Santa Fe, New Mexico 87505

RE: North Drainage Ditch Area Investigation Report
Western Refining Southwest LLC, Marathon Gallup Refinery
EPA ID #NMD000333211
HWB-WRG-19-009

Dear Mr. Pierard,

Attached please find the Investigation Report for the North Drainage Ditch Area as requested in the New Mexico Environment Department (NMED) Approval with Modifications letter dated March 4, 2021.

If you have any questions or comments regarding the information contained herein, please do not hesitate to contact Mr. John Moore at (505) 879-7643.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction of supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Marathon Petroleum Company LP, Gallup Refinery

Ruth A Cade

WESTERN REFINING SOUTHWEST LLC

D/B/A MARATHON GALLUP REFINERY

NORTH DRAINAGE DITCH AREA INVESTIGATION REPORT

DECEMBER 17, 2021

Released to Imaging: 11/23/2022 9:06:16 AM

Executive Summary

Western Refining Southwest LLC (dba Marathon Gallup Refinery) (Refinery) is submitting this investigation report regarding the sampling of soils and collection of groundwater samples in an area on the north side of the refinery identified as the North Drainage Ditch. The objectives of the investigation were to:

1. Further characterize soils observed in and near the ditch.
2. Assess the area up-gradient of the ditch to help identify potential sources of hydrocarbons and metals in groundwater.
3. Determine the down-gradient extent of hydrocarbons and metals in groundwater.

Initial investigative field activities took place during August 2021. Groundwater samples from the temporary and permanent monitoring wells were collected in September 2021. Field work included the completion of six soil borings and installation of five temporary monitoring wells and two permanent monitoring wells.

Hydrocarbons in the soil were observed during the field activities and confirmed by laboratory analyses. Hydrocarbon staining and odors were noted during the soil boring activities. Detections of total petroleum hydrocarbons were above applicable soil screening levels.

Of the five temporary monitoring wells installed, two contained enough water for sampling, NDD-TW-2 and NDD-TW-5. Of the two permanent monitoring wells, one had water for sampling, NDD-MW-1. Groundwater quality was similar to those observed in preexisting up-gradient wells, including elevated concentrations of petroleum related compounds, and metals. At this time, no further investigative activities are currently planned or recommended for groundwater in the North Drainage Ditch area. The groundwater will be addressed with the underlying plume in the area.

Based on the detection of hydrocarbon constituents in soils (i.e., above applicable screening levels) we recommend completing additional delineation sampling to the south of NDD-SB-1 and NDD-SB-2, and to the northeast of NDD-SB-3.

1.0 Introduction

This report summarizes the activities associated with a follow-on investigation of the North Drainage Ditch area conducted at the Western Refining Southwest LLC Refinery (dba Marathon Gallup Refinery) (Refinery), located 17 miles east of Gallup, New Mexico (Figure 1-1). The physical address of the Refinery is I-40, Exit #39 Jamestown, New Mexico, 87347. The investigation purpose was to characterize potential hydrocarbons and metals in the soil and groundwater to the north/northwest of the refinery tank farm, in the area identified as the North Drainage Ditch (Figure 1-2). Sampling was conducted in accordance with the investigation work plan that was approved, with modifications, by the New Mexico Environment Department (NMED) on March 4, 2021 (NMED 2021). The revised work plan was submitted to NMED on March 29, 2021 (Marathon Petroleum Company [MPC] 2021). At the time of the field investigation, and this report, a response to the revised work plan had not been received from NMED.

1.1 Background

The Refinery property covers approximately 810 acres. Refinery operations were indefinitely idled in August 2020. While operating, the Refinery processed crude oil transported by pipeline or tanker truck from the Four Corners region. Various process units operated at the Refinery included crude distillation, reformer, fluidized catalytic cracker, alkylation, sulfur recovery, merox treater, and hydrotreater. Past operations have produced gasoline, diesel fuels, jet fuels, kerosene, propane, butane, and residual fuel.

First indications of potential impacts in the North Drainage Ditch area were documented in an October 2009 site inspection; during a routine inspection of the site drainage features, the ditch was discovered to have “non-moving water” with possible hydrocarbon staining and a diesel-like odor. A C-141 Release Form was submitted to the New Mexico Oil Conservation Division and NMED on October 20, 2009. The potentially affected portion of the ditch was estimated to be 40 feet (ft) long.

1.1.1 Submittal History

The following work plans and reports have been submitted and received for the North Drainage Ditch area.

- C-141 Release Form, submitted October 20, 2009
- Notification of Potential Hydrocarbon Discovery, submitted April 22, 2015
- Requirement, Submittal of Work Plan, received May 12, 2015
- Investigation Work Plan, submitted August 13, 2015
- Investigation Report, submitted August 20, 2018
- Disapproval, Investigation Report, received February 8, 2019

- Investigation Work Plan, submitted April 26, 2019
- Response to Disapproval, Investigation Report, submitted May 13, 2019
- Approval with Modifications, Revised Investigation Report, received June 24, 2019
- Disapproval, Investigation Work Plan, received June 24, 2019
- Response to Approval with Modifications, Investigation Report, submitted July 30, 2019
- Response to Disapproval, Investigation Work Plan, submitted September 20, 2019
- Response to Approval with Modifications, Investigation Report, submitted December 2, 2019
- Approval, Response to Approval with Modifications, Investigation Report, received January 16, 2020
- Approval with Modifications, Investigation Report, received March 4, 2021
- Response to Approval with Modifications, Investigation Report, March 29, 2021

1.1.2 Historical Sampling and Results

After standing water was found in the area in 2009, soil and water samples were collected and analyzed following the submittal of the C-141 Form (Western 2015). The water samples were analyzed for total petroleum hydrocarbon (TPH) by method 418.1. The soil samples were analyzed for semi-volatile organic compounds (SVOCs) by method 8270, metals using the toxicity characteristic leaching procedure, and TPH by method 418.1. The water samples indicated the presence of TPH, however, at the time of sampling, no applicable screening levels had been established. The soil results were mostly non-detect. With analytical results below applicable screening levels, and due to the ephemeral nature of the water, no further action was taken. There is no record of waste or other contaminants being handled in the area of investigation.

Water potentially containing hydrocarbons was again observed in the ditch in 2015. Surface water samples were collected and sampled for volatile organic compounds (VOC), TPH, and metals; benzene, xylenes, methyl tert butyl ether (MTBE), 1,2,4-trimethlybenzene, 1,3,5-trimethylbenzene, arsenic, naphthalene, and barium were detected at concentrations above applicable screening levels. To further investigate the surface water analytical results, three soil borings were completed in the area. One boring encountered saturation and a groundwater sample was collected and analyzed for VOCs, SVOCs, and TPH; MTBE and 1,2-dichloroethane were detected at concentrations above applicable screening levels (Western 2018).

Because petroleum fuel hydrocarbons and metals were detected in samples collected in 2015, continued investigative work was planned and conducted in 2016. Temporary wells were completed in

Released to Imaging: 11/23/2022 9:06:16 AM

four boreholes and four permanent monitoring wells (OW-53, OW-54, OW-55, and OW-56) were installed. During initial sampling efforts, both groundwater and soil samples from the well installations indicated exceedances of applicable screening levels for multiple constituents. The permanent monitoring wells have continued to be sampled quarterly, with the exception of OW-53 which has remained dry since its installation. Analytical results for the permanent monitoring wells have continued to exceed the applicable screening levels for multiple constituents and are discussed in the Annual Groundwater Reports.

Additional sampling, conducted in 2019, centered around elevated manganese concentrations observed in historical soil sample results (MPC 2019b). Samples were collected to assess if the crude oils processed at the facility resulted in the elevated manganese concentrations observed in the North Drainage Ditch. The results of the sampling effort indicated that the crude oils did not contribute to the elevated manganese concentrations (NMED 2020).

Results from investigation efforts from 2015 through 2017 were detailed in the North Drainage investigation report submitted to NMED in 2018 (Western 2018). Following the submittal of the 2018 investigation report, NMED requested an additional investigation work plan to further characterize the area (NMED 2019a). In 2019, an investigation work plan was submitted to further characterize soil and groundwater in and around the ditch, assess the area up-gradient, and determine the down-gradient extent of petroleum fuel hydrocarbons and metals in groundwater (MPC 2019a). This work plan was revised and approved with modifications by NMED on March 4, 2021 for the August 2021 investigation.

1.2 Scope of Activities

The revised Investigation Work Plan (MPC 2021) was submitted to NMED in March 2021. The objectives of the investigation were to:

1. Further characterize soils observed in and near the ditch.
2. Assess the area up-gradient of the ditch to help identify potential sources of hydrocarbons and metals in groundwater.
3. Determine the down-gradient extent of hydrocarbons and metals in groundwater.

Field activities took place from August 12 through August 24, 2021, and consisted of the following:

- Six soil borings
- Five temporary monitoring wells
- Two permanent monitoring wells

Released to Imaging: 11/23/2022 9:06:16 AM

2.0 Site Conditions

This section provides a summary of the surface and subsurface conditions at the refinery in the area of the North Drainage Ditch. A discussion of the installation of soil borings, field screening of soils, and collection of soil and groundwater samples for analysis are provided in Section 3.0.

2.1 Surface Conditions

Site topographic features include high ground in the southeast gradually decreasing to a lowland fluvial plain to the northwest. Elevations on the refinery property range from 7,040 ft to 6,860 ft. The area of the site near the North Drainage Ditch is at an approximate elevation of 6,920 ft above mean sea level. The North Drainage Ditch is part of a larger drainage feature that begins on the north side of the tank farm, extending north approximately 200 ft and passes beneath a dirt road after which it bifurcates into two smaller segments (one to the northeast and the other to the west). The western segment extends westward approximately 400 ft and then turns northwest through a low-lying area (i.e., an area of periodic standing water) that is the focus of this investigation (Figure 1-2).

The North Drainage Ditch essentially ends (i.e., there is no clearly defined channel) approximately 90 feet north of the access road. Thereafter, surface water appears to flow north, along the east side of a dirt road, before crossing over the road.

Surface soils within most of the area of investigation are primarily Rehobeth silty clay loam. Rehobeth soil properties include a pH ranging from 8 to 9 standard units and salinity (naturally occurring and typically measuring up to approximately 8 millimhos per centimeter.

2.2 Subsurface Conditions

Based on existing boring logs, shallow subsurface fluvial and alluvial soils are comprised of primarily clays and silts with minor inter-bedded sand layers. Very low permeability bedrock (e.g., claystones and siltstones) underlie the surface soils and effectively form an aquitard. The Chinle Group, from the Upper Triassic period, crops out over a large area on the southern margin of the San Juan Basin. The uppermost recognized local Formation is the Petrified Forest Formation. The Sonsela Sandstone Bed is the uppermost recognized regional aquifer. Aquifer tests of the Sonsela Bed northeast of Prewitt indicated a transmissivity of greater than 100 square feet per day (Stone et al., 1983). The Sonsela Sandstone's highest point occurs southeast of the site and slopes downward to the northwest as it passes under the Refinery. Due to the confinement of the Chinle Formation aquitard, the Sonsela Sandstone bed acts as a water-bearing reservoir and is artesian at its lower extremis. Artesian conditions exist through much of the central and western portions of the Refinery property.

Surface soils generally consist of fluvial and alluvial deposits, primarily clay and silt with minor inter-bedded sand layers. Below the surface layer is the Chinle Formation, which consists of very low permeability clay stones and siltstones that comprise the shale of this formation. As such, the Chinle Formation effectively serves as an aquitard. Interbedded within the Chinle Formation is the Sonsela

Sandstone bed, which represents the uppermost potential aquifer in the region. The Sonsela Sandstone bed lies within and parallels the dip of the Chinle Formation. As such, its high point is located southeast of the Refinery and it slopes downward to the northwest as it passes under the Refinery.

Groundwater flow within the Chinle Formation is extremely slow and typically averages less than 10^{-10} centimeters per second (cm/sec) (i.e., less than 0.01 ft per year). Groundwater flow within the surface soil layer, above the Chinle Formation, is highly variable due to the presence of complex and irregular stratigraphy including sand stringers, cobble beds, and dense clay layers. As such, hydraulic conductivity may range from 10^{-8} cm/sec (approximately 0.01 ft per year) in the clay soil layers located near the surface and up to 10^{-2} cm/sec (approximately 10,000 ft per year) in the gravelly sands immediately overlying the Chinle Formation.

Shallow groundwater located under Refinery property generally flows along the upper contact of the Chinle Formation. Although the prevailing regional flow direction is from the southeast and toward the northwest, in the tank farm area flow is in a northeasterly direction, and in the southern marketing area flow is generally in a westerly direction.

The diverse properties, and complex irregular stratigraphy of the surface soils across the Refinery cause a wide range of hydraulic conductivity ranging from less than 10^{-2} cm/sec (approximately 10,000 ft per year) for gravel-like sands immediately overlying the Petrified Forest Formation to 10^{-8} cm/sec (approximately 0.01 ft per year) in the clay soils located near the surface. Generally, shallow groundwater at the Refinery follows the upper contact of the Petrified Forest Formation (Chinle Group) with prevailing flow from the southeast to the northwest, although localized areas may have varying flow directions based on the subsurface geology.

Groundwater in the area of the North Drainage Ditch flows from the east to the west (Figure 2-1). The new temporary and permanent monitoring wells are shown on the potentiometric surface figure but are not included in the groundwater depths as surveying data for the elevations were not completed prior to the submittal of this report. The surveying data will be completed during the first quarter of 2022. These data will be included in the 2021 Annual Groundwater Report and incorporated into the site wide potentiometric map. Up-gradient of the North Drainage Ditch includes the eastern boundary of the refinery and the tank farm.

Released to Imaging: 11/23/2022 9:06:16 AM

3.0 Field Investigation

The following sections summarize the events completed during the 2021 North Drainage Ditch investigation, activities were conducted August 12, 2021 through August 24, 2021, September 9, 2021, and September 17, 2021. Seven monitoring wells (two permanent and five temporary) and six soil boring locations were completed (Figure 3-1). Fifty eight soil samples and three groundwater samples were collected. A summary of samples submitted for laboratory analyses are presented in Table 3-1. The locations are presented on Figure 3-1 and the field notes are provided in Appendix A.

3.1 Sampling Locations

Soil boring locations were chosen based on historical sample results and locations. Previously completed borings NDD-5, NDD-8, and NDD-9 detected hydrocarbons; most borings for this investigation were chosen to further delineate the subsurface surrounding these locations. All historical sample locations are provided on Figure 3-2. New soil investigation locations were completed in the following places (MPC 2021):

- South of NDD-9 (NDD-SB-1)
- South side of the ditch, between NDD-9 and NDD-5 (NDD-SB-2)
- West (down gradient) of NDD-8 (NDD-SB-3)
- East of NDD-8 and NDD-9 (NDD-SB-4)
- Near boring NDD-5 (NDD-SB-5)
- Up-gradient within the drainage feature (NDD-SB-6)

The five temporary monitoring well locations were chosen to further define the down gradient extent of petroleum fuel hydrocarbons and metals in groundwater (NDD-TW-1 through NDD-TW-5). The two permanent monitoring well locations were installed up-gradient of the North Drainage Ditch to evaluate potential up-gradient sources (NDD-MW-1 and NDD-MW-2). These monitoring wells are presented on Figure 3-1.

3.2 Sampling Methods

Soil boring locations were drilled by Terracon Consultants, Inc. using a hollow-stem auger. Soil borings were advanced to the alluvium/Chinle subsurface group (local aquitard). Monitoring wells were completed with a 0.01-inch slotted polyvinyl chloride well screen, placed at the bottom of each well and extending 10-15 ft to ensure a complete screen across the shallow water table. A 10/20 sand filter pack was installed to 2 ft over the top of the well screen. Well completion details for each location are provided in Appendix B.

Soil borings were screened at 2-ft intervals to analyze for evidence of petroleum hydrocarbons and help select sample intervals for laboratory analysis. Screening methods included visual examination, olfactory examination, and headspace vapor screening for VOCs. Headspace vapor screening was performed by placing a soil aliquot into a sealed plastic bag and letting the sample to rest for a minimum of 5 minutes to allow vapors to equilibrate. Vapor's present were measured by inserting a photoionization detector (PID) probe into a small opening in the bag and recording this result (Table 3-2). Lithology, physical characteristics, and PID values were recorded on the boring logs and are included as Appendix C.

Depth to water, if present, and total depth were measured at the seven monitoring wells prior to development. Note that seven monitoring well locations were drilled however casing material was not installed at NDD-TW-3 as presented below in Section 3.3. Water was not present in wells NDD-TW-1, NDD-TW-4, or NDD-MW-2. Separate phase hydrocarbon (SPH) was not detected at any location. For temporary monitoring well NDD-TW-5, 10 casing volumes were bailed during development and additional groundwater was removed during sampling until the field parameters equilibrated. A YSI multiprobe meter was used to collect measurements of conductivity, pH, temperature, dissolved oxygen, and salinity. The remaining monitoring wells, NDD-TW-2 and NDD-MW-1, went dry during development and groundwater measurements were collected during purging and sampling (Appendix D).

3.3 Field Observations

The depths, method of sample collection, and physical characteristics of each soil sample (i.e., mineralogy, soil classification, moisture content, texture, color, and the presence of stains and odors), were recorded in the field by a qualified geologist and are presented in the soil boring logs (Appendix A).

Boring depths ranged from 10 ft below ground surface (bgs) (NDD-SB-3) to 48 ft bgs (NDD-MW-2). Boring depths were determined based on field observations and PID readings.

