORTH HORSE UNIT

METHOD OF ALLOCATING COSTS

(Samedan Oil Corporation)

I. Operating Expenses

1. Operating, Maintenance and Overhead expenses incurred in the production, handling and treating of oil and gas shall be charged on the basis of the phase-in-effect oil participation.

2. Operating, Maintenance and Overhead expenses pertaining to the supply of make-up water, injection of water and all injection facilities, including the injection wells, shall be charged on the basis of 33⅓% Phase II Oil Participation plus 66⅔% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above charges shall be made on the basis of Phase III Oil Participation during the Phase III period.

II. Inventoried Value of Personal Property - Capital Expenditures

1. The inventoried value of personal property shall be made on the basis of 33⅓% Phase II Oil Participation plus 66⅔% Phase III Oil Participation with such value, corrected for retirements, to be adjusted on the basis of Phase III Oil Participation within a reasonable time following the effective date of the Phase III period.

2. All expenditures of a capital nature shall be made on the basis of 33⅓% Phase II Oil Participation plus 66⅔% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above expenditures, corrected for retirements, shall be adjusted on the basis of Phase III Oil Participation within a reasonable time after the effective date of the Phase III period.

3. All expenditures of a capital nature made during the Phase III period shall be charged to the joint account on the basis of Phase III Oil Participation.

Subject: Ballot Results - Participation Formula
and Cost Allocation Formula
North Hobbs (Grayburg-San Andres) Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS (Mailing List Attached)

By letter of September 23, 1977, ballots were submitted to the Working Interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit concerning a participation formula and a cost allocation formula. Tabulated below are the results of the ballots returned as of this date. The percentages shown are the Working Interest Owners' participation based on Formula 17 (Oil Allocation).

Participation Formula (No. 17)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	92.01237	1.46358
Phase II	92.58657	1.30069
Phase III	89.76525	1.27189

Cost Allocation

	Working Interest Owners'%	
	Approved	Disapproved
Phase I	78.13850	15.05034
Phase II	78.33749	15.33648
Phase III	85.16566	5.76775

Following are the results received to date on the cost allocation formula submitted by Samedan Oil Corporation.

Cost Allocation (Samedan)

	Working Interest Owners'%	
	Approved	Disapproved
Phase I	9.07946	30.19928
Phase II	9.53079	29.52246
Phase III	1.72004	28.39264

Shell is currently preparing drafts of the Unit and Unit Operating Agreements and will submit such drafts for your consideration in the near future.

Attached for your consideration and use is a tabulation showing the tract interest and tract participation of each Working Interest Owner as calculated from Participation Formula No. 17. Also attached is a summary tabulation showing the unit participation of each Working Interest Owner as calculated from Participation Formula No. 17.

In the near future you will receive a letter from Shell's Land Department requesting confirmation of Working Interests and other data required for the various exhibits that will be included in the Unit and Unit Operating Agreements. Please give such request your earliest consideration so that all the data will be available when needed for preparation of the Agreements in final form.

Yours very truly,

R L Howard

Subject: North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS
NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT
(Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs (Grayburg - San Andres) Unit is called for 10:00 A.M. February 2, 1978 in the Midland Room, Midland National Bank, Midland, Texas.

The agenda for the meeting will be as follows:

1. Review drafts of Unit and Unit Operating Agreements.
2. Develop course of action for further unitization efforts.
3. Any other business.

Attached for your review are copies of proposed Unit and Unit Operating Agreements. Exhibits pertaining to tract and unit participation have not been included as current division of interests are not yet available. Tabulations showing the interests as now available have been attached and the exhibits will be prepared as soon as the data is complete.

We would appreciate any written comments prior to the meeting and asked that all parties attend the meeting prepared to render decisions regarding the various provisions of the agreements.

Response to date on the ballots submitted September 23, 1977 is as follows:

Participation Formula (No. 17)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	92.04485	1.46358
Phase II	92.62039	1.30069
Phase III	89.76789	1.27189

Cost Allocation

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	78.13850	15.08282
Phase II	78.33749	15.37030
Phase III	85.16566	5.77039

Cost Allocation (Samedon)

	Working Interest Owners' %	
	Approved	Disapproved
Phase I	9.18740	36.47405
Phase II	9.59976	35.82007
Phase III	1.73943	38.79959

Yours very truly,

W. E. Buck
Chairman, Working Interest
Owners' Committee

Working Interest Owners
Proposed North Hobbs Unit
Lea County, New Mexico

Re: Method of Allocating
Operating Costs, Inventory
Value and Capital Expenditure

Ladies and Gentlemen:

Proceedings toward unitization of the North Hobbs Field have resulted in two proposals of methods by which to make charges to the various Tracts within the proposed Unit, such charges pertaining to Operating Costs, Inventory Adjustment and Capital Expenditures.

Shell Oil Company presented a method September 23, 1977, which recommends charging operating costs on the basis of the oil participation phase-in-effect and allocating inventory adjustment and capital expenditures on the basis of 100% Remaining Primary Oil Reserves (Phase II), with readjustment to occur at the beginning of Phase III (100% Secondary Oil Reserve Parameter).

Samedan Oil Corporation proposed a second method for allocating the above charges on October ?, 1977. Samedan contended at the time of their proposal that Shell's recommendation was disproportionately weighted on the remaining primary oil reserves. Samedan's proposal tended to make charges using a combination of Remaining Primary Oil Reserves (Phase II) and Secondary Oil Reserves (Phase III), thereby allocating costs more fairly and more commensurate with the purpose of forming the Unit.

Shell Oil Company has scheduled a Working Interest Owners Meeting on February 2, 1978, at Midland, Texas. In preparation for this meeting, Samedan has conducted an in-depth study of the different proposals for allocating costs, and by this letter we intend to show the inequitable, high development costs incurred by Shell's proposal for those Tracts having a high remaining primary oil parameter and a low secondary oil parameter.

The proposed North Hobbs Unit incorporates basically three distinct types of oil producing Tracts:

(1) Some 31 of the 83 Tracts produce only from the Grayburg zone and have no remaining primary reserves in the San Andres formation.

The current producing rate of these Tracts places them in a "stripper" status, or essentially a depleted state. Conversely, all of these Tracts have secondary reserves. Three of these leases have no current production and no remaining primary reserves, but do have secondary reserves. Tracts having only Grayburg reserves are paying a low development cost for secondary reserves during the early phases of the Unit.

(2) Tracts having San Andres II, San Andres III Upper and San Andres III Lower have a higher producing rate than those having Grayburg only, and consequently, also have a higher remaining primary reserve position. These San Andres zones also are given secondary oil reserves, which brings the Phase II (Remaining Primary Oil) and Phase III (Secondary Oil) parameters closer together. However, these zones are pressure depleting, having a solution gas drive mechanism.

(3) The third category of producing properties includes those Tracts which produce almost entirely from the San Andres I zone, which has no secondary reserves due to the active water-drive reservoir mechanism. There are 17 Tracts which have 70% or more of their remaining primary reserves in the San Andres I zone, but have little or no secondary reserves. There are 6 Tracts which receive 100% of the remaining reserves from the San Andres I zone and have relatively small secondary reserves.

This third category is paying an unfairly high development cost for its negligible secondary reserves during the initial stage of the operations.

Below is a tabulation of all Samedan operated leases showing a comparison of investment and discounted net cash flow before Federal Income Taxes. The assumption is made that a basic 1/8 Royalty Interest exists and that the bulk of the investment or development capital expenditures will be made during the first three years of operations.

Tract No.	Lease Name	Remaining Primary Oil Zone	Development Cost Per Secondary Bbl.		Discounted Primary Phase Income @ 10%	
			Shell Proposal	Samedan Proposal	Shell Proposal (M$)	Samedan Proposal (M$)
32	State 'C'	San Andres I	$ 0.92	$ 0.55	$2,746	$3,135
41	State 'B'	Grayburg	$ 0.09	$ 0.29	$ 56	$ 46
55	Moon 'A'	S.A. I, S.A. II	$ 3.90	$ 1.56	$2,253	$2,611
56	Moon 'B'	S.A. I, S.A. II	$ 9.45	$ 3.39	$2,335	$2,702
64	Turner 'B'	San Andres I	$ 8.54	$ 3.13	$ 289	$ 351
65	Turner 'B-2'	San Andres I	$ 8.93	$ 3.18	$ 343	$ 412
66	Turner 'A'	San Andres I	$ 2.41	$ 1.13	$2,285	$2,646

The above clearly shows the wide range of development costs as they apply from lease to lease, but more significantly, the figures show that Tracts having a high remaining primary position, mainly because of the San Andres I

zone, and a low secondary reserves position are paying for a large share of the development costs which are being made for secondary oil recovery. The principle is totally unacceptable to Samedan.

We believe water injection will enhance the recovery of remaining primary reserves, and consequently, the primary phase should incur a portion of the development costs. However, the Unit is being formed for the recovery of secondary reserves, and the secondary phase is obligated to share its portion of the development costs. Even though an adjustment of the costs are to be made at the beginning of Phase III, there is no assurance that the operations will reach the Phase III period. Should Phase III not become effective, development costs administered against the high percentage remaining primary-low percentage secondary participants will not be recovered. Further, the excessive early high costs charged against the Tracts with a high remaining primary position, requires those Tracts to sustain an unfavorable present value position by, in effect, loaning money to the Tracts having a low remaining primary - high secondary position for the duration of the primary phase. Such loan made today, and repaid at the beginning of Phase III, has little present worth.

Due to the extreme difference in the present worth value of the primary phase Tract income, between Shell's proposal and Samedan's proposal, as a percent of the total primary phase Tract net income, Samedan must take the strong position of refusing to become a part of the North Hobbs Unit should Shell's proposal be adopted. Further, we have an obligation to our joint interest owners to make them aware of this unfair basis of administering expenses. Should Shell's proposal be made a part of the Unit Operating Agreement, Samedan will resort to any available legal means to prevent its enactment.

We request that the agenda for the meeting scheduled for February 2, 1978, be modified to permit renegotiation of a method for allocating costs. This request is in the interest of permitting continued progress toward unitization.

Very truly yours,

SAMEDAN OIL CORPORATION

SHELL OIL COMPANY
P.O. BOX 991
HOUSTON, TEXAS 77001

January 24, 1978

Subject: North Hobbs (Grayburg San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS

By letter of January 16, 1978, Samedan Oil Corporation advised that they considered the cost allocation formula as balloted by letter of September 23, 1977, inequitable. Samedan further requested by their letter that negotiation of a cost allocation formula be included on the agenda for the Working Interest Owners meeting called for February 2, 1978. In view of Samedan's request and as it was agreed at the previous Working Interest Owners meeting that the cost allocation formula would be considered at the time the draft agreements were reviewed, the stated agenda of the meeting called for February 2, 1978, is hereby amended to include consideration of a cost allocation formula.

Shell does not agree that the comparisons set forth by Samedan are acceptable criteria for determining equity. However, Shell has reviewed the effects of both the Samedan and Shell formulas and is concerned that either of the two formulas might result in the secondary recovery project yielding a less-than-acceptable investment opportunity for certain parties. This situation results from the extreme variation in participation of tracts from the primary to secondary phase.

In an effort to evaluate the effect of the two cost formulas, Shell developed a comparison of the incremental present value profit for each tract. Incremental profit as used in the analysis, is the difference between the present value profit to be derived from unit operations (recovery of primary plus secondary oil) and the present value profit resulting from non-unit (primary oil and gas only) operations of any given tract. A discount factor of 10 percent was used in all cases and only the before tax profit was calculated. The production rates and capital and operating cost estimates as developed by the Technical Committee and presented in the "Waterflood Feasibility Study" were used in the evaluation.

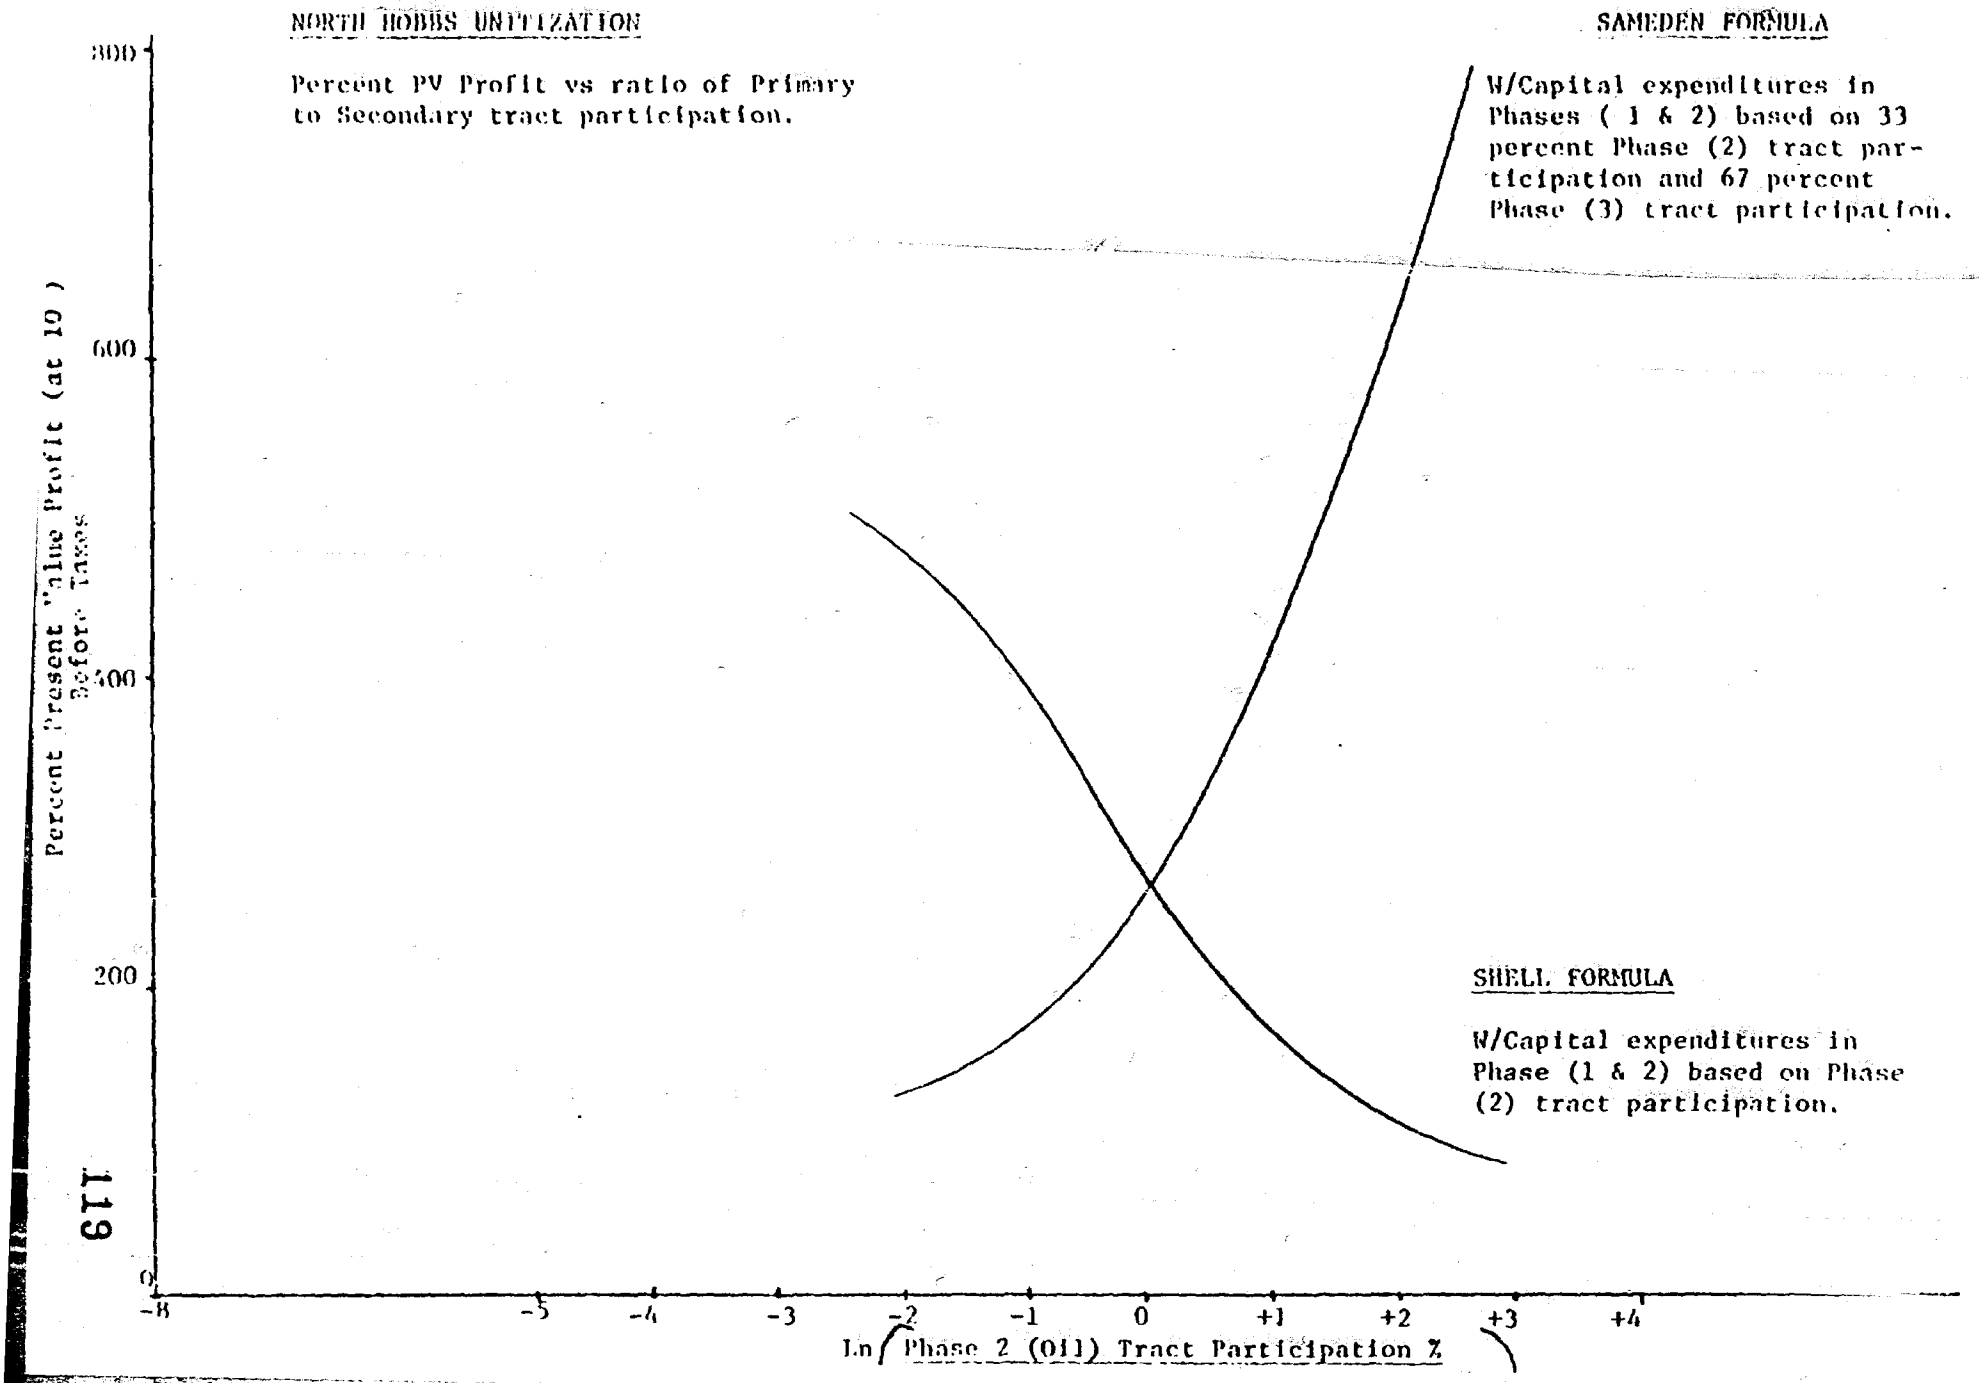
The attached graph shows the results of Shell's review. The percent incremental present value profit (incremental present value profit divided by present value capital for each tract) was plotted against the ratio of each tract's primary participation percentage to its secondary participation. To facilitate computer plotting, the natural logarithm of the ratio was used. The results indicate that by using the Samedan formula, the tracts having a high ratio (high primary and relatively low secondary participation) would yield a very favorable return on the capital investment; whereas, the tracts with a low ratio (low primary and relatively high secondary) would yield a low return on investment. With the Shell formula, the reverse is true. Tracts with a high ratio would yield a low

return on investment and tracts with a relatively low ratio would enjoy a high return on investment.

It is recognized that the method of evaluation does not result in absolute values for each tract. However, it is felt that the method offers a realistic means of comparing the trends of the cost allocation formulas and that such trends should be considered in developing an acceptable formula.

Based on the above comparisons, it is Shell's feeling that further consideration should be given to negotiating a cost allocation formula which would provide for a unitized operation that would yield acceptable investment opportunities to all parties. It is, therefore, asked that all Working Interest Owners attend the meeting of February 2, 1978, prepared to render a decision regarding a method of allocating unit costs.

Yours very truly,



For: R. L. Howard
Division Production Manager

February 8, 1978

Subject: Minutes - Working Interest Owners' Meeting
Proposed North Hobbs (Grayburg-San Andres) Unit
Lea County, New New Mexico

TO: WORKING INTEREST OWNERS (Mailing List Attached)

A meeting of the Working Interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit was held February 2, 1978 in Midland, Texas. Representatives attending the meeting are shown on the attached attendance list.

Mr. Buck opened the meeting by stating that at the meeting of September 23, 1977, general agreement was reached on an oil and gas allocation formula. Mr. Buck stated that it was also agreed at such meeting for Shell to submit ballots on the oil and gas allocation formula and a cost allocation formula. In addition, Shell was to develop drafts of Unit and Unit Operating Agreements and to submitt such drafts to the Working Interest Owners for review. Mr. Buck advised that the draft agreements had been completed and were submitted with the call to meeting.

Mr. Buck then advised that the results of the ballots on the oil and gas allocation formula were as follows:

	Working Interest Owners' % (Oil Only)	
	Approved	Disapproved
Phase I	92.04485	1.46358
Phase II	92.62039	1.30069
Phase III	89.76789	1.27189

Response to date on the cost allocation formula is as follows:

	Working Interest Owners' % (Oil Only)	
	Approved	Disapproved
Phase I	82.82611	15.0828
Phase II	82.73358	15.37030
Phase III	92.80451	5.77039

Mr. Buck then stated that Samedan Oil Corporation submitted a cost allocation formula in writing to all Working Interest Owners and requested a ballot vote. The ballot response to such formula was as follows:

Working Interest Owners' % (Oil Only)

	Approved*	Disapproved
Phase I	13.86912	36.47405
Phase II	14.30357	35.82007
Phase III	4.55875	38.79959

*Includes Texas Pacific approval stated at meeting.

Mr. Buck went on to advise that the program of unitization and water injection has been submitted to the Commissioner of Public Land, State of New Mexico and to the United States Department of Interior, Geological Survey. Although neither agency has given any written response, Mr. Buck felt from the discussions at the presentations that the program was favorably received by both.

Mr. Buck advised that a review of the division of interests received to date indicated a diversity of working interests above and below 4500 feet in a number of leases. In view of this, it is believed that the base of the unitized formation (Section 2 (h), Unit Agreement) should be defined as the depth of 4500 feet beneath the surface. The depth of 4500 feet is approximately 200 feet below the established water level in the San Andres formation.

Mr. Buck pointed out that some parties advised in writing of their objections to the cost allocation formula and that they would object to an effort to form a unit on such basis under the New Mexico Unitization Statute. In view of this, Mr. Buck felt the Working Interest Owners should decide whether to proceed with unitization efforts based on the cost allocation formula which has an indicated acceptance by more than 75 percent of the Working Interests or to attempt to develop another formula that would receive greater acceptance. It was noted that the Working Interests approving both the participation formula and the Shell cost allocation formula, and which could, therefore, be anticipated to ratify a unit agreement, total 78 percent for each Phase I and Phase II and 85 percent for Phase III. The meeting was then opened for discussion.

Mr. Joe Thorton, Sun Production Company, advised that Sun would oppose an effort to form the unit under the New Mexico Unitization Statute. Mr. Thornton stated that such opposition was not on a matter of equity but as a matter of principle. Sun did not feel the New Mexico Oil Conservation Commission had the authority to act in this particular instance.

Mr. Boyce Perry, Samedan, stated they would oppose unitization if based on present cost allocation formula and that they felt the formula proposed by Samedan was more in keeping with the benefits to be derived from the project. Mr. John Cusack, Cusack interests, advised that he would not accept the formula as presented and favored the one submitted by Samedan. After more discussion in which some parties indicated a preference to proceed with the formula which has received in excess of 75% approval, Mr. Boyce Perry, Samedan, moved that an effort be made to negotiate a cost allocation which would be acceptable to a greater number of the Working Interest Owners. The motion was seconded by Mr. Cusack, Cusack Interests. Voting results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	75.23913	21.67889	0.22719
Phase II	76.07912	21.12195	0.19658
Phase III	62.00388	34.33593	0.43429
	97.14531	97.39765	96.77410

The motion was considered passed and the meeting was opened for suggested cost allocation formulas.

Mr. Boyce Perry, Samedan, requested that the formula submitted in writing be again submitted for vote. The formula was as follows:

I. Operating Expenses

1. Operating, Maintenance and Overhead expenses incurred in the production, handling and treating of oil and gas shall be charged on the basis of the phase-in-effect oil participation.

2. Operating, Maintenance and Overhead expenses pertaining to the supply of make-up water, injection of water and all injection facilities, including the injection wells, shall be charged on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

   All the above charges shall be made on the basis of Phase III Oil Participation during the Phase III period.

II. Inventoried Value of personal Property - Capital Expenditures

1. The inventoried value of personal property shall be made on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation with such value, corrected for retirements, to be adjusted on the basis of Phase III Oil Participation within a reasonable time following the effective date of the Phase III period.

2. All expenditures of a capital nature shall be made on the basis of 33% Phase II Oil Participation plus 67% Phase III Oil Participation during the Phase I and Phase II periods.

3. All the above expenditures, corrected for retirements, shall be adjusted on the basis of Phase III Oil Participation within a reasonable time after the effective date of the Phase III period.

4. All expenditures of a capital nature made during the Phase III period shall be charged to the joint account on the basis of Phase III Oil Participation.

Details of the voting are shown on Attachment No. I and the summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	18.42891	78.48903	
Phase II	18.99331	78.17770	
Phase III	8.11158	88.18190	
.33 Phase II + .67 Phase III	11.70255	83.82857	

Mr. R. W. Mullins, Amerada-Hess Corporation, proposed that the Samedan formula be used, only that no adjustment in the investment account be made at the termination of Phase II (Oil). Details of the voting are shown on Attachment No. 2 and summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	6.56696	79.03633	11.54184
Phase II	6.56261	78.89605	11.96893
Phase III	8.60241	73.91749	14.81957
.33 Phase II + .67 Phase III			

Mr. O. V. Stuckey, Getty Oil Company, proposed that all capital expenditures during Phase I and Phase II be allocated on 2/3 Phase II Interest (Oil) plus 1/3 Phase III Interest (Oil) and adjusted to Phase III at termination of Phase II (Oil). Operating expenses were to be based on phase-in-effect. Details of the voting are shown on Attachment No. 3, and the summary results were as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	59.97659	36.94135	
Phase II	60.40459	36.76642	
Phase III	56.81526	39.47822	
2/3 Phase II + 1/3 Phase III	59.20220	37.66659	

Mr. Boyce Perry, proposed that all capital expenditures be allocated on 1/3 Phase II (oil) + 2/3 Phase III (oil) during Phase I and II and adjusted to Phase III interests at termination of Phase II (Oil). Operating costs to be based on phase-in-effect. Details of the vote are shown on Attachment No. 4 and the summary results were as follows:

	Working Interest Owners' % (Oil)		
	For	Against	Pass
Phase I	18.42891	78.48903	
Phase II	18.99331	78.17770	
Phase III	8.11158	88.18190	
1/3 Phase II + 2/3 Phase III	11.73764	84.83870	

Mr. Thane Aikens, Arco, proposed that all capital expenditures during Phase I (Oil) and Phase II (Oil) be allocated on .50 Phase II (Oil) plus .50 Phase III (Oil) interest and adjusted to Phase III (Oil) at termination of Phase II. All operating expenses to be allocated on phase-in-effect. Details of the vote are shown on Attachment No. 5 and summary results were as follows:

	Working Interest Owners' % (Oil)		
	For	Against	Pass
Phase I	78.27269	18.64525	
Phase II	78.88410	18.28691	
Phase III	68.56783	27.72595	
.5 Phase II + .5 Phase III	73.72588	23.00645	

Mr. Buck, Shell, proposed a compromise of two previous proposals, (Getty and Arco). Such proposal was that all capital expenditures during Phase I (Oil) and Phase II (Oil) be allocated on 58 percent Phase II (Oil) interest and 42 percent Phase III (Oil) interest and adjusted to Phase III (Oil) at termination of Phase II (Oil). Operating expenses to be allocated on basis of phase-in-effect. Details of the vote are shown on Attachment No. 6 and summary results are as follows:

	Working Interest Owners' % (Oil Only)		
	For	Against	Pass
Phase I	82.01563	10.87691	2.63643
Phase II	82.36473	10.72944	2.71879
Phase III	76.86992	13.50522	4.03993
.58 Phase II + .42 Phase III	80.05693	11.89528	2.27367

In view of the favorable response to the last cost formula submitted by Shell, it was agreed to submit the formula for ballot vote. It was understood that all votes were cast subject to management approval.

Time did not permit review of the Unit and Unit Operating Agreements and Mr. Buck advised that a meeting would be called at a later date for such purpose. Comments regarding the agreements have been received from two parties. Based on the comments, Shell proposed certain changes or additions. A list of the changes were given to the Working Interest Owners present and a copy is attached to the minutes.

Mr. Shepherd, Exxon, asked for an explanation of the limiting quantity of 23,000,000 barrels of oil stated in Article 16 (c) of the Unit Agreement. Mr. Buck advised that based on the projected primary performance of the Unit, it was estimated that, without water injection, the unit production would average 10 barrels of oil per day per well after the production of 23,000,000 barrels from January 1, 1979. As all production would qualify as stripper for FEA pricing purposes at such time and under such conditions, it was suggested that this amount be used as the limiting quantity of oil.

All parties who had not done so, were ask to submit as soon as possible the division of interests for their properties in order that the necessary exhibits for the agreements could be completed.

There being no further business, the meeting was adjourned.

Yours very truly,

W E Buck

W. E. Buck
Chairman, Working Interest Owners Committee

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 3: In subsection (h), delete "and 5347 feet" and add at the end "and the depth of 4500 feet beneath the surface".

Page 9: In the third paragraph of Section 12, delete "owner" and insert "party or parties entitled thereto".

Page 10: At the end of the next to last paragraph in Section 13 add:

"Unit Operator shall notify the Supervisor and the Land Commissioner as to the date each phase change occurs".

Page 19: At the end of the first paragraph in Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least eighty percent (80%) as to all Tracts then committed to this Agreement".

Page 24: In the fifth line of the first paragraph of Section 39 after "become parties to this Agreement" insert "or have approved this Agreement in writing".

Page 25: At the end of the first paragraph in the revised Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless within ninety (90) days after the date all other prerequisites for effectiveness of this Agreement have been satisfied, such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least sixty-five percent (65%) as to all Tracts within the Unit Area.

Subject: Proposed Cost Allocation Formula
North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: ALL WORKING INTEREST OWNERS

At the Working Interest Owners Meeting of the proposed North Hobbs (Grayburg - San Andres) Unit of February 2, 1978, it was agreed to submit for ballot vote a method of allocating unit costs as proposed by Shell Oil Company. Accordingly, a ballot is hereby submitted for such method of allocating unit costs. Please indicate your decision on this matter in the space provided and return one copy to Shell Oil Company, Box 991, Houston, Texas 77001, Attention W. E. Buck.

Enclosed for your convenience is a self-addressed, stamped envelope.

Yours very truly,

W E Buck

W. E. Buck
Chairman, Working Interest Owners Comm

NORTH HOBBS (GRAYBURG - SAN ANDRES) UNIT
COST ALLOCATION FORMULA - PROPOSED BY SHELL AT
MEETING OF FEBRUARY 2, 1978

I. Operating Expenses

Operating, maintenance, and overhead expenses to be allocated on phase-in-effect unit participation (oil).

II. Capital Expenditures and Inventoried Value of Personal Property

1. The inventoried value of personal property and all expenditures of a capital nature (including injection well conversion costs) made during Phase I (oil) and Phase II (oil) will be allocated on the basis of .58 Phase II (oil) participation plus .42 Phase III (oil) participation.

2. At the termination of Phase II (oil), the inventoried value of personal property and the capital investment account (both adjusted for retirements and including conversion costs) shall be adjusted to Phase III (oil) participation.

3. All expenditures of a capital nature made during Phase III will be allocated on the basis of Phase III (oil) participation.

The undersigned votes as noted below in regard to the above stated cost allocation formula.

Approved _____ Company _____

Disapproved _____ Representative _____

Date _____

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001
May 3, 1978

Subject: North Hobbs (Grayburg - San Andres) Unit
Lea County, New Mexico

TO: Working Interest Owners
(Mailing List Attached)

A meeting of the working interest owners of the proposed North Hobbs (Grayburg-San Andres) Unit is called for 10:00 A.M., May 18, 1978, in the Reddy Room, Texas Electric Service Company, Midland, Texas.

The agenda for the meeting will be as follows:

1. Review drafts of Unit and Unit Operating Agreements with view to preparing agreements in final form and submitting to working and royalty interests for ratification.

2. Develop further course of action for unitization matters.

3. Any other business

The indicated response to date on the ballot submitted February 9, 1978, is as follows:

Investment Participation

	Working Interest Owners' Participation %	
	Approved	Disapproved
Phase I Oil (Unit Participation)	85.33638	10.18781
Phase II Oil (Unit Participation)	85.79607	9.70702
Phase III Oil (Unit Participation)	83.62214	14.55282
Investment Participation	84.88304	11.74226

(Detailed response is shown on attached tabulation)

The response shown includes, as approved, the indicated acceptance of Samedan Oil Corporation. Samedan has advised that they will accept the formula with the added provision that the investment account be re-adjusted to Phase III Oil Unit Participation at the termination of Phase II (production of 38,071,683 bbls oil after 1/1/77) or at January 1, 1991, which ever occurs first. The date,

January 1, 1991, is the first day of the year following the approximate date that oil production from the unit area after January 1, 1977, totals 38,071,683 barrels as determined from the unit production performance estimated by the Technical Committee. As this is in keeping with the intent and purpose of the proposed formula for investment expenditures, the draft of the Unit Operating Agreement has been revised to include such stipulation.

All working interests owners, who have now indicated acceptance of the cost allocation formula, have previously indicated acceptance also of the gas and oil participation formulas. Shell considers this response sufficient to proceed with finalization of the Unit and Unit Operating Agreements and to submit such agreements for ratification at the earliest possible date.

Drafts of the Unit and Unit Operating agreements were submitted with the call to meeting of December 14, 1977. Due to further negotiation of the cost allocation formula, the drafts were not reviewed at the meeting of February 2, 1978. In the interim, written comments have been received from a number of the working interest owners. The comments have been reviewed and the revisions suggested by Shell are attached. All comments will be discussed at the meeting and representatives are asked to attend the meeting prepared to render decisions concerning the agreements.

A current listing of all working interest owners has been made and, as there have been changes in ownership, a new tabulation showing unit participation (oil and gas) and investment participation (based on .58 -.42 formula) is being prepared. Such tabulation will be mailed to you as soon as completed.

Yours very truly,

W E Buck

W. E. Buck
Chairman, Working Interest Owners
Committee

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 3: In subsection (h), delete "and 5347 feet" and add at the end "and the depth of 4500 feet beneath the surface".

Page 9: In the 5th line of the 1st paragraph in Section 12, after "water" insert "injection plants", and in the next line after "injection" insert "plants".

Page 9: In the 3rd paragraph in Section 12, delete "owner" and insert "party or parties entitled thereto".

Page 10: At the end of the next to last paragraph in Section 13 add:

"Unit Operator shall notify the Supervisor and the Land Commissioner as to the date each phase change occurs".

Page 15: At the end of the 3rd sentence in the last paragraph in Section 16, change the period to a semicolon and add "thereafter all oil produced, saved and sold from the unit shall, as to each and every category into which such production may then or thereafter be classified for pricing or other purposes, be allocated to all qualified Tracts in proportion to Tract Participation in accordance with the provisions of Section 15".

Page 16: At the beginning of Section 18, delete "The State of New Mexico and United States of America and" and insert "Any and".

Page 19: In the 10th and 14th lines in Section 23, change "instrument or transfer" to "instrument of transfer" and delete the comma in the 14th line.

Page 19: At the end of the 1st paragraph in Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least eighty percent (80%) as to all Tracts then qualified under the provisions of Section 14".

Page 21: At the beginning of Section 27 insert "Unless a different representative is designated by Working Interest Owners,".

Page 22: In the 8th line in Section 32 change "interested subject thereto" to "interest subject hereto".

PROPOSED CHANGES IN UNIT AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 24: In the 5th line of the 1st paragraph in Section 39 after "become parties to this Agreement" insert "or have approved this Agreement in writing".

Page 25: At the end of the 1st paragraph in the revised Section 24 add:

"Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless within ninety (90) days after the date all other prerequisites for effectiveness of this Agreement have been satisfied, such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least sixty-five percent (65%) as to all Tracts within the Unit Area.

PROPOSED CHANGES IN UNIT OPERATING AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT

Page 1: Add a section in Article I as follows:

"1.2 Additional Definitions. For the purposes of this agreement, the following terms and expressions as used herein shall mean:

(a) "Investment Participation" shall mean the sum of .58 Phase II Unit Participation and .42 Phase III Unit Participation.

(b) "Investment Readjustment Date" shall mean the date of termination of Phase II or January 1, 1991, whichever is the earlier date."

Page 1: Change the first sentence in Section 2.1.2 to read "Exhibit E, attached hereto, is a schedule showing the Tract Participation, the Unit Participation, and the Investment Participation of each Working Interest Owner."

Page 6: After the 1st sentence in Section 7.9 insert "Unit Operator shall furnish to a Working Interest Owner, upon written request, a copy of each authority for expenditure prepared by Unit Operator for its own use."

Page 8: In the 7th line of Section 10.3.1 change "Phase II Unit Participation" to "Investment Participation".

Page 9: Make the following changes in Section 10.3.2:

Beginning in the 1st line in the 1st paragraph, change "as of the end of Phase II" to "as of the Investment Adjustment Date".

Beginning in the 8th line in the 1st paragraph change "during Phase I and Phase II Unit Operations" to "prior to the Investment Readjustment Date".

Beginning in the 2nd line in paragraph (b) change "during Phase I and Phase II Unit Operations" to "prior to the Investment Readjustment Date".

Beginning in the 2nd line in paragraph (c) change "prior to the effective date of Phase III Unit Operations" to "prior to the Investment Readjustment Date".

Page 9: Delete the last sentence in Section 10.4.

PROPOSED CHANGES IN UNIT OPERATING AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES UNIT)

Page 10: Make the following changes in Section 10.5:

In the 5th line change "Phase II Unit Participation" to "Investment Participation."

Beginning in the 5th line change "as and while Phase I and Phase II may be effective" to "during the time prior to the Investment Readjustment Date".

In the 7th line change "from and after the time Phase III may hereafter become effective" to "from and after the Investment Readjustment Date."

Page 10: Change Section 11.1.2 to read as follows:

"11.1.2. Investment Cost. The cost of investment items (as described in Section 10.3.2 (b) above) incurred prior to the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Investment Participation. The cost of such investment items incurred after the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Phase III Unit Participation."

Page 12: In the 4th line from the top of the page after "collected from" insert "or otherwise received for the account of".

Page 16: In the 10th line of Section 18.1, after "Working Interest Owners" insert "without regard to plugging and abandonment costs".

Page 17: In the 4th line of Section 20.1.2, after "Working Interest Owners" insert "without regard to plugging and abandonment costs".

Subject: Participation and Cost Allocation
Tabulations
North Hobbs (Grayburg-San Andres) Unit
Lea County, New Mexico

To: Working Interest Owners - North Hobbs
(Grayburg - San Andres) Unit
(Mailing List Attached)

The call to meeting of May 3, 1978, advised that up-dated tabulations of all working interest owners and their respective unit and investment participation would be furnished as soon as completed. Attached are the following listed tabulations:

1. Tract participation and Investment Participation.

2. Tract Participation and Investment Participation - by tract and working interest in each tract.

3. Unit Participation and Investment Participation - by working interest owner and by tract.

4. Summary of Unit and Investment Participation.

The data shown will be used in preparing the exhibits to the unit and unit operating agreements. It is, therefore, requested that if any errors are noted, Shell be so advised as soon as possible.

Since the call to meeting was issued, Cities Service has indicated acceptance of the cost allocation formula. The current response concerning the investment allocation, including the acceptance of Cities Service, is as follows:

Investment Participation

	Working Interest Owners' Participation %	
	Approved	Disapproved
Phase I Oil (Unit Participation)	88.58519	6.93900
Phase II Oil (Unit Participation)	88.99853	6.50456

Investment Participation	Working Interest Owners' Participation %	
	Approved	Disapproved
Phase III Oil (Unit Participation)	89.16650	9.00846
Investment Participation	89.06910	7.5562

Yours very truly,

W. E. Buck
Chairman, Working Interest Owners Committee

SHELL OIL COMPANY

P.O. BOX 991
HOUSTON, TEXAS 77001
JUN - 2 1978

Subject: Minutes - Working Interest Owners' Meeting
of May 18, 1978
Proposed North Hobbs (Grayburg - San Andres)Unit
Lea County, New Mexico

TO: WORKING INTEREST OWNERS
(Mailing List Attached)

A meeting of the Working interest Owners of the proposed North Hobbs (Grayburg-San Andres) Unit was held May 18, 1978 in Midland, Texas. The representatives attending the meeting are shown on the attached attendance list.

Mr. Buck, chairman, opened the meeting by stating that the cost allocation formula submitted for ballot consideration by letter of February 9, 1978, had been accepted by Working Interest Owners totaling approximately 89 percent based on the oil unit participation. He further advised that all parties indicating acceptance of the cost allocation formula had also previously indicated acceptance of the unit participation (oil & gas) formula. He stated that Shell, as Unit Expeditor, believed the affirmative response was sufficient to proceed with the development and the submittal for execution of the unit and unit operating agreements.

Mr. Buck pointed out that drafts of the unit and unit operating agreements had been submitted to the Working Interest Owners with the notice of the meeting of February 2, 1978. Comments from a number of Working Interest Owners have been received and reviewed by Shell. Revisions, suggested by Shell and resulting from the comments received, were attached to the notice of this meeting.

As the first agenda item, the unit and unit operating agreements were reviewed. The unit agreement was reviewed first, page at a time. Comments of the Working Interest Owners were discussed and agreement reached on various revisions or deletions.

The unit operating agreement was then reviewed in the same manner. The major items of discussion were as follows:

Article 4.2	Agreement was reached to revise the provision to include the requirement that any request for monetary approval at a meeting must appear as an agenda item.
Article 7.9	Agreement was reached to include a provision requiring the unit operator to furnish informational AFE's to Working Interest Owners for any single capital expenditures in excess of $5000.

Article 10.2 Agreement was reached to provide for the inventory and pricing of items considered non-controllable as determined by the Working Interest Owners.

Article 10.3.2 In answer to questions, Mr. Buck explained that it was Shell's understanding that if any items of personal property and facilities were replaced by new items, the Investment Account would be reduced by the inventory value or actual installation cost of the item replaced and increased by the actual cost, including installation, of the new item. When given a specific example, Mr. Buck replied that if a treating or separation vessel, included in the original inventory, was replaced by a new vessel, the Investment Account would be reduced by the original inventory value of the replaced vessel and increased by the actual cost, including installation, of the new vessel. When asked about costs to deepen wells, Mr. Buck replied that it was Shell's understanding that such costs, being a part of the development program, would be charged on the basis of the investment participation and included in the adjustment of the Investment Account.

Article 18.1
Article 20.1.2 It was agreed that wells no longer needed for unit operations could be taken over by the Working Interest Owner by payment of net salvage value as estimated by Working Interest Owners.

Exhibit F (Accounting Procedure)

Because of the comments concerning the deletion of the word "direct" (Section I (1)) and the addition of the phrase "and related expenses"(Section II 2, A(1)), Mr. Buck offered the following explanation prior to review.

The revisions do not represent a change in Shell's accounting procedures or in the method of handling joint venture properties. The changes in the form are brought about by the use of the 1974-COPAS form.

Shell refers to their field operating Unit as a Production Unit. The employees and/or contract labor engaged in operating and maintaining the properties included in a Production Unit are supervised by a Production Foreman who is assisted by one or more Maintenance Foremen. The Production Unit is the First Level of Supervision. The salaries and related expenses of Production Unit Supervisors are considered as direct charges, since they were excluded from the calculation of overhead rates. All expenses of supervisory employees assigned to offices above a Production Unit, starting with the Division Production Superintendent, are included in Shell's overhead charges.

The COPAS-1974 Accounting Procedure defines First Level Supervisors as employees whose primary function is the direct supervision of other employees and/or contract labor. Previous COPAS Accounting Procedures did not include such a definition. Bulletin No. 8, associated with COPAS-1968 Accounting Procedure, defines First Level Supervisors as employees and their assistants who supervise other employees and/or contract labor. The COPAS-1968 form was acceptable to Shell. As supervision of Production Unit operating employees and/or contract labor by the Production Foreman may not always be direct, it was felt that the definition of the 1974-COPAS form could not be applied to Shell's organization. To avoid an interpretation that the Maintenance Foreman rather than the Production Unit is the First Level of Supervision, Shell felt it essential to delete the word "direct" when using the COPAS-1974 Accounting Procedure.

Related expenses are the expenses necessary for proper performance of the foreman's function. This would include such expenses as office rent, utilities, communication, answering service, and other miscellaneous expenses directly related to the Production Unit.

Although no formal vote was taken, it appeared that the unit and unit operating agreements, revised as discussed, were generally acceptable to the Working Interest Owners present and that it would not be necessary to submit revised drafts of the agreements. Mr. Buck advised that the agreements would be prepared in final form and submitted to the United States Department of Interior, Geological Survey and to the New Mexico State Land Office for review. If no revisions of substance are required by the governmental agencies, the agreements will be submitted to the working and royalty interests for ratification without further review. Depending on the time required for review by the governmental agencies, Mr. Buck estimated that the agreements would be submitted for ratification at some time between July 15, and August 1, 1978.

It was pointed out that ownership and lease data had been furnished to all Working Interest Owners by Shell's Land Department with the request that Shell be notified of any errors. As there are approximately 1500 royalty interests and 74 working interests, considerable time and effort would be required to correct data after the first printing of the agreements. Therefore, all parties are urged to review the data submitted as soon as possible and to advise Shell of any changes or corrections.

Mr. Buck noted that a unit of this size would require considerable preliminary planning and design work in order that injection operations could be commenced as early as possible after the effective date of unitization. As part of this preliminary work, Shell is proceeding to negotiate a water purchase agreement with the City of Hobbs, to purchase key rights-of-way and plant sites, and to design long delivery equipment and facilities. Shell will advise the Working Interest Owners from time to time of the progress of this work and the status of sign-up of working and royalty interests.

There being no further business, the meeting was adjourned.

Yours very truly

W E Buck

W. E. Buck

OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING CALLED BY THE OIL CONSERVATION COMMISSION FOR THE PURPOSE OF CONSIDERING:

Case No. 6653
Order No. _____

APPLICATION OF SHELL OIL COMPANY FOR A PRESSURE MAINTENANCE PROJECT, LEA COUNTY, NEW MEXICO.

Final Draft
by
Owen Lopez

ORDER OF THE COMMISSION

By The Commission:

This case and cause of action came on for hearing at 9 a.m. on October 3, 1979, at Santa Fe, New Mexico, before Commissioners Joe D. Ramey and Emory C. Arnold.

NOW, on this ____ day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record, and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law and the Commission has jurisdiction of this case and cause of action and the subject matter hereof;

(2) That by Commission Order No. R-____ dated November __, 1979, statutory unitization was approved for the North Hobbs Grayburg-San Andres Unit Area, Lea County, New Mexico;

(3) That the applicant herein, Shell Oil Company, seeks authority to institute a pressure maintenance project for the aforesaid North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through 70 wells at orthodox and unorthodox locations, 52 of which are producing wells which will be converted to injection wells in 1980;

(4) That during 1980 for the pressure maintenance project, applicant proposes to drill five producing wells and 18 injection wells at orthodox and unorthodox locations as specified below:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

Township 18 South, Range 38 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
18	242	N	1220' FSL & 2540' FWL
19	142	M	1220' FSL & 100' FWL
19	242	N	1220' FSL & 2540' FWL
28	242	N	990' FSL & 1330' FWL
29	112	D	330' FNL & 1000' FWL
29	142	M	1220' FSL & 100' FWL
29	242	N	1220' FSL & 1650' FWL
30	222	F	2540' FNL & 1420' FWL
31	432	I	2540' FSL & 1220' FEL
31	442	P	100' FSL & 1220' FEL
32	122	E	2310' FNL & 1220' FWL
32	242	N	100' FSL & 1420' FWL
32	412	A	1220' FNL & 1220' FEL
32	432	I	2310' FSL & 1310' FEL
32	442	P	100' FSL & 1220' FEL
33	112	D	1220' FNL & 100' FWL
33	212	C	1220' FNL & 1440' FWL
33	232	K	1420' FSL & 1420' FWL
33	242	N	100' FSL & 1420' FWL
33	332	J	2540' FSL & 2540' FEL
33	342	O	100' FSL & 1420' FEL

(5) That all of the wells referred to in Findings Nos. (3) and (4) above, being the 70 injection wells and the five producing wells, together with wells currently completed in the Grayburg San-Andres formation, will provide a thorough and efficient sweep of hydrocarbons throughout the unit area, and will result in the recovery of otherwise unrecoverable oil and gas, thereby preventing waste;

(6) That the above-described injection and producing wells, some of which will be at unorthodox locations along the unit

boundary in accordance with lease-line agreements with operators of offsetting lands, will not impair but will protect correlative rights;

(7) That the applicant further seeks the designation of a unit area for a pressure maintenance project for the North Hobbs Grayburg-San Andres Unit, and for the promulgation of special rules and regulations governing said project, including special allowable provisions, which is in the interest of conservation and should be approved, subject to certain provisions set forth herein;

(8) That the unit area should consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area as described in Order R_____;

(9) That the unit area allowable should be equal to the sum of the basic unit area allowable plus the water injection credit allowable as hereinafter defined;

(10) That the basic unit area allowable should be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the North Hobbs Grayburg San-Andres Unit Area;

(11) That the water injection credit allowable should be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Unit Area Allowable Reservoir Voidage}} - 1 \right] \times \text{Basic Unit Area Allowable}$$

and should be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached to this Order and incorporated by reference;

(12) That a weighted average unit area reservoir pressure should be determined prior to commencement of injection of water into the reservoir and at least annually thereafter;

(13) That the unit area allowable should be permitted to be produced from the wells within the unit area in any proportion;

(14) That the Division Director should have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the boundary of the

North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application;

(15) Application for approval of additional wells to be used for injection should be filed in accordance with Rule 701 of the Division Rules and Regulations and may be approved administratively by the Division Director without notice and hearing.

(16) That each newly drilled injection or producing well should be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and production casing run to total depth (approximately 4500 feet), or

c. Exceptions to the aforesaid casing programs may be granted by administrative approval of the Division Director;

All casing strings should be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing;

(17) That injection should be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing should be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well should be filled with an inert fluid and a surface pressure gauge or approved leak detection device should be attached to the annulus;

(18) That the injection wells or system should be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata;

(19) That all wells within the unit area should be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production;

(20) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which have previously been plugged and abandoned in a manner which may permit waters injected into the Grayburg-San Andres formation to escape into other formations, including the Salado formation and the shallow fresh water-bearing formations unless remedial action is taken on said wells prior to injection in their near vicinity;

(21) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which penetrate the Hobbs Grayburg-San Andres Pool and are completed in deeper pay zones, but which are cased and cemented in such a manner as may permit the escape of waters injected into the Grayburg-San Andres formation into other formations as described in the preceding paragraph;

(22) That those wells referred to in Findings No. (20) and (21) above which are inadequately plugged and abandoned or are inadequately cased and cemented, or are suspected of being so, include, but are not necessarily limited to, the wells listed in Exhibit "C" attached hereto and incorporated by reference;

(23) That no injection at greater than hydrostatic pressure should be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

IT IS THEREFORE ORDERED:

(1) That the applicant, Shell Oil Company, is hereby authorized to institute and operate a pressure maintenance project in the North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through certain wells which will be administratively approved for water injection by the Division Director;

(2) That said project shall be designated the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project;

(3) That the following orthodox and unorthodox locations are hereby approved for the drilling of new injection and producing wells:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

Township 18 South, Range 38 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location

33	332	J	2540' FSL & 2540' FEL
33	342	O	100' FSL & 1420' FEL

(4) That Special Rules and Regulations governing the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project are hereby promulgated as follows:

SPECIAL RULES AND REGULATIONS
FOR THE
NORTH HOBBS GRAYBURG-SAN ANDRES UNIT
PRESSURE MAINTENANCE PROJECT

RULE 1. That the unit area shall consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area.

RULE 2. The unit area shall receive a unit area allowable, and said unit area allowable shall be the sum of the basic unit area allowable plus the water injection credit allowable.

RULE 3. The basic unit area allowable shall be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the unit area.

RULE 4. The water injection credit allowable shall be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Unit Area Allowable Reservoir Voidage}} - 1 \right] = \text{Basic Unit Area Allowable}$$

The water injection credit allowable shall be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached hereto and incorporated by reference. In no event shall the water injection credit allowable be less than zero. Therefore, negative numbers derived from the application of the above formula shall be ignored.

RULE 5. A weighted average unit area reservoir pressure shall be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

RULE 6. The unit area allowable may be produced from the wells within the unit area in any proportion.

RULE 7. The Division Director shall have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

RULE 8. Application for approval of additional wells to be used for injection shall be filed in accordance with Rule 701 of the Division Rules and Regulations and may be approved administratively by the Division Director without notice and hearing.

RULE 9. Each newly drilled injection or producing well shall be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and production casing run to total depth (approximately 4500 feet), or

c. Exceptions to the aforesaid casing programs shall be granted by administrative approval of the Division Director.

All casing strings shall be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing.

RULE 10. Injection shall be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing shall be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well shall be filled with an inert fluid and a surface gauge or approved leak detection device shall be attached to the annulus.

RULE 11. The injection wells or system shall be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata.

RULE 12. All wells within the unit area shall be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

RULE 13. The Unit Operator shall immediately notify the Supervisor of the Hobbs District Office of the Division of the failure of the tubing or packer in any of the injection wells, the leakage of water or oil from or around any producing well, the leakage of water or oil from or around any plugged and abandoned well within the unit area, or any other evidence of fluid migration from the injection zone, and shall take such timely steps as may be necessary or required to correct such failure or leakage.

RULE 14. Prior to placing any well on injection, a cement bond log shall be run on said well; also at any time the tubing is pulled from any producing well in the unit area, a cement bond log shall be run on said well. Copies of all cement bond logs shall be sent to the Hobbs District Office of the Division. If any well is found to have an inadequate casing-cement bond, such measures as may be necessary to prevent leakage or migration of fluids within the wellbore shall be taken before placing the well on injection or restoring it to production.

Where multiple casing strings prevent technical interpretation of bonding, the cement bond shall be deemed adequate when the log shows acoustic coupling with the formation. In addition, radioactive tracer surveys, or any other acceptable survey presently available or developed in the future, that show no fluid migration out of the Grayburg-San Andres formation shall be acceptable evidence of bonding.

RULE 15. Each month the Unit Operator shall submit to the Division a Pressure Maintenance Project Operator's Report, on a form prescribed by the Division, outlining thereon the data required and requesting a unit area allowable.

RULE 16. The Division shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for the unit area for the next succeeding month in accordance with these rules. The allowable so calculated shall be assigned to the unit area and may be produced from the wells in the unit area in any proportion.

IT IS FURTHER ORDERED:

(1) That no injection at greater than hydrostatic pressure shall be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well, or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

(2) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove described.

NORTH HOBBS GRAYBURG-SAN ANDRES UNIT AREA
PRESSURE MAINTENANCE PROJECT

HOBBS GRAYBURG-SAN ANDRES POOL

LEA COUNTY, NEW MEXICO

Water Injection Credit Allowable Calculation Data

$$\text{Water Injection Credit Allowable} = \left[\frac{W_i - W_p}{BUAA\left(B_o + \frac{R_p - R_s}{1{,}000} B_g \right)} - 1 \right] \times BUAA$$

W_i = Average daily water injection during previous month, barrels per day unit area

W_p = Average daily water produced during previous month, barrels per day unit area

BUAA = Basic unit area allowable, 80 bopd X _____ (number of developed 40-acre proration unit in unit area)

P = Weighted average unit area reservoir pressure, psig, from _____, 19___, survey data

B_o = Oil formation volume factor, reservoir barrels per stock tank barrel (Exhibit B)

R_p = Producing gas-oil ratio, cubic feet per barrel for previous month

R_s = Solution gas-oil ratio, cubic feet per barrel (Exhibit B)

B_g = Gas formation volume factor, reservoir barrels per Mcf (Exhibit B)

Water injection credit allowable for _____, 19___, = _____ barrels of oil per day

OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING CALLED BY THE OIL CONSERVATION COMMISSION FOR THE PURPOSE OF CONSIDERING:

Case No. 6653
Order No. ___

APPLICATION OF SHELL OIL COMPANY FOR A PRESSURE MAINTENANCE PROJECT, LEA COUNTY, NEW MEXICO.

First draft
by
Owen Lopez

ORDER OF THE COMMISSION

By The Commission:

This cause came on for hearing at 9 a.m. on October 3, 1979, at Santa Fe, New Mexico, before Commissioners Joe D. Ramey and Emory C. Arnold.

NOW, on this ____ day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record, and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law and the Commission has jurisdiction of this case and cause of action and the subject matter thereof;

(2) That by Commission Order No. R-____ dated November __, 1979, statutory unitization was approved for the North Hobbs Grayburg-San Andres Unit Area, Lea County, New Mexico;

(3) That the applicant herein, Shell Oil Company, seeks authority to institute a pressure maintenance project for the aforesaid North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through 70 wells at orthodox and unorthodox location, 52 of which are producing wells which will be converted to injection wells in 1980;

(4) That during 1980 for the pressure maintenance project, applicant proposes to drill five producing wells and 18 injection wells at orthodox and unorthodox locations as specified below:

(5) That all of the wells referred to in Findings Nos. (3) and (4) above, being the 70 injection wells and the five producing wells, together with wells currently completed in the Grayburg San-Andres formation, will provide a thorough and efficient sweep of hydrocarbons throughout the unit area, and will result in the recovery of otherwise unrecoverable oil and gas, thereby preventing waste;

(6) That the above-described injection and producing wells, some of which will be at unorthodox locations along the unit boundary in accordance with lease-line agreements with operators of offsetting lands, will not impair but will protect correlative rights;

(7) That the applicant further seeks the designation of a project area for the pressure maintenance project for the North Hobbs Grayburg-San Andres Unit Area, and for the promulgation of special rules and regulations governing said project, including special allowable provisions, is in the interest of conservation and should be approved, subject to certain provisions set forth herein;

(8) That the project area should consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area as described in Order R_____;

(9) That the project area allowable should be equal to the sum of the basic project area allowable plus the water injection credit allowable as hereinafter defined;

(10) That the basic project area allowable should be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the North Hobbs Grayburg San-Andres Unit Area;

(11) That the water injection credit allowable should be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1\right] \times \text{Basic Project Area Allowable}$$

and should be calculated in accordance with this formula using the data set forth shown on Exhibits "A" and "B" attached to this Order and by incorporation or reference;

(12) That a weighted average project area reservoir pressure should be determined prior to commencement of injection of water into the reservoir and at least annually thereafter;

(13) That the project area allowable should be allowed to be produced from the wells within the project area in any proportion;

(14) That the Division Director should have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the area boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application;

(15) That no well should be placed on water injection in the project area unless the Division Director has approved such well for injection. Applications for injection approval shall be filed in accordance with Rule 701 of the Division Rules and Regulations;

(16) That each newly drilled injection or producing well should be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

Exceptions to the above assigned procedures may be approved by the

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and "production" casing run to total depth (approximately 4500 feet), or

c. ~~Other procedures may be used after receiving administrative approval of~~ the Director of the Oil Conservation Division;

All casing strings should be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the "production" string may be cemented back into the base of the intermediate casing;

(17) That injection should be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing should be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well should be filled with an inert fluid and a surface pressure gauge or approved leak detection device should be attached to the annulus;

(18) That the injection wells or system should be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata;

(19) That all wells within the project area should be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production;

(20) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which have previously been plugged and abandoned in a manner which may permit waters injected into the Grayburg-San Andres formation to escape into other formations, including the Salado formation and the shallow fresh water-bearing formations unless remedial action is taken on said wells prior to injection in their near vicinity;

(21) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which penetrate the Hobbs Grayburg-San Andres Pool and are completed in deeper pay zones, but which are cased and cemented in such a manner as may permit the escape of waters injected into the Grayburg-San Andres formation into other formations as described in the preceding paragraph;

(22) That those wells referred to in Findings No. (20) and (21) above which are inadequately plugged and abandoned or are inadequately cased and cemented, or are suspected of being so, include, but are not necessarily limited to, the wells listed in Exhibit "C" attached hereto and incorporated by reference;

(23) That no injection at greater than hydrostatic pressure should be made into the Grayburg-San Andres formation in any well

in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

IT IS THEREFORE ORDERED:

(1) That the applicant, Shell Oil Company, is hereby authorized to institute and operate a pressure maintenance project in the North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through certain wells which will be administratively approved for water injection by the Division Director;

(2) That said project shall be designated the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project;

(3) That the following orthodox and unorthodox locations are hereby approved for the drilling of new injection and producing wells:

Sec.	Unit Letter	Unit Well #	Location
24	N	24-242	1220' FSL & 2540' FWL
29	M	29-142	1220' FSL & 100' FWL
33	D	33-112	1220' FNL & 100' FWL

33	O	33-342	100' FSL & 1420' FEL
28	N	28-242	990' FSL & 1330' FWL

all in Township 18 South, Ranges 37 and 38 East, NMPM, Lea County, New Mexico;

(4) That Special Rules and Regulations governing the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project are hereby promulgated as follows:

SPECIAL RULES AND REGULATIONS
FOR THE
NORTH HOBBS GRAYBURG-SAN ANDRES UNIT
PRESSURE MAINTENANCE PROJECT

RULE 1. That the project area shall consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area.

