RE: Response to Approval with Modifications
Well Installation and Abandonment Report
Western Refining Southwest LLC
(D/B/A Marathon Gallup Refinery)
EPA ID# NMD000333211
HWB-WRG-21-017

Dear Mr. Pierard:

Attached please find the response to comments contained in the New Mexico Environment Department (NMED) Approval with Modifications letter dated January 24, 2022. A timeline of the Well Installation and Abandonment Report (Report) is provided below.

- Report, submitted November 15, 2021
- Approval with Modifications, dated January 24, 2022

Two hard copies and an electronic version of the revised Report are included. A redline-strikeout version in electronic format is also included.

If you have any questions or comments regarding the information contained herein, please do not hesitate to contact Mr. John Moore at (505) 879-7643.

RESPONSE TO COMMENTS

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Comment 1:	**Response 1:**
In the Executive Summary, page 4 of 21, paragraph 1, the Permittee states, "6 existing wells were abandoned and replaced due to submerged well screens, and 7 new wells were planned to aid in evaluation of the separate phase hydrocarbon (SPH) and dissolved-phase plumes." The Permittee must notify NMED and receive approval prior to completing plugging and abandoning activities for existing wells. Furthermore, the replacement wells should have been installed adjacent to the existing wells or the placement of the new wells should have been discussed with NMED. In the future, NMED must be notified of plugging and abandoning activities and will assess the abandonment of the six wells once the data collected from the existing and replacement wells are compared and evaluated. Acknowledge this provision in a response letter.	This comment is acknowledged. Additional discussion was provided in the Refinery's response to Comment 4 of NMED's "Second Disapproval [Revised] Facility Wide Groundwater Monitoring Work Plan – Updates for 2021", dated November 15, 2021. To reiterate, NMED will be notified in accordance with Part IV.J of the Final RCRA Post-Closure Permit, Modified September 2017, prior to future plug and abandonment activities.
Comment 2:	**Response 2:**
In the Executive Summary, page 4 of 21, paragraph 1, and Section 1.3 (Deviations from the Scope of Work), page 7 of 12, paragraph 1, the Permittee states, "property access was not granted for the two off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30)." The Permittee must continue to make efforts to contact the property owner to gain access to the site.	To date, the adjacent property owners have been unresponsive to the Refinery's attempts for communication. Recently, the Refinery learned that the property was sold in late 2021. The Refinery's effort to contact the new property owners is ongoing.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Comment 3:	**Response 3:**
In the Executive Summary, page 5 of 21, bullet 2, the Permittee states, "[m]onitoring wells OW-67 and OW-68 were installed in the upper sand (alluvium) aquifer to assess previously detected elevated concentrations of chloride and sulfate northwest of evaporation pond (EP) 2 and monitoring well GWM-1 and east of EP-2." The aquifer northwest of EP-2 is currently monitored by wells SMW-2, OW-59, and OW-60. It is NMED's opinion that wells OW-67 and OW-68 are not useful to assess the conditions of the referenced aquifer. Comment 1 in the NMED's December 27, 2021 *Approval with Modifications Investigation Report, SMW-2 and GWM-1 Areas* states, "[w]ells SMW-2, OW-59, and OW-60 were installed with screened intervals with depths of 34.31 – 54.31, 20 – 35, and 25 – 45 feet bgs, respectively, which were designed to monitor groundwater quality at the Chinle/Alluvial Interface. Wells OW-67 and OW -68 were installed with screened intervals with depths of 10 – 25, and 5 – 25 feet bgs, respectively, which were designed to monitor shallow groundwater quality at the upper-most saturated interval. The screened intervals of wells OW-67 and OW-68 are not comparable with well SMW-2; therefore, the conclusions regarding the elevated chloride and sulfate concentrations in the groundwater samples collected from wells OW-67 and OW-68 will not be representative of the samples collected from well SMW-2. If the Permittee would like to continue to use the locations of wells OW-67 and OW-68 to evaluate the chloride and sulfate concentrations in the Chinle/Alluvial interface, propose to install nested wells adjacent to OW-67 and OW-68 that are screened to monitor the groundwater quality at the	This comment is acknowledged. However, to eliminate discrepancy between the "Investigation Report, SMW-2 and GWM-1 Areas" (SMW-2/GWM-1 Report) and this "Well Installation and Abandonment Report" (Well Report), the Executive Summary, page 5 of 21, and Section 4.0 (Summary and Conclusions), page 20 of 21, were revised to state: "Monitoring wells OW-67 and OW-68 were installed in the upper sand (alluvium) aquifer to assess previously detected elevated concentrations of chloride and sulfate observed at monitoring well SMW-2 that may be attributable to evaporation pond (EP) 2 by installing the wells at depths corresponding to the base of EP-2. The investigation indicates that the source of sulfate and chloride is not EP-2."