General findings during the field investigation are noted below:

- Hydrocarbon odors and staining were observed in all the soil borings and permanent monitoring wells, at various depths and degrees. Hydrocarbons were also observed in two of the temporary monitoring wells, NDD-TW-2 and NDD-TW-5 (Appendix A).
- PID readings were completed approximately every 2 ft. Readings ranged from 0 parts per million (ppm) to 1,529 ppm (6 ft bgs in NDD-SB-3). Samples were collected at the highest PID reading in each boring (Table 3-2).
- Soil borings NDD-SB-1 and NDD-SB-2 had indications of hydrocarbons throughout the entire boring. These indications included strong hydrocarbon odors and visible staining in the soil. The

borings were plugged with bentonite chips after samples were collected and the soil was disposed in on-site drums.

- NDD-TW-3 was drilled to 34 ft bgs; however, water was not encountered. Per the revised work plan (MPC 2021) a temporary monitoring well was not completed, the dry boring was filled and plugged. The lithology log for NDD-TW-3 is included in Appendix C. The soil boring for NDD-TW-3 was analyzed at three depths, 0-0.5 ft bgs, 1.5-2 ft bgs, and 33.5-34 ft bgs. Analyses were reported as non-detect with the exception of several analytes, however, no results exceeded the screening levels.

3.4 Deviations from Approved Work Plan

Deviations from the revised investigation work plan (MPC 2021) included the following:

- The work plan states that a total of 65 soil samples (5 from each soil boring and recovery well locations) were to be collected. A total of 58 soil samples (with varying numbers at each investigation location) were collected during field activities. This deviation was based on field observations and field screening results recorded by the on-site geologist.

- Monitoring wells NDD-TW-1, NDD-TW-4, and NDD-MW-2 were dry when sampling activities were conducted. Well development logs are provided in Appendix D.

4.0 Analytical Results

Analytical results for the various parameters are summarized below, with the analytical laboratory reports included in Appendix C. Analytical results were compared against the following screening levels:

Soil

- NMED Risk Assessment Guidance for Site Investigations, Residential Soil Screening Level (SSL) (NMED 2019b)
- NMED Risk Assessment Guidance for Site Investigations, Industrial SSL (NMED 2019b)

Groundwater

- NMED Risk Assessment Guidance for Site Investigations, Tap Water (NMED 2019b)
- United States Environmental Protection Agency (USEPA) Maximum Contaminant Level, Hazardous Quotient 1.0, May 2021 (USEPA 2021)
- NMED TPH Screening Levels, Risk Assessment Guidance for Investigations and Remediation (NMED 2017)

Analytical results that exceeded the applicable screening levels are discussed below and presented in the noted tables.

4.1 Soil Sample Results

Soil samples were collected from August 12, 2021, through August 24, 2021. Soil samples were analyzed for VOCs, SVOCs, metals, and general chemistry. Soil samples were collected from soil borings (NDD-SB-1 through NDD-SB-6), and the monitoring well borings (NDD-TW-1 through NDD-TW-5, NDD-MW-1, and NDD-MW-2). Analytical results are provided in Tables 4-1 through 4-4.

PID readings were completed on samples collected approximately every 2 ft. Readings ranged from 0 ppm to 1,529 ppm (6 ft bgs in NDD-SB-3). Samples were generally collected at 0 to 0.5 ft bgs, 1.5 to 2.0 ft bgs, and additional intervals based on field observations and screenings, including the highest PID reading for each soil boring.

Eight of the thirteen boring locations had TPH results that exceeded their respective SSLs (Figure 4-1). The highest detections of TPH were found in NDD-SB-2; TPH-gasoline range organics (GRO) was detected at 14,000 milligrams per kilogram (mg/kg) from 1.5 to 2.0 ft bgs and TPH-diesel range organics (DRO) was detected at 8,500 mg/kg from 3.5 to 4 ft bgs. TPH-oil range organics (ORO) was only detected in NDD-MW-1 (7.5 to 8 ft bgs) and exceeded the applicable screening level. In addition, soil boring NDD-SB-2 had exceedances of ethylbenzene and benzene between 3.5 and 4 ft bgs. No other analytical results for soil samples exceeded their respective screening levels.

4.2 Groundwater Sample Results

Groundwater samples were collected on September 9, 2021, from the temporary monitoring wells, and on September 17, 2021, from the permanent monitoring wells. Groundwater samples were collected from locations NDD-TW-2, NDD-TW-5, and NDD-MW-1, the monitoring well locations, NDD-TW01, NDD-TW-4, and NDD-MW-2, were dry during sampling activities. Depth to groundwater was measured as 23.15 ft bgs, 19.33 ft bgs, and 3.41 ft bgs, in NDD-TW-2, NDD-TW-5, and NDD-MW-1, respectively. The depths to groundwater of the temporary monitoring wells, NDD-TW-2 and NDD-TW-5, were consistent with permanent wells in the area; NDD-MW-1 is not near the preexisting monitoring wells. Groundwater sampling field forms are available in Appendix F.

Groundwater samples were analyzed for VOCs, SVOCs, metals, and general chemistry. Several of the analytical results exceeded their respective screening levels. Most exceedances were observed in temporary monitoring well NDD-TW-5, including benzene, toluene, ethylbenzene, and total xylenes (BTEX), as well as naphthalene, arsenic, barium, chromium, lead, beryllium, TPH-DRO, and TPH-GRO. Exceedances in NDD-MW-1 were 1,2-dichloroethane, TPH-DRO, TPH-GRO, and TPH-ORO. Chloride was the only exceedance in NDD-TW-2.

BTEX and naphthalene results are presented on Figure 4-2. Metal results are presented on Figure 4-3. TPH results are presented on Figure 4-4. The analytical results are provided in Tables 4-5 through 4-8.

NDD-MW-1 and NDD-MW-2 will be included in the annual groundwater monitoring program and results will be included in future groundwater reports.

4.3 Quality Assurance/Quality Control

Quality Assurance/Quality Control (QA/QC) soil and groundwater analytical samples were collected during the investigation. QA/QC samples are included in the laboratory reports provided in Appendix E. The analytical data reported from the receiving laboratory underwent Tier I and Tier II data validation by Trihydro's chemical data validation services group. Data qualifiers are included in the analytical tables. The Tier II data validation reports are provided in Appendix G.

Nine equipment blanks, five methanol blanks, two trip blanks, and one field blank were collected during the soil and groundwater sampling activities. Reported detections in the blank samples included acetone, 2-butanone, chloromethane, 2-hexanone, methylene chloride, and toluene. However, none of the detections were reported above screening levels.

In addition to the blanks that were collected during the field event, field duplicates were also collected from the following locations NDD-SB-1 (5 – 5.5 ft bgs), NDD-SB-3 (6 – 6.5 ft bgs), NDD-SB-5 (9.5 – 10 ft bgs), NDD-TW-1 (34 – 34.5 ft bgs), and NDD-TW-5 (23 – 23.5 ft bgs) for the soil borings; a field duplicate groundwater sample was collected from NDD-TW-5. These field duplicates were compared to their parent samples and flagged, if necessary, as described in the Appendix D data validation reports.

5.0 Conclusions

Findings regarding the soil and groundwater in and around the North Drainage Ditch include:

- Soil and groundwater analytical results indicate that petroleum fuel hydrocarbons are present within the North Drainage Ditch area.
- Hydrocarbon staining and odors were observed in the soil borings. However, no SPH was observed in groundwater during the groundwater sampling events.
- NDD-MW-2 was dry for the September 2021 sampling event. NDD-MW-2 was installed in the area of OW-12 (deep well). OW-12 groundwater results have historically been below screening levels. Although NDD-MW-2 was dry for the September 2021 sampling event, the lack of hydrocarbons and metals in the soil boring at NDD-MW-2, and the lack of hydrocarbon detections in the groundwater of OW-12, suggest that hydrocarbons are not in NDD-MW-2 or OW-12.

Based on the detections of hydrocarbons in soils above the screening levels, we recommend to complete additional soil delineation sampling to the south of NDD-SB-1 and NDD-SB-2, and to the northeast of NDD-SB-3.

The observed groundwater conditions at NDD-TW-5 are generally similar to the petroleum hydrocarbon and metal concentrations observed in the surrounding observation wells. At this time, no further investigative activities are currently planned or recommended for groundwater in the North Drainage Ditch area. The groundwater quality will be addressed with the underlying plume in the area.

Notes:
Dup - Field duplicate
ft - Feet
J - Estimated concentration
J- - Estimated concentration, possibly biased low
mg/kg - Milligram per kilogram
ND - Not detected at the reporting limit
NMED Industrial SSL - NMED Risk Assessment Guidance for Site Investigations, Industrial Soil Screening Level, June 2019
NMED Residential SSL - NMED Risk Assessment Guidance for Site Investigations, Residential Soil Screening Level, June 2019
U - Evaluated to be undetected at the reported concentration
UJ - Estimated reporting limit
a. Bold text indicates results that exceed the NMED Industrial SSL.
b. Bold text indicates the results that exceed the NMED Residential SSL.
* - The first result represents the laboratory reported concentration. The second result was evaluated to be undetected at the reported concentration by the data validator. The result was determined to be a false positive.

Notes:
Dup - Field duplicate
ft - Feet
J - Estimated concentration
J- - Estimated concentration, possibly biased low
mg/kg - Milligram per kilogram
ND - Not detected at the reporting limit
NMED Industrial SSL - NMED Risk Assessment Guidance for Site Investigations, Industrial Soil Screening Level, June 2019
NMED Residential SSL - NMED Risk Assessment Guidance for Site Investigations, Residential Soil Screening Level, June 2019
U - Evaluated to be undetected at the reported concentration
UJ - Estimated reporting limit
a. Bold text indicates results that exceed the NMED Industrial SSL.
b. Bold text indicates the results that exceed the NMED Residential SSL.
* - The first result represents the laboratory reported concentration. The second result was evaluated to be undetected at the reported concentration by the data validator. The result was determined to be a false positive.

Notes:
Dup - Field duplicate
ft - Feet
J - Estimated concentration
J- - Estimated concentration, possibly biased low
mg/kg - Milligram per kilogram
ND - Not detected at the reporting limit
NMED Industrial SSL - NMED Risk Assessment Guidance for Site Investigations, Industrial Soil Screening Level, June 2019
NMED Residential SSL - NMED Risk Assessment Guidance for Site Investigations, Residential Soil Screening Level, June 2019
U - Evaluated to be undetected at the reported concentration
UJ - Estimated reporting limit
a. Bold text indicates results that exceed the NMED Industrial SSL.
b. Bold text indicates the results that exceed the NMED Residential SSL.
* - The first result represents the laboratory reported concentration. The second result was evaluated to be undetected at the reported concentration by the data validator. The result was determined to be a false positive.

Daily Field Report

Date:	8/12/2021	**Arrival Time:**	06:00
Project:	Gallup RCR / NDD	**Departure Time:**	18:00
Project #:	697-089-001 / TBD	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Emily Conkling, Kara Hoppes
Location:	Gallup, NM	**Visitors:**	Terracon drillers - Jeff & Elliot
Task/Scope:	Finish soil sampling for RCR area & work on drilling/installation of NDD temporary monitoring wells		

Time:	Notes:
06:00	Arrive & Tailgate / JSAs
06:50	Gather supplies for day
07:20	Set up to drill RCR-SB-4 (5') to regather sample + BD
08:00	Heading to NDDA for drilling of temporary wells
17:00	Stopped drilling for the day to allow drillers to get rest
	NDD --> Finished drilling west-most temporary wells
	Drilled to 20' for temporary well just to the east of the 1st
	(anticipated 25-30' more until bedrock on that one)
	As we move east & south for NDD borings, bedrock should get a bit
	more shallow which should speed things up a bit; slow now due to 2'
	sampling device & depth to bedrock
18:00	Completed sample processing
	Tomorrow's Objectives for this Project: Continue drilling/installing temporary monitoring
	wells w/in NDD
	H&S Notes: No Stop Works, incidents, or close calls
	Waste Notes: Each temporary monitoring well drilled had cuttings collected w/in its
	own drum
	RCR Project Status: Soil borings completed w/ exception of northmost (will have vac truck
	remove water on Monday to try and complete this boring & nearby
	surface soil samples)
	Ones not drowned have been collected; Emily has current
	count
	Note: Had planned to begin on MKTF wells today, but with how unpredictable the
	weather has been, decided to take advantage of dry ground @ at-risk locations
	so that the rig will not get stuck in the event of poor weather

Daily Field Report

Date:	8/13/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch Area & MKTF	**Departure Time:**	17:45
Project #:	697-082-002 & 697-092-001	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Kara Hoppes, Hilario Trejo
Location:	Gallup, NM	**Visitors:**	Terracon drillers - Jeff & Elliot
Task/Scope:	Drilling & installing temporary monitoring wells & developing yesterday's temp. MW		

Time:	Notes:
06:20	Tailgate meeting
06:45	Gather drilling supplies
07:10	Begin (resume) drilling NDD-TW-2
09:30	Finished drilling NDD-TW-2; this one likely will not produce much water
10:30	Finished construction of NDD-TW-2 — Convo w/ Caitlin @ 09:04 to determine if wanted to keep drilling or set well since reached bedrock w/o much water; set well so can say to NMED we tried; going deeper would likely not have told us anything about contamination runoff water infiltration
10:30 -12:25	Set up @ next location (RW-2R) & sample processing
	CLOSE CALL ---> there were two v-trenches w/in the vicinity of RW-2; one had a pin flag and the other was farther away & did not; driller noticed v-trench @ farther away location after setting up @ pin flag & doublechecked w/ v-trench crew (nothing was communicated to us about there being 2 v-trenches despite the first one hitting something (pipe?); was told by Hilario to drill the farther away location ARE THERE ANY OTHER LOCATIONS THAT NEEDED 2 V-TRENCHES? <-- Confirmed w/ Hilario that there are not (17:45)
16:00	Finished drilling RW-2R
17:00	Drillers stopped work; will need to finish completion of well tomorrow when we have obtained cement/grout
17:15	Sample processing/closing out permits for day
	Tomorrow's Objectives: keep working on drilling/installing MKTF wells
	H&S Notes: see above notes from 10:30-12:25
	Waste Notes: two soil drums labeled non-haz for NDD-TW-2; three soil drums labeled Haz pending laboratory analysis for RW-2R
	Note: was going to have Hilario develop the NDD temporary well finished on 8/12 but when he gauged it, it was dry (screen had been set to encompass saturated above bedrock intervals but there is so much clay & silt that it is not producing water very well)
	Laboratory News: Shipped all Rail Car Release & North Drainage Ditch samples to date

Daily Field Report

Date:	8/16/2021	**Arrival Time:**	06:00
Project:	MKTF Well Installation & NDD	**Departure Time:**	17:00
Project #:	697-092-001 & 697-082-002	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Kara Hoppes, Hilario Trejo
Location:	Gallup, NM	**Visitors:**	Jeff Cothron & Elliot Goddu
Task/Scope:	Well completions, drilling/well installation		

Time:	Notes:
06:00	Tailgate meeting & permitting
06:30	Equipment loading & start of pouring concrete well pads for permanent wells (RW-2R,
	MKTF-17R, MKTF-18R)
10:20	Augers cleaned & setting up to drill MKTF-04R
12:50	Finished drilling/installing (w/ exception of pad) MKTF-04R
13:00	Samples for MKTF wells dropped @ seemity for pickup
13:30	Pad finished for MKTF-04R --> just needs to be labeled once cement dries a bit more; going
	to start on NDD-MW-1 (permanent North Drainage Ditch well)
16:00	Stopped drilling NDD-MW-1 (drillers had to make a FedEx run before it closed) --> made it to
	22' bgs & will resume tomorrow
16:15	Sample processing, permit closeout
	Tomorrow's Objectives: Finish drilling & installing both North Drainage Ditch permanent
	monitoring wells
	H&S Notes: No Stop Works, incidents, or close calls
	Waste Notes: One soil drum labeled Non-Haz from MKTF-04R
	MKTF Well Install. Project Status ---> Complete. Will just need to develop & sample the
	four installed wells now. All of the soil samples
	were sent out today

Daily Field Report

Date:	8/17/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch Area	**Departure Time:**	17:00
Project #:	697-082-002	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Hilario Trejo
Location:	Gallup, NM	**Visitors:**	Jeff Cothron & Elliot Goddu
Task/Scope:	Drilling/installing permanent monitoring wells		

Time:	Notes:	
06:00	Tailgate meeting, permitting, gathering equipment for the day	
06:50	Setup to finish drilling/installing NDD-MW-1	
12:25	Going to clean augers & then set up on NDD-MW-2; Install of NDD-MW-1 completed w/	
	exception of pad (need grout to set first)	
17:00	Finished drilling for the day; made it to 38' on NDD-MW-2 so far	
	Tomorrow's Objectives:	Finish drilling/completing NDD-MW-2
		Finish NDD-MW-1 well pad
		Ship samples
		Drill next temporary monitoring well
	H&S Notes: No Stop Works, incidents, or close calls	
	Waste Notes: 3 Non-hazardous waste drums labeled @ NDD-MW-1	

Daily Field Report

Date:	8/18/2021	**Arrival Time:**	06:05
Project:	North Drainage Ditch Area	**Departure Time:**	15:30
Project #:	697-082-002	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	
Location:	Gallup, NM	**Visitors:**	Terracon Drillers: Jeff Cothron & Elliot Goddu
Task/Scope:	Drilling/installing monitoring wells		