RULE 2. The project area shall receive a project area allowable, and said project area allowable shall be the sum of the basic project area allowable plus the water injection credit allowable.

RULE 3. The basic project area allowable shall be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the project area.

RULE 4. The water injection credit allowable shall be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1\right] \times \text{Basic Project Area Allowable}$$

The water injection credit allowable shall be calculated in accordance with this formula using the data shown on Exhibits "A" and "B" attached hereto and incorporated by reference.
In no event shall the water injection credit allowable be less than zero. Therefore, negative numbers derived from the application of the above formula shall be ignored.

RULE 5. A weighted average project area reservoir pressure shall be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

RULE 6. The project area allowable may be produced from the wells within the project area in any proportion.

RULE 7. The Division Director shall have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the area boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

RULE 8. No well shall be placed on water injection in the project area unless the Division Director has approved such well for injection. Applications for injection approval shall be filed in accordance with Rule 701 of the Division Rules and Regulations.

RULE 9. Each newly drilled injection or producing well shall be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 ft.) and "production" casing run to total depth (approximately 4500 feet), or

c. Other procedures may be used after receiving administrative approval of the Director of the Oil Conservation Division.

All casing strings shall be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the "production" string may be cemented back into the base of the intermediate casing.

RULE 10. Injection shall be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing shall be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well shall be filled with an inert fluid and a surface gauge or approved leak detection device shall be attached to the annulus.

RULE 11. The injection wells or system shall be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata.

RULE 12. All wells within the project area shall be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

RULE 13. The Unit Operator shall immediately notify the Supervisor of the Hobbs District Office of the Division of the failure of the tubing or packer in any of the injection wells, the leakage of water or oil from or around any producing well, the leakage of water or oil from or around any plugged and abandoned well within the project area, or any other evidence of fluid migration from the injection zone, and shall take such timely steps as may be necessary or required to correct such failure or leakage.

RULE 14. Prior to placing any well on injection, other than a newly drilled well drilled under provision of Rule 9, a cement

bond log shall be run on said well. Copies of all cement bond logs shall be sent to the Hobbs District Office of the Division. If any well is found to have an inadequate casing-cement bond, such measures as may be necessary to prevent leakage or migration of fluids from the Grayburg-San Andres formation shall be taken before placing the well on injection.

Where multiple casing strings prevent technical interpretation of bonding, the cement bond shall be deemed adequate when the log shows acoustic coupling with the formation. In addition, radioactive tracer surveys, or any other acceptable survey presently available or developed in the future, that show no fluid migration out of the Grayburg-San Andres formation shall be acceptable evidence of bonding.

RULE 15. Each month the Unit Operator shall submit to the Division a Pressure Maintenance Project Operator's Report, on a form prescribed by the Division, outlining thereon the data required and requesting allowables for each of the several wells in the project area as well as the total project area allowable.

RULE 16. The Division shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for the wells in the project area for the next succeeding month in accordance with these rules. The sum of the allowables so calculated shall be assigned to the project area and may be produced from the wells in the project area in any proportion.

IT IS FURTHER ORDERED:

(1) That no injection at greater than hydrostatic pressure shall be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well, or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

(2) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove described.

STATE OF NEW MEXICO OIL
CONSERVATION DIVISION

JOE D. RAMEY
Director

STATE OF NEW MEXICO
ENERGY AND MINERALS DEPARTMENT
OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING CALLED BY THE OIL CONSERVATION COMMISSION FOR THE PURPOSE OF CONSIDERING:

Case No. 6652
Order No. R _____

APPLICATION OF SHELL OIL COMPANY FOR STATUTORY UNITIZATION, LEA COUNTY, NEW MEXICO.

Final Draft
by
Ocie Lopez

ORDER OF THE COMMISSION

By The Commission:

This case and cause of action came on for hearing at 9:00 a.m. on October 3, 1979, at Santa Fe, New Mexico, before Commissioner Joe D. Ramey and Emory C. Arnold.

NOW, on this _____ day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law, the Commission has jurisdiction of this case and cause of action and the subject matter hereof;

(2) That the applicant, Shell Oil Company, seeks the statutory unitization, pursuant to the "Statutory Unitization Act," Sections 70-7-1 through 70-7-21, NMSA 1978, of 10,649.53 acres, more or less, being a portion of the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, said portion to be known as the North Hobbs Grayburg-San Andres Unit Area. The applicant also seeks approval of the Unit Agreement and the Unit Operating Agreement which were submitted in evidence as applicant's Exhibits 3 and 4 and are hereby incorporated by reference;

(3) That the proposed unit area should be designated the North Hobbs Grayburg-San Andres Unit Area; that the vertical limits of said unit area should be the subsurface formation commonly known as the Grayburg-San Andres formation of Permian

Age found in the interval between the stratigraphic depth of 3698 feet (51 feet sub-sea) and the stratigraphic depth of 4500 feet (853 feet sub-sea) beneath the surface as measured on the Borehole Compensated Sonic-Gamma Ray Log run in Shell Oil Company's State A-7 well on July 9, 1969. This well is located 1930 feet from the north line and 660 feet from the east line of Section 32-T18S-R38E, NMPM, Lea County, New Mexico. The upper limit of the unitized formation is the top of the Grayburg-San Andres interval. The lower limit of the unitized formation is 4500 feet beneath the surface. The vertical limits of the unit area should include all the subsurface interval throughout the unit area correlative to the identified interval described above. The unit area should be comprised of the following described lands:

TOWNSHIP 18 SOUTH, RANGE 37 EAST, NMPM
Section 13 SE/4 and W/2
Section 14 All
Section 23 All
Section 24 All
Section 25 All
Section 26 E/2 NE/4 and NW/4 NE/4
Section 36 E/2 NW/4 and E/2

TOWNSHIP 18 SOUTH, RANGE 38 EAST, NMPM
Section 17 S/2 NW/4 and SW/4
Section 18 NE/4 and S/2
Section 19 All
Section 20 All
Section 21 SW/4 and S/2 SE/4 and NW/4 SE/4
Section 27 All
Section 28 All
Section 29 All
Section 30 All
Section 31 All
Section 32 All
Section 33 W/2 and NE/4 and W/2 SE/4 and NE/4 SE/4
Section 34 E/2 NW/4 and E/2

(4) That the portion of the Hobbs Grayburg-San Andres Pool proposed to be included in the aforesaid North Hobbs Grayburg-San Andres Unit Area has been reasonably defined by development;

(5) That the applicant proposes to institute a pressure maintenance project for the secondary recovery of oil, gas, gaseous substances, sulfur contained in gas, condensate, distillate and all associated and constituent liquid or liquifiable hydrocarbons within and to be produced from the proposed unit area;

(6) That the unitized management, operation and further development of the North Hobbs Grayburg-San Andres Unit Area, as proposed, is reasonably necessary to effectively carry on pressure maintenance and secondary recovery operations to substantially increase the ultimate recovery of oil and gas from the unitized portion of the pool;

(7) That the proposed unitized method of operation as applied to the North Hobbs Grayburg-San Andres Unit Area is feasible and will result with reasonable probability in the increased recovery of substantially more oil and gas from the unitized portion of the pool than would otherwise be recovered without unitization;

(8) That the estimated additional investment costs of the proposed supplemental recovery operations are $33 million which include an estimated initial capital investment of $27 million forecast to be spent in 1980 and 1981 and an additional $6 million forecast to be spent during the eight years subsequent to 1981 for construction of facilities necessary to handle the anticipated increasing volumes of oil and water. The evidence was undisputed that the supplemental recovery operations would result in the additional recovery of approximately 55 million barrels of oil. The resultant net profitability on a present value basis with a ten percent discount, before federal income tax, would be $124 million or a 421% profit. Therefore, the estimated additional costs of the proposed operations will not exceed the estimated value of the additional oil and gas plus a reasonable profit;

(9) That unitization and the adoption of the proposed unitized method of operation will benefit the working interest owners and royalty owners of the oil and gas rights within the North Hobbs Grayburg-San Andres Unit Area;

(10) That the applicant, the designated Unit Operator pursuant to the Unit Agreement and the Unit Operating Agreement, has made a good faith effort to secure voluntary unitization within the North Hobbs Grayburg-San Andres Unit Area. Nonetheless, Exxon Company, U.S.A. has declined to voluntarily join the unit and has opposed the application of Shell Oil Company on the basis that the participation formula contained in the Unit Agreement fails to allocate the produced and saved unitized hydrocarbons to the separately owned tracts within the unit area on a fair, reasonable and equitable basis;

(11) That the Technical Report introduced as applicant's Exhibit 16 and incorporated herein by reference, was prepared by a Technical Committee comprised of engineering representatives of all working interest owners involved in the proposed unit. The Technical Committee met over a three and a half year period from September, 1973, to March, 1977. Exxon Company, U.S.A. was represented at each of these meetings and its representative

accepted the values assigned the unitization parameters contained in the Technical Report as well as the use of the cutoff date of January 1, 1975 for well logging data and well test information and the remaining primary oil reserve estimates as of January 1, 1977. The values assigned the parameters are based on sound engineering principles and data. Further, there exists a sound and rational basis for the adoption of the cutoff dates so that a foundation could be laid for the fair and precise allocation of remaining primary and secondary reserves to each of the tracts within the proposed unit area. The objection of Exxon Company, U.S.A. to the application is in large part based on Exxon's contention that the production performance of its Tract No. 47 since January 1, 1977, is not in conformity with the projections made by the computer simulator model used in the Technical Report. Evidence was presented using the oil cutoff reserve relationship with the simulator output for Tract 47 that showed the May 1979 reserves as estimated by the simulation and the May 1979 oil cut for Tract 47 are in agreement, confirming that the simulation predictions are valid, and that the oil reserve estimates for Tract 47 are in order. Therefore, the evidence of Exxon Company, U.S.A. fails to refute the contention of the applicant that the allocations of the produced and saved hydrocarbons as set forth in the Technical Report and Unit Agreement to the separately owned tracts within the unit area are based on fair, reasonable and equitable considerations and calculations;

(12) That a Working Interest Owner Committee comprised of all working interest owners involved in the proposed unit area, including Exxon Company, U.S.A., accepted the Technical Report as a basis for the development of a participation formula, as evidenced by the minutes of the Working Interest Owners Committee meetings of May 26, 1977 and July 12, 1977 as shown in Exhibit 20 and incorporated by reference into this Order. The participation formula finally adopted by the Working Interest Owners Committee provides for participation in three separate phases during the anticipated life of the pressure maintenance project and secondary recovery operations. This participation formula was approved by working interest owners representing 90% of the mineral ownership within the unit area. This participation formula allows each working interest owner within the proposed unit area to recover his allocated remaining primary reserves first before any working interest owner commences to recover his allocated secondary reserves. The formula further provides that the actual cost of the expenditures required by the pressure maintenance project and secondary recovery operations will be ultimately borne by each working interest owner in proportion to his share of his allocated remaining secondary reserves. Therefore, the participation formula contained in the Unit Agreement allocates the costs to be incurred and the benefits to be derived from the supplemental recovery operations to the separately owned tracts within the unit area on a fair, reasonable and equitable basis;

(13) That the granting of the application in this case shall have no adverse effect upon other portions of the Hobbs Grayburg-San Andres Pool;

(14) That applicant's Exhibits Nos. 3 and 4 in this cause, being the Unit Agreement and the Unit Operating Agreement, respectively, should be incorporated by reference into this Order;

(15) That the statutory unitization of the North Hobbs Grayburg-San Andres Unit Area is in conformity with the above findings, and will prevent waste and protect the correlative rights of all owners of interest within the proposed unit area, and should be approved.

IT IS THEREFORE ORDERED:

(1) That the North Hobbs Grayburg-San Andres Unit Area, covering 10,649.53 acres, more or less, in the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, is hereby approved for statutory unitization pursuant to the Statutory Unitization Act, Sections 70-7-1 through 70-7-21 NMSA 1978;

(2) That the lands included within the North Hobbs Grayburg-San Andres Unit Area shall be comprised of:

TOWNSHIP 18 SOUTH, RANGE 37 EAST, NMPM
Section 13 SE/4 and W/2
Section 14 All
Section 23 All
Section 24 All
Section 25 All
Section 26 E/2 NE/4 and NW/4 NE/4
Section 36 E/2 NW/4 and E/2

TOWNSHIP 18 SOUTH, RANGE 38 EAST, NMPM
Section 17 S/2 NW/4 and SW/4
Section 18 NE/4 and S/2
Section 19 All
Section 20 All
Section 21 SW/4 and S/2 SE/4 and NW/4 SE/4
Section 27 All
Section 28 All
Section 29 All
Section 30 All
Section 31 All
Section 32 All
Section 33 W/2 and NE/4 and W/2 SE/4 and NE/4 SE/4
Section 34 E/2 NW/4 and E/2

and that the above described lands shall be designated as the North Hobbs Grayburg-San Andres Unit Area;

(3) That the vertical limits of the North Hobbs Grayburg-San Andres Unit Area shall be the Grayburg-San Andres formation of Permian Age found in the interval between the stratigraphic depth of 3698 feet (51 feet sub-sea) and the stratigraphic depth of 4500 feet (853 feet sub-sea) beneath the surface as measured on the Borehole Compensated Sonic-Gamma Ray Log run in Shell Oil Company's State A-7 well on July 9, 1969. This well is located 1930 feet from the north line and 660 feet from the east line of Section 32-T18S-R38E, NMPM, Lea County, New Mexico. The upper limit of the unitized formation shall be the top of the Grayburg-San Andres interval. The lower limit of the unitized formation shall be 4500 feet beneath the surface. The vertical limits of said unit area shall include all the subsurface interval throughout the unit area correlative to the identified interval described above;

(4) That the applicant contemplates instituting a pressure maintenance project for the secondary recovery of oil, gas, gaseous substances, sulfur contained in gas, condensate, distillate and all associated and constituent liquid or liquified hydrocarbons within and produced from the unit area;

(5) That the North Hobbs Grayburg-San Andres Unit Agreement and the North Hobbs Grayburg-San Andres Unit Operating Agreement provide for unitization and unit operation of the North Hobbs Grayburg-San Andres Unit Area upon terms and conditions that are fair, reasonable and equitable and which include:

(a) an allocation to the separately owned tracts in the unit area of all oil and gas that is produced from the unit area and which is saved, being the production that is not used in the conduct of unit operations or not unavoidably lost;

(b) a provision for the credits and charges to be made in the adjustment among the owners in the unit area for their respective investments in wells, tanks, pumps, machinery, materials and equipment contributed to the unit operations;

(c) a provision governing how the costs of unit operations including capital investments shall be determined and charged to the separately owned tracts and how said costs shall be paid including a provision providing when, how, and by whom the unit production allocated to an owner who does not pay his share of the costs of unit operations shall be charged to such owner, or the interest of such owner, and how his interest may be sold and the proceeds applied to the payment of his costs;

(d) a provision for carrying any working interest owner on a limited, carried or net-profits basis, payable out of production, upon such terms and conditions which are just and

reasonable, and which allow an appropriate charge for interest for such service payable out of production, upon such terms and conditions determined by the Division Director to be just and reasonable, and allowing an appropriate charge for interest for such service payable out of such owner's share of production, providing that any nonconsenting working interest owner being so carried shall be deemed to have relinquished to the Unit Operator all of his operating rights and working interests in an to the unit until his share of the costs, service charge and interest are repaid to the Unit Operator;

(e) a provision designating the Unit Operator and providing for the supervision and conduct of the unit operations, including the selection, removal or substitution of an operator from among the working interest owners to conduct the unit operations;

(f) a provision for a voting procedure for the decision of matters to be decided by the working interest owners in respect to which each working interest owner shall have a voting interest equal to his unit participation; and

(g) the time when the unit operation shall commence and the manner in which, and the circumstances under which, the operations shall terminate and for the settlement of accounts upon such termination;

and therefore the North Hobbs Grayburg-San Andres Unit Agreement and the North Hobbs Grayburg-San Andres Unit Operating Agreement are approved, adopted and incorporated by reference into this Order subject to the appropriate ratification provisions of Section 70-7-8, NMSA 1978, being complied with;

(6) That when the persons owning the required percentage of interest in the unit area have approved or ratified the Unit Agreement and the Unit Operating Agreement, the interests of all persons within the unit area are unitized whether or not such persons have approved the Unit Agreement or the Unit Operating Agreement in writing;

(7) That the applicant as Unit Operator shall notify in writing the Division Director of any removal or substitution of said Unit Operator by any other working interest owner within the unit area;

(8) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.

OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
COMMISSION FOR THE PURPOSE OF
CONSIDERING:

Case No. 6652
Order No. R _____

First Draft
by
Buren Lopez

APPLICATION OF SHELL OIL
COMPANY FOR STATUTORY
UNITIZATION, LEA COUNTY,
NEW MEXICO.

ORDER OF THE DIVISION

By The Commission:

This case and cause of action came on for hearing at 9:00 a.m. on October 3, 1979, at Santa Fe, New Mexico, before Commissioner Joe D. Ramey and E. C. Arnold.

NOW, on this _____ day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law, the Commission has jurisdiction of this case and cause of action and the subject matter hereof;

(2) That the applicant, Shell Oil Company, seeks the statutory unitization, pursuant to the "Statutory Unitization Act," Sections 70-7-1 through 70-7-21, NMSA 1978, of 10,649.53 acres, more or less, being a portion of the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, said portion to be known as the North Hobbs Grayburg-San Andres ~~Pool~~ Unit Area. The applicant also seeks approval of the Unit Agreement and the Unit Operating Agreement which were submitted in evidence.

(3) That the proposed unit area is designated the North Hobbs Grayburg-San Andres Unit Area; that the vertical limits of said unit area is the subsurface formation commonly known as the Grayburg-San Andres formation of Permian Age found in the

interval between the stratigraphic depth of 3698 feet (51 feet sub-sea) and the depth of 4500 feet (853 feet sub-sea) beneath the surface as measured on the Borehole Compensated Sonic-Gamma Ray Log run in Shell Oil Company's State A-7 well on July 9, 1969. This well is located 1930 feet from the north line and 660 feet from the east line of Section 32-T18S-R38E, NMPM, Lea County, New Mexico. The upper limit of the unitized formation is the top of the Grayburg-San Andres interval. The lower limit of the unitized formation is 4500 feet beneath the surface. The vertical limits of the unit area is to include all the subsurface interval throughout the unit area correlative to the identified interval described above. The unit area is comprised of the following described lands:

TOWNSHIP 18 SOUTH, RANGE 37 EAST, NMPM
Section 13 SE/4 and W/2
Section 14 All
Section 23 All
Section 24 All
Section 25 All
Section 26 E/2 NE/4 and NW/4 NE/4
Section 36 E/2 NW/4 and E/2

TOWNSHIP 18 SOUTH, RANGE 38 EAST, NMPM
Section 17 S/2 NW/4 and SW/4
Section 18 NE/4 and S/2
Section 19 All
Section 20 All
Section 21 SW/4 and S/2 SE/4 and NW/4 SE/4
Section 27 All
Section 28 All
Section 29 All
Section 30 All
Section 31 All
Section 32 All
Section 33 W/2 and NE/4 and W/2 SE/4 and NE/4 SE/4
Section 34 E/2 NW/4 and E/2

(4) That the portion of the Hobbs Grayburg-San Andres Pool proposed to be included in the aforesaid North Hobbs Grayburg-San Andres Unit Area has been reasonably defined by development;

(5) That the applicant proposes to institute a pressure maintenance project for the secondary recovery of oil, gas, gaseous substances, sulfur contained in gas, condensate, distillate and all associated and constituent liquid or liquifiable hydrocarbons within and produced from the proposed unit area;

(6) That the unitized management, operation and further development of the North Hobbs Grayburg-San Andres ~~Pool~~ Unit Area, as proposed, is reasonably necessary in order to effectively carry on pressure maintenance and secondary recovery operations to substantially increase the ultimate recovery of oil and gas from the unitized portion of the pool;

(7) That the proposed unitized method of operation as applied to the North Hobbs Grayburg-San Andres Unit Area is feasible, will prevent waste, and will result with reasonable probability in the increased recovery of substantially more oil and gas from the unitized portion of the pool than would otherwise be recovered without unitization;

need some dollars and cents and barrels

(8) That the estimated additional costs of the proposed operations will not exceed the estimated value of the additional oil and gas to be recovered plus a reasonable profit;

Notification & change of Unit Operator

(9) That unitization and the adoption of the proposed unitized method of operation will benefit the working interest owners and royalty owners of the oil and gas rights within the North Hobbs Grayburg-San Andres Unit Area;

Need findings & Exhibits to be admitted into this Commission

(10) That the applicant, the designated Unit Operator pursuant to the Unit Agreement and the Unit Operating Agreement, has made a good faith effort to secure voluntary unitization within the North Hobbs Grayburg San Andres Unit Area;

(11) That the participation formula contained in the Unit Agreement allocates the produced and saved unitized hydrocarbons to the separately owned tracts within the unit area on a fair, reasonable and equitable basis;

(12) That the granting of the application in this case shall have no adverse effect upon other portions of the Hobbs Grayburg-San Andres Pool~~, and shall protect the correlative rights of all owners of interest within said pool;~~

(13) That applicant's Exhibits Nos. 3 and 4 in this cause, being the Unit Agreement and the Unit Operating Agreement, respectively, should be incorporated by reference into this Order.

(14) That the Statutory Unitization of the North Hobbs Grayburg-San Andres Unit Area in conformance with the above findings, will prevent waste and protect correlative rights and should be approved.

of all owners of interest in the pool

IT IS THEREFORE ORDERED:

(1) That the North Hobbs Grayburg-San Andrews Unit Area, ent, covering 10,649.53 acres, more or less, in the Hobbs Grayburg-San Andrews Pool, Lea County, New Mexico, is hereby approved for statutory unitization pursuant to the Statutory Unitization Act, Sections 70-7-1 through 70-7-21 NMSA 1978;

(2) That the lands included within the North Hobbs Grayburg-San Andres Unit Area shall be comprised of:

TOWNSHIP 18 SOUTH, RANGE 37 EAST, NMPM
Section 13 SE/4 and W/2
Section 14 All
Section 23 All
Section 24 All
Section 25 All
Section 26 E/2 NE/4 and NW/4 NE/4
Section 36 E/2 NW/4 and E/2

TOWNSHIP 18 SOUTH, RANGE 38 EAST, NMPM
Section 17 S/2 NW/4 and SW/4
Section 18 NE/4 and S/2
Section 19 All
Section 20 All
Section 21 SW/4 and S/2 SE/4 and NW/4 SE/4
Section 27 All
Section 28 All
Section 29 All
Section 30 All
Section 31 All
Section 32 All
Section 33 W/2 and NE/4 and W/2 SE/4 and NE/4 SE/4
Section 34 E/2 NW/4 and E/2

and that the above described lands shall be designated as the North Hobbs Grayburg-San Andres Unit Area;

(3) That the vertical limits of the North Hobbs Grayburg-San Andres Unit Area shall be the Grayburg-San Andres formation of Permian Age found in the interval between the stratigraphic depth of 3698 feet (51 feet sub-sea) and the depth of 4500 feet (853 feet sub-sea) beneath the surface as measured on the Borehole Compensated Sonic-Gamma Ray Log run in Shell Oil Company's State A-7 well on July 9, 1969. This well is located 1930 feet from the north line and 660 feet from the east line of Section 32-T18S-R38E, NMPM, Lea County, New Mexico. The upper limit of the unitized formation shall be the top of the Grayburg-San Andres interval. The lower limit of the unitized formation shall be 4500 feet beneath the surface. The vertical

limits of said unit area shall include all the subsurface intervals throughout the unit area correlative to the identified interval described above;

(4) That applicant's Exhibit No. 3 in this case which is the North Hobbs Grayburg-San Andres Unit Agreement is hereby incorporated by reference into this Order;

(5) That applicant's Exhibit No. 4 in this case which the North Hobbs Grayburg-San Andres Unit Operating Agreement is hereby incorporated by reference into this Order;

(6) That the North Hobbs Grayburg-San Andres Unit Agreement and the North Hobbs Grayburg-San Andres Unit Operating Agreement provide for unitization and unit operation of the North Hobbs Grayburg-San Andres Unit Area upon terms and conditions that are fair, reasonable and equitable and which include:

(a) an allocation to the separately owned tracts in the unit area of all oil and gas that is produced from the unit area and is saved, being the production that is not used in the conduct of operations on the unit area or not unavoidably lost;

(b) a provision for the credits and charges to be made in the adjustment among the owners in the unit area for their respective investments in wells, tanks, pumps, machinery, materials and equipment contributed to the unit operations;

(c) a provision governing how the costs of unit operations including capital investments shall be determined and charged to the separately owned tracts and how said costs shall be paid including a provision providing when, how, and by whom the unit production allocated to an owner who does not pay the share of the costs of unit operations charged to such owner, or the interest of such owner, may be sold and the proceeds applied to the payment of such costs;

(d) a provision for carrying any working interest owner on a limited, carried or net-profits basis, payable out of production, upon such terms and conditions determined by the Division Director to be just and reasonable, and allowing an appropriate charge for interest for such service payable out of such owner's share of production, provided that any nonconsenting working interest owner being so carried shall be deemed to have relinquished to the unit operator all of its operating rights and working interests in an to the unit until his share of the costs, service charge and interest are repaid to the unit operator;

(e) a provision designating the unit operator and providing for the supervision and conduct of the unit operations, including the selection, removal or substitution of an operator

from among the working interest owners to conduct the unit operations;

(f) a provision for a voting procedure for the decision of matters to be decided by the working interest owners in respect to which each working interest owner shall have a voting interest equal to its unit participation; and

(g) the time when the unit operation shall commence and the manner in which, and the circumstances under which, the operations shall terminate and for the settlement of accounts upon such termination;

and are therefore hereby adopted.

(7) That the Unit Agreement and the Unit Operating Agreement are approved and adopted by the Commission subject to the appropriate ratification provisions of Section 70-7-8, NMSA 1978, being complied with;

(8) That when the persons owning the required percentage of interest in the unit area have approved or ratified the Unit Agreement and the Unit Operating Agreement, the interests of all persons within the unit area are unitized whether or not such persons have approved the Unit Agreement or the Unit Operating Agreement in writing;

(9) That jurisdiction of this cause is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.

ratification of chg of operator

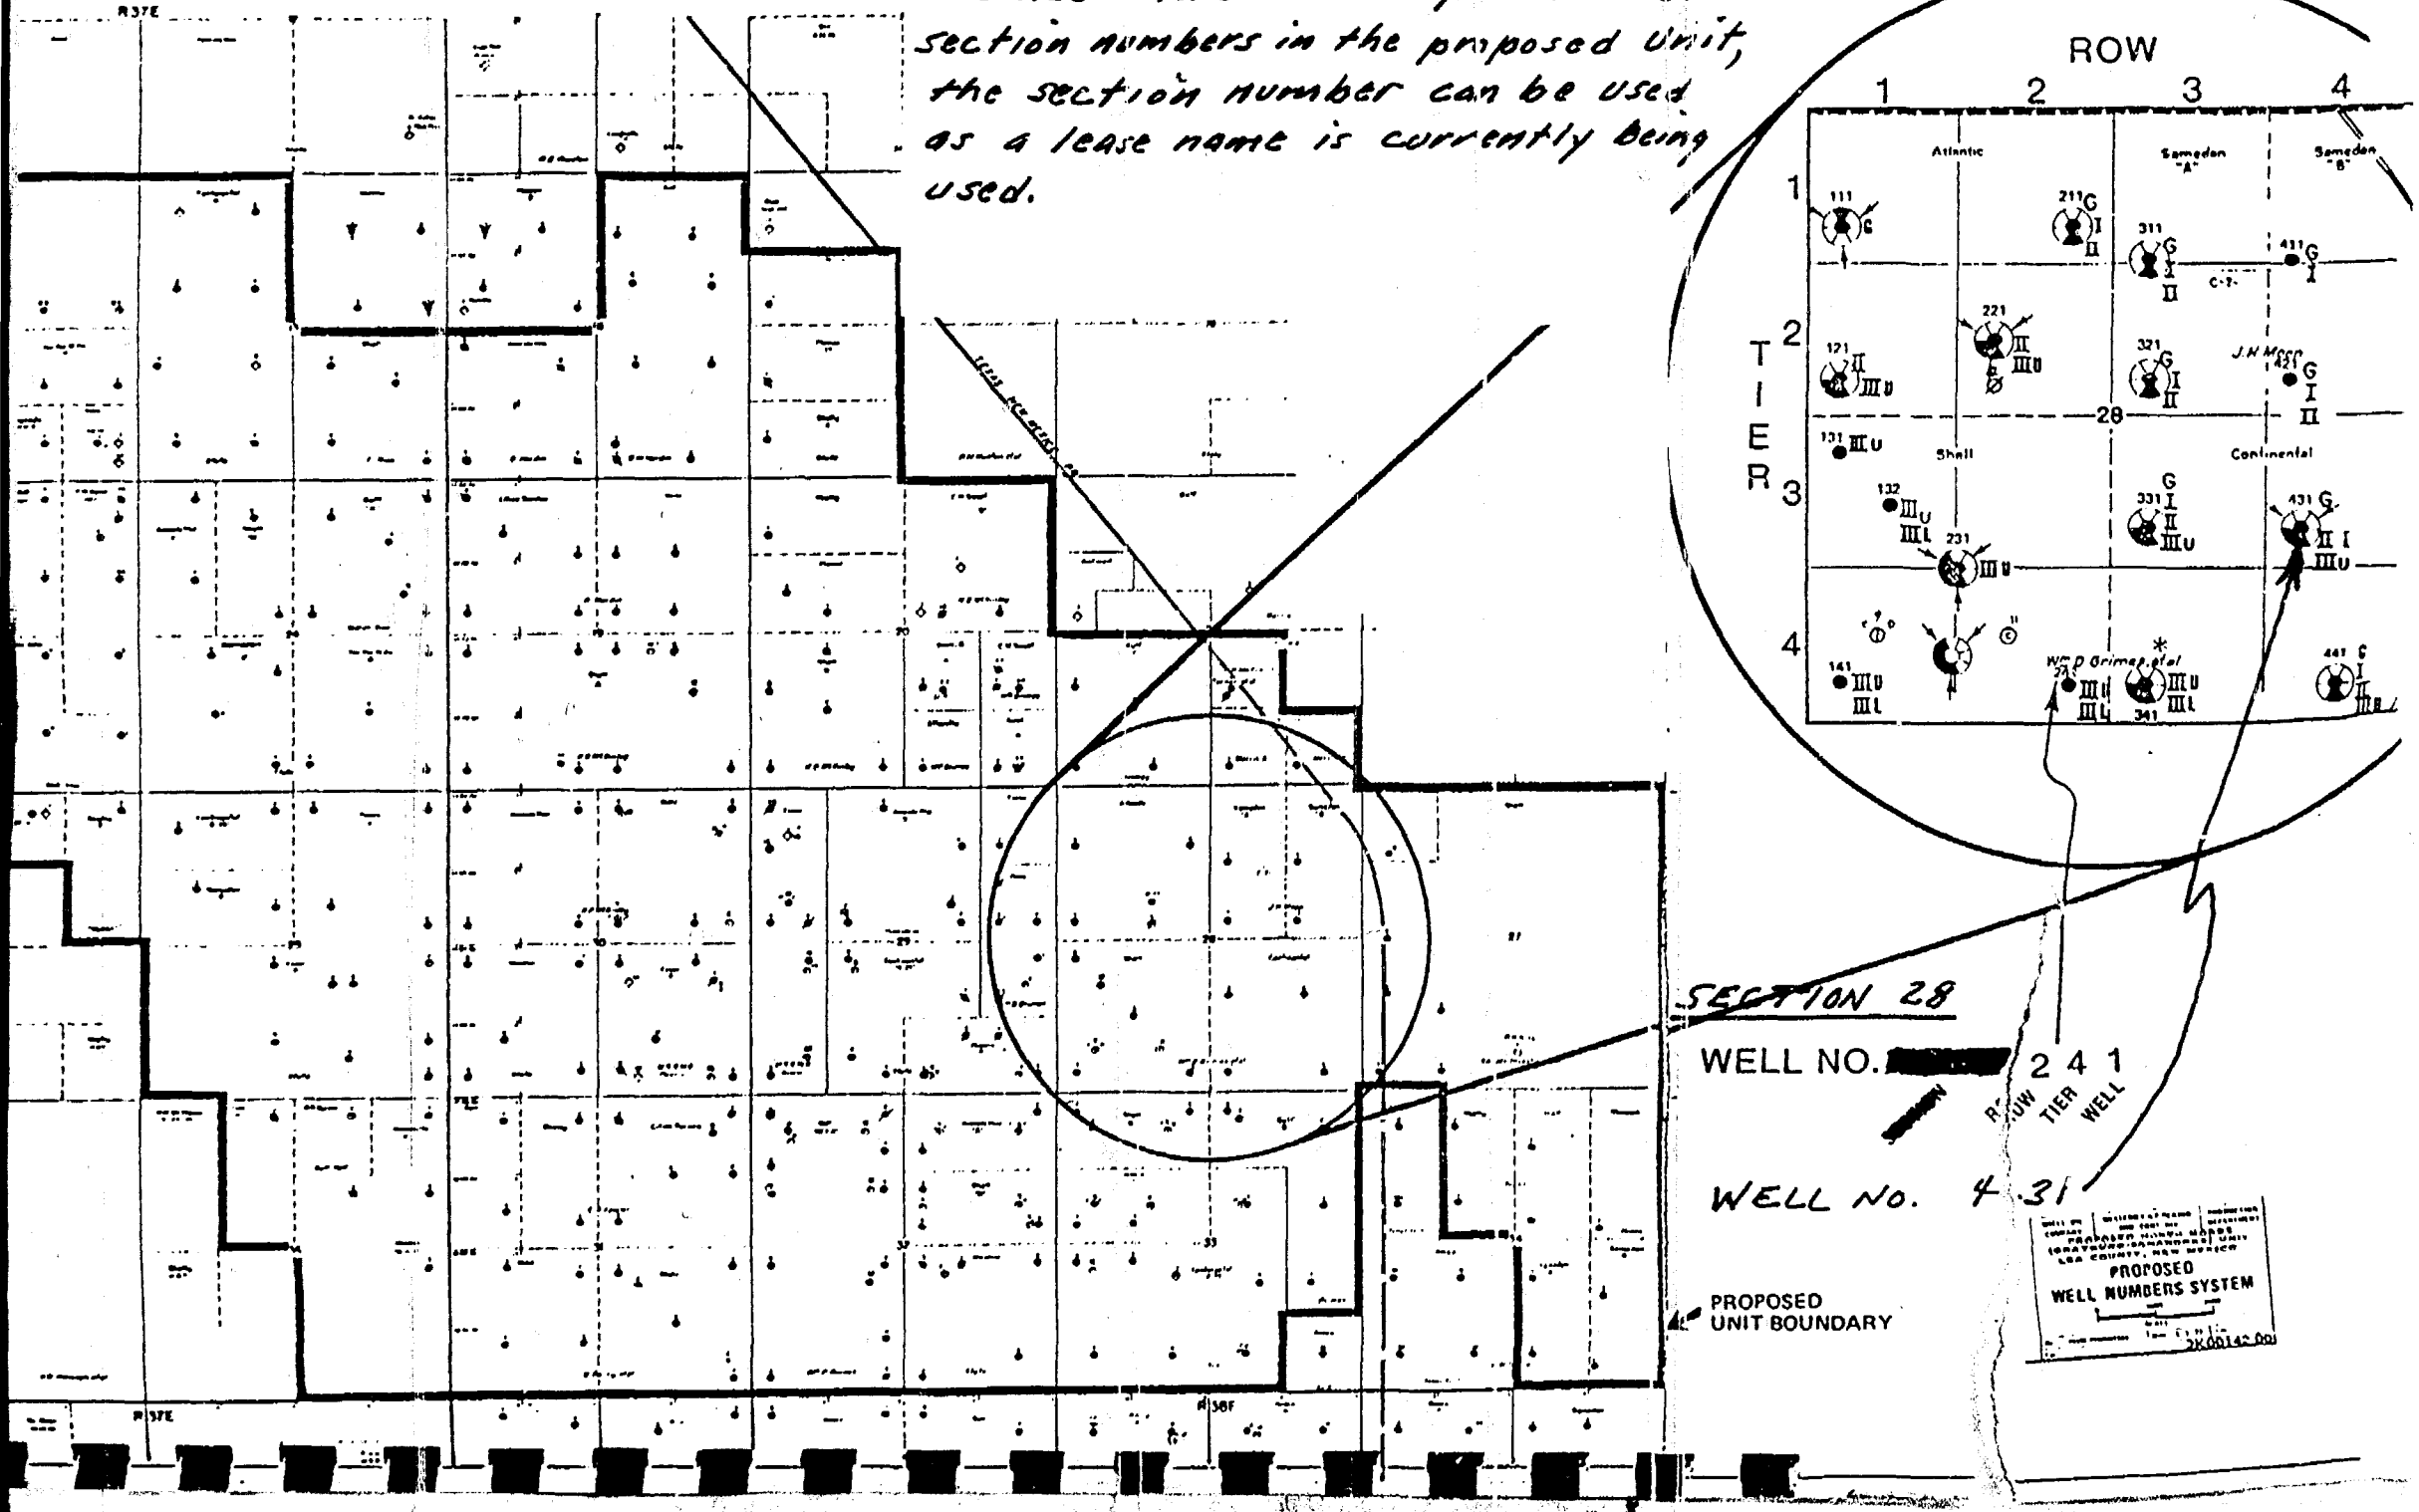
Mr. Dan Nutter
Oil Conservation Commission
Land Office Building
Santa Fe, New Mexico 87503

Dear Dan:

Please find enclosed a proposed draft of an order for the statutory unitization and pressure maintenance project for the North Hobbs field. I am also enclosing a copy of a memo to the file which I prepared with transcript references for each finding.



Naturally, if you have any questions, please let me know.

Sincerely,

Owen M. Lopez

OML:to
Enclosures

Since there is no duplication of section numbers in the proposed Unit, the section number can be used as a lease name is currently being used.

MEMORANDUM

November 2, 1979

TO: File

FROM: Owen M. Lopez

RE: Proposed Drafts of Statutory Unitization Order, Case No. 6652 and Pressure Maintenance Project Order, Case No. 6653

Most of the proposed findings are fairly self-obvious.

Finding 3: The information to support Finding 3 is contained in the early portion of Mr. Campbell's testimony, and particularly at pages 13-16 of the transcript.

Finding 4: Is taken from Bill Lancaster's testimony as well as Exhibit 16, the technical report. The fact that the pool has been reasonably defined by development is essentially contained on pages 29 and 30 of the transcript.

Finding 5: Is taken from the Unit Agreement, Section 2(e) under the definitions which is confirmed under Article I of the Unit Operating Agreement.

Findings 6 and 7: Are found in Bill Lancaster's testimony, at pages 31 and 32 of the transcript.

Finding 8: Is supported again by Bill Lancaster's testimony at pages 50 and 51 of the transcript together with the exhibit referred to therein. and Mr. Nolan's testimony @ pages 120-122.

Finding 10: Is supported by Earl Buck's testimony as well as Exxon's witness, Mr. Nolan. pp 71-74 86-89 pp. 123-126

Finding 11: The first portion of Finding 11 is supported by Bill Lancaster's testimony on page 33 of the transcript and by Mr. Nolan's testimony at page 114 of the transcript and at pages 177 and 178 of the transcript. The middle portion of the finding is supported by Mr. Buck's testimony at pages 69, 70 and 71 of the transcript, and page 118 of Mr. Nolan's testimony. The latter portion of the finding is supported by Mr. Nolan's testimony at page 124 et seq. of the transcript, and the final portion of the finding is as a result of Mr. Miller's testimony found at page 217 et seq. of the transcript.

Finding 12: Is essentially covered in Mr. Buck's testimony at pages 71, 73-76, 78-80 and 83 of the transcript.

Finding 13: Is supported by Mr. Phillips' testimony at page 99 of the transcript.

Findings 14 and 15: Are self-evident.

Orders 1 and 2: Conform to Findings 1 and 2 and are contained in Mr. Campbell's testimony at pages 13-16 of the transcript.

Order 4: Goes to Finding 5.

Order 5: Is covered in Mr. Buck's testimony. Subparagraphs (a) to (g) are contained in Mr. Buck's testimony at pages 83-85 of the transcript.

Orders 6, 7 and 8: Go to the Commission and the statute itself.

With respect to the proposed order regarding the pressure maintenance project, support for the findings in the order are contained in Mr. Phillips testimony and exhibits introduced in accordance with his testimony from pages 91-102 of the transcript.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

MR. RAMEY: The hearing will come to order. We'll call Case Number 6652.

MR. PADILLA: Application of Shell Oil Company for statutory unitization, Lea County, New Mexico.

MR. RAMEY: Does anyone have any opinions about consolidating this case with Case 6653?

MR. ATKINSON: Mr. Commissioner, I represent Exxon Corporation, from the Modrall law firm, my name is Clifford Atkinson, and also with me is Jack Dalious. We're opposing the application of Shell Oil.

MR. RAMEY: Okay. But you have no objection to consolidating the two cases?

MR. ATKINSON: Oh, no, sir.

MR. RAMEY: All right. We'll call Case 6653.

MR. PADILLA: Application of Shell Oil Company for a pressure maintenance project, Lea County, New Mexico.

MR. RAMEY: Ask for appearances at this time, please.

MR. LOPEZ: Mr. Chairman, my name is Owen Lopez with the Montgomery law firm in Santa Fe, New Mexico, appearing on behalf of the applicant in both cases, Shell Oil Company. I have with me, and associated with me on the case, Gary Kilpatric of our law firm, and might as well put

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

Clint Parsley on the record, too. He's also a new lawyer with our law firm, and Jim Lore, who's with the Office of General Counsel for Shell Oil Company, Houston, Texas.

I also have with me at counsel table Mr. Earl Buck, Project Manager of the unit, and I have four witnesses to be sworn in the cases.

I should also point out, I think, to accommodate the Commission, that we have marked our exhibits. We have at this time, propose to enter thirty-four exhibits. The first three witnesses' exhibits all pertain to the statutory unitization application and the last witness' exhibits, Mr. Phillips, all pertain to the pressure maintenance project. I have marked the exhibits accordingly.

MR. RAMEY: Thank you. What was the third man's name you mentioned, Clint --

MR. LOPEZ: Parsley, Clint Parsley.

MR. RAMEY: All right.

MR. ATKINSON: Once again I'll enter an appearance for Exxon Corporation. My name is Clifford Atkinson from Modrall law firm. Also appearing, Mr. Jack Dalious, Exxon Corporation, and at the counsel table is Mr. Bill Nolan, also with Exxon.

MR. RAMEY: Do you have any witnesses?

MR. ATKINSON: Yes, sir. Mr. Bill Nolan will be our sole witness.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

MR. RAMEY: I'll ask that all witnesses --- are there any other appearances?

I'll ask all witnesses to stand at this time and be sworn.

(Witnesses sworn.)

You may proceed, Mr. Lopez.

MR. LOPEZ: Thank you, Mr. Chairman.

Perhaps preliminarily I might mention that I have talked to the Chairman and I do understand that there are some working interest owners here who may wish to appear either on behalf or in opposition to our application, but have other commitments and may not want to sit through the whole story. The chairman said it might be possible for those persons to enter their appearances before the recess at lunch time.

Okay, I call our first witness, Mr. Campbell.

LEE CAMPBELL

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

BY MR. KILPATRIC:

MR. KILPATRIC: Mr. Chairman, I direct your attention to the prepared testimony of Mr. Campbell in the green booklet. Yes. And before we start I might point out that page nine, there are a couple of number changes. If I give them to you now I think the testimony will flow more smoothly.

MR. RAMEY: Okay.

MR. KILPATRIC: The number 70 on the first complete answer down at the middle of the page, should be 65, and the 65, I think there are three places where there is 70, that number should be changed to 65.

And at the top of page 10 at the very first line those percentages should read 92.21 instead of 92.26 and 95.34 instead of 95.44.

And I refer you back over to page 8 and ask that the first full answer there, the last line should be stricken. There are some ratifications that were received this morning. We probably will receive them this morning but we haven't received them at this time, so that would be premature.

With those corrections we'll start the testimony.

Q. What is your name and where do you reside?

A. Lee Campbell. I reside in Slidell,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Louisiana.

Q. By whom are you employed and in what capacity?

A. I'm employed by Shell Oil Company as a Senior Landman.

Q. Have you testified previously before the Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you briefly describe your educational and employment background?

A. I graduated with a Bachelor's in Business Administration in Petroleum Land Management from the University of Texas in December, 1972, and in January, 1973, I was employed by Shell Oil Company in their Land Department in Houston.

For the past two years I have been one of those responsible for the land operations of Shell Oil Company in New Mexico and West Texas, and for the last year and a half I have almost entirely devoted my time and energies to the North Hobbs Unitization and Pressure Maintenance Project.

Q. I take it then, that you are familiar with Shell Oil Company's applications in these consolidated cases, Numbers 6652 and6653?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Yes, very familiar.

Q. How was it that you have become familiar with the facts concerning these two applications?

A. I was assigned the task of determining who had the working ownership interests and royalty ownership interests for each tract within the northern portion of the Hobbs Grayburg-San Andres Pool, which I will refer to as the Unit Area.

In this connection I participated in the preparation of the ownership and tract participation exhibits pertaining to the Unit Area.

MR. KILPATRIC: Are the witness' qualifications acceptable, Mr. Chairman?

MR. RAMEY: He's considered qualified.

MR. KILPATRIC: Thank you.

Q. (Mr. Kilpatric continuing.) Now, Mr. Campbell, I direct your attention to what has been marked as Shell's Exhibit Number One, and I ask you to identify it.

A. This is a map of the proposed Unit Area, which is located in Lea County, New Mexico, and which contains approximately 10,649.53 acres. The Unit Area includes the following sections or portions of sections in Township 18 South, Range 37 East, NMPM: The southeast quarter and the west half of Section 13; all of Sections 14, 23, 24, and 25; the east half of the northeast quarter and the northwest

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3018 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

quarter of the northeast quarter of Section 26; the east half of the northwest quarter and the east half of Section 36.

As regards Township 18 South, Range 38 East, the Unit Area includes the south half of the northwest quarter and the southwest quarter of Section 17; the northeast quarter and the south half of Section 18; all of Sections 19 and 20; the southwest quarter and the south half of the southeast quarter and the northwest quarter of the southeast quarter of Section 21; all of Sections 27, 28, 29, 30, 31, and 32; all of Section 33, except the southeast quarter of the southeast quarter; and the east half of the northwest one-quarter and the east half of Section 34.

The Unit Area consists of 88 separate tracts which were formed according to their common mineral ownership. Each tract is identified on the exhibit by a tract number, lease name, and tract operator. The tract number is denoted with a circle near the center of the tract. The lease name is at the bottom, and the tract operator is shown at the top of each designated tract.

In some instances a tract encompasses an entire lease; however, in certain leases which had diverse mineral ownership within the unitized horizon, we divided into two or more tracts.

You will note that some of the tracts have

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

a designation A or B after their particular tract numbers, which, for example, you will see if you look at Tract 10 at the north central portion of the exhibit. This division was made because we discovered after we had assigned the original tract numbers additional divisions of mineral ownership within the unitized formation.

MR. KILPATRIC: Mr. Chairman, I'd like to point out that the exhibits are tabbed for the testimony and you can refer to any during the testimony by the use of tabs.

Q. (Mr. Kilpatric continuing.) Now, Mr. Campbell, please define the unitized formation for the Unit Area, and in this connection I direct your attention to what has been marked for identification as Shell's Exhibit Number Two, and ask you to identify it for the Commission.

A. Exhibit Number Two shows the unitized formation for the Unit Area, which is that subsurface portion of the Unit Area known as the Grayburg-San Andres formation, of Permian age, found in the interval between the stratigraphic depth of 3698 feet and the depth of 4500 feet beneath the surface, as measured on the Borehole Compensated Sonic-Gamma Ray Log run in the Shell Oil Company State A-7 Well on July the 9th, 1969.

This well is located 1930 feet from the north line and 660 feet from the east line of Section 32,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Township 18 South, Range 38 East, Lea County, New Mexico.

The upper limit of the unitized formation is the top of the Grayburg-San Andres interval.

The lower limit of the unitized formation is 4500 feet beneath the surface, which is approximately 200 feet below the oil/water contact as determined by the technical committee whose function will be described by Mr. Lancaster later on.

Therefore the unitized formation has been limited to only the interval required for unit operations, which would affect the Hobbs Grayburg-San Andres Pool.

Q. Mr. Campbell, I now refer you to Shell's Exhibits Numbers Three and Four, and ask you to identify them.

A. Shell's Exhibit Number Three is a copy of the Unit Agreement, covering the Unit Area.

And Exhibit Number Four is a copy of the Unit Operating Agreement, covering the Unit Area.

These are copies of the agreements that I submitted to the various royalty interest owners and working interest owners in the Unit Area for their consideration and ratification.

Q. How were you able to determine who were the working interest owners and the royalty interest owners?

A. We were able to obtain the names of all

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the operators within the Unit Area from the records of the Oil and Gas Conservation Division of the State of New Mexico.

We then asked and obtained from each operator within the Unit Area a list of all the working interest owners and royalty interest owners within each of their tracts.

Q. What did you do with this information?

A. We compiled a list of all of the working interest owners and royalty interest owners within the Unit Area on a tract-by-tract basis, and we then contacted each working interest owner and attempted to contact all known royalty interest owners.

The Unit Agreement was submitted to the royalty interest owners and both the Unit Agreement and Unit Operating Agreement were submitted to the working interest owners, as well as to the USGS and the State of New Mexico.

It should be noted that Exhibit B contained in Shell's Exhibit Number Three, the Unit Agreement, is a list of each tract within the Unit Area, the area of land located within each tract, and the mineral ownership information for each tract.

Q. I now refer you to what has been marked as Shell's Exhibit Number Five and ask you to identify it.

A. Exhibit Number Five is a computer printout on a tract-by-tract basis listing all the royalty interest

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

owners within the Unit Area, their addresses, and their percentage of royalty interest in each tract.

Column One lists the tract numbers. Column Three lists the names and addresses of each royalty interest in the tract. Column Four shows the percentage of each owner's royalty interest within the tract, and Column Five indicates by an "X" that the interest owner has ratified the Unit Agreement.

Q. How many royalty owners are involved in the unit Area and how were they contacted with regard to ratification of the Unit Agreement? And in this connection I direct your attention to what has been marked as Shell's Exhibit Number Six.

A. As the Exhibit shows, approximately 905 royalty interest owners exist within the Unit Area, including the USGS and the State of New Mexico.

As is also shown on the exhibit, on August the 8th, 1978, the Unit Agreement and ratification forms were mailed to all known royalty interest owners. Then on October the 11th, 1978, we sent a follow-up letter to all the then known unsigned royalty interest owners advising them of sign-up status and again requesting their ratification.

During the months of December, 1978, and January and February, 1979, an intense effort was made to contact all unsigned royalty interest owners by phone.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
502 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Then, as further shown on Exhibit Number Six, on February the 22nd, 1979, we sent even another follow-up letter to all of the unsigned royalty interest owners at that time, again advising them of sign-up status with request -- respect to the Unit Agreement, and again requesting their ratification. In this letter we explained as best we could to these persons that we had attempted to contact each of them by phone but had been unable to reach some of them. We asked that they call us collect if they had any questions concerning the Unit Agreement or the project we were undertaking. Additional ratification forms were included with this letter.

Finally, on August the 6th, 1979, again as shown on the exhibit, we sent another and final letter to every known royalty interest owner, advising each of them of the status of ratification and of our plans to proceed with these applications before the Commission today, and again we requested all unsigned royalty interest owners to ratify the Unit Agreement.

Q. How many of the total royalty interest owners have ratified the Unit Agreement?

A. 720 of the total 905 royalty interest owners have ratified the Unit Agreement to date, and this includes the preliminary approval of the USGS and the Commission of Public Lands of the State of New Mexico.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

As Exhibit Six shows, of the 185 who have not yet ratified the Unit Agreement, 41 were unreachable, and 144 were contacted but have not yet ratified the agreement.

Q. Now, Mr. Campbell, you stated that 720 of the total number of 905 royalty interest owners have ratified the Unit Agreement. What does this figure represent as a percentage of the total royalty interests in the unit area?

A. As the exhibit shows, the percentage of sign-up is set forth in six separate percentage figures. The reason for this is twofold.

First, the percentage of ratification is dependent upon the determination of the royalty owners' interest in either the oil or the gas in the pool.

Second, the life of the water injection project has been broken down into three specific phases. The reasons for this will be discussed in later testimony of Mr. Lancaster and Mr. Buck.

Therefore, the royalty owner's interest will be dependent upon his interest during the phase in effect at a given time and whether his interest is in oil or gas.

As a result you will note that the exhibit shows a percentage sign-up ranging from 97.18 percent to 97.42 percent, which exceeds the 75 percent required for statutory unitization by more than 20 percent.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Less than 3 percent of the royalty interest ownership has not yet ratified the Unit Agreement.

Q. Now I refer you to Exhibit Number Seven and ask you to identify it.

A. Exhibit Number Seven is a computer printout on a tract-by-tract basis listing all working interest owners within the Unit Area, their addresses, and their percentage of working interest in each tract.

Column One lists the tract numbers. Column Three lists the names and addresses of each working interest owner. Column Four is the percentage of each owner's working interest in each tract, and Column Five indicates by an "X" that the interest owner has ratified the unit.

MR. KILPATRIC: Mr. Chairman, I might point out here that since the time that I asked you to strike that latter sentence, it has become true and we have received some more ratifications this morning. So, in fact, we now have 73 out of the total 80 working interest owners and we'll cover that in later testimony.

Q. (Mr. Kilpatric continuing.) How many working interest owners are involved within the Unit Area and how were they contacted with regard to ratification of the Unit Agreement and Unit Operating Agreement? In this connection I refer you to Shell's Exhibit Number Eight.

A. There are 80 working interest owners in the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Unit, 25 of which are operators. As shown on this exhibit, on August the 7th, 1978, we mailed the Unit Agreement and the Unit Operating Agreement and ratification form to each of the working interest owners.

On November the 20th, 1978, we again wrote a letter to each working interest owner and again requested each unsigned owner to consider the agreements and to ratify them at their earliest convenience..

We wrote a final letter on July 13th, 1979, again to each working interest owner, advising him of the status of ratification and of Shell's plans for proceeding with statutory unitization and for the institution of a pressure maintenance project.

In this connection we made numerous telephone calls in an attempt to obtain ratification from each of the unsigned working interest owners.

Q. How many of the total working interest owners have ratified the Unit Agreement and Unit Operating Agreement?

A. As shown on the Exhibit Number Eight, 63 of the 80 working interest owners have ratified the Unit Agreement and the Unit Operating Agreement; however, since the exhibit was prepared we have received additional commitments to the Unit, and at this point the interest of 73 of the 80 working interest owners are committed to the Unit.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Now, Mr. Campbell, can you tell the Commission what percentage of the total working interest ownership is represented by the interests of the 73 working interest owners who have committed to the unit?

A. Yes. As I just stated, the interest of 73 of the 80 working interest owners have committed to the unit. This represents in excess of 92.26 percent to an excess of 95.44 percent of the working interest ownership, depending again on which of the three phases of the project is in effect at a given time and whether it involves the working interest ownership's interest in oil or gas.

This percentage of ratification again substantially exceeds the 75 percent required for statutory unitization.

Q. Now I refer you to what have been marked as Shell's Exhibits Numbers 9 and 10 and ask you to identify these.

A. Exhibit Number Nine is a letter dated July 31st, 1978, from James W. Sutherland, Oil and Gas Supervisor of the United Stated Department of the Interior, advising that the USGS has no objection to the revised unit agreement form.

Exhibit Ten is a series of letters dated June 13th, June 21st, and July 6th, 1978, from Ray D. Graham, Direction of the Oil and Gas Division of the Commissioner

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

of Public Lands of the State of New Mexico, approving the Unit Agreement as to form and content.

Q. Mr. Campbell, I now refer you to what has been marked as Shell's Exhibits Eleven and Twelve and ask you to identify them for the Commission.

A. Exhibit Eleven is a packet of ratification forms which have been executed by the royalty interest owners.

Exhibit Twelve is a packet of ratification forms which have been executed by the working interest owners.

Q. Were Exhibits One through Twelve prepared by you or under your supervision?

A. With the exception of Exhibits Three and Four all of these exhibits were prepared by me or under my supervision.

Regarding Exhibits Three and Four, which are the Unit Agreement and the Unit Operating Agreement, respectively, although these were actually prepared by Mr. Buck, the Project Manager, in conjunction with Shell's Legal Department, these exhibits are copies of the actual agreement that I submitted to both the working interest owners and the royalty interest owners.

MR. KILPATRIC: Mr. Chairman, I now offer Exhibits One through Twelve into evidence.

If there be no objection to these exhibits, that concludes our examination.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

MR. RAMEY: These Exhibits One through Twelve will be admitted.

MR. KILPATRIC: Thank you. Pass the witness.

MR. RAMEY: Any questions of Mr. Campbell?

MR. ATKINSON: Just a couple of questions, if I may.

CROSS EXAMINATION

BY MR. ATKINSON:

Q. Mr. Campbell, the Shell Exhibit Number One defines the boundaries of the proposed North Hobbs Unit, I believe, is that not correct?

A. That's correct.

Q. But in fact the Unit itself does not entirely comprise the pool within which the Unit lies, does it?

A. Well, there's a South Hobbs Unit.

Q. And the two of them are part of the same pool, are they not?

A. I'm not the engineer.

Q. And the, if I may refer to the lower right-hand corner of the Shell Exhibit Number One, the finger that juts up into the proposed North Hobbs Unit, then, is a portion of the South Hobbs Unit?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

A. That's correct.

MR. ATKINSON: No further questions.

MR. KILPATRIC: No redirect.

MR. LOPEZ: Mr. Chairman, I might point out that I've just been informed that rather than 73 it's 77, so I would like the record to be amended or corrected to reflect that we've exceeded even our wildest expectations.

MR. RAMEY: This, I assume, is the working interest owners --

MR. KILPATRIC: Yes, sir.

MR. RAMEY: -- that have signed?

MR. KILPATRIC: Yes, sir.

MR. ATKINSON: Mr. Chairman, if possible, we'd like to reserve the right to recall him at a later time after the finish of their case.

MR. RAMEY: I would think so. I would think Mr. Campbell would want to stay around and see the whole show.

MR. ATKINSON: Okay.

MR. LOPEZ: I'd like to call Mr. Lancaster.

BILL LANCASTER

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

Santa Fe, New Mexico 87501

DIRECT EXAMINATION

BY MR. LOPEZ:

Q. Would you please state your name, by whom you're employed, and in where you reside?

A. My name is Bill Lancaster. I'm employed by Shell Oil Company and I reside in Houston, Texas.

Q. Have you previosly testified before the Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you then briefly describe your educational background and employment experience?

A. I graduated from Ohio State University in 1954 with a Bachelor of Science in Petroleum Engineering. Upon graduation I spent two years, from 1954 to 1956, in the Air Force. In 1957 I received a Masters of Science in Petroleum Engineering from Texas A & M.

In August of 1957 I was employed by Shell Oil Company. From 1957 to 1968 I worked in Shell's New Orleans office as a Production and Reservoir Engineer. From 1968 until 1977 I worked as a Reservoir Engineer in Shell's Rocky Mountain Division. In 1977 I was assigned to the Reservoir Engineering Section of the Mid-Continent Division, where my responsibilities include reservoir engineering work

for fields in which Shell has an interest in West Texas and New Mexico.

Q. Mr. Lancaster, are you familiar with the history of the Hobbs Grayburg-San Andres Pool?

A. Yes, I am.

Q. How did you become familiar with this pool?

A. I am not Chairman of the Technical Committee which was formed by the Working Interest Owner Committee to investigate the feasibility of initiating a pressure maintenance project for the purpose of recovering additional oil reserves in the Hobbs Grayburg-San Andres Pool.

Q. And I take it you are familiar with the applications in Case Numbers 6652 and 6653?

A. Yes, I am.

MR. LOPEZ: Mr. Chairman, are the witness' qualifications acceptable?

MR. RAMEY: Yes.

Q. (Mr. Lopez continuing.) Mr. Lancaster, I now ask you to briefly describe the history of this pool and in that connection I ask you to refer to what has been marked as Shell Exhibit Number Thirteen.

A. Exhibit Number Thirteen is not on the wall. It is a graph showing the production history of the entire Hobbs Grayburg-San Andres Pool from its inception through 1975.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

As is shown, the pool was discovered in 1928, and by the end of 1930 was producing about one million barrels of oil per month from 135 wells. This high production rate continued until 1935, when the rate was curtailed because of the reduced demand for oil.

Although a number of wells within the pool continued to produce at maximum allowables after 1935, declines in production capacity were observed in most wells as a result of a continuing decline in these wells' bottom hole pressures.

By 1975 bottom hole pressures had declined from an initial 1,515 pounds per square inch absolute in the pool to an approximately 400 pounds per square inch absolute in what I shall refer to as the Grayburg study zones; approximately 950 pounds per square inch absolute in the San Andres study zone I; and to approximately 800 pounds per square inch in the San Andres study zones II and III.

I should mention at this time that the Technical Committee decided it would better describe the past and future performance of any complex reservoir by dividing it into six study zones. In any event, this decline in production and pressure prompted operators to consider ways of supplementing the natural reservoir drive mechanisms so as to achieve greater ultimate recovery from the reservoir.

In 1970 Amoco initiated efforts to unitize

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

the entire Hobbs Grayburg-San Andres Pool.

In 1971 Moranco began injecting water into the Grayburg study zones in the northern portion of the pool on the Moranco-operated Rice and Hardin leases.

In 1973 Amoco abandoned its efforts to unitize the entire Hobbs Pool when working interest owners could not reach an agreement on a participation formula. Nevertheless, Amoco continued its unitization efforts and subsequently formed a volunteer unit, which comprised the southern third of the pool. This unit became effective on January 1st, 1975.

When Amoco abandoned its efforts to unitize the entire pool, Shell Oil Company was selected as unit expeditor for the remaining northern portion of the pool by the working interest owners. Shell has continued its unitization efforts to date.