Time:	Notes:
06:10	Daily tailgate meeting, permitting
06:35	Drillers have to attend weekly safety meeting for Terracon
07:30	Begin drilling NDD-MW-2 again
09:15	Called Caitlin to discuss options for well installation @ NDD-MW-2; looped Heidi into
	discussion @ 9:40 --> it was decided that we should try our best to capture the saturated
	interval ABOVE bedrock; drillers poured concrete pad for NDD-MW-1
10:00	Installing NDD-MW-2
12:50	Set up @ NDD-SB-1 for drilling
13:15	STOP WORK for lightning w/in 6 miles
13:45	Resumed drilling after half hour of no lightning w/in 10 miles
14:00	STOP WORK for thunderstorms; after looking at radar, decision made to stop for the rest of
	the day since thunderstorms likely to continue for the remainder of the permitted day
14:20	Sample processing, permit closeout
	Tomorrow's Objectives: Release outfall by rail cars to see if soil will be dry enough to
	sample on Friday
	Finish drilling NDD-SB-1
	Begin drilling/installing remaining 3 temporary monitoring
	wells
	Pour concrete pad @ NDD-MW-2
	H&S Notes: None other than Stop Works noted above
	Waste Notes: 3 Non-haz labeled drums @ NDD-MW-2
	Other News: All permanent monitoring well soil samples shipped to laboratory today

Daily Field Report

Date:	8/19/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch & Rail Car Release	**Departure Time:**	18:20
Project #:	697-082-002 & 697-089-001	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Terracon: Jeff Cothron & Elliot Goddu
Location:	Gallup, NM	**Visitors:**	
Task/Scope:	Drill/install soil borings & temporary monitoring wells		

Time:	Notes:
06:00	Tailgate meeting & permitting
06:55	Start drilling NDD-SB-1 again
08:10	Completed NDD-SB-1 & starting on drilling NDD-TW-3
11:36	Set up on NDD-TW-4 after drilling NDD-TW-3 (did not complete as a temporary well due to
	lack of water)
14:00	Brian was able to complete the remaining Rail Car surface soil samples
15:30	Setting up on NDD-TW-5 after drilling/installing NDD-TW-4
17:00	Stop drilling for day; sample processing & permit closeout
	Tomorrow's Objectives: Finish drilling/installing final temporary monitoring well
	Finish drilling remaining soil borings
	H&S Notes: No Stop Works, incidents, or close calls
	Waste Notes: 1 Haz-pending drum @ NDD-SB-1
	2 Non-Haz drums @ NDD-TW-4
	Rail Car Release Project Status: Only 1 soil boring remaining (unable to get to with current
	wetness)
	North Drainage Ditch Project Status: Final temporary well in process of being drilled
	5 remaining soil borings to be drilled

Daily Field Report

Date:	8/20/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch Area	**Departure Time:**	15:30
Project #:	697-082-002	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Terracon: Jeff Cothron & Elliot Goddu
Location:	Gallup, NM	**Visitors:**	
Task/Scope:	Drill/install temporary monitoring wells & soil borings		

Time:	Notes:
06:00	Tailgate meeting, permitting, set up on NDD-TW-5
07:10	Resume drilling NDD-TW-5
10:30	Finished drilling/installing NDD-TW-5 & decontaminating augers; Setting up to pour concrete
	pad @ NDD-MW-2
11:15	Set up to drill NDD-SB-2
13:00	Finished drilling/plugging NDD-SB-2
	Decon augers & drillers packing up (flying home for the weekend)
13:50	Well spec. measurements, housekeeping, sample processing, permit closeout
	Monday's Objectives: Finish drilling final 4 borings
	H&S Notes: No Stop Works, incidents, or close calls
	Waste Notes: 2 Non-Haz labeled drums @ NDD-TW-5
	1 Haz. - pending analysis drum @ NDD-SB-2
	Other Notes: Samples from 8/19 & 8/20 (with exception of 8/20 equipment blank
	which was collected at the end of the day) shipped to laboratory

Daily Field Report

Date:	8/23/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch Area	**Departure Time:**	17:40
Project #:	697-082-002	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Terracon: Jeff Cothron & Elliot Goddu
Location:	Gallup, NM	**Visitors:**	
Task/Scope:	Drilling soil borings		

Time:	Notes:
06:00	Tailgate meeting, permitting, equipment gathering
07:58	Set up and ready to begin drilling NDD-SB-3
09:40	Finished drilling NDD-SB-3; start drilling NDD-SB-4
13:15	Finished drilling NDD-SB-4; start drilling NDD-SB-6;
	ANOTHER CLOSE CALL W/ HOLE CLEARANCE
	---> I was told by Brian & Hilario on Friday that NDD-SB-5 had been v-trenched
	despite not seeing a trench (only pink pin flag to mark location). Today I felt
	skeptical again since there would be difficulty getting the rig to the location so I
	had Brian walk out to the flag w/ me. He did not think it had been cleared once he
	saw it so he went and cleared it w/ a hand auger
15:30	Completed drilling NDD-SB-6; drillers are decontaminating augers & then we will set up to
	drill NDD-SB-5
16:15	Began drilling NDD-SB-5
16:30	Brian filming his drilling safety video
17:00	Stop drilling for the day; sample processing; permit closeout
	Tuesday's Objectives: Finish drilling NDD-SB-5 (last of NDD locations)
	Elliot & Kara: Wingate site-specific training
	Finish the majority of the Wingate borings
	Ship samples from North Drainage Ditch to laboratory
	H&S Notes: See "Notes" from 13:15
	Waste Notes: 1 Non-Haz drum each @ NDD-SB-4 & NDD-SB-6

Daily Field Report

Date:	8/24/2021	**Arrival Time:**	06:00
Project:	North Drainage Ditch & Wingate	**Departure Time:**	17:15
Project #:	697-082-002 & 697-072-003	**Logged by:**	Kara Hoppes
Client:	Marathon	**On Site:**	Jeff Cothron, Elliot Goddu, Brian McLoughlin
Location:	Gallup, NM	**Visitors:**	
Task/Scope:	Drill soil borings, sample H_2O & soil		

Time:	Notes:
06:00	Tailgate meeting, permitting, equipment gathering, set up to drill NDD-SB-5
07:25	Resumed drilling SB-5
08:10	Finished drilling NDD-SB-5 (last of NDD locations); equipment breakdown, sample processing
09:50	Arrived @ Wingate (but non-Wingate property; gravel company property) to scout locations/
	get ramps built for access
11:45	Set up to drill BH-51
13:00	Stop Work to find correct piece to remove pipe form hole; Hilario found it @ main refinery
	& delivered it to us
14:30	Finished drilling/sampling BH-51; setting up on BH-46
15:30	Finished drilling/sampling BH-46; setting up on BH-47
16:30	Stop drilling for day (property we were on closes @ 17:00, so needed to pack up & leave;
	sample processing; equipment storage
17:00	Look into elevation difference between two Wingate monitoring wells by train tracks
17:15	Leave Wingate
	Wednesday's Objectives: Finish drilling/sampling Wingate boreholes
	H&S Notes: See 13:00
	Waste Notes: 1 Non-Haz drum @ NDD-SB-5
	Other Notes: All North Drainage Ditch samples shipped to laboratory today

Appendix C – Boring Logs

Trihydro CORPORATION

Lithology Log

Sheet 1 of 3

Project Name	Project Number	Borehole ID
Gallup Refinery, North Drainage Ditch Area	697-082-002	NDD-TW-1

Drilling Company	Driller	Ground Elevation	Total Drilled Depth
Terracon	Jeff Cothron		34.5 feet-bgs

Drilling Equipment	Drilling Method	Borehole Diameter	Date/Time Drilling Started	Date/Time Stopped
CME 55	HSA	8"	8/12/21 08:55	8/12/21 12:10

Type of Sampling Device	Water Level (bgs)	Final
Split Spoon California Modified	26.5 feet-bgs	34.5'

PID/FID (make, model, serial no.)	Geologist	Checked by/Date
PID (Honeywell Mini RAE Lite) - PGM7300	Kara Hoppes	

Location Description (include sketch in field logbook)	Weather Conditions (temp., clear, rain, wind)
	Cloudy, good temp. ~60°

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
0				0-2'	0-0.5'	0.0
			1	0 - 0.5' tan-brown clayey-silt, dry; roots; cohesive, somewhat plastic, moderate stiffness to soft		
			2	0.5 - 2' brown silty-clay; dense, cohesive, moderate plasticity; very stiff @ 2' otherwise stiff; occasional roots		
1			6		1.5-2'	0.0
			14			
2				2-4' brown, hard, cohesive, non-plastic silty-clay; dry; occ. roots & calcareous F-grained material		
			17			
			26			
3						
			28			
			30			
4				4-6'	4'	0.0
			4	4-4.5' brown, hard, cohesive, dry, mildly plastic clay w/ occ. roots		
			19	4.5-6' brown, very hard/stiff, cohesive, dry, non-plastic silty-clay; occassional roots, organic fragments, & calcareous F-C grained calcareous fragments.		
5						
			33			
			42			
6				6-7'	6'	0.0
			42	6-6.8' Same as above		
			56	6.8-7' brown, hard, cohesive, non-plastic silty (10%) - sandy (10%) - clay (80%); sand VF-F & very well-sorted		
7						
			7	7-9' SAA but moist & contains regular calcareous fragments up to C-grained & black organic fragments & roots		
			19

Lithology Log (continued)

Sheet 2 of 3

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
			24	10.5-11' brown sandy-silty clay; cohesive, moderate stiffness, damp; sand content increasing w/ depth from 10% to 20%, VF-C, poorly-sorted, predominately subround (includes calcareous grains & other mixed minerals); brittle		
			23			
11				11-13'		
			19	11-12.5' med-brown, damp, cohesive, non-plastic, stiff silty-clay w/ rare F-grained sand; roots & calcareous material similar to above still present		
			25			
12					12'	0.0
			35	12.5-13' brown sandy (25%) - clay (75%); dense, cohesive but brittle when squeezed; sand VF-C, poorly-sorted, mixed minerology but ~50% calcareous grains; occasional VC grains to 1 cm diameter. gravel & organic frags		
			32			
13				13-15'		
			14	13-14' brown sandy (10-20%)-clay (80-90%) dense, non-plastic, damp; sand VF-C, poorly-sorted, round subang; thin light green-grey ash layer @ 13.5, sand grains include calcareous; organic fragments & silicate minerals		
			25			
14				14-15' Same as above but harder & sand content down to ~5%, roots occasional	14'	0.0
			41			
			47			
15				15-17'		
			15	15-16.5' Same as above but slightly more moisture		
			23			
16				16.5-16.8' sandy (20-40%) - clay (60-80%), brown-light brown, damp, cohesive but brittle; sand VF-VC, poorly-sorted, mixed minimum, round subang	16'	0.0
			23			
				16.8-17' brown-light brown silty-clay w/ calcareous lenses/laminations, rare black organic fragments; fissile		
			11			
17				17-19'		
			7	17-17.5' tan clayey-silty (25%) - sand (75%); cohesive until pressure applied; soft, dry, sand VF-F; well-sorted		
			5	17-5-19' dry, tan silty-sand; soft, loose, VF-F; occasional black organic fragments		
18					18'	0.0
			5			
			5			
19				19-21'		
			7	19-19.5' Same as 17-17.5'		
				19.5-20.5' silty-sand, tan; grades from VF-F & well-sorted @ top to VF-C & poorly-sorted @ base; round-subround quartz dominant ~90%, else lithics; damp starting @ 20.2'; soft, loose		
			7			
20					20'	0.0
			5	20.5-21' brown, damp clayey (10%) - sand (90%); sand VF-C, poorly-sorted, same sand composition as above, slightly cohesive; soft		
			6			
21				21-23'		
			4	21-21.5' tan silty-sand VF-M, poorly-sorted, same composition as above, damp, soft, loose		
			6	21.5-22.5' brown material grading from sandy (10%) - gravelly (5%) - clay (85%) @ top, cohesive, damp, mildly plastic, sand (round gravel up to 4mm diameter) to clayey (5%) - gravelly (5%) - sand (90%) @ base (loose; gravel up to 2 cm otherwise similar comp. --> 80% quartz, 20% lithics round subangular

Lithology Log

Sheet 1 of 4

Project Name	Project Number	Borehole ID
Gallup Refinery, North Drainage Ditch Area	697-082-002	NDD-MW-2

Drilling Company	Driller	Ground Elevation	Total Drilled Depth
Terracon	Jeff Cothron		48 feet-bgs

Drilling Equipment	Drilling Method	Borehole Diameter	Date/Time Drilling Started	Date/Time Stopped
CME 55 (tracks)	HSA	4.25" ID 8" OD	8/17/21 13:40	8/18/21 09:15

Type of Sampling Device	Water Level (bgs)	Final
California Modified Split Spoon & Regular Split Spoon	28.2 feet-bgs	48'

PID/FID (make, model, serial no.)	Geologist	Checked by/Date
PID (Honeywell Mini RAE Lite - PGM7300)	Kara Hoppes	

Location Description (include sketch in field logbook)	Weather Conditions (temp., clear, rain, wind)
	Hot, bright

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
0				0-1' 1' recovery	0-0.5'	0.1
			5	0-0.5' loose, dry gravelly (10%) - clayey (10%) - sand (80%) & concrete chunks; sand VF or VC (no in between), poorly-sorted; brown		
			3			
1				0.5-1' firm, brown red-brown clay interbedded evenly with loose material same as above; damp; clay intervals are cohesive & non-plastic		
			3			
					1.5-2'	0.2
			2			
2				1-2' 1' recovery		
			2	1-1.5 reddish-brown, damp, gravelly (15%) - silty (10%) - sand (75%); sand VF-F w/ regular VC grains; poorly-sorted; damp, loose		
			3			
3				1.5-2' brown, firm, silty (10%) - sandy (10%) - clay (80%); cohesive, non-plastic, dry; occasional black organic vegetative fragments & white clay lenses up to 3 mm		
			3			
			5			
4				2-4' brown, mildly plastic, moderately stiff clay with regular calcareous modules, roots, black org. frags & white clay lenses/streaking	4'	0.0
			2			
			4			
5						
			6			
			8			
6				4-6' 1.5' recovery	6'	0.0
			5	4-5.5' Same as above		
				5.5-6' brown, gravelly (20%) - sandy (20%) - clay (60%); dry, stiff, cohesive, non-plastic; drilled through rock the same diam. or greater than split spoon; sand F-VC, poorly-sorted; gravel & sand ang-round		
			14			
7						
			19			
			13			
8				6-8'	8'	0.0
			3	6-7' Same as above; 7-8' brown, stiff, silty-clay with calcareous modules; non-plastic; dry		
			4			
9				8-10'		
			6	8-9' Same as above 9-10' Same as above with ~10% gravel & 10% sand (VF-VC, poorly-sorted); gravel up to size of modified split spoon core; rare black vegetative matter		
			14		10'	0.1

Lithology Log (continued) Sheet 2 of 4

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
			10	10-12'		
				10-10.5' Same as above		
			10	10.5-11.8' loose, clayey (10%) - gravelly (20% - up to 2" diameter) - sand (70%); sand VF-VC, poorly-sorted; sand & gravel round-angular; 10.5-11' damp; 11-11.5' moist		
11						
			10	11.8-12' same as 10-10.5', damp		
			6			
12				12-14' brown, damp, cohesive, soft clayey-silt	12'	0.1
			3			
			5			
13						
			7			
			5			
14				14-16'	14'	0.1
			2	14-14.5' brown sandy (10%) - gravelly (10%) - clay (80%); cohesive, soft; non-plastic; sand VF-F, well-sorted, gravel up to 1" diameter, round-ang		
			8	14.5-16' damp to moist tannish-brown; material grades from gravelly (10%)-clayey (10%) - sand (80%) (sand VF-VC, poorly-sorted, round-subang.) @ top to F-M, well-sorted sand @ base; loose		
15			8			
			12			
16				16-18'	16'	0.1
			13	16-17.5' brown gravelly (10-20%) - clayey (10%) - sand (70-80%), damp; angular-round, VF-VC, poorly-sorted; loose; gravel up to 3" diameter		
			16	17.5-18' brown gravelly (30% - up to size of a core diameter) - clay; cohesive, moderately plastic, medium stiffness; dry; gravel includes petrified wood frags		
17						
			15			
			15			
18				18-20' Same as above but gravel content up to 40%	18'	0.0
			6	18-19' Same as above		
				19-19.5' same as 16-17.5' but dry & gravel content up to 30%		
			16	19.5-20' same as 18-19'		
19						
			18			
			14			
20				20-22'	20'	0.0
			6	20-20.5' Same as above		
				20.5-21' loose, damp, gravelly (30%) - sand; brown; sand VF-VC, poorly-sorted; gravel up to 2 cm diameter		
			15	21-21.5' brown clayey (20%) - gravel (80%); gravel damp round-subang., up to 1" diameter		
21						
			13	21.5-22' brown sandy (30%) - clayey (20%) - silt (50%); sand VF & well-sorted; soft, damp, mildly cohesive		
			7			
22				22-24' 1.5' recovery, brown interbedded sandy (20%, VF, well-sorted)-silty-clay & silty-clay; soft, cohesive, mildly plastic, dry to damp	22'	0.1
			7			
			12			

Lithology Log (continued) Sheet 3 of 4

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
23			12			
			14			
24				24-26'	24'	0.6
			6	24-25' strong gasoline odor; gravelly (30%) - sand (70%); gravel up to 3" diameter; sand VF-VC, poorly-sorted; loose, damp		
			13	25-25.5' tan, damp gravelly (5%) - sand; sand mostly F-M, round-subround, moderate sorting; gravel up to 2 cm diameter; strong gasoline odor		
25			22	25.5-26' dry, brown, gravelly (10%) - sandy (20%) - silty (30%) - clay (40%); cohesive, non-plastic, moderately soft, no odor	25'	668
			23			
26				26-28'	26'	14.9
			14	26-26.5' Same as above but slight hydrocarbon odor		
			13	26.5-27' brown, very moist sand, gravel, silt & clay (~equal parts of each); strong gasoline odor; gravel up to size of core diameter; sand poorly-sorted in terms of size, angular & mineralogy		
27			8	27-28' brown sandy-silty (20%) - clay; dry, slight hydrocarbon odor; occasional gravel, cohesive, moderate plasticity, stiff		
			18			
28				28-30' Saturated @ 28.2'	28'	103.2
			30	28-28.5' brown gravelly (40%) - clayey (10%) - sand (50%); gravel > size of core diameter; sand VF-VC; poorly-sorted; mildly cohesive; no odor	28.2-28.7'	4.2
			21	28.5-29' moist to damp, gravelly (20%) - sandy (20%) - clay (60%); brown, cohesive non-plastic		
29			32	29-30' brown, weathered silty shale; breaks apart easily with fingers; somewhat fissile; cohesive, damp		
			45			
30				30-32'	30'	0.2
			20	30-31' Same as above		
			42	31-32' reddish-brown weathered siltstone w/ greenish-white clay lenses up to 2 mm diameter, dry		
31			52			
			50			
32				32-34' Same as above but with white calcareous streaking	32'	0.1
			10			
			9			
33			13			
			50			
34				34-35' Same as above but hard & with greenish-white clay lenses & streaking; up to diameter of core	34'	0.3
			17			
			37			
35			42			
			50			
36					36'	0.1

Lithology Log (continued) Sheet 4 of 4

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
36			23	36-37' Same as above but more fissile; can break apart easily with hands		
			50			
37			40		37'	0.1
			50	END OF DAY		
				37-38' 8/18/21 RESUME @ 07:30		
38			24	37-37.7' reddish-brown, extremely fissile silty shale with whitish-green clay lenses; cohesive		
			55	37.7-38' reddish-brown, damp; extremely weathered silty-claystone; cohesive but only moderately consolidated; greenish-white only streaking occasional		
39			10	38-39' silty-clay shale otherwise similar to 37-37.7'; dry	39'	0.1
			28	39-40.5' Same as above but damp		
40			65	40.5-42' Same as above but 41-41.5'; smells of gasoline		
			16			
41			37		41'	727
			60			
42			39	42-43' gasoline odor; same as above		
			66			
43			22	43-44.5' Same as above	43'	1434
			44			
44			67			
			24	44.5-46' Same as above but with lead-grey metallic faces on some of the shales broken pieces; hydrocarbon odor increasing with depth; lense of black asphaltic-looking material ~45.8'		
45			52		45'	1136
			60			
46			17	46-48' Same as above including metallic streaking, but dry & crumbles more easily than above section		
			28			
47			41		47'	1042
			50			
48					48'	598

0				0-2'		
			1	0-1' non-native backfill so tentatively we could access with rig (supplementing what would have been 0-0.5' & 1.5-2' with appropriate intervals)		
			1	1-2' highly-moist, brown silty-clay; very cohesive & plastic; HC odor; soft; roots		
1			1		1-1.5'	1334
			1			
2				2-4'		
			1	2-3' Same as above but saturated	2-2.5'	1213
				3-4' Hydrocarbon odor & dark-grey staining throughout; brown-grey, occ. roots, highly moist; grades from sandy (50%), silty-clay (50%) @ top (sand VF-F, well-sorted, soft, mostly cohesive, plastic) to silty-clay @ bottom (highly cohesive & plastic)	2.5-3'	1190
3			2			
			3			
			2			
4				4-6' Same as above (bottom of section) interlaminated with rare 1" thick blackish-grey, saturated sand (VF-F, well-sorted); occasional angular to subangular gravel up to 1" diameter from 5.5-6'		
			1			
			1			
5					5'	703.3
			2			
			3			
6				6-8' slight hydrocarbon odor, brown & grey-brown hydrocarbon staining, saturated sandy (30%)-clayey (30%)-silt (40%); very cohesive & plastic, soft		
			2			
			3			
7					7'	203.7
			3			
			3			
8				8-10'		
			1	8-8.5' Same as above		
				8.5-10' brown with rare grey hydrocarbon staining; saturated, soft, cohesive; grades from clayey (10%)-silty (30%)-sand (60%) (VF, well-sorted) @ top to sandy (30%)-clayey (20%)-gravel (50%), gravel round-subangular & up to diameter of core; sand mostly F-VF, well-sorted) @ base		
			2			
9			2		9'	51.0
			3			

Lithology Log (continued) Sheet 2 of 2

Depth	Interval	Recovery	Blow Counts	Description (Include lithology, grain size, sorting, angularity, Munsell color name & notation, minerology, bedding, plasticity, density, consistency, etc., as applicable)	Screened Interval (ft-bgs)	PID (ppm)
			7	10-12' saturated, no odor 10-11' brown, F-M-grained sand, round-subround, well-sorted, loose with layer of muddy (10%)-gravelly (20%)-sand (70%) from 10.2-10.3' (loose, gravel round-angular & up to 2" diameter, sand same as above)		
			7			
11			11	11-12' grey-brown clayey (20%)-gravelly (10%)-sand (70%) (sand VF-M, moderately sorted; gravel up to 2" diam); loose to mildly cohesive	11'	130.7
			11			
12			1	12-14' saturated, grey-brown, loose sand; predominately F-M, well-sorted w/ occasional gravel up to 1" diameter & VC grains throughout; base of section ~ 10% mud, gravel round-angular		
			3			
13			3		13'	19.6
			3			
14			5	14-16' 1.5' recovery red, stiff silty-clay; highly cohesive, somewhat consolidated; appears to be transitioning to highly weather claystone @ base; rare whitish-grey ashy laminations; moist-damp		
			11			
15			12		15'	19.3
			12			
16			9	16-18' 1' recovery; damp-dry; same as above except looks even more like claystone --> bedrock; occasional whitish-green clay lenses up to 1 cm width		
			12			
17			17		17'	7.6
			15			
18			9	18-20' Same as above but harder/more consolidated then above & with regular whitish green clay lenses & laminations; no odor		
			15			
19			22		19'	13.4
			25		19.5-20'	10.9
20

Job Number 697-092-001
Installation Date
Well Diameter 2 inch
Borehole Diameter 8-in
Screen Length 15 ft

Measured Depth (pre-development) 35.00
Static Water Level (ft) DRY
Standing Fluid Column (ft) DRY
One Well Volume (gal)
One Annulus Volume (gal)
Minimum Gallons to Purge
Measured Depth (post-development)
Water Level (ft) (post-development)

Qty of Drilling Fluid Lost N/A
Development Method DRY
Purging Equipment DRY
Water Level Equipment fluid level probe
pH/EC Meter YSI
Turbidity Meter LaMotte, 2020we
Other TD of Installed well = 34 ft bgs

Time	Amount Purged (gal)	Field Parameters Measured						Comments
		EC (mS/cm)	pH	Temp. (ºC)	Turbidity (NTU)	D.O. (mg/L)	SAL.	
13:40	0							Dry Well

RE: North Drainage Ditch Area OrderNo.: 2108A32

Dear Caitlin Fields:

Hall Environmental Analysis Laboratory received 15 sample(s) on 8/19/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

ANALYTICAL REPORT

September 03, 2021

Hall Environmental Analysis Laboratory

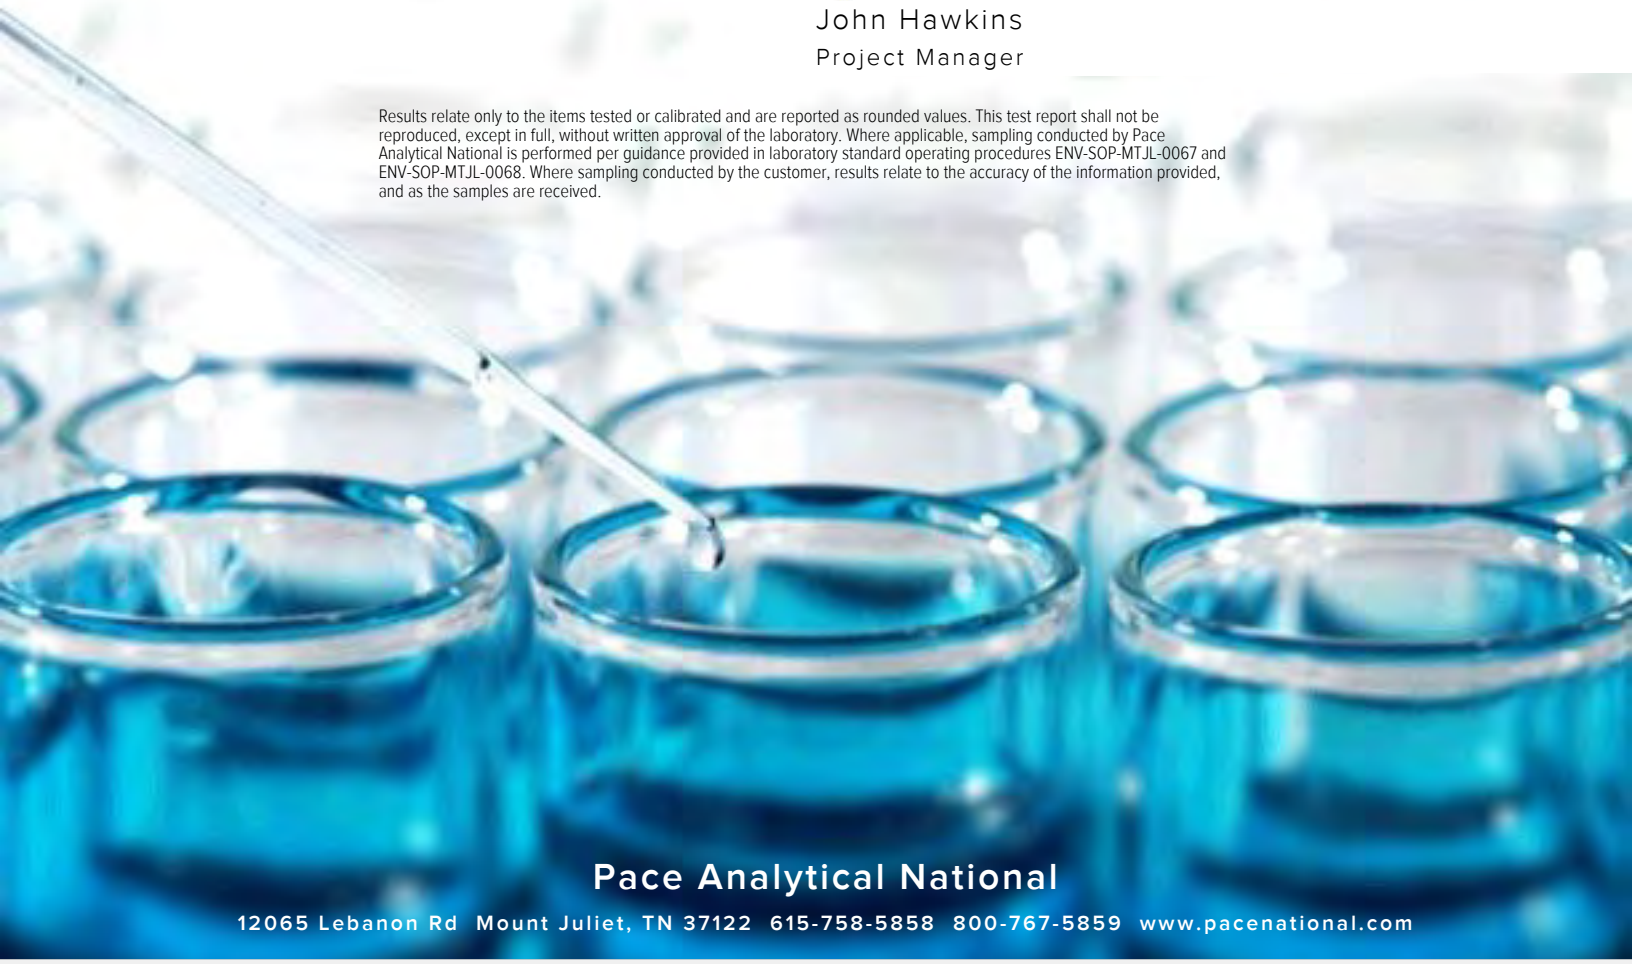

Sample Delivery Group:	L1394443
Samples Received:	08/25/2021
Project Number:	
Description:	

Report To: Jackie Bolte
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By:

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.

Completed By: **Isaiah Ortiz** **8/19/2021 9:09:10 AM**

Reviewed By: JR 8/19/21

Chain of Custody

1. Is Chain of Custody complete?	Yes ☑	No ☐	Not Present ☐
2. How was the sample delivered?	Courier		

Log In

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☐	No ☐	NA ☑
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	# of preserved bottles checked for pH: (<2 or >12 unless noted)
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	Adjusted?
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	Checked by: SPA 8.19.21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order?	Yes ☐	No ☐	NA ☑

RE: North Drainage Ditch Area OrderNo.: 2108B84

Dear Caitlin Fields:

Hall Environmental Analysis Laboratory received 26 sample(s) on 8/20/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

ANALYTICAL REPORT

September 01, 2021

Hall Environmental Analysis Laboratory

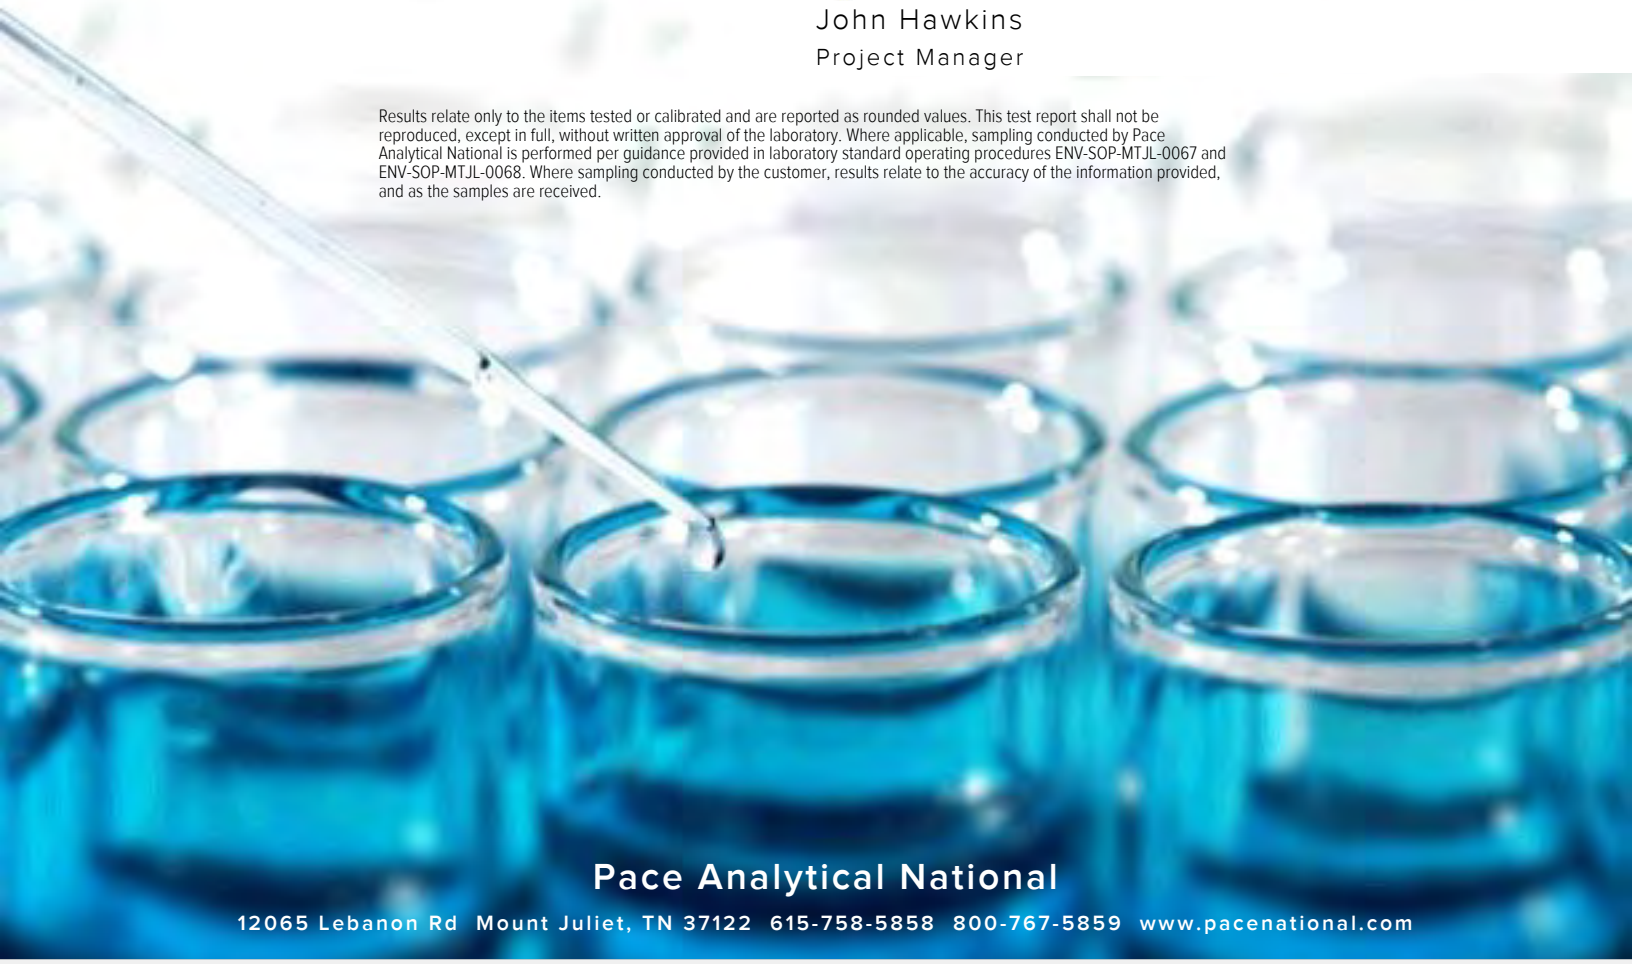

Sample Delivery Group:	L1394947
Samples Received:	08/25/2021
Project Number:	
Description:	