Q. What were the initial unitization efforts undertaken after Shell was selected unit expeditor for the northern portion of the Hobbs Pool?

A. All operators within this northern portion of the Hobbs Pool were asked to invite the working interest owners to a meeting on July 31st, 1973. At this meeting our Technical Committee was formed by the working interest owners.

The Technical Committee was to be comprised of engineering representatives of all working interest owners.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
501 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. What instructions, if any, were given to the Technical Committee by the Working Interest Owners Committee, and in this connection I refer you to what has been marked as Shell's Exhibit Number Fourteen?

A. As shown on this exhibit, the Technical Committee was charged by the Working Interest Owners Committee with the task of determining the feasibility and profitability of instituting a pressure maintenance project for the northern portion of the Hobbs Grayburg-San Andres Pool. In addition, our committee was charged with the responsibility of developing values, tract by tract, for the parameters set forth on this exhibit. This was done so that the Working Interest Owners Committee could develop a formula for the equitable sharing of the costs and the revenues to be derived from the pressure maintenance project.

Q. Did the Technical Committee in response to this charge determine whether or not the pressure maintenance project would be feasible and profitable?

A. Yes, it did.

Q. What was the determination and what was the basis for that determination?

A. The Technical Committee made a comprehensive study of the pool, including such parameters as the amount of oil in place, its location, and its primary recovery efficiency, that is, as you know, the expected recovery from

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

the pool without the water injection program, and determined that significant volumes of oil would not be recovered under primary operations, and that be initiating a water injection program there was a potential to increase the ultimate recovery by some 55-million barrels of oil.

The committee also determined that a water injection program in this pool was feasible and that such a program would be profitable and beneficial to all the working interest owners and royalty owners.

Q. Would you describe how this Technical Committee functioned in responding to the charges you've just described, and in this connection I refer you to what has been marked for identification as Shell's Exhibits Numbers Fifteen and Sixteen?

A. Since Amoco's prior attempt was abandoned because the working interest owners could not reach an agreement on a method for allocating the unit production, based on the values assigned the parameters, and since Shell's undertaking of the unitization effort for the northern portion of the Hobbs Pool probably represented the last chance to unitize the entire northern portion of this reservoir, the Working Interest Owners Committee instructed the Technical Committee that a simple majority agreement on pertinent matters would not be sufficient and that they were to reach agreement on these matters by a substantial majority, and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3028 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

that if they failed in this endeavor, the Technical Committee was to present the issue to the Working Interest Owners Committee for resolution.

To achieve these objectives our committee proceeded in a step-by-step manner so that a substantial majority agreement could be reached on each issue addressed before proceeding to the next. No decisions were reached unless there was a substantial majority concurrence.

In following these guidelines our committee met for twenty-two sessions over a three and a half year period from September, 1973, to March of 1977. Minutes of each meeting were kept and they are compiled in Shell's Exhibit Number Fifteen.

Throughout the meetings there was outstanding cooperation and attendance averaged about 83 percent of the working interest ownership.

The final outcome of this work was the acceptance by the Working Interest Owners Committee of our committee's technical report, entitled Waterflood Feasibility and Unitization Parameters of the North Hobbs Grayburg-San Andres Unit, dated April of 1977.

This technical report is Shell's Exhibit Number Sixteen.

Q. Did your committee develop any information concerning the geology of the northern portion of the Hobbs

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

Pool?

A. Yes, we did. The entire Hobbs Grayburg-San Andres Pool is a northwest-southeast trending anticline about eight miles long and three and a half miles wide. Within this pool there exist two recognized geological strata known as the Grayburg and the San Andres. As I previously mentioned, the Technical Committee decided that breaking these strata into six study zones would facilitate the job of describing the reservoir performance.

Now, as is shown on Figure 4 of the Technical Report, this anticline has some 400 feet of structural relief from the crest of the Grayburg at 217 feet subsea, to the top of an oil/water transitional zone at 1614 feet subsea. A large gas cap above 360 feet subsea initially covered the crestal or central portion of this reservoir.

Q. Would you describe for the Commission the six study zones?

A. For the purposes of the technical study, the upper portion of the reservoir was divided into two study zones, referred to as the Upper and Lower Grayburg. The total thickness of these two zones varies from 80 gross feet on the southeast flank to 200 feet on the northwest and southwest flanks of the Unit Area.

Since the Grayburg is overlain by a large gas cap, most of the oil-bearing reservoir is located around

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the flanks of the structure. Maximum pay development for both of these Grayburg study zones is found on the western flank and production is from thinly interbedded sandstone, siltstone, and dolomite layers, with most of the production coming from the sandstone layers.

Again, for the purposes of the technical study, the lower portion of the reservoir was divided into four study zones, referred to as San Andres Zones I, II, III Upper, and III Lower.

San Andres Zone I is a crystalline dolomite that is separated from the overlying productive interval by 10 to 80 feet of impermeable dolomite. This zone usually consists of two to three very porous layers, some of which are reported to be cavernous. This is the only study zone known to have experienced significant edge water influx.

San Andres Zone II is a dolomite layer 50 to 90 feet thick, which is normally separated from Zone I by a thin shaley bed.

San Andres Zone III is separated from Zone II by a sandy break consisting of 10 to 20 feet of dense sandy carbonate. Zone III is generally more thin-bedded than Zones I and II, but like Zone II, is best developed on the crest of the structure. Based on core and petrophysical studies, this zone was further divided into an upper and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

lower study zone.

Q. In connection with its technical study, did the Technical Committee make any determinations with respect to the oil and gas in place within the Unit Area?

A. Yes, the Committee did.

Q. How were these determinations made?

A. Most of the wells completed in the Grayburg study zones were drilled in the 1930's and their logging surveys were not suitable for calculating porosity values; therefore, to determine the oil in place for these particular zones the Technical Committee developed net pay maps and used an average porosity value of 14 percent that had been determined from analyzing available log and core data. These oil and gas net pay maps are based on a gas/oil contact at 360 feet subsea and are included in the Technical Report as Figures 8, 9, 10, and 11.

With respect to the San Andres study zones, there did exist sufficient core and log data in the San Andres intervals to enable the Technical Committee to prepare porosity feet maps for each of the four San Andres study zones. Table 6 in the Technical Report is a summation of the petrophysical analysis used in constructing the net porosity feet maps for each of the San Andres study zones.

The resulting porosity feet maps are included in the Technical Report as Figures 23, 24, 25, and 26.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

These porosity feet maps were utilized by the Technical Committee to calculate initial oil in place on a tract-by-tract basis within the Unit Area.

Q. What other kinds of data did the Technical Committee develop with respect to their study?

A. The Committee developed a water-cut map for the San Andres Zone I, and gas/oil ratio maps for San Andres Zones II, III Upper, and III Lower, all of which are included in the Technical Report as Figures 27 through 30, respectively.

Q. How was the data used in meeting the charge of the Working Interest Owners Committee?

A. The data was used as input in determining the remaining primary and secondary reserves, and in determining the economic profitability of instituting a program of water injection in this northern portion of the Hobbs Grayburg-San Andres Pool.

This data would also provide a basis upon which the Working Interest Owners Committee could develop a fair and reasonable participation formula for all the working interest owners and royalty interest owners.

Q. How did the Technical Committee finally determine an estimate of primary reserves?

A. The Hobbs Grayburg-San Andres Pool is one of the last major Grayburg-San Andres reservoirs in the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

New Mexico-West Texas area to be unitized. Two factors that have contributed to this delay in forming the North Hobbs Unit are the complexity of the reservoir and the influx of water into the upper portion of the San Andres, both of which made estimating primary reserves very difficult.

In forecasting the remaining primary performance of the North Hobbs Unit wells, the Technical Committee decided to determine the reserves on a well-by-well basis, separating the producers into two groups.

The first group consisted of those wells with only Grayburg production. The second group consisted of those wells with San Andres production.

Production from wells completed only in the Grayburg study zone is characterized by marginal oil rates, high gas/oil ratios, and little or no water. Since these study zones were in the latter stages of depletion, the Technical Committee determined that the remaining reserves could be estimated by extrapolating recent production trends; however, due to the complex reservoir performance observed in the San Andres study zones, production plots, such as decline curves or oil cut cumulative curves, were not suitable for forecasting the reserve potential of the San Andres wells.

After considering several proposed methods of determining primary reserves for these study zones, the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

Technical Committee elected to us a computerized reservoir simulation model because it is the most precise means of describing a complex reservoir performance of this type, and because it is able to utilize detailed well, production, reservoir, and geological data effectively.

Figure 31 of the Technical Report is a map of the North Hobbs Unit showing which of these two methods, extrapolation or computer simulation, was used in determining each well's primary reserves.

Q. What was your committee's final conclusion as the remaining primary Grayburg reserves within the northern portion of the Hobbs Pool?

A. At the time the Technical Report was finalized there were 78 wells completed in only the Grayburg study zones. The primary oil reserves from these wells were determined by extrapolating the 5-year production trends between January 1st, 1972, and January 1st, 1977, to an economic limit of one barrel of oil per day per well.

The well reserves were then summed by tract and the tract reserves are shown on Table 14 of the Technical Report. Using this method the total Grayburg primary oil reserves were estimated to be 1.5 million barrels of oil as of January 1st, 1977.

Q. How did you calculate the remaining primary reserves with respect to the San Andres study zones?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. As I explained earlier, the analysis and the data necessary to make the computations with respect to the remaining primary reserves within the San Andres study zones were considerably more complex than those required for the Grayburg study zones.

Figure Number 32 of the Technical Report shows the gid overlay that was used for the computer simulation model work in describing the San Andres Zones I, II, and III.

The model consisted of three layers of 200 blocks each, with each layer describing one of the San Andres study zones. Each of the blocks within the model was assigned particular reservoir characteristics, including zonal thickness, porosity, permeability, and initial oil, gas, and water saturations. In addition, the simulation included an aquifer for the upper layer of the model to represent the water influx experienced in the San Andres Zone I.

Within the simulator program, oil, gas, and water were withdrawn from each San Andres well located within the entire Hobbs Pool, based on each well's reported production history. This, of course, included wells located in that southern portion of the pool that Amoco unitized.

The object was to construct a model so that the reservoir performance as calculated by the computer simulation would match the actual performance evidenced by the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

historical reservoir data. Once a match was obtained a prediction of future performance was made, starting in September of 1976.

The results of the simulation model study indicated the San Andres primary reserves for the North Hobbs wells would be 36.6 million barrels of oil as of January 1st, 1977.

These well reserves estimates were then summed up by study zone, by tract, and by working interest owner, and are presented in the Technical Report as Tables 16 and 23, A and B.

Q How were the recoverable secondary reserves estimated?

A Because of differences in reservoir quality, the secondary potential of the Grayburg and San Andres study zones was evaluated separately. Evaluation of the Grayburg secondary recovery potential was done using another reservoir simulation model. In a depleted reservoir with a relatively low permeability, as exists in this Grayburg reservoir, the injection rates will be low, and it can take a long time to reach maximum response.

Although there are numerous technical procedures for estimating recoveries and response times, we believe the use of a simulation model, especially in this case, offers the most precise estimate performance. This

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

simulation model consisted of 153 blocks on a 9x17 grid in a single layer, with wells located within the model to duplicate the results of installing an 80-acre 5-spot water injection program. The reservoir input data was based on the average reservoir characteristics typical of the Grayburg study zones on the north and west flanks of the pool.

The significant conclusions derived from this study were the following:

Number one, because of the low permeability of 5 millidarcies, more or less, injection pressures on the order of 1500 pounds per square inch will be required to inject sufficient water to obtain a successful secondary recovery operation.

Ultimate primary recovery will be 18.7 percent of the original oil in place and secondary recovery will be 14.4 percent of the original oil in place, using a symmetrical closed 80-acre 5-spot injection pattern.

Number three, an 80-acre 5-spot pattern using existing wells is economically attractive and will have a long life of approximately 36 years.

Applying the calculated secondary recovery percentage factor to the oil in place in the patterns surrounding the Grayburg injectors, as shown on Figures 35 and 36 of the Technical Report, resulted in a secondary recovery estimate of 6.6 million barrels of oil for the Grayburg study

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5028 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

zones. This is equivalent to a secondary to primary recovery ratio of .57. The estimated primary and secondary oil recoveries are again listed by zone on Table 16 and by tract and working interest owner on Tables 24, A and B, of the Technical Report.

Based on the simulator results, the anticipated average water injection rates will be 260 barrels of oil per day per well into 40 injectors during fill-up, and 125 barrels of water per day per injector afterwards.

This Grayburg water injection program will require approximately 90 million barrels of injection water over a 36-year life, including 35 million barrels of makeup water, which will be obtained through contract with the City of Hobbs.

Peak Grayburg production averaging 30 barrels of oil per day per producing well, or about 1000 barrels of oil per day, will occur ten years after the water injection program begins.

Q. What methods were used to evaluate the secondary potential of the San Andres study zones?

A. First, no secondary recovery potential was attributed to the San Andres Study Zone I, because the reservoir analysis of its primary performance indicated a high recovery efficiency due to the strong natural water influx.

With respect to San Andres Zones II and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

III, two methods were used to evaluate their secondary potential. These methods were, number one, to use nearby water injection projects in the same San Andres strata as an analogy to determine what could be expected from the northern portion of the Hobbs Pool. And number two, to use a third computer simulation model to forecast the results of a water injection program.

With respect to the analogy with other existing San Andres water injection programs, the performance data on eight such projects were reviewed and volumetrically averaged on the basis of the original oil in place, and this study reflected an average ultimate recovery efficiency of 35 percent with a secondary to primary recovery ratio of .85. The water injection programs included in this study were mature projects that had already recovered in excess of 60 percent of the estimated ultimate secondary oil reserve.

In analyzing these analogous water injection programs it was noted that the higher the permeability within the reservoir, the higher the anticipated secondary recovery efficiency. Only two of the project studies had average permeabilities as high as the 28 millidarcies encountered in the San Andres portion of the HObbs Pool and their ultimate recoveries were predicted to be 39.4 and 46.4 percent of the original oil in place.

In addition to the study of these analo-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

gous projects, the secondary potential and performance of the Hobbs Grayburg-San Andres Pool was evaluated using a third reservoir simulation model. The results of this model study confirmed the floodability of the San Andres and indicated that the ultimate recovery with a water injection program would be 44 percent of the original oil in place. Consequently, based on the results of these two studies, the Technical Committee determined that the ultimate oil recovery efficiency with a water injection program for the San Andres Zones II and III would be 40 percent of the oil in place.

Q. Did the Technical Committee adopt any recommendation with respect to the injection patterns for San Andres Zones II and III?

A. Yes. The recommended water injection patterns for these zones was an inverted 9-spot injection pattern with approximately 160-acre spacing, as shown on pages 37 through 39 of the Technical Report. The injection wells were selected on the basis of both location and evidence of non-communication behind pipe with the San Andres Zone I.

Q. Did the Technical Committee come to any conclusions with respect to the amount of secondary recovery potential based on recommended injection patterns?

A. The Technical Committee determined that by installing 160-acre inverted 9-spot patterns in the San Andres Zones II and III the recovery efficiency would be

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

increased to about 24 to 40 percent and that the ultimate oil recovery would be increased by 48.6 million barrels of oil. A breakdown of the secondary recovery by study zone is listed on Table 16 and by tract and working interest owner on Tables 24, A and B, of the Technical Report.

Based on the simulation study it was determined that the San Andres production response will reach a peak of 9000 barrels of oil per day some eight years after injection begins. This constitutes an average of about 80 barrels of oil per day per producing well. This production forecast is based on an average water injection rate of 2000 barrels of water per day per well into 30 injectors during fill-up, which will take approximately 160 million barrels of water.

The total injection requirement is estimated to be 550 million barrels, of which 80 million barrels will constitute makeup volume, and again, will be obtained from the City of Hobbs. The cumulative produced water/oil ratio is expected to be 5 to 1.

Q. Mr. Lancaster, did the Technical Committee estimate remaining gas reserves?

A. Yes. The Technical Committee made estimates of both the volumes of the original gas cap gas in place and the remaining gas reserves. Gas cap volumetrics were calculated from the Grayburg net pay Isopach maps and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the San Andres porosity feet maps, included in the Technical Report as Figures 8, 10, and 12.

For the Grayburg, the calculations included an average porosity of 14 percent, based on log and core data, and a water saturation of 30 percent, which was derived from analyzing the available technical data.

For the San Andres our committee used a water saturation of 22 percent, again based on the analysis of available technical data. The distribution of the calculated 54.2 billion cubic feet of gas by tract and by working interest owner, is given on Tables 21, A and B, of the Technical Report.

In estimating the remaining gas reserves for the Grayburg, our committee used the remaining Grayburg primary oil reserves for each tract as of January 1st, 1977 and multiplied that figure by the producing gas/oil ratio for each tract during the year 1976.

For the San Andres, our committee agreed to use the gas reserves as predicted by the reservoir computer simulator that predicted the San Andres primary recovery.

The well-by-well estimates of the San Andres gas reserves were then summed up on a tract-by-tract basis. The remaining gas reserves for the Grayburg and San Andres thus determined by the Technical Committee were 8.9

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

and 98.3 billion cubic feet respectively. The distribution of the gas reserves by tract and by working interest owner is given on Tables 25A and 25B, respectively, in the Technical Report.

Q. Mr. Lancaster, I now refer you to what has been marked Shell's Exhibit Number Seventeen and ask you to identify it.

A. Exhibit Seventeen, as shown on the wall, is a summary of the capital requirements to install the North Hobbs Water Injection Program in the event Shell's applications are granted. This tabulation is based on Table 17 of the Technical Report, which has been revised using updated cost estimates. The exhibit is fairly self-explanatory and identifies the various capital requirements allocated to various parts of the project.

I might point out that the exhibit reflects the ultimate capital investment to be $33 million which takes into account future capital requirements that will be necessary through the life of the project.

Q. Now, Mr. Lancaster, I refer you to what has been marked as Shell's Exhibit Number Eighteen and ask you to identify it.

A. Exhibit Number Eighteen, as shown on the wall, is a production schedule for the North Hobbs Grayburg-San Andres Unit. In this exhibit there are two production

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

forecasts. The lower curve represents the predicted primary production performance of the North Hobbs wells without the water injection project. The upper curve represents the unit performance that we anticipate with the water injection program.

It may be noted that the unit production is anticipated to increase to more than 10,000 barrels of oil per day. It is of interest to further note that the projected life of the unit is on the order of 44 years, or approximately 10 years more than the projected life without unitization. As I have already mentioned, we anticipate that this program of water injection would provide an additional 55 million barrels of oil over the life of the project, which would not otherwise be recovered.

Q. Mr. Lancaster, I now refer you to Shell's Exhibit Number Nineteen and ask you to identify it.

A. As shown on the wall, Exhibit Nineteen is a tabulation demonstrating the difference in reserves and profitability with and without unitization of the northern portion of the North -- of the Hobbs Grayburg-San Andres Pool.

The first column on the exhibit shows the reserves and profitability without unitization. The second column shows the same thing with unitization. The third column shows the difference between the first two

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

columns.

You will note that the estimated remaining primary reserves as of January 1st of 1980 are 33.3 million barrels of oil. This was obtained by subtracting estimated production between January 1st, 1977, and January 1st, 1980, of 7.8 million barrels from the primary reserve estimate given in the Technical Report of 38.1 million barrels as of January 1st, 1977. The reserves of 85.5 million barrels of oil estimated to be recovered through unitized water injection operations includes the remaining primary of 30.3 million barrels plus the 55 million barrels of secondary reserves.

The next line on the exhibit shows the initial and ultimate investment requirement anticipated for the water injection project. Of the total anticipated capital investment of $33 million, $27 million is forecast to be spent during 1980 and '81 and an additional $6 million is forecast to be spent during the following 8 years to handle increasing volumes of oil and water.

The third line on this exhibit shows the difference in profitability with and without unitization. The profitability was broken down into two calculations.

The first sub-category shows profitability as undiscounted, or without any consideration for the time value of revenue.

Hearing Date OCTOBER 3, 1979 Time: 9:00 A.M.

NAME	REPRESENTING	LOCATION

The second sub-category shows the profitability on a present value basis with a ten percent discount, which is a more common approach shoing the effects of deferring income over an extended period of time. Consequently, as may be seen, the expected profit on an undiscounted basis for continued primary production is $405 million without unitization; $917 million with unitization; resulting in a net profit for the water injection project of $512 million.

Using this approach of calculating profitability on a discounted basis you can again see that the profit without unitization is $178 million; with unitization it's $302 million, resulting in an additional profit of $124 million, which reflects a 412 percent profit for the water injection project.

As shown on the exhibit, all profits listed do not include the payment of Federal income tax.

Q. What factors were used in these calculations?

A. The reserve estimates were taken from the Technical Report with the primary reserves adjusted for estimated production from January 1st, 1977 to January 1st, 1980. The income schedule for these reserves was based on the production schedule shown in Exhibit Nineteen. In addition to the $33 million capital expenditure, the operating costs of unit operations was estimated to be an additional

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

$100 million more than the primary operating costs without unitization.

Revenue and expenditures were based on current unit values and no adjustments were made for future inflationary factors. In developing the profits to be derived from unit and non-unit operations, the following crude prices were used: $6.25 per barrel of oil for lower tier production; $14.98 per barrel of oil for upper tier production; and $26.00 per barrel of oil for stripper production.

Q. Mr. Lancaster, realizing that the cost of operations, as well as the price of crude oil, can change, what is your opinion as to the profit values listed on Exhibit Number Nineteen?

A. In my opinion the profitabilities given on Exhibit Nineteen are conservative.

Q. Is it your opinion that the unitized management, operation, and development of the North Hobbs Grayburg-San Andres Unit is feasible and will result in a reasonable profit?

A. Yes, that is my opinion.

Q. Why is the unitized management of the North Hobbs Grayburg-San Andres Unit necessary?

A. With the water injection program, oil is forced to move from one property to another. In view of this movement, it is necessary to unitize all interests in

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

order for the owners to receive their fair share of the income from all of the oil produced within the unit. This type of arrangement benefits both the royalty and the working interest owners and protects their correlative rights, which is especially difficult to achieve in a multi-layered, heterogeneous reservoir.

In addition, the elimination of lease line barriers allows flexibility in the use of existing wells and allows variation in the injection and withdrawal rates as will be required by the reservoir's actual performance. This flexibility will result in a maximum efficiency of recovery and the elimination of waste.

Q. In addition to determining the feasibility of the project and its profitability, what other charges were directed to the Technical Committee to answer?

A. The Committee was charged with developing values of certain specified parameters, or characteristics by tract, in order to permit the working interest owners to develop an equitable method for sharing of expenses and revenue from that tract.

Q. What were these parameters or characteristics which the Technical Committee was charged to develop values for?

A. The list of parameters is included on Exhibit Fourteen under the sub-heading "F". Of the ten

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

parameters listed specifically, we were unable to obtain two. The first was the value of the oil and gas production and the second was the floodable net acre feet. We were unable to obtain the value for the oil production parameter with sufficient accuracy because of the wide variations of income per barrel of oil under the Federal price control regulations. We were unable to obtain the floodable net acre feet because of the poor quality of logs that exist as a result of the pool being very old; however, our committee did develop two additional parameters, which were, one, the primary gas reserves, and two, the gas cap volumetrics.

Q. Is this information located in the Technical Committee Report?

A. Yes, it is, on Tables 21 through 25. It might be noted that there are two tables for each set of parameters. On Table A the parameters are listed by tract and on Table B, listed by working interest owner. In each of these tables the parameters are listed as to the magnitude and the percent of the total for each tract and for each working interest owner.

Q. Mr. Lancaster, you have described for us how the Technical Committee was charged with certain tasks by the Working Interest Owners Committee and how your committee determined the feasibility and profitability of the pressure maintenance project. What, if anything, was to be

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

done with the Technical Committee's Report?

A. As I've indicated, the Technical Committee prepared the Technical Report, dated April, 1977. In this report the Committee described the history and geology of the northern portion of the Hobbs Grayburg-San Andres Pool, calculated the primary and secondary reserves, demonstrated the feasibility and profitability of this pressure maintenance project, made recommendations as to a plan of secondary recovery, based on a water injection, and provided the working interest owners with calculated values of certain parameters as a basis upon which to negotiate an equitable formula for the sharing of the expense and income of the project.

With the data from this report the Working Interest Owners Committee would be able to determine an equitable method of sharing costs and expenses of the project and to prepare a unit agreement and unit operating agreement for ratification.

Q. Based upon your technical expertise and your knowledge of the facts concerning the two applications being heard here today, is it your opinion that the granting of the applications in these consolidated cases, Number 6652 and 6653, will result in the prevention of waste and the protection of correlative rights?

A. Yes, that is my opinion.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. And is it also your opinion that the granting of these applications is reasonably necessary to carry on supplemental recovery operations so as to substantially increase the ultimate recovery of oil and gas from the Hobbs Grayburg-San Andres Pool?

A. Yes. That is also my opinion.

Q. Were Exhibits Thirteen through Nineteen prepared by you or under your supervision?

A. Yes, they were.

MR. LOPEZ: Mr. Chairman, I offer Exhibits -- Shell's Exhibits Thirteen through Nineteen into evidence.

MR. RAMEY: Shell's Exhibits Thirteen through Nineteen will be admitted.

Any questions of the witness?

MR. ATKINSON: Yes.

CROSS EXAMINATION

BY MR. ATKINSON:

Q. I do have a question for you, Mr. Lancaster. In direct examination you stated that the primary reserve, that was calculated on a well-by-well basis. Was done by extrapolation, largely by extrapolation from recent production trends.

A. For the Grayburg only wells.

Q. And the San Andres as well, I take it.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8483
Santa Fe, New Mexico 87501

A. No. The San Andres, in the San Andres we used the simulation, computer simulation.

Q. All right. Now, the computer simulation itself was based on recent production trends, though, was it not?

A. No, it was based on the complete history of each well in the total field.

Q. The -- what was the effect of the recent production trends, then, on your simulation model for the San Andres?

A. Well, the model used the production trend to match the history, so that what you -- and then it was agreed to in the simulation that when the simulation was done, that what it was going to forecast would be the primary reserve under the existing conditions of the field at that time.

Q. All right, so that in fact the simulation model, then, was created in such a way as to match the actual performance of the well, or the life of the well, up to January 1, 1977.

A. Really January -- well, really September of '76.

Q. September of '76, so in fact had the actual performance of the well differed, then the simulation model would have been altered as well to fit that perfor-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

mance, is that correct?

A. It might have, depending upon the alteration.

Q. Now you mentioned something earlier about protection of correlative rights, I believe, and about protection of the unit. Shell Exhibit Number One is no longer on the wall.

MR. LOPEZ: Yes, it is. It's way in the back. We're going to fill up the room.

Q. Okay, well, that's fine. I'll ask you this, first of all, I asked your landman this question.

The San Andres -- excuse me, the North Hobbs Unit is part of the same pool then as the South Hobbs Unit, is that correct?

A. I think basically, yes.

Q. All right. Now what are the plans for protection of the South Hobbs Unit?

A. For the protection of the South Hobbs Unit?

Q. Across the lease line between the South Hobbs Unit and the North Hobbs Unit, what are the plans for the protection of that?

A. Well, there will have to be a lease line agreement drawn up.

Q. All right, now how about with regard to --

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

once again it's hard to see, but do you know where the Moranco waterflood project is?

A. Right.

Q. Now what is being done to protect the Moranco?

A. We'll have to have a lease line agreement there, too.

Q. One more question, then. In your formula, your oil allocation formula, which is based, I believe, on -- in Phase I on 20 percent of 1976 production, 80 percent of remaining primary oil reserves, is that correct?

A. That's correct.

MR. LOPEZ: Mr. Chairman, I might assist all of this. Mr. Buck is going to be our witness to explain the --

MR. ATKINSON: I see.

MR. LOPEZ: -- participation formulas. Mr. Lancaster is here just to explain what the Technical Committee did in meeting the charge from the Working Interest Owners Committee, and therefore is the reservoir engineer who is prepared to discuss the values assigned those parameters put forth on this exhibit, but Mr. Buck will be the man who is the chairman of the Working Interest Owners Committee who can discuss the participation formulas.

MR. ATKINSON: Okay.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

Q. (Mr. Atkinson continuing.) I just have a couple more questions, then.

On the -- what assumptions were made regarding the completion intervals in calculating primary reserves?

A. You mean in setting up and forecasting the simulation model?

Q. Yes.

A. It was agreed to in the Technical Committee that everybody had had sufficient time to get their zones in shape so that the zones that were open and the conditions that existed at the time the simulation model went into the forecast would be -- would be maintained.

Q. All right. Now, in determining the economic limits for a particular well, then I take it that the position of the well in the unit is a consideration also, is that not true?

A. Well, no, not necessarily. The economic limit was determined upon when your production is no longer profitable. Now, in the case of, I think, of the simulation model, it was shut off at about 2024, because frankly, it was considered the value of any barrel of oil recovered after that would be very hard to -- to equate to the formula, or equate to the recovery.

MR. ATKINSON: We have no further questions

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

for the witness. We would like to reserve the right to recall Mr. Lancaster.

MR. RAMEY: Okay, Mr. Lancaster also will probably be around, won't you?

Any other questions? Mr. Nutter.

CROSS EXAMINATION

BY MR. NUTTER:

Q. Mr. Lancaster, now, what patterns will you be using for the two Grayburg zones? An 80-acre 5-spot, is that it?

A. That's right, yes.

Q. And then your San Andres flooding would be on a converted 9-spot.

A. That's right.

Q. Now, you won't be flooding Zone I of the San Andres at all, is that correct?

A. We do not intend to, no.

Q. Now, what is Amoco flooding in the unit to the south of your proposed unit? Are they flooding the two zones in the Grayburg?

A. They are, yes. They have tried.

Q. Are they using the same pattern that you would be using, the 80-acre 5-spots there?

A. They don't really have very many injectors

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

in the Grayburg at the moment, but that is their basic pattern.

Q. And how about the San Andres injection pattern?

A. They're using a 5-spot. We have a bit of a problem because a good part of the south unit was developed by Amoco and the wells are located in the center part of each tract, or each 140-acre section. But in the North Hobbs it was developed, and we have diagrams we can show later, it was developed on a competitive basis and you may have four wells in 160-acre tract, all within 660 feet of each other, literally, in the corner of each of the sections. So it's a little bit more difficult.

We intend to start off with an inverted 9-spot.

Q. And is it feasible that some day you might have to go to a similar pattern of whatever Amoco would be using along that line, due to a lease line agreement, then. If they're using a 5-spot in the San Andres, you might have to go to a 5-spot rather than an inverted 9-spot along the southern border of the unit.

A. Now this is something we'd have to look at when the time came.

Q. Now what is Moranco drilling up in that little plug to the north there, to the Grayburg only?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. To the Grayburg; to the Grayburg only.

Q. And they are using an 80-acre 5-spot there?

A. Yes.

Q. And you have a compatible arrangement of injection wells to their flood?

A. Yes.

Q. Now you mentioned that it would take approximately ten years to assume maximum production -- to achieve maximum production from the Grayburg and eight years from the San Andres. Is that assuming that you would be placing all of the injection wells on injection more or less simultaneously?

A. Yes.

Q. And that it will take the -- all of the producing wells that long to have their fill-up and to achieve their maximum --

A. Well, certain wells might respond earlier than others, but as a whole, this is what we've figured, that the reservoir as a whole would be slow to respond. You've got quite a bit of gas that has to be compressed, quite a bit of void space to be filled up.

Q. I see. Now you also mentioned that you had studied eight analogous San Andres reservoirs to make this -- some of these predictions for this one.

Could you name those reservoirs, please?

SALLY WALTON BOYD

A. I can't name all of them right offhand, but I can get the list for you.

Q. Okay, would you --

A. Seminole was one, Jordan was another. There was, I believe -- well, I'd have to check the list.

Q. You could furnish us with that list of reservoirs, though?

A. Yes.

MR. NUTTER: Okay, I believe that's all.

A. Now, in the -- they were not included in the report because the operators did not want that information published.

Q. But we'd like to know the names of them.

A. The names we can give you.

Q. Was the Vacuum Pool included in that study?

A. I think it was.

MR. RAMEY: Any other questions of the witness? He may be excused.

MR. RAMEY: We'll take a fifteen minute recess.

(Thereupon a recess was taken.)

MR. RAMEY: The hearing will come to order. Mr. Lopez, you may proceed.

SALLY WALTON BOYD

Santa Fe, New Mexico 87501

MR. LOPEZ: Yes, sir, Mr. Chairman. I'd like to correct about three littls gliches in Mr. Lancaster's testimony.

When he was talking about the water recovered -- required for the Grayburg injection, I think he said oil, but it's pretty obvious that he meant water.

The second thing is, I think he talked about eleven parameters on the exhibit. He mentioned ten but there are actually eleven parameters.

And the third item is that when he was talking about the income schedule for the reserves for the profitability study, he referred to Exhibit Number Nineteen but it's pretty obvious that he should have referred to Exhibit Number Eighteen.

MR. NUTTER: As long as you're making corrections, Owen, also I think it was where some monies were involved on total income for -- or something --

MR. LOPEZ: Yeah, this 412 --

MR. NUTTER: He said $412 million and it's $421 million.

MR. LOPEZ: Or 421 percent profit --

MR. NUTTER: Rather than 412.

MR. LOPEZ: Thank you, Dan. Okay.

W. E. BUCK

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

BY MR. LOPEZ:

Q. Will you please state your name and where you reside?

A. W. E. Buck. I reside in Houston, Texas.

Q. Where are you employed and in what capacity?

A. I'm employed by Shell Oil Company in Houston, Texas, as a Staff Engineer in the business coordination group.

Q. Have you previously testified before this Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you briefly describe your educational background and employment experience?

A. I graduated from the University of Oklahoma, February of 1941, with a BS degree in Petroleum Engineering. I performed military service from March, 1941, to February of 1946, and was employed by Shell Oil Company as an exploitation engineer in February of 1946.

My assignment with Shell Oil Company has

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

included various engineering and supervisory postions directly associated with the development and production of oil and gas reserves.

During the past nine years I have directed and have been responsible for Shell's efforts to unitize properties for supplemental recovery purposes. During this period I have also represented Shell and other operators' efforts to unitize properties for supplemental recovery purposes.

I have been registered as a professional engineer in the State of Texas since July 29th, 1958.

Q. Are you familiar with the applications of Shell Oil Company in Cases Numbers 6652 and 6653?

A. Yes, I am, as I have represented Shell and acted as Chairman of the Working Interest Owners Committee during the negotiations in connection with the unitization of the proposed North Hobbs Grayburg-San Andres Unit.

MR. LOPEZ: Mr. Chairman, are the witness' qualifications acceptable?

MR. RAMEY: Yes, they are.

Q. (Mr. Lopez continuing.) Mr. Buck, did the Working Interest Owners Committee hold meetings during your chairmanship?

A. Yes, they did.

Q. Were minutes taken at those meetings?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Yes.

Q. Let me refer you to what has been marked as Shell's Exhibit Number Twenty and ask you to identify it?

A. Exhibit Twenty is a bound series of copies of the minutes of the Working Interest Owners Committee meetings and related correspondence. These minutes and this correspondence were prepared by me in my role as chairman of the committee.

Q. Have you reviewed these minutes?

A. Yes, I have.

Q. Do they accurately report the actions of the Working Interest Owners Committee in those respective meetings?

A. Yes, they do.

Q. How were efforts to form the North Hobbs Unit initiated and how was the program for unitization and water injection development?

A. As Mr. Lancaster previously stated, Amoco Production Company initiated an effort in 1970 to form a pool wide unit of the Hobbs Grayburg-San Andres Pool, for the purpose of supplemental recovery operations. It became apparent that agreement could not be reached on a pool wide basis because the working interest owners could not reach agreement on the method of allocating the unit production based on the values assigned the parameters.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

At a meeting held by Amoco in July -- on July the 12th, 1973, all of the working interest owners in the Hobbs Pool decided to abandon efforts to form a pool wide unit and to divide the pool into two parts for future unitization efforts. Amoco undertook a program of unitization of the south portion of the pool and was successful in forming the South Hobbs Unit on January 1, 1975.

Shell called a meeting of all operators on July 31st, 1973, to determine what interest, if any, all of them had in undertaking a program for the unitization and water injection for the northern portion of the -- part of the pool. The operators attending this meeting actually represented a major portion of the working interest in the northern portion of the pool. They agreed to proceed with a program of unitization and water injection, and to participate in an effort to form a North Hobbs Grayburg-San Andres Unit, with Shell Oil Company acting as unit expeditor and unit operator if the efforts toward unitization were successful.

As Mr. Lancaster discussed, the operators in attendance at this meeting charged the Technical Committee with the task of developing a Technical Study for the proposed North Hobbs Grayburg-San Andres Unit.

The operators instructed the Technical Committee to obtain general agreement on all items considered.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

The Technical Committee was instructed to bring any matters upon which general agreement could not be reached to the Working Interest Owners Committee for direction or decision.

This Technical Committee consisted of representatives of all working interest owners who wished to participate and Shell's representative acted as chairman of the committee.

Q What actions were taken by the Working Interest Owners Committee during the time the study was being developed by the Technical Committee?

A No further meetings of the Working Interest Owners Committee was held until May 26th, 1977; however, in the meantime the Technical Committee asked our committee to act on two of its recommendations.

Our first action was to approve the recommendation of the Technical Committee to adopt a cutoff date of January 1, 1975, for all well logging data and well test information which they were going to consider in completing their charge. The need to adopt a cutoff date is fairly self-evident. As was stated in the ballot submitted to the working interest owners, a cutoff date was necessary in order to bring certain facets of the Technical Committee's work to a conclusion so that it could proceed with answering their charge. Our approval of this recommendation was arrived at by a written ballot vote on September the 26th, 1974.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

The second action our committee took was to adopt the Technical Committee's recommendation to approve a computer analysis of certain study zones using Shell's three dimensional, compressible fluid reservoir simulation program. This recommendation was approved by 88.5 percent of the working interest owners involved in the northern portion of the Hobbs Pool, again by written ballot on March 15th, 1975. The percentage approval was based on each working interest owner's respective percentage of oil production from the northern portion of the Pool during the year -- there's an error in that date and I'll have to check my minutes for that date. I apologize. That should be a portion of 1973.

MR. LOPEZ: Okay, sorry for the hitch. When did the Technical Committee complete their charge and what action was then taken by the Working Interest Owners Committee?

A. The Technical Report which has been previously introduced as Shell's Exhibit Number Sixteen, was formally submitted to the Working Interest Owners Committee at a meeting on May 26th, 1977. This Technical Report was accepted by the Working Interest Owners Committee as the completion of their charge.

76.6 percent of the working interest owners, again based on 1976 oil production, accepted the study as a

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

basis for unitization negotiations.

Q. Excuse me, Mr. Buck, should that also be 1973? It should not be '76?

A. I'm sure that that is correct, '76 there.

Q. This is '76.

A. Exxon's acceptance was qualified because Exxon was not yet ready to accept the gas reserve parameters. Exxon later accepted without qualification the Technical Report as a basis for unit negotiations. Ultimately, not one working interest owner objected to the use of the Technical Report as the basis for unit negotiations.

Q. Was a method developed for allocating all of the oil and gas to be produced from the Unit Area, and if so, in what manner was it developed?

A. At a meeting of the Working Interest Owners Committee on July the 12th, 1977, efforts were initiated to develop a participation formula or method of allocating the oil and gas to the various tracts within the Unit Area. The meeting was attended by working interest owners representing more than 92 percent of the unit participation based on the lowest participation of any of the formulas considered at that meeting.

At this meeting a total of twelve different participation formulas were proposed by ten different working interest owners. Each proposal was considered and a roll-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

call vote was taken of the working interest owners in attendance. None of the twelve formulas received more than 50 percent approval of the working interest owners in attendance.

In the absence of agreement, the meeting of the Working Interest Owners Committee was adjourned with the intent of renewing efforts at a later date after all parties had time to review the efforts to date.

The Working Interest Owners Committee again met on September the 20th, 1977, in its continuing effort to develop an acceptable participation formula. Five additional formulas or methods of allocation were proposed at this meeting. Each new method -- formula was considered by the committee and a roll-call vote of the working interest owners present was taken on each formula.

Continental Oil Company presented the fifth formula considered at this meeting and the seventeenth proposal in all. Continental's formula received in excess of 83 percent approval of the working interest owners on a roll-call vote.

At the request of the working interest owners, a written ballot on this formula was submitted and returned by mail. This formula provided for participation by the working interest owners during three specified phases of the life of the project and based on each working interest owner's respective oil participation in each phase, the re-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

sults of the ballot were: Phase I, 92.01 percent working interest owners' approval, with only 1.46 percent disapproval Phase II, 92.58 percent approval, with only 1.30 percent disapproval; and Phase III, 89.76 percent approval, with only 1.27 percent disapproval.

Q Would you state what is the participation formula which received the percentage approval you've just described, and also tell the Commission how it works, and in this connection I refer you to what has been marked as Shell's Exhibit Number Twenty-one.

And preliminarily, let me suggest, Mr. Chairman, the date was shown on the exhibit as 9. We've changed it to 7 on the wall exhibit and we've also corrected the Commission exhibit, but all the other exhibits that are floating around have the wrong date.

So we're clear, this Exhibit Twenty-one, the date shown in the phase allocation should read January 1, 1977, throughout. Okay.

A. Actually, participation was made up of two formulas, one for oil and one for gas, each divided into three parts or phases.

As shown on the exhibit, the formula for oil allocation in Phase I participation was based on 20 percent of the ratio of the quantity of 1976 oil production from each tract to the total quantity of 1976 oil production from

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-4462
Santa Fe, New Mexico 87501

all tracts within the Unit Area, plus 80 percent of the ratio of the quantity of remaining primary oil reserves of each tract within the Unit Area as of January 1, 1977, as set forth in the Technical Report to the total quantity of remaining primary oil reserves of all tracts within the Unit Area as of the same date.

In Phase II the participation was based on 100 percent of the ratio of the quantity of remaining primary oil reserves for each tract within the Unit Area, again as of January 1, 1977, to the total quantity of remaining primary oil reserves of all tracts within the Unit Area as of the same date.

In Phase III participation was based on 100 percent of the ratio of the quantity of secondary oil reserves for each tract within the Unit Area as set forth in the Technical Report, to the total quantity of secondary oil reserves of all tracts within the Unit Area.

The gas participation formula is the same in principle as the formula for oil participation.

In Phase I participation was based on 20 percent of the ratio of the volume of 1976 gas production from each tract within the Unit Area to the total volume of 1976 gas production from all tracts within the Unit Area, plus 80 percent of the ratio of the volume of remaining primary gas reserves of each tract within the Unit Area as

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

of January 1, 1977, as set forth in the Technical Report, to the total volume remaining primary gas reserves of all the tracts within the Unit Area as of the same date.

In Phase II participation was based on 100 percent of the ratio of the volume of remaining primary gas reserves for each tract within the Unit Area, again as of January, 1977, to the total volume of remaining primary gas reserves of all the tracts within the Unit Area as of the same date.

In Phase III participation was based on 100 percent of the ratio of each tract's quantity of secondary oil reserves within the Unit Area as set forth in the Technical Report, to the total quantity of secondary oil reserves of all tracts within the Unit Area.

Q. Mr. Buck, now that you've described how unit oil and gas production will be allocated to each tract during three phases, would you explain the duration of each phase?

A. With respect to the duration of each phase, Phase I is to start on the effective date of unitization and continue until the first day of the month following the month in which the total number of barrels of oil produced from all tracts within the Unit Area after the effective date of unitization equalf four million barrels.

Phase II starts at the termination of

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Phase I and continues until the first day of the month following the month in which the total number of barrels of oil produced after January 1, 1977, from all tracts within the Unit Area equals 38,071,683 barrels, which is the quantity of remaining primary oil reserves of the Unit Area, as of January 1, 1977, as set forth in the Technical Report.

Phase III begins with the termination of Phase II and continues to the remainder of the term of unitization or life of the project.

Q. Is then the oil and gas that is produced from the Unit Area less that used in the conduct of unit operations or unavoidably lost, to be allocated to the separately owned tracts within the Unit Area on the basis of the participation formula just stated?

A. Yes. This method of allocation is set forth in Section 13, page 9, of the Unit Agreement for the North Hobbs Grayburg-San Andres Unit, which has been introduced as Shell's Exhibit Number Three.

Q. Why is there a split formula with respect to Phase I of the unit operations?

A. The relationship of a tract's production to the production of other tracts, or to the total of all tracts, at a given time, or for a relatively short period, is not necessarily the same as the relationship of the remaining primary reserves of such a tract to the total of

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

all tracts; therefore, a rate of production for a fixed period was used as a parameter in Phase I to provide some adjustment. Phase I is for only a short period of time, the time it takes to produce four million barrels of oil. By the time four million barrels of oil are produced it is anticipated that the rate of production of the unit will begin to increase so that soon thereafter all tracts will be allocated oil at a rate greater than they enjoyed prior to unit operations.

Q. Do you have an opinion as to whether or not the participation formula contained in the Unit Agreement allocating the produced and saved unitized hydrocarbons to the separately owned tracts in the Unit Area does so on a fair, reasonable, and equitable basis?

A. Yes, I believe it does.

As may be noted, the first two phases are based fundamentally on the remaining primary reserves of each tract as determined by the Technical Committee, a committee on which all working interest owners were invited to be represented. By using this factor as the basis for the allocation of oil and gas produced under the proposed Unit Agreement, each tract would receive first from the Unit's operation an amount of oil and an amount of gas equal to the amounts each would have received if primary operations had continued without unitization.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Phase III, being based entirely on a given tract's secondary recovery potential, allows each tract to recover its contributed share of the added reserves. This condition is very desirable in that it places any risk of recovery upon the supplemental oil, or that additional oil that is made possible by unit operation. With the amount of oil involved in the North Hobbs Unit, royalty interest owners, working interest owners, and the State of New Mexico, can all feel quite certain that they will receive at least as much oil and gas from unit operations as they would have received from continued operations without unitization, and know they all stand to benefit from the additional oil recovered by water injection.

Placing the risk of recovery on the anticipated secondary potential is quite reasonable and fair when one considers the fact that the tracts differ in their share of primary and secondary reserves contributed to the unit. Some tracts have a smaller share of the remaining primary recovery than their share of the secondary or supplemental oil, and by the same token, some tracts have a higher share of the remaining primary than their share of the secondary reserves.

For example, two tracts might be allocated the same total amount of oil from unit operations. Assume one of these tracts receives most of its oil by reasons of

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

its primary contribution and very little from its secondary contribution, and that the other tract receives its oil allocation based upon the opposite mix of its primary and secondary contribution. It is therefore reasonable that the first tract with possibly less incentive for unitization and water injection, should bear only that risk of recovery which is in proportion to its incentive or secondary potential. Conversely, the second tract which has a greater incentive for unitization and water injection by virtue of the greater secondary recovery potential, should bear the risk related to that potential benefit. The participation formula achieves this desirable and necessary result.

Q. How were procedures developed for allocating unit expenses to the various separately owned tracts?

A. The percentages for allocating unit expenses were developed in a manner similar to that involved in the developing of the participation formula; that is, by the working interest owners.

Unit expenses were considered as two separate items, operating expense, which is comprised of the costs associated with the actual unit operations and investment cost, which is comprised of the cost of the facilities, including the construction costs required for the water injection program.

At a metting of the Working Interest Owners

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Committee on February the 2nd, 1978, consideration was given to the methods to be used for allocating the unit expenses. Six methods were proposed and considered at the meeting. A roll-call vote was taken on each method proposed. The sixth proposal considered received in excess of 76 percent approval of the working interest owners on a roll-call vote. The working interest owners then agreed to submit by mail the sixth proposal for ballot vote.

The results of the written ballot, again based on each working interest owner's respective oil participation in each phase were: Phase 1, 85.3 percent approval, with only 10.2 percent disapproval; Phase II, 85.8 percent approval, with only 9.7 percent disapproval; Phase III, 83.6 percent approval, with only 14.6 percent disapproval.

In addition, based on their initial share of the investment cost, this formula received 84.9 percent approval with only 11.7 percent disapproval.

Q. What was the method developed for the sharing of unit expenses, and in this connection I refer you to Shell's Exhibit Number Twenty-two?

A. The method of allocating unit expenses finally agreed upon is shown on this exhibit. The unit operating expenses, which are referred to in Article 11 of the Unit Operating Agreement, are to be shared by the working interest owners in proportion to their Phase I,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Phase II, or Phase III, unit participation based on oil, depending on which phase is in effect at the time a particular expense is incurred.

The cost of investment items incurred prior to the Investment Readjustment Date, which is defined in Article 1.2 of the Unit Operating Agreement as the termination of Phase II, or January 1, 1991, whichever occurs first, is to be shared by working interest owners in proportion to their investment participation, which again is defined in the Unit Operating Agreement as .58 of Phase II unit participation, plus .42 of Phase III unit participation. The cost of investment items incurred after the Investment Readjustment Date will be shared by working interest owners in proportion to their Phase III unit participation.

At the time of the Investment Readjustment Date, all investment costs incurred prior to such time are to be adjusted among all the working interest owners in accordance with their respective Phase III unit participation.

Q. Is this the method stated in the Unit Operating Agreement for allocating unit expenses to the working interest owners?

A. Yes. Article 11 of the Unit Operating Agreement, which is Shell's Exhibit Four, sets forth the method of allocating the costs of unit operations, including capital investments in the manner I've just described.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1020 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

Q. Do you consider these methods of allocating unit expenses to be fair, reasonable, and equitable?

A. Yes. The proposed water injection program in conjunction with the participation formula results in the accelerated recovery of an amount of oil equivalent to each tract's remaining primary reserve, as well as allowing for the recovery of supplemental reserves. In view of the fact that benefits will result from the accelerated recovery, it is fair and reasonable that this accelerated recovery should be considered in the allocation of unit expenses. Therefore, the allocation of operating costs on the basis of the phase in effect at the time the costs are incurred, and the weighting between primary and secondary reserves in the initial allocation of investment costs, as well as the provisions for the readjustment of Phase III unit participation, allocates the expense burdens in proportion to the benefits to be derived from the project.

Q. How are credits or charges to be made for such items as wells, tanks, pumps, machinery, and equipment contributed to unit operations?

A. Consideration was given to such items by the Working Interest Owners Committee at the same time and in association with the development of a method for allocating unit expenses. As noted in Article 10 of the Unit Operating Agreement, all items contributed to unit operations

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

by the working interest owners are to be inventoried and a value assigned immediately after the effective date of initization. The value of the inventoried items will be adjusted initially among the working interest owners in proportion to their investment participation, just as for investment costs.

At the Investment Readjustment Date the value of the inventoried items, less the value of any items retired, is to be readjusted among all working interest owners in accordance with their respective Phase III unit participation.

Q. Does the Unit Operating Agreement provide for the situation where a working interest owner does not pay his share of the unit expense?

A. Yes. Article 11.5 of the Agreement provides that in this case the unit operator shall hve a lien on the unit oil and gas owned by that working interest owner and the unit operator shall have the right to collect the proceeds from the sale of that oil and gas until the reimbursable amount owed, plus interest, has been paid.

Q. Does the Unit Agreement and the Unit Operating Agreement provide for the designation and removal of the Unit Operator?

A. Section 6 of the Unit Agreement and Article 6.1 of the Unit Operating Agreement designate Shell as the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

unit operator.

Article 6.2 of the Unit Operating Agreement and Sections 7 and 8 of the Unit Agreement provide a procedure for the removal of the Unit Operator and the selection of a successor.

Q. Does the Unit Operating Agreement provide a method for voting on unit matters?

A. Yes. Article 4 of the Unit Operating Agreement sets forth the voting procedures for voting on matters to be decided by the working interest owners.

Q. Does the Unit Agreement provide for putting the unit into effect and terminating it?

A. Yes. The unit is to become effective as provided by Section 39 of the Unit Agreement. The Unit Agreement may be terminated as provided in Section 24 of the Unit Agreement.

I might further add that this section of the Unit Agreement to which I have just referred provides by its own terms for its own ipso facto expiration on January 1, 1980, if the unit does not become effective by that date.

Q. Is it your opinion that the granting of these applications is in the interests of prevention of waste and protection of correlative rights?

A. Absolutely.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8483
Santa Fe, New Mexico 87501

Q. And is it also your opinion that the granting of these applications is reasonably necessary to carry on the supplemental recovery operations so as to substantially increase the ultimate recovery of oil and gas from the Hobbs Grayburg-San Andres Pool?

A. Yes, that is my opinion.

Q. Mr. Buck, one final question.

Based on your very intense and extensive involvement in the unitization effort you have just described, do you have an opinion as to whether unitization would be undertaken again in the forseeable future if the application for unitization is not approved as presented?

A. Naturally I hope this question will be moot, but I might comment that our efforts to date have all been to form the North Hobbs Unit, and in view of the overwhelming response we have had from the working -- from the 80 working interest owners, and the 905 royalty interest owners, it just hasn't seemed appropriate or necessary, nor was time available, to develop a "what if" program.

Nevertheless, I think that when one considers that Amoco was unable to reach agreement and form a unit in spite of the tremendous time and effort they expended in their attempts to include the northern portion of the pool in the unit; two, the complexity and history of the reservoir; three, the methods, the time, and the expense

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

required to evaluate the reservoir, remembering that the Technical Committee spent nearly four years in gathering data, developing a method of evaluation and obtaining acceptance of their report by the Working Interest Owners Committee; four, that a unit expeditor is not compensated for its time, engineers, lawyers, accountants, clerks, landmen, et cetera, when a unit is not formed, but only by his share of added oil when a unit is formed; five, when I think of the number of interested parties involved, 80 working interest owners, 905 royalty interest owners, and think about what it takes to get all or most to agree on anything, much less a method of sharing over 85 million barrels of oil, of which over 55 million barrels constitute oil that would not otherwise be recovered; six, that the incentive for a water injection program decreases with time, both from a reservoir recovery standpoint and from an actual construction and operational standpoint -- for example, part of the unit area is within the city limits of Hobbs, and the growth of the city's residential areas makes it increasingly difficult to do the necessary construction and drilling work; and seven, the fact that this effort has had an excellent response, ratification or acceptance by more than 92 percent of the working interest owners and 97 percent of the royalty interest owners, and in my judgment there is little or no assurance of improving upon this level of acceptance, if unitization is not

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

brought about by such an effort and response, then the risk of another attempt to unitize would be extremely high, too high, maybe.

Considering all these things, Shell, or any other operator, would have to think long and hard before again undertaking such a monumental task when there is no reason to believe that the commitment of additional time, money, and professional talent would produce a better result than we have achieved to date.

Q. Were Exhibits Twenty through Twenty-two prepared by you or under your supervision?

A. Yes, they were.

MR. LOPEZ: Mr. Chairman, I offer Shell's Exhibits Twenty through Twenty-two into evidence.

MR. RAMEY: Shell's Exhibits Twenty through Twenty-two will be accepted.

Any questions of the witness?

CROSS EXAMINATION

BY MR. ATKINSON:

Q. Mr. Buck, I just have a couple of questions for you.

How much of the $33 million capital investment will be subject to readjustment at the end of Phase II?

A. Of the $33 million?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Yes, sir.

A. As now estimated, as I recall, the -- the total of the $33 million, which I believe is to be the capital investment required for installation, would be adjusted to the Phase III participation at the end of Phase II.

Q. The entire $33 million?

A. That is correct.

Q. Also now can the ipso facto termination be extended from six months by agreement of the working interest owners?

A. It can be by the approval of the working interest owners who have ratified the agreement.

MR. ATKINSON: We have no further questions

MR. RAMEY: Any other questions of the witness? He may be excused.

MR. LOPEZ: Maybe, if we could just take about a three minute break, we've got a lot of exhibits to hang up.

(Thereupon a short recess was taken.)

MR. KILPATRIC: Mr. Chairman, we're ready any time you are.

MR. RAMEY: All right, please proceed.

Santa Fe, New Mexico 87501

R. W. PHILLIPS

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

BY MR. KILPATRIC:

Q. Would you please state your name, where you reside, and by whom you are employed, and in what capacity?

A. My name is R. W. Phillips. I live in Houston, and I am employed by Shell Oil Company as a Staff Production Engineer.

Q. Have you previously testified before the Commission and had your qualifications accepted as a matter of record?

A. No, I have not.

Q. Would you briefly describe your educational background and employment experience?

A. I received a BS in Mechanical Engineering and a BS in Petroleum Engineering from Texas A & M University in 1949. I joined Shell in August of 1949. I have had production engineering type assignments for Shell in Elk City, Oklahoma; Wichita,Kansas; Ardmore, Oklahoma; Oklahoma City,

Denver, New Orleans, and Houston. I am a Registered Professional Engineer in the States of Colorado and Louisiana.

Q. Do your duties as Production Engineer for Shell include responsibilities for Shell's operations in New Mexico, specifically the North Hobbs Unit under discussion today?

A. Yes, they do.

Q. Are you familiar with Shell Oil Company's application in Cases Numbers 6652 and 6653?

A. Yes, I am.

I have been charged by Shell with the job of coordinator of engineering with responsibility for coordinating the project planning in connection with unitization efforts. In this capacity I have reviewed the wells to be included in the North Hobbs Unit Area as to their current completion and their proposed utilization in the unit operation. I also coordinated engineering efforts toward the implementation of this water injection project.

MR. KILPATRIC: Mr. Chairman, are the witness' qualifications acceptable?

MR. RAMEY: Yes, they're acceptable.

Q. (Mr. Kilpatric continuing.) I refer you now to what has been marked as Shell's Exhibit Number Twenty-three and ask you to identify it.

A. Exhibit Number Twenty-three is a location

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-4462
Santa Fe, New Mexico 87501

plat which shows the following:

The location of the proposed injection wells in the unit area;

The location of all other wells within a radius of two miles from the proposed injection wells;

The formation from which these wells are producing or have produced; and

The lessees within a radius of two miles from the proposed injection wells.

At the bottom of this exhibit there exists a legend which shows the status of all wells shown on the plat, for example, whether a well is a proposed injector, or is plugged and abandoned, or what have you. You will also note that on the exhibit on the wall we have outlined the Hobbs City Limits in red.

Q. Now I refer you to what has been marked as Shell's Exhibit Number Twenty-four and ask you to identify it.

A. Exhibit Number Twenty-four is the well numbering system proposed for the North Hobbs Grayburg-San Andres Unit.

This exhibit has two parts. The first part is a plat showing the method for numbering the unit wells. For example, there are no sections in the Unit that have the same number; therefore, the base unit number is the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

section's number, as shown in the enlargement of Section 28. The individual wells within the section are identified by rows and tiers which match the established 40-acre proration units in which the well or wells are located.

The enlargement identifies Well No. 28-241. The well is located in Section 28, Row 2, Tier 4, and is the only well located in this proration unit. If there was another well in the same proration unit, it would be identified as Well No. 28-242.

The second part of this exhibit is a tabulation showing the unit wells identified both by the proposed numbering system and also by the operator.

Q. I now refer you to what has been marked as Shell's Exhibits Numbers Twenty-five and Twenty-six and ask you to identify them.

A. Exhibit Number Twenty-five is a diagrammatic sketch of all wells to be converted to injection wells. These sketches show all casing string diameters, setting depths, quantities of cement used and tops of cement, completion intervals, and total depth of each well. A tabular summary of all wells to be converted to injection is attached as part of this exhibit and shows the current operator and well number and the proposed unit well number.

Exhibit Number Twenty-six is a series of three different diagrammatic sketches which illustrate the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

three types of typical completions of producers which we anticipate converting to injectors. These sketches show tubing diameters and packer setting depths. In addition, these sketches show that these injectors will have corrosion inhibited inert fluid in the tubing-casing annulus and that the tubing will be internally lined with a non-reactive corrosion preventing coating. Provisions will be made for monitoring injection pressure and tubing-casing annulus pressures in order to detect any leaks that might occur.

Q. Now I refer you to what has been marked for identification as Shell's Exhibit Number Twenty-seven and ask you to identify that.

A. Exhibit Number Twenty-seven is a tabulation of wells to be drilled and their proposed location including the unit well number of each of these wells and the proposed use of these wells.

Q. Now I refer you to what has been marked for identification as Shell's Exhibit Number Twenty-eight and ask you to explain it.

A. Exhibit Number Twenty-eight is a series of four diagrammatic sketches showing how the newly drilled injectors and producers will be completed. In addition, these sketches show that the injectors will have non-reactive internally lined corrosion protected tubing with a packer set 100 feet above the uppermost perforation. The sketches

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3011 Plaza Blanca (505) 471-2402
Santa Fe, New Mexico 87501

further show that the tubing-casing annulus will be filled with a corrosion inhibited inert fluid and provision will be made for monitoring injection pressure and tubing-casing annulus pressure.

Both producers and injectors will have a minimum of 350 feet of surface casing and all casing strings will be cemented to the surface.

Q. Were all available logs with respect to wells proposed for conversion to injection within the Unit previously given to the Commission?

A. Yes, they were under the original application of August 15, 1979.

MR. KILPATRIC: At this time, Mr. Chairman, I request that the Commission take administrative notice that all these logs were submitted with Shell's application in Case Number 6653 and that the Commission make them a part of the record in these cases.

MR. RAMEY: So done.

MR. KILPATRIC: Thank you.

Q. (Mr. Kilpatric continuing.) Are there any wells proposed for conversion to injection for which no logs were available and in this connection I refer you to what has been marked for identification as Shell's Exhibit Number Twenty-nine.

A. Yes, there are six such wells and Exhibit

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Twenty-nine is a tabulation of these six producers proposed to be converted to injectors for which no logs are available.

Q. I now refer you to what has been marked for identification as Shell's Exhibit Number Thirty and ask you to identify it.

A. Exhibit Number Thirty is a tabular summary for all wells which penetrate the injection zone and which are located within one half mile of the proposed injection wells. The tabulation consists of four parts:

Part One is a tabulation of all proposed unit wells.

Part Two is a tabulation of all active wells completed below the Grayburg-San Andres interval and within the Unit boundary.

And Part Three shows all active wells outside the Unit boundary.

And Part Four shows all plugged wells.

The tabular summary shows all casing strings, setting depths, amount of cement used, cement tops, total depth, producing interval, and well identification and location.

Q. I now refer you to what has been marked for identification as Shell's Exhibit Number Thirty-one and ask you to identify it.

A. Exhibit Number Thirty-one is a series of

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

diagrammatic sketches of each plugged and abandoned well which penetrates the injection zone and is located within one half mile radius of the proposed injectors.

These sketches show the position of all cement plugs placed in the wellbore during abandonment work.

Q. Now I refer you to what has been marked as Shell's Exhibit Number Thirty-two and ask you to describe it.

A. Exhibit Number Thirty-two is a copy of the water contract that Shell successfully negotiated with the City of Hobbs, New Mexico. The contract provides for the purchase of treated waste water which will be used for injection water in the Pressure Maintenance Project.