Report To: Jackie Bolte
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By: John V Hawkins

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☑	No ☐	NA ☐
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	# of preserved bottles checked for pH: (<2 or >12 unless noted)
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	Adjusted?
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	Checked by: JR 8/20/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order?	Yes ☐	No ☐	NA ☑

RE: North Drainage Ditch Area OrderNo.: 2108D42

Dear Caitlin Fields:

Hall Environmental Analysis Laboratory received 27 sample(s) on 8/25/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

ANALYTICAL REPORT

September 03, 2021

Hall Environmental Analysis Laboratory

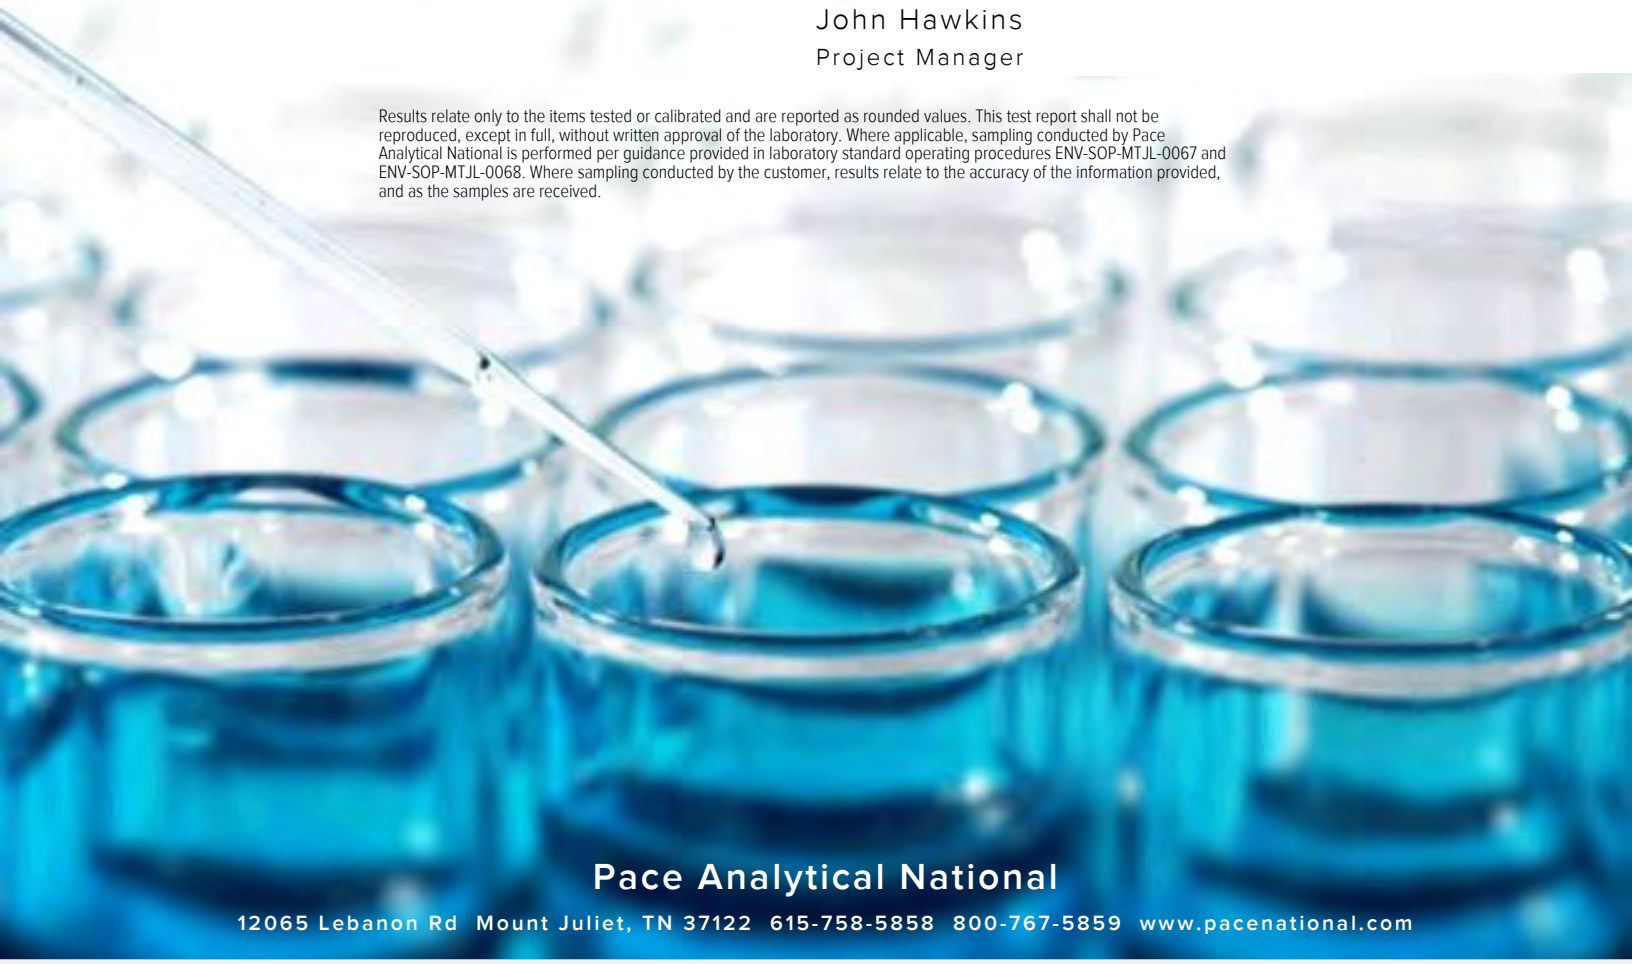

Sample Delivery Group:	L1396104
Samples Received:	08/27/2021
Project Number:	
Description:	

Report To: Jackie Bolte
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By:

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Sample Log-In Check List

Client Name: **Marathon** Work Order Number: **2108D42** RcptNo: 1

Received By: **Cheyenne Cason** **8/25/2021 7:10:00 AM**

Completed By: **Sean Livingston** **8/25/2021 9:42:44 AM**

Reviewed By: JN 8/25/21

Chain of Custody

1. Is Chain of Custody complete?	Yes ☑	No ☐	Not Present ☐
2. How was the sample delivered?	Courier		

Log In

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☑	No ☐	NA ☐
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	# of preserved bottles checked for pH: (<2 or >12 unless noted)
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	Adjusted?
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	Checked by: KPA 8/25/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order?	Yes ☐	No ☐	NA ☑

RE: North Drainage Ditch Area OrderNo.: 2108785

Dear Caitlin Fields:

Hall Environmental Analysis Laboratory received 13 sample(s) on 8/13/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Completed By: **Desiree Dominguez** **8/13/2021 4:06:02 PM**

Reviewed By: JD 8.16.21

Chain of Custody

1. Is Chain of Custody complete? Yes ☑ No ☐ Not Present ☐
2. How was the sample delivered? Courier

Log In

3. Was an attempt made to cool the samples? Yes ☑ No ☐ NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C Yes ☑ No ☐ NA ☐
5. Sample(s) in proper container(s)? Yes ☑ No ☐
6. Sufficient sample volume for indicated test(s)? Yes ☑ No ☐
7. Are samples (except VOA and ONG) properly preserved? Yes ☑ No ☐
8. Was preservative added to bottles? Yes ☐ No ☑ NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes ☑ No ☐ NA ☐
10. Were any sample containers received broken? Yes ☐ No ☑
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody) Yes ☑ No ☐
12. Are matrices correctly identified on Chain of Custody? Yes ☑ No ☐
13. Is it clear what analyses were requested? Yes ☑ No ☐
14. Were all holding times able to be met? (If no, notify customer for authorization.) Yes ☑ No ☐

# of preserved bottles checked for pH: (<2 or >12 unless noted)

Adjusted?

Checked by: JR 8/16/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

RE: North Drainage Ditch Investigation OrderNo.: 2109522

Dear Caitlin Fields:

Hall Environmental Analysis Laboratory received 6 sample(s) on 9/10/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2109522**
Date: **9/28/2021**

CLIENT: Marathon
Project: North Drainage Ditch Investigation

Analytical Notes Regarding EPA Method 8270:
The laboratory control spike (LCS) had low recoveries for 2 compounds: 4-nitrophenol and pentachlorophenol. The LCSD, MS and MSD all had acceptable recoveries. All 8270 samples were reextracted and reanalyzed, past the holding time, and they confirmed the initial results. The initial results are reported.

ANALYTICAL REPORT

September 26, 2021

Hall Environmental Analysis Laboratory

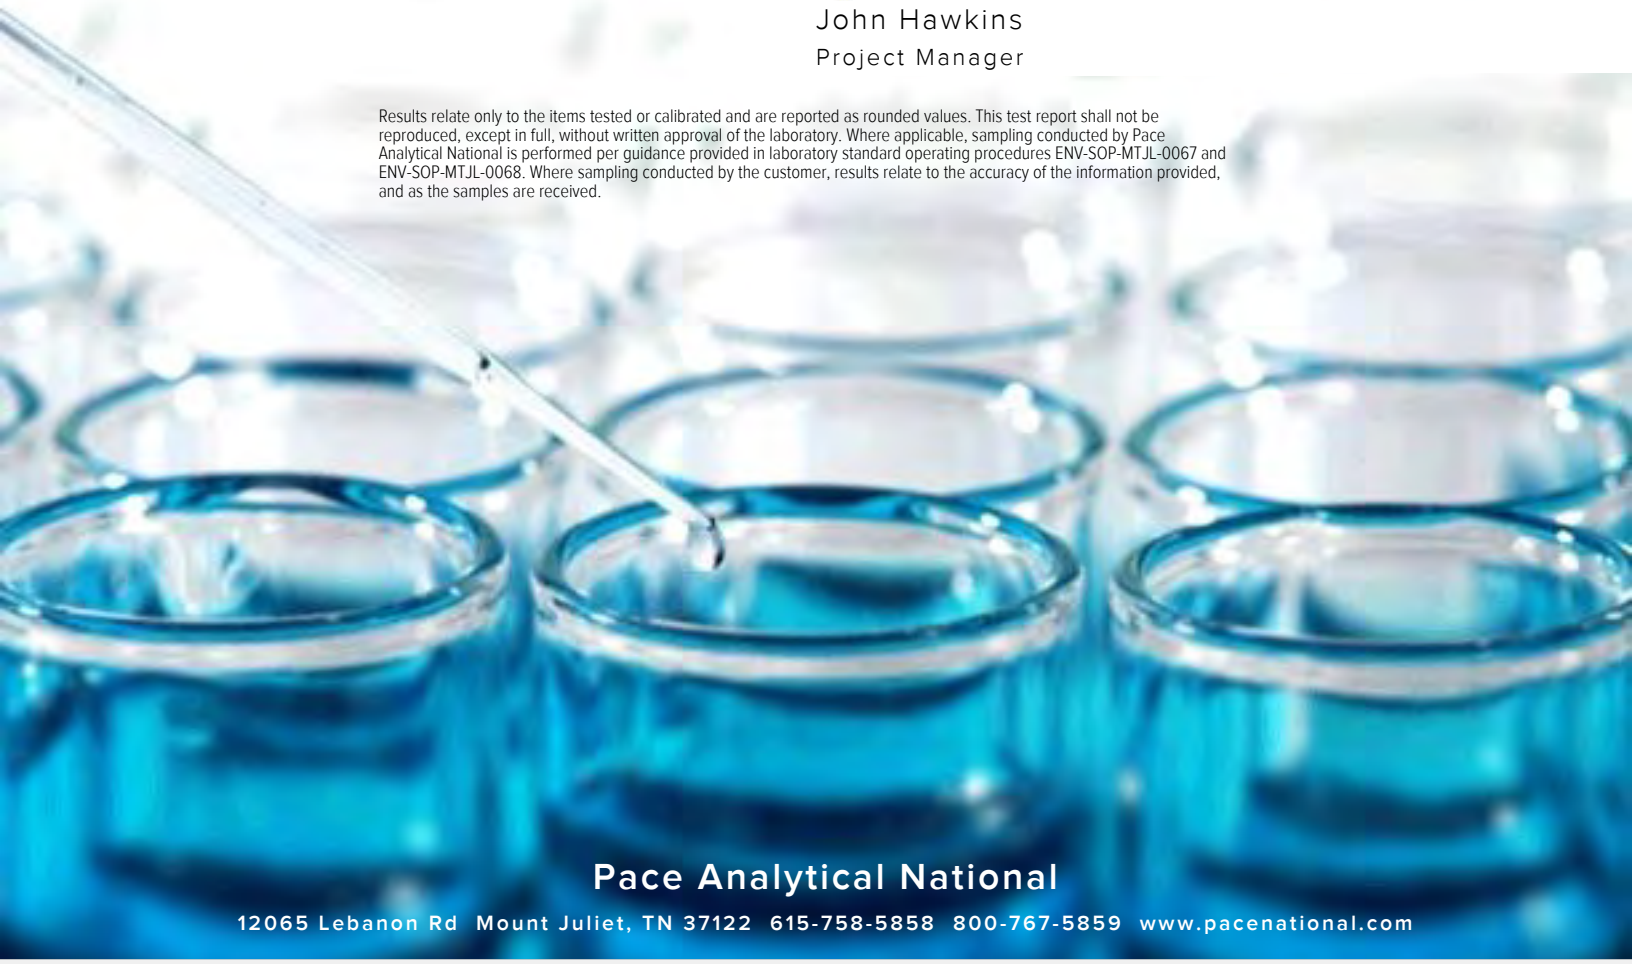

Sample Delivery Group:	L1403469
Samples Received:	09/15/2021
Project Number:	
Description:	

Report To: Andy Freeman
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By: John V Hawkins

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Appendix G – Data Validation Report

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: Western Refining SW, North Drainage Ditch	Sample Matrix: Soil
Project Number: 697-096-001 Task: 0002	Sample Start Date: 08/16/2021
Date Validated: 10/06/2021	Sample End Date: 08/18/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total Metals by SW-846 Method 6010B ▪ Total Mercury by SW-846 Method 7471B ▪ Cyanide by SW-846 Method 9012B	
Laboratory Project ID: 2108A32	
Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical in Mt. Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- Laboratory control samples (LCS)
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Equipment blanks

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NDD-MW-1 (0-0.5')	2108A32-001
NDD-MW-1 (1.5-2')	2108A32-002
NDD-BD2	2108A32-003
NDD-MW-1 (7.5-8')	2108A32-004
NDD-MW-1 (27.5-28')	2108A32-005
NDD-MW-1 (35-35.5')	2108A32-006
NDD-MW-1 (45.5-46')	2108A32-007
NDD-MW-2 (0-0.5')	2108A32-008
NDD-MW-2 (1.5-2')	2108A32-009
NDD-MW-2 (28.2-28.7)	2108A32-010
NDD-EB3	2108A32-011
NDD-EB4	2108A32-012
NDD-MW-2 (42.5-43')	2108A32-013
NDD-MW-2 (47.5-48')	2108A32-014A
MeOH Blank	2108a32-015

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ✓ Trip and Equipment Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
JB	Estimated concentration due to blank contamination
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,872 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify analytical non-conformances related to this data set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits D – Sample diluted due to matrix. S – % Recovery outside of range due to dilution or matrix. J4 – The associated batch QC was outside the established quality control range for accuracy. J5 – The sample matrix interfered with the ability to make any accurate determination; spike value is high.	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel information, dates, and times of receipt. The "Relinquished by:" information was typed rather than signed by the appropriate field personnel, but custody was not affected. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 8260B: Dilutions of 5 times were applied to samples NDD-MW-1 (27.5-28') and NDD-MW-2 (47.5-48') for the analysis of VOCs. Method 8270C: The submitted samples were diluted by factors of 10 and 20 times for the analyses of SVOC target analytes. Method 8015D: Dilutions of 5 times were applied to samples NDD-MW-1 (27.5-28') and NDD-MW-2 (47.5-48') for the analysis of GRO. Method 8015M/D: Sample NDD-MW-1 (7.5-8') was diluted by a factor of 100 times for the analysis of DRO and MRO. Method 6010B: Dilutions of 2 to 200 times were applied to select submitted samples for the analysis of total metals. Method 7471: Sample NDD-BD2 was diluted by a factor of 5 times for the analysis of mercury.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	No
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. The CoC indicated requests for metals by Method 6020 and mercury by Method 7470. The analyses by Method 6010B and Method 7471B met the project accuracy and precision goals and were acceptable replacements.	
6. Were samples received in good condition within method-specified requirements?	Yes
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperature within the recommended temperature range of 4°C ± 2°C at 5.8°C as noted on the CoC and on the *Sample Log-in Check List*. Portions of the samples transferred to Pace Analytical were received intact and with the cooler temperature within the recommended range at 3.9°C as noted on the CoC.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	

VALIDATION CRITERIA CHECKLIST

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of milligrams per kilogram (mg/kg), which were acceptable for the sample matrix and the analyses requested. The results for the soil samples were reported on a wet weight, as-received basis. The equipment blank results were reported in the appropriate units of micrograms per liter (µg/L).

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
8015D	**GRO**	**62086**	**1.7 mg/kg**
8015D	**GRO**	**62159**	**1.5 mg/kg**
8015M/D	**DRO**	**62277**	**11 mg/kg**
6010B	Beryllium	62201	0.041 mg/kg
6010B	Cobalt	62201	0.062 mg/kg
6010B	Cadmium	62280	0.055 mg/kg

Detections of the identified analytes in the associated samples that were less than the blank results or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than 10 times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Analysis Batch	Prep Batch	MS Sample Source
8260B	VOCs	62086	-----	Not Prepared
8260B	VOCs	62159	-----	Not Prepared
8260B	VOCs	R80688	-----	Not Prepared
8270C	SVOCs	80799	62128	Not Prepared
8270C	SVOCs	80881	62187	Not Prepared
8270C	SVOCs	81016	62216	Not Prepared
8270C	SVOCs	80978	62272	Not Prepared
Method	Analytes	Analysis Batch	Prep Batch	MS Sample Source
8015D MOD	GRO	62086	-----	Not Prepared
8015D MOD	GRO	62159	-----	Not Prepared
8015M/D	DRO	80736	62109	Not Prepared
8015M/D	DRO	80756	62132	Not Prepared
8015M/D	DRO	80913	62277	Not Prepared
6010B	Metals	80853	62201	Not Prepared
6010B	Metals	80954	62280	Not Prepared
7471	Mercury	80969	62297	NDD-BD2
9012B	Cyanide	WG1730156	R81401	NDD-MW-1 (0-0.5') and NDD-MW-1 (45.5-46')
9012B	Cyanide	WG1731390	R81401	NDD-MW-2 (1.5-2') and Not Associated

Not Associated – The MS sample source was not associated with this project.
Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from project samples were within laboratory and data validation QC limits, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits
7471	**Mercury**	**62297**	**150%**	**148%**	**75-125%**
9012B	Cyanide	R81401	146%	136%	75-125%
9012B	Cyanide	R81401	149%	143%	75-125%
9012B	**Cyanide**	**R81401**	**149%**	**156%**	**75-125%**

Detections of mercury and cyanide in the associated samples were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of these analytes in the associated samples did not require qualification due to these non-conformances.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS percent recoveries were within laboratory QC limits, with the following exceptions.

The reported recovery for mercury in the LCS for Method 7471 batch 62297 was outside the acceptance range of 70-130% at 61.7%. Detections of mercury in the associated samples were previously qualified J+ based on evidence of potential high bias in the matrix spike results. These qualifiers were changed to J with no bias indicators due to the conflicting QC results. The associated non-detect results were assigned UJ qualifiers due to evidence of potential low bias.

The cyanide recovery in the LCS for Method 9012B batch R81401 was outside the acceptance range of 85-115% at 73.5%. Cyanide was not detected in the associated sample in this batch, NDD-MW-1 (0-0.5'), and the result was assigned a UJ qualifier due to evidence of potential low bias.

LCSDs were not analyzed as part of this data set.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

Method	Sample	Surrogate	Surrogate Recovery	QC Limits
8015M/D	**NDD-MW-1 (27.5-28')**	**DNOP**	**135%**	**70-130%**
8015M/D	NDD-MW-1 (35-35.5')	DNOP	152%	70-130%
8015M/D	NDD-MW-1 (45.5-46')	DNOP	138%	70-130%
8015M/D	NDD-MW-2 (28.2-28.7)	DNOP	131%	70-130%

DRO was detected in sample NDD-MW-1 (27.5-28'), and the result was assigned a J+ qualifier due to evidence of potential high bias. MRO was not detected in this sample, and qualification of the result was not required. DRO and MRO were not detected in the remaining samples, and qualification of the results was not required based on the evidence of potential high bias.

The SVOC results were not qualified based on the surrogate non-conformances in the Method 8270C analyses since the applied dilutions of 10 to 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

The DRO and MRO results for sample NDD-MW-1 (7.5-8') were not qualified based on the surrogate non-conformances in the Method 8015M/D analysis since the applied dilution of 100 times resulted in a surrogate concentration below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. One trip blank sample, MeOH Blank, and two equipment blank samples, NDD-EB3 and NDD-EB4, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST	
19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples?	Yes
Comments: Target analytes were reported as not detected in the trip blank and equipment blank samples.	
20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	No
Comments: The number of field duplicates collected was not equal to at least 10% of the number of samples. • Sample NDD-BD2 was collected as a field duplicate of sample NDD-MW-1(1.5-2).	
21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)?	No
Comment: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-50% for soil samples, with the following exception. **The RPD for mercury exceeded the data validation limit of 50% at 66.7%. The mercury results for the parent and duplicate samples, NDD-MW-1 (1.5-2') and NDD-BD2, were assigned J qualifiers due to evidence of poor precision.**	

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for the analyses in this data set as summarized below.

Method	Analytes	Batch	Laboratory Duplicate Sample Source
9012B	Cyanide	R81401	NDD-MW-1 (0-0.5') and NDD-MW-1 (45.5-46')
9012B	Cyanide	R81401	NDD-MW-1 (27.5-28') and Not Associated

Not Associated – The MS sample source was not associated with this project.

The reported RPDs for laboratory duplicates prepared from project samples were within laboratory acceptance limits.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods with the following exceptions.

Sample	Analyte	Method 8260B (mg/kg)	Method 8270C (mg/kg)	Reporting Limits (8260/8270)	RPD
NDD-MW-1 (1.5-2')	1-Methylnaphthalene	0.092	ND	0.14 / 3.9	----
NDD-MW-1 (7.5-8')	1-Methylnaphthalene	0.066	ND	0.11 / 3.9	----
NDD-MW-1 (27.5-28')	1-Methylnaphthalene	0.32	ND	0.49 / 2.0	----
NDD-MW-1 (1.5-2')	2-Methylnaphthalene	0.078	ND	0.14 / 3.9	----
NDD-MW-1 (7.5-8')	2-Methylnaphthalene	0.097	ND	0.11 / 3.9	----
NDD-MW-1 (27.5-28')	2-Methylnaphthalene	0.54	ND	0.49 / 2.0	----
NDD-MW-2 (47.5-48')	2-Methylnaphthalene	0.34	ND	0.80 / 1.9	----
NDD-MW-1 (1.5-2')	Naphthalene	0.016	ND	0.072 / 3.9	----
NDD-MW-1 (7.5-8')	Naphthalene	0.024	ND	0.053 / 3.9	----
NDD-MW-1 (27.5-28')	Naphthalene	0.34	ND	0.24 / 2.0	----
NDD-MW-2 (42.5-43')	Naphthalene	0.018	ND	0.073 / 2.0	----
NDD-MW-2 (47.5-48')	Naphthalene	0.19	ND	0.40 / 1.9	----

----- – RPD could not be calculated.

The differences between the results reported for Method 8260B and Method 8270C were evaluated to be within the measurement uncertainty of the analytical methods at concentrations near or below the reporting limits. Qualification of results was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? N/A

Comments: Only total metals were analyzed as part of this data set.

FIELD DUPLICATE SUMMARY

Client Sample ID: NDD-MW-1 (1.5-2') Field Duplicate Sample ID: NDD-BD2

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

The RPD for mercury exceeded the data validation limit of 50% at 66.7%. The mercury results for the parent and duplicate samples, NDD-MW-1 (1.5-2') and NDD-BD2, were assigned J qualifiers due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
MBD	Method blank detection
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
ERPD-FD	High field duplicate RPD.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: Western Refining SW, North Drainage Ditch	Sample Matrix: Soil
Project Number: 697-096-001 Task: 0002	Sample Start Date: 08/18/2021
Date Validated: 10/08/2021	Sample End Date: 08/20/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total Metals by SW-846 Method 6010B ▪ Total Mercury by SW-846 Method 7471B ▪ Cyanide by SW-846 Method 9012B	
Laboratory Project ID: 2108B84	
Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical in Mt. Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- Laboratory control samples (LCS)
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Tier II Data Validation Report Summary

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NDD-TW-5 (0-0.5')	2108B84-001
NDD-TW-5 (1.5-2')	2108B84-002
NDD-TW-5 (18.5-19')	2108B84-003
NDD-TW-5 (23-23.5')	2108B84-004
NDD-BD4	2108B84-005
NDD-TW-5 (30.5-31)	2108B84-008
NDD-SB-2 (0-0.5')	2108B84-009
NDD-SB-2 (1.5-2')	2108B84-010
NDD-SB-2 (3.5-4')	2108B84-011
NDD-SB-2 (19-19.5')	2108B84-012
NDD-SB-1 (0-0.5')	2108B84-013
NDD-SB-1 (1.5-2')	2108B84-014
NDD-SB-1 (5-5.5')	2108B84-015
NDD-BD3	2108B84-016
NDD-SB-1 (13.5-14')	2108B84-017
NDD-TW-3 (0-0.5')	2108B84-018
NDD-TW-3 (1.5-2')	2108B84-019
NDD-TW-3 (33.5-34')	2108B84-020
NDD-TW-4 (0-0.5')	2108B84-021
NDD-TW-4 (1.5-2')	2108B84-022
NDD-TW-4 (15-15.5')	2108B84-023
NDD-TW-4 (31.5-32')	2108B84-024
MeOh Blank-1	2108b84-025
MeOh Blank-2	2108b84-026

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ✓ LCS (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 3,432 data points. The data completeness calculation does not include any submitted blank sample results. One data point was rejected. The data completeness measure for this data package is calculated to be 99.97% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify analytical non-conformances related to this data set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits D – Sample diluted due to matrix. S – % Recovery outside of range due to dilution or matrix. J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.	
3. Were sample CoC forms and custody procedures complete?	No
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel information, dates, and times of receipt. The "Relinquished by:" information was typed rather than signed by the appropriate field personnel, but custody was not affected. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times. Equipment blank samples NDD-EB5 and NDD-EB6 were listed on the CoC but were not included in the shipping containers. Blank sample results are not included in the completeness calculation; therefore, validation action was not required for this omission.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 8260B: Dilutions of 5 to 500 times were applied to select samples for the analysis of VOCs. Method 8270C: Select submitted samples were diluted by factors of 10 to 50 times for the analyses of SVOC target analytes. Method 8015D: Samples NDD-TW-5 (18.5-19') and NDD-SB-2 (0-0.5') were diluted by factors of 5 for GRO analyses. Dilutions of 50 times were applied to samples NDD-SB-2 (1.5-2'), NDD-SB-2 (3.5-4'), NDD-SB-1 (5-5.5'), and NDD-BD3. Method 8015M/D: Dilution factors of 10 times were applied to samples NDD-SB-1 (5-5.5') and NDD-BD3 for the analysis of DRO and MRO. Samples NDD-SB-2 (1.5-2') and NDD-SB-2 (3.5-4') were diluted by factors of 50 times. Method 6010B: Dilutions of 2 to 200 times were applied to select submitted samples for the analysis of total metals.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	No
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. The CoC indicated requests for metals by Method 6020 and mercury by Method 7470. The analyses by Method 6010B and Method 7471B, respectively, met the project accuracy and precision goals and were acceptable replacements. The analytical method for cyanide was not identified on the CoC and the use of EPA Method 335.4 and the equivalent SW-846 Method 9012 was appropriate.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C at 2.3°C and 2.7°C as noted on the *Sample Log-in Check List*. Portions of the samples transferred to Pace Analytical were received intact and with the cooler temperature outside the recommended range at 1.7°C as noted on the CoC. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.	

VALIDATION CRITERIA CHECKLIST

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were digested/extracted and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of milligrams per kilogram (mg/kg), which were acceptable for the sample matrix and the analyses requested. The results for the soil samples were reported on a wet weight, as-received basis.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
6010B	Beryllium	62200	0.033 mg/kg
6010B	Beryllium	62201	0.041 mg/kg
6010B	Cobalt	62201	0.062 mg/kg

Detections of beryllium and cobalt in the associated samples were greater than 10 times the blank concentrations, and the results did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Analysis Batch	Prep Batch	MS Sample Source
8260B	VOCs	A80915	-----	Not Prepared
8260B	VOCs	A80948	-----	NDD-SB-2 (0-0.5')
8260B	VOCs	R80995	-----	Not Prepared
8270C	SVOCs	80881	62157	Not Prepared
8270C	SVOCs	80881	62187	Not Prepared
8015D MOD	GRO	B80915	-----	Not Prepared
8015D MOD	GRO	B80948	-----	NDD-TW-5 (30.5-31)
8015D MOD	GRO	B80995	-----	Not Prepared
8015M/D	DRO	80756	62132	Not Prepared
Method	Analytes	Analysis Batch	Prep Batch	MS Sample Source
8015M/D	DRO	80779	62136	NDD-TW-4 (0-0.5')
6010B	Metals	80853, 80919	62200	NDD-TW-5 (0-0.5')
6010B	Metals	80853, 80919, 80954	62201	NDD-TW-4 (15-15.5')
7471	Mercury	81040	62361	NDD-SB-2 (1.5-2')
7471	Mercury	81040	62362	NDD-TW-4 (1.5-2')
9012B	Cyanide	R3698238	R81402	NDD-SB-2 (19-19.5') and NDD-TW-4 (1.5-2')
9012B	Cyanide	R2398745	R81402	NDD-TW-4 (31.5-32') and Not Associated

Not Associated – The MS sample source was not associated with this project.
Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits	MS/MSD RPD	RPD QC Limits
6010B	**Antimony**	**62200**	**20.5%**	**15.2%**	**75-125%**	**29.6%**	**20%**
6010B	**Silver**	**62200**	**50.0%**	**49.1%**	**75-125%**	**Acceptable**	**20%**

Antimony and silver were not detected in the associated samples, and the results were assigned UJ qualifiers due to evidence of potential low bias. The result for antimony in the parent sample, NDD-TW-5 (0-0.5'), was assigned an R qualifier, due to evidence of extreme low bias (recoveries less than 30%). The antimony results were also qualified based on the evidence of poor precision.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

Comments: The LCS percent recoveries were within laboratory QC limits. LCSDs were not analyzed as part of this data set.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: The reported surrogate recoveries were within laboratory QC limits, with the following exceptions.

Method	Sample	Surrogate	Surrogate Recovery	QC Limits
8015M/D	NDD-TW-5 (23-23.5')	DNOP	130%	70-130%
8015M/D	**NDD-TW-5 (30.5-31)**	**DNOP**	**130%**	**70-130%**
8015M/D	**NDD-SB-2 (19-19.5')**	**DNOP**	**132%**	**70-130%**
8015M/D	NDD-SB-1 (0-0.5')	DNOP	131%	70-130%
8260B	**NDD-SB-1 (5-5.5')**	**Dibromofluoromethane**	**68.7%**	**70-130%**
8015M/D	NDD-TW-3 (1.5-2')	DNOP	132%	70-130%
8015M/D	**NDD-TW-4 (1.5-2')**	**DNOP**	**138%**	**70-130%**
8270C	NDD-TW-4 (1.5-2')	Nitrobenzene-d_5	23.3%	24.7-73.2%

DRO was detected in samples NDD-TW-5 (30.5-31), NDD-SB-2 (19-19.5'), and NDD-TW-4 (1.5-2') and the results were assigned J+ qualifiers due to evidence of potential high bias. MRO was not detected in these samples, and qualification of the result was not required. DRO and MRO were not detected in the remaining identified samples, and qualification of the results was not required based on the evidence of potential high bias.

Since Method 8260B surrogate associations were not available from the laboratory, qualification was assigned to all target analytes when one or more surrogates was outside the acceptance range. This condition existed for sample NDD-SB-1 (5-5.5'). Detections of the target analytes in sample NDD-SB-1 (5-5.5') were assigned J- qualifiers and non-detect results were qualified UJ due to evidence of potential low bias.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample NDD-TW-4 (1.5-2'), and qualification of sample data was not required based on the single surrogate non-coonformance.

SVOC and DRO/MRO results were not qualified based on the surrogate non-conformances in the Method 8270C and Method 8015M/D analyses with applied dilutions of 10 times or greater since these resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. Two trip blank samples, MeOh Blank-1 and MeOh Blank-2, were collected as part of this sample set. Equipment blank samples NDD-EB5 and NDD-EB6 were listed on the CoC but were not included in the shipping containers.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank samples, with the following exceptions.