Our initial term contract with the City of Hobbs provides for the purchase of 50,000 barrels of water per day at a cent and a half per barrel and means an annual income to the City of Hobbs of $274,000.

Q. Do you plan to use any other water source for injection in your pressure maintenance project?

A. Yes. We plan to use water produced by unit operations. We will have about 20,000 barrels of water per day available from this production and therefore will plan to use a total of 70,000 barrels of water per day initially for injection.

Q. I now refer you to what has been marked for

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

identification as Shell's Exhibit Number Thirty-three and ask you to identify it.

A. Exhibit Number Thirty-three is a list of the proposed special rules and regulations for the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project. The proposed rules encompass the method for allowable calculations, establishing drilling well locations, completion of newly drilled and converted wells, restrictions on water injection, monitoring wells for problems, and investigation of formation isolation integrity in injection wells.

Q. It is apparent that the proposed Unit Area for the North Hobbs Grayburg-San Andres Unit does not encompass the entire Hobbs Grayburg-San Andres Pool in Lea County, New Mexico, but only a part thereof. Have there been any negotiations regarding the development of line agreements with owners or operators of other properties within the pool, but outside the proposed Unit Area?

A. Yes. There are only two water injection projects which offset the proposed Unit Area. One of them is the Moranco Rice-Hardin Waterflood Project to the north, and the other is the Amoco Operated South Hobbs Grayburg-San Andres Unit on the south. We are in the process of negotiating line agreements with both Moranco and Amoco.

In the case of Moranco -- of the Moranco Rice-Hardin Waterflood Project, we propose to convert to

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

water injection the following wells in the North Hobbs Unit: Well No. 18-131 -- I'm sorry. Well No. 13-331, which is currently Shell-Rice No. 4; Well No. 18-131, the current Amerada-Hardin 3; Well No. 18-311, the current Gulf-Hardin 7; and Well No. 13-221, the current Conoco State "B4". Two of these wells are not included in our current application. We will need to obtain the unit working interest owners' approval for the conversion of these two additional wells, and upon securing that approval we will apply to the Division for administrative approval for these additional injectors.

Q. Do you have an opinion as to whether the North Hobbs Unit operations will have an adverse affect upon other portions of the Hobbs Grayburg-San Andres Pool?

A. With the completion of the North Hobbs Unit there will be three water injection programs within the Hobbs Pool, which will provide proper protection for all parties. In addition, either the Special Rules and Regulations for the North Hobbs Unit or line agreements will further assure that there will be no adverse effect upon other portions of the Hobbs Pool.

Q. I now refer you to what has been marked for identification as Shell's Exhibit Number Thirty-four and ask you to explain it.

A. Exhibit Number Thirty-four is a diagram depicting the history of the efforts that have gone into

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

developing the project and the projected schedule for implementation of the project.

The top portion of the diagram depicts the work of the Technical Committee and negotiations of the working interest owners since initial efforts began in July, 1973. This top portion of the diagram also shows the time allocated for planning the unit implementation and the anticipated effective date of unitization.

The second line from the top of the diagram represents the time involved in searching, locating, negotiating, and securing a source of make-up water. As I've already indicated, the make-up water will be otained from the City of Hobbs.

The third line from the top reflects time and effort spent in the planning involved in the design of the production, injection, and water source systems, and the acquisition of sites and rights-of-way to accomodate these plans.

The bottom line of the diagram represents the planning and effort involved in developing the details of the drilling and well workover programs necessary for the implementation of the Pressure Maintenance Project.

This exhibit graphically illustrates what the testimony which you've heard today clearly shows, that the magnitude and complexity of this project have been nothing

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

less than monumental.

Mr. Campbell has explained what efforts were involved in determining who had ownership interests in the proposed unit area and what efforts were involved in locating, contacting, and obtaining the consent of the incredibly numerous royalty owners and working interest owners involved.

Mr. Lancaster has described the Technical Committee's arduous four-year task of gathering the necessary technical data with accuracy, developing a method of evaluating that data, and in turn compiling that data into the Technical Report, which was accepted by all the working interest owners as a basis for their negotiations in reaching agreement as to the fair and equitable distribution of the burdens and benefits to be obtained from the production of over 55 million additional barrels of oil.

Finally, as Mr. Buck has explained, the working interest owners sat down, rolled up their sleeves, and hammered away until they were able to reach fair and equitable formulas for the sharing of these burdens and benefits.

The exhibit also shows that the efforts just described have only set the stage for the actual implementation of the project. If our efforts here today are successful, there remains much to be done to finally realize

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the very significant and important gains that the project holds.

Q. Were Exhibits Twenty-three through Thirty-four prepared by you or under your supervision?

A. Yes, all these exhibits, with the exception of the Exhibit Number Thirty-two, which -- were prepared by me or under my supervision.

With respect to Exhibit Thirty-two, this represents a copy of the actual agreement that was submitted to and executed by the City of Hobbs.

MR. KILPATRIC: Mr. Chairman, I offer Exhibits -- Shell's Exhibits Numbers Twenty-three through Thirty-four into evidence.

MR. RAMEY: Exhibits Twenty-three through Thirty-four will be accepted.

I think before we submit Mr. Phillips to cross examination, it might be wise to take statements from the other people who wish to make them.

MR. NAERT: Mr. Chairman, my name is Gilbert A. Naert, N-A-E-R-T, with Marathon Oil Company, and I'm a Senior Petroleum Engineer and I'd like to state before I read this statement that I've been directly involved in the attempted efforts to unitize the Hobbs Field since its inception in 1969 and 1970, when, as you know, we tried to unitize the entire field with PanAmerican, or Amoco, as oper-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

ator.

Marathon Oil Company is a working interest owner with leases included in the North Hobbs Grayburg-San Andres Unit in Lea County, New Mexico, and we make this statement in support of Shell Oil Company's application in Case Number 6652 and 6653 before the Oil Conservation Commission for approval of said unit.

Marathon has been participating in discussions concerning possible unitization and water flooding of these producing zones in the Hobbs Field for the past ten years. This is the first time that a substantial majority of the working interest owners in the proposed unit have been able to agree upon participation in a unitized waterflood operation.

Marathon, in executing the Unit Agreement and supporting the application believes that the proposal is essentially a fair one to all parties concerned and if adopted and implemented will result in increased production of much needed additional oil and consequently will prevent waste that might occur under continued competitive operation.

We urge approval of the unit proposal of Shell Oil Company.

Thank you.

MR. INGRAM: I'm Hugh Ingram. I'm Conservation Coordinator for Conoco, Inc., Hobbs, New Mexico.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Conoco, Inc. is a working interest owner in the proposed North Hobbs Grayburg-San Andres Unit and supports Shell's application for statutory unitization of the proposed North Hobbs Unit. We believe that the formation of this unit is in the best interests of conservation, the prevention of waste, and the protection of correlative rights of all parties concerned.

MR. RAMEY: Anyone else?

MR. PERRY: Mr. Commissioner, my name is Boyce Perry. I'm the manager of secondary recovery for Samedan Oil Corporation.

I would like to read this statement into the record of this hearing.

Samedan Oil Corporation is a working interest owner in the North Hobbs Unit and has been involved in the proceedings of the unitization of the North Hobbs Unit since its concept; have taken on the feasibility study, compilation of the Technical Committee Report, and negotiations for participation in investment formulas.

We stand in support of all aspects of unitization efforts and believe and accept unitization of the North Hobbs Field under the proposals submitted at this hearing by Shell Oil Company.

MR. ALLEN: Mr. Chairman, I'm James Allen with Amoco Production Company, Houston, Texas. I'm a Senior

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Petroleum Engineering Supervisor.

Amoco Production Company is an operator in the proposed North Hobbs Grayburg-San Andres Unit. We have ratified both the Unit Agreement and the Unit Operating Agreement.

Amoco hereby recommends that the Commission approve the proposed unit and pressure maintenance project as proposed by Shell Oil Company in Cases Numbers 6652 and 6653.

MR. MORAN: I'm R. M. Moran, President of Moranco, Hobbs, New Mexico. I'm both the lease line operator and in the unit and Shell invited me out and we support it all.

MR. RAMEY: Anyone else?

MR. HEFLEY: I'm Jim Hefley, Unitization Manager for Amerada Hess Corporation, Tulsa, Oklahoma.

Amerade Hess Corporation is a working operator within the unit boundary and we have ratified Shell's Unitization Agreement and support the proposal here.

MR. NUTTER: What was your last name again, please, sir?

MR. HEFLEY: Hefley, H-E-F-L-E-Y.

MR. NUTTER: Thank you.

MR. RAMEY: Any other statements? We'll recess until 1:30.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

(Thereupon the noon recess was taken.

Thereafter at the hour of 1:30 p.m. on the 3rd day of October, 1979, the hearing was again called to order and the following proceedings were had, to-wit:)

MR. RAMEY: The hearing will come to order.

Were you through with Mr. Phillips?

MR. KILPATRIC: Yes, Mr. Chairman, Shell has completed the direct examination.

MR. RAMEY: Are there any questions of this witness?

MR. ATKINSON: I have no questions, thank you.

MR. RAMEY: Mr. Stamets?

CROSS EXAMINATION

BY MR. STAMETS:

Q. Mr. Phillips, Figures 35 through 39 of the Waterflood Feasibility Unitization Parameters show the injection and production patterns for the various zones to be flooded, and those are certainly some odd looking patterns

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3150 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

in there. Has any consideration been given to infill drilling in this proposed unitization project?

A. Mr. Stamets, I'm going to have to refer you to the Technical Committee people for that question because I was not involved in developing the plan, and right now we're sticking to that plan.

Q. Okay, nonetheless, I would wish you would put someone on, back on to answer the question, whoever it should be.

MR. LOPEZ: Yes, we will.

MR. KILPATRIC: We will.

MR. LOPEZ: We'll be glad to.

MR. RAMEY: Any other questions of Mr. Phillips? He may be excused.

MR. LOPEZ: Mr. Chairman, that concludes Shell's direct testimony. I would of course request to be allowed to make a closing statement at the conclusion of the evidence.

MR. RAMEY: I think that can be arranged, Mr. Lopez.

Let's see, who did you want to put back on to answer your question?

MR. LOPEZ: I'll be glad to put Mr. Lancaster on for that particular question.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

BILL LANCASTER

being recalled as a witness and being still sworn upon his oath, testified as follows, to-wit:

CROSS EXAMINATION

BY MR. STAMETS:

Q. The question refers to the injection patterns that are shown on Figures, I believe, Thirty-five through Thirty-nine of the Technical Report, and my question was, has consideration been given to infill drilling within this project to make those patterns a little more uniform?

A. At this point it hasn't. At this point we are -- since we haven't really gotten the unit together, and we haven't talked to the working interest owners, we more or less feel that what's in the -- what's in the Technical Report is the way we will start off. At least this is how we initially will proceed.

Now, it may be that before we go very far, we might want to make some changes.

Q. Do you feel that that should be looked at?

A. Yes.

Q. An infill program in this project?

A. Well, now when you say an infill program, I don't quite -- we've got a -- it's a 9-spot. I admit that

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1016 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

it's not a complete pattern across the unit, but there is in essence a 9-spot that's in there now with some drilling wells.

Now it may be that when we get together, especially after we get done on our final agreements with Amoco, that we may have a slightly different pattern, or we may have a slightly different configuration to the wells, but we have not sat down and gone through a redevelopment, no.

Q. Do you feel that this should be done within a reasonable period after the project is started?

A. After they're approved, yes.

Q. How long is a reasonable period of time?

A. I would think that within the first year when we see how things are -- how our injection is going to proceed.

And we also, as we go into this, what we will find, I think, we'll find some wells that we can't use, and moving -- then as you move one well that maybe moves another, and these are things that we can't foresee at this time.

MR. STAMETS: I believe that's all the questions I have.

MR. ATKINSON: I have another question, Mr. Chairman, as a result of this questioning of him.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3120 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

RECROSS EXAMINATION

BY MR. ATKINSON:

Q. In the event that additional infill drilling is necessary, what will that do to the projected capital investment?

A. The investment would go up slightly.

Q. Do you have any feeling at all what the additional investment would be for these?

A. Well, it depends on how many wells we're talking about, but the wells, when we talk about a well costing maybe $150,00, maybe $175,000, you could drill twenty wells and you'd go up maybe a couple million dollars, but when you talk about the profit that that offsets, you're talking about four hundred million profit and you're talking only going up about five million dollars or so on your expenditures.

So as a percentage of your profit it's really very small.

MR. ATKINSON: Okay, thank you.

RECROSS EXAMINATION

BY MR. STAMETS:

Q. I presume, Mr. Lancaster, that you would

not propose drilling any additional wells in the project unless you could see that those additional wells would recover more oil than in your current projections that you have

A. Well, the concept is that each additional expenditure or what we did would pretty much have to stand on its own in our presentation to the working interest owners

Q. So that would not have any effect on the overall economics of the project as you've put it forth here today.

A. Spending the additional money or -- I wouldn't think so.

Q. Thank you.

MR. RAMEY: Any other questions?

MR. PADILLA: Mr. Chairman, I have one question I think it is properly -- would be properly addressed to Mr. Buck, and I think he could answer that question from there.

Section 7 of the proposed Unit Agreement indicates that upon removal of the operator -- or the removal of the operator would be effective upon notice to the Land Commissioner. Do you have any objection to the inclusion of that notice to the Oil Conservation Division, as well?

MR. BUCK: I don't believe we'd have any objection whatsoever.

MR. LOPEZ: I might add, Ernie, that I'm

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

sure no one would have any objection. That's certainly fine. It's just not in the agreement now. When you're talking about getting 700 and how many royalty owners and 77 working interest owners signed up, that takes a little bit of negotiation.

MR. PADILLA: That Section 7 just lists the procedure by which an operator may be removed.

MR. RAMEY: The witness may be excused.

Mr. Atkinson, are you ready?

MR. ATKINSON; Yes, sir. Exxon calls Mr. William Nolan.

WILLIAM E. NOLAN

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

BY MR. ATKINSON:

Q. Will you please state your name and residence for the record?

A. William E. Nolan and I live in Midland, Texas.

Q. Mr. Nolan, how are you employed?

A. Employed by Exxon as a Senior Staff Engineer.

Q. Have you previously appeared before the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

Commission and had your qualifications accepted as a matter of record?

A. No, sir, not before this Commission.

Q. What is your educational background?

A. I graduated from the University of Kentucky in 1943 with a Bachelor of Science in Civil Engineering.

Q. After graduation, as an undergraduate, what was your employment experience?

A. For the first two years after I graduated I worked for Sohio Petroleum Company and during my last couple of years I was District Engineer for the West Edmond Hunton Lime Unit, which was the first large unit formed in the State of Oklahoma.

After that work experience I joined Monterey Oil Company as Chief Engineer of the Fullerton Clear Fork Unit, another large unit in West Texas.

After Exxon bought Monterey out, I went to work for Exxon in 1961. Since that period of time I've done various types of unitization work for Exxon.

Q. And what has your contact with technical committees been with regard to unitization?

A. I have attended quite a number of technical committees and I am at the present time a member of six or seven technical committees, working on unitization studies.

Q. What technical committees have you been

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

involved with in New Mexico?

A. With the recently formed East Vacuum Unit I was Exxon's representative. I was also a representative for Exxon on the Double L Queen Unit, which I believe was the first statutory unit in the state. I also served on several others.

Q. Now with regard to the Technical Committee relating to Shell's applications, what has your involvement been with that, please?

A. Since 1973 I have been Exxon's technical representative on that committee.

Q. And have you had extensive involvement as a member of the Technical Committee with its workings?

A. Yes. I was trying to figure out, I think I attended every technical session of the twenty or so that was held while Mr. Swartz was the coordinator and I believe I attended them all.

MR ATKINSON: Will the Commission accept Mr. Nolan's qualifications?

MR. RAMEY: Yes, we've heard of Mr. Nolan over the years.

Q. (Mr. Atkinson continuing.) Mr. Nolan, I refer you to what's been marked for identification as Exxon's Exhibit Number One. Could you please briefly describe what this is?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Well, this is a map which Shell has also sort of presented some background data on, but this shows the whole of the Hobbs Pool, and the map was actually prepared by Amoco as an exhibit when they were working on the full field unitization effort.

It shows the boundary line between the Amoco operated South Hobbs Unit and the proposed boundary line -- proposed boundary of the North Hobbs Unit Area, along with that little peninsula that sort of sticks up there on the east side along the township between 18 South and 19 South.

Q. The dark hatched lines, I take it, outline the boundaries of the North Hobbs Unit?

A. That's correct.

Q. Now, I notice in the south portion, in the Amoco South Unit, there are two -- there's a hatch marked rectangle and a dotten rectangle. Will you explain what those are?

A. Those show two 80-acre tracts which are not a part of the Amoco South Unit, which are -- this unit, as was earlier stated, was a voluntary unit and all the tracts were not put into the unit when it was initially formed. There are a number of other tracts that did not join the unit initially on its formation in early 1975. Those, several of those, have subsequently joined the unit

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

but these two, the Conoco State A-5 and the Getty Mexico 4, are at the present time, or at least the last time I looked at the records in June, were not a -- were not part of the South Unit.

Q. All right. Now there are three areas overlined in yellow. Will you please explain what those are?

A. Those three areas show the tracts which Exxon owns.

Q. Thank you. I now refer you to what has been marked for identification as Exxon --

A. I might point out that that Moranco Flood also is shown on here at the top of the Area.

Q. All right. I now refer you to what is marked for identification as Exxon Exhibit Two.

A. This shows again the same exhibit that Shell has presented but we'll give it a little more detail on Exxon's ownership in this unit.

On the lefthand side you see the 320-acre tract 43, which is Exxon's State "A" Lease. It has six wells on it.

Tracts 47 and 48 in the middle of the lease are the Exxon Bowers "A" Federal tracts. This is the largest Federal lease in the unit. It's 320 acres of a total of 400 acres of Federal leases in the unit.

The reason it's divided into two tracts

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

is a division of royalty interest between the Tract 47 and Tract 48. It has the same base lease.

Exxon also has a 50 percent interest in the W. D. Grimes, the 40-acre tract to the right.

Q. All right, thank you.

A. I guess Exxon's total there is 660 acres out of roughly 10,000 acres in the total unit, about 6 percent, a little over 6 percent of the total surface area.

Q. I'm sorry, what --

A. I say Exxon's total is about 6 percent of, a little over 6 percent of the total surface area of the unit.

Q. All right. I now refer you to what has been marked for identification as Exxon Exhibit Number Three.

A. Again, this exhibit is very similar to Shell's Exhibit Eighteen, excepting that when Shell plotted the production rate versus time they used a semilog plot which gives a -- quite a different character to the look of the production.

This is plotted on Cartesian -- or directly plotted such that the production rate in barrels per day plotted to the left between 2000 and 4000 and 4000 and 6000 is an equal space, and that makes the difference in the look of the graph. But in essence this is the same

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3030 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

graph. You remember that -- that Shell testified the remaining primary recovery was 30.3 million barrels. That's a slight difference in estimate. Our estimate here is 30.2 million barrels, a very slight difference in estimate as to the cumulative recovery that will occur to the beginning of 1980.

That 30.2 million barrels is a direct calculation made by the Technical Committee. It started as on 1-1-77 as Mr. Buck testified, being 38.1 million barrels. Since that period of time some 7.8 or .9 million barrels would have been produced, leaving a remaining primary of 30.2 million barrels by our estimate on January the 1st of 1980.

Q. How is the remaining primary exhibited on this Exhibit Number Three?

A. The remaining primary is shown by the dashed line. It starts with slightly over 6000 barrels a day in January of 1980 and gradually declines across the graph, goes on off the 30-year to the year 2025, or for 45 years thereafter, and contains under that line the oil reserve,under that dashed line would accumulate to 30.2 million barrels after a production time of 45 years.

Q. All right. Now, the 45-year period is when the economic limit will be reached?

A. Yes. The economic limit of 3 barrels per

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

day per well on quite a few of the wells will be reached in the year of 2025.

Q. Would you please explain what the dark line is?

A. The dark line shows the total forecast, the Unit production with waterflooding, and that would be the sum of the remaining primary plus the secondary, and you'll recall that Shell testified the secondary as being 55.2 million barrels and we agree precisely with that determination. We have no problem with that. It was what the Technical Committee determined.

And the sum, then, of the secondary being 55.2 and the primary being 30.2, gives a total recovery under the curve of 85.4 million barrels.

You'll notice, again as Shell's graph has shown, that the secondary, or bold, the black line crosses the primary line after a couple of years of production and then graudally increases on up to a rate slightly over 12,000 barrels a day, remains relatively flat for about 7 years, and then begins to decline. The reserves, by the Technical Committee, were estimated to be -- to have been produced in about 35 years from secondary recovery program, a shorter period of time than was estimated for the primary.

Also, this graph is basically, and I believe this probably was testified to by Shell, but this is a result

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

of waterflooding in the Grayburg on a 5-spot pattern and in the San Andres on an inverted 9-spot pattern. Any change of that would probably change these rates.

Q. I now refer you to Exxon's Exhibit Number Four, which is in some ways very similar to the Exxon Exhibit Number Three. I notice that there are two formulas addressed in the upper lefthand corner. The first one is titled Unit Agreement Formula (Revenue Participation), and it is divided into three phases. Would you please explain that?

A. Yes. And this will be very similar to Mr. Buck's testimony.

Phase One lasts for a period of 4 million barrels. Phase Two lasts for a period of from January 1st, 1977, for 38 million barrels, and that relates down to 26.2 million barrels from the end of Phase I to the beginning of Phase III. Those are the same numbers subtracting out the cumulative production prior, and the Phase I production leaves you with 26.2 million barrels from the end of Phase I to the beginring of Phase III.

Then, of course, Phase III is 55.2 million barrels, as we've indicated with the secondary recovery for the Unit.

Q. These formulas presented here, again, are the same, are they not, as those presented by Shell this morning?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Yes, as near as we can estimate.

Q. All right. Now, the second formula is entitled Unit Agreement Formula (For Payment of Investment.) Could you please explain what that is?

A. Well, for the first two phases, Phase I and Phase II investments, over the first about 10 years of production is shown by the arrows, show the extent of time we estimate the phase will last; about 2 years in Phase I and an additional 8 years in Phase II. During that period of time 58 percent of the investment would be paid on the basis of primary reserves and 42 percent on the basis of secondary reserves.

Q. Do you have an opinion as to what effect the use of these two formulas would have on a producer with higher secondary oil?

A. Yes. It causes him during the earlier phase of the Unit to invest money for something that he gets no revenue for. During Phases I and II there is no revenue dedicated for secondary production, so that if an owner owned only secondary, he would get no revenue during the first 10 years of operations and he'd pay 42 percent of the secondary oil investment.

Now, you will notice that at the end of Phase II there is a 100 percent adjustment to the Phase III investment, such that at that time whatever investment in

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

secondary, secondary recovery owners have not paid, they will at that time pay in cash to those owners who have a lower secondary oil recovery. It's not a question of paying this, it's the timing under which it is paid. It would be paid under the investment adjustment, of which Mr. Buck testified that the entire 33 million barrels of secondary would be adjusted at the end of Phase II to secondary ownership, or Phase III ownership.

Q. I see, you said 33 million barrels?

A. I'm sorry, 33 million dollars of investment would be adjusted at that time.

Q. Now, for a producer of higher secondary oil, you stated that he would be at a disadvantageous situation for several years. Approximately how long would it be?

A. Around -- a little over 10 years is the way this production forecast goes before it produces the entire remaining primary of 30.2 million barrels.

Q. Mr. Nolan, I now refer you to what has been marked for identification as Exxon Exhibit Number Five. Could you please explain what that is?

A. Yes. This is the same type of graph that shows the production rate on Cartesian coordinates up the lefthand side, showing the production rate in barrels per day against the time. These are years after the unitization,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

after the Unit starts; didn't put the years on, just put the years after starting time, which we believe a reasonable estimate might be 1-1-80.

This shows Exxon's producing rate over the period of time of the three phases of the formula.

Q. This is Exxon's producing rate under the formula proposed by --

A. Under the formula proposed by Shell.

During Phase I Exxon's participation is 4.688 percent, and for that first couple of years period you would multiply Exxon's 4.688 percent by the total Unit producing rate shown on the prior exhibit.

During Phase II Exxon's participation is 4.396 percent. During that period of time you would multiply the 4.396 percent times the production rate shown on the previous exhibit.

And after the end of Phase II, the secondary oil participation becomes in effect and you would multiply 7.639 percent by the production rate shown on the prior graph.

Q. Those percentages you're talking about are not on this exhibit.

A. They are not on that exhibit. They will be shown on a later exhibit.

Q. Now, you may recall this morning Mr. Buck,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

I believe, testified that within a short period of time after Phase I, that the individual tract owners would be producing at a rate equal to or greater than what they had produced prior to unitization.

A. That's right.

Q. In the event that unitization is permitted. Do you have an opinion as to whether that is true in view of this exhibit?

A. Well, Exxon's production rate for the first five months of 1979 averaged 535 barrels per day, as shown by the arrow on that graph.

Exxon's production allocated at 4.688 percent times the estimated Unit production rate would be in the order of 300 barrels per day compared to the actual production rate we are now achieving of 535 barrels per day for Exxon's leases.

This graph shows that as the production rate for the Unit increases, and with a constant percentage of 4.396 for Phase II, that Exxon's production rate increases from 300 barrels a day to the tenth year, where I estimated it was 545 barrels per day, which is slightly more than we are today making on those leases.

Q. That would be a 10-year lag before you would achieve what you're presently --

A. Before it gets back where we are today, yes,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8483
Santa Fe, New Mexico 87501

sir.

Q. All right. Now, not only as to Exxon's working interest, but in your opinion what effect will this have on the royalty payments to royalty holders in these tracts?

A. Well, of course, the main problem with this lease is that the Bowers "A" Federal Tract, and this big difference occurs on that very tract, it affects the tracts and, of course, the royalty owners in direct proportion.

Q. Do you have an opinion as to the percentage production of royalties to royalty interest holders in the event that the Unit were allowed and Exxon's production was increased?

A. Please state that again. Why didn't you ask me that last night?

Q. Well, can you approximate what percentage of royalties the royalty owners would receive as compared to what they are receiving now?

A. Yes. This lease is burdened by royalty, excess royalty payment. The Bowers "A" Federal Tract has a 12-1/2 basic royalty on a sliding scale, plus 7-1/2 percent of additional override, so it's some 20 percent of the revenue from that lease is -- goes to royalty owners.

VOIR DIRE EXAMINATION

BY MR. DALIOUS:

Q. Mr. Nolan, according to this exhibit you show Exxon's Unit formula participation at about 300 barrels and its actual rate of production as 535 barrels.

A. That -- during the first five months of 1979 that was the actual average production, yes.

Q. Now assuming royalties are paid royalty owners on the basis of the Unit formula for the first four or five years, would the royalty owners under the Unit formula for the Exxon leases receive less royalty?

A. Yes, I believe --

Q. Than would be paid under our actual production rate?

A. We actually calculated that they would receive some 44 percent less.

Q. All right.

DIRECT EXAMINATION

BY MR. ATKINSON:

Q. Mr. Nolan, I now refer you to what has been marked for identification as Exxon Exhibit Five-A. Would you please explain for the Commission what this is?

A. Exxon Exhibit Five-A shows again a plot

of Exxon's production in the bold line. This is the actual production from January of 1976 on up through August, or to August of 1979.

It shows that Exxon's actual production started out at about 500 barrels a day in 1976 and declined in December to about a little less than 400 barrels a day, and then began to go back up and for the past two years has averaged over 500 barrels per day.

Q. All right. Now, Exxon's share that is demonstrated by the dashed line, what -- what does that represent?

A. The dashed line represents Exxon's Phase I share of Unit production. You recall that during Phase I Exxon's share is 4.688 percent of the Unit total under the Agreement formula proposed here.

If you take 4.688 percent of the actual field production starting in 1977, that's what this plot shows. The field production has been relatively constant during that period of a little over 7000 barrels per day, which would then result in, had the Unit been in effect in early 1977, Exxon's share of production would have been a little over 300 barrels a day, and would have remained relatively constant during that 2-year period.

Q. What is the difference between the -- or the space between the two lines, the dashed line and the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8463
Santa Fe, New Mexico 87501

solid line, represent?

A. Well, of course, you can see, it's about 200 barrels a day, all during that period, and the cumulative difference is shown by the bold line that goes across the curve and has an arrow on the end of it, starting at zero at the beginning of 1977. At the end of the first year it shows a 50,000 barrel difference; end of the second year, 170,000 barrel difference; and say at the end of this year we would estimate that cumulative difference at almost 200,000 barrels, which Exxon would have been paid, that they would have received 200,000 barrels less under the unitized formula than they actually produced during this period of time and the royalty owners would have been likewise treated.

Q. Now, both of these lines are based on actual production data taken from field production, is that correct?

A. That's correct. It's simply a multiplication in the case of the dashed line of the actual production of the field during that case, and an addition of Exxon's lease production during the -- for the bold line.

Q. All right. I now refer you to what has been marked for identification as Exxon Exhibit Five-B, very similar to Five-A. Could you please explain what this is?

A. This is an attempt to just show the position of some of the other operators under this formula.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

The first one we picked on was Shell. There, had the Unit formed there early in 1977, and with Shell's 24.123 percent, they would have been credited with about 1750 barrels a day of Unit production.

At that time they were producing about 1880 barrels of production. Since that time Shell's actual production has declined and today their producing rate is some -- a little less than 1700 barrels per day.

Q. All right, now, if I understand you correctly, then, in the beginning of 1977 through approximately the middle of 1978, had the Unit Agreement been in effect, Shell would in essence have been reduced in the amount it could have produced, is that correct?

A. Well, it would have been reduced in the amount they would receive under the formula as compared to what their leases actually would have contributed to the Unit.

Q. Now what is their position now as of -- well, as of June, 1979, what was their position?

A. Very close to the same line. They would have received just about, almost exactly what they are producing from their leases under the Unit formula. The dashed line and the solid line cross each other for the first four or five months of 1979, pretty closely.

Q. If you will, I'd like briefly to turn you

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

back to Exhibit Five-A and compare it with Exhibit Five-B, then. Could you compare the difference in effect to Exxon and Shell in the event that the Unit Agreement is approved by the Commission, as to what increase or decrease in production would result to the -- to Exxon and Shell?

A. Well, of course, if the Unit formula is approved, Exxon's trend is pretty level and the Unit's production -- the field production trend is pretty level. Exxon would take a 200 and some barrel a day loss, whereas Shell, with perhaps a little deline as this bold line shows, their production rate is declining, they may have a slight gain if the Unit goes into effect.

Q. Thank you. I now refer you to Exxon Exhibit Five-C. Would you please explain what that is?

A. Well, if Exxon loses somebody else has to gain, and this shows one of those parties that gain.

Chevron's share of Phase I production is 3.125 percent. Under the Unit formula their production rate would be slightly over 200 barrels a day, or would have been had the Unit been in effect since 1977.

The bold line shows Chevron's actual production as being some 150 barrels a day less all during the period -- the last two years.

Q. So that in the event that the Unit Agreement were in effect, what would happen to Chevron's production?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Chevron's production would more than double if the Unit goes into effect.

Q. Okay, now referring to what has been marked for identification as Exxon Exhibit Five-D, would you identify that, please?

A. Five-D is the performance graph for Texas Pacific Company. Their share of Unit production, Phase I, their share of Phase I, is 4.682 percent, very close to what Exxon's is.

Their actual production, shown by the bold line, held pretty close, very close, to the unitized share until February of 1978, when a rapid decline took place on their leases, and today they're producing at a rate of about 180 barrels per day, compared to their unitized share of about 340 barrels per day.

Q. Do you have an opinion as to what these four graphs indicate as to changing conditions within the proposed unit?

A. These graphs show that there have been substantial distortions since the study was made, that leases are not performing, certain leases are not performing as predicted by the Technical Study; in particular, of course, the Texas Pacific and Chevron leases. Obviously they've declined at a faster rate than the Technical Study. The Exxon leases have not declined as fast as the Technical Study

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

would have shown. Shell's apparently pretty close on balance.

Q. Do you have an opinion as to what may have caused these changes?

A. Of course, the Technical Study had several limitations to it. As it was testified by Shell, this was an extremely complicated study because of the complicated nature of the reservoir, and we feel that at the time the study, the way it was done, was the best that could be done with the data then existing.

We took no exceptions to those decline curves, to those rates, at the time they were done.

Q. Do you have an opinion now as to the viability of the data that was relied upon by Shell, or by the Technical Committee, in formulating these performance --

A. Well, that data is over three years old now, and certainly, with one particular limitation that was placed on the study, and it was a necessary limitation, it was testified by Bill Lancaster, that it was necessary to assume that the producing interval of each well was not changed for the entire 45-year future primary life. Of course, to do differently would have been an impossible task. So that was agreed that we would do it that way, but it did not give a unique solution for the remaining primary, and with the reliance of the formula almost 100 percent on remaining primary, it made it an extremely important deter-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

mination using only that for the first 10 years of production, and causes Exxon this problem.

Q. Now, when you talk of the reliance of the formula almost 100 percent on remaining primary, are you talking about during Phases I and II?

A. During Phases I and II alone. We have no problem with Phase III.

Q. And referring once again to the formula that Shell set out this morning and as set out on Exxon Exhibit Four?

A. That's correct. There is some weighting of current production rate that amounts to 20 percent during the first 4 million barrels. That is only 3 percent of the total production during Phases I and II, such that 97 percent, then, relies altogether on remaining primary production for each lease.

Q. All right. Mr. Nolan, I now refer you to what has been marked for identification as Exxon Exhibit Number Six, the colored graph.

A. Right. Now, this graph shows the hairy details of one of the estimates made by the Technical Committee during 1976.

Q. All right. Now, could you please explain what the blue line is?

A. The line highlighted in blue, starting in

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

1969, shows the actual production rate of Exxon's Bowers "A" Federal tract.

On the lefthand side you'll see that that rate was about 500 barrels a day for a period of four or five years and then it declined quite rapidly.

Starting at the beginning of 1964 when the Technical Study was made, the lease had declined to a producing rate of around 300 barrels per day.

Q. All right. Now, we're talking, just to clarify this, we're talking about the Exxon Bowers "A" Federal which is Tract 47. That is the same tract which is identified as Tract 47 on Exxon Exhibit Two, right, is that correct?

A. Correct; that is correct. It is a 7-well lease.

Q. Now, taking the actual production from the tract up until the end of 1975, what did the Technical Committee do with it?

A. Well, the initial simulation study was made using data up to the end of 1975. The line that is labeled "A" shows the simulation study forecast of production decline which was made with data up to the end of 1975. That matched the decline and so on, and shows a couple of changes in decline rate.

Q. That is the line which lies above the blue

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8468
Santa Fe, New Mexico 87501

line then, is that correct?

A. That's correct, yes.

Q. All right. Now, could you explain -- first of all, when was the "A" line generated by the simulator model?

A. Well, sometime in early 1976. It took a considerable amount of time to set the model up and get it going. The results were furnished to the Technical Committee members on October the 27th, 1976.

Q. All right. Now, would you please explain what the straight blue line is, which is designated as Line B?

A. Line B shows the forecast for the Bowers "A" Federal lease determined by the simulation study, starting September the 1st, 1976, and declining on out through the end of 1989. Now this line was the one which depicts the reserves which are included in the Technical Study, which are included in the formula, and which this lease is credited with.

Q. All right. Now, I notice that it is lower than Line A is, and that at the beginning of 1976 there is a pink blob there.

A. Yes.

Q. Would you please explain what the relationship with those two facts are?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

A. The pink blob shows the 8-months production which was accumulated after the 1975 one, or one A, was made. That data was introduced into the model and the reserves were recalculated, and the effective date then was September the 1st, as related by Shell. This is the final calculation which was made. This includes data through August of 1976. The addition of the little, red blob caused a reduction in the reserves assigned to this tract from a value of 1,485,868 barrels, as shown in the lower righthand side of that graph, Original Computation, (Run B).

Run B signified that 3 barrels a day economic limit was used. Another run was made using a 5 barrel a day economic limit, but Run B was decided to be the best by the Technical Committee, and that's the one we were looking at at the time, but in any case, the reserves determined under the line A were 1,485,000. The reserves determined under line B, and effective 9-1-76, where you would have to subtract the production from the beginning of the -- from 1-1-75 to 9-1-75 to make those comparable numbers, but that production rate was only 30 or 40,000 barrels. So it shows a very substantial reduction in the reserves assigned to this lease by the addition of the six months under the red blob of some 200,000 barrels.

Q. All right. Now, did you perform, or have performed for you, a computer run relating to the B line?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Yes. We were not -- we could not or can not duplicate that study made by Shell with and for the Technical Committee, but by observing all of the leases, they have come pretty close to decline curves; ordinary semilog decline curves plotted against time, an exponential function.

And what we did was fit an exponential decline to the actual calculation made under this -- by this Technical Study, because we were given the starting rates and the time under the curve, and the total reserves, we could then take 1,273,139 -- that's shown on the righthand side as SR76, that is the simulator reserves determined in 1976, and that is what is used in the formula and in the report, 1,273, 139 barrels.

Q. You're referring now to the numbers in the -- the first two numbers on the righthand side of the page?

A. Yes, sir, the top -- the top one of those, 1,273,139 barrels was the simulator reserve, which is in the Technical Study for this lease.

At the time this information was furnished to the Technical Committee members the rates for 1976 were also furnished. This lease, the rates shown for September 1st rate for this lease, was 316 barrels a day. That's shown in the second line of that tabulation. That's simulator 76 rate of 316 barrels per day.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Also furnished was the rate on January 1st of 1980. Now this was done so that the Technical Committee members could view their leases and see how a visual graph would compare to the complicated calculations that none of us really understood that were made by this simulation study.

So this shows that the lease declined from 316 barrels a day in September 1st of 1976, to 206 barrels a day at the beginning of 1980, and further declined to 102 barrels a day at the beginning of 1990, and since the Technical Committee agreed that the economic limit would be 3 barrels per well per day, this lease reached its economic limit at a calculated time in the year 2012.469, as shown in the bottom part of that first group of tabulations.

The final year, the simulation study final year, SFYR, that is the year in which this lease would reach its economic limit if a decline curve match was made with the Technical Committee determined reserves.

This lease would then have three slopes to it. The decline curve would have three slopes.

Starting out, the slope would be 12.04 percent per year, and you can see that it's fairly sharp the first -- between the period of 1976 and 1980, it's fairly sharp, and it's 12 percent a year.

From the period of 1980 to 1990 the lease

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

declined at 6.787684 and so on percent per year, and then it declined at 6.79206 from the period ending from 1990 to the economic limit, and that, if you use those slopes, you use those rates, you'll calculate precisely a 1,273,139 barrels under the curve.

Q. This is the reserve calculated --

A. By the Technical Committee and these calculations were made to match a decline so we could estimate what might happen under changed conditions. We couldn't duplicate the study. We tried to make as a close an estimate as possible using a conventional decline curve approach and utilizing the data calculated in the simulation study to maximum effect.

Q. And have conditions changed in the Exxon lease? Or Exxon tract?

A. Yes, and with the Exxon tract performance, which -- now this data was not available, of course, to the Technical Committee because this study was done in 1976. But starting at the beginning of 1977 this particular lease, production started to increase from 280 barrels a day at the beginning of 1977 to around 400 barrels a day, as you can see on that plot, at the end of 1977, and since that time it has been above and below 400 barrels a day, and it's fairly level at about 400 barrels a day, currently producing at about 400 barrels a day.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

It can be noted --

Q. Excuse me, go ahead.

A. No, you go ahead.

Q. All right, I will.

Now, based on the production data since the time the Technical Committee Report was prepared, what did Exxon do with the information as to attempting to calculate reserves?

A. Well, Exxon took the updated production, utilized the end point determined by the Technical Study, increasing the starting point to the average production rate occurring during the first 5 months of 1979, and declining it to the economic limit as determined under the Technical Study.

Q. All right. Now, could you explain briefly how that end point was arrived at once again --

A. Well, we calculated that the lease reached its economic limit in the year of 2012. The decline curve estimate here simply takes the starting rate at 409 barrels a day, the A79 is 409 barrels per day, the actual production for that lease for the first five months of 1979. It declines it in a straight semilog decline to the economic limit in the year 2012.

Q. All right. Could you please explain how your ultimate reserve calculation was arrived at by the gen-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2018 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

eration of numbers in the lower righthand corner?

A. Right. Now these are the numbers which the -- which the attempt at matching generated. This shows that the -- an actual number was calculated for the producing rate first five months of 409 barrels a day.

The line slopes to the first of 19 -- for the first five months average of 19 -- pardon me. It slopes at 8.54 percent per year from the beginning of 1979 to the economic limit.

The producing rate at the beginning of 1980 is calculated to be 381 barrels per day under the curve. 226 barrels per day is what the simulation study, the S79 shows to be the producing rate at the beginning of 1980.

Q. That's where the blue line correlates right --

A. That's where the blue line is in 1980. So that means that the blue line is -- actually, it's 226 barrels per day and the -- under the yellow line the rate would be 381 barrels a day at that time.

At the end of 1990 the producing rate, calculated by the yellow line, is 156 barrels per day, and at that point you can see that the blue line is 102 barrels per day, as shown in the upper tabulation.

And they both reach the economic limit at

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

the same point in time.

The reserves calculated under the yellow line from a point in 1980 are 1,472,492 barrels for this lease.

From the same point in time on the blue line, this calculation is 960,377 barrels per day, a difference of 512,000 barrels, a very substantial difference, which is what our estimate is of the increase in reserves that would be indicated by the increased producing rate of some 200 barrels per day.

Q. Now by a difference, what do you mean? The difference between the formula and using the 1976 parameters and Unit formula using the updated parameters?

A. No, no. This is simply the calculated reserves from a point of 1-1-80, using the yellow line ER80, a 1,472,000 barrels and using the simulation reserve, which corresponds to that same point in time of 960,377, that is the reserve calculated by the Technical Study from and after January 1st, 1980, the 963,877. So the difference between those two is the increase in reserves this lease would enjoy if the calculation is correct, of 512,000 barrels.

Q. How could that be accomplished under the present Unit formula?

A. Of course, we could develop this into a parameter for remaining primary and utilize the changed per-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

centages in the same formula, and that would, of course, give this lease additional participation.

Q. All right. I now refer you to Exxon Exhibit Number Seven.

A. Yeah, this is the same type of calculation for the 40-acre portion of the Bowers"A" Federal Com Tract 48. It's the upper part of the Bowers "A" Federal Lease that we think we showed on Exhibit Two. It's a single well lease, and it is the same type of calculation. The purpose of putting this in is to show the similarities between what happened with the updating, what happens with the -- adding the additional data, and that in general the slope, or pretty similar, the -- it is a two-part slope, sloping a little more drastically for the first four or five years after 1976 to the point, the beginning of 1980, and then flattening out from that point at a rate of about 6 or 7 percent per year.

The same calculations, identical calculations, were made for this lease.

The Technical Report determined a reserve of 231,139 barrels from September of 1976. That's shown by the SR76. The same type of calculation would indicate this lease reached its economic limit in the year 2027. Drawing a straight line, then, from the first five months of 1979 to that economic limit,as shown by line C, would result in a calculation of a reserve of 247,000, as shown in the ER80.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3120 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

The Shell -- the simulation reserve from that same point is 183,000 barrels, for an increase in reserve for this tract of 63,874 barrels.

Q. Once again, by the increase you mean --

A. The increase from and after January 1st, 1980.

Q. In the event that the updated parameters were employed --

A. In the event the updated parameters were employed, you would determine a minimum reserve for this lease of 247,000 barrels, and if it was put into the formula, we relate that as Shell has described, to the total of all leases; take that percentage and determine the parameter that would be substituted in the formula.

Q. Now, for what tracts did you perform these calculations?

A. I did this for each and every tract in the Unit. As a conincidental number, and these are given later in these tables, the reserves were fairly close. The reserve calculated by the Technical Study from and after 1-1-80, as we've previously shown, is about 30.2 million barrels.

The sum of all the leases going through this same calculation procedure, was 33 million barrels; some 10 percent change on the overall basis.

Many leases are up and many leases are down.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3016 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

The earlier exhibits show which operators are particularly affected, just a few selected ones, and we have, of course, these same graphs for each and every tract, the same calculations for each tract; if anybody wants to go through them, we'll go through them.

Q. Is Exxon willing to make these available to the Commission in the event the Commission wished to view them?

A. The Commission, or anyone else. Yes.

Q. All right. Now I'll refer you to what has been marked for identification as Exxon Exhibit Eight. Would you tell briefly what this is, please?

A. Well, this shows the comparison of the 1976 and the updated parameters as determined by Exxon, using the methods that we've tried to describe.

First off, it's pretty easy to update the production rate. We know what these leases produced for any period of time you want to talk about. We have selected as did the operators, a full year of production, being the last full year of production, to compare to the 1976 production rate, which is utilized in the formula.

Just to start out with Exxon's share, in 1976 Exxon's oil production rate from all of its tracts was 160,433 barrels, as shown under 1976 Oil Producing Rate, and that amounted to 5.854 percent of the total production,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

which is shown down at the bottom the Unit Total of 2,740,636. If you divide 160,433 by 2,740,636 you get 5.854 percent. That's Exxon's parameter share of production in 1976.

Now, we --

Q. To clarify that, that is the parameter which is presently employed in the proposed Unit formula in Phase I, is that correct?

A. That's correct. That's Exxon's share of the 1976 oil production rate, which weights 20 percent in Phase I of the Unit formula.

Now, if we redevelop that parameter, that same parameter, for the year of 1978, Exxon's tracts produced, coincidentally, around 180,000 barrels during 1978. The total production from all the tracts was 2,631,234, and that develops a parameter of 7.143 percent, which says that the Exxon share of unit production, based on the producing rate, was 5.854 percent in 1976, and that has now increased to 7.143 percent, demonstrating a disparity in reserve calculation and in use of a parameter that's three years old for production rate.

Q. So that in the event that the Commission were to apply the 1978 actual production data to develop the parameter, this would be the parameter that would be employed in the present formula, then, is that correct?

A. That's correct. Near as we can calculate

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

it, Exxon's share would be 7.143 percent for the year of 1978.

Now, Shell's numbers, just as a comparison, we though we'd pick somebody to compare Exxon to, during 1976 Shell produced 699,966 barrels out of a total 2,740,636 for a total of 25.540 percent.

During 1978 Shell produced 638,905 barrels of the 2,731,000 produced by the Unit, for a total percentage of 24.282 percent, a reduction of about 1.3 percent where Exxon's has increased some 1.3 percent.

Q. Now would you please explain what the oil reserves calculations are in part B of Exhibit Eight?

A. Right. Part B, like I say, shows the oil reserves, and for the 1976 primary oil reserves -- these numbers were taken directly from the Technical Study-- Exxon's reserves were 1,673,668 barrels out of a total reserve of 38,071,683 from a date of 1-1-77. That percentage for Exxon is 4.396 percent. And that is the parameter that is used 100 percent in Phase II of the formula.

Q. And used 80 percent, I believe, in Phase I.

A. And used 80 percent in Phase I, correct.

Now, going through the decline curve method that we have described, for each and every tract in the Unit, we determined that the future oil recovery from

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

a period of 1-1-80, which is perhaps close to the date this Unit may go into effect, was 33,205,631 barrels.

Going through each tract for Exxon, we determined that the reserve for Exxon is 1,875,393 barrels, for a percentage of 5.468, an increase from 4.396 to 5.468 percent.

Now, doing the same thing for Shell, Shell's 1976 primary reserve from 1-1-77, was 9,048,999 barrels out of a total 38,000,000 for a total of 23.769 percent. The redetermined reserves by Exxon, 7,776,948 out of 33.2 million for a total percentage of 23.421, a reduction of some .3 of a percent.

Q. All right, now how about secondary oil reserves?

A. Secondary oil reserves are just shown for reference. That is the number directly out of the Technical Report and we didn't see any reason for changing it. Exxon's share is 4,216,642 out of the 55.2 million; a total of 7.639.

Shell's is 10,419,216 out of the 55.2, a percentage of 18.875.

Q. All right. Now, if we will be using many of the same numbers in what has been marked for identification as Exxon Exhibit Nine, would you please explain how that works?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Well, Exxon's participation under the Agreement formula, under the formula proposed by Conoco and which is now included in the agreement, first this shows a development of Exxon's share; A, using the 1976 Parameters, and B, using the updated parameters.

Q. So A represents what will be Exxon's share in Phase I and Phase II under what is proposed by Shell presently.

A. That is correct. If you recall, the formula is composed of 20 percent 1976 oil producing rate , from the former graph, former exhibit, you see that that would amount to 20 percent of the value 5.854 percent, or 1.171 percent of the total.

Q. Now 5.584 is taken off of Exhibit Eight --

A. That's correct. Exxon's share of the parameter 1976 oil producing rate, and if you multiply that 1.171 percent, which is the rating, all that percentage in the formula, multiply that by the 4 million barrels in Phase I, you determine that that portion of the formula allocates to Exxon during Phase I, 47,000 barrels of oil. Because 1.171 percent times 4 million is 47,000, roughly.

For the remainder of -- for the other part of Phase I, you recall that the formula is 80 percent 1976 primary oil reserves. We take 80 percent of the primary oil reserves determined under the Technical Report,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

that's a percentage of 3.517. Applying that 3.517 again to the 4 million barrels, we come up with 140,000 barrels, for a total during Phase I of 4.688 percent and a share in barrels of the 4 million barrels, 187,000 barrels.

For Phase II where the oil is allocated 100 percent on primary oil reserves, using the 4.396 percent in the Technical Report, Exxon's share of the 26.2 million barrels produced during Phase II, is 1,154,000 barrels. That would give a total production during Phase I and Phase II of 1,341,000 barrels.

Q. Just to emphasize once again, this is what Exxon would be able to produce under the present --

A. This is what Exxon would be allocated under the formula. This is Exxon's allocation of the first 30.2 million barrels produced during Phase I and Phase II. It's a precise number. When the Unit produces 30.2 million barrels, Exxon's percent is going to be 4.688, or 187,000 barrels, regardless of when it's produced or how it's produced.

Q. All right. Now, what happens when you use updated parameter based on actual production data?

A. Using the updated parameters, of course, helps that some.

The 20 percent 1978 oil producing rate, as you recall from the previous exhibit, was 7.145 percent.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Taking 20 percent of that, 1.429 percent, multiplying that by the 4 million barrels gives you 57,000 barrels, which is 10,000 more than that parameter gave the -- would give us under the '76 parameter.

The 80 percent share of primary reserves in Phase I is 5.648 percent as we've determined it. Its percentage is 4.518 weighed in the formula, multiplying that by the 4 million gives you 181,000, a total during Phase I of 238,000 barrels.

You'll notice that under the old parameters we would have gotten 187,000 barrels; under the new parameter, 238,000.

Under Phase II, using the updated parameter of 5.648 percent and multiplying that by 26,200,000 barrels gives Exxon 1,480,000 barrels for a total during Phase I and Phase II of 1,718,000 barrels, a difference of 377,000 barrels in Phase I and Phase II.

Q. Which is to say, then, that in the event the updated parameters were employed, Exxon would benefit by 377,000 barrels of oil.

A. According to our estimates, which we feel are close to what a Technical Committee would determine if that were done over on a more precise basis, we feel that's a reasonable estimate of the difference on the Exxon leases, is 377,000 barrels.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-4462
Santa Fe, New Mexico 87501

Q. Now referring you to --

VOIR DIRE EXAMINATION

BY MR. DALIOUS:

Q. Mr. Nolan, you just mentioned that Exxon would receive an extra 377,000 barrels of oil if the updated parameters were used.

Would it not be true that we'd lose 377,000 barrels of oil if the proposed parameters were used as appears in the Unit Agreement?

A. That's a direct corollary. If we'd get --

Q. At $10 a barrel --

A. Yes, sir.

Q. -- how much money would that loss represent?

A. Well, at $10 a barrel, that loss would be $10,770,000. I can do that without my calculator.

DIRECT EXAMINATION

BY MR. ATKINSON:

Q. I now refer you to what has been marked for identification as Exxon Exhibit Ten. Could you explain what this is?

A. Now, this exhibit shows the same type of calculation using the same -- using numbers from Exhibit --

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Exhibit Eight, I believe.

A. It is from Exhibit Eight, thank you, for Shell's participation, doing the same thing, taking 20 percent of the 1976 oil producing rate would allocate Shell 204,000 barrels for that part of the formula; using 80 percent of the 1976 primary oil reserve would give Shell 19 percent, or 760,000 barrels for the remainder of Phase I; this being a total of 964,000 barrels.

During Phase II, applying Shell's 23.768 percent, as determined by the Technical Committee, for 100 percent of the 1976 primary oil reserve, applying that to the 26 million barrels, would give 6,227,000 barrels during Phase II.

So that the total during Phase I and Phase II is 7,191,000 barrels, which Shell will be allocated under the parameters in the Technical Report and utilizing the formula in the Technical Report.

Q. All right, now what happens when you use the updated parameters with Shell?

A. When you use the updated parameter, you do again the same thing, 20 percent updated 1978 producing rate parameter is 24.282 percent. This gives 194,000 barrels compared to the 204,000 barrels, slight reduction. The 80 percent of the updated 1979 primary oil reserve, effective 1-1-80, is 23.421 percent times 8.8; 18.737 percent,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

multiplying that by your 4 million barrels gives 749,000 barrels. Under those circumstances during Phase I Shell's allocation of production from the Unit would be 943,000 barrels.

During Phase II, with the revised or updated 1979 primary oil reserve of 23.421, Shell's share would be 6,136,000 barrels. This is a total, then, for the two phases of 7,079,000 barrels.

Q. Okay, what is the difference between those two using the 1976 parameters and the parameters based on production since '76?

A. This shows a difference of 112,000 barrels.

Q. Now, what does this mean with regard to how Shell will come out if the present Unit Agreement goes through?

A. This -- this means that using the 1976 parameters, the older parameters, Shell would be allocated 112,000 barrels more oil than it would if the parameters were updated on the basis of Exxon's estimate.

Q. Now, in your opinion as an engineer, is it good engineering practice to base parameters and formula on the most up-to-date data available?

A. Certainly that's one of the things that in all the Technical Committee work we try to use all the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3018 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

updated parameters, and all of us are faced with attending these Technical Committee meetings with having to update at least two or three times during the course of a study.

As we described earlier in this study, it was updated once for -- to get an additional eight months of production included in the -- in the determination.

Q. Is it your opinion that it would be appropriate and good engineering practice in view of the length of time that has elapsed since 1977, 1976, to so update the present formula?

A. Yes, this is an inordinately long time to use these outdated parameters. It's over three -- about a three-year period and it would seem to me to give a better, closer, determination for each lease to redetermine the reserves based on the additional data that's now available.

Q. Now you mentioned a previous update that was performed by the Technical Committee. What did that consist of?

A. Well, as I said, we added the -- the production from a period January 1st of 1976 through August of 1976, and that caused the differences we looked at on Exhibits Six and Seven.

Q. To the best of your knowledge, then, what was the length of time involved in rerunning the formula with the updated production parameters?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. That's a good point. The initial Technical Committee information was furnished in October of 1976, and less than a month later the -- the updated information was furnished to the Technical Committee members, so it took Shell some several weeks to rerun that data including to include the eight months additional data.

Q. And is it your opinion that from your knowledge of what is involved in rerunning the simulator model, do you have any idea what amount of time would be involved in this case to rerun the formula?

A. No, I don't, really. I don't know what shape that's in as far as Shell's preserving the data or how long it would take to redo it. We'd have to just ask Shell what it would take if that's appropriate. I don't know.

Q. Now I refer you to what has been marked for identification as Exxon Exhibit Number Eleven, dealing with required investment of the Exxon share of the Unit Agreement formula using 1976 parameters. Would you please explain what this is and what we're doing here?

A. Well, Exxon, I guess, has objected to the payment for investments,for secondary investments during the long Phase I and Phase II period. That's what makes this one rather unique, is the long 10-year period, Exxon having a higher Phase III percentage must pay additional in-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

vestments during Phase I and Phase II over and above its revenue participation during this long period of time.

Q. Now the investment formula you're talking about, the revenue participation formula, are those set out by Shell this morning, being set forth in Exxon Exhibit Number Four, is that correct?

A. That's correct. Whereas we show down here towards the middle of this graph that in Phase I Exxon's revenue share is 4.688 percent. That's sort of along the middle line.

The investment share is 5.758 percent during that period.

Q. Now specifically how is that investment share calculated?

A. It was calculated based on 32 percent Phase III participation; 58 percent Phase II participation. That percentage -- that's the way that percentage was arrived at.

Q. I'm sorry, I think we have a little bit of confusion here. Right now you are speaking of the numbers which are sort of in the middle of the page under oil production share and investment share in thousands of dollars.

A. Yes, I am.

If we look at the top of this -- the top

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

of this exhibit, we see that for an estimated range of total unit investment between $31 million and $106 million, a calculation is made as to what Exxon's cost would be on a per barrel basis during Phases I and II.

Now, $31 million is less than Shell showed would be the investment for this Unit. This was an outdated number that we used in earlier -- they've updated their number somewhat for inflation, and so on. This $106.4 million is entirely Exxon's estimate of what the investment might be in this Unit. We must admit that if that investment is made, there are going to be considerable improvements to the production performance of the Unit, and additional reserves that will be perhaps generated by the additional investment.

Q. Is initial investment --

A. But we strongly feel that the investment of $31 million is less than will be spent. It's been our experience in this type of unit for -- in the San Andres, and even in units operated by Shell, that these investments are much higher than the initial anticipation.

Of course, there will be benefits that will accrue, so we have just looked at what the range of investments would be and what the cost to Exxon would be, for the investment share compared to the production which would be allocated under the production side of the -- of

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1011 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the agreement.

Q. All right. Now the additional investment you're talking about could come about from things such as infill drilling that has been spoken about here today --

A. Yes, that's particularly what may be required as the Unit starts. It would be justified. It would certainly be justified by increased reserves, higher rates, and this and that, but nevertheless, during Phase I and Phase II Exxon's share will still be the same.

Q. Now would you please explain what happens with these numbers here?

A. Okay. On previous graphs we showed that Exxon's production allocated during Phase I and Phase II is 1,341,000 barrels. We're going to calculate -- we're going to show how we develop Exxon's share of investment, which in the case of $31 million total investment, would be $2.371 million dollars if the investment is $31 million.

If the investment is the higher number, $106 million, Exxon's investment would be $8.1 million.

If we divide the investment by the production, we find that under the first case Exxon's cost is $1.77 a barrel.

Under th second case, it's $6.06 a barrel, and these are just numbers to demonstrate how tough it can get on investment if they are this high, and I want to also

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

compare that to some other numbers as we go through here.

Now the bottom part of this graph, repeats what Exxon's oil production share is at a 1,341,000 barrels during Phases I and II, and we've described how we got that by applying the percentage of the formula by the production in the various phases. Exxon's share of production for the first ten years is 1,341,000 barrels.

On the righthand side of the lower part, under the investment share in thousands of dollars, shows what Exxon's calculated investment share under the two investment schemes that we have established, $31 million and $106 million, we would pay -- Exxon would pay 5.758 percent and at the end of Phase II, if we just jump down to that line, Exxon would have paid $1,787,000. That's multiplying 5.758 times $31 million.

In the case of the $106 million investment, that number is $6,129,000.

Now then, this number, the next line shows the adjustment that is made at the end of Phase I. All investments at the end of Phase I are adjusted to Phase III percentage. Exxon's percentage in Phase III is 7.639 percent. So that amounts to an adjustment of 1.881 percent from Exxon's earlier share of investment to its share of investment at the beginning of Phase III. Exxon would have to pay in cash investment adjustment, 1.881 percent. In

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

case of the $31 million, that's $584,000. In the case of the $106 million, that's $2 million.

Exxon would pay to others as the investment adjustment for all the investments which we made from the beginning of Phase I and through to the beginning of Phase III, for that 10-year period.

And when we add the investment adjustment and amounts paid during Phases I and II, we find that Exxon's total production -- total share of investment, in the $31 million case, is $2,371, which is shown at the top of the graph, and for the $106 million case, as shown at the top of the graph, it is $8,131,000, which includes investment paid during Phases I and II and the additional investment for the investment adjustment.

Now then, Exxon's oil production share, you'll recall, is 4.440 percent during those two phases.

If Exxon had been paying on the basis of Phase in effect, or on the same share as its revenue, its investment would be as shown here: 4.440 percent of $31 million is $1,378,000. This means that Exxon during that period paid $993,000 for an investment in excess of its revenue share of participation.

Q. This represents what Exxon actually paid under the Unit formula with the 1976 parameters.

A. That's right on the basis of the 1976 para-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2030 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

meters it would be paid in excess of its production share, $993.000 and this number would jump to $3,405,000 if the investment is as high as $106, which we feel it could get that high.

Q All right. Now referring to what has been marked for identification as Exxon Exhibit Twelve, going through the same types of calculation for Shell under the Unit Agreement formula with 1976 parameters, what do you come up with?

A. Well, we showed Shell and we're not picking on Shell, we just showed it because their Phase III is lower than their Phase II, and this demonstrates what happens under this type of investment scheme where operators have big differences in primary and secondary and pay more during Phase I than they do in Phase III -- Phase I and II than they do in Phase III.

This shows that Exxon's -- or Shell's investment share for the $31 million deal at the top of the page, is $5,859,000. Shell's production during that period is $7,191,000 developed as we have on previous exhibits for a cost of $.81 a barrel. Now you recall that on the previous exhibit Exxon's cost was $1.77 a barrel during Phase I and Phase II.

Under the $106 million investment, if it does go that high, Exxon's investment -- or Shell's invest-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

ment is $20 million; Shell's production, again, is exactly the same, 7,191,000. That's a cost of $2.79 a barrel or compared to Exxon's cost of $606,000, and this results in considerable difference in the economics of this project, as to the rate of return which Shell would receive and the rate of return which Exxon would receive.

Q. All right, now would you please explain to the Commission what the meaning of numbers is in the second group of calculations?

A. Well, again, we calculated Shell's oil production share as being 7,191,000 barrels. This is simply multiplying their percentages times the barrels in each phase, and come on down here where their average production is 23.811 percent during Phases I and II. They've received as an oil production share 7.191,000 barrels.

Now, Shell is on the receiving side of this investment adjustment. Shell puts up more money during Phase I and Phase II, but it receives it back at the end of Phase -- some of that money back when the adjustment takes place, due to the fact that their Phase III is lower than their investment share during Phases I and II.

The percentage which they will receive, their Phase III is 18.875 percent. Their investment share is 21.713 percent. The difference between those two percentages is 2.838 percent. Multiplying that 2.838 percent

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

times the investment of $31 million gives Shell a credit at the end of Phase II of $881,000. That's a little more than Exxon pays, $584.