In trip blank sample MeOh Blank-1, methylene chloride was detected at a concentration of 0.064 mg/kg and toluene was reported at a concentration of 0.011 mg/kg. Methylene chloride was not detected in the associated samples, and qualification of results was not required based on this trip blank detection.

Toluene was detected in samples NDD-TW-5 (30.5-31) and NDD-SB-2 (19-19.5') at concentrations less than the applicable reporting limits, and the results were assigned U qualifiers. Toluene was not detected in the remaining associated samples or the reported concentrations were greater than 10 times the trip blank detection; therefore, qualification of those results was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to 10% of the number of samples.

- Sample NDD-BD3 was collected as a field duplicate of sample NDD-SB-1(5-5.5').
- Sample NDD-BD4 was collected as a field duplicate of sample NDD-TW-5(23-23.5').

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comment: As indicated in the Field Duplicate Summary Tables at the end of this report, field duplicate RPD values were within data validation QC limits of 0-50% for soil samples, with the following exceptions.

Duplicate pair NDD-SB-1(5-5.5') / NDD-BD3: **The RPD for naphthalene exceeded the data validation limit of 50% at 54.9%. The naphthalene results for the parent and duplicate samples, NDD-SB-1(5-5.5') and NDD-BD3, were assigned J qualifiers due to evidence of poor precision.**

Duplicate pair NDD-TW-5(23-23.5') / NDD-BD4: **The RPD values for benzene, toluene, and manganese exceeded the data validation limit of 50%. The benzene, toluene, and manganese results for the parent and duplicate samples, NDD-TW-5(23-23.5') and NDD-BD4, were assigned J qualifiers due to evidence of poor precision.**

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for the analyses in this data set as summarized below.

Method	Analytes	Batch	Laboratory Duplicate Sample Source
9012B	Cyanide	R81402	NDD-SB-2 (19-19.5') and NDD-TW-4 (1.5-2')
9012B	Cyanide	R81402	NDD-TW-4 (31.5-32') and Not Associated

Not Associated – The MS sample source was not associated with this project.

The reported RPDs for laboratory duplicates prepared from project samples were within laboratory acceptance limits.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods with the following exceptions.

Sample	Analyte	Method 8260B (mg/kg)	Method 8270C (mg/kg)	Reporting Limits (8260/8270)	RPD
NDD-TW-5 (18.5-19')	1-Methylnaphthalene	0.70	0.17	0.50 / 0.19	122% ◄
NDD-SB-2 (0-0.5')	1-Methylnaphthalene	21	ND	6.8 / 1.9	----
NDD-SB-2 (1.5-2')	1-Methylnaphthalene	24	27	7.6 / 1.9	11.8% ◄
NDD-SB-2 (3.5-4')	1-Methylnaphthalene	17	39	5.8 / 9.6	78.6% ◄
NDD-SB-1 (5-5.5')	1-Methylnaphthalene	16	19	5.6 / 2.0	17.1% ◄
NDD-BD3	1-Methylnaphthalene	14	12	5.5 / 1.9	15.4% ◄
NDD-TW-5 (18.5-19')	2-Methylnaphthalene	1.3	0.31	0.50 / 0.19	123% ◄
Sample	Analyte	Method 8260B (mg/kg)	Method 8270C (mg/kg)	Reporting Limits (8260/8270)	RPD
NDD-TW-5 (23-23.5')	2-Methylnaphthalene	0.039	ND	0.097 / 0.20	----
NDD-BD4	2-Methylnaphthalene	0.044	ND	0.10 / 0.20	----
NDD-SB-2 (0-0.5')	2-Methylnaphthalene	27	ND	6.8 / 1.9	----
NDD-SB-2 (1.5-2')	2-Methylnaphthalene	37	43	7.6 / 3.9	15.0% ◄
NDD-SB-2 (3.5-4')	2-Methylnaphthalene	25	59	5.8 / 9.6	81.0% ◄
NDD-SB-1 (5-5.5')	2-Methylnaphthalene	25	30	5.6 / 2.0	18.2% ◄
NDD-BD3	2-Methylnaphthalene	21	18	5.5 / 1.9	15.4% ◄
NDD-SB-1 (13.5-14')	2-Methylnaphthalene	0.039	ND	0.11 / 1.9	----
NDD-TW-5 (18.5-19')	Naphthalene	1.2	0.30	0.25 / 0.19	120% ◄
NDD-TW-5 (23-23.5')	Naphthalene	0.059	ND	0.049 / 0.20	----
NDD-BD4	Naphthalene	0.060	ND	0.051 / 0.20	----
NDD-SB-2 (0-0.5')	Naphthalene	10	ND	0.34 / 1.9	----
NDD-SB-2 (1.5-2')	Naphthalene	22	19	3.8 / 1.9	14.6%
NDD-SB-2 (3.5-4')	Naphthalene	18	30	2.9 / 1.9	50.0%
NDD-SB-1 (5-5.5')	Naphthalene	12	13	0.28 / 2.0	8.0%
NDD-BD3	Naphthalene	12	7.4	0.27 / 1.9	47.4% ◄
NDD-SB-1 (13.5-14')	Naphthalene	0.017	ND	0.054 / 1.9	----

◄ – one or both results were within 5 times the applicable reporting limit.

----- – RPD could not be calculated.

The differences between the results reported for Method 8260B and Method 8270C were evaluated to be within the measurement uncertainty of the analytical methods at concentrations near or below the reporting limits. Qualification of results was not required.

VALIDATION CRITERIA CHECKLIST	
• Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?	N/A
Comments: Only total metals were analyzed as part of this data set.	

FIELD DUPLICATE SUMMARY

Client Sample ID: NDD-SB-1(5-5.5') Field Duplicate Sample ID: NDD-BD3				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
1,2,4-Trimethylbenzene	SW8260B	42 mg/kg	37 mg/kg	12.7%

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required

The RPD for naphthalene exceeded the data validation limit of 50% at 54.9%. The naphthalene results for the parent and duplicate samples, NDD-SB-1(5-5.5') and NDD-BD3, were assigned J qualifiers due to evidence of poor precision.

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required

The RPD values for benzene, toluene, and manganese exceeded the data validation limit of 50%. The benzene, toluene, and manganese results for the parent and duplicate samples, NDD-TW-5(23-23.5') and NDD-BD4, were assigned J qualifiers due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
LR-MS	The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference.
ERPD-MS	The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision.
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-SUR	The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias.
TBD	Trip blank detection
ERPD-FD	High field duplicate RPD.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: North Drainage Ditch	Sample Matrix: Soil
Project Number: 697-096-001 Task: 0001	Sample Start Date: 08/18/2021
Date Validated: 10/08/2021	Sample End Date: 08/24/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total Metals by SW-846 Method 6010B ▪ Total Mercury by SW-846 Method 7471B ▪ Cyanide by SW-846 Method 9012B	
Laboratory Project ID: 2108D42	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mt. Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- Laboratory control samples (LCS)
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Equipment blanks

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NDD-SB-6 (23.5-24')	2108d42-001
NDD-SB-5 (0-0.5')	2108d42-002
NDD-SB-5 (1.5-2')	2108d42-003

MeOH Blank 2	2108d42-027

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ✓ LCS (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ✓ Equipment and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
UJ	Estimated reporting limit
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 3,120 data points. The data completeness calculation does not include any submitted blank sample results. One data point was rejected. The data completeness measure for this data package is calculated to be 99.97% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

R – %RPD outside laboratory limits

S – % Recovery outside of range due to dilution or matrix.

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by a laboratory courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples.

Method	Sample(s)	Analyte(s)	Dilution Factor
6010B	Multiple Samples	Select Metals	2
6010B	NDD-SB-6 (23.5-24'), NDD-SB-4 (19.5-20')	Select Metals	5
8015D Mod	NDD-SB-4 (1-1.5'), NDD-SB-4 (2-2.5'), NDD-SB-4 (2.5-3')	GRO	5
8260B	NDD-SB-4 (2-2.5')	VOC	5
6010B	NDD-BD5, NDD-SB-3 (1.5-2'), NDD-SB-3 (6-6.5')	Select Metals	10
8015D Mod	NDD-BD5, NDD-SB-3 (6-6.5'), NDD-SB-6 (21-21.5')	GRO	10
8015M/D	Multiple Samples	DRO, MRO	10
8260B	Multiple Samples	VOC	10
8270C	Multiple Samples	SVOC	10
8270C	NDD-SB-6 (1.5-2')	SVOC	20
6010B	Submitted Samples	Iron	100

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested mercury using Method 7470 and metals using Method 6020; however, the laboratory report states that the laboratory used Method 7471B for the mercury analyses and Method 6010B for the metals analyses. These substituted analytical methods met similar sensitivity, accuracy, and precision goals and, therefore, were acceptable replacements.

VALIDATION CRITERIA CHECKLIST	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 0.7°C and 2.9°C as noted on the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 3.7°C and as noted on the CoC. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per kilogram (mg/kg), which were acceptable for the sample matrices and the analyses requested. The analytical results for the soil samples were reported on a wet weight basis for this sample set.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Initial and continuing calibration data were not included as part of this data set.	
10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?	N/A
Comments: Initial and continuing calibration data were not included as part of this data set.	
11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.	
12. Were target analytes reported as not detected in the laboratory blanks?	Yes
Comments: Target analytes were reported as not detected in the laboratory blanks.	

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
6010B	Metals	62279	NDD-SB-6 (23.5-24')
7471	Mercury	62410	NDD-SB-6 (23.5-24')
8015D MOD	GRO	B80948	Not Prepared
8015D MOD	GRO	B80803	NDD-SB-5 (0-0.5')
8015D MOD	GRO	B80915	Not Prepared
8015D MOD	GRO	B80995	NDD-SB-6 (1.5-2')
8015M/D	DRO	62220	Not Prepared
8015M/D	DRO	62222	NDD-SB-4 (19.5-20')
8260B	VOCs	A80803	Not Prepared
8260B	VOCs	R80878	Not Prepared
Method	Analytes	Batch	MS Sample Source
8260B	VOCs	R80915	NDD-SB-6 (23.5-24')
8260B	VOCs	R80995	NDD-SB-5 (17.5-18')
8270C	SVOCs	62216	Not Prepared
8270C	SVOCs	62772	Not Prepared
9012	Cyanide	R81402 / R3699286	Not Associated, NDD-SB-5 (17.5-18')
9012	Cyanide	R81402 / R3699848	Not Associated

Not Associated – The MS sample source was not associated with this project.
Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits
6010B	**Antimony**	**62279**	**0%**	**0%**	**75-125%**
6010B	**Silver**	**62279**	**61.5%**	**53.0%**	**75-125%**
6010B	**Zinc**	**62279**	**Acceptable**	**139%**	**75-125%**
6010B	**Vanadium**	**62279**	**Acceptable**	**125%**	**75-125%**

Antimony and silver with MS and MSD percent recoveries that were less than lower the laboratory QC limits and data validation QC limits were not detected in the associated samples. These results were qualified as UJ due to evidence of potential low bias. For antimony with MS and MSD percent recoveries less than 30%, the non-detected antimony result for the parent sample, NDD-SB-6 (23.5-24'), was qualified R to indicate rejected (not usable) data based on evidence of extreme low bias.
Vanadium and zinc with MSD recoveries greater than the laboratory and data validation QC limits were detected in the associated samples, and the results were qualified as J+ to indicate estimated concentrations that may be biased high.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

The LCS percent recoveries were within laboratory QC limits. LCSDs were not analyzed as part of this sample set.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

Method	Surrogate	Sample	Surrogate Recovery	QC Limits
8015M/D	**DNOP**	**NDD-SB-5 (1.5-2')**	**175%**	**70-130%**
8015M/D	DNOP	NDD-BD6	132%	70-130%
8015M/D	**DNOP**	**NDD-SB-4 (19.5-20')**	**149%**	**70-130%**
Method	Surrogate	Sample	Surrogate Recovery	QC Limits
8015M/D	DNOP	NDD-SB-6 (3-3.5')	180%	70-130%
8015M/D	DNOP	NDD-SB-6 (15-15.5')	154%	70-130%

The associated target analyte (TPH DRO) in the samples with surrogate recoveries that were greater than upper laboratory QC limits were qualified as J+ if detected in the affected samples to indicate estimated concentrations that may be biased high. Qualification was not required for non-detected analytes associated with these surrogates.

The SVOC results for multiple samples were not qualified based on the surrogate non-conformances in the Method 8270C analyses since the applied dilutions of 10 times and 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

The DRO and MRO results for multiple samples were not qualified based on the surrogate non-conformances in the Method 8015M/D analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. Two trip blank samples, MeOH Blank 1 and MeOH Blank 2, and five equipment blank samples, NDD-EB5, NDD-EB6, NDD-EB7, NDD-EB8, and NDD-EB9, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank and equipment blank samples, with the following exception.

Acetone was detected in the 8260B analysis of equipment blank sample NDD-EB5 at 5.0 µg/L. Acetone was not detected in the associated samples, and the results did not require qualification.

VALIDATION CRITERIA CHECKLIST	
20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	Yes
Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. • Sample NDD-BD5 was collected as a field duplicate of sample NDD-SB-3 (6-6.5'). • Sample NDD-BD6 was collected as a field duplicate of sample NDD-SB-5 (9.5-10').	
21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)?	No
Comment: As indicated in the Field Duplicate Summary Tables at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions. Duplicate pair NDD-SB-3 (6-6.5') / NDD-BD5: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples NDD-SB-3 (6-6.5') and NDD-BD5.**	
22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits?	Yes
Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch R81402 / R3699286 from a sample not associated with this data set and sample NDD-SB-5 (17.5-18'), and for cyanide in batch R81402 / R3699848 from samples not associated with this data set. The RPD for the laboratory duplicate prepared from a project sample was not applicable since the results for one or both measurements were within 5 times the reporting limit. The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.	
23. Were the following data relationships realistic and acceptable? • Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement?	Yes
Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, hexachlorobutadiene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and 8270C. The results for these analytes were reported as not detected by one or more methods, and/or one or both results were less than five times the applicable reporting limits. Qualification of data was not required	
• Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?	N/A
Comments: Only total metals were analyzed as part of this data set.	

FIELD DUPLICATE SUMMARY

Client Sample ID: NDD-SB-3 (6-6.5') Field Duplicate Sample ID: NDD-BD5				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Barium, Total	SW6010B	620 mg/kg	980 mg/kg	45.0%

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples NDD-SB-3 (6-6.5') and NDD-BD5.

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
ERPD-FD	High field duplicate RPD.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-MS	The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: Western Refining SW, North Drainage Ditch	Sample Matrix: Soil
Project Number: 697-096-001 Task: 0002	Sample Start Date: 08/12/2021
Date Validated: 10/07/2021	Sample End Date: 08/13/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total Metals by SW-846 Method 6010B ▪ Total Mercury by SW-846 Method 7471 ▪ Cyanide by Environmental Protection Agency (EPA) Method 335.4 9012	
Laboratory Project ID: 2108785	
Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Anatek Labs, Inc. in Moscow, Idaho, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- Laboratory control samples (LCS)
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Tier II Data Validation Report Summary

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NDD-TW-1 (0-0.5')	2108785-001
NDD-TW-1 (1.5-2')	2108785-002
NDD-TW-1 (26.5-27')	2108785-003
NDD-TW-1 (34-34.5')	2108785-004
NDD-TW-2 (0-0.5')	2108785-005
NDD-TW-2 (1.5-2')	2108785-006
NDD-BD-1	2108785-007
NDD-EB1	2108785-008
NDD-EB2	2108785-009
NDD-TW-2 (5.5-6')	2108785-010
NDD-TW-2 (30.5-31')	2108785-011
NDD-TW-2 (33.5-34')	2108785-012
MeOH Blank	2108785-013

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ✓ Trip and Equipment Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,560 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify analytical non-conformances related to this data set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits D – Sample diluted due to matrix. S – % Recovery outside of range due to dilution or matrix. B – Analyte detected in the associated Method Blank	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by field personnel, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 8270C: Sample NDD-TW-1 (0-0.5') was diluted by a factor of 20 times for the analysis of SVOC target analytes. Method 6010B: Dilutions of 2 to 200 times were applied to select submitted samples for the analysis of total metals.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	No
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. The CoC indicated requests for metals by Method 6020 and mercury by Method 7470. The analyses by Method 6010B and Method 7471B, respectively, met the project accuracy and precision goals and were acceptable replacements. The analytical method for cyanide was not identified on the CoC and the use of EPA Method 335.4 and the equivalent SW-846 Method 9012 was appropriate.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperature within the recommended temperature range of 4°C ± 2°C at 4.8°C as noted on the *Sample Log-in Check List*. Portions of the samples transferred to Anatek Labs were received intact and with the cooler temperature outside the recommended range at 1.1°C as noted on the Sample Receipt and Preservation Form. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of milligrams per kilogram (mg/kg), which were acceptable for the sample matrix and the analyses requested. The cyanide results for the soil samples were reported on a dry weight basis. The other results for the soil samples were reported on a wet weight basis. The equipment blank results were reported in the appropriate units of micrograms per liter (µg/L).	