The investment share based on the higher investment numbers, Shell would receive $3,021,000 compared to Exxon's payment of $2,002,000.

Again, Shell's oil production share, being 23. -- the bottom, second to the bottom line, now, Shell's oil production share is 23.811 percent. If that were applied to the investment, their oil production share of those investments is $7,391,000 for the $31 million investment. Their investment share is $25,344 for the $106 million investment. They have received some million and a half dollars -- or they have not received, I'm sorry. I want to rephrase that.

The investment paid by others for Shell's production share of investment is a more proper way to put it, is $1,500,000. That results because their oil production share is higher than their investment share. Others have then had to pay that difference, and in the case of the $106 million, that difference is 5.2 million dollars.

Q. Would you explain in somewhat more detail exactly what you mean by investment paid by others?

A. Well, the total investment must be paid by all parties. If Shell's oil production share is, for

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3936 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

instance, $7.4 million, if they would have had to pay $7.4 million of these $31 million total investment, which is 23.8 percent. That is their -- that is their revenue share. Had they been forced to pay that, they would have had to pay a million and a half dollars more than they actually paid; therefore, other people must -- somebody had to pay that, and that is paid for by people who have a higher Phase III than Phase II.

Q. One of which is Exxon?

A. One of which is Exxon.

Q. I refer to you what has been marked for identification as Exxon Exhibits Thirteen and Fourteen. These examine required investment under the Unit Agreement formula using the updated parameters, based on production since 1976, first for Exxon and then for Shell.

Would you please explain the results on these two exhibits?

A. Well, these exhibits were prepared now instead of using the parameters that were in the Technical Study and are in the Unit Agreement. These were for using the updated 1978 oil production rate and the updated remaining primary parameters, and the same calculation procedure was used.

For instance, Exxon's share of production increases from 1,341,000 barrels, as shown on Exhibit Eleven,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

up to 1,718,000 under this type of -- during Phases I and II. If the parameters are updated, Exxon's production increased.

Its investment share remains the same, exactly the same. Now that results because the investment share is really determined by your Phase III percentage. Once the investment adjustment is applied, your total investment is exactly whatever your Phase III is.

So this does not change the total investment but it increases Exxon's production, and therefore, reduces the cost per barrel from $1.77 to $1.38, and under the high investment scheme it reduces it from $6.06 per barrel to $4.73 per barrel.

It takes some of the sting out.

And again we can show that, going through this bottom part, that the amount paid by Exxon in excess of Exxon's share of production is, in the case of $31 million, it's $607,000; and it's $2 million in the event that the investment is at the higher rate, and you'll see that those numbers are both lower than Exhibit Eleven, 993 compared to 607 for the $31 million case, 2 million 4 instead of 2 million 878 for the $106 million case.

Q. With regard to Exhibit Fourteen, which deals with Shell, would you please compare that with Exhibit Twelve?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. This is the same calculation procedure, using the updated parameters in the formula proposed here, but only changing it to insert the updated parameters determined by Exxon.

It shows the effect on Shell's production, where Shell's production is reduced from 7,191,000 down to 7,079,000. Shell's share of investment is exactly the same because its Phase III doesn't change, 5,859,000. That's 83 cents a barrel where before they only paid 81 cents a barrel. Two cents a barrel.

On the $106 million scheme, a little more -- a little more of an increase. It increases their cost per barrel from $2.79 to $2.84.

And again, the investment paid by others for Shell's production share, doing it the same way, comparing the production percentage share applied to the investments, against the actual percentage paid by Shell, results in the fact of $1,307,000 is paid for by others; for the $106 million case, $4.8 million is paid for by others, during the Phase I and Phase II period.

Q. All right. Now will you -- we now come to Exhibit Fifteen. Would you explain briefly what Exhibit Fifteen presents?

A. Exhibit Fifteen shows the tract parameters for the oil production rate for three periods of time. It

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

shows the 1976 oil production rate used in the Agreement formula. It shows the 1978 oil production rate which we have used to update the formula, and also shows for reference the first -- it says 1979 oil production rate, but it's actually the first five months of 1979 oil production rate, and if you would, please, note your exhibits. That is the first five months. This is all that was available to us at the time this calculation was made from the State records.

But this just shows, then, for each lease in the Unit, there are 83 tracts, for each of those tracts it shows the value of the production during that period. It shows the fraction that each tract bears to the total, or the parameter, which is developed for 1976 oil production, 1978 oil production, and more updated, 1979. You'll notice that Exxon -- well, no, I don't show it on that.

The next part of that exhibit shows the oil reserves laid out in the same way, from the 1976 Primary Oil Reserves, as included in the Technical Study, to 1979 Primary Oil Reserves, which actually start on 1-1-80; and just for reference, the Secondary Oil Reserves, which is identical to the Technical Study and the percentages are the same as shown in Shell's Exhibit.

This is the -- each tract's percentage of the primary oil reserves for '76, as determined in 1976, the primary oil reserves as determined in 1979, and the secondary

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

oil reserves as determined in 1979 -- as determined by the Technical Study.

We have also determined these parameters for the gas reserves in a manner similar for that used by the Technical Study. We did not think we wanted to burden everybody with another six tables. We have them available if anybody wants to look at them. We're not going to make any point of that, I guess.

Q. No.

A. The next exhibit shows the working interest owner and tract identification and the ownership of each tract. This is taken from the Unit Agreement; one correction for Exxon's tract.

This shows what each -- who owns each tract and in what proportions they own each tract.

When you apply these fractions to the tract parameters, you then determine -- and then apply that to the formula, you then determine the participation under the two formulas and the two participation schemes that we've talked about.

The next page shows Phase I, Phase II, and Phase III percentage and the investment percentage under the Agreement formula and using the 1976 parameter values for each operator in the Unit. There are 74 numbered operators. I think maybe there are only 73 operators; some number is

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
8010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

missing. But in any case, the working interest owners are shown on the left; their participation during Phase I is the first column; their participation during Phase II is the second column; the third column is their participation during Phase III, and the investment participation is shown on the right.

Highlighted are Exxon's percentages, which should agree with a few more decimal points, with the numbers we've earlier presented on all exhibits; 4.867 in Phase I, 4.396 percent in Phase II, 7.629 percent in Phase III, and 5.758 percent for the investment share.

Shell's are also highlighted, since we've used their numbers. They should agree with the earlier numbers.

And last exhibit shows the same numbers for each working interest owner, using the updated parameters which Exxon has developed for 1978 oil production rate and what we call 1979 primary oil reserves.

And these show the change in percentage which occurs for each working interest owner if updated parameters are substituted into the formula proposed in the Unit Agreement presented here today.

Q. All right. Now, for what purpose is the Exhibit Fifteen being submitted to the Commission?

A. If anybody's curious about how this af-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

fects their interest and their tracts, it's information, of course, that can be used to find out, and we believe this -- should the Commission, I guess, decide that they like this updating better than the other deal, they could take these percentages and do whatever they want to with them.

MR. ATKINSON: Mr. Chairman, I'm just about at the end of my direct examination, and I wonder if we might take a short recess?

MR. RAMEY: We'll take a fifteen minute recess.

(Thereupon a recess was taken.)

MR. RAMEY: The hearing will come to order. Are there any questions of the witness?

MR. DALIOUS: Mr. Chairman, we have two or three more.

MR. RAMEY: Okay.

MR. ATKINSON: First, Mr. Chairman, we'd like to notify you of a typographic error in our Exxon Exhibit Eight. Under 1978 oil production rate, barrels, instead of 180,000 for Exxon, it should read 188,000.

MR. RAMEY: On Exhibit Eight?

MR. ATKINSON: Under 1978 oil production

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

rate, barrels for Exxon should be 188,000.

MR. RAMEY: Okay.

VOIR DIRE EXAMINATION

BY MR. DALIOUS:

Q. Mr. Nolan, referring back to Exxon's Five-A, Five-C, Five-D, did I understand you to say that Five-A reflected that under the proposed formula, that Exxon would lose approximately 200 barrels a day as opposed to its actual production rate?

That on Five-C Chevron, by the same process, would more than double, and that TP, by the same process, would increase substantially, perhaps 85 to 90 percent?

A. Yes, sir, that was my statement.

Q. Would you please state again why this would exist?

A. Well, this is due to the drastic changes, rather drastic changes that have occurred in the production parameters and the remaining primary recovery parameters which are used during the early phases of the formula, since the obsolete parameters determined in 1976 were determined.

The fact that the production rate has changed on these leases and the calculated reserve would no doubt change if it were recalculated, that has resulted in this rather remarkable difference.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

Q. Would you describe the 1976 production data as being current?

A. No, sir, I would not.

Q. If not, how would you categorize that data?

A. Obsolete. Out of date.

Q. In your opinion, based on such data, and applying Exhibits Five-A, C, and D, in your opinion is the old Shell formula fair and equitable and a reasonable distribution of hydrocarbons?

A. Not based on what the leases are now doing, it is not.

Q. I now refer you back to Exxon Eleven and Twelve. I want to be certain I understand what your testimony was with regard to both of those exhibits.

If I understood you correctly, on Exxon Number Eleven, the top line, using the total investment of $31 million, that the cost per barrel to Exxon would be $1.77.

A. Yes, sir, if we take the production that is allocated to Exxon during Phases I and II, 1,341,000 barrels is the calculated oil allocated to Exxon under the formula, with a $2,371,000 investment obligation, as shown below. That results in a cost to Exxon of $1.77 per barrel.

Q. All right, and on Exxon Number Twelve,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

that same number for Shell is 81 cents.

A. That's correct.

Q. Now that is a difference of 96 cents per barrel for oil, is that correct?

A. Well, that's a difference in investment cost; a cost of 96, yes, sir, 96 cents.

Q. All right. In your opinion, is that variance in investment cost under a formula using obsolete 1976 data a fair, reasonable, and equitable distribution of the payments of investment cost?

A. I think it is not. It just complicates an already bad situation.

Q. Now referring to Exxon Thirteen and Fourteen, there is a variance between Exxon's cost, investment cost of $1.38 a barrel, and Shell's of 84 cents a barrel.

A. Yes, sir.

Q. Now that difference is not so great. Did you not use the expression, the using of updated parameters would take some of the sting out of that?

A. Yes, sir, I -- it would reduce that discrepancy because it increases the oil production allocated to Exxon during Phases I and II.

Q. All right, I'll refer you back to one other question that was asked to you by Mr. Atkinson.

I believe he inquired into your opinion as

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

to the length of time that it would take to recompute this data using updated parameters as opposed to 1976 parameters, and I believe you did not express your opinion at that time.

And I would like to re-ask that question in this manner: Assuming that the basic data has not been destroyed and is still available, what, in your opinion, would be the time necessary to recalculate on the basis of updated, current, 1978 or 1979 numbers?

A. Well, now on that basis, if the data is available, and could be updated as was done in 1976 when we talked about the additional eight months production, which was added, that work was done between the period of October 22nd, 1976, and November the 10th, 1976, because on October the 22nd certain decisions were made as to how those calculations would be made and Shell furnished the data then to the Technical Committee on November the 10th, a period of about three weeks.

And I don't see any reason why it would take much longer than that to recalculate, if the data is available and that stuff is still preserved.

Q. Okay. If updated parameters, in your opinion, would take some of the sting out of Exxon, as you stated, would you consider even that still somewhat inequitable?

A. Well, we --

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Even that.

A. We felt that the reliance entirely on remaining primary for the long period of time, ten years, to recover the entire primary, was not equitable because this is after all a secondary recovery program. When you go into it you are willing to take some of the risk or you don't want to go. There is secondary recovery even attributable to those owners who have a high percentage of primary.

MR. ATKINSON: Mr. Chairman, at this time Exxon moves to introduce in evidence Exxon Exhibits One through Fifteen.

MR. RAMEY: Exxon's Exhibits One through Fifteen will be admitted.

MR. ATKINSON: We pass the witness.

MR. LOPEZ: Mr. Chairman, at this time on behalf of Shell Oil I'd like to request a recess until tomorrow morning, whereby we can put on our cross examination and also a brief rebuttal witness.

MR. RAMEY: Any objections to the recess?

MR. ATKINSON: No objection.

MR. RAMEY: The hearing will be recessed until 8:00 a. m. tomorrow morning at this same place.

(Thereupon the evening recess was taken.)

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

(Thereafter at the hour of 8:00 o'clock a. m. on the 4th day of October, 1979, the hearing was reconvened, with the same appearances and the same Commission members in attendance, at which time the following proceedings were had, to-wit:)

MR. RAMEY: The hearing will come to order, please.

Are you ready with questions for Mr. Nolan?

MR. LOPEZ: Yes, sir, Mr. Chairman, thank you. Good morning.

MR. NOLAN: Good morning.

WILLIAM E. NOLAN

resuming the witness stand, and being previously sworn upon his oath, testified as follows, to-wit:

CROSS EXAMINATION

BY MR. LOPEZ:

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

a matter of fact, I think you mentioned that you probably never missed a meeting of that Technical Committee, is that correct?

A. As I recall, yes.

Q. And would you also agree with me that there were twenty-two sessions that were fairly intense over a three and a half year period between July, 1973 and March of 1977?

A. I didn't count them but I'm sure there were that many meetings.

Q. And would you agree with me that the Technical Committee should be complimented for the excellent job performed with a very difficult situation?

A. Yes, sir, I do.

Q. Mr. Nolan, I'm going to hand you a couple letters, and I've marked an area in yellow on these letters. And first of all, I'd like you to identify the letter, if you would, for the Commission, and then I'd like you to read the language that I've marked in yellow.

A. This is a letter from Mr. J. M. Shepherd of Exxon Company to the United States Department of Interior, Geological Survey, dated June 9th, 1978.

And the highlighted area reads: "The proposed North Hobbs Grayburg-San Andres Unit Area was studied extensively for more than four years by technical

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

personnel broadly representing area ownership. This study reasonably projects when and in what relative proportions remaining primary and secondary reserves will be produced under unitized waterflood operations. The graph and tabulated data developed from the study reflects this performance forecast."

Q. Thank you. Now I'd like to hand you another letter and ask you to identify it and read the same highlighted language.

A. This is a second letter from Mr. J. M. Shepherd of Exxon Company to Shell Oil Company, to the attention of Mr. W. E. Buck, dated February 16th, 1978. The highlighted area reads: "The North Hobbs Grayburg-San Andres Field was studied extensively for more than four years by technical personnel broadly representing the field ownership. This study reasonably projects when and in what relative proportions remaining primary and secondary reserves will be produced."

Q. It's essentially the same language, if not identical, to the earlier letter, is it not?

A. That is correct.

Q. And that was about six months later.

A. Yes, sir.

Q. Why is it, Mr. Nolan, that not until the time of this hearing have we been advised that the values as-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

signed the parameters on the Technical Report, to which Exxon apparently agreed, are not correct values?

A. The parameter values determined at the time the study was made are the best values which could be determined at that time and with the data existing to that point.

Earlier, Exxon did not take exception to the parameter values. On re-evaluation, based on more recent data, as opposed to the obsolete data, we have come to the conclusion that this data should now be updated and proper values assigned to the -- each tract.

Q. Why should we stop now five years -- five months into 1979? Aren't these values going to constantly change? Won't they be changing by December of this year or by the end of next year?

A. I would say they will change, but there is some limiting time under which you dedicate a lease to a unit forever; some limiting period where the more updated data should be used. You cannot go back five years and ten years ago and use data developed then to unitize now.

Q. Well, wouldn't you agree with me, and it's pretty significant, that over 90 percent of the people involved in this deal have agreed to the picture taken as of January 1, 1975?

A. Certainly your -- your ownership informa-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

tion presented earlier indicates some 90 percent have signed. What their various reasons were and what their situation is, I do not know.

Q. Okay. Let's go into the reasons why you believe the parameters changed. And in that connection I would refer you to your Exhibit Two, and ask you if you wouldn't agree with me that the increased production that you have described actually comes from Tracts 47 and 48 within the Unit Area?

A. Yes, sir, Tracts 47 and 48 have shown increase in production in access of that predicted by the Technical Study.

Q. I'd like for you to explain to me why this increased production has occurred. Did you go in and rework the wells or set new pumps? I'd just like to -- for you to explain to me what you did to these wells that got them to do what none of us thought they were going to do.

A. Submersible pumps were installed on two of the wells.

That increased the volume of artificial lift; increased the volume produced from the wells.

Q. Is that all you did to increase the volume?

A. Yes.

Q. And were there no pumps existing before that?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
Santa Fe, New Mexico 87501

A. There were sucker rod pumps, which did not have the capacity of the submersible pumps.

Q. How much was the capacity increased by the pumps?

A. The initial installation, the pump produced between 6 and 700 barrels of fluid a day. Prior to that time the producing rate was approximately 100-150 barrels of fluid per day. I'm guessing at that. I believe it was a very substantial increase in -- in fluid production.

Q. I see. When you talk about substantial increase in fluid production, isn't it true that after you installed these submersible pumps that you increased the volume of water about four times, too?

A. The volume of water increased about in direct proportion with the total fluid of the wells.

Q. And cannot this reflect the fact that all you are doing is accelerating your primary recovery by increasing your lift?

A. You are withdrawing at a more competitive, at a faster rate, from a given volume in the reservoir, and you will therefore produce more ultimate recovery from a well that produces at a higher rate. That's the name of the game.

Q. This is a fairly common practice in oil field management and operation, isn't it?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Oil companies are quite competitive.

Q. And we're talking in this particular pool about a fairly lengthy primary life, wouldn't you agree? 35 or 40 years?

A. 45 years, yes, sir. If that volume is sustained for that period of time, there'll be a great amount of recovery made by that well as opposed to some other well on an offsetting lease.

Q. Okay. Now, I would like for you to refer to your Exhibit Five-A, and I must say that yesterday you left me with the impression that if unitization becomes a reality, Exxon would have to pay back all that additional oil production that's reflected between the solid line and the hatched line, or about 200 barrels a day, but that's not the case, is it?

A. No, sir, I did not mean to give anyone that impression. That merely represents what would have been the difference in production had the unit been formed earlier.

Q. But by increasing your lift volume, you have actually increased or accelerated your primary and those additional 200 barrels a day reflect money in the bank to Exxon even if unitization becomes a reality, isn't that so?

A. What Exxon's production has been in the past certainly is Exxon's.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

And the Feds, as well.

Q. Goes without saying.

A. Yes, sir.

Q. Now, Mr. Nolan, you'd agree with me that there has been water injection in the Amoco Unit for about four years, would you not?

A. I believe their injection started in early 1976, yes, sir.

Q. All right. And do you know whether or not the wells in that unit have responded favorably to water injection?

A. I have examined the overall production. There has been a substantial production increase. That production increase is due to several things. One is the change in allowable treatment. That has a very substantial affect. The early production increases were undoubtedly due to production changes. There may be response. The gas/oil ratios are leveling out and perhaps going down. I believe it will be a successful flood, if that's the point.

Q. What has been your experience with the gas/oil ratio in your Tract 47?

Has it stayed the same or --

A. Gone down.

Q. -- gone down? It has gone down? Have you had an opportunity to examine any of the wells along the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

northern perimeter of the Amoco waterflood and found out whether or not they responded favorably or whether or not their gas/oil ratio has gone down?

A. No, sir, I have not. I have had the opportunity. I have not taken advantage of it.

Q. Well, would you agree with me that once a waterflood project is undertaken that it's pretty difficult at that point to go back to the drawing board and determine what the remaining primary reserves would be?

A. On the leases that will respond to waterflood it would be difficult.

Q. Mr. Nolan, yesterday I believe you explained that the unit participation formula, that was based on values assigned parameters that are no longer valid.

A. Yes, sir.

Q. And that in your analysis these could be updated fairly simply, by -- and I'm not quite sure how you came to your own calculations, but it seemed to be a combination of a decline curve analysis meshed with the computer simulation model, is that not correct?

A. That is correct, yes, sir.

Q. And this was to pertain to estimating the reserves in the San Andres formation, is that not so?

A. That is correct, yes, sir.

Q. Well, why didn't the Technical Committee

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

in its deliberations agree to some kind of decline curve analysis rather than as we've discussed rely and insist upon the computer simulation model?

A. The San Andres portion of this reservoir has water influx. Decline curve analysis, straight decline curve analysis, as normally used, simply doesn't reflect what a well's reserves are. So the Committee was forced to use some method which provided for the movement of oil in the reservoir. As the water expands from the edges, it pushes the oil various areas in the reservoir. That was why we used a combined -- or I used a combination of the two methods I have no way of doing this. This is only an approximation. It is fairly close, based on my experience, to what would happen if the simulation model were run. I do not claim, certainly, that this is an improved method. It is an approximation using only the data that we now have, and if the model were rerun, it would give results somewhat similar. The higher producing wells now would obtain greater reserves.

It was to show approximately where the oil would be produced under the updated and more recent conditions.

Q. But you would agree with me, though, that to use a decline curve analysis in a water-drive reservoir would have been laughable for -- to the Technical Committee.

A. They would not use a straight decline curve method for the San Andres, that's correct.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Now, Mr. Nolan, I'd like to talk about the participation formula which has been presented to the Commission and that's contained in the Unit Agreement and Unit Operating Agreement.

You don't have any problem, do you, with Mr. Buck's explanation that it seems fairly reasonable that this kind of participation formula that allows those with primary reserves to recover those primary reserves first and put the risk of any loss or gain on those that have secondary benefits to be realized?

A. Yes, I do.

Q. Well, why don't you tell me what your problem is?

A. Personally, it is my opinion that relying entirely on the single parameter, remaining parameter, for a period of ten years, when in fact over fifty percent of the oil produced during that period is developed because of the secondary flood, it is not an equitable way to distribute the oil production to each and every lease in the tract.

Now, that problem has been wrestled for many meetings and the majority of the owners did not agree with me and did not agree with Exxon on that point. And Exxon, in my opinion now, may defer to the majority.

Q. Now let's turn to a discussion of the investment participation formula. First in this regard, I'd

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

like you to explain why you think we seem to be so many miles apart. We've put up exhibits and calculations showing the initial capital investment to be $33 million, and Exxon's estimate is $100 million.

Could you explain why this big difference is there?

A. It has been our experience in San Andres waterfloods in West Texas and New Mexico that infill drilling is needed to get the maximum recovery. 40-acre spacing is not as effective. We believe that infill drilling will be required in this unit.

Now, we also believe that when we infill drill additional recovery will occur, and it certainly will be an investment that will be beneficial to all parties.

Q. Okay, but you'll have to agree with me here today, won't you, that what we've discussed with the Commission thus far does not provide for infill drilling, and what we've put before the Commission is the fact that this unitization project will be feasibly and profitable based on the data we've submitted to the Commission, and that does not include infill drilling?

A. That is correct. In that event, then all you will want to look at is our $31 million case and you would not want to look, or you would not want to believe, the $106 million case. That's your privilege.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

Q. And I believe yesterday's testimony showed that if infill drilling is indicated, it's going to have to stand on its own merit above and beyond what we have here today, right?

A. We have no -- no quarrel with that.

Q. But let's say even assuming that I agree with your $100 million figure without infill drilling, based on what we've done, Exxon still stands to realize a pretty substantial profit from unitization, wouldn't you agree?

A. Certainly, but however, we would like to also point out that the difference, the $1.71 per barrel paid by Exxon, still compares with the 84 cents per barrel paid by other companies.

Therefore their rate of return on the initial part of this thing is much higher.

That's the only point we wanted to make. It's simply that the investment formula is inconsistent with the allocation of reserves.

Q. You've brought up the next point I wanted to get into. Very good.

In that connection, I'd like you to refer to your Exhibit Eleven.

A. Yes, sir.

Q. Pardon me for standing up, but I think if I work closely with you on this deal, we might get to the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

bottom of my problem.

A. All right, sir.

Q. First of all, we are in agreement and do understand, don't we, that the unit agreement formula for capital investments in this project will ultimately be shared on the Phase III participation, or that which is actually the secondary oil, or added oil, made possible by this unitization, is that not so?

A. Yes, sir, that is correct.

Q. Okay. Well, if you -- if you'll look at your exhibit, and I'll just -- I first point to you that your -- Exxon's share of the total investment, of the $31 million, is $2.3 million.

A. Yes, sir.

Q. Right?

A. That's correct.

Q. Okay. And that, in order to get at that cost to Exxon of $1.77 per barrel, we divided the 2.3 million by the production of 1.3 million, isn't that right?

A. That is right.

Q. Okay. Then we go down here to the percent of the total investment share, or 7.3 percent, and if we multiply that figure, 7.6, I mean.

A. Yes, sir, 7.6 percent, right.

Q. Okay, and we multiply that times the total

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3026 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

estimated recovery of 55.2 million barrels, we get a total estimated secondary recovery for Exxon of 4.2 million barrels, isn't that correct?

I'll be glad to supply a calculator.

A. I believe your number is approximately correct, that the future recovery after the end of Phase II, and during Phase III, when secondary operations, or secondary recovery factors become effective, after that point, Exxon's investment is -- or Exxon's recovery is some 4.2 million barrels.

Q. Okay. We're in agreement.

Now, let's see what it costs Exxon to have this secondary recovery. In order to do that, then, we would go back to your 2.3 million dollar investment, right?

A. Yes, sir.

Q. And we would divide that by the 4.2 million that you expect to get, and I've done the calculation so I want to know if you agree with me, that comes out to 56 cents per barrel, I think.

A. I believe that that would be correct and the point you're making there is that each and every party who has secondary recovery pays then exactly the same, 56 cents per barrel.

Now, during Phase I and Phase II, the parties don't pay on the same basis. After Phase III starts

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5020 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

everybody pays the same. We have no complaint about that. We're not complaining about Phase III.

Q. Well, we have the readjustment date and we readjust everybody to the Phase III deal, don't we?

A. Everybody becomes whole at the beginning of Phase III.

Q. Well, what's wrong with that?

A. No problem with that. The problem is during Phase I and Phase II, when we're paying twice as much.

Q. Well. I can see your problem to a point but I don't think, Mr. Nolan, you're really fairly giving credit to those guys with more primary reserves who are being benefitted by this accelerated primary recovery made possible by the waterflood.

A. Of course, they're benefiting by the accelerated primary and they're paying nothing, only the interest on the money which they put up on the 58 percent during Phase I and Phase II. They're paying practically nothing to get that benefit, so they should share in some way in the cost. Which is my opinion.

They're also getting the benefit of the two-phase upper tier oil price and that type of thing, which is a benefit.

Q. A few final questions, Mr. Nolan.

You know, I'm -- I'm fairly amazed at what

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

I have to consider is a fairly reckless approach by Exxon.

MR. ATKINSON: Mr. Chairman, excuse me. If Mr. Lopez wants to cross examine the witness I think that is perfectly permissible, but if he's going to use this as an opportunity for argument, then we would object.

MR. RAMEY: Would you like to rephrase that question?

MR. LOPEZ: I'd be glad to rephrase that.

MR. RAMEY: It appears you may be bordering on testimony and you're not sworn.

MR. LOPEZ: And I -- that's true.

Q. (Mr. Lopez continuing.) Let me refer you to your Exhibit Nine, Mr. Nolan.

A. Yes, sir.

Q. And I -- if I understand that exhibit, it reflects that Exxon feels that they will lose 377,000 barrels of oil, is that right?

A. Yes, sir, that's correct.

Q. Now, if you compare that amount of oil to the total estimated recovery of 55.2 million barrels of oil, which you agree can be recovered by secondary operations, that figure represents less than 1 percent, or .68 percent, of the oil we can get out of this project.

A. Yes, sir; however, that's 100 percent of Exxon's loss.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. Well, I'm not so sure it is. Let me understand why you think that's so, because if I compared the same figure, 377,000 barrels of oil, to the 4.2 million additional barrels of oil that you stand to gain from the project, that seems to be less than 9 percent of what you can get, and it seems to me you're risking 11-to-1 odds to forego this 377,000 barrels of oil if the project isn't put into effect.

Q. Those numbers are not mutually exclusive. We believe that the project should proceed and that the secondary recovery is a benefit to everyone. We do not believe that Exxon's position will stop the project. If we believed that, then, perhaps there would be some different approach taken.

Q. Well, I don't know what else is happening here today.

No more questions.

MR. RAMEY: Any other questions?

MR. ATKINSON: Mr. Chairman, I've got a brief redirect, if I may.

MR. RAMEY: Let me ask a couple of questions first, Mr. Atkinson.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

CROSS EXAMINATION

BY MR. RAMEY:

Q. Mr. Nolan, you have, as I see on your Exhibit Fifteen, you have four leases.

A. Yes, sir.

Q. Tract 43.

A. Yes, that's the Exxon State "A" Lease.

Q. All right, what's the affect of your proposal to that lease?

A. I believe that lease drops in participation under the updated parameters, sir. It has not performed as well as predicted by the Technical Committee compared to the other leases.

Q. So if we went to the '78 production figure, that lease would not --

A. Fare as well, no, sir.

Q. -- fare as well.

And then the next two are your Bowers Leases?

A. Yes, sir, the 47, Exxon Bowers "A" Federal, Tract 48, Exxon Bowers Federal Communitized.

Q. And those two, their participation would be increased?

A. Yes, sir, their participation would increase.

Q. And then the fourth one, which is your

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-4462
Santa Fe, New Mexico 87501

Grimes Lease, what's the effect on that?

A. Well, now that is a stripper lease, and the production has dropped substantially since the Technical Report was made, and under that -- under our estimate of future production, that lease drops very substantially in participation.

Q. So Mr. Grimes would suffer considerably.

A. I'm afraid so, but Mr. Grimes -- that's his -- I mean we're protecting him as best we can.

Q. So two of your leases you would get an increase in participation and two of your leases you would get a decrease in participation.

A. That's correct.

Q. And you're concerned about the Federal government.

A. We're concerned about them all, sir. We just want to give them all fair treatment.

Q. You seemed to emphasize yesterday that this was a big Federal lease and most of the Federal participation in the unit.

A. That's correct. There are a total of 400 acres Federal leases. This is 320 of them.

Q. I just made a quick addition here. I took Conoco's leases in the Unit. I think they have five leases, and under the proposed participation they would have 9.3

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

percent, and under your proposal they would have 12.8 percent.

A. Yes, the Conoco leases have in general shown production much in excess of the Technical Report prediction since made in 1976.

Q. And yet they're supporting the proposed formula.

A. Conoco proposed this formula and I suppose they're proposing it. I don't know whether Conoco's looked at those numbers.

Q. But they would -- their participation would increase.

A. Very substantially, yes, sir.

Q. And still they are willing to take their knocks to get the unit together, I assume.

A. If they overlooked it, I presume they are.

MR. RAMEY: Thank you. Any other questions of Mr. Nolan? Mr. Nutter?

CROSS EXAMINATION

BY MR. NUTTER:

Q. Mr. Nolan, when you're putting a unit together that has as many interest owners as this one does, isn't it logical that at some point that you have to arrive at a cutoff point and start your circulation of the petitions

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

or the circulation of the ratifications to the operators, based on information that you've had up to that time.

A. Yes, Mr. Nutter, that's correct. There must be a --

Q. Well now, isn't it also true, Mr. Nolan, that by the time you have circulated 905 royalty owners and 90 working interest owners, that a certain passage of time would have gone by, and by then someone will always pick up some new statistics and come up with some new parameters that would change what you just finished circulating.

A. Certainly that is right. There has to be some period, some reasonable period of time, but beyond some reasonable period the updating may be needed.

Q. But you always have to cut it off at some point.

A. At some point, yes, sir.

Q. So you'll have the numbers that you can send out to people so they can look at it and sign it.

A. That is certainly -- that is certainly right.

Q. Now, on your Bowers lease there, the production took a dramatic increase back in 197 --

A. Yes, that's Exhibit Six.

Q. In took a dramatic increase back in 1977, to what is that increase attributed, Mr. Nolan?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. There were two REDA pumps installed on the Bowers Lease on Well No. 2 and Well No. 3.

Q. And are those the only wells that have shown increase in production?

A. Those are the principal ones; others have shown slight increases, but those -- that is where the principal increase comes, is from those two leases which both produce from Zone 1, which is the main production interval, primary production interval, and withdrawing at the higher rate just has made this lease much more competitive.

Too bad Exxon didn't do it earlier.

Q. Now those are -- those are producing up to top allowable, I presume.

A. Yes, sir, those are both --

Q. Allowable --

A. Those are both producing up to top allowable and one of those leases is only able to produce five days a month, and it makes its allowable. It produces at a rate in excess of 500 barrels per day with the REDA pump.

Q. Well now you have also on your Exhibit Six shown the reflection of that in the production as the yellow line, and you've also shown it as an increase in reserves. Now, isn't it often true that when you put in new equipment in a well, that you have a temporary increase in production and then the production declines back to the original decline

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

curve, and that you won't have the production decline curve going out there ad infinitum that high above the original decline curve?

A. Well, we can only look at what's happened in the past two years. That's a little more than just a short period of time. This lease has held -- these wells have held this production for the two-year period, from the middle of 1977 on. They show no signs of declining.

Q. And those two wells are producing from Zone 1 of the San Andres?

A. Yes, sir.

Q. So the production from those two wells is not going to affect the secondary recovery from the lease?

A. No, sir. That is not secondary recovery. All of that is primary, remaining primary oil, from the main primary zone.

Q. I see.

And you feel that you're increasing the reserves under the lease by installing these two pumps?

A. We're increasing the reserve from those two wells at the expense of some offsetting leases, yes, sir. It's just becoming more competitive. It's which wells get the oil. The reservoir production of the total reservoir will not be increased; the reserves should not be increased

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

by this.

MR. NUTTER: I believe that's all. Thank you.

A. Yes, sir.

REDIRECT EXAMINATION

BY MR. ATKINSON:

Q. Mr. Nolan, I have a couple more questions on redirect.

First of all, I'd like to clarify something. Exxon is not suggesting that the decline curve method you employed to approximate the simulation model should be used by the Commission or by the Technical Committee to re-evaluate reserves, are they?

A. No, I am not. I just said it is an approximation, and I think I was very conservative, using an 8 percent decline, 8-1/2 percent decline on it. This lease is in the dead center of the reservoir; the best producing area in that reservoir. And we assigned an 8-1/2 percent decline to it when the overall production decline is 6 percent. There's no reason to believe it shouldn't decline at a rate even slower because of its central location in the reservoir.

Q. What I want to get at, though, is that Exxon is not suggesting that the simulation model is not

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

correct?

A. No, the simulation model we feel would be the better method of doing it.

Q. So that what you're proposing is that the new data be input into the simulation model and see what it generates, is that correct?

A. Well that, we would certainly agree to that type of thing, but we can't force anybody to do that.

Q. Now, Mr. Lopez, sort of inferred that somehow that Exxon's installation of artificial lift in 1977 and the corresponding increase in production is some how unusual, and that wells won't change like that, ordinarily, unless you do something special.

Now do you know other wells in the proposed unit that have had -- demonstrated sharp increases over short periods of time?

A. There have been quite a number of cases through the years where there've been dramatic changes from one month to the next and then those changes were sustained for periods of -- long periods of time and this type of reservoir, where you have a large hunting ground, you have Zone 1, Zone 2, Zone 3 Upper, Zone 3 Lower, all of which will produce top allowable in some parts of the reservoir.

You have open only parts of those zones, so that you have opportunities to work over wells, get into

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

new zones, put on artificial lift, stimulate wells, all those good things that oil companies are supposed to do.

Q. All right. Well, now I'd like to refer you to what has been marked for identification as Exxon Exhibit Number Sixteen.

MR. ATKINSON: Mr. Chairman we only have one copy of this, so I'd like to circulate it to opposing counsel and then to the witness and the Commission, if I may.

Q. (Mr. Atkinson continuing.) Mr. Nolan, looking at Exhibit Sixteen, could you please identify that and explain what that is?

A. This is a data graph showing the producing history of the Shell "D" Lease, located in Section 24, Tract 29.

It shows the production rate in barrels per day versus plotted against time from a period 1960 through April, May, of 1979, and then it also shows an extrapolation made by the Technical Committee as to the future reserves on this lease.

Q. Now is there anything unusual about that curve or anything that meets the eye?

A. Well, there is a dramatic increase in production on this lease from a rate of about 20 barrels per day in 1973 to a rate of 120 or 30 barrels per day in 1974.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

That lease has shown a decline since that time of 16.6744 percent per year from the period -- I'll take that back. It's not that accurate. About 16 percent from 1976 to the present time.

Q. Now, in your expert opinion had the Technical Committee formulated the formula that's presently proposed and put it into effect using the same parameters, current production, et cetera, in 1973 before that dramatic increase was shown, would Shell's allocation of reserves have been substantially less?

A. Very substantially less, yes, sir.

Q. So it's really just a question of where you end up at the time that the data is cut off then, isn't it?

A. That's the unfortunate part of it, yes, sir.

Q. But your feeling is that it must be cut off at some point.

A. Yes, and Mr. Nutter's perfectly right. You must cut it off sometime.

Q. Now, I have one other question for you regarding the investment formula.

Mr. Lopez has suggested that the 100 million dollar figure may be a little bit preposterous. Have you had any experience or knowledge at all of the Wasson Field? (sic)

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. Yes, I have.

Q. And who is the operator?

A. Shell.

Q. And realizing that you have no exact figures in front of you, could you give us some idea of what additional costs have been incurred, investment costs, by the use of infill drilling in that field?

A. Well, as you say, I don't have the data, but as I recall, initially that waterflood was designed as a peripheral flood with a very modest investment as it started out. I'd say perhaps less than the investment that is predicted -- is estimated for this field, for this Unit.

Q. Less than $33 million?

A. Yes, I would say so, because it is peripheral with just converting the initial wells which wasn't a great deal of investment.

Now that was quite a few years ago.

Q. What has happened to the total investment to this date, to the best of your knowledge?

A. This always appears on Exxon's budget as one of our large items. Shell has drilled down to 10-acre spacing in many parts of that field, all being justified and all being profitable and all yielding additional recovery. I'd say that we've drilled 4 or 500 wells at least in that field. Investments have been in excess of $100 million.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. I'd also like to clarify one other point, which I believe you stated in your cross examination, but Exxon's problem with the formula, with the investment formula and the participation formula, really is not Phase III at all. It's only in Phase I and II then, is that correct?

A. Yes, that's where the problem lies.

Q. And also, as to the purportedly insignificant loss to Exxon of 377,000 barrels, just to clarify this once again, approximately what percentage is that of the total projected Exxon recovery?

A. The total projected Exxon recovery, both primary and secondary, is 5 million barrels, so that is only 6 or 7 percent of the total projected.

Q. Would you consider 377,000 barrels to be insignificant in your opinion?

A. No, sir, not in my opinion. 377,000 barrels is 377,000 barrels regardless of what your total is.

MR. ATKINSON: We have no further questions Mr. Chairman.

MR. RAMEY: Any other questions of the witness? He may be excused.

MR. NOLAN: Thank you.

MR. RAMEY: Do you have anything further, Mr. Atkinson?

MR. ATKINSON: No, sir, we don't have any

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
8010 Plaza Blanca (505) 471-6462
Santa Fe, New Mexico 87501

further witnesses.

MR. RAMEY: Do you have anything further, Mr. Lopez?

MR. LOPEZ: Yes, sir, Mr. Chairman. I have a couple or three rebuttal witnesses.

I'd like to call Mr. Miller. If you could give us a second, we'd like to put up a couple of exhibits.

MR. RAMEY: Are we ready? Please proceed.

WILLIAM C. MILLER

being called as a witness and having been duly sworn upon his oath, testified as follows, to-wit:

DIRECT EXAMINATION

BY MR. LOPEZ:

Q. Would you please state your name and where you reside?

A. My name is Bill Miller and I reside in Houston, Texas.

Q. Mr. Miller, by whom are you employed and in what capacity?

A. I'm employed by Shell Oil Company as a Senior Staff Reservoir Engineer in the Mid-Continent Division.

Q. Have you previously testified before this

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Commission and had your qualifications made a matter of record?

A. No, I have not.

Q. Would then you briefly describe your educational and employment background?

A. I graduated from Stanford University in 1950 with a Bachelor of Science degree in petroleum engineering. In that year I was employed by Shell Oil Company in Los Angeles, and I worked as a Division Reservoir Engineer in Bakersfield and Farmington, New Mexico, until 1960.

I then had special assignment in Shell's Production Research Laboratory in Houston, and with Shell in the Hague in the Netherlands until 1965.

This was followed by four years Area Engineer, responsible for Shell's California Supplemental Recovery Engineering. This included thermal, miscible (sic) and waterflood projects.

During the Hobbs Primary Reserve Study, discussed in this hearing, I was the supervisor of miscible flooding and reservoir simulation research at Shell's laboratory in Houston.

In collaboration with Shell's representative on the Technical Committee my staff and I analyzed the excellent data compiled by the Committee and made the computer runs.

I attended several Committee meetings in

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Midland and Houston to explain the nature of the math model, the key factors that were bound to affect the final answer, and to inform them of our progress.

During the past two and a half years I have been responsible for Shell Oil's engineering and pilot testing of enhanced oil recovery in the huge Denver Unit in the Wasson Field, West Texas. The productive measures there are also the San Andres formation.

More recently, in cooperation with Mr. Lancaster, I've analyzed the past two and a half years production performance for the Hobbs Grayburg-San Andres Pool, and related it to the previous reservoir simulation study results.

Q. Then I take it you are fairly familiar with Shell's application in these cases, 6652 and 6653?

A. Yes, sir.

MR. LOPEZ: Mr. Chairman, are the witness' qualifications acceptable?

MR. RAMEY: He is considered qualified, Mr. Lopez.

Q. (Mr. Lopez continuing.) Mr. Miller, could you explain why you became involved in the North Hobbs Unitization Project?

A. The Technical Committee contacted me at the -- Shell's Laboratory and informed me that other methods

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

to determine the important parameter of primary reserves had failed, and they wanted to know if it could be done by means of the math model.

I examined the -- all the data that the Technical Committee had compiled, thought about the nature of the problem, and concluded that indeed the math model would be suitable for this purpose.

Q. Would you briefly describe what was involved in the study you did for the Technical Committee?

A. Well, the complete summary is set forth in the Technical Report on pages 26 to 30; however -- which was introduced as an exhibit in this hearing.

Briefly, we represented the entire Hobbs Grayburg-San Andres Pool, north and south, with a grid system consisting of 600 distinct blocks. Based on the Technical Committee's data, we assigned properties to each one of those blocks, the thickness, the porosity, the structure that was involved, the gas/oil contacts, and the water levels.

We likewise assigned pertinent properties to each one of the individual wells in the pool, such as what zone it had been completed in, reconditioning data, and of course, the oil production.

Q. And then what did the computer do?

A. Well, the computer then automatically cal-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3016 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

culated the performance of each zone, the water influx, finally getting to the answer, which amounted to each well's individual pressure, its water cut, its gas/oil ratio, and its productivity.

The values I mentioned then were matched to the actual data as reported. Adjustments were made to the model to match these parameters ever more closely.

For instance, the location and strength of the water influx was an important adjustment parameter in Zone 1 production. The water drive was an important part of the performance of those wells.

When a close match was obtained, we then in the Committee felt confident in using that model for predicting the future reservoir performance.

Q. And it was accepted as the method of going about it, wasn't it? At any rate --

A. Yes, indeed.

Q. Did the Technical Committee establish any specifications for predicting oil and gas reserves?

A. Yes, they did, and most importantly, we decided that each well in the prediction would retain its existing completion interval. There was to be no credit given for possible future acid stimulation, for instance. There was no credit to be given for possible future completions of oil that was currently behind pipe and had never

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

been opened up. There was no credit to be given to installation of high volume equipment, et cetera, a change in the productivity of the well.

In addition, we decided that to get the purely primary reserve estimate we would have to ignore the anticipated influence of the water injection of Amoco's waterflood in the south, and so indeed the primary reserves in the absence of waterflood were also calculated for all the south at the same time, in the absence of waterflood.

We recognized that there was excess capacity in the top allowable wells; that there were wells that only had to produce for a fraction of a month to make their oil production, and this was included, and the difference between those wells and the wells that were producing to capacity was recognized.

A well economic limit of 3 barrels per day was adopted or a 99 percent water cut, whichever came first, and the prediction was terminated way out in the future at the beginning of year 2025.

Q. What efforts were made to insure that the Technical Committee members fully understood the computer simulator program?

A. Very early in the game, at the January, '75 meeting of the Technical Committee in Midland, I attended and informed them of the type of model that was to be used,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the grid system and the approach that was going to be used and the progress we had made at that time.

I met with them several times leading up to a meeting in October, 1976, in which in the call for the meeting the chairman of the Technical Committee asked especially that the people attending that meeting the representatives of the working interest owners, bring along a computer expert who could delve more deeply into the workings of the model.

We received numerous -- during all this, we received numerous suggestions, some corrections to our data, and all these were incorporated into the study, and finally, after the study was done, we specifically invited, if people wanted and still had questions, that they could come to the Belair Laboratory there in Houston and interrogate us personally and look at the output in detail.

Conoco and Skelly, now the Getty wells, took advantage of that and we met with them in our laboratory.

Q. Today, looking back, what is your opinion as to the success of your computer simulation model?

A. Well first, I do think we took into account all of the important factors that exist in the actual production of that big field.

More recently I compared the projection of the simulated oil production with the actual production to

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

date of the many tracts in the -- in the North Hobbs Unit, and in general, the overall agreement is good.

Now these are the tracts that have San Andres production. You recall the San Andres alone was the target of the simulation study.

There were tracts where operational changes showed deviations from the simulator prediction. Now, this certainly would not have surprised anyone in the Technical Committee, because this was all discussed when we set the restrictions on the fact that, as I mentioned before, that we would use existing completions and -- and degree of stimulation in making the prediction.

So in any case where additional work was done, why indeed it would not be surprising to me or to any other member of the Technical Committee that the oil production may be above the predicted trend.

Q. Did you have the opportunity in evaluating the performance of your computer simulation to study the Exxon tracts?

A. Yes, I did.

There are four tracts involved, as we talked about just a little while ago. The first is a Grayburg Well tract, which was not involved in the simulation.

The next two are single 40-acre tracts, and indeed one is above prediction and one is below.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

The fourth tract has San Andres production from seven wells and indeed, substantially deviates from the computer prediction.

Q. Was this last tract that you just mentioned Tract 47, and in that connection I refer you to Exhibit Number 35, and ask you to explain it?

A. On Exhibit 35 I've plotted the barrels of oil production from Tract 47 on one axis versus the time on the other one, starting at the beginning of 1975 and with data, actual data, up till and including May of 1979.

The actual production is shown as the jagged line. The computer history match and projection and prediction of reserves of the oil rate is shown here as the smooth line.

In making the original history match Tract 47 indeed was always a problem. Back in the history match period the production, oil production decline, of this tract over two and a half years preceding, was at a rate of 25 percent per year, and indeed, looking at the other tracts in the Unit, the top allowable tracts had no decline, and the majority of the other tracts typically would have a decline that was three or four times as small as the 25 percent that was being experienced on the Exxon tract.

The productivity was declining precipitously. If someone had indeed projected that decline rate at 25

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

percent, they would have drawn in a line as I've shown in green here, which as you can see, would have been far below the computer projection.

The actual match of the gas/oil ratio and the oil cut at the time of the history match, actually was quite good. What was unexplained was the rapid productivity decline in that period.

Well, indeed, as brought out, Mr. Nolan suggested using 25 percent or any other decline curve for these tracts. We did it with the computer. And this was the projection that the computer gave us under the constraints that I've mentioned earlier.

Now, as you can see, starting here in the middle of 1977 the actual production has exceeded what was projected. Now, in looking at the production figure, not only of oil but also of water during this time, you find that the water production has risen from about 250 barrels a day at the time we made the history match to nearly 1000 barrels a day now. The water production from this tract has been increased nearly four times.

Now it's obvious from looking at this that the increase in oil production has by no means been the factor of four. The increase in oil production has been considerably less. This means that the oil cut of this tract is considerably less than it was, so that the rise in oil and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

the rise in water have not been proportionate. A lot more water proportionately taken out than there was oil.

Q. Have you analyzed this decline in the oil cut, and in that connection I refer you to Shell's Exhibit Number 36, and ask you to explain it?

A. Exhibit 36 is a plot of Exxon's Tract Number 47. Primary reserves, as predicted by the simulator. To get a handle on this, we plotted the remaining reserves in barrels along the bottom axis here, starting as the simulator indicated for this tract, at over 1.2 million barrels for the Exxon's Tract Number 47.

On the other axis I've plotted here the percent oil cut. Now this is the percent of the total gross production that is oil, the remainder being water. I then plotted from the simulator three points: The water cut that was predicted was actually measured, on which we made our history match, in August of 1976. I plotted what the simulator predicted would be the oil cut at the first of 1980.

Q. Those points are marked on the exhibit?

A. It's marked in red. The first one is marked with a yellow square; the second with a red circle.

And finally, we have a yellow circle around what the simulator predicted would be the oil cut and the amount of oil that would be remaining as a primary reserve at the beginning of 1990.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3038 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

The dashed line then connects these three points and is the simulator's prediction back in 1976 of what the oil cut performance should be as we withdraw oil from the Tract 47.

The next thing I did was to superimpose the actual data, and in this case the yellow square which lies on top of the line is the actual oil cut that was experienced at the end of the history match, the beginning of the prediction.

At the present time there has been 475,000 barrels of oil produced out of Tract 47 in the two and a half years since the prediction, so against that point I have plotted the actual made 1979 oil cut of Tract Number 47, and outlined it in a blue square.

Now the first thing you notice is that the blue square falls on the prediction that was made by the simulator, so for this amount of remaining reserves the oil cut is just what the computer simulator would have expected.

The second thing you notice is that it, this point, May, 1979, is further from here than we thought we would be in 1980, based on the productivity of the well, as demonstrated by the actual data at the end of the history match.

So what we have here is an acceleration

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

of the remaining primary reserves, which has led us down further on the oil cut, and so it's completely consistent with what the simulator had expected and predicted.

The comparable points are shown over here on this graph.

Q. On Exhibit 35?

A. On Exhibit 35.

Q. Would you then dispute Exxon's contention that the computer simulator does not accurately project Exxon's remaining primary reserves in Tract 47?

A. Yes, I would. To me, this analysis indicates that what we are looking at in the case of Tract 47 is a classic case of pure acceleration of oil reserves, and by acceleration, I mean the fact that where you are getting to the same oil reserves, but you're running faster to get there; in this case producing four times the volume of water in terms of barrels per day than we would of otherwise.

Q. Finally, Mr. Miller, you have heard Mr. Nolan's testimony that in his opinion it would be possible to update the parameters by plugging in new production data. What is your opinion?

A. I don't think that this would be practical or worthwhile. To be consistent with the definition of primary reserves it was agreed by the Technical Committee

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

that the simulator forecast for all the San Andres wells in all the reservoirs would not include the influence of a water injection project being installed in the south by Amoco.

Under this contraint Amoco's Unit's San Andres primary reserves without the waterflood at the end of 1976 were determined by the computer to be about 9 million barrels. This was about 1/4 of the corresponding primary reserves in the northern portion. Water injection since that time by Amoco has definitely mobilized secondary recovery oil, benefiting not only the Amoco Unit producers, but also numerous wells within the proposed North Unit.

As a consequence, the oil production on Amoco-operated properties in the Hobbs Pool has steadily increased from the purely primary recovery rate of 1700 barrels a day in 1976 to nearly 5000 barrels per day by water injection now.

It's tripled.

The map labeled Exhibit 37 shows the location of the responding wells on the North Unit. Also shown is a portion of Amoco's South Unit. The tier of 40-acre tracts that lies just to the south of the North Unit. At the time that we made the history match, there were 52 oil wells in this area that were capable of making 65 barrels a day or more. Now, as expected after two-and-a-half years

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
Santa Fe, New Mexico 87501

of primary production, 40 percent of these, or 21 wells, can no longer make this good oil rate, and I've indicated those and highlighted them with yellow as the minuses on the map.

This leaves 31 wells that were good oil producers that are still good oil producers, and those I have indicated by the symbol "OK". Now, I should point out that some of the "OK's" at the time of the simulator study were top allowable 80-barrel a day wells. Those, for instance, this one located here on the South Unit that juts into the North Unit is now making 300 barrels a day, due to transfer of allowable.

The next feature of the graph are 24 wells indicated by the red plus, that were not making 65 barrels a day at the time we made the projection that are making 65 barrels per day now, and over, and indeed, some of them make as much as 400 barrels a day.

Now I would point out that the concentration of these wells adjacent to the next line down here, which is the water injection, where the water injection begins in the Amoco South Unit. Now, we have previously emphasized that the clear-cut nature of the rules that were adopted 2-1/2 years ago by the Technical Committee in the simulator estimation of each well's primary reserve. Now, due to the above-mentioned response to water injection, and the high

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

withdrawals in some wells adjacent to the North Unit Wells, a fresh redetermination of primary reserves in a portion of the North Unit is no longer feasible. All the portion of the North Unit affected by these, you can no longer determine primary reserve, and the portion of that North Unit that is so affected, and where you cannot determine primary reserves, is increasing every day.

In a new study it would be necessary to somehow separate many wells recent oil production into a primary fraction and a secondary recovery contraction. Then it would be necessary to obtain the Technical Committee's agreement to the admittedly arbitrary split that would be involved in each well. Furthermore, the increasing water cut would also have to be apportioned. Part of the water now could originate in the aquifer, part of it can originate from the water being injected in the South Unit, and part of it is affected by the re-adjustment of the flow lines from the aquifer due to repressuring of the South Unit.

And finally, although the field-wide and multi-zone model was well suited for estimating strictly primary recovery from the entire San Andres, it's not suitable for analyzing pattern water injection. As we testified earlier, for evaluating supplementary recovery, we made a separate simulation study, using a much more detailed grid system but covering a smaller area, only the San Andres Zone

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

III Lower. This productive area covers only about three square miles.

It's evident that the 1976 time period in which primary reserves were determined and agreed upon by the Technical Committee have unique advantages. Production trends were well established and the response to water injection had not yet occurred. Any re-evaluation at this time, in my opinion, would necessarily be less definite, it would be less consistent, and it would probably be less universally acceptable to the working interest owners.

MR. LOPEZ: No further questions.

MR. RAMEY: Any questions for Mr. Miller?

MR. ATKINSON: Mr. Chairman, could we ask for a short recess to consult with my expert here?

MR. RAMEY: Certainly. We'll take a fifteen minute recess.

(Thereupon a recess was taken.)

MR. RAMEY: The hearing will come to order. Any questions?

MR. LOPEZ: Mr. Chairman, before we get into cross examination, I'd like to tender on behalf of Shell Oil Company Exhibits Thirty-five, Thirty-six, and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Thirty-seven into evidence.

MR. RAMEY: Sholl Exhibits Thirty-five through Thirty-seven will be admitted.

MR. ATKINSON: As long as we're at it, I'd also like to tender Exhibit Sixteen for Exxon.

MR. RAMEY: Exxon Exhibit Sixteen will be admitted.

Now, are there any questions for Mr. Miller?

CROSS EXAMINATION

BY MR. ATKINSON:

Q. Mr. Miller, I just have a very few questions for you.

First of all, with regard to the rules, as you called them, adopted by the Technical Committee that acidizing of wells and reworking of wells were -- that it was assumed that the completion intervals remained the same, I think is the way you put it, by the Technical Committee.

A. Yes. Yes, sir.

Q. Okay. Now, those rules were for purposes of simplifying the model, were they not?

A. No, sir. They were -- the purpose of them was to get a uniform and across-the-board fair way of -- of making extrapolations of future reserves, based on, you

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

know, firm data, not on what someone might have in the back of their mind some years later.

Q. But there's no prohibition against reworking wells, for example, was there?

A. No. It was recognized that there be all sorts of that going on.

Q. In fact, Shell reworked some of its wells during the same period, did it not?

A. Yes, after the -- after the study period.

Q. After the study period?

A. Yes.

Q. There was no prohibition anywhere in the rules adopted by the Technical Committee which would have prohibited installing artificial lift on wells, either, was there?

A. No, sir. The purpose was to get a percentage that would be fair and then would be applied to whatever future acceleration or increases were made.

Q. All right. Now, with regard to -- with specific regard to the Exxon Bowers Tract 47, or the Exxon Tract 47, you spoke about the waterflood in the Amoco Unit to the south. Now you're not suggesting that the increased production from the Exxon Tract 47 was as a result of a waterflood in the south, are you?

A. Not yet.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Q. I'm sorry?

A. No, not yet.

Q. Now you also stated, I believe, -- I'm going to refer you to what has been marked for identification as Exxon Exhibits Five-B, Five-C, and Five-D. I'm sorry they're not marked. Do you have those with you?

A. Yes, sir, I have.

Q. Oh, okay, good. Have you reviewed these?

A. Yes, sir.

Q. All right. Now, you stated in your direct examination that you did not think it would be worthwhile to update the information available through the -- now available, in order to update the parameters, and the basis of your statement, I take it, is that based on the exhibits that you presented through your direct examination.

Now, in view of the great discrepancy between the performance that was forecast for Texas Pacific and for Chevron, and in view of the great discrepancy that did exist for Shell up until 1978, between what was projected and the actual production, isn't it a rather strange statement that it is not worthwhile to update the information?

A. No, I don't think so. There are leases; in my review I found that are producing below prediction. As far as the other people's leases, I can only infer that this looks very typical of a case where the operators are looking

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

forward to unitization, where they have wells that they intend to use as key wells in the waterflood in the deeper zones, II and III, and where they do not, therefore, intend to make major investments and to jeopardize that well by doing work on it prior to the unitization; in their judgment that they're not looking to accelerate the primary reserve. The reason I infer that is that certainly has been Shell's case. With impending unitization, that we've not taken steps to try and accelerate this 45 years of dwindling reserves. We've concentrated on getting ready for the waterflood.

Q. Now, with regard to Shell, however, I notice that as far as actual production, you see Shell is essentially gearing down now in preparation for unitization, yet up until 1978 Shell's actual production was exceeding what it was to be permitted under the unitized formula.

A. We are not gearing down. I say there are opportunities for doing well work that we have not taken, and indeed, as you point out, with the long term projection of reserves, to take into account 45 years, that it's misleading to look at a few, you know, 2-1/2 years production and compare our 24.123 percent that covers the whole 45 years and compare it to what we've actually done.

Q. Now with regard to the possibility of updating, something that was not clear yesterday and is

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

still not clear in my mind, at least, Shell does have the simulator program available, does it not?

A. Yes, it does, and all the data is still intact.

MR. ATKINSON: We have no further questions Mr. Chairman.

MR. RAMEY: Any other questions of Mr. Miller? He may be excused.

MR. KILPATRIC: We'd like to recall Mr. Buck to the stand. It will be very brief.

W. E. BUCK

being recalled as a witness and having been previously sworn upon his oath, testified as follows, to-wit:

REDIRECT EXAMINATION

BY MR. KILPATRIC:

Q. Mr. Buck, you have heard Exxon state that the method of allocating Investment Expenditures was not fair and reasonable, haven't you?

A. Yes.

Q. Why do you believe the allocation formula adopted in the Unit Agreement is fair and reasonable?

A. As previously stated, there exist considerable differences between the tracts and their relation-

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

ship to the amount of remaining primary oil reserves and the amount of secondary oil reserves contributed to the unit. Some tracts have a high primary share and a low secondary. Others are just in the reverse, but all tracts are benefited by an acceleration and assurance of the primary reserves contributed and the recovery of secondary reserves.

To relate these benefits and to compare the benefits among parties, the actual profit to be earned by each party must be considered.

Total profit to be received is the added profit made possible by unit operations and the program of water injection. That is, if the profit a part would realize from continued primary operation without a water injection program is subtracted from the total profit to be derived from unit operations and a program of water injection, the difference would represent the added profit made possible by the unit and a program of water injection.

If the added profit should provide all parties with about the same return on their added investment, then the method of allocating costs would be in line with the benefits and would be considered fair and reasonable, in my opinion.

Such a method of relating or comparing the profit positions of the working interest owners was submitted by letter of January 24, 1978, to the working interest

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

owners.

Q Would you explain the method of comparison that you just referred to, and in this connection I refer you to Shell's Exhibit Number 38?

A. Most companies analyze their investment prospects and potential profits on a present value basis. That is to say that all income and expenditures are valued at their present worth, or discounted at a fixed percentage rate.

By discounting all monies, income and expenses, and expenses including capital, profit is determined on a present value basis. Now, on Exhibit 19, which has previously been submitted, we showed a discount rate of 10 percent, and that is the same discount rate we have used in this exhibit.

The first graph here of the exhibit, as presented on the wall, is a plot of the percent rate of return of all working interest owners that would have received from Unit operations had operating expenses been based on the phase-in-effect Unit participation -- that again is operating expenses -- and the capital expenses were allocated initially on the basis of their Phase II, or primary participation, and then adjusted to Phase III secondary participation at the INvestment Readjustment Date. This, as I said, is a plot of their added profit. The vertical scale is the percent present

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

value added profit due to the water injection project or the present value of the added profit divided by the present value of added investments.

For the purpose of this comparison all parties are assumed to receive the same price for oil sold. This may not be true as oil is priced by the Department of Energy, but it is the only way the sensitivity to the method of investment can be compared.

The horizontal scale on the exhibit is the ratio of a party's Phase II, or primary participation, to his Phase III, or secondary participation.

In order to get a reasonable scale on the bottom, this is plotted, the ratio is plotted, or expressed, I mean, as a logarithmic function, but it's still the same, being a ratio.

What the exhibit shows is that the percent profit of a party with a low Phase II primary reserve and a high Phase III reserve would be -- now this is plotted to the left of the zero line. I'm not sure you can see, the zero line runs up here. The plots I'm talking about now are here. Whereas the percent profit of a party with a high Phase II, or primary, and a low Phase III reserve is plotted to the right of zero.

As you will note, the parties to the left of zero would receive a relatively high rate of return on

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
5010 Plaza Blanca (505) 471-2465
Santa Fe, New Mexico 87501

their money; whereas those parties to the right would receive a considerably lower rate.

Now, if the investments are shared completely on Phase III from the beginning, as shown here by this second overlay, this procedure has been followed, I believe, Exxon might be familiar with their Robertson Field Unit, Gage County, Texas, this procedure is that, the percent profit or rate of return reverses; that is, the parties on the left now receive a relatively low rate of return, and the parties on the right enjoy considerably higher rate of return.

The last overlay is based on the method of cost sharing as stated in the Unit Agreement. That is, the investments are based on a weight of 42 percent primary and 58 percent secondary participation. Here you will note that all parties receive about the same rate of return, not exactly the same, but within a reasonable range.

As this is a rate of return for added profit, and it takes all parties to make the added profit possible, it seems fair and reasonable that all should receive about the same rate of return from the added recovery, and the formula proposed provides such a condition.

Q. Thank you, Mr. Buck. Was Shell's Exhibit Number Thirty-eight prepared by you or under your supervision?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

A. It was, yes.

Q. Thank you.

MR. KILPATRIC: Mr. Chairman, we'll offer Shell's Exhibit Thirty-eight into evidence at this time.

MR. RAMEY: Exhibit Number Thirty-eight will be admitted.

MR. KILPATRIC: Thank you. No further questions.

MR. RAMEY: Any questions of Mr. Buck?

MR. ATKINSON: We have no questions.

MR. RAMEY: He may be excused.

MR. LOPEZ: Mr. Chairman, that concludes our rebuttal.

MR. ATKINSON: Mr. Chairman I would like to -- I realize it's a bit irregular, but if possible, I would like to recall Mr. Lancaster.

BILL LANCASTER

being recalled as a witness and having been previously sworn upon his oath, testified as follows, to-wit:

RECROSS EXAMINATION

BY MR. ATKINSON:

Q. Mr. Lancaster, yesterday I believe you testified that you were and are the Chairman of the Technical

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

Committee, is that correct?

A. That's correct.

Q. And I believe you also testified that in your opinion the Unit Agreement proposed by Shell allocates hydrocarbons to various tract owners in a fair and reasonable method or manner, also, did you not?

A. I don't remember, but I agree with that.

Q. All right. Now, the distribution of hydrocarbons to the various tracts as reserves on the simulation model was accomplished prior to November 17th and 18th 1976, I think you will agree.

A. Correct.

Q. And the reserves that are presently allocated to the various tract owners in the simulation model are the same reserves that were allocated prior to November 17th and 18th, 1976, is that correct?

A. The reserves, the primary reserves, or --

Q. Yes.

A. -- both?

Q. Primary reserves.

A. Well, they're what came out as the result of the second simulation model, the one they reran, right.

Q. Now it is true, is it not, that a meeting of the Technical Committee on November 17th and 18th, the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

reserve allocation as to Skelly Oil for their Turner Wells, which had been calculated by the Shell computer run allocating 319,000 and 321,000 barrels respectively to the two Skelly Turner Wells were adjusted.

A. That's correct.

Q. And they were adjusted by taking the arithmetic average of three Shell wells, the Shell Sanger 2, 27 North, the Shell Turner 2, 34-B, and the Shell Turner 1, 34-G Wells, taking their production that was allocated under the computer run and arithmetically averaging that with the allocations to the Skelly Wells, is that not true?

A. That's correct.

Q. And this was done without a computer calculation. It was simply a decision on the part of Shell Oil to arithmetically average, is that correct?

A. No, this was an agreement of the Technical Committee.

Q. All right. Now, I would like to refer you, or I will ask you, whether you recall that there were seven parties in favor of this, among whom were Amerada, Amoco, Gulf, Mobil, Sun, Texas Pacific, and Shell.

Opposed to this were Cities Service, Conoco, Exxon, and Skelly.

Do you recall that?

A. Well, I'm going to have to get my minutes,

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

because I think you're -- we're out of -- can I get my minutes now?

Q. I refer you to page two of the minutes of that Committee on November 17th and 18th, 1976.

A. Okay, just a minute, though.

Well, no, that was an initial vote. There was a subsequent vote taken, and that was on March 2nd, 1977. And at that time basically the same thing, in essence, was offered, and there Exxon agreed.

If you go to your minutes for March 2nd, 1977, and go to the bottom of the page.

Q. The point is that there was an adjustment, though, was there not?

A. Yes.

Q. And it was not a function of the computer simulation model.

A. That's true.

Q. All right.

MR. ATKINSON: I have no further questions.

MR. LOPEZ: Mr. Chairman, in light of this, I'd like to kind of go out of order again and call Mr. Miller back to the stand just for a brief question.

MR. RAMEY: Okay. Does anybody have any questions of Mr. Lancaster? He may be excused.

SALLY WALTON BOYD
CERTIFIED (SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

MR. LOPEZ: Mr. Chairman, I might also mention that I don't believe Mr. Miller was ever sworn, and I would like him to be sworn and to swear that the testimony he's given today has been the truth.

(Thereupon Mr. Miller was duly sworn upon his oath.)

WILLIAM C. MILLER

being recalled as a witness, testified as follows, to-wit:

REDIRECT EXAMINATION

BY MR. LOPEZ:

Q. Mr. Miller, you have just heard the questions put to Mr. Lancaster. Would you explain the reason why this adjustment was made and what Shell's role was in it?

A. Yes, sir. In the Technical Report there is the -- you will see a picture of the grid system. The grid blocks in this particular case at the intersection of four of them was located a Skelly well, much like the Four Corners Monument.

In the simulator, therefore, it was possible to put that particular well into any one of the four

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

blocks.

The first attempt we made, we found that indeed, what appeared to be very comparable wells in this area, three Shell wells and two Skelly wells, that at least one of the Skelly wells looked as though, indeed, its reserves were low compared to the neighbor. This was one of the changes that we made in that intervening three-week period that was spoken. We thought that by merely moving that well to another block that we could bring it into line with its neighbors.

When we did it, we actually ended up concentrating production out of that new block and the well actually made somewhat less.

At the meeting that's being referred to, this was to accept and finalize the percentages for -- I'm sorry, to finalize the oil production reserves that we had derived, and therefore, indeed, Shell suggested that rather than making additional runs and consuming additional time, that it would be fair and reasonable to start with the computer reserves for those five wells, totally 416,000 barrels on the average for each one of those five.

We then suggested that each of these wells be given that average, which meant that some wells went up some; some wells went down some. The net result was that we subtracted from the Shell wells the total of 192,000

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

barrels of oil. We added to the Skelly wells 192,000 barrels of oil, and no other operator was involved in those changes.

Q. Why did Shell sacrifice 192,000 barrels of oil?

A. Basically, we were determined to -- to do anything necessary to get on with the water injection project.

MR. LOPEZ: No further questions.

MR. ATKINSON: We have no questions.

MR. RAMEY: The witness may be excused. Do you have anything further, Mr. Lopez.

MR. LOPEZ: No, Mr. Chairman.

MR. RAMEY: Mr. Atkinson?

MR. ATKINSON: Only to ask Mr. Nolan, without taking the witness stand, whether Exhibits One through Sixteen were prepared by you or under your supervision?

MR. NOLAN: Yes, they were.

MR. ATKINSON: We have nothing further.

MR. RAMEY: Do you have any statement?

MR. ATKINSON: Yes, sir, we do.

Shell has come before the Commission seeking a statutory unitization. It is their burden to show, as the Commission well knows, that the Unit Agreement and unitization will protect correlative rights and that hydrocarbons will be allocated to the separately owned tracts, is statutory language, on a fair, reasonable, and equitable basis.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
502 D Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

That is not to say some of the tracts, or most of the tracts, or Shell's tracts. It's all the tracts we're talking about.

Now, as has been brought out in our case, we do not feel that the present parameters being employed in the proposed formula, Unit formula, are fair. They are not based on production data since 1976.

I think to a certain extent the real issue has been clouded this morning. The -- Exxon is not taking issue with the effort that Shell's made to unitize this -- this North Hobbs Unit. They aren't taking issue with the accuracy of the study in 1976. They are not taking issue with anything at all as proposed by Shell, except that the parameters are simply not correct, and the reason they're not correct is because they are based on outdated, outmoded, obsolete data.

It is no more appropriate for this Commission to accept the parameters proposed by Shell in this formula with 1976 data than it would have been if Shell had brought this thing before the Commission in 1976 and suggested that 1973 data should be used.

Now I realize that it may not be an easy matter to rerun the program; however, as has been testified to this morning, the program does exist and it can be done. Exxon is more than willing to cooperate in any way to rerun

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

the program as far as making their information and personnel available.

There is only one way under this present formula that the hydrocarbons can be allocated to the tract owners, the individual tract owners, all of them, on a fair and equitable basis, and that is to update the parameters. If the parameters are not updated, then Exxon's position is that, as Mr. Dalious will state in a moment, that Exxon should be left out of the Unit Agreement, and there's a precedent for this in the same pool, the Amoco -- the Amoco Unit in the south has -- I've forgotten who the operators are -- there are two windows in that pool, or in that Unit. There is also substantial precedent in view of the Moranco Waterflood Unit, which apparently can be operated by the use of lease line wells and offset wells, and as was testified to yesterday, there's no problem with projecting a finger that sticks into the proposed unit. It's certainly possible that the Exxon Tract 47 will be protected to the same extent that the peninsula that juts into the northern unit of Amoco is protected, or proposed to be protected.

So Mr. Dalious is going to set forth Exxon's official position as representative of Exxon, but I want to re-emphasize that Exxon is not quarreling with the tremendous efforts that the Technical Committee has made

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2463
Santa Fe, New Mexico 87501

in formulating a formula that they believe to be fair and equitable, and if the parameters are revised and updated, Exxon is agreeable to proceeding with that formula and getting on with the unitization.

Thank you. Mr. Dalious will now address Exxon's formal position.

MR. DALIOUS: Mr. Chairman, in this hearing Exxon has entered its objection to approval of the proposed North Hobbs Grayburg-San Andres Unit on the basis of applicant, Shell Oil Company.

In considering the application, Exxon respectfully requests serious consideration be given to its principal objection, namely, that the proposed formula is neither fair nor equitable because of now obsolete 1976 production numbers being used for the calculation of participation percentages as they now appear in the proposed Unit and Unit Agreement.

In the instant case Exxon suggests that the passage of time since 1976 numbers has been unusually long, considerably more than is normal.

Accordingly, Exxon respectfully requests the selection of one of the following three alternatives with regard to the present application:

First of Exxon's proposed alternatives is that the Commission approve the application provided the

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2468
Santa Fe, New Mexico 87501

applicant be required to recalculate tract participation percentages by using updated, current production and remaining primary production figures, as opposed to the 1976 figures now applied to the formula.

As a means of expediting the recalculation, the updated numbers, already available from Exxon's exhibits, could be used, and I refer to its Exhibit Number Fifteen.

With regard to authority for the issuing of an order in conformity with this alternative, Exxon submits that New Mexico Statute 70-2-6, 70-2-11, 70-7-6, and 70-7-7 contain adequate authority for such action by the Commission. Exxon suggests that the words "as prescribed" as they appear in 70-7-7 provide ample discretionary authority for the entry of an order in conformity with alternative one. Exxon submits that in so doing the applicant need not obtain a re-approval of all parties who heretofore have ratified Unit or the Unit Operating Agreement, or both. Exxon submits that if the cited articles, and in particular, 70-7-7, do not provide such authority that the word "Prescribed" is meaningless with the result that the only authority of the Commission would be either to approve or disapprove the application precisely as submitted.

Such an interpretation would appear to be contrary to the clear legislative intent in the enactment of this statute.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Exxon further submits that if alternative number one be adopted, that applicant has ample time to effect the recomputation prior to the ipso facto termination date which is 1-1-80.

Exxon directs the attention of the Commission to a precedent for such an alternative. In the Double L Queen Unit in Eddy County, one Jack L. McClellan protested the application of Bert Royalty Company on essentially the same basis as Exxon now protests Shell's application. In that cause the Commission entered an order requiring a recalculation based on newer data. Further, we understand that no additional re-signup was required.

The second of Exxon's proposed alternatives is that the Commission approve the application subject, however, to excluding Tracts 43, 47, and 48 from the Unit Area.

Mr. Lancaster and Mr. Phillips have assured the Commission that the Unit would have no -- this would have no effect on the Unit and that these tracts could adequately be protected by the use of a cooperative agreement, and in this respect we would agree to entering into a cooperative agreement.

As a part of this alternative, Exxon would be willing to accept deletion only of its federal tracts, Numbers 47 and 48 in the proposed Unit.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-4462
Santa Fe, New Mexico 87501

Exxon's third alternative would simply be disapproval of the Unit.

With regard to the application for field rules, Exxon has no objection to such application -- approval of such application, provided either alternative one or alternative three be selected. HOwever, should the Commission elect to follow alternative two, respondent, Exxon herein enters its objection to Rules 1, 6, and 7, as proposed for the reason that as presently written exclusion of any tract would delete that tract from the application of the proposed rules.

These rules clearly were written as relating to the entire Unit as it was set forth in exterior boundaries and the presence of a window in the Unit would eliminate those tracts from the new rules, as proposed. We suggest that if this alternative be -- I said suggest -- we request if this alternative be selected by the Commission for its order that minor changes in the wording of the rules could be entered so that the window tracts would have the same application of the rules as they would have to the entire Unit Area.

We wish to state we appreciate the attention of the Commission and respectfully request that one of our three alternatives be entered in the order.

MR. RAMEY: Mr. Lopez?

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
2010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

MR. LOPEZ: Mr. Chairman, I'm not even going to dignify the suggestion of Exxon to its second alternative by responding to it. If Exxon wanted to discuss cooperative waterflooding, the time was before now. We've had a day and a half of testimony. I would have been glad to hear it and I would have been glad to put on witnesses to respond to it as to why is just simply won't work and no one will agree to it.

Therefore, I'm not even going to respond to that.

Mr. Chairman, Mr. Commissioner, Members of the Staff, Ladies and Gentlemen.

Never in my experience before this Commission have I participated in a case more important as regards the human endeavor that has gone into it. In this connection, I want to introduce you to Hank Swartz, who was the author of the Technical Committee, and who flew directly from Cameroon to Santa Fe, New Mexico, to attend this hearing.

Mr. Hank, I want you to stand up. You did a helluve job on that Technical Report.

What we've tried to do here in the last day and a half is tell a story, and I think we've told a helluve story. I'd just like to highlight some of those events that have occurred.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

Mr. Lancaster, who is now the chairman of the Technical Committee, has described to you the mammoth undertaking that the Technical Committee did to try and get one of the most important historic pools in New Mexico into a posture for secondary recovery. The magnitude of the undertaking with respect to the assembly of data, to establishing parameters, and assigning values to those parameters, to establishing a cutoff date, and the fact that they could come to a conclusion that the secondary recovery operation of this unit would be both feasible and profitable. He's described the wonderful participation of all the working interest owners in the unit and their amazing efforts to come to almost unanimous agreement on a step-by-step basis so that the working owners could find some way to allocate the production, the benefits as well as the burdens, that would be undertaken if unitization became a reality.

Mr. Buck, my good friend Mr. Buck, who was Chairman of the Working Interest Owners Committee, he has also described the relentless and unbelieveable undertaking that the working owners did in trying to achieve a fair, reasonable, and equitable formula.

He's explained, and I won't go and bore you with the details of why the participation formula with respect to the allocation of oil reserves and with respect to the allocation of investment are fair and reasonable.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
1010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

I could never say it better myself.

Third, you've heard from Mr. Campbell, who once the Unit Agreement and the Unit Operating Agreement were put into a form that could be submitted to the people involved, went out and found out who they all were. I don't what Exxon expects or how long they think it's going to take to find out where 905 royalty interest owners are, or how they're going to get 80 working owners to agree to the thing, but that's what he did. In fact, he's also testified that he couldn't even find 44 royalty interests. They're still unknown where they are; they were unreachable.

But that was a mammoth undertaking in itself.

Next, you heard from Mr. Phillips, and he's already to go with the thing, and he's told you how big a project it is and what kind of complexities are involved in trying to deal with this particular reservoir.

And finally, Mr. Chairman, today you heard from Mr. Computer Simulator himself, Mr. Miller, and he's explained the best he could how that thing worked and why everybody agreed to it.

What we've attempted to do, and if I may, and I think what the testimony reflects in a nutshell, and if I may analogize it, I think if you picture a train leaving Kansas City, and it's arrived in Albuquerque, and it's going

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

to have to stop in Winslow unless everybody can get together and see that it gets to San Francisco. So all these guys on this train took a picture and agreed to take a picture in Albuquerque, that if they could take a picture and get this train together, that they wouldn't have to stop in Winslow; that they could get all the way to San Francisco.

And this is essentially what we're trying to do here today, and what Exxon would have us to do is to erase the picture we took in Albuquerque, and I suppose stop in Winslow. That's not what we want to do. We all want to get to San Francisco.

If you would just indulge me a little more, this case has been very important to me and I'd like to talk about how I feel about it and how I perceive my role.

When Mr. Buck first called me to Houston, and I went down to find out what the deal was all about, he kind of suggested to me that if I thought I was going to be able to understand the magnitude of the complexity of the project, I was biting off more than I could chew.

Well, we worked on the deal. We tried to put it together. I came home, filed an application, went back down, tried to get the testimony together, see that we were all in order, and I kind of got a little confident. I thought I was getting a pretty good handle on the deal.

Last week when I went down to Houston and

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3010 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

I sat down with these gentlemen, I said to them, "You know, there's one thing. I think I've got a handle on your deal but I don't really understand the computer simulator. Would you try to explain that to me?"

And you ought to have seen the expressions on their faces. You know, they were fairly stunned, and they said, well, Owen, if we tried to describe to you the number of years, the talent involved, the amount of money that went in to developing this computer simulation program, it would take us a helluve a long time, and that's when I was humbled, Mr. Chairman. I knew, and Mr. Buck was right when he first told me, I was going to bite off more than I can chew.

You know, 55 million barrels of oil is a lot of oil, especially when you consider that only 83 million barrels of oil were produced in 1978 in New Mexico, and when you consider that we're trying to get away from our dependence on foreign oil sources, but that's not what makes this project so awesome to me. When you talk about the millions of dollars of profits, that's a lot of money, but that's not what really has gotten to me, either.

What has made my -- what has made me realize that my undertaking in trying to direct the story we've put on here in the last day and a half, what made me realize that this undertaking was fairly awesome, is when

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-8462
Santa Fe, New Mexico 87501

I finally realized the commitment of human resource to this project; the commitment of the talent, the genius, the human sacrifice, that went in to this project over the last seven years to make this thing a reality. That's when it really got to me. That's when I understood that this is a fairly awesome responsibility.

And now, Mr. Chairman, we've told our story. The curtain rang up yesterday morning at 9:00 o'clock and now it's with a great deal of relief that I am able to share with you this awesome responsibility, and I have great confidence that there will be a wise and expeditious resolution and decision to these cases and that you gentlemen up there will be able to ring down the curtain.

Thank you.

MR. RAMEY: Thank you, Mr. Lopez. Anybody else have a statement to make?

MR. ATKINSON: Mr. Chairman, I would just like to set one thing straight. Shell was not taken unawares as to Exxon's possible desire to be let out of the Unit. Exxon has talked to Shell about this previously and as recently as two months ago Shell responded and said they would not agree to that.

MR. RAMEY: The Commission will take the two cases under advisement.

MR. LAW: Mr. Chairman.

SALLY WALTON BOYD
CERTIFIED SHORTHAND REPORTER
3020 Plaza Blanca (505) 471-2462
Santa Fe, New Mexico 87501

MR. RAMEY: Yes, do you want to make a statement?

MR. LAW: My name is J. W. Law. I'm a petroleum engineer and I work for the Commissioner of Public Lands of the State of New Mexico.

The Commissioner has granted preliminary approval to the participation factor and formula set out in the proposed Unit Agreement titled the North Hobbs Grayburg-San Andres Unit, Lea County, New Mexico.

We feel at this point that if there are any changes in the participation formula or the participation percentages, it would reduce the equity of the State Land Office; that could jeopardize the preliminary approval granted.

MR. RAMEY: Thank you. Any other statements?

The Commission will take the cases under advisement.

(Hearing concluded.)

BEFORE THE OIL CONSERVATION DIVISION
OF THE STATE OF NEW MEXICO

APPLICATION OF SHELL OIL COMPANY FOR AUTHORITY TO INSTITUTE A PRESSURE MAINTENANCE PROJECT FOR THE NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT, LEA COUNTY, NEW MEXICO.

Case No. 6653

Read 8/15/79

APPLICATION

Shell Oil Company hereby applies to the New Mexico Oil Conservation Division for an order authorizing it to institute a pressure maintenance project for the North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico, and in support of its application states:

1. Shell Oil Company (Shell) is a Delaware corporation authorized to transact business in the State of New Mexico, and is engaged in the business of, among other things, producing and selling oil and gas.

2. The Project Area for which application is made consists of 10,649.53 acres, more or less, in Lea County, New Mexico, and is more particularly described in Exhibit "1" attached hereto and incorporated herein by reference. Shell proposes to seek an order pursuant to the New Mexico Statutory Unitization Act providing for the unitized management, operation and further development of the Project Area.

3. By converting certain presently producing wells, by shutting-in other producing wells and by drilling new wells, Shell proposes to inject fluids into the producing horizon known as the Grayburg-San Andres formation in the North Hobbs Unit, the vertical limits thereof being located between the depth of 3,698 feet and the depth of 4,500 feet beneath the surface as measured

on the Borehole Compensated Sonic-Gamma Ray Log run in the Shell Oil Company--State A-7 Well on July 9, 1969, said well being located 1,930 feet FNL and 660 feet FEL of Section 32, Township 18 South, Range 38 East, Lea County, New Mexico as shown on Exhibit "2" attached hereto and incorporated by reference. Also attached hereto and incorporated by reference as Exhibit "3" is a plat showing the location of all wells located within the Project Area which are proposed to be used as producing wells or, injection wells and those wells which are plugged and abandoned. In addition, said Exhibit "3" also shows all wells and lessees that are located within a two-mile radius of the proposed injection wells. Also attached hereto and incorporated by reference is Exhibit "4" which shows the proposed well numbering system, and the unit well number to be assigned existing wells in the event this application is granted. A diagrammatic sketch of the proposed injection wells showing all casing strings, including diameters and setting depths, quantities used and tops of cement, perforated or open hole intervals, and a diagrammatic sketch showing the manner in which the wells will be equipped for injection are attached hereto and incorporated by reference as Exhibits "5" and "6". Also attached hereto and incorporated by reference as Exhibit "7" is a tabulation showing all wells to be drilled and the location thereof, and the unit number within the Project Area. Additionally, attached hereto and incorporated by reference as Exhibit "8" are diagrammatic sketches showing how the proposed injectors and producers will be completed. Submitted to the Division with this application are all the logs of the proposed injection wells that are available, and attached hereto as Exhibit "9" is a list of those wells for which logs are not available.

4. A tabular summary of all wells located within one-half mile of the proposed injection wells and which penetrate the injection zone showing all casing strings, setting depths, sacks of cement used, cement tops, total depth, producing interval, well identification, and location is attached hereto and incorporated herein by reference as Exhibit "10". A schematic of all plugged and abandoned wells located within a one-half mile radius of the proposed injection wells which have penetrated the producing horizon with the size and location of all plugs and the date of abandonment is attached hereto as Exhibit "11".

5. The water to be used for injection for the pressure maintenance project shall be industrial process water from wastewater discharge to be purchased from the City of Hobbs, New Mexico, and water associated with the production of unitized substances. A copy of the Resolution authorizing the City of Hobbs to enter into an Agreement for water supply and a copy of the Agreement itself is attached hereto and incorporated herein by reference as Exhibit "12". It is projected that 115 million barrels of water from the City of Hobbs and 525 million barrels of produced water will be injected throughout the life of the pressure maintenance project.

6. Water is to be injected at a surface pressure not to exceed 0.2 psi per foot of depth to top of injection zone provided that surface pressure in excess of 0.2 psi per foot of depth to injection zone may be applied upon administrative approval of Secretary/Director of the Division after showing that such higher pressure will not result in fracturing of the confining strata.

7. Approval of this application and the adoption of special rules and regulations for the North Hobbs (Grayburg-San Andres) pressure maintenance project will substantially increase

recoverable reserves to be produced within the useful life of production facilities, thereby preventing waste and protecting correlative rights. A copy of proposed special rules and regulations is attached hereto as Exhibit "13".

WHEREFORE, Shell respectfully requests that this application be set for hearing before the Division at the earliest practicable date and that the Division enter its order approving the pressure maintenance project for the North Hobbs (Grayburg-San Andres) Unit, and that it also enter its order approving the proposed special unit rules and regulations.

REPORTER'S CERTIFICATE

I, SALLY W. BOYD, a court reporter, DO HEREBY CERTIFY that the foregoing and attached Transcript of Hearing before the Oil Conservation Division was reported by me; that the said transcript is a full, true, and correct record of the hearing, prepared by me to the best of my ability, from my notes taken at the time of the hearing.

Sally W. Boyd, C.S.R.

I do hereby certify that the foregoing is a complete record of the proceedings in the Examiner hearing of Case No. _____, heard by me on _____ 19__.

_____, Examiner
Oil Conservation Division

Dockets Nos. 38-79 and 39-79 are tentatively set for October 2 and October 17, 1979. Applications for hearing must be filed at least 22 days in advance of hearing date.

DOCKET: COMMISSION HEARING - TUESDAY - SEPTEMBER 25, 1979

9 A.M. - OIL CONSERVATION DIVISION CONFERENCE ROOM,
STATE LAND OFFICE BUILDING, SANTA FE, NEW MEXICO

CASE 6495: (DE NOVO) (Continued from August 24, 1979, Commission Hearing)

Application of Amax Chemical Corporation for the amendment of Order No. R-111-A, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the amendment of Order No. R-111-A to extend the boundaries of the Potash-Oil Area by the inclusion of certain lands in Sections 23 and 24, Township 19 South, Range 29 East, Sections 1, 4, 5, 6, 7, 11, 12, 13, 14, 19, 20, 23, 24, and 29, Township 19 South, Range 30 East, and Sections 7, 8, 17, 18, and 19, Township 19 South, Range 31 East, all in Eddy County, New Mexico.

Upon application of Amax Chemical Corporation this case will be heard De Novo pursuant to the provisions of Rule 1220.

****

Docket No. 36-79

DOCKET: EXAMINER HEARING - WEDNESDAY - SEPTEMBER 19, 1979

9 A.M. - OIL CONSERVATION DIVISION CONFERENCE ROOM,
STATE LAND OFFICE BUILDING, SANTA FE, NEW MEXICO

The following cases will be heard before Daniel S. Nutter, Examiner, or Richard L. Stamets, Alternate Examiner:

CASE 6656: In the matter of the hearing called by the Oil Conservation Division on its own motion to permit Energy Oil & Gas Corp., The Travelers Indemnity Co., and all other interested parties to appear and show cause why the Sadler Well No. 1 located in Unit I of Section 3, Township 24 North, Range 29 East, Union County, New Mexico, should not be plugged and abandoned in accordance with a Division-approved plugging program.

CASE 6652: (Continued from September 5, 1979, Examiner Hearing)

Application of Shell Oil Company for statutory unitization, Lea County, New Mexico. Applicant, in the above-styled cause, seeks an order unitizing, for the purpose of a pressure maintenance project, all mineral interests in the North Hobbs Grayburg-San Andres Unit encompassing 10,650 acres, more or less, underlying all or portions of the following lands in Lea County, New Mexico: Sections 13, 14, 23, 24, 25, 26, and 36, Township 18 South, Range 37 East; Sections 17 through 21 and 27 through 34, Township 18 South, Range 38 East.

The unitized interval would be the Grayburg-San Andres Formation between the depths of 3,698 feet and 4,500 feet in Shell's State A Well No. 7, located in Unit H of Section 32, Township 18 South, Range 38 East.

Among the matters to be considered at the hearing will be the necessity of unit operations; the designation of a unit operator; the determination of the horizontal and vertical limits of the unit area; the determination of a fair, reasonable, and equitable allocation of production and costs of production, including capital investment, to each of the various tracts in the unit area; the determination of credits and charges to be made among the various owners in the unit area for their investment in wells and equipment; and such other matters as may be necessary and appropriate for carrying on efficient unit operations, including, but not necessarily limited to, unit voting procedures, selection, removal, or substitution of unit operator, and time of commencement and termination of unit operations. (This case will be continued to the October 3, 1979, Commission Hearing.)

CASE 6653: (Continued from September 5, 1979, Examiner Hearing)

Application of Shell Oil Company for a pressure maintenance project, Lea County, New Mexico. Applicant, in the above-styled cause, seeks authority to institute a pressure maintenance project on its North Hobbs Grayburg-San Andres Unit, by the injection of water through 70 wells into the Grayburg-San Andres formation, and the adoption of special rules governing said project. (This case will be continued to the October 3, 1979, Commission Hearing.)

CASE 6657: Application of Petroleum Development Corporation for the rescission of special pool rules, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the rescission of the special pool rules for the South Hope-Pennsylvanian Gas Pool to provide for 320-acre spacing rather than 640 acres. In the absence of objection, the pool rules will be rescinded and the pool placed on standard 320-acre spacing for Pennsylvanian gas pools rather than the present 640-acre spacing.

CASE 6658: Application of Texas Pacific Oil Company, Inc. for an unorthodox well location and a non-standard proration unit, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval of a 160-acre non-standard gas proration unit comprising the S/2 NE/4 and N/2 SE/4 of Section 14, Township 24 South, Range 36 East, Jalmat Gas Pool, to be dedicated to its J. W. Cooper Well No. 8 at an unorthodox location 2010 feet from the North line and 2310 feet from the East line of said Section 14.

CASE 6659: Application of Amoco Production Company for an exception to Order No. R-3221, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an exception to Order No. R-3221 to permit disposal of produced brine in several unlined surface pits located in Sections 27, 34 and 35, Township 18 South, Range 31 East.

CASE 6660: Application of B. & W. Oil Reclaiming for an oil treating plant permit, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks authority for the construction and operation of an oil treating plant for the purpose of treating and reclaiming sediment oil at a site in the NE/4 NE/4 NE/4 of Section 34, Township 18 South, Range 26 East.

CASE 6661: Application of LaRue and Muncy for an exception to R-111-A, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an exception to the casing-cementing rules of Order R-111-A to permit a well to be drilled in Unit C of Section 22, Township 18 South, Range 30 East, Leo Queen-Grayburg Pool, to be cased by setting surface casing at the top of the salt, circulating cement on the oil string, and omitting the intermediate casing required by R-111-A; applicant further requests special rules to apply to all of Sections 15 and 22 of said township to permit additional wells to be completed in the same manner.

CASE 6662: Application of Supron Energy Corporation for a dual completion and downhole commingling, Rio Arriba County, New Mexico. Applicant, in the above-styled cause, seeks approval for the dual completion of its Jicarilla "A" Well No. 22Y located in Unit K of Section 24, Township 26 North, Range 4 West, to produce gas from the Blanco Mesaverde Pool through tubing and to commingle and produce the Wildhorse Gallup and Basin-Dakota zones through a parallel tubing string.

CASE 6663: Application of Doyle Hartman for an unorthodox well location and approval of infill drilling, Lea County, New Mexico. Applicant, in the above-styled cause, seeks a waiver of existing well spacing requirements and a finding that the drilling of a well at an unorthodox location 330 feet from the South line and 2310 feet from the West line of Section 36, Township 23 South, Range 36 East, Jalmat Gas Pool, is necessary to effectively and efficiently drain that portion of the existing proration unit which cannot be so drained by the existing well.

CASE 6664: Application of Doyle Hartman for an unorthodox well location, two non-standard proration units and approval of infill drilling, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval of a 40-acre non-standard proration unit comprising the NW/4 SW/4 of Section 27, Township 25 South, Range 37 East, Jalmat Pool, to be dedicated to El Paso Natural Gas Company's Harrison Well No. 1, and also a 120-acre unit comprising the E/2 SW/4 and SW/4 SW/4 of said Section 27 to be dedicated to a well to be drilled at an unorthodox location 330 feet from the South and West lines of the section; applicant further seeks a waiver of existing well spacing requirements and a finding that the drilling of said well is necessary to effectively and efficiently drain that portion of an existing proration unit which cannot be so drained by the existing well.

CASE 6647: (Continued from September 5, 1979, Examiner Hearing)

Application of O. H. Berry for an unorthodox gas well location, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval for the unorthodox location of a Seven Rivers well to be located 1650 feet from the North line and 330 feet from the East line of Section 15, Township 24 South, Range 36 East, Jalmat Gas Pool, the NE/4 of said Section 15 to be dedicated to the well.

CASE 6665: Application of Amax Chemical Corporation for the amendment of Order No. R-111-A, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the amendment of Order No. R-111-A to extend the boundaries of the Potash-Oil Area by the inclusion of certain lands in Sections 22 and 23, Township 19 South, Range 29 East, and Section 19, Township 19 South, Range 30 East.

CASE 6666: Application of Exxon Corporation for a non-standard proration unit, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks approval of a 377.57-acre non-standard gas proration unit comprising Lots 1, 2, 3, and 4 and the N/2 N/2 of Section 36, Township 26 South, Range 25 East, and Lots 3 and 4 and the N/2 NW/4 of Section 31, Township 26 South, Range 26 East, to be dedicated to a Morrow test well to be located in Unit A of said Section 36.

CASE 6667: Application of Exxon Corporation for a non-standard proration unit, an unorthodox well location, and simultaneous dedication, Lea County, New Mexico. Applicant, in the above-styled cause, seeks the approval of a 320-acre non-standard gas proration unit comprising the W/2 of Section 10, Township 21 South, Range 36 East, Eumont Pool, to be simultaneously dedicated to its A. J. Adkins Com Well No. 1 located in Unit L, and to its Well No. 2, at an unorthodox location 1650 feet from the North and West lines of said Section 10.

CASE 6668: Application of Delta Drilling Company for pool creation and special pool rules, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the creation of a new oil pool for Bone Spring production for its SCB Unit Well No. 3 in Unit G of Section 23, Township 23 South, Range 28 East, and special rules therefor, including 80-acre spacing.

CASE 6669: Application of Mesa Petroleum Company for the amendment of Order No. R-6078, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks the amendment of Order No. R-6078 to cover the Wolfcamp and Pennsylvanian formations in the compulsory pooling of the E/2 of Section 10, Township 16 South, Range 27 East, rather than the Morrow formation only.

CASE 6644: (Continued from September 5, 1979, Examiner Hearing)

Application of Tenneco Oil Corporation for downhole commingling, San Juan County, New Mexico. Applicant, in the above-styled cause, seeks approval for the downhole commingling of Fruitland and Pictured Cliffs production in the wellbores of its State K Com Well No. 12 located in Unit E of Section 16, Township 30 North, Range 9 West, and its Florence Well No. 60R in Unit L of Section 1, Township 29 North, Range 9 West.

CASE 6670: Application of BTA Oil Producers for pool creation and special pool rules, Lea County, New Mexico. Applicant, in the above-styled cause, seeks the creation of a new Devonian gas pool for its 7811 JV-P Rojo Well No. 1 located in Unit D of Section 27, Township 25 South, Range 33 East, and special rules therefor, including 640-acre gas well spacing.

CASE 6671: Application of Chapman and Schneider for salt water disposal, Lea County, New Mexico. Applicant, in the above-styled cause, seeks authority to dispose of produced salt water in the Seven Rivers Reef formation in the open-hole interval from 3422 feet to 3504 feet in its I. B. Ogg "A" Well No. 3 located in Unit E of Section 35, Township 24 South, Range 36 East, Jalmat Pool.

CASE 6672: Application of Coquina Oil Corporation for an exception to Rule 303C, Lea County, New Mexico. Applicant, in the above-styled cause, seeks an exception to the Division's Rule 303C to permit its Vivian Well No. 1 located in Unit F of Section 30, Township 22 South, Range 38 East, in which Drinkard and Granite Wash production is commingled in the wellbore, to produce in excess of the 50-barrel limit imposed by said rule.

CASE 6673: Application of Conoco Inc. for a non-standard proration unit, unorthodox well locations, and simultaneous dedication, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval of a 440-acre non-standard gas proration unit comprising the SW/4 and S/2 NW/4 of Section 17 and the N/2 NE/4, SE/4 NE/4, and N/2 SE/4 of Section 18, all in Township 21 South, Range 36 East, Eumont Pool, to be simultaneously dedicated to the following wells at unorthodox locations: Meyer A-1 Wells Nos. 11 in Unit K of Section 17 and 6 and 14 in Units B and J of Section 18.

CASE 6580: (Continued from August 22, 1979, Examiner Hearing)

Application of Continental Oil Company for a carbon dioxide injection project, Lea County, New Mexico. Applicant, in the above-styled cause, seeks authority to initiate a pilot carbon dioxide injection project in the Grayburg-San Andres formation in Units H and I of Section 20, Township 17 South, Range 32 East, Maljamar Pool, for tertiary recovery purposes.

STATE OF NEW MEXICO
ENERGY AND MINERALS DEPARTMENT
OIL CONSERVATION COMMISSION

IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
COMMISSION FOR THE PURPOSE OF
CONSIDERING:

CASE NO. 6653
Order No. R-6199

APPLICATION OF SHELL OIL COMPANY
FOR A PRESSURE MAINTENANCE PROJECT,
LEA COUNTY, NEW MEXICO.

ORDER OF THE COMMISSION

BY THE COMMISSION:

This case and cause of action came on for hearing at 9 a.m. on October 3, 1979, at Santa Fe, New Mexico, before the Oil Conservation Commission of New Mexico, hereinafter referred to as the "Commission."

NOW, on this 30th day of November, 1979, the Commission, a quorum having been present, having considered the testimony and the record, and being otherwise fully advised in the premises,

FINDS:

(1) That due public notice has been given as required by law and the Commission has jurisdiction of this case and cause of action and the subject matter hereof.

(2) That by Commission Order No. R-6198 dated November 1979, statutory unitization was approved for the North Hobbs Grayburg-San Andres Unit Area, Lea County, New Mexico.

(3) That the applicant herein, Shell Oil Company, seeks authority to institute a pressure maintenance project for the aforesaid North Hobbs Grayburg-San Andres Unit Area within the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through 70 wells at orthodox and unorthodox locations, 52 of which are producing wells which will be converted to injection wells in 1980.

(4) That during 1980 for the pressure maintenance project, applicant proposes to drill five producing wells and 18 injection wells at orthodox and unorthodox locations as specified below:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

Township 18 South, Range 38 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
18	242	N	1220' FSL & 2540' FWL
19	142	M	1220' FSL & 100' FWL
19	242	N	1220' FSL & 2540' FWL
28	242	N	990' FSL & 1330' FWL
29	112	D	330' FNL & 1000' FWL
29	142	M	1220' FSL & 100' FWL
29	242	N	1220' FSL & 1650' FWL
30	222	F	2540' FNL & 1420' FWL
31	432	I	2540' FSL & 1220' FEL
31	442	P	100' FSL & 1220' FEL
32	122	E	2310' FNL & 1220' FWL
32	242	N	100' FSL & 1420' FWL
32	412	A	1220' FNL & 1220' FEL
32	432	I	2310' FSL & 1310' FEL
32	442	P	100' FSL & 1220' FEL
33	112	D	1220' FNL & 100' FWL
33	212	C	1220' FNL & 1440' FWL
33	232	K	1420' FSL & 1420' FWL
33	242	N	100' FSL & 1420' FWL
33	332	J	2540' FSL & 2540' FEL
33	342	O	100' FSL & 1420' FEL

(5) That all of the wells referred to in Findings Nos. (3) and (4) above, being the 70 injection wells and the five producing wells, together with wells currently completed in the Grayburg-San Andres formation, will provide a thorough and efficient sweep of hydrocarbons throughout the unit area, and will result in the recovery of otherwise unrecoverable oil and gas, thereby preventing waste.

(6) That the above-described injection and producing wells, some of which will be at unorthodox locations along the unit boundary in accordance with lease-line agreements with operators of offsetting lands, will not impair but will protect correlative rights.

(7) That the applicant further seeks the designation of a project area for said pressure maintenance project for the North Hobbs Grayburg-San Andres Unit, and for the promulgation of special rules and regulations governing said project, including special allowable provisions, which is in the interest of conservation and should be approved, subject to certain provisions set forth herein.

(8) That the project area should consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area as described in Order R-6198 upon which are located wells completed in the Hobbs Grayburg-San Andres Pool.

(9) That the project area allowable should be equal to the sum of the basic project area allowable plus the water injection credit allowable as hereinafter defined.

(10) That the basic project area allowable should be equal to 80 barrels of oil per day times the number of 40-acre proration units in the North Hobbs Grayburg-San Andres Unit Area upon which are located wells completed in the Hobbs Grayburg-San Andres Pool.

(11) That the water injection credit allowable should be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1 \right] \times \text{Basic Project Area Allowable}$$

and should be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached hereto.

(12) That a weighted average project area reservoir pressure should be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

(13) That the project area allowable should be permitted to be produced from the wells within the project area in any proportion.

(14) That the Director of the Oil Conservation Division should have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within the boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than

ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

(15) Application for approval of additional wells to be used for injection should be filed in accordance with Rule 701 of the Division Rules and Regulations and provision should be made whereby the same could be approved administratively by the Division Director without notice and hearing.

(16) That each newly drilled injection or producing well should be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 feet) and production casing run to total depth (approximately 4500 feet).

c. The Division Director should have authority to approve exceptions to the aforesaid casing programs for good cause shown.

All casing strings should be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing.

(17) That injection should be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in the case of an open hole completion, 100 feet above the casing shoe. The injection tubing should be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well should be filled with an inert fluid and a surface pressure gauge or approved leak detection device should be attached to the annulus.

(18) That the injection wells or system should be equipped with a pressure control device or acceptable substitute which will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director should have authority to administratively authorize a pressure

limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata.

(19) That all wells within the unit area should be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

(20) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which have previously been plugged and abandoned in a manner which may permit waters injected into the Grayburg-San Andres formation to escape into other formations, including the Salado formation and threaten the shallow fresh water-bearing formations unless remedial action is taken on said wells prior to injection in their near vicinity.

(21) That there are a number of wells within the North Hobbs Grayburg-San Andres Unit Area and on lands offsetting the unit area which penetrate the Hobbs Grayburg-San Andres Pool and are completed in deeper pay zones, but which are cased and cemented in such a manner as may permit the escape of waters injected into the Grayburg-San Andres formation into other formations as described in the preceding paragraph.

(22) That those wells referred to in Findings Nos. (20) and (21) above which are inadequately plugged and abandoned or are inadequately cased and cemented, or are suspected of being so, include, but are not necessarily limited to, the wells listed in Exhibit "C" attached hereto.

(23) That no injection at greater than hydrostatic pressure should be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

IT IS THEREFORE ORDERED:

(1) That the applicant, Shell Oil Company, is hereby authorized to institute and operate a pressure maintenance project in the North Hobbs Grayburg-San Andres Unit Area within

the Hobbs Grayburg-San Andres Pool, Lea County, New Mexico, by the injection of water into the Grayburg-San Andres formation through certain wells which will be administratively approved for water injection by the Division Director.

(2) That said project shall be designated the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project.

(3) That the following orthodox and unorthodox locations are hereby approved for the drilling of new injection and producing wells:

Township 18 South, Range 37 East, NMPM

Sec.	Unit Well No.	Unit Letter	Well Location
24	242	N	1220' FSL & 2540' FWL
25	412	A	1220' FNL & 1220' FEL

(4) That Special Rules and Regulations governing the North Hobbs Grayburg-San Andres Unit Pressure Maintenance Project are hereby promulgated as follows:

SPECIAL RULES AND REGULATIONS
FOR THE
NORTH HOBBS GRAYBURG-SAN ANDRES UNIT
PRESSURE MAINTENANCE PROJECT

RULE 1. That the project area shall consist of all those proration units within the boundary of the North Hobbs Grayburg-San Andres Unit Area upon which is completed a well in the Hobbs Grayburg-San Andres Pool.

RULE 2. The project area shall receive a project area allowable, and said project area allowable shall be the sum of the basic project area allowable plus the water injection credit allowable.

RULE 3. The basic project area allowable shall be equal to 80 barrels of oil per day times the number of developed 40-acre proration units in the project area.

RULE 4. The water injection credit allowable shall be based upon the following formula:

$$\text{Water Injection Credit Allowable} = \left[\frac{\text{Net Water Injected}}{\text{Basic Project Area Allowable Reservoir Voidage}} - 1 \right] \times \text{Basic Project Area Allowable}$$

The water injection credit allowable shall be calculated in accordance with this formula using the formula and data set forth on Exhibits "A" and "B" attached hereto and incorporated herein by reference. In no event shall the water injection credit allowable be less than zero. Therefore, negative numbers derived from the application of the above formula shall be ignored.

RULE 5. A weighted average project area reservoir pressure shall be determined prior to commencement of injection of water into the reservoir and at least annually thereafter.

RULE 6. The project area allowable may be produced from the wells within the project area in any proportion.

RULE 7. The Director of the Oil Conservation Division shall have authority to approve, without notice and hearing, the drilling of wells at unorthodox locations anywhere within

the boundary of the North Hobbs Grayburg-San Andres Unit Area, provided however, no unorthodox location shall be closer than ten feet to any quarter-quarter section line, and provided further, that no such unorthodox location shall be closer than 330 feet to the boundary of the unit area, unless such well is covered by a lease-line agreement with the operator of the lands offsetting such well, and a copy of the lease-line agreement accompanies the application for such unorthodox location, or unless such offset operator has waived objection to the proposed unorthodox location in writing, and his waiver accompanies the application.

RULE 8. Application for approval of additional wells to be used for injection shall be filed in accordance with Rule 701 of the Division Rules and Regulations and may be approved administratively by the Division Director without notice and hearing.

RULE 9. Each newly drilled injection or producing well shall be equipped as follows:

a. Minimum of 350 feet of surface casing and production casing run to total depth (approximately 4500 feet), or

b. Surface casing cemented below the "red beds" (approximately 1600 feet) and production casing run to total depth (approximately 4500 feet).

c. Exceptions to the aforesaid casing programs may be granted by administrative approval of the Division Director upon good cause shown.

All casing strings shall be cemented to the surface except that in any well in which an intermediate casing string has been run and cemented to the surface, the production string may be cemented back into the base of the intermediate casing.

RULE 10. Injection shall be accomplished through tubing installed in a packer set within 100 feet of the uppermost perforation, or in case of an open hole completion, 100 feet above the casing shoe. The injection tubing shall be corrosion protected by a non-reactive internal lining or coating. The casing-tubing annulus in each injection well shall be filled with an inert fluid and a surface gauge or approved leak detection device shall be attached to the annulus.

RULE 11. The injection wells or system shall be equipped with a pressure control device or acceptable substitute which

will limit the surface injection pressure to no more than 0.2 psi per foot of depth to the injection zone. The Division Director may administratively authorize a pressure limitation in excess of the above upon a showing by the Unit Operator that such higher pressure will not result in fracturing of the confining strata.

RULE 12. All wells within the unit area shall be equipped with risers or in some other acceptable manner so as to facilitate the periodic testing of the bradenhead for pressure or fluid production.

RULE 13. The Unit Operator shall immediately notify the Supervisor of the Hobbs District Office of the Division of the failure of the tubing or packer in any of the injection wells, the leakage of water or oil from or around any producing well, the leakage of water or oil from or around any plugged and abandoned well within the unit area, or any other evidence of fluid migration from the injection zone, and shall take such timely steps as may be necessary or required to correct such failure or leakage.

RULE 14. Prior to placing any well on injection, a cement bond log shall be run on said well; also at any time the tubing is pulled from any producing well in the unit area, a cement bond log shall be run on said well. Copies of all cement bond logs shall be sent to the Hobbs District Office of the Division. If any well is found to have an inadequate casing-cement bond, such measures as may be necessary to prevent leakage or migration of fluids within the wellbore shall be taken before placing the well on injection or restoring it to production.

Where multiple casing strings prevent technical interpretation of bonding, the cement bond shall be deemed adequate when the log shows acoustic coupling with the formation. In addition, radioactive tracer surveys, or any other acceptable survey presently available or developed in the future, that show no fluid migration out of the Grayburg-San Andres formation shall be acceptable evidence of bonding.

RULE 15. Each month the Unit Operator shall submit to the Division a Pressure Maintenance Project Operator's Report, on a form prescribed by the Division, outlining thereon the data required and requesting a project area allowable.

RULE 16. The Division shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for the project area for the next succeeding month in accordance

with these rules. The allowable so calculated shall be assigned to the unit area and may be produced from the wells in the project area in any proportion.

IT IS FURTHER ORDERED:

(1) That no injection at greater than hydrostatic pressure shall be made into the Grayburg-San Andres formation in any well in the North Hobbs Grayburg-San Andres Unit Area within one-half mile of any well listed on Exhibit "C" attached hereto and by reference herein incorporated, until remedial action has been taken on such well to ensure that it will not serve as an avenue of escape for injected waters, or until tests have been conducted on such well, or until other evidence concerning such well has been presented establishing to the satisfaction of the Supervisor of the Hobbs District Office of the Division that remedial work on such well is unnecessary.

(2) That the rules in this order concerning project allowables and the transfer thereof shall not be applicable until actual water injection begins in the North Hobbs Grayburg-San Andres Unit Area, provided however, that pending commencement of water injection activities, those wells in said unit area which directly or diagonally offset injection wells in any other water injection project in the Hobbs Pool or which directly or diagonally offset producing wells in any other water injection project in the Hobbs Pool, which producing wells are receiving transferred allowable and are producing at a rate in excess of top unit allowable for the pool, shall be eligible to receive and produce transferred allowable.

(3) That jurisdiction of this cause is retained for the entry of such further orders as the Commission may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.

HOBBS GRAYBURG-SAN ANDRES POOL

LEA COUNTY, NEW MEXICO

Water Injection Credit Allowable Calculation Data

$$\text{Water Injection Credit Allowable} = \left[\frac{W_i - W_p}{\text{BPAA}\left(B_o + \frac{R_p - R_s}{1{,}000}\, B_g\right)} \right] -1 \text{ X BPAA}$$

W_i = Average daily water injection during previous month, barrels per day unit area

W_p = Average daily water produced during previous month, barrels per day unit area

BPAA = Basic project area allowable, 80 bopd x _____(number of developed 40-acre proration units in unit area)

P = Weighted average unit area reservoir pressure, psig, from _____, 19___, survey data

B_o = Oil formation volume factor, reservoir barrels per stock tank barrel (Exhibit B)

R_p = Producing gas-oil ratio, cubic feet per barrel for previous month

R_s = Solution gas-oil ratio, cubic feet per barrel (Exhibit B)

B_g = Gas formation volume factor, reservoir barrels per Mcf (Exhibit B)

Water injection credit allowable for _____, 19___, = _____ barrels of oil per day

UNIT AGREEMENT
NORTH HOBBS (GRAYBURGSAN ANDRES) UNIT
LEA COUNTY, NEW MEXICO

THIS AGREEMENT, entered into as of the 1st day of July, 1978, by and between the parties subscribing, ratifying or consenting hereto, and herein referred to as "parties hereto";

WITNESSETH:

WHEREAS, the parties hereto are the owners of working, royalty or other oil or gas interests in the Unit Area subject to this Agreement; and

WHEREAS, the Commissioner of Public Lands of the State of New Mexico is authorized by an Act of the Legislature (Sec. 1, Chap. 88, Laws 1943 as amended by Sec. 1, Chap. 176, Laws 1961; Chap. 7, Art. 11, Sec. 39, N.M.S. 1953 Ann.) to consent to or approve this agreement on behalf of the State of New Mexico, insofar as it covers and includes lands and mineral interests of the State of New Mexico; and

WHEREAS, the Commissioner of Public Lands of the State of New Mexico is authorized by an Act of the Legislature (Sec. 3, Chap. 88, Laws 1943 as amended by Sec. 1, Chap. 162, Laws 1951; Chap. 7, Art. 11, Sec. 41, N.M.S. 1953 Ann.) to amend with the approval of the lessee, any oil and gas lease embracing State lands so that the length of the term of said lease may coincide with the term of such unitized development and operation of State lands; and

WHEREAS, the Oil Conservation Division of the Energy and Minerals Department of the State of New Mexico is authorized by law (Chap. 65, Art. 3 and Art. 14, N.M.S. 1953 Ann.) to approve this agreement and the conservation provisions hereof; and

WHEREAS, the parties hereto hold sufficient interests in the North Hobbs (Grayburg-San Andres) Unit covering the land hereinafter described to give reasonably effective control of operations therein; and

WHEREAS, it is the purpose of the parties hereto to conserve natural resources, to prevent waste and secure the other benefits obtainable through development and operation of the area subject to this Agreement under the terms, conditions and limitations herein set forth.

NOW, THEREFORE, in consideration of the premises and the promises herein contained, the parties hereto commit to this Agreement their respective interests in the unitized formation of the below defined Unit Area, and agree severally among themselves as follows:

SECTION 1. ENABLING ACT AND REGULATIONS. The Mineral Leasing Act of February 25, 1920, as amended, supra, and all valid pertinent regulations, including operating and unit plan regulations, heretofore issued thereunder and valid, pertinent and reasonable regulations hereafter issued thereunder are accepted and made a part of this Agreement as to Federal lands, provided such regulations are not inconsistent with the terms of this Agreement; and as to non-Federal lands, the oil and gas operating regulations in effect as of the effective date hereof governing drilling and producing operations, not inconsistent with the terms hereof or the laws of the State in which the non-Federal land is located, are hereby accepted and made a part of this Agreement.

SECTION 2. UNIT AREA AND DEFINITIONS. For the purpose of this Agreement, the following terms and expressions as used herein shall mean:

(a) "Unit Area" is defined as those lands described in Exhibit B and depicted on Exhibit A hereof, and such land is hereby designated and recognized as constituting the Unit Area, containing 10,649.53 acres, more or less, in Lea County, New Mexico.

(b) "Land Commissioner" is defined as the Commissioner of Public Lands of the State of New Mexico.

(c) "Division" is defined as the Oil Conservation Division of the Energy and Minerals Department of the State of New Mexico.

(d) "Unitized Formation" shall mean that subsurface portion of the Unit Area known as the Grayburg-San Andres formation of Permian Age found in the interval between the stratigraphic depth of 3698 feet as measured on the Borehole Compensated Sonic-Gamma Ray Log run in the Shell Oil Company - State A-7 well on July 9, 1969, said well being located 1930 feet FNL and 660 feet FEL of Section 32-T18S-R38E, Lea County, New Mexico, and the depth of 4500 feet beneath the surface.

(e) "Unitized Substances" are all oil, gas, gaseous substances, sulphur contained in gas, condensate, distillate and all associated and constituent liquid or liquefiable hydrocarbons within and produced from the Unitized Formation of the Unitized Land.

(f) "Tract" is each parcel of land described as such and given a Tract number in Exhibit B.

(g) "Tract Participation" is defined as the percentage of participation shown on Exhibit C for allocating Unitized Substances to a Tract under this Agreement, such percentages or participation being shown separately as to oil and as to gas.

(h) "Unit Participation" is the sum of the percentages obtained by multiplying the Working Interest of a Working Interest Owner in each Tract by the Tract Participation of such Tract as to oil.

(i) "Working Interest" is the right to search for, produce and acquire Unitized Substances whether held as an incident of ownership of mineral fee simple title, under an oil and gas lease, or otherwise held, which interest is chargeable with and obligated to pay or bear, either in cash or out of production, or otherwise, all or a portion of the cost of drilling, developing and producing the Unitized Substances from the Unitized Formation and operations thereof hereunder. Provided that any Royalty Interest created out of a Working Interest subsequent to the execution of this Agreement by the owner of the working interest shall continue to be subject to such Working Interest burdens and obligations.

(j) "Working Interest Owner" is any party hereto owning a Working Interest, including a carried working interest owner, holding an interest in Unitized Substances by virtue of a lease, operating agreement, fee title or otherwise. The owner of Oil and Gas Rights that are free of lease or other instrument creating a Working Interest in another shall be regarded as a Working Interest Owner to the extent of seven-eighths (7/8) of his interest in Unitized Substances, and as a Royalty Owner with respect to his remaining one-eighth (1/8) interest therein.

(k) "Royalty Interest" or "Royalty" is an interest, other than a Working Interest, having the right to receive a portion of the Unitized Substances or the proceeds thereof and includes the royalty interest reserved by the lessor by an oil and gas lease and any overriding royalty interest, oil payment interest, net profit contract, or any other payment or burden which does not carry with it the right to search for and produce Unitized Substances.

(l) "Royalty Owner" is the owner of a Royalty Interest.

(m) "Unit Operating Agreement" is the agreement entered into by and between the Unit Operator and the Working Interest Owners as provided in Section 9, infra, and shall be styled "Unit Operating Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico".

(n) "Oil and Gas Rights" is the right to explore, develop and operate lands within the Unit Area for the production of Unitized Substances, or to share in the production so obtained or the proceeds thereof.

(o) "Outside Substances" are any substances obtained from any source other than the Unitized Formation and injected into the Unitized Formation.

(p) "Unit Manager" is any person or corporation appointed by Working Interest Owners to perform the duties of Unit Operator until the selection and qualification of a successor Unit Operator as provided for in Section 7 hereof.

(q) "Unit Operator" is the party designated by Working Interest Owners under the Unit Operating Agreement to conduct Unit Operations.

(r) "Unit Operations" are any operations conducted pursuant to this Agreement and the Unit Operating Agreement.

(s) "Unit Equipment" is all personal property, lease and well equipment, plants, and other facilities and equipment taken over or otherwise acquired for the joint account for use in Unit Operations.

(t) "Unit Expense" is all cost, expense, or indebtedness incurred pursuant to this Agreement and the Unit Operating Agreement for or on account of Unit Operations.

(u) "Effective Date" is the date this Agreement becomes effective as provided in Section 24.

SECTION 3. EXHIBITS. Exhibit A attached hereto is a map showing the Unit Area and the boundaries and identity of tracts and leases in said Unit Area to the extent known to the Unit Operator. Exhibit B attached hereto is a schedule showing, to the extent known to the Unit Operator, the acreage comprising each Tract, percentages and kind of ownership of oil and gas interests in all land in the Unit Area. Exhibit C attached hereto shows the Tract Participation of each Tract in the Unit Area. However, nothing herein or in said schedule or map shall be construed as a representation by any party hereto as to the ownership of any interest other than such interest or interests as are shown in said map or schedule as owned by such party. Exhibit D attached hereto is an appendix setting out certain federal contract provisions. Exhibits, A, B, and C shall be revised by the Unit Operator whenever changes in the Unit Area render such revision necessary and copies of such revision shall be filed with the Land Commissioner.

SECTION 4. EXPANSION. The above described Unit Area may when practicable be expanded to include therein any additional lands regarded as reasonably necessary or advisable for the purposes of this Agreement. Such expansion shall be effected in the following manner:

(a) The working interest owner or owners of lands desiring to bring such lands into this unit, shall file an application therefor with Unit Operator requesting such admission.

(b) Unit Operator shall circulate a notice of the proposed expansion to each Working Interest Owner in the Unit Area and to each working interest owner in the lands proposed to be included in the unit, setting out the basis for admission, the Tract Participation to be assigned to each Tract in the enlarged Unit Area and other pertinent data. After negotiation (at Working Interest Owner's meeting or through correspondence) if at least three Working Interest Owners having in the aggregate seventy-five percent (75%) Unit Participation then in effect have agreed to inclusion of such lands in the Unit Area, the Unit Operator shall:

(1) After obtaining preliminary concurrence by the Land Commissioner and the Division, prepare a notice of proposed expansion describing the contemplated changes in the boundaries of the Unit Area, the reason therefor, the basis for admission of the additional lands, the Tract Participation to be assigned thereto and the proposed effective date thereof; and

(2) Mail or deliver copies of said notice to the Land Commissioner, each Working Interest Owner and Royalty Owner, and to the lessee and lessor whose interests are affected, advising such parties that thirty (30) days will be allowed for submission to the Unit Operator of any objection to such proposed expansion; and

(3) File, upon the expiration of said thirty (30) day period as set out in (2) immediately above, with the Land Commissioner: (a) Evidence of mailing or delivering copies of said notice of expansion; (b) An application for approval of such expansion; (c) An instrument containing the appropriate joinders in compliance with the participation requirements of Section 14, and Section 33, infra; and (d) A copy of all objections received along with the Unit Operator's response thereto.

The expansion shall, after due consideration of all pertinent information and approval by the Land Commissioner, become effective as of the date prescribed in the notice thereof, preferably as of 7:00 a.m. of the first day of a month subsequent to the date of notice. The revised Tract Participation of the respective Tracts included within the Unit Area prior to such enlargement shall remain in the same ratio one to another.

SECTION 5. UNITIZED LAND. All land committed to this Agreement as to the Unitized Formation shall constitute land referred to herein as "Unitized Land" or "Land subject to this Agreement". Nothing herein shall be construed to unitize, pool, or in any way affect the oil, gas and other minerals contained in or that may be produced from any formation other than the Unitized Formation as defined in Section 2 (d) of this Agreement.

SECTION 6. UNIT OPERATOR. Shell Oil Company is hereby designated the Unit Operator, and by signing this instrument as Unit Operator agrees and consents to accept the duties and obligations of Unit Operator for the operation, development and production of Unitized Substances as herein provided. Whenever reference is made herein to the Unit Operator, such reference means the Unit Operator acting in that capacity and not as an owner of interests in Unitized Substances, when such interests are owned by it, and the term "Working Interest Owner" when used herein shall include or refer to the Unit Operator as the owner of a Working Interest when such an interest is owned by it.

The interests of Working Interest Owners and the Unit Operator in the Unit Area shall be subject to a reciprocal lien and security interest to the extent provided in the Unit Operating Agreement.

SECTION 7. RESIGNATION OR REMOVAL OF UNIT OPERATOR. Unit Operator shall have the right to resign at any time, but such resignation shall not become effective so as to release Unit Operator from the duties and obligations of Unit Operator and terminate Unit Operator's rights as such for a period of six (6) months after written notice of intention to resign has been given by Unit Operator to all Working Interest Owners and the Land Commissioner unless a new Unit Operator shall have taken over and assumed the duties and obligations of Unit Operator prior to the expiration of said period. The resignation or removal of Unit Operator shall not release Unit Operator from any liability for any default by it hereunder occurring prior to the effective date of its resignation or removal.

The Unit Operator shall be subject to removal by Working Interest Owners having in the aggregate eighty percent (80%) or more Unit Participation then in effect exclusive of the Working Interest Owner who is the Unit Operator. Such removal shall be effective upon notice thereof to the Land Commissioner.

In all such instances of effective resignation or removal, until a successor to Unit Operator is selected and approved as hereinafter provided, the Working Interest Owners shall be jointly responsible for the performance of the duties of the Unit Operator and shall, not later than thirty (30) days before such resignation or removal become effective, appoint a Unit Manager to represent them in any action to be taken hereunder.

The resignation or removal of Unit Operator under this Agreement shall not terminate its right, title or interest as the owner of a Working Interest or other interest in Unitized Substances, but upon the resignation or removal of Unit Operator becoming effective, such Unit Operator shall deliver possession of all wells, equipment, books and records, materials, appurtenances and any other assets used in connection with the Unit Operations

and owned by the Working Interest Owners to the new duly qualified successor Unit Operator or to the Unit Manager if no such new Unit Operator is elected, to be used for the purpose of conducting Unit Operations hereunder. Nothing herein shall be construed as authorizing the removal of any material, equipment or appurtenances needed for the preservation of any wells. Nothing herein contained shall be construed to relieve or discharge any Unit Operator or Unit Manager who resigns or is removed hereunder from any liability or duties accruing or performable by it prior to the effective date of such resignation or removal.