VALIDATION CRITERIA CHECKLIST

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

Iron was detected in the method blank for Method 6010B batch 62196 at a concentration of 3.2 mg/kg. Iron was detected in the associated samples in this batch at concentrations greater than 10 times the blank level, and qualification of results was not required.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
8260B	VOCs	A80682	Not Prepared
8260B	VOCs	62009	Not Prepared
8260B	VOCs	B80573	Not Prepared
8270C	SVOCs	62082	Not Prepared
8270C	SVOCs	62128	NDD-TW-1 (34-34.5*)
8015D MOD	GRO	B80682	Not Prepared
8015D MOD	GRO	62009	Not Prepared
8015M/D	DRO	62022	NDD-TW-1 (0-0.5')
6010B	Metals	62196	Not Prepared
7471	Mercury	62296	NDD-TW-1 (1.5-2')
9012	Cyanide	R81419	NDD-TW-1 (0-0.5')

Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from project samples were within laboratory and data validation QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS percent recoveries were within laboratory QC limits, with the following exception.

The reported recovery for mercury in the LCS for Method 7471 batch 62296 was outside the acceptance limits of 70-130% at 59.5%. Detections of mercury in the associated samples were qualified J-, and the associated non-detect results were assigned UJ qualifiers due to evidence of potential low bias.

LCSDs were not analyzed as part of this data set.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

The recovery of the Method 8015D surrogate DNOP in the analysis of sample NDD-TW-2 (0-0.5') was outside the laboratory acceptance range of 70-130% at 133%. The associated target analytes were not detected in this sample, and qualification of the results was not required based on the evidence of potential high bias.

The SVOC results for sample NDD-TW-1 (0-0.5') were not qualified based on the surrogate non-conformances in the Method 8270C analysis since the applied dilution of 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. One trip blank sample, MeOH Blank, and two equipment blank samples, NDD-EB1 and NDD-EB2, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank and equipment blank samples, with the following exceptions.

Blank Sample ID	Method	Analyte	Concentration
NDD-EB1	8260B	2-Butanone	6.7 µg/L
NDD-EB1	8260B	Acetone	20 µg/L
NDD-EB2	8260B	Acetone	3.9 µg/L
MeOH Blank	8260B	2-Hexanone	0.032 mg/kg

The identified analytes were not detected in the associated samples, and qualification of results was not required based on the trip blank and equipment blank detections.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

• Sample NDD-BD-1 was collected as a field duplicate of sample NDD-TW-1(34-34.5).

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comment: As indicated in the Field Duplicate Summary Tables at the end of this report, field duplicate RPD values were within data validation QC limits of 0-50% for soil samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were not prepared for the analyses in this data set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods, with the following exceptions.

Sample	Analyte	Method 8260B (mg/kg)	Method 8270C (mg/kg)	Reporting Limits (8260/8270)	RPD
NDD-TW-2 (5.5-6')	1-Methylnaphthalene	0.16	ND	0.10 / 0.19	----
NDD-TW-2 (5.5-6')	2-Methylnaphthalene	0.025	ND	0.10 / 0.19	----
NDD-TW-2 (5.5-6')	Naphthalene	0.33	0.10	0.051 / 0.19	107.0% ◄
NDD-TW-2 (30.5-31')	Naphthalene	0.015	ND	0.064 / 0.19	----

◄ – one or both results were within 5 times the applicable reporting limit.

----- – RPD could not be calculated.

The differences between the results reported for Method 8260B and Method 8270C were evaluated to be within the measurement uncertainty of the analytical methods at concentrations near or below the reporting limits. Qualification of results was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? N/A

Comments: Only total metals were analyzed as part of this data set.

FIELD DUPLICATE SUMMARY

Client Sample ID: NDD-TW-1(34-34.5) Field Duplicate Sample ID: NDD-BD-1				
Analyte	**Method**	**Laboratory Result (mg/kg)**	**Duplicate Result (mg/kg)**	**Relative Percent Difference (RPD)**
Arsenic, Total	SW6010B	1.8	ND (4.9)	DL
Barium, Total	SW6010B	130	120	8.0%
Beryllium, Total	SW6010B	1.2	1.5	22.2%
Chromium, Total	SW6010B	13	17	26.7%
Cobalt, Total	SW6010B	6.1	7.5	20.6%
Iron, Total	SW6010B	21,000	26,000	21.3%
Lead, Total	SW6010B	4.7	3.4	32.1%
Manganese, Total	SW6010B	350	400	13.3%
Nickel, Total	SW6010B	15	18	18.2%
Vanadium, Total	SW6010B	16	24	40.0%
Zinc, Total	SW6010B	21	28	28.6%
TPH-DRO	SW8015	4.8	ND (9.4)	DL
TPH-GRO	SW8015	ND (3.6)	1.1	DL

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Analyte	Method	Field Sample ID	Lab Sample ID	Result	Limit	Units	Reviewer Qualifier	DV Flag Reasons
2-Butanone	SW8260B	NDD-EB1	2108785-008a	6.7	10	µg/L	J	MDLRL
2-Hexanone	SW8260B	MeOH Blank	2108785-013a	0.032	0.5	mg/kg	J	MDLRL

Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical in Mt. Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-09092021	2109522-001
NDD-TW-05	2109522-002
NDD-TW-02	2109522-003
FB-09092021	2109522-004
DUP-09092021	2109522-005
Trip Blank	2109522-006

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 477 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	No
Comments: The laboratory identified the following analytical non-conformances related to this data set. Method 8270C: The laboratory control spike (LCS) had low recoveries for 2 compounds: 4-nitrophenol and pentachlorophenol. The LCSD, MS and MSD all had acceptable recoveries. All 8270 samples were reextracted and reanalyzed, past the holding time, and they confirmed the initial results. The initial results are reported.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits S – % Recovery outside of range due to dilution or matrix. R – Relative Percent Difference (RPD) exceeds limit * – Value exceeds Maximum Contaminant Level J6 (Pace) – The sample matrix interfered with the ability to make any accurate determination; spike value is low.	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by a laboratory courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 8260B: Dilutions of 50 times were applied to samples NDD-TW-05 and DUP-09092021 for the analysis of VOCs. Method 8015D: Samples NDD-TW-05 and DUP-09092021 were diluted by a factor of 50 times for the analysis of GRO. Method 6020: Dilutions of 5 to 200 times were applied to samples NDD-TW-05, NDD-TW-02, and DUP-09092021 for the analysis of total metals. Method 300.0: Samples EB-09092021, NDD-TW-05, NDD-TW-02, and DUP-09092021 were diluted by factors of 5 to 100 times for the analysis of anions.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C at 4.2°C and 5.9°C as noted on the *Sample Log-in Check List*. The laboratory noted that additional nitric acid was added to containers designated for metals analyses for samples NDD-TW-05 and DUP-09092021 to achieve the required pH less than 2. Validation action was not required. Portions of the samples transferred to Pace Analytical were received intact and with the cooler temperature within the recommended range at 2.3°C as noted on the CoC transferring the samples.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	

VALIDATION CRITERIA CHECKLIST

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. — Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? — No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? — N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? — Yes

Comments: Target analytes were reported as not detected in the laboratory blanks.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
8260B	VOCs	R81276	EB-09092021
8260B	VOCs	R81312	Not Prepared
8270C	SVOCs	62559	Not Prepared
8015D MOD	GRO	R81278	NDD-TW-05
8015M/D	DRO	62607	EB-09092021
6020	Metals	62558	EB-09092021
6020	Chromium	62644	Not Prepared
7470	Mercury	62565	Not Prepared
300.0	Anions	R81214	Not Prepared
300.0	Chloride	R81311	Not Prepared
335.4	Cyanide	R81721	Not Associated

Not Prepared – Matrix spikes were not prepared for this batch.
Not Associated - The MS sample source was not associated with this project.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? — Yes

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from project samples were within laboratory and data validation QC limits.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCSD Recovery	LCS/LCSD QC Limits	LCS/LCSD RPD	RPD QC Limits
8270C	**2-Chlorophenol**	**62559**	**Acceptable**	**Acceptable**	**29.3-105%**	**42%**	**35.6%**
8270C	**4-Nitrophenol**	**62559**	**3.08%**	**Acceptable**	**15-77%**	**173%**	**52.4%**
8270C	**Pentachlorophenol**	**62559**	**9.37%**	**Acceptable**	**21-111%**	**141%**	**71.6%**

2-Chlorophenol was not detected in the associated samples, and the results were assigned UJ qualifiers based on the evidence of poor precision.

4-Nitrophenol and pentachlorophenol were not detected in the associated samples, and the results were assigned UJ qualifiers due to evidence of potential low bias and poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

The recovery of the Method 8270C surrogate 2-fluorophenol in the analysis of sample NDD-TW-5 was outside the laboratory acceptance range of 15-87% at 0%. The recovery of the Method 8270C surrogate 2-fluorophenol in the analysis of sample DUP-09092021 was outside the laboratory acceptance range of 15-87% at 0%.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples NDD-TW-5 and DUP-09092021, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-09092021, and one equipment blank sample, EB-09092021, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank and equipment blank samples, with the following exceptions.

Blank Sample ID	Method	Analyte	Concentration (µg/L)
Trip Blank	**SW8260B**	**Chloromethane**	**0.41**
FB-09092021	**SW8260B**	**2-Butanone**	**20**
FB-09092021	SW8260B	2-Hexanone	3.6
FB-09092021	SW8260B	4-Isopropyltoluene	0.44
FB-09092021	**SW8260B**	**Acetone**	**35**
FB-09092021	SW8260B	Chloromethane	0.43
EB-09092021	SW8260B	2-Butanone	8.6
EB-09092021	SW8260B	Acetone	5.9

Detections of the identified analytes in the associated samples that were less than the blank results or less than the applicable reporting limits were assigned U qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

• Sample DUP-09092021 was collected as a field duplicate of sample NDD-TW-05.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comment: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for Method 335.4 batch R81721 analyses of cyanide from samples not associated with this project. The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods, with the following exceptions.

Sample	Analyte	Method 8260B (µg/L)	Method 8270C (µg/L)	Reporting Limits (8260/8270)	RPD
NDD-TW-05	1-Methylnaphthalene	ND	6.4	200 / 5.0	----
DUP-09092021	1-Methylnaphthalene	ND	7.4	200 / 5.0	----
NDD-TW-05	2-Methylnaphthalene	ND	10	200 / 5.0	----
DUP-09092021	2-Methylnaphthalene	ND	11	200 / 5.0	----
NDD-TW-05	Naphthalene	64	38	100 / 5.0	51.0% ◄
DUP-09092021	Naphthalene	65	45	100 / 5.0	36.4% ◄

◄ – one or both results were within 5 times the applicable reporting limit.

----- – RPD could not be calculated.

The differences between the results reported for Method 8260B and Method 8270C were evaluated to be within the measurement uncertainty of the analytical methods at concentrations near or below the reporting limits. Qualification of results was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? N/A

Comments: Only total metals were analyzed as part of this data set.

FIELD DUPLICATE SUMMARY

Client Sample ID: NDD-TW-05 Field Duplicate Sample ID: DUP-09092021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
1,2,4-Trimethylbenzene	SW8260B	350 µg/L	320 µg/L	9.0%

Client Sample ID: NDD-TW-05 Field Duplicate Sample ID: DUP-09092021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Nickel, Total	SW6020	0.32 mg/L	0.31 mg/L	3.2%
Selenium, Total	SW6020	0.0077 mg/L	0.0075 mg/L	2.6% +/-RL
Vanadium, Total	SW6020	0.26 mg/L	0.24 mg/L	8.0%
Zinc, Total	SW6020	0.26 mg/L	0.23 mg/L	12.2%
Mercury, Total	SW7470	ND (0.00080 mg/L)	0.00089 mg/L	DL

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
FBD	Field blank detection
TBD	Trip blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Analyte	Method	Field Sample ID	Lab Sample ID	Result	Limit	Units	Reviewer Qualifier	DV Flag Reasons

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: Western Refining SW, North Drainage Ditch	Sample Matrix: Aqueous
Project Number: 697-096-001 Task: 0002	Sample Start Date: 09/17/2021
Date Validated: 10/21/2021	Sample End Date: 09/17/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total and Dissolved Metals by Environmental Protection Agency (EPA) Method 200.7 and Method 200.8 ▪ Total Mercury by EPA Method 245.1 ▪ Alkalinity by Standard Methods for the Examination of Water and Wastewater (SM) Method 2320B ▪ Anions by Environmental Protection Agency (EPA) Method 300.0 ▪ Cyanide by EPA Method 335.4	
Laboratory Project ID: 2109997	
Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Anatek Labs, Inc. in Moscow, Idaho, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NDD-MW-1	2109997-001
Trip Blank	2109997-002

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Trip Blanks (Items 18 and 19)
- ○ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
U	Evaluated to be undetected at the reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 185 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify analytical non-conformances related to this data set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits * – Value exceeds Maximum Contaminant Level	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 300.0: Sample NDD-MW-1 was diluted by a factor of 5 times for the analysis of anions, except chloride that was analyzed at a dilution of 20 times. Method 200.7: A dilution factor of 5 times was applied to sample NDD-MW-1 for the analysis of dissolved sodium, and the analysis for total sodium was performed with a dilution of 10 times.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. The laboratory noted that project personnel cancelled the analysis for chemical oxygen demand (COD) that was indicated on the CoC. Validation action was not required.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 1.6°C and 4.9°C as noted on the *Sample Log-in Check List*. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen. The laboratory noted that additional nitric acid was added to the containers designated for metals analyses for sample NDD-MW-1 to achieve the required pH less than 2. Validation action was not required. Portions of the samples transferred to Anatek Labs were received intact and with the cooler temperature within the recommended range at 4.6°C as noted on the *Sample Receipt and Preservation Form*.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.	

VALIDATION CRITERIA CHECKLIST

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

Pyrene was detected in the method blank for Method 8270 batch 62703 at a concentration of 0.18 µg/L. Pyrene was not detected in the associated sample NDD-MW-1, and qualification of the result was not required based on the method blank detection.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
8260B	VOCs	R81501	Not Prepared
8270C	SVOCs	62689	Not Prepared
8270C-SIM	SVOCs	62703	Not Prepared
8015D MOD	GRO	R81501	NDD-MW-1
8015M/D	DRO	62721	Not Prepared
200.7	Total Metals	62791	Not Prepared
200.7	Dissolved Metals	B81434	Not Prepared
200.8	Total Metals	62791	NDD-MW-1
200.8	Dissolved Metals	B81621	Not Prepared
245.1	Mercury	62871	Not Prepared
300.0	Anions	R81380	Not Prepared
2320B	Alkalinity	R81457	Not Prepared
335.4	Cyanide	R82000 (BBI0811)	NDD-MW-1

Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from project samples were within laboratory and data validation QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST	
16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?	Yes
Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within laboratory QC limits.	
17. Were surrogate recoveries within laboratory QC limits?	Yes
Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits.	
18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	Yes
Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. One trip blank sample, Trip Blank, was collected as part of this sample set.	
19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples?	No
Comments: Target analytes were reported as not detected in the trip blank sample, with the following exception. **Chloromethane was detected in the trip blank sample at a concentration of 0.44 µg/L. Chloromethane was also detected in the associated sample NDD-MW-1 at a concentration less than the applicable reporting limit, and that result was assigned a U qualifier.**	
20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	No
Comments: The number of field duplicates collected was not equal to at least 10% of the number of samples. Field duplicates were not collected as part of this sample set.	
21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)?	N/A
Comment: Field duplicates were not submitted as part of this sample set.	
22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits?	N/A
Comments: Laboratory duplicates were not prepared for the analytical batches in this data set.	

VALIDATION CRITERIA CHECKLIST	
23. Were the following data relationships realistic and acceptable?	
• Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement?	Yes
Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods.	
• Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?	No
Comments: The reported concentrations for total metals in sample NDD-MW-1 were greater than the dissolved results, with the following exception. The reported dissolved zinc result of 0.011 mg/L was greater than the total zinc concentration of 0.0098 mg/L. The difference was within the measurement uncertainty of the analyses, and qualification of results was not required.	

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
TBD	Trip blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Analyte	Method	Field Sample ID	Lab Sample ID	Result	Limit	Units	Reviewer Qualifier	DV Flag Reasons
1,1-Dichloroethane	SW8260B	NDD-MW-1	2109997-001a	0.7	1	µg/L	J	MDLRL
1,2,4-Trimethylbenzene	SW8260B	NDD-MW-1	2109997-001a	0.19	1	µg/L	J	MDLRL
2-Butanone	SW8260B	NDD-MW-1	2109997-001a	3.3	10	µg/L	J	MDLRL
Carbazole	SW8270C	NDD-MW-1	2109997-001c	3.7	5	µg/L	J	MDLRL
Chloromethane	SW8260B	NDD-MW-1	2109997-001a	1.3	3	µg/L	U	MDLRL, TBD
Chloromethane	SW8260B	Trip Blank	2109997-002a	0.44	3	µg/L	J	MDLRL
Fluoride, Total	E300	NDD-MW-1	2109997-001D	0.39	0.5	mg/L	J	MDLRL
Iron, Dissolved	E 200.7	NDD-MW-1	2109997-001E	0.013	0.02	mg/L	J	MDLRL
Lead, Dissolved	E200.8	NDD-MW-1	2109997-001E	0.00022	0.0005	mg/L	J	MDLRL
Nitrogen, Nitrate	E300	NDD-MW-1	2109997-001D	0.1	0.5	mg/L	J	MDLRL
n-Propylbenzene	SW8260B	NDD-MW-1	2109997-001a	0.46	1	µg/L	J	MDLRL
Selenium, Total	E200.8	NDD-MW-1	2109997-001G	0.00053	0.001	mg/L	J	MDLRL
Zinc, Total	E 200.7	NDD-MW-1	2109997-001G	0.0098	0.01	mg/L	J	MDLRL