SECTION 8. SUCCESSOR UNIT OPERATOR. Whenever the Unit Operator shall tender its resignation as Unit Operator or shall be removed as hereinabove provided, the Working Interest Owners shall select a successor Unit Operator as herein provided. Such selection shall not become effective until (a) a Unit Operator so selected shall accept in writing the duties and responsibilities of Unit Operator, and (b) the selection shall have been approved by the Land Commissioner. If no successor Unit Operator or Unit Manager is selected and qualified as herein provided, the Land Commissioner, at his election, may declare this Agreement terminated.

In selecting a successor Unit Operator the affirmative vote of three or more Working Interest Owners having a total of sixty-five percent (65%) or more of the total Unit Participation then in effect shall prevail; provided that if any one Working Interest Owner has a Unit Participation of more than thirty-five percent (35%), its negative vote or failure to vote shall not be regarded as sufficient unless supported by the vote of one or more other Working Interest Owners having a total Unit Participation of at least five percent (5%). If the Unit Operator who is removed votes only to succeed itself or fails to vote, the successor Unit Operator may be selected by the affirmative vote of the owners of at least seventy-five percent (75%) of the Unit Participation remaining after excluding the Unit Participation of Unit Operator so removed.

SECTION 9. ACCOUNTING PROVISIONS AND UNIT AGREEMENT. Costs and expenses incurred by Unit Operator in conducting Unit Operations hereunder shall be paid, apportioned among and borne by the Working Interest Owners in accordance with the Unit Operating Agreement. Such Unit Operating Agreement shall also provide the manner in which the Working Interest Owners shall be entitled to receive their respective proportionate and allocated share of the benefits accruing hereto in conformity with their underlying operating agreements, leases or other contracts and such other rights and obligations as between Unit Operator and the Working Interest Owners as may be agreed upon by the Unit Operator and the Working Interest Owners; however, no such Unit Operating Agreement shall be deemed either to modify any of the terms and conditions of this Agreement or to relieve the

Unit Operator of any right or obligation established under this Agreement, and in case of any inconsistency or conflict between this Agreement and the Unit Operating Agreement, this Agreement shall prevail. Copies of any Unit Operating Agreement executed pursuant to this Section shall be filed with the Land Commissioner.

SECTION 10. RIGHTS AND OBLIGATIONS OF UNIT OPERATOR. Except as otherwise specifically provided herein the exclusive right, privilege and duty of exercising any and all rights of the parties hereto which are necessary or convenient for prospecting for, producing, storing, allocating and distributing the Unitized Substances or for conducting other Unit Operations are hereby delegated to and shall be exercised by the Unit Operator as herein provided. Upon request, acceptable evidence of title to said rights shall be deposited with said Unit Operator, and together with this Agreement, shall constitute and define the rights, privileges and obligations of Unit Operator. Nothing herein, however, shall be construed to transfer title to any land or to any lease or operating agreement, it being understood that under this Agreement the Unit Operator, in its capacity as Unit Operator, shall exercise the rights of possession and use vested in the parties hereto only for the purposes herein specified.

SECTION 11. PLAN OF OPERATIONS. It is recognized and agreed by the parties hereto that all of the land subject to this Agreement is reasonably proved to be productive of Unitized Substances and that the object and purpose of this Agreement is to formulate and to put into effect an enhanced recovery project in order to effect additional recovery of Unitized Substances, prevent waste and conserve natural resources. The parties hereto agree that the Unit Operator may, subject to the consent and approval of a Plan of Operation by the Working Interest Owners, the Land Commissioner and the Division, inject into the Unitized Formation, through any well or wells completed therein, brine, water, air, gas, oil, liquefied petroleum gases and any one or more other substances or combination of substances whether produced from the Unitized Land or not, and that the location of input wells and the rates of injection therein shall be governed by standards of good geologic and petroleum engineering practices and conservation methods. Subject to like approval the Plan of Operation may be revised as conditions may warrant.

The initial Plan of Operation shall be filed with the Land Commissioner and the Division concurrently with the filing of this Agreement for final approval. Said initial Plan of Operation and all revisions thereof shall be as complete and adequate as the Land Commissioner and the Division may determine to be necessary for timely operation consistent herewith. Upon approval of this Agreement and the initial plan by the Land Commissioner, said plan, and all subsequently approved plans shall constitute

the operating obligations of the Unit Operator under this Agreement for the period specified therein. Thereafter, from time to time before the expiration of any existing plan, the Unit Operator shall submit for like approval a plan for an additional specified period of operation. After such operations are commenced, reasonable diligence shall be exercised by the Unit Operator in complying with the obligations of the approved Plan of Operation.

Notwithstanding anything to the contrary herein contained, should the Unit Operator fail to commence operation of an enhanced recovery project incorporating the injection of water within eighteen (18) months after the Effective Date of this Agreement, or any extension thereof approved by the Land Commissioner, this Agreement shall terminate automatically as of the date of default.

SECTION 12. USE OF SURFACE AND USE OF WATER. The parties, to the extent of their rights and interests, hereby grant to Unit Operator the right to use as much of the surface of the Unitized Land as may reasonably be necessary for Unit Operations; provided that nothing herein shall be construed as leasing or otherwise conveying to the Unit Operator a site for water injection plants, gas injection plants or other plants or camp site.

Unit Operator shall have free use of water or brine or both from the Unitized Land for Unit Operations, except water from any well, lake, pond or irrigation ditch of a surface owner, unless approval for such use is granted by the surface owner.

Unit Operator shall pay the party or parties entitled thereto for damages to growing crops, timber, fences, improvements and structures on the Unitized Land that result from Unit Operations.

SECTION 13. TRACT PARTICIPATION. In Exhibit C attached hereto there are listed and numbered the various Tracts within the Unit Area, and set forth opposite each Tract are figures which represent the Tract Participation, shown separately as to oil and as to gas, during Phase I, Phase II and Phase III of Unit Operations if all Tracts in the Unit Area qualify as provided herein. The Phase I, Phase II and Phase III Tract Participations of each Tract as shown in Exhibit C were determined in accordance with the following formulas, using data heretofore approved by Working Interest Owners:

TRACT PARTICIPATION:

During Phase I:	As to oil:	20% A / 80% B
	As to gas:	20% C / 80% D

During Phase II:	As to oil:	100% B
	As to gas:	100% D
During Phase III:	As to oil:	100% E
	As to gas:	100% E

Where: A = Ratio of the quantity of 1976 oil production from each Tract to the total quantity of 1976 oil production from all Tracts within the Unit Area.

B = Ratio of the quantity of remaining primary oil reserves (as of 1/1/77) of each Tract to the total quantity of remaining primary oil reserves (as of 1/1/77) of all Tracts within the Unit Area.

C = Ratio of the volume of 1976 gas production from each Tract to the total volume of 1976 gas production from all Tracts within the Unit Area.

D = Ratio of the volume of remaining primary gas reserves (as of 1/1/77) of each Tract to the total volume of remaining primary gas reserves (as of 1/1/77) of all Tracts within the Unit Area.

E = Ratio of the quantity of secondary oil reserves of each Tract to the total quantity of secondary oil reserves of all Tracts within the Unit Area.

Phase I shall begin on the Effective Date of this Agreement and continue until the first day of the calendar month next following the date on which the total number of barrels of oil produced after said Effective Date from the Unitized Formation underlying all Tracts described in the original Exhibit B hereof equals 4,000,000 barrels as determined from the official production reports (currently known as C-115 reports) filed with the New Mexico Oil Conservation Commission or its successor. Phase II shall begin with the termination of Phase I and continue until the first day of the calendar month next following the date on which the total number of barrels of oil produced after January 1, 1977, from the Unitized Formation underlying all Tracts described in the original Exhibit B hereof equals 38,071,683 barrels determined in the same manner as aforesaid. Phase III shall begin with the termination of Phase II and continue for the remainder of the term of this Agreement. Unit Operator shall notify the Land Commissioner and all Working Interest Owners as to the date each phase change occurs.

In the event less than all Tracts are qualified on the Effective Date hereof, the Tract Participations shall be calculated on the basis of all such qualified Tracts rather than all Tracts in the Unit Area. The total

number of barrels of oil that shall determine the duration of Phase I shall remain at 4,000,000 barrels, and the total number of barrels of oil that shall determine the duration of Phase II shall remain at 38,071,683 barrels; however, oil produced from all Tracts within the Unit Area, non-qualified Tracts as well as qualified Tracts, shall be counted for purposes of determining the production of said totals of 4,000,000 barrels as to Phase I and 38,071,683 barrels as to Phase II.

SECTION 14. TRACTS QUALIFIED FOR PARTICIPATION. On and after the Effective Date hereof the Tracts within the Unit Area which shall be entitled to participation in the production of Unitized Substances shall be those Tracts more particularly described in Exhibit B that corner or have a common boundary (Tracts separated only by a public highway or a railroad right of way shall be considered to have a common boundary), and that otherwise qualify as follows:

(a) Each Tract as to which Working Interest Owners owning one hundred percent (100%) of the Working Interest have become parties to this Agreement, and as to which Royalty Owners owning seventy-five percent (75%) or more of the Royalty Interest have become parties to this Agreement.

(b) Each Tract as to which Working Interest Owners owning one hundred percent (100%) of the Working Interest have become parties to this Agreement, and as to which Royalty Owners owning less than seventy-five percent (75%) of the Royalty Interest have become parties to this Agreement, and as to which (1) Working Interest Owners, including the Working Interest Owner who operates the Tract, owning a total of seventy-five percent (75%) or more of the Working Interest in such Tract that is committed to this agreement have joined in a request for qualification of such Tract, and as to which (2) Working Interest Owners having seventy-five percent (75%) or more of the combined Phase III Unit Participation in all Tracts that meet the requirements of Section 14 (a) above have voted in favor of the qualification of such Tract.

(c) Each Tract as to which Working Interest Owners owning less than one hundred percent (100%) of the Working Interest have become parties to this Agreement, regardless of the percentage of Royalty Interest therein that is committed hereto; and as to which (1) one or more of the Working Interest Owners in such Tract who have become parties to this Agreement, one of which must be the operator of such Tract, have joined in a request for qualification of such Tract, and have executed and delivered, or obligated themselves to execute and deliver, an indemnity agreement identical in form to the agreement attached to the Unit Operating Agreement as Exhibit H indemnifying and agreeing to hold harmless the other Working Interest Owners in the Unit Area, their successors and assigns, against all claims and demands that may be made by the owners of Working Interest in such

Tract who are not parties to this Agreement, and which arise out of the qualification of such Tract; and as to which (2) Working Interest Owners having seventy-five percent (75%) or more of the Phase III Unit Participation in all Tracts that meet the requirements of Section 14 (a) and 14(b) have voted in favor of the qualification of such Tract and to accept the indemnity agreement. Upon the qualification of such a Tract, the Tract Participations which would have been attributed to the non-subscribing owners of Working Interest in such Tract, had they become parties to this Agreement and the Unit Operating Agreement, shall be attributed to the Working Interest Owners in such Tract who have become parties to such agreements, and joined in the indemnity agreement, in proportion to their respective Working Interests in the Tract.

If on the Effective Date of this Agreement there is any Tract or Tracts which have not been effectively committed to or made subject to this Agreement by qualifying as above provided, then such Tract or Tracts shall not be entitled to participate hereunder. Unit Operator shall, when submitting this Agreement for final approval by the Land Commissioner, file therewith a schedule of those Tracts which have been committed and made subject to this Agreement and are entitled to participate in Unitized Substances. Said schedule shall set forth opposite each such committed Tract the lease number or assignment number, the owner of record of the lease, and the percentage participation of such Tract which shall be computed according to the participation formula set out in Section 13 (Tract Participation) above. This schedule of participation shall be Revised Exhibit C and upon approval thereof by the Land Commissioner shall become a part of this Agreement and shall govern the allocation of production of Unitized Substances until a new schedule is approved by the Land Commissioner.

SECTION 15. ALLOCATION OF UNITIZED SUBSTANCES. All Unitized Substances produced and saved (less, save and except any part of such Unitized Substances used in conformity with good operating practices on Unitized Land for drilling, operating, camp and other production or development purposes and for injection or unavoidable loss in accordance with a Plan of Operation approved by the Land Commissioner) shall be apportioned among and allocated to the qualified Tracts in accordance with the respective Tract Participations effective hereunder during the respective periods such Unitized Substances were produced, as set forth in the schedule of participation in Exhibit C. The amount of Unitized Substances so allocated to each Tract, and only that amount, (regardless of whether it be more or less than the amount of the actual production of Unitized Substances from the well or wells, if any, on such Tract) shall, for all intents, uses and purposes, be deemed to have been produced from such Tract.

The Unitized Substances allocated to each Tract shall be distributed among, or accounted for, to the parties entitled to share in the production from such Tract in the same manner, in the same proportions, and

upon the same conditions, as they would have participated and shared in the production from such Tracts, or in the proceeds thereof, had this Agreement not been entered into; and with the same legal force and effect.

No Tract committed to this Agreement and qualified for participation as above provided shall be subsequently excluded from participation hereunder on account of depletion of Unitized Substances.

If the Working Interest and/or the Royalty Interest in any Tract are divided with respect to separate parcels or portions of such Tract and owned now or hereafter in severalty by different persons, the Tract Participation during Phase I, Phase II and Phase III shall, in the absence of a recordable instrument executed by all owners and furnished to Unit Operator fixing the divisions of ownership, be divided among such parcels or portions in proportion to the number of surface acres in each.

The Unitized Substances allocated to each Tract shall be delivered in kind to the respective Working Interest Owners and parties entitled thereto by virtue of the ownership of Oil and Gas Rights therein. Each Working Interest Owner and the parties entitled thereto shall have the continuing right to receive such production in kind at a common point within the Unit Area and to sell or dispose of the same as it sees fit. Each such party shall have the right to construct, maintain and operate all necessary facilities for that purpose on Unitized Land, provided the same are so constructed, maintained and operated as not to interfere with operations carried on pursuant hereto. Subject to Section 18 hereof, any extra expenditure incurred by Unit Operator by reason of the delivery in kind of any portion of the Unitized Substances shall be borne by the party responsible therefor under the controlling lease or contract. In the event any Working Interest Owner shall fail to take or otherwise adequately dispose of its proportionate share of the production from the Unitized Formation currently as and when produced, then so long as such condition continues, Unit Operator, for the account and at the expense of the Working Interest Owner of the Tract or Tracts concerned, and in order to avoid curtailing the operation of the Unit Area, may, but shall not be required to, sell or otherwise dispose of such production to itself or to others on a day-to-day basis, provided that all contracts of sale by the Unit Operator of any other party's share of Unitized Substances shall be only for such reasonable periods of time as are consistent with the minimum needs of the industry under the circumstances, but in no event shall any such contract be for a period in excess of one year, and at not less than the prevailing market price in the area for like production, and the account of such Working Interest Owner shall be charged therewith as having received such production. The net proceeds, if any, of the Unitized Substances so disposed of by Unit Operator shall be paid to the Working Interest Owner of the Tract or Tracts concerned. Notwithstanding the foregoing, Unit Operator shall not make a sale into interstate commerce of any Working Interest Owner's share of gas production without first giving such Working Interest Owner sixty (60) days notice of such intended sale.

Any Working Interest Owner receiving in kind or separately disposing of all or any part of the Unitized Substances allocated to any Tract, or receiving the proceeds therefrom if the same is sold or purchased by Unit Operator, shall be responsible for the payment of all Royalty, overriding royalty and production payments due thereon, and each such party shall hold each other Working Interest Owner harmless against all claims, demands and causes of action by owners of such Royalty, overriding royalty and production payments.

If, after the Effective Date of this Agreement, there is any Tract or Tracts that are subsequently committed hereto, as provided in Section 4 (Expansion) hereof, or any Tract or Tracts within the Unit Area not committed hereto as of the Effective Date hereof but which are subsequently committed hereto under the provisions of Section 14 (Tracts Qualified for Participation) and Section 33 (Nonjoinder and Subsequent Joinder), or if any Tract is excluded from this Agreement as provided for in Section 32 (Loss of Title), the schedule of participation as shown in Exhibit C, shall be revised by the Unit Operator; and the revised Exhibit C, upon approval by the Land Commissioner, shall govern the allocation of production on and after the effective date thereof until a revised schedule is approved as hereinabove provided. In any such revised Exhibit C, pursuant to this paragraph, the Tract Participation of the previously qualified Tracts shall remain in the same ratio one to the other.

SECTION 16. FEA PRICING. It is anticipated that at the Effective Date hereof, crude oil produced, saved and sold from the North Hobbs (Grayburg-San Andres) Unit will be subject to the rules and regulations of the Federal Energy Administration or its successor, herein referred to as "FEA". Such rules and regulations provide for the classification of crude oil for pricing purposes as (a) Stripper Well Crude Oil, (b) Old Oil, and (c) Upper Tier Crude Oil. It is further anticipated that Unit Operator will, in compliance with applicable FEA rules and regulations, prepare a unit-wide certification covering monthly crude oil production from the unit, in which event it will be necessary for Unit Operator to implement a method for the allocation of the unit certification among the Tracts comprising the unit. It is the intention of the parties to this agreement that the interest owners in each Tract shall retain the regulatory benefits attributable to that Tract to the extent that the unit is legally permitted to retain such benefits. Under the FEA rules and regulations as of October 1976, a unit certification is allowed each month to include in the Upper Tier Crude Oil portion thereof, a constant number of barrels described by FEA rules and regulations as Imputed Upper Tier Crude Oil. The unit certification is further allowed each month to include in the Stripper Well Crude Oil portion thereof, a constant number of barrels described by FEA rules and regulations as Imputed Stripper Well Crude Oil. In view of the foregoing, and notwithstanding the provisions of Section 15 hereof, crude oil produced, saved and sold from the unit shall be allocated as follows:

(a) Imputed Stripper Well Crude Oil. The first oil produced, saved and sold each month up to a quantity equal to the unit's Imputed Stripper Well Crude Oil shall be allocated to Tracts contributing Imputed Stripper Well Crude Oil to the unit certification in proportion to their contributions of such Imputed Stripper Well Crude Oil. Should any Tract in any month be allocated out of unit production in accordance with its Tract Participation as set forth in this agreement, a total number of barrels of oil that is less than the Imputed Stripper Well Crude Oil that such Tract has contributed to the unit certification, then such Tract's allocation of Imputed Stripper Well Crude Oil shall be reduced by the amount that the Imputed Stripper Crude Oil exceeds the amount of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Stripper Well Crude Oil. The total Excess Imputed Stripper Well Crude Oil of all Tracts shall be allocated to all Tracts, including Tracts which have not contributed Imputed Stripper Well Crude Oil to the unit certification, in proportion to the quantities that the unit production allocated to a Tract by its Tract Participation exceeds the quantity of Imputed Stripper Well Crude Oil allocated to such Tract.

(b) Imputed Upper Tier Crude Oil. Oil produced, saved, and sold each month from the unit after a quantity of oil equal to the Imputed Stripper Well Crude Oil is produced, saved and sold, up to a quantity equal to the Imputed Upper Tier Crude Oil, shall be allocated to those Tracts contributing Imputed Upper Tier Crude Oil to the unit certification in proportion to their contributions of such Imputed Upper Tier Crude Oil. Should any Tract in any month be allocated out of unit production in accordance with its Tract Participation as set forth in this agreement, a total number of barrels of oil that is less than the sum of its Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Well Crude Oil as provided in subparagraph (a) above, and its allocated Imputed Upper Tier Crude Oil, then such Tract's allocation of Imputed Upper Tier Crude Oil shall be reduced by the quantity that the sum of the Tract's Imputed Stripper Well Crude Oil, its Excess Imputed Stripper Crude Oil and its allocated Imputed Upper Tier Crude Oil exceeds the total quantity of oil to be allocated in accordance with its Tract Participation. The amount in excess of its Tract Participation shall be termed Excess Imputed Upper Tier Crude Oil. The total Excess Imputed Upper Tier Crude Oil of all Tracts shall be allocated to all Tracts, including Tracts which have not contributed Imputed Stripper Well Crude Oil and/or Imputed Upper Tier Crude Oil to the unit certification, in proportion to the quantities that the unit production allocated to a Tract by its Tract Participation exceeds the sum of the Imputed Stripper Well Crude, Excess Imputed Stripper Well Crude Oil and Imputed Upper Tier Crude Oil allocated to such Tract.

(c) Upper Tier Crude Oil and Old Oil shall each be allocated to each Tract in proportion to the quantities that the unit production allocated

to a Tract by its Tract Participaton exceeds the sum of the allocated Imputed Stripper Well Crude Oil, Excess Imputed Stripper Well Crude Oil, Imputed Upper Tier Crude Oil and Excess Imputed Upper Tier Crude Oil allocated to such Tract.

The provisions of this Section 16 shall remain in effect only so long as necessary for the unit to comply with applicable laws, rules and regulations of appropriate governmental authorities. Should such laws, rules, and regulations hereafter change substantially so as to alter the basis for a certification of unit production as set forth above, then in such event a method of allocating the certification among the Tracts comprising the unit shall be implemented by Unit Operator which as nearly as possible achieves the above-stated intention hereof. In any event the provisions of this Section 16 shall automatically terminate in their entirety upon the production of 23,000,000 barrels of oil after the Effective Date from the Unitized Formation underlying all Tracts described in the original Exhibit B hereof; thereafter all oil produced, saved and sold from the unit shall, as to each and every category into which such production may then or thereafter be classified for pricing or other purposes, be allocated to all qualified Tracts in proportion to Tract Participation in accordance with the provisions of Section 15. The provisions of this section shall be deemed supplementary to the other provisions of this Agreement and the provisions of the Unit Operating Agreement so that nothing contained herein shall alter the terms of such agreements, including but not limited to the portions thereof dealing with Tract Participation, allocation of unit production, and allocation of investment and operating costs.

SECTION 17. OUTSIDE SUBSTANCES. If gas obtained from any source other than the Unitized Formation is introduced into the Unitized Formation for use in repressuring, stimulating of production or increasing ultimate recovery, which shall be in conformity with a Plan of Operation first approved by the Land Commissioner and the Division, a like amount of gas with appropriate deduction for loss or depletion from any cause may be withdrawn from unit wells completed in the Unitized Formation royalty free as to dry gas, but not royalty free as to the products extracted therefrom; provided that such withdrawal shall be at such time as may be provided in the approved Plan of Operation or as otherwise may be consented to or prescribed by the Land Commissioner and the Division as conforming to good petroleum engineering practices and provided further that such right of withdrawal shall terminate on the termination date of this Agreement.

SECTION 18. ROYALTY SETTLEMENT. Any and all Royalty Owners who, under an existing contract, are entitled to take in kind a share of the substances produced from any Tract unitized hereunder, shall continue to be entitled to such right to take in kind their share of the Unitized Substances

allocated to such Tract, and Unit Operator shall make deliveries of such Royalty share taken in kind in conformity with the applicable contracts, laws and regulations. Settlement for Royalty not taken in kind shall be made by Working Interest Owners responsible therefor under existing contracts, laws and regulations on or before the last day of each month for Unitized Substances produced during the preceding calendar month; provided, however, that nothing herein contained shall operate to relieve the lessees of any land from their respective lease obligations for the payment of any Royalty due under their leases, except that such Royalty shall be computed on Unitized Substances as allocated to each Tract in accordance with the terms of this Agreement. With respect to Federal leases committed hereto on which the royalty rate depends upon the daily average production per well, such average production shall be determined in accordance with the operating regulations pertaining to Federal leases as though the committed Tracts were included in a single consolidated lease.

If the amount of production or the proceeds thereof accruing to any Royalty Owner (except the United States of America) in a Tract depends upon the average production per well or the average pipeline runs per well from such Tract during any period of time, then such production shall be determined from and after the Effective Date hereof by dividing the quantity of Unitized Substances allocated hereunder to such Tract during such period of time by the number of wells located thereon completed in the Unitized Formation as of the Effective Date hereof, provided that any Tract not having any well completed in the Unitized Formation on the Effective Date hereof shall be considered as having one such well for the purpose of this provision.

All Royalty due the State of New Mexico and the United States of America and the other Royalty Owners hereunder shall be computed and paid on the basis of all Unitized Substances allocated to the respective Tract or Tracts committed hereto, in lieu of actual production from such Tract or Tracts.

Each Royalty Owner (other than the State of New Mexico and the United States of America) that executes this Agreement represents and warrants that it is the owner of a Royalty Interest in a Tract or Tracts within the Unit Area as its interest is indicated in Exhibit B attached hereto. If any Royalty Interest in a Tract or Tracts should be lost by title failure or otherwise in whole or in part, during the term of this Agreement, then the Royalty Interest of the party representing himself to be the owner hereof shall be reduced proportionately and the interests of all parties shall be adjusted accordingly.

SECTION 19. RENTAL SETTLEMENT. Rentals or minimum Royalties due on leases committed hereto shall be paid by Working Interest Owners responsible therefor under existing contracts, laws and regulations provided that

nothing herein contained shall operate to relieve the lessees of any land from their respective lease obligations for the payment of any rental or minimum Royalty in lieu thereof, due under their leases. Rental for lands of the State of New Mexico subject to this Agreement shall be paid at the rate specified in the respective leases from the State of New Mexico. Rental or minimum Royalty for lands of the United States of America subject to this Agreement shall be paid at the rate specified in the respective leases from the United States of America, unless such rental or minimum Royalty is waived, suspended or reduced by law or by approval of the Secretary or his duly authorized representative.

SECTION 20. CONSERVATION. Operations hereunder and production of Unitized Substances shall be conducted to provide for the most economical and efficient recovery of said substances without waste, as defined by or pursuant to Federal and State laws and regulations.

SECTION 21. DRAINAGE. The Unit Operator shall take appropriate and adequate measures to prevent drainage of Unitized Substances from Unitized Land by wells on land not subject to this Agreement.

The Unit Operator, upon approval by the Working Interest Owners and the Land Commissioner, is hereby empowered to enter into a border line agreement or agreements with working interest owners of adjoining lands not subject to this Agreement with respect to operation in the border area for the maximum economic recovery, conservation purposes and proper protection of the parties and interest affected.

SECTION 22. LEASES AND CONTRACTS CONFORMED AND EXTENDED. The terms, conditions and provisions of all leases, subleases and other contracts relating to exploration, drilling, development or operation for oil or gas on lands committed to this Agreement are hereby expressly modified and amended to the extent necessary to make the same conform to the provisions hereof, but otherwise to remain in full force and effect, and the parties hereto hereby consent that the Land Commissioner and the Secretary of the Interior of the United States of America (hereinafter referred to as "Secretary"), respectively, shall and by their approval hereof, or by the approval hereof by their duly authorized representatives, do hereby establish, alter, change or revoke the drilling, producing, rental, minimum Royalty and Royalty requirements of State and Federal leases committed hereto and the regulations in respect thereto to conform said requirements to the provisions of this Agreement.

Without limiting the generality of the foregoing, all leases, subleases and contracts are particularly modified in accordance with the following:

(a) The development and operation of lands subject to this Agreement under the terms hereof shall be deemed full performance of all

obligations for development and operation with respect to each part or separately owned Tract subject to this Agreement, regardless of whether there is any development of any particular part or Tract of the Unit Area, notwithstanding anything to the contrary in any lease, operating agreement or other contract by and between the parties hereto, or their respective predecessors in interest, or any of them.

(b) Drilling, producing or enhanced recovery operations performed hereunder shall be deemed to be performed upon and for the benefit of each Tract, and no lease shall be deemed to expire by reason of failure to drill or produce wells situated on the land therein embraced.

(c) Suspension of drilling or producing operations on all unitized lands pursuant to direction or consent of the Land Commissioner and the Secretary, or their duly authorized representatives, shall be deemed to constitute such suspension pursuant to such direction or consent as to each Tract of Unitized Lands.

(d) Each lease, sublease, or contract relating to the exploration, drilling, development or operation for oil and gas which by its terms might expire prior to the termination of this Agreement, is hereby extended beyond any such term so provided therein, so that it shall be continued in full force and effect for and during the term of this Agreement.

(e) Any lease embracing lands of the State of New Mexico which is made subject to this Agreement shall continue in force beyond the term provided therein as to the lands committed hereto until the termination hereof.

(f) Any lease embracing lands of the State of New Mexico having only a portion of its land committed hereto shall be segregated as to that portion committed and that not committed, and the terms of such lease shall apply separately to such segregated portions commencing as of the Effective Date hereof. Provided, however, that notwithstanding any of the provisions of this Agreement to the contrary, such lease shall continue in full force and effect beyond the term provided therein as to all lands embraced in such lease if oil or gas is, or has heretofore been discovered in paying quantities on some part of the lands embraced in such lease committed to this Agreement or, so long as a portion of the Unitized Substances produced from the Unit Area is, under the terms of this Agreement, allocated to the portion of the lands covered by such lease committed to this Agreement, or, at any time during the term hereof, as to any lease that is then valid and subsisting and upon which the lessee or the Unit Operator is then engaged in bona fide drilling, reworking, or improved recovery operations on any part of the lands embraced in such lease, then the same as to all lands embraced therein shall remain in full force and effect so long as such operations are diligently prosecuted, and if they result in the production

of oil or gas, said lease shall continue in full force and effect as to all of the lands embraced therein, so long thereafter as oil or gas in paying quantities is being produced from any portion of said lands.

(g) The segregation of any Federal lease committed to this Agreement is governed by the following provision in the fourth paragraph of Section 17 (j) of the Mineral Leasing Act, as amended by the Act of September 2, 1960, (74 Stat. 781-784): "Any (Federal) lease heretofore or hereafter committed to any such (unit) plan embracing lands that are in part within and in part outside of the area covered by any such plan shall be segregated into separate leases as to the lands committed and the lands not committed as of the effective date of unitization; provided, however, that any such lease as to the non-unitized portion shall continue in force and effect for the term thereof but for not less than two years from the date of such segregation and so long thereafter as oil or gas is produced in paying quantities."

SECTION 23. COVENANTS RUN WITH LAND. The covenants herein shall be construed to be covenants running with the land with respect to the interests of the parties hereto and their successors in interest until this Agreement terminates, and any grant, transfer or conveyance of interest in land or leases subject hereto shall be and hereby is conditioned upon the assumption of all privileges and obligations hereunder by the grantee, transferee or other successor in interest. No assignment or transfer of any Working Interest subject hereto shall be binding upon Unit Operator until the first day of the calendar month after Unit Operator is furnished with the original, or acceptable photostatic or certified copy of the recorded instrument of transfer; and no assignment or transfer of any Royalty Interest subject hereto shall be binding upon the Working Interest Owner responsible therefor until the first day of the calendar month after said Working Interest Owner is furnished with the original or acceptable photostatic or certified copy of the recorded instrument of transfer.

SECTION 24. EFFECTIVE DATE AND TERM. This Agreement shall become binding upon each party who executes or ratifies it as of the date of execution or ratification by such party and shall become effective on the first day of the calendar month next following the approval of this Agreement by the Land Commissioner and the Division, and the filing by Unit Operator of this Agreement or notice thereof for record in the office of the County Clerk of Lea County, New Mexico. Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least eighty percent (80%) as to all Tracts then qualified under the provisions of Section 14.

If this Agreement does not become effective on or before January 1, 1980, it shall ipso facto expire on said date (hereinafter called "expiration

date") and thereafter be of no further force or effect, unless prior thereto this Agreement has been executed or ratified by Working Interest Owners owning a combined Phase III Unit Participation of at least seventy-five percent (75%), and the owners of at least seventy-five percent (75%) of such Working Interest committed to this Agreement have decided to extend said expiration date for a period not to exceed one year (hereinafter called "extended expiration date"). If said expiration date is so extended and this Agreement does not become effective on or before said extended expiration date, it shall ipso facto expire on said extended expiration date and thereafter be of no further force or effect.

Unit Operator shall, within thirty (30) days after the Effective Date of this Agreement, file for record in the office of the County Clerk of Lea County, New Mexico, a certificate to the effect that this Agreement has become effective in accordance with its terms and stating the Effective Date.

The term of this Agreement shall be for and during the time that Unitized Substances are produced from the Unitized Land and so long thereafter as drilling, reworking or other operations (including enhanced recovery operations) are prosecuted thereon without cessation of more than ninety (90) consecutive days unless sooner terminated as herein provided.

This Agreement may be terminated with the approval of the Land Commissioner by Working Interest Owners owning eighty percent (80%) or more of the Unit Participation then in effect whenever such Working Interest Owners determine that Unit Operations are no longer profitable or in the interest of conservation. Upon approval, such termination shall be effective as of the first day of the month after said Working Interest Owners' determination. Notice of any such termination shall be filed by Unit Operator in the office of the County Clerk of Lea County, New Mexico, within thirty (30) days of the effective date of termination.

Upon termination of this Agreement, the parties hereto shall be governed by the terms and provisions of the leases and contracts affecting the separate Tracts just as if this Agreement had never been entered into.

If not otherwise provided by the leases unitized under this Agreement, Royalty Owners hereby grant Working Interest Owners a period of six months after termination of this Agreement in which to salvage, sell, distribute or otherwise dispose of the personal property and facilities used in connection with Unit Operations.

SECTION 25. RATE OF PRODUCTION AND DISPOSAL THEREOF. All production and the disposal thereof shall be in conformity with allocations and quotas made or fixed by any duly authorized person or regulatory body under any Federal or State statute.

SECTION 26. NONDISCRIMINATION. Unit Operator in connection with the performance of work under this Agreement relating to leases of the United States agrees to comply with the provisions of Exhibit D attached hereto and made a part hereof.

SECTION 27. APPEARANCES. Unless a different representative is designated by Working Interest Owners, Unit Operator shall have the right to appear for or on behalf of any interests affected hereby before the Land Commissioner, the Department of the Interior of the United States of America, and the Division, and to appeal from any order issued under the rules and regulations of the Land Commissioner, the Department or the Division, or to apply for relief from any of said rules and regulations or in any proceedings relative to operations before the Land Commissioner, the Department or the Division or any other legally constituted authority; provided, however, that any other interested party shall also have the right at his or its own expense to be heard in any such proceeding.

SECTION 28. NOTICES. All notices, demands, objections or statements required hereunder to be given or rendered to the parties hereto shall be deemed fully given if made in writing and personally delivered to the party or parties or sent by postpaid certified or registered mail, addressed to such party or parties at their respective addresses set forth in connection with the signatures hereto or to the ratification or consent hereof or to such other address as any such party or parties may have furnished in writing to the party sending the notice, demand or statement.

SECTION 29. NO WAIVER OF CERTAIN RIGHTS. Nothing in this Agreement contained shall be construed as a waiver by any party hereto of the right to assert any legal or constitutional right or defense as to the validity or invalidity of any law of the State wherein said Unitized Lands are located, or regulations issued thereunder in any way affecting such party, or as a waiver by any such party of any right beyond his or its authority to waive; provided, however, each party hereto covenants that it will not resort to any action to partition the Unitized Land or the Unit Equipment.

SECTION 30. EQUIPMENT AND FACILITIES NOT FIXTURES ATTACHED TO REALTY. Each Working Interest Owner has heretofore placed and used on its Tract or Tracts committed to this Agreement various well and lease equipment and other property, equipment and facilities. It is also recognized that additional equipment and facilities may hereafter be placed and used upon the Unitized Land as now or hereafter constituted. Therefore, for all purposes of this Agreement all such equipment shall be considered to be personal property and not fixtures attached to realty. Accordingly, all such well and lease equipment and personal property is hereby severed from the mineral estates affected by this Agreement, and it is agreed that all

such equipment and personal property shall be and remain personal property of the Working Interest Owners for all purposes and the rights and interests therein as among Working Interest Owners shall be as set forth in the Unit Operating Agreement.

SECTION 31. UNAVOIDABLE DELAY. All obligations under this Agreement requiring the Unit Operator to commence or continue enhanced recovery operations or to operate on or produce Unitized Substances from any of the lands covered by this Agreement shall be suspended while, but only so long as, the Unit Operator, despite the exercise of due care and diligence, is prevented from complying with such obligations, in whole or in part, by strikes, acts of God, Federal, State or municipal law or agency, unavoidable accident, uncontrollable delays in transportation, inability to obtain necessary materials in open market, or other matters beyond the reasonable control of the Unit Operator whether similar to matters herein enumerated or not.

SECTION 32. LOSS OF TITLE. In the event title to any Tract of Unitized Land shall fail so as to render the Tract inoperable under this Agreement and the true owner cannot be induced to join this Agreement, such Tract shall be automatically regarded as not committed hereto as of the first day of the calendar month in which the failure of title is determined and there shall be such readjustment of future costs and benefits as may be required on account of the loss of such title. In the event of a dispute as to title as to any Royalty, Working Interest or other interest subject hereto, payment or delivery on account thereof may be withheld without liability or interest until the dispute is finally settled; provided, that as to State or Federal land or leases, no payments of funds due the State of New Mexico or the United Sates of America shall be withheld, but such funds shall be deposited as directed by the Land Commissioner and/or the Oil and Gas Supervisor of the United States Geological Survey (hereinafter referred to as "Supervisor"), as the case may be, to be held as unearned money pending final settlement of the title dispute, and then applied as earned or returned in accordance with such final settlement.

Unit Operator as such is relieved from any responsibility for any defeat or failure of any title hereunder.

SECTION 33. NONJOINDER AND SUBSEQUENT JOINDER. Joinder by any Royalty Owner, at any time, must be accompanied by appropriate joinder of the corresponding Working Interest Owner in order for the interest of such Royalty Owner to be regarded as effectively committed. Joinder to this Agreement by a Working Interest Owner, at any time, must be accompanied by appropriate joinder to the Unit Operating Agreement in order for such interest to be regarded as effectively committed to this Agreement.

Any oil or gas interest in the Unitized Formation not committed hereto prior to submission of this Agreement to the Land Commissioner for

final approval may thereafter be committed hereto upon compliance with the applicable provisions of this Section and of Section 14 (Tracts Qualified for Participation) hereof, at any time up to the Effective Date hereof on the same basis of participation as provided in said Section 14, by the owner or owners thereof subscribing, ratifying, or consenting in writing to this Agreement and, if the interest is a Working Interest, by the owner of such interest subscribing also to the Unit Operating Agreement.

It is understood and agreed, however, that from and after the Effective Date hereof the right of subsequent joinder as provided in this Section shall be subject to such requirements or approvals and on such basis and effective as of such date as may be agreed upon by Working Interest Owners owning not less than sixty-five percent (65%) of the Unit Participation then in effect, and approved by the Land Commissioner. Such subsequent joinder by a proposed Working Interest Owner must be evidenced by his execution or ratification of this Agreement and the Unit Operating Agreement and, where State or Federal land is involved, such joinder must be approved by the Land Commissioner or Supervisor. Such joinder by a proposed Royalty Owner must be evidenced by his execution, ratification or consent of this Agreement and must be consented to in writing by the Working Interest Owner responsible for the payment of any benefits that may accrue hereunder in behalf of such proposed Royalty Owner. Except as may be otherwise herein provided, subsequent joinder to this Agreement shall be effective as of the first day of the month following the filing with the Land Commissioner of duly executed counterparts of any and all documents necessary to establish effective commitment of any Tract or interest to this Agreement, unless objection to such joinder by the Land Commissioner is duly made within sixty (60) days after such filing.

SECTION 34. COUNTERPARTS. This Agreement may be executed in any number of counterparts, no one of which needs to be executed by all parties and may be ratified or consented to by separate instrument in writing, specifically referring hereto, and shall be binding upon all those parties who have executed such a counterpart, ratification or consent hereto with the same force and effect as if all parties had signed the same document, and regardless of whether or not it is executed by all other parties owning or claiming an interest in the land within the above described Unit Area.

SECTION 35. JOINDER IN DUAL CAPACITY. Execution as herein provided by any party as either a Working Interest Owner or a Royalty Owner shall commit all interests owned or controlled by such party; provided, that if the party is the owner of a Working Interest, he must also execute the Unit Operating Agreement.

SECTION 36. TAXES. Each party hereto shall, for its own account, render and pay its share of any taxes levied against or measured by the amount or value of the Unitized Substances produced from the Unitized Land;

provided, however, that if it is required or if it be determined that the Unit Operator or the several Working Interest Owners must pay or advance said taxes for the account of the parties hereto, it is hereby expressly agreed that the parties so paying or advancing said taxes shall be reimbursed therefor by the parties hereto, including Royalty Owners, who may be responsible for the taxes on their respective allocated share of said Unitized Substances. No taxes shall be charged to the United States or to the State of New Mexico, nor to any lessor who has a contract with a lessee which requires his lessee to pay such taxes.

SECTION 37. NO PARTNERSHIP. The duties, obligations and liabilities of the parties hereto are intended to be several and not joint or collective. This Agreement is not intended to create, and shall not be construed to create, an association or trust, or to impose a partnership duty, obligation or liability with regard to any one or more of the parties hereto. Each party hereto shall be individually responsible for its own obligations as herein provided.

SECTION 38. PRODUCTION AS OF THE EFFECTIVE DATE. Unit Operator shall make a proper and timely gauge of all lease storage tanks (excluding separation and treating equipment) within the Unitized Area in order to ascertain the amount of merchantable oil above the pipe line connection in such tanks as of the Effective Date hereof. All such oil which has then been produced in accordance with established allowables shall be and remain the property of the Working Interest Owner entitled thereto, the same as if the unit had not been formed; and the responsible Working Interest Owner shall promptly remove said oil from the Unitized Land. Any such oil not so removed shall be sold by Unit Operator for the account of such Working Interest Owners, subject to the payment of all Royalty to Royalty Owners under the terms hereof. The oil that is in excess of the prior allowable of the wells from which it was produced shall be regarded as Unitized Substances produced after Effective Date hereof.

If, as of the Effective Date hereof, any Tract is overproduced with respect to the allowable of the wells on that Tract and the amount of over-production has been sold or otherwise disposed of, such over-production shall be regarded as a part of the Unitized Substances produced after the Effective Date hereof and shall be charged to such Tract as having been delivered to the parties entitled to Unitized Substances allocated to such Tract.

SECTION 39. STATUTORY UNITIZATION. If and when Working Interest Owners owning at least seventy-five percent (75%) of the Phase I, Phase II and Phase III Unit Participation and Royalty Owners owning at least seventy-five percent (75%) of the Phase I, Phase II and Phase III Royalty Interest have become parties to this Agreement or have approved this Agreement in

writing and such Working Interest Owners have also become parties to the Unit Operating Agreement, Unit Operator may make application to the Division for statutory unitization of the uncommitted interests pursuant to the Statutory Unitization Act (Chap. 65, Art. 14, N.M.S. 1953 Ann.). If such application is made and statutory unitization is approved by the Division, then effective as of the date of the Division's order approving statutory unitization, this Agreement and/or the Unit Operating Agreement shall automatically be revised and/or amended in accordance with the following:

(1) Section 14 of this Agreement shall be revised by substituting for the entire said section the following:

"SECTION 14. TRACTS QUALIFIED FOR PARTICIPATION. On and after the Effective Date hereof, all Tracts within the Unit Area shall be entitled to participation in the production of Unitized Substances."

(2) Section 24 of this Agreement shall be revised by substituting for the first three paragraphs of said section the following:

"SECTION 24. EFFECTIVE DATE AND TERM. This Agreement shall become effective on the first day of the calendar month next following the effective date of the Division's order approving statutory unitization upon the terms and conditions of this Agreement, as amended (if any amendment is necessary) to conform to the Division's order; approval of this Agreement, as so amended, by the Land Commissioner; and the filing by Unit Operator of this Agreement or notice thereof for record in the office of the County Clerk of Lea County, New Mexico. Unit Operator shall not file this Agreement or notice thereof for record, and hence this Agreement shall not become effective, unless within ninety (90) days after the date all other prerequisites for effectiveness of this Agreement have been satisfied, such filing is approved by Working Interest Owners owning a combined Phase III Unit Participation of at least sixty-five percent (65%) as to all Tracts within the Unit Area.

"Unit Operator shall, within thirty (30) days after the Effective Date of this Agreement, file for record in the office of the County Clerk of Lea County, New Mexico, a certificate to the effect that this Agreement has become effective in accordance with its terms, therein identifying the Division's order approving statutory unitization and stating the Effective Date."

(3) This Agreement and/or the Unit Operating Agreement shall be amended in any and all respects necessary to conform to the Division's order approving statutory unitization.

Any and all amendments of this Agreement and/or the Unit Operating Agreement that are necessary to conform said agreements to the Division's

order approving statutory unitization shall be deemed to be hereby approved in writing by the parties hereto without any necessity for further approval by said parties, except as follows:

(a) If any amendment of this Agreement has the effect of reducing any Royalty Owner's participation in the production of Unitized Substances, such Royalty Owner shall not be deemed to have hereby approved the amended agreement without the necessity of further approval in writing by said Royalty Owner; and

(b) If any amendment of this Agreement and/or the Unit Operating Agreement has the effect of reducing any Working Interest Owner's participation in the production of Unitized Substances or increasing such Working Interest Owner's share of Unit Expense, such Working Interest Owner shall not be deemed to have hereby approved the amended agreements without the necessity of further approval in writing by said Working Interest Owner.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed and have set opposite their respective names the date of execution.

SHELL OIL COMPANY
Unit Operator and Working Interest Owner

Date: July 31, 1978

By: Robert L. Avary
Attorney in Fact
ROBERT L. AVARY
P. O. Box 991
Houston, Texas 77001

STATE OF TEXAS)
)
COUNTY OF HARRIS)

The foregoing instrument was acknowledged before me this 31st day of July, 1978, by ROBERT L. AVARY, Attorney in Fact for SHELL OIL COMPANY, a Delaware corporation, on behalf of said corporation.

My Commission expires:
BELINDA ROEBER
Notary Public in and for Harris County, Texas
My Commission Expires July 21, 1979

Belinda Roeber
Notary Public in and for

APPENDIX

"FEDERAL CONTRACT PROVISIONS"

The following provisions are incorporated in the agreement to which this Appendix is attached and shall be applicable to the parties thereunder if and to the extent such agreement is a subcontract or purchase order under a federal contract and inclusion of such provisions is required under applicable Executive Orders or Government Procurement Regulations:

EQUAL OPPORTUNITY CLAUSE

(Executive Order 11246)

(A) Contractor is aware of and is fully informed of Contractor's responsibilities under Executive Order 11246 and shall file compliance reports as required by Section 203 of Executive Order 11246 and otherwise comply with the requirements of such order.

(B) Contractor shall be bound by and agrees to the following provisions as contained in Section 202 of Executive Order 11246, to wit:

"(1) The Contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex or national origin. The Contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer, recruitment or recruitment advertising, layoff or termination, rates of pay or other forms of compensation, and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

"(2) The Contractor will, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

"(3) The Contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the Contractor's commitments under Section 202 of Executive Order 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

"(4) The Contractor will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

"(5) The Contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

"(6) In the event of the Contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and the Contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulations, or order of the Secretary of Labor, or as otherwise provided by law.

"(7) The Contractor will include the provisions of Paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The Contractor will take action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions including sanctions for noncompliance; provided, however, that in the event the Contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the Contractor may request the United States to enter into such litigation to protect the interests of the United States."

(C) Contractor certifies that segregated facilities are not and will not be maintained or provided for Contractor's employees at any of Contractor's establishments; that such employees are not and will not be permitted to perform their services at any location under Contractor's control where segregated facilities are maintained, and, that Contractor is aware of and understands that any breach of the foregoing is a violation of the Equal Opportunity Clause of Executive Order 11246, as included above in paragraph (B). "Segregated facilities" as used herein means any waiting rooms, work areas, rest rooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, creed, color, or national origin, because of habit, local custom or otherwise.

UTILIZATION OF MINORITY BUSINESS ENTERPRISES

(41 CFR 1-1.13)

(A) It is the policy of the government that minority business enterprises shall have the maximum practicable opportunity to participate in the performance of government contracts.

(B) The Contractor agrees to use his best efforts to carry out this policy in the award of his subcontracts to the fullest extent consistent with the efficient performance of this contract. As used in this contract, the term "Minority Business Enterprise" means a business, at least 50 percent of which is owned by minority group members or, in case of publicly owned businesses, at least 51 percent of the stock of which is owned by minority group members. For the purposes of this definition, minority group members are Negroes, Spanish-speaking American persons, American-Orientals, American-Indians, American-Eskimos, and American-Aleuts. Contractors may rely on written representations by subcontractors regarding their status as minority business enterprises in lieu of an independent investigation.

MINORITY BUSINESS ENTERPRISES SUBCONTRACTING PROGRAM

(41CFR 1-1.13) (Applicable to contracts which may exceed $500,000 in value)

(A) The Contractor agrees to establish and conduct a program which will enable minority business enterprises (as defined in the clause entitled "Utilization of Minority Business Enterprises") to be considered fairly as subcontractors and suppliers under this contract. In this connection, the Contractor shall –

(1) Designate a liaison officer who will administer the Contractor's minority business enterprises program.

(2) Provide adequate and timely consideration of the potentialities of known minority business enterprises in all "make-or-buy" decisions.

(3) Assure that known minority business enterprises will have an equitable opportunity to compete for subcontracts, particularly by arranging solicitations, time for the preparation of bids, quantities, specifications, and delivery schedules so as to facilitate the participation of minority business enterprises.

(4) Maintain records showing (i) procedures which have been adopted to comply with the policies set forth in this clause, including the establishment of a source list of minority business enterprises, (ii) awards to minority business enterprises on the source list, and (iii) specific efforts to identify and award contracts to minority business enterprises.

(5) Include the Utilization of Minority Business Enterprises clause in subcontracts which offer substantial minority business enterprises subcontracting opportunities.

(6) Cooperate with the Contracting Officer in any studies and surveys of the Contractor's minority business enterprises procedures and practices that the Contracting Officer may from time to time conduct.

(7) Submit periodic reports of subcontracting to known minority business enterprises with respect to the records referred to in subparagraph (4), above, in such form and manner and at such time (not more often than quarterly) as the Contracting Officer may prescribe.

(B) The Contractor further agrees to insert, in any subcontract hereunder which may exceed $500,000, provisions which shall conform substantially to the language of this clause, including this paragraph (B), and to notify the Contracting Officer of the names of such subcontractors.

LISTING OF EMPLOYMENT OPENINGS

(41 CFR 50–250)

(A) The contractor, to provide special emphasis to the employment of qualified disabled veterans and veterans of the Vietnam era, agrees that all suitable employment openings of the contractor which exist at the time of the execution of this contract and those which occur during the performance of this contract, including those not generated by this contract and including those occurring at an establishment of the contractor other than the one wherein the contract is being performed but excluding those of independently operated corporate affiliates, shall be offered for listing at an appropriate local office of the State employment service system wherein the opening occurs and to provide such reports to such local office regarding employment openings and hires as may be required: Provided, that if the contract is for less than $10,000 or if it is with a State or local government the reports set forth in paragraphs (C) and (D) of this clause are not required.

(B) Listing of employment openings with the employment service system pursuant to this clause shall be made at least concurrently with the use of any other recruitment service or effort and shall involve the normal obligations which attach to the placing of a bona fide job order, including the acceptance of referrals of veterans and non-veterans. The listing of employment openings does not require the hiring of any particular job applicant or from any particular group of job applicants, and nothing herein is intended to relieve the Contractor from any requirements in any Executive Orders or regulations regarding nondiscrimination in employment.

(C) The reports required by paragraph (A) of this clause shall include, but not be limited to, periodic reports which shall be filed at least quarterly with the appropriate local office or, where the contractor has more than one establishment in a State, with the central office of that State employment service. Such reports shall indicate for each establishment (1) the number of individuals who were hired during the reporting period, (2) the number of those hired who were disabled veterans, and (3) the number who were nondisabled veterans of the Vietnam era. The contractor shall submit a report within 30 days after the end of each reporting period wherein any performance is made on this contract. The contractor shall maintain copies of the reports submitted until the expiration of 1 year after final payment under the contract, during which time they shall be made available, upon request, for examination by any authorized representatives of the contracting officer or of the Secretary of Labor.

(D) Whenever the contractor becomes contractually bound to the listing provisions of this clause, he shall advise the employment service system in each State wherein he has establishments of the name and location of each such establishment in the State. As long as the contractor is contractually bound to these provisions and has so advised the State system there is no need to advise the State system of subsequent contracts. The contractor may advise the State systems when it is no longer bound by this contract clause.

(E) This clause does not apply to the listing of employment openings which occur and are filled outside of the 50 States, the District of Columbia, Puerto Rico, Guam, and the Virgin Islands.

(F) This clause does not apply to openings which the contractor proposes to fill from within his own organization or to fill pursuant to a customary and traditional employer-union hiring arrangement. This exclusion does not apply to a particular opening once an employer decides to consider applicants outside of his own organization or employer-union arrangement for that opening.

(G) As used in this clause:

(1) "All suitable employment openings" includes, but is not limited to, openings which occur in the following job categories: Production and nonproduction; plant and office; laborers and mechanics; supervisory and nonsupervisory; technical; and executive, administrative, and professional openings which are compensated on a salary basis of less than $16,000 per year. This term includes full-time employment, temporary employment of more than 3 days' duration, and part-time employment. It does not include openings which the contractor proposes to fill from within his own organization or to fill pursuant to a customary and traditional employer-union hiring arrangement. Under the most compelling circumstances an employment opening may not be suitable for listing, including such situations where the needs of the Government cannot reasonably be otherwise supplied, where listing would be contrary to national security, or where the requirement of listing would otherwise not be for the best interest of the Government.

(2) "Appropriate office of the State employment service system" means the local office of the Federal-State national system of public employment offices with assigned responsibility for serving the area where the employment opening is to be filled, including the District of Columbia, Guam, Puerto Rico, and the Virgin Islands.

(3) "Openings which the contractor proposes to fill from within his own organization" means employment openings for which no consideration will be given to persons outside the contractor's organization (including any affiliates, subsidiaries, and the parent companies) and includes any openings which the contractor proposes to fill from regularly established "recall" or "rehire" lists.

(4) "Openings which the contractor proposes * * * * to fill pursuant to a customary and traditional employer-union hiring arrangement" means employment openings for which no consideration will be given to persons outside of a special hiring arrangement, including openings which the contractor proposes to fill from union halls, which is part of the customary and traditional hiring relationship which exists between the contractor and representatives of his employees.

(5) "Disabled veteran" means a person entitled to disability compensation under laws administered by the Veterans' Administration for disability rated at 30 per centum or more, or a person whose discharge or release from active duty was for a disability incurred or aggravated in line of duty.

(6) "Veteran of the Vietnam era" means a person (1) who (i) served on active duty for a period of more than 180 days, any part of which occurred after August 5, 1964, and was discharged or released therefrom with other than a dishonorable discharge, or (ii) was discharged or released from active duty for service-connected disability if any part of such duty was performed after August 5, 1964, and (2) who was so discharged or released within the 48 months preceding his application for employment covered under this part.

UNIT OPERATING AGREEMENT
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
LEA COUNTY, NEW MEXICO

THIS AGREEMENT, entered into as of the 1st day of July, 1978, by the parties who have signed the original of this instrument, a counterpart thereof, or other instrument agreeing to be bound by the provisions hereof;

WITNESSETH:

WHEREAS, the parties hereto as Working Interest Owners have executed, as of the date hereof, an agreement entitled "Unit Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico", herein referred to as "Unit Agreement", which among other things, provides for a separate agreement to be entered into by Working Interest Owners to provide for the development and operation of the Unit Area as therein defined;

NOW, THEREFORE, in consideration of the mutual agreements herein set forth, it is agreed as follows:

ARTICLE 1
CONFIRMATION OF UNIT AGREEMENT

1.1 Confirmation of Unit Agreement. The Unit Agreement is hereby confirmed and by reference made a part of this agreement. The definitions in the Unit Agreement are adopted for all purposes of this agreement. If there is any conflict between the Unit Agreement and this agreement, the Unit Agreement shall govern.

1.2 Additional Definitions. For the purpose of this agreement, the following terms and expressions as used herein shall mean:

(a) "Investment Participation" shall mean the sum of .58 Phase II Unit Participation and .42 Phase III Unit Participation.

(b) "Investment Readjustment Date" shall mean the date of termination of Phase II or January 1, 1991, whichever is the earlier date."

ARTICLE 2
EXHIBITS

2.1 Exhibits. The following exhibits are incorporated herein by reference:

2.1.1 Exhibits A, B, C and D of the Unit Agreement.

2.1.2 Exhibit E, attached hereto, is a schedule showing the Tract Participation, the Unit Participation, and the Investment Participation of each Working Interest Owner. Exhibit E, or a revision thereof, shall not be conclusive as to the information therein, except it may be used as showing the Unit Participations of Working Interest Owners for purposes of this agreement until shown to be in error or revised as herein authorized.

2.1.3 Exhibit F, attached hereto, is the Accounting Procedure applicable to Unit Operations. If there is any conflict between this agreement and Exhibit F, this agreement shall govern.

2.1.4 Exhibit G, attached hereto, contains insurance provisions applicable to Unit Operations.

2.1.5 Exhibit H, attached hereto, is a form of Indemnity Agreement required under the provisions of Section 14(c) of the Unit Agreement.

2.2 Revision of Exhibits. Whenever Exhibits A, B or C are revised, Exhibit E shall be revised accordingly and be effective as of the same date. Unit Operator shall also revise Exhibit E from time to time as required to conform to changes in ownership of which Unit Operator has been notified as provided in the Unit Agreement.

2.3 Reference to Exhibits. When reference is made herein to an exhibit, it is to the exhibit as originally attached, or, if revised, to the last revision.

ARTICLE 3
SUPERVISION OF OPERATIONS BY WORKING INTEREST OWNERS

3.1 Overall Supervision. Working Interest Owners shall exercise overall supervision and control of all matters pertaining to Unit Operations pursuant to this agreement and the Unit Agreement. In the exercise of such authority, each Working Interest Owner shall act solely in its own behalf in the capacity of an individual owner and not on behalf of the owners as an entirety.

3.2 Specific Authorities and Duties. The matters with respect to which the Working Interest Owners shall decide and take action shall include, but not be limited to, the following:

3.2.1 Method of Operation. The method of operation, including any type of pressure maintenance, enhanced recovery, or other recovery program to be employed.

3.2.2 Drilling of Wells. The drilling of any well whether for production of Unitized Substances, for use as an injection well, or for other purposes.

3.2.3 Abandonment and Change of Status of Wells. The abandonment of any well or change of status of any well by converting such well for use as an injector or for any purpose other than production of Unitized Substances.

3.2.4. Expenditures. The making of any single expenditure in excess of twenty-five thousand dollars ($25,000); provided that, approval by Working Interest Owners of the drilling, reworking, deepening, or plugging back of any well shall include approval of all necessary expenditures required therefor, and for completing, testing, and equipping the well, including necessary flow lines, separators, and lease tankage.

3.2.5 Disposition of Unit Equipment. The selling or otherwise disposing of any major item of surplus Unit Equipment, if the list price of new equipment similar thereto is seven thousand five hundred dollars ($7,500) or more.

3.2.6. Appearance Before a Court or Regulatory Agency. The designating of a representative to appear before any court or regulatory agency in matters pertaining to Unit Operations; provided, however, that Unit Operator shall act as such representative in the absence of the designation of a different representative by Working Interest Owners, and provided, further, that such designation shall not prevent any Working Interest Owner from appearing in person or from designating another representative in its own behalf.

3.2.7 Audits. The auditing of the accounts of Unit Operator pertaining to Unit Operations hereunder; however, the audits shall

(a) not be conducted more than once each year except upon the resignation or removal of Unit Operator, and

(b) be made upon approval of the owner or owners of a majority of Working Interest other than that of Unit Operator, at the expense of all Working Interest Owners other than Unit Operator, or

(c) be made at the expense of those Working Interest Owners requesting such audit, if owners of less than a majority of Working Interest, other than that of Unit Operator, request such an audit, and

(d) be made upon not less than thirty (30) days' written notice to Unit Operator.

3.2.8 Inventories. The taking of periodic inventories under the terms of Exhibit F.

3.2.9 Technical Services. The authorizing of charges to the joint account for services by consultants or Unit Operator's technical personnel not covered by the overhead charges provided by Exhibit F.

3.2.10 Assignments to Committees. The appointment of committees to study any problems in connection with Unit Operations.

3.2.11 The removal of Unit Operator and the selection of a successor.

3.2.12 The enlargement of the Unit Area.

3.2.13 The adjustment and readjustment of investments.

3.2.14 The termination of the Unit Agreement.

ARTICLE 4
MANNER OF EXERCISING SUPERVISION

4.1 Designation of Representatives. Each Working Interest Owner shall inform Unit Operator in writing of the names and addresses of the representative and alternate who are authorized to represent and bind such Working Interest Owner with respect to Unit Operations. The representative or alternate may be changed from time to time by written notice to Unit Operator.

4.2 Meetings. All meetings of Working Interest Owners shall be called by Unit Operator upon its own motion or at the request of two (2) or more Working Interest Owners having a total voting interest of not less than ten percent (10%). No meeting shall be called on less than fourteen (14) days' advance written notice, with agenda for the meeting attached. Working Interest Owners who attend the meeting may amend items included in the agenda and may act upon an amended item or other items presented at the meeting; provided, however, that no expenditure or commitment for expenditure may be authorized unless it is included in the agenda attached to the notice of the meeting. The representative of Unit Operator shall be chairman of each meeting. The parties hereto may reduce the notice requirement to not less than three (3) days and may waive the requirement for an attached agenda by consent of Working Interest Owners having a combined voting interest not less than that required for an affirmative vote under the provision of Section 4.3.2.

4.3 Voting Procedure. Working Interest Owners shall decide all matters coming before them as follows:

4.3.1 Voting Interest. Each Working Interest Owner shall have a voting interest equal to its Phase II Unit Participation during Phase I and Phase II and equal to its Phase III Unit Participation during Phase III, depending upon which phase is in effect at the time the vote is taken.

4.3.2 Vote Required. Unless otherwise provided herein or in the Unit Agreement, Working Interest Owners shall determine all matters by the affirmative vote of Working Interest Owners have a combined voting interest of at least sixty-five percent (65%); however, should any one Working Interest Owner have more than thirty-five percent (35%) voting interest, its negative vote or failure to vote shall not defeat a motion, and such motion shall pass if approved by Working Interest Owners having a majority voting interest, unless one or more Working Interest Owners having a combined voting interest of at least five percent (5%) likewise vote against the motion or fail to vote.

4.3.3 Vote at Meeting by Nonattending Working Interest Owner. Any Working Interest Owner who is not represented at a meeting may vote by letter or telegram addressed to the representative of the Unit Operator if its vote is received prior to the vote on the item.

4.3.4 Poll Votes. Working Interest Owners may vote on and decide, by letter or telegram, any matter submitted in writing to Working Interest Owners. If no meeting is requested, as provided in Section 4.2, within seven (7) days after a written proposal is sent to Working Interest Owners, the vote taken by letter or telegram shall become final. Unit Operator will give prompt noice of the results of such voting to all Working Interest Owners.

ARTICLE 5
INDIVIDUAL RIGHTS OF WORKING INTEREST OWNERS

5.1 Reservation of Rights. Working Interest Owners severally reserve to themselves all their rights, except as otherwise provided in this agreement and the Unit Agreement.

5.2 Specific Rights. Each Working Interest Owner shall have, among others, the following specific rights:

5.2.1 Access to Unit Area. Access to the Unit Area at all reasonable times to inspect Unit Operations, all wells, and the records and data pertaining thereto.

5.2.2 Reports. The right to receive from Unit Operator, upon written request, copies of all reports to any governmental agency, reports of crude oil runs and stocks, inventory reports, and all other information pertaining to Unit Operations. The cost of gathering and furnishing information not ordinarily furnished by Unit Operator to all Working Interest Owners shall be charged to the Working Interest Owner that requires the information.

ARTICLE 6
UNIT OPERATOR

6.1 Unit Operator. Shell Oil Company is hereby designated as the Unit Operator.

6.2 Resignation or Removal and Selection of Successor. The resignation or removal of Unit Operator and the selection of a successor shall be governed by the provisions of the Unit Agreement.

ARTICLE 7
AUTHORITIES AND DUTIES OF UNIT OPERATOR

7.1 Exclusive Right to Operate Unit. Subject to the provisions of this agreement and to instructions from Working Interest Owners, Unit Operator shall have the exclusive right and be obligated to conduct Unit Operations.

7.2 Workmanlike Conduct. Unit Operator shall conduct Unit Operations in a good and workmanlike manner as would a prudent operator under the same or similar circumstances. Unit Operator shall freely consult with Working Interest Owners and keep them informed of all matters which Unit Operator, in the exercise of its best judgment, considers important. Unit Operator shall not be liable to Working Interest Owners for damages, unless such damages result from its gross negligence or willful misconduct.

7.3 Liens and Encumbrances. Unit Operator shall endeavor to keep the lands, leases and Unit Equipment in the Unit Area free from all liens and encumbrances occasioned by Unit Operations, except the lien and security interest of Unit Operator granted hereunder.

7.4 Employees. The number of employees used by Unit Operator in conducting Unit Operations, their selection, hours of labor, and compensation shall be determined by Unit Operator. Such employees shall be the employees of Unit Operator.

7.5 Records. Unit Operator shall keep correct books, accounts, and records of Unit Operations.

7.6 Reports to Working Interest Owners. Unit Operator shall furnish to Working Interest Owners quarterly reports of Unit Operations or reports at such less-frequent intervals as may be approved by Working Interest Owners.

7.7 Reports to Governmental Authorities. Unit Operator shall make all reports to governmental authorities that it has the duty to make as Unit Operator.

7.8 Engineering and Geological Information. Unit Operator shall furnish to a Working Interest Owner, upon written request, a copy of all logs and other engineering and geological data pertaining to wells drilled for Unit Operations.

7.9 Expenditures. Unit Operator is authorized to make single expenditures not in excess of twenty-five thousand dollars ($25,000) without prior approval of Working Interest Owners; provided that any capital expenditure in excess of five thousand dollars ($5,000) will be described in an informational authority for expenditure furnished to Working Interest Owners, except individual Working Interest Owners declining to receive such information. If an emergency occurs, Unit Operator may immediately make or incur such expenditures as in its opinion are required to deal with the emergency. Unit Operator shall report to Working Interest Owners, as promptly as possible, the nature of the emergency and the action taken.

7.10 Wells Drilled by Unit Operator. All wells drilled by Unit Operator shall be on a competitive bid basis. Unit Operator may employ its own tools and equipment under terms and conditions approved by Working Interest Owners.

7.11 Border Agreements. Unit Operator may, after approval by Working Interest Owners, enter into border agreements with respect to lands adjacent to the Unit Area for the purpose of coordinating operations.

ARTICLE 8
TAXES

8.1 Ad Valorem Taxes. Beginning with the first calendar year commencing after the Effective Date hereof, Unit Operator shall make and file all necessary ad valorem tax renditions and returns with the proper taxing authorities with respect to all property of each Working Interest Owner used or held by Unit Operator for Unit Operations. Unit Operator shall settle assessments arising therefrom. All such ad valorem taxes shall be paid by Unit Operator and charged to the joint account; however, if the interest of a Working Interest Owner is subject to a separately assessed overriding royalty interest, production payment, or other interest in excess of a one-eighth (1/8) royalty, such Working Interest Owner shall notify Unit Operator of such interest prior to the rendition date and shall be given credit for the reduction in taxes paid resulting therefrom.

8.2 Other Taxes. Each Working Interest Owner shall pay or cause to be paid all production, severance, gathering, and other taxes imposed upon or with respect to the production or handling of its share of Unitized Substances.

ARTICLE 9
INSURANCE

9.1 Insurance. Unit Operator, with respect to Unit Operations, shall:

9.1.1 Comply with the Workmen's Compensation Law of the State of New Mexico.

9.1.2 Provide employers' liability insurance with a limit of $100,000.

9.1.3. Provide other insurance as set forth in Exhibit G.

ARTICLE 10
ADJUSTMENT OF INVESTMENTS

10.1 Personal Property Taken Over. Upon the Effective Date hereof, Working Interest Owners shall deliver to Unit Operator the following:

10.1.1 Wells and Casing. All wells completed in the Unitized Formation, together with all casing therein.

10.1.2 Well and Lease Equipment. The tubing in each such well, the wellhead connections thereon, and all other well, lease and operating equipment used in the operation of such wells which Working Interest Owners determine is necessary or desirable for conducting Unit Operations. Working Interest Owners shall make such determination as soon as practicable after the Effective Date hereof, and all of such property that is determined to be surplus shall be returned as promptly as possible to the Working Interest Owners who delivered same to Unit Operator. Property determined by Working Interest Owners to be surplus shall not be considered to have been taken over under this agreement.

10.1.3 Condition of Wells. All wells, including the casing therein, shall be delivered to Unit Operator in reasonably good physical condition capable of being used for Unit Operations. If within one hundred and eighty (180) days after the Effective Date hereof (a) any such well is determined by the Working Interest Owners not to have been in reasonably good physical condition on said Effective Date, or (b) any casing failure or leak is discovered by Unit Operator in any such well, whether such casing failure or leak developed before or after the Effective Date hereof, the Working Interest Owner who contributed such well shall be liable to the other Working Interest Owners for liquidated damages in an amount, measured by the cost to Working Interest Owners of repairing such well or drilling a replacement well, not to exceed fifty thousand dollars ($50,000), provided that any amount in excess of fifty thousand dollars ($50,000) shall be treated as any other item of Unit Expense and charged to the joint account.

10.1.4 Records. A copy of all production and well records that pertain to such wells.

10.2 Inventory and Evaluation of Personal Property. Working Interest Owners shall at Unit Expense inventory and evaluate the personal property taken over under Section 10.1.2, except flowlines, and shall inventory the

casing taken over under Section 10.1.1, but casing shall be given no value. Such inventories shall include and be limited to those items of equipment indicated to be controllable in the most recent edition of the "Materials Classification Manual" prepared by the Council of Petroleum Accountants Societies of North America, except that, upon determination of Working Interest Owners, items considered noncontrollable may be included in the inventory in order to insure a more equitable adjustment of investment. All noncontrollable items of well and lease equipment installed within the Unit Area that are required in Unit Operations, although excluded from the inventories, shall nevertheless be taken over by the Unit Operator. Immediately following completion of such inventory, the material and equipment taken over under Section 10.1.2 shall be priced at a realistic value as determined by the Working Interest Owners, which pricing shall be performed under the supervision of, by the personnel of, and in the offices of the Unit Operator, with other Working Interest Owners furnishing such additional pricing help as may be available and necessary.

10.3 Investment Adjustment. Upon approval by Working Interest Owners of the inventory and evaluation, investments shall be adjusted as follows:

10.3.1 Initial Adjustment of Investments. Each Working Interest Owner shall be credited with the value, as determined in accordance with Section 10.2 above, of its interest in all personal property taken over by Unit Operator under Section 10.1.2 and charged with an amount equal to that obtained by multiplying the total value of all such personal property taken over by Unit Operator under Section 10.1.2 by such Working Interest Owner's Investment Participation, as shown on Exhibit E. If the charge against any Working Interest Owner is greater than the amount credited to such Working Interest Owner, the resulting net charge shall be paid and in all other respects be treated as any other item of Unit Expense chargeable against such Working Interest Owner. If the credit to any Working Interest Owner is greater than the amount charged against such Working Interest Owner, the resulting net credit shall be paid to such Working Interest Owner by Unit Operator out of funds received by it in settlement of the net charges described above.

10.3.2 Readjustments of Investments. Effective as of the Investment Readjustment Date, the investment account of the Working Interest Owners hereunder shall be readjusted on the basis of their respective Phase III Unit Participations, as shown on Exhibit E. For the purposes of such readjustment, each Working Interest Owner shall be (1) credited for its interest in the adjusted value of all personal property and facilities taken over or otherwise acquired by the Unit Operator pursuant to this agreement prior to the Investment Readjustment Date, and (2) charged with an amount equal to that obtained by multiplying the same adjusted value of personal property and facilities by such Working Interest Owner's Phase III Unit Participation. The adjusted value of all personal property and facilities for the purposes of this Section 10.3.2 shall be determined as follows:

(a) Value personal property and facilities initially taken over by Unit Operator on the same basis as that used when such personal property and facilities were taken over.

(b) Value all other investment items (controllable and noncontrollable materials and construction costs) acquired prior to the Investment Readjustment Date, including well casing subsequently purchased and installed, injection well conversion costs, and tank battery consolidation costs, on the basis of cost to the joint account.

(c) Add (a) and (b) together and deduct the value of all items of investment retired prior to the Investment Readjustment Date on the same basis that such items were originally charged.

Each Working Interest Owner shall be charged or credited with the net cash amount necessary to effect such readjustment of the investment account, and such charges and credits shall be settled in the same manner as the charges and credits referred to in Section 10.3.1.

10.4 General Facilities and Abandoned Installations. The acquisition of warehouses, warehouse stocks, lease houses, camps, facility systems, and office buildings necessary for Unit Operations shall be by negotiation by the owners thereof and Unit Operator, subject to the approval of Working Interest Owners. There shall be no adjustment for lease roads or appurtenances thereto.

10.5 Exchange of Interest in and Ownership of Personal Property and Facilities. Each Working Interest Owner hereby exchanges, and agrees to exchange, its interest in all of the personal property and facilities described in Section 10.1.2 above for its proportionate interest, as shown for Investment Participation on Exhibit E during the time prior to the Investment Readjustment Date and as shown for Phase III Unit Participation on Exhibit E from and after the Investment Readjustment Date in all such personal property and facilities described in Section 10.1.2. Each Working Interest Owner, individually, shall by virtue hereof own an undivided interest in all personal property and facilities taken over or otherwise acquired by Unit Operator pursuant to this agreement.

ARTICLE 11
UNIT EXPENSE

11.1 Basis of Charge to Working Interest Owners. Unit Operator initially shall pay all Unit Expense. Each Working Interest Owner shall reimburse Unit Operator for its share of Unit Expense on the basis provided in Sections 11.1.1 and 11.1.2 below. All charges, credits, and accounting for Unit Expense shall be in accordance with Exhibit F.

11.1.1. Operating Expense. Operating expense shall be shared and borne by Working Interest Owners in proportion to Phase I, Phase II or Phase III Unit Participation, whichever phase is in effect at the time such expense was incurred.

11.1.2. Investment Cost. The cost of investment items (as described in Section 10.3.2 (b) above) incurred prior to the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Investment Participation. The cost of such investment items incurred after the Investment Readjustment Date shall be shared and borne by Working Interest Owners in proportion to Phase III Unit Participation.

11.2 Budgets. Before or as soon as practical after the Effective Date hereof, Unit Operator shall prepare a budget of estimated Unit Expense for the remainder of the calendar year, and, on or before the first day of each August thereafter, shall prepare such a budget for the ensuing calendar year. A budget shall set forth the estimated Unit Expense by quarterly periods. Budgets shall be estimates only, and shall be adjusted or corrected by Working Interest Owners and Unit Operator whenever an adjustment or correction is proper. A copy of each budget and adjusted budget shall promptly be furnished to each Working Interest Owner.

11.3 Advance Billings. Unit Operator shall have the right, without prejudice to other rights or remedies, to require Working Interest Owners to advance their respective shares of estimated Unit Expense by submitting to Working Interest Owners, on or before the 15th day of any month, an itemized estimate thereof for the succeeding month, with a request for payment in advance. Within fifteen (15) days thereafter, each Working Interest Owner shall pay to Unit Operator its share of such estimate. Adjustments between estimated and actual Unit Expense shall be made by Unit Operator at the close of each calendar month, and the accounts of Working Interest Owners shall be adjusted accordingly.

11.4 Commingling of Funds. Funds received by Unit Operator under this agreement need not be segregated or maintained by it as a separate fund, but may be commingled with its own funds.

11.5 Liens and Security Interest of Unit Operator. Each Working Interest Owner grants to Unit Operator and Unit Operator shall have as to each Working Interest Owner a lien upon its Oil and Gas Rights in each Tract, and a security interest in its share of Unitized Substances when extracted, and its interest in all Unit Equipment, to secure payment of its share of Unit Expense, together with interest thereon at the rate of twelve percent (12%) per annum or the maximum contract rate permitted by applicable usury laws, whichever is the lesser; provided, however, that notwithstanding anything in this agreement to the contrary, said lien shall not be enforceable by foreclosure and sale of the Oil and Gas Rights of any Working Interest Owner which is not a signatory party to this agreement.

To the extent that Unit Operator has a security interest under the Uniform Commercial Code of the State of New Mexico, Unit Operator shall be entitled to exercise the rights and remedies of a secured party under the Code. The bringing of a suit and the obtaining of judgment by Unit Operator for the secured indebtedness shall not be deemed an election of remedies or otherwise affect the lien rights or security interest as security for the payment thereof. In addition, upon default by any Working Interest Owner in the payment of its share of Unit Expense, Unit Operator shall have the right, without prejudice to other rights or remedies, to collect from the purchaser the proceeds from the sale of such Working Interest Owner's share of Unitized Substances until the amount owed by such Working Interest Owner, plus interest as aforesaid, has been paid. Each purchaser shall be entitled to rely upon Unit Operator's written statement concerning the amount of any default. Unit Operator hereby grants to the other Working Interest Owners a similar lien upon all of Unit Operator's right, title and interest as a Working Interest Owner hereunder as security for payment of any and all amounts that may become due and owing hereunder by Unit Operator to any of such other Working Interest Owners.

11.6 Unpaid Unit Expense. If any Working Interest Owner fails to pay its share of Unit Expense within sixty (60) days after rendition of a statement therefor by Unit Operator, each Working Interest Owner which is a signatory party to this agreement shall, upon request by Unit Operator, pay its proportionate part of the unpaid share of Unit Expense of the non-paying Working Interest Owner. Working Interest Owners that pay the share of Unit Expense of a non-paying Working Interest Owner shall be reimbursed by the Unit Operator for the amount so paid, plus any interest collected thereon, upon receipt by Unit Operator of any past due amount collected from or otherwise received for the account of the non-paying Working Interest Owner. Each Working Interest Owner so paying a non-paying Working Interest Owner's share of Unit Expense shall be subrogated to the lien and other rights herein granted Unit Operator, and each such Working Interest Owner, in proportion to the amounts so paid and not reimbursed, shall have and be entitled to exercise the voting interest of the non-paying Working Interest Owner.

11.7 Carved-out Interest. If any Working Interest Owner shall, after becoming bound by this agreement, create an overriding royalty, production payment, net proceeds interest, carried interest, or any other interest out of its Working Interest, such carved-out interest shall be subject to the terms and provisions of this agreement, specifically including, but without limitation, Section 11.5 hereof entitled "Lien and Security Interest of Unit Operator". If the Working Interest Owner creating such carved-out interest (a) fails to pay any Unit Expense chargeable to such Working Interest Owner under this agreement, and the production of Unitized Substances accruing to the credit of such Working Interest Owner is insufficient for that purpose, or (b) withdraws from this agreement under the terms and provisions of Article 17 hereof, the carved-out interest

shall be chargeable with a pro rata portion of all Unit Expense incurred hereunder, the same as though such carved-out interest were a Working Interest, and Unit Operator shall have the right to enforce against such carved-out interest the lien and all other rights granted in Section 11.5 for the purpose of collecting the Unit Expense chargeable to the carved-out interest.

11.8 Uncommitted Royalty. Should an owner of a Royalty Interest in any Tract fail to become a party to the Unit Agreement, and, as a result thereof, the actual Royalty Interest payments with respect to such Tract are more or less than the Royalty Interest payments computed on the basis of the Unitized Substances that are allocated to such Tract under the Unit Agreement, the difference shall be borne by or inure to the benefit of Working Interest Owners, in proportion to their respective Unit Participations at the time the Unitized Substances were produced; however, the difference to be borne by or inure to the benefit of Working Interest Owners shall not exceed an amount computed on the basis of one-eighth (1/8) of the difference between the Unitized Substances allocated to the Tract and the Unitized Substances produced from the Tract. Such adjustments shall be made by charges and credits to the joint account.

11.9 Rentals. The Working Interest Owners in each Tract shall pay and bear all rentals, minimum royalty, advance rentals or delay rentals due under the lease thereon and shall concurrently submit to the Unit Operator evidence of payment.

ARTICLE 12
NONUNITIZED FORMATIONS

12.1 Right to Operate. Any Working Interest Owner that now has or hereafter acquires the right to drill for and produce oil, gas, or other minerals, from a formation underlying the Unit Area other than the Unitized Formation, shall have the right to do so notwithstanding this agreement or the Unit Agreement. In exercising the right, however, the Working Interest Owner shall exercise care to prevent unreasonable interference with Unit Operations. No Working Interest Owner shall produce Unitized Substances through any well drilled or operated by it. If any Working Interest Owner drills any well into or through the Unitized Formation, the Unitized Formation shall be protected in a manner satisfactory to Working Interest Owners so that production of Unitized Substances will not be adversely affected.

12.2 Multiple Completions. No well now or hereafter completed in the Unitized Formation shall ever be completed as a multiple completion with the Unitized Formation and any other formation unless such multiple completion and the subsequent handling of the multiple completion is approved by Working Interest Owners in accordance with the voting procedure set out in Section 4.3.2 of this agreement.

ARTICLE 13
TITLES

13.1 Warranty and Indemnity. Each Working Interest Owner represents and warrants that it is the owner of the respective Working Interests set forth opposite its name in Exhibit B, and agrees to indemnify and hold harmless the other Working Interest Owners from any loss due to failure, in whole or in part, of its title to any such interest, except failure of title arising because of Unit Operations; however, such indemnity and any liability for breach of warranty shall be limited to an amount equal to the net value that has been received from the sale or receipt of Unitized Substances attributed to the interest as to which title failed. Each failure of title will be deemed to be effective, insofar as this agreement is concerned, as of 7:00 a.m. on the first day of the calendar month in which such failure is finally determined, and there shall be no retroactive adjustment of Unit Expense, or retroactive allocation of Unitized Substances or the proceeds therefrom, as a result of a title failure.

13.2 Failure Because of Unit Operations. The failure of title to any Working Interest in any Tract because of Unit Operations, including non-production from such Tract, shall not change the Unit Participation of the Working Interest Owner whose title failed in relation to the Unit Participation of the other Working Interest Owners at the time of the title failure.

ARTICLE 14
LIABILITY, CLAIMS, AND SUITS

14.1 Individual Liability. The duties, obligations, and liabilities of Working Interest Owners shall be several and not joint or collective; and nothing herein contained shall ever be construed as creating a partnership of any kind, joint venture, association, or trust among Working Interest Owners.

14.2 Settlements. Unit Operator may settle any single damage claim or suit involving Unit Operations if the expenditure does not exceed seven thousand five hundred dollars ($7,500.00) and if the payment is in complete settlement of such claim or suit. If the amount required for settlement exceeds the above specified amount, Working Interest Owners shall assume and take over the further handling of the claim or suit unless such authority is expressly delegated to Unit Operator. All costs and expense of handling, settling, or otherwise discharging such claim or suit shall be an item of Unit Expense. If a claim is made against any Working Interest Owner or if any Working Interest Owner is sued on account of any matter arising from Unit Operations over which such Working Interest Owner individually has no control because of the rights given Working Interest Owners and Unit Operator by this agreement and the Unit Agreement, the Working Interest Owner shall immediately notify the Unit Operator, and the claim or suit shall be treated as any other claim or suit involving Unit Operations.

ARTICLE 15
INTERNAL REVENUE PROVISION

15.1 Internal Revenue Provision. Notwithstanding any provisions herein that the rights and liabilities of the parties hereunder are several and not joint or collective, or that this agreement and operations hereunder shall not constitute a partnership, if for Federal income tax purposes this agreement and the operations hereunder are regarded as a partnership, then each of the parties hereto elects to be excluded from the application of all of the provisions of Subchapter K, Chapter 1, Subtitle A, of the Internal Revenue Code of 1954, as permitted and authorized by Section 761 of the Code and the regulations promulgated hereunder. Each party hereto agrees not to give any notices or take any other action inconsistent with the election made hereby. If any present or future income tax laws of the state or states in which the Unit Area is located, or any future income tax law of the United States, contain provisions similar to those in Subchapter K, Chapter 1, Subtitle A, of the Internal Revenue Code of 1954, under which an election similar to that provided by Section 761 of the Code is permitted, each of the parties agree to make such election as may be permitted or required by such laws. In making this election, each of the parties states that the income derived by such party from the operations under this agreement can be adequately determined without the computation of partnership taxable income.

ARTICLE 16
NOTICES

16.1 Notices. All notices required hereunder shall be in writing and shall be deemed to have been properly served when sent by mail or telegram to the address of the representative of each Working Interest Owner as furnished to Unit Operator in accordance with Article 4.

ARTICLE 17
WITHDRAWAL OF WORKING INTEREST OWNER

17.1 Withdrawal. A Working Interest Owner may withdraw from this Agreement by transferring, without warranty of title either express or implied, to the Working Interest Owners who do not desire to withdraw all its Oil and Gas Rights, exclusive of Royalty Interests, together with its interest in all Unit Equipment and in all wells used in Unit Operations, provided that such transfer shall not relieve such Working Interest Owner from any obligation or liability incurred prior to the first day of the month following receipt by Unit Operator of such transfer, and further provided that each of the non-transferring Working Interest Owners shall have the option to acquire a transferred interest and shall indicate such election by notifying the Unit Operator in writing within thirty (30) days of notice of withdrawal. The delivery of the transfer shall be made to Unit Operator for the transferees. The transferred interest shall be owned by the transferees in proportion to their respective Unit Participations. The

transferees, in proportion to the respective interests so acquired, shall pay the transferor for its interest in Unit Equipment, the salvage value thereof less its share of the estimated cost of salvaging same and of plugging and abandoning all wells then being used or held for Unit Operations, as determined by Working Interest Owners. In the event such withdrawing owner's interest in the aforesaid salvage value is less than such owner's share of such estimated costs, the withdrawing owner, as a condition precedent to withdrawal, shall pay the Unit Operator, for the benefit of Working Interest Owners succeeding to its interest, a sum equal to the deficiency. Within sixty (60) days after receiving delivery of the transfer, Unit Operator shall render a final statement to the withdrawing owner for its share of Unit Expense, including any deficiency in salvage value as determined by Working Interest Owners, incurred as of the first day of the month following the date of receipt of the transfer. Provided all Unit Expense, including any deficiency hereunder, due from the withdrawing owner has been paid in full within thirty (30) days after the rendering of such final statement by the Unit Operator, withdrawing owner shall be relieved from all further obligations and liabilities hereunder and under the Unit Agreement, and the rights of the withdrawing Working Interest Owner hereunder and under the Unit Agreement shall cease insofar as they existed by virtue of the interest transferred.

17.2 Limitation on Withdrawal. Notwithstanding anything set forth in Section 17.1, Working Interest Owners may refuse to permit the withdrawal of a Working Interest Owner if its Working Interest is burdened by any royalties, overriding royalties, production payments, net proceeds interest, carried interest, or any other interest created out of the Working Interest in excess of one-eighth (1/8) lessor's royalty, unless other Working Interest Owners willing to accept the assignment agree to accept the Working Interest subject to such burdens.

ARTICLE 18
ABANDONMENT OF WELLS

18.1 Rights of Former Owners. If Working Interest Owners decide to abandon permanently any well within the Unit Area prior to termination of the Unit Agreement, Unit Operator shall give written notice thereof to the Working Interest Owners of the Tract on which the well is located, and they shall have the option for a period of ninety (90) days after the sending of such notice to notify Unit Operator in writing of their election to take over and own the well. Within thirty (30) days after the Working Interest Owners of the Tract have notified Unit Operator of their election to take over the well, they shall pay Unit Operator, for credit to the joint account, the amount estimated by Working Interest Owners to be the net salvage value, as determined by Working Interest Owners, of the casing and equipment in and on the well up to and including the wellhead equipment, except the casing therein if contributed by such Working Interest Owners under Section 10.1.1. The Working Interest Owners of the Tract, by taking

over the well, agree to seal off effectively and protect the Unitized Formation, and upon abandonment to plug the well in compliance with applicable laws and regulations.

18.2 Plugging. If the Working Interest Owners of a Tract do not elect to take over a well located within the Unit Area that is proposed for abandonment, Unit Operator shall at Unit Expense plug and abandon the well in compliance with applicable laws and regulations.

ARTICLE 19
EFFECTIVE DATE AND TERM

19.1 Effective Date. This agreement shall become effective when the Unit Agreement becomes effective.

19.2 Term. This agreement shall continue in effect so long as the Unit Agreement remains in effect, and thereafter until (a) all unit wells have been plugged and abandoned or turned over to Working Interest Owners in accordance with Article 20, (b) all Unit Equipment and real property acquired for the joint account have been disposed of by Unit Operator in accordance with instructions of Working Interest Owners, and (c) there has been a final accounting.

ARTICLE 20
ABANDONMENT OF OPERATIONS

20.1 Termination. Upon termination of the Unit Agreement, the following will occur:

20.1.1 Oil and Gas Rights. Oil and Gas Rights in and to each separate Tract shall no longer be affected by this agreement, and thereafter the parties shall be governed by the terms and provisions of the leases, contracts, and other instruments affecting the separate Tracts.

20.1.2 Right to Operate. Working Interest Owners of any Tract that desire to take over and continue to operate wells located thereon may do so by paying Unit Operator, for credit to the joint account, the amount estimated by Working Interest Owners to be the net salvage value, as determined by Working Interest Owners, of the casing and equipment up to and including the wellhead equipment in and on the wells taken over, except the casing therein if contributed by such Working Interest Owners under Section 10.1.1, and by agreeing to plug properly each well at such time as it is abandoned.

20.1.3 Salvaging Wells: Unit Operator shall salvage as much of the casing and equipment in or on wells not taken over by Working

Interest Owners of separate Tracts as can economically and reasonably be salvaged, and shall cause the wells to be plugged and abandoned in compliance with applicable laws and regulations.

20.1.4 Cost of Abandonment. The cost of abandonment of Unit Operations shall be Unit Expense.

20.1.5 Distribution of Assets. Working Interest Owners shall share in the distribution of Unit Equipment, or the proceeds thereof, in the same proportion as then applicable to the sharing of investment costs.

ARTICLE 21
EXECUTION

21.1 Original, Counterpart, or Other Instrument. An owner of a Working Interest may become a party to this agreement by signing the original of this instrument, a counterpart thereof, or other instrument agreeing to be bound by the provisions hereof. The signing of any such instrument shall have the same effect as if all the parties had signed the same instrument.

ARTICLE 22
SUCCESSORS AND ASSIGNS

22.1 Successors and Assigns. This agreement shall extend to, be binding upon, and inure to the benefit of the parties hereto and their respective heirs, devisees, legal representatives, successors, and assigns, and shall constitute a covenant running with the lands, leases, and interests covered hereby.

IN WITNESS WHEREOF, the parties hereto have executed this agreement on the dates opposite their respective signatures.

SHELL OIL COMPANY
Unit Operator and Working Interest Owner

Date: July 31, 1978

By: Robert L. Avary
Attorney in Fact
ROBERT L. AVARY
P. O. Box 991
Houston, Texas 77001

STATE OF TEXAS)
)
COUNTY OF HARRIS)

The foregoing instrument was acknowledged before me this 31st day of July, 1978, by ROBERT L. AVARY, Attorney in Fact for SHELL OIL COMPANY, a Delaware corporation, on behalf of said corporation.

My Commission expires:

BELINDA ROEBER
Notary Public in and for Harris County, Texas
My Commission Expires July 21, 1979

ACCOUNTING PROCEDURE
JOINT OPERATIONS

I. GENERAL PROVISIONS

1. Definitions

"Joint Property" shall mean the real and personal property subject to the agreement to which this Accounting Procedure is attached.

"Joint Operations" shall mean all operations necessary or proper for the development, operation, protection and maintenance of the Joint Property.

"Joint Account" shall mean the account showing the charges paid and credits received in the conduct of the Joint Operations and which are to be shared by the Parties.

"Operator" shall mean the party designated to conduct the Joint Operations.

"Non-Operators" shall mean the parties to this agreement other than the Operator.

"Parties" shall mean Operator and Non-Operators.

"First Level Supervisors" shall mean those employees whose primary function in Joint Operations is the direct supervision of other employees and/or contract labor directly employed on the Joint Property in a field operating capacity.

"Technical Employees" shall mean those employees having special and specific engineering, geological or other professional skills, and whose primary function in Joint Operations is the handling of specific operating conditions and problems for the benefit of the Joint Property.

"Personal Expenses" shall mean travel and other reasonable reimbursable expenses of Operator's employees.

"Material" shall mean personal property, equipment or supplies acquired or held for use on the Joint Property.

"Controllable Material" shall mean Material which at the time is so classified in the Material Classification Manual as most recently recommended by the Council of Petroleum Accountants Societies of North America.

2. Statement and Billings

Operator shall bill Non-Operators on or before the last day of each month for their proportionate share of the Joint Account for the preceding month. Such bills will be accompanied by statements which identify the authority for expenditure, lease or facility, and all charges and credits, summarized by appropriate classifications of investment and expense except that items of Controllable Material and unusual charges and credits shall be separately identified and fully described in detail.

3. Advances and Payments by Non-Operators

Unless otherwise provided for in the agreement, the Operator may require the Non-Operators to advance their share of estimated cash outlay for the succeeding month's operation. Operator shall adjust each monthly billing to reflect advances received from the Non-Operators.

Each Non-Operator shall pay its proportion of all bills within fifteen (15) days after receipt. If payment is not made within such time, the unpaid balance shall bear interest monthly at the rate of twelve percent (12%) per annum or the maximum contract rate permitted by the applicable usury laws in the state in which the Joint Property is located, whichever is the lesser, plus attorney's fees, court costs, and other costs in connection with the collection of unpaid amounts.

4. Adjustments

Payment of any such bills shall not prejudice the right of any Non-Operator to protest or question the correctness thereof; provided, however, all bills and statements rendered to Non-Operators by Operator during any calendar year shall conclusively be presumed to be true and correct after twenty-four (24) months following the end of any such calendar year, unless within the said twenty-four (24) month period a Non-Operator takes written exception thereto and makes claim on Operator for adjustment. No adjustment favorable to Operator shall be made unless it is made within the same prescribed period. The provisions of this paragraph shall not prevent adjustments resulting from a physical inventory of Controllable Material as provided for in Section V.

5. Audits

A. Non-Operator, upon notice in writing to Operator and all other Non-Operators, shall have the right to audit Operator's accounts and records relating to the Joint Account for any calendar year within the twenty-four (24) month period following the end of such calendar year; provided, however, the making of an audit shall not extend the time for the taking of written exception to and the adjustments of accounts as provided for in Paragraph 4 of this Section I. Where there are two or more Non-Operators, the Non-Operators shall make every reasonable effort to conduct joint or simultaneous audits in a manner which will result in a minimum of inconvenience to the Operator. Operator shall bear no portion of the Non-Operators' audit cost incurred under this paragraph unless agreed to by the Operator.

6. Approval by Non-Operators

Where an approval or other agreement of the Parties or Non-Operators is expressly required under other sections of this Accounting Procedure and if the agreement to which this Accounting Procedure is attached contains no contrary provisions in regard thereto, Operator shall notify all Non-Operators of the Operator's proposal, and the agreement or approval of a majority in interest of the Non-Operators shall be controlling on all Non-Operators.

II. DIRECT CHARGES

Operator shall charge the Joint Account with the following items:

1. **Rentals and Royalties**

   Lease rentals and royalties paid by Operator for the Joint Operations.

2. **Labor**

   A. (1) Salaries and wages of Operator's field employees directly employed on the Joint Property in the conduct of Joint Operations and related expenses

   (2) Salaries of First Level Supervisors in the field.

   (3) Salaries and wages of Technical Employees directly employed on the Joint Property if such charges are excluded from the Overhead rates.

   B. Operator's cost of holiday, vacation, sickness and disability benefits and other customary allowances paid to employees whose salaries and wages are chargeable to the Joint Account under Paragraph 2A of this Section II. Such costs under this Paragraph 2B may be charged on a "when and as paid basis" or by "percentage assessment" on the amount of salaries and wages chargeable to the Joint Account under Paragraph 2A of this Section II. If percentage assessment is used, the rate shall be based on the Operator's cost experience.

   C. Expenditures or contributions made pursuant to assessments imposed by governmental authority which are applicable to Operator's costs chargeable to the Joint Account under Paragraphs 2A and 2B of this Section II.

   D. Personal Expenses of those employees whose salaries and wages are chargeable to the Joint Account under Paragraph 2A of this Section II.

3. **Employee Benefits**

   Operator's current costs of established plans for employees' group life insurance, hospitalization, pension, retirement, stock purchase, thrift, bonus, and other benefit plans of a like nature, applicable to Operator's labor cost chargeable to the Joint Account under Paragraphs 2A and 2B of this Section II shall be Operator's actual cost not to exceed twenty per cent (20%), or percent most recently recommended by the Council of Petroleum Accountants Societies of North America.

4. **Material**

   Material purchased or furnished by Operator for use on the Joint Property as provided under Section IV. Only such Material shall be purchased for or transferred to the Joint Property as may be required for immediate use and is reasonably practical and consistent with efficient and economical operations. The accumulation of surplus stocks shall be avoided.

5. **Transportation**

   Transportation of employees and Material necessary for the Joint Operations but subject to the following limitations:

   A. If Material is moved to the Joint Property from the Operator's warehouse or other properties, no charge shall be made to the Joint Account for a distance greater than the distance from the nearest reliable supply store, recognized barge terminal, or railway receiving point where like material is normally available, unless agreed to by the Parties.

   B. If surplus Material is moved to Operator's warehouse or other storage point, no charge shall be made to the Joint Account for a distance greater than the distance to the nearest reliable supply store, recognized barge terminal, or railway receiving point unless agreed to by the Parties. No charge shall be made to the Joint Account for moving Material to other properties belonging to Operator, unless agreed to by the Parties.

   C. In the application of Subparagraphs A and B above, there shall be no equalization of actual gross trucking cost of $200 or less excluding accessorial charges.

6. **Services**

   The cost of contract services, equipment and utilities provided by outside sources, except services excluded by Paragraph 9 of Section II and Paragraph 1. ii of Section III. The cost of professional consultant services and contract services of technical personnel directly engaged on the Joint Property if such charges are excluded from the Overhead rates. The cost of professional consultant services or contract services of technical personnel not directly engaged on the Joint Property shall not be charged to the Joint Account unless previously agreed to by the Parties.

7. **Equipment and Facilities Furnished by Operator**

   A. Operator shall charge the Joint Account for use of Operator owned equipment and facilities at rates commensurate with costs of ownership and operation. Such rates shall include costs of maintenance, repairs, other operating expense, insurance, taxes, depreciation, and interest on investment not to exceed eight per cent (8%) per annum. Such rates shall not exceed average commercial rates currently prevailing in the immediate area of the Joint Property.

   B. In lieu of charges in Paragraph 7A above, Operator may elect to use average commercial rates prevailing in the immediate area of the Joint Property less 20%. For automotive equipment, Operator may elect to use rates published by the Petroleum Motor Transport Association.

8. **Damages and Losses to Joint Property**

   All costs or expenses necessary for the repair or replacement of Joint Property made necessary because of damages or losses incurred by fire, flood, storm, theft, accident, or other cause, except those resulting from Operator's gross negligence or willful misconduct. Operator shall furnish Non-Operator written notice of damages or losses incurred as soon as practicable after a report thereof has been received by Operator.

9. **Legal Expense**

   Expense of handling, investigating and settling litigation or claims, discharging of liens, payment of judgments and amounts paid for settlement of claims incurred in or resulting from operations under the agreement or necessary to protect or recover the Joint Property, except that no charge for services of Operator's legal staff or fees or expense of outside attorneys shall be made unless previously agreed to by the Parties. All other legal expense is considered to be covered by the overhead provisions of Section III unless otherwise agreed to by the Parties, except as provided in Section I, Paragraph 3.

10. Taxes

All taxes of every kind and nature assessed or levied upon or in connection with the Joint Property, the operation thereof, or the production therefrom, and which taxes have been paid by the Operator for the benefit of the Parties.

11. Insurance

Net premiums paid for insurance required to be carried for the Joint Operations for the protection of the Parties. In the event Joint Operations are conducted in a state in which Operator may act as self-insurer for Workmen's Compensation and/or Employers Liability under the respective state's laws, Operator may, at its election, include the risk under its self-insurance program and in that event, Operator shall include a charge at Operator's cost not to exceed manual rates.

12. Other Expenditures

Any other expenditure not covered or dealt with in the foregoing provisions of this Section II, or in Section III, and which is incurred by the Operator in the necessary and proper conduct of the Joint Operations.

III. OVERHEAD

1. Overhead - Drilling and Producing Operations

i. As compensation for administrative, supervision, office services and warehousing costs, Operator shall charge drilling and producing operations on either:

(X) Fixed Rate Basis, Paragraph 1A, or
( ) Percentage Basis, Paragraph 1B.

Unless otherwise agreed to by the Parties, such charge shall be in lieu of costs and expenses of all offices and salaries or wages plus applicable burdens and expenses of all personnel, except those directly chargeable under Paragraph 2A, Section II. The cost and expense of services from outside sources in connection with matters of taxation, traffic, accounting or matters before or involving governmental agencies shall be considered as included in the Overhead rates provided for in the above selected Paragraph of this Section III unless such cost and expense are agreed to by the Parties as a direct charge to the Joint Account.

ii. The salaries, wages and Personal Expenses of Technical Employees and/or the cost of professional consultant services and contract services of technical personnel directly employed on the Joint Property shall (X) shall not ( ) be covered by the Overhead rates.

A. Overhead - Fixed Rate Basis

(1) Operator shall charge the Joint Account at the following rates per well per month:

Drilling Well Rate $ 2311
Producing Well Rate $ 165

(2) Application of Overhead - Fixed Rate Basis shall be as follows:

(a) Drilling Well Rate

[1] Charges for onshore drilling wells shall begin on the date the well is spudded and terminate on the date the drilling or completion rig is released, whichever is later, except that no charge shall be made during suspension of drilling operations for fifteen (15) or more consecutive days.

[2] Charges for offshore drilling wells shall begin on the date when drilling or completion equipment arrives on location and terminate on the date the drilling or completion equipment moves off location or rig is released, whichever occurs first, except that no charge shall be made during suspension of drilling operations for fifteen (15) or more consecutive days

[3] Charges for wells undergoing any type of workover or recompletion for a period of five (5) consecutive days or more shall be made at the drilling well rate. Such charges shall be applied for the period from date workover operations, with rig, commence through date of rig release, except that no charge shall be made during suspension of operations for fifteen (15) or more consecutive days.

(b) Producing Well Rates

[1] An active well either produced or injected into for any portion of the month shall be considered as a one-well charge for the entire month.

[2] Each active completion in a multi-completed well in which production is not commingled down hole shall be considered as a one-well charge providing each completion is considered a separate well by the governing regulatory authority.

[3] An inactive gas well shut in because of overproduction or failure of purchaser to take the production shall be considered as a one-well charge providing the gas well is directly connected to a permanent sales outlet.

[4] A one-well charge may be made for the month in which plugging and abandonment operations are completed on any well.

[5] All other inactive wells (including but not limited to inactive wells covered by unit allowable, lease allowable, transferred allowable, etc.) shall not qualify for an overhead charge.

(3) The well rates shall be adjusted as of the first day of April* each year following the effective date of the agreement to which this Accounting Procedure is attached. The adjustment shall be computed by multiplying the rate currently in use by the percentage increase or decrease in the average weekly earnings of Crude Petroleum and Gas Production Workers for the last calendar year compared to the calendar year preceding as shown by the index of average weekly earnings of Crude Petroleum and Gas Fields Production Workers as published by the United States Department of Labor, Bureau of Labor Statistics, or the equivalent Canadian index as published by Statistics Canada, as applicable. The adjusted rates shall be the rates currently in use, plus or minus the computed adjustment.

* of the year 1978 and each year thereafter.

B. Overhead - Percentage Basis

(1) Operator shall charge the Joint Account at the following rates:

(a) Development

_____ Percent (%) of the cost of Development of the Joint Property exclusive of costs provided under Paragraph 9 of Section II and all salvage credits.

(b) Operating

_____ Percent (%) of the cost of Operating the Joint Property exclusive of costs provided under Paragraphs 1 and 9 of Section II, all salvage credits, the value of injected substances purchased for secondary recovery and all taxes and assessments which are levied, assessed and paid upon the mineral interest in and to the Joint Property.

(2) Application of Overhead - Percentage Basis shall be as follows:
For the purpose of determining charges on a percentage basis under Paragraph 1B of this Section III, development shall include all costs in connection with drilling, redrilling, deepening or any remedial operations on any or all wells involving the use of drilling crew and equipment; also, preliminary expenditures necessary in preparation for drilling and expenditures incurred in abandoning when the well is not completed as a producer, and original cost of construction or installation of fixed assets, the expansion of fixed assets and any other project clearly discernible as a fixed asset, except Major Construction as defined in Paragraph 2 of this Section III. All other costs shall be considered as Operating.

2. Overhead - Major Construction

To compensate Operator for overhead costs incurred in the construction and installation of fixed assets, the expansion of fixed assets, and any other project clearly discernible as a fixed asset required for the development and operation of the Joint Property, Operator shall either negotiate a rate prior to the beginning of construction, or shall charge the Joint Account for Overhead based on the following rates for any Major Construction project in excess of $ 25,000 :

A. 3 % of total costs if such costs are more than $ 25,000 but less than $ 100,000 ; plus

B. 3 % of total costs in excess of $ 100,000 but less than $1,000,000; plus

C. 2 % of total costs in excess of $1,000,000.

Total cost shall mean the gross cost of any one project. For the purpose of this paragraph, the component parts of a single project shall not be treated separately and the cost of drilling and workover wells shall be excluded.

3. Amendment of Rates

The Overhead rates provided for in this Section III may be amended from time to time only by mutual agreement between the Parties hereto if, in practice, the rates are found to be insufficient or excessive.

IV. PRICING OF JOINT ACCOUNT MATERIAL PURCHASES, TRANSFERS AND DISPOSITIONS

Operator is responsible for Joint Account Material and shall make proper and timely charges and credits for all material movements affecting the Joint Property. Operator shall provide all Material for use on the Joint Property; however, at Operator's option, such Material may be supplied by the Non-Operator. Operator shall make timely disposition of idle and/or surplus Material, such disposal being made either through sale to Operator or Non-Operator, division in kind, or sale to outsiders. Operator may purchase, but shall be under no obligation to purchase, interest of Non-Operator in surplus condition A or B Material. The disposal of surplus Controllable Material not purchased by the Operator shall be agreed to by the Parties.

1. Purchases

Material purchased shall be charged at the price paid by Operator after deduction of all discounts received. In case of Material found to be defective or returned to vendor for any other reason, credit shall be passed to the Joint Account when adjustment has been received by the Operator.

2. Transfers and Dispositions

Material furnished to the Joint Property and Material transferred from the Joint Property or disposed of by the Operator, unless otherwise agreed to by the Parties, shall be priced on the following bases exclusive of cash discounts:

A. New Material (Condition A)

(1) Tubular goods, except line pipe, shall be priced at the current new price in effect on date of movement on a maximum carload or barge load weight basis, regardless of quantity transferred, equalized to the lowest published price f.o.b. railway receiving point or recognized barge terminal nearest the Joint Property where such Material is normally available.

(2) Line Pipe

(a) Movement of less than 30,000 pounds shall be priced at the current new price, in effect at date of movement, as listed by a reliable supply store nearest the Joint Property where such Material is normally available.

(b) Movement of 30,000 pounds or more shall be priced under provisions of tubular goods pricing in Paragraph 2A (1) of this Section IV.

(3) Other Material shall be priced at the current new price, in effect at date of movement, as listed by a reliable supply store or f.o.b. railway receiving point nearest the Joint Property where such Material is normally available.

B. Good Used Material (Condition B)

Material in sound and serviceable condition and suitable for reuse without reconditioning:

(1) Material moved to the Joint Property

(a) At seventy-five percent (75%) of current new price, as determined by Paragraph 2A of this Section IV.

(2) Material moved from the Joint Property

(a) At seventy-five percent (75%) of current new price, as determined by Paragraph 2A of this Section IV, if Material was originally charged to the Joint Account as new Material, or

(b) at sixty-five percent (65%) of current new price, as determined by Paragraph 2A of this Section IV, if Material was originally charged to the Joint Account as good used Material at seventy-five percent (75%) of current new price.

The cost of reconditioning, if any, shall be absorbed by the transferring property.

C. Other Used Material (Condition C and D)

(1) Condition C

Material which is not in sound and serviceable condition and not suitable for its original function until after reconditioning shall be priced at fifty percent (50%) of current new price as determined by Paragraph 2A of this Section IV. The cost of reconditioning shall be charged to the receiving property, provided Condition C value plus cost of reconditioning does not exceed Condition B value.

(2) Condition D

All other Material, including junk, shall be priced at a value commensurate with its use or at prevailing prices. Material no longer suitable for its original purpose but usable for some other purpose, shall be priced on a basis comparable with that of items normally used for such other purpose. Operator may dispose of Condition D Material under procedures normally utilized by the Operator without prior approval of Non-Operators.

D. Obsolete Material

Material which is serviceable and usable for its original function but condition and/or value of such Material is not equivalent to that which would justify a price as provided above may be specially priced as agreed to by the Parties. Such price should result in the Joint Account being charged with the value of the service rendered by such Material.

E. Pricing Conditions

(1) Loading and unloading costs may be charged to the Joint Account at the rate of fifteen cents (15¢) per hundred weight on all tubular goods movements, in lieu of loading and unloading costs sustained, when actual hauling cost of such tubular goods are equalized under provisions of Paragraph 3 of Section II.

(2) Material involving erection costs shall be charged at applicable percentage of the current knocked-down price of new Material.

3. Premium Prices

Whenever Material is not readily obtainable at published or listed prices because of national emergencies, strikes or other unusual causes over which the Operator has no control, the Operator may charge the Joint Account for the required Material at the Operator's actual cost incurred in providing such Material, in making it suitable for use, and in moving it to the Joint Property; provided notice in writing is furnished to Non-Operators of the proposed charge prior to billing Non-Operators for such Material. Each Non-Operator shall have the right, by so electing and notifying Operator within ten days after receiving notice from Operator, to furnish in kind all or part of his share of such Material suitable for use and acceptable to Operator.

4. Warranty of Material Furnished by Operator

Operator does not warrant the Material furnished. In case of defective Material, credit shall not be passed to the Joint Account until adjustment has been received by Operator from the manufacturers or their agents.

V. INVENTORIES

The Operator shall maintain detailed records of Controllable Material.

1. Periodic Inventories, Notice and Representation

At reasonable intervals, Inventories shall be taken by Operator of the Joint Account Controllable Material. Written notice of intention to take inventory shall be given by Operator at least thirty (30) days before any inventory is to begin so that Non-Operators may be represented when any inventory is taken. Failure of Non-Operators to be represented at an inventory shall bind Non-Operators to accept the inventory taken by Operator.

2. Reconciliation and Adjustment of Inventories

Reconciliation of a physical inventory with the Joint Account shall be made, and a list of overages and shortages shall be furnished to the Non-Operators within six months following the taking of the inventory. Inventory adjustments shall be made by Operator with the Joint Account for overages and shortages, but Operator shall be held accountable only for shortages due to lack of reasonable diligence.

3. Special Inventories

Special Inventories may be taken whenever there is any sale or change of interest in the Joint Property. It shall be the duty of the party selling to notify all other Parties as quickly as possible after the transfer of interest takes place. In such cases, both the seller and the purchaser shall be governed by such inventory.

4. Expense of Conducting Periodic Inventories

The expense of conducting periodic Inventories shall not be charged to the Joint Account unless agreed to by the Parties.

INSURANCE PROVISIONS

Unit Operator shall carry the following insurance with respect to Unit Operations:

(1) Public liability and property damage insurance with limits of $100,000.00 for injuries to or death of one person and $300,000.00 for injuries or deaths in one accident, and $100,000.00 for property damage in one accident.

(2) Automobile public liability and property damage insurance with limits of $100,000.00 for injuries to or death of one person and $300,000.00 for injuries or deaths in one accident, and $100,000.00 for property damage in one accident.

All insurance coverage required hereby shall be carried at the joint expense and for the benefit of the Working Interest Owners. Premiums for automobile public liability and property damage insurance on Unit Operator's fully owned equipment shall not be charged directly to the joint account, but will be covered by the flat rate charge assessed for the use of such equipment. Unit Operator will not carry fire, windstorm or explosion insurance covering Unit Operations or Unit Equipment.

Contractors and sub-contractors will be required to carry insurance of the same types as hereinabove specified and in such amounts as deemed necessary by Unit Operator.

If under the laws of the State in which operations are conducted Operator is authorized to be a self-insurer as to workmen's compensation and/or employers' liability, Operator may elect to be a self-insurer under such laws and in such event Operator shall charge to the joint account, in lieu of any premiums for such insurance, a premium equivalent limited to amounts determined by applying manual insurance rates to the payroll.

If the parties hereto or any of them shall insure their respective risks beyond the specific limits of insurance required hereunder to be carried by the Unit Operator, the benefits of such insurance shall inure to the parties procuring and maintaining the same, respectively, and the cost of such insurance shall be borne by such parties, respectively, without reimbursement one from the other and without entering into any accounting hereunder.

INDEMNITY AGREEMENT

WHEREAS, Section 14(c) of an agreement entitled "Unit Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico," dated July 1, 1978, provides that under certain circumstances and conditions therein stated a Tract that fails to qualify under Section 14(a) or Section 14(b) may be qualified under said Section 14(c) if the requisite Working Interest Owners in the Tract as specified in said Section 14(c) request the qualification of the Tract and execute and deliver, or obligate themselves to execute and deliver, an indemnity agreement; and

WHEREAS, Tract _____, described in the Unit Agreement is such a Tract; and

WHEREAS, the undersigned are owners of Working Interest in such Tract and have become parties to the Unit Agreement and the Unit Operating Agreement and desire the qualification of the Tract under said Section 14(c):

NOW THEREFORE, in consideration of and conditioned upon said Tract meeting the other requirements of said Section 14(c) of the Unit Agreement and its being qualified under said Section 14(c), the undersigned hereby request the qualification of said Tract under said Section 14(c) and agree, together with other owners of Working Interest in the Tract who execute and deliver, or who obligate themselves to execute and deliver, like indemnity agreements, to indemnify and hold harmless all other Working Interest Owners in the Unit Area against all claims and demands required by said Section 14(c) to be the subject of such indemnity. Any liability arising hereunder shall be borne by the undersigned and other Working Interest Owners in the Tract who are committed to like indemnity agreements in the proportion that the Working Interest of each in the Tract bears to the total Working Interest therein of all the owners of Working Interest in the Tract committed to such indemnity agreement.

This indemnity shall become void with respect to all claims and demands based upon occurrences subsequent to any time that conditions are such that said Tract would be qualified under the provisions of said Unit Agreement without this indemnity.

This agreement shall be binding upon and inure to the benefit of the heirs, devisees, legal representatives, successors, and assigns of the respective parties initially bound or benefited by the provisions hereof.

IN WITNESS WHEREOF, each of the undersigned has executed this instrument on the date opposite its signature.

Shell Oil Company
Attention: Mr. W. L. Campbell
P. O. Box 991
Houston, Texas 77001

Gentlemen:

In response to your letter of June 30, 1978, concerning the revised unit agreement form for the Proposed North Hobbs (Grayburg-San Andres) unit, Lea County, New Mexico, we have no objection to the revised unit agreement form transmitted by your letter.

In view of the minority oil participation of the Federal tracts, 3.40305, 3.28211 and 6.28727 percent for Phase I, II, and III, respectively, designation of this unit by the USGS will not be required pursuant to Conservation Division Manual section 645.1.3C(D), a copy of which is enclosed to explain the procedure used where small percentages of Federal land are involved in a unit. The unit agreement, with appropriate collateral material, should be filed with this office after final approval thereof by the New Mexico Oil Conservation Division and performance of all requirements necessary to establish the effective date.

Notwithstanding the above procedure, we would appreciate being kept informed of your progress towards unitization of the area and of the docket dates arranged for the New Mexico Oil Conservation Division hearings. We appreciate your previous cooperation with this office in arranging a preliminary conference and furnishing the engineering report from which the participating parameters were interpreted and established.

Sincerely yours,

James W. Sutherland

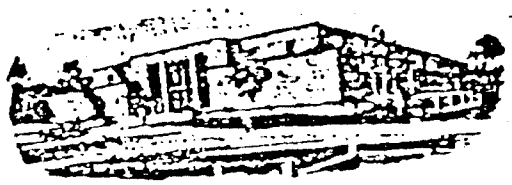
BEFORE THE
OIL CONSERVATION COMMISSION
Santa Fe, New Mexico
Case No. 5562 Exhibit No. 9
Submitted by Shell
Hearing Date 10-3-79

(4) number and depth of additional wells required to adequately test the structure or features involved; and (5) the expense of drilling.

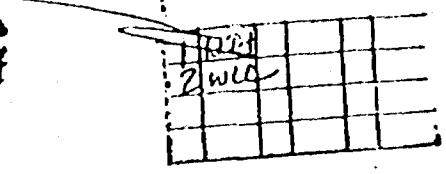
As a general guideline for unit areas larger than 25,000 acres, one additional test well should be required for each additional 10 - 15,000 acres. Also, these initial well requirements should establish a minimum distance between wells so as to allow for the proper exploration of the unit area.

D. Approval of Executed Agreements



After the area has been designated as logically subject to unitization and the proponent has obtained sufficient joinders to the unit agreement, and unit operating agreement to insure control of operations within the unit area, the executed unit agreement should be filed with the appropriate Area Supervisor for approval. The Area Supervisor has been delegated the authority to approve executed unit agreements. Guidelines and procedures for processing executed unit agreements received for final approval are contained in Exhibit 7.

Units containing less than five to ten percent Federal participation do not require designation or approval under the usual procedures. Such units are generally not handled like units containing large percentages of Federal participation in that the API form is usually used in lieu of the Federal form and the unit operator often will not have requested and obtained the designation of the unit. In such event, the only Federal requirements for the agreement are listed on the approval page signed by the Regional Manager, for the Director. This kind of agreement is usually filed in its final executed form with the Area Supervisor on a "take-it-or-leave-it" basis, e.g., when the area will be unitized with or without Federal participation. In such cases, the executed unit agreement is reviewed for general acceptability by the Area Supervisor, and, if the proposal can be recommended, it is forwarded to the Regional Office for review and final approval. This kind of unit should be treated as a non-Federal control unit, and normal Federal supervision should be maintained only over the Federal/Indian leases involved.



E. Exploratory Drilling Operations

Section 9 of the model form of unit agreement for unproved areas (Exhibit 4) contains the initial test well requirements for the unit. Generally, this section requires the unit

Re: Proposed North Hobbs
(Grayburg-San Andres) Unit
Lea County, New Mexico

ATTENTION: Mr. W. L. Campbell

Gentlemen:

We have reviewed the unexecuted copy of unit agreement, Exhibits "A" and "B", for the proposed North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico. The form of agreement meets the requirements of the Commissioner of Public Lands, therefore, your agreement has been approved as to form and content.

We are sorry to inform you that we can not accept the Exhibit "B" as submitted. All tracts must be in numerical order, starting with tract 1 through 43. Also, the Exhibit has a few errors which we have marked in red in the enclosed copy. We would also like to have the Exhibit on one side of the page only instead of both sides. This makes it much easier in checking our leases and posting our tract books.

When submitting your agreement for final approval, the following are required by this office.

1. Application for final approval stating Tracts committed and Tracts not committed.

2. Two executed copies of Unit Agreement-one must contain original signatures, together with two copies of Exhibits "A" and "B".

3. One executed copy of Operating agreement.

4. Two sets of all ratifications from Lessees of Record and Working Intrest Owners.

BEFORE THE
OIL CONSERVATION COMMISSION
Santa Fe, New Mexico
Case No. 5561 Exhibit No. 10
Submitted by Shell
Hearing Date 10-3-78

5. Order of the New Mexico Oil Conservation Division.

6. Filing Fee in the amount of Three Hundred ($300.00) Dollars.

7. Re-designation of well names and numbers.

8. Initial Plan of Operation

9. Certificate of Determination by USGS.

If we may be of further help please do not hesitate to call on us.

Very truly yours,

PHIL R. LUCERO

Part of T18S-R37E and T18S-R38E
Lea County, New Mexico

ATTENTION: Mr. W. L. Campbell

Gentlemen:

We are in receipt of your letter dated June 30, 1978, together with revised copy of the unit agreement and revised copy of Exhibit "A" to the North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico. Such revisions were requested by the United States Geological Survey.

We have reviewed the changes and they meet with our approval, therefore, your revised copy, with certain deletions, has been approved as to form and content by the Commissioner of Public Lands on this date.

The requirements for final approval were outlined in our letter of June 13, 1978.

Very truly yours,

PHIL R. LUCERO

RATIFICATION
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
LEA COUNTY, NEW MEXICO

WHEREAS, certain agreements entitled "Unit Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico" and "Unit Operating Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico", are being entered into as of July 1, 1978, between the signatory parties for the purpose of unitizing and conducting unit operations in a portion of the Hobbs (Grayburg-San Andres) Field, in Lea County, New Mexico, the unit boundaries and the tracts comprising the unit area being shown on Exhibit A and said tracts being described in Exhibit B of the exhibits attached to said unit agreement; and

WHEREAS, the undersigned is the owner of a royalty interest or a working interest, or both, as said interests are defined in said unit agreement, in one or more of the tracts described in said Exhibit B, and the undersigned desires to commit said interest or interests to said unit agreement:

NOW, THEREFORE, KNOW ALL MEN BY THESE PRESENTS that each of the undersigned (whether one or more), for and in consideration of the premises and pursuant to the joinder provisions contained in said agreements, does hereby ratify and agree to be bound by the provisions of the said unit agreement as a party thereto, and if the undersigned is the owner of a working interest, does also hereby ratify and agree to be bound by the provisions of the said unit operating agreement as a party thereto, the same in each case as if the undersigned had executed a counterpart of the agreement. Receipt of a counterpart in each case is hereby acknowledged by the undersigned.

IN WITNESS WHEREOF, each of the undersigned has executed this instrument on the date stated below.

NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
LEA COUNTY, NEW MEXICO

WHEREAS, certain agreements entitled "Unit Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico" and "Unit Operating Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico", are being entered into as of July 1, 1978, between the signatory parties for the purpose of unitizing and conducting unit operations in a portion of the Hobbs (Grayburg-San Andres) Field, in Lea County, New Mexico, the unit boundaries and the tracts comprising the unit area being shown on Exhibit A and said tracts being described in Exhibit B of the exhibits attached to said unit agreement; and

WHEREAS, the undersigned is the owner of a royalty interest or a working interest, or both, as said interests are defined in said unit agreement, in one or more of the tracts described in said Exhibit B, and the undersigned desires to commit said interest or interests to said unit agreement:

NOW, THEREFORE, KNOW ALL MEN BY THESE PRESENTS that each of the undersigned (whether one or more), for and in consideration of the premises and pursuant to the joinder provisions contained in said agreements, does hereby ratify and agree to be bound by the provisions of the said unit agreement as a party thereto, and if the undersigned is the owner of a working interest, does also hereby ratify and agree to be bound by the provisions of the said unit operating agreement as a party thereto, the same in each case as if the undersigned had executed a counterpart of the agreement. Receipt of a counterpart in each case is hereby acknowledged by the undersigned.

IN WITNESS WHEREOF, each of the undersigned has executed this instrument on the date stated below.

RATIFICATION
NORTH HOBBS (GRAYBURG-SAN ANDRES) UNIT
LEA COUNTY, NEW MEXICO

WHEREAS, certain agreements entitled "Unit Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico" and "Unit Operating Agreement, North Hobbs (Grayburg-San Andres) Unit, Lea County, New Mexico", are being entered into as of July 1, 1978, between the signatory parties for the purpose of unitizing and conducting unit operations in a portion of the Hobbs (Grayburg-San Andres) Field, in Lea County, New Mexico, the unit boundaries and the tracts comprising the unit area being shown on Exhibit A and said tracts being described in Exhibit B of the exhibits attached to said unit agreement; and

WHEREAS, the undersigned is the owner of a royalty interest or a working interest, or both, as said interests are defined in said unit agreement, in one or more of the tracts described in said Exhibit B, and the undersigned desires to commit said interest or interests to said unit agreement:

NOW, THEREFORE, KNOW ALL MEN BY THESE PRESENTS that each of the undersigned (whether one or more), for and in consideration of the premises and pursuant to the joinder provisions contained in said agreements, does hereby ratify and agree to be bound by the provisions of the said unit agreement as a party thereto, and if the undersigned is the owner of a working interest, does also hereby ratify and agree to be bound by the provisions of the said unit operating agreement as a party thereto, the same in each case as if the undersigned had executed a counterpart of the agreement. Receipt of a counterpart in each case is hereby acknowledged by the undersigned.

IN WITNESS WHEREOF, each of the undersigned has executed this instrument on the date stated below.