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Chinle/Alluvial Interface; otherwise, explain why wells OW-67 and OW-68 are sufficient for the evaluation in a response letter." Since this comment will be addressed in a separate report, no response is required.	
Comment 4:	**Response 4:**
In Sections 2.2 (Drilling) and 2.3 (Soil Borings), page 8 of 21, paragraphs 5 and 6, the Permittee states, "[w]ell construction details are summarized in Table 2-1 [and g]roundwater was not encountered in two of the proposed monitoring well locations, OW-13A and OW-69 (Figure 2-1)." Table 2-1 (Well Construction and Gauging Data) reports the surface elevations for most of the new wells except for borings OW-13A and OW-69. The Permittee must provide the surface elevation at boring OW-69. Comment 2 in the NMED's December 27, 2021 *Approval with Modifications* states, "[s]ince boring log OW-69 included in Appendix A (Boring Logs) does not provide information regarding the ground surface elevation, NMED is unable to evaluate whether boring OW-69 was advanced to a sufficient depth to intercept the saturated zone. The groundwater elevations at well GWM-1 are recorded as approximately 6,891 feet. Based on Figure 2 (SWM-2 and GWM-1 Area Features), boring OW-69 is depicted approximately 75 feet downgradient of well GWM-1 along a relatively flat hydraulic gradient in the pertinent area. Boring OW-69 should have been advanced to the comparable depth of groundwater detected in well GWM-1 (i.e., 6,891 feet), at a minimum. Provide accurate surface elevation survey data for boring OW-69 to confirm that the depth of boring OW-69 was completed to a depth comparable to groundwater levels detected in well GWM-1 in the response letter."	This comment is acknowledged. However, to eliminate discrepancy between the SMW-2/GWM-1 Report and this Well Report, the Executive Summary, page 5 of 21, and Section 4.0 (Summary and Conclusions), page 20 of 21, were revised to state: "Boring OW-69 was drilled to assess previously detected elevated concentrations of chloride and sulfate northwest of EP-2 and monitoring well GWM-1 and east of EP-2 by drilling to the Chinle/Alluvium aquifer interface."

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Since this comment will be addressed in a separate report, no response is required.	
Comment 5:	**Response 5:**
In Section 2.3 (Soil Borings), page 9 of 21, paragraph 2, the Permittee states, "[t]he rig was advanced to a total depth of 26 ft bgs, with no observable saturated interval in the upper sand (alluvium) or Chinle formation. Because the well [OW-69] was to be installed in the upper sand (alluvium) and not in the Chinle formation, the boring was not advanced past 26 ft bgs and no monitoring well was installed." Although the water bearing zone where well GWM-1 was screened is located at the alluvium/Chinle interface, it is possible that the same water bearing zone may be present below the interface at the location of boring OW-69. However, there is no surface elevation data to support the statement. Since the purpose of well OW-69 is to delineate the extent of SPH detected in well GWM-1, the boring should have been advanced past 26 feet below ground surface (bgs), in order for the boring depth to be comparable to the groundwater elevation recorded in well GWM-1 (see Comment 4). The surface elevation at boring OW-69 must be determined to confirm whether the boring depth (i.e., at or below 26 feet bgs) was sufficient. Since this comment will be addressed in a separate report, no response is required.	This comment is acknowledged.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Comment 6:	**Response 6:**
In Section 2.5 (Well Abandonment), page 11 of 21, paragraph 2, the Permittee states, "[i]n the Comment 3 of the letter "Approval with Modifications, Hydrocarbon Seep Interim Measures 2021 Second Quarter Status Report" dated September 14, 2021, NMED stated, "Existing Wells MKTF-1, MKTF-2, MKTF-4, MKTF-17, and MKTF-18 must not be plugged and abandoned; they must be preserved at this time." However, the wells were abandoned in July 2021 and August 2021, in accordance with previous correspondence, before the September 2021 letter was received. The replacement wells will provide enhanced information (the ability to monitor for SPH) in addition to providing equivalent dissolved constituent data while reducing the liability of maintaining duplicative shallow groundwater wells." In the future, the Permittee must notify NMED prior to plugging and abandoning wells at the site so that NMED will be provided with the opportunity to assess the abandonment of the existing wells once the data collected from the existing and replacement wells are compared and evaluated (see Comment 1). NMED also agrees that the replacement wells will provide the ability to monitor for SPH. For example, well RW-2 has a submerged screen interval (26.1 – 36.1 feet bgs) that has never been able to detect SPH while well RW-2R has a screened interval that intercepts the water table (11.5 – 31.5 feet bgs) which provides accurate data (2.67 feet of SPH was detected in well RW-2R according to Table 2-1). Although the replacement wells will provide the ability to monitor for SPH, the Permittee may not collect groundwater samples for dissolved-phase constituents from well RW-2R because of the presence of SPH.	See Response to Comment 1.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Since the screened interval of well RW-2 was submerged and SPH was absent, the Permittee could have continued to collect groundwater samples from well RW-2 if it had not been abandoned. There were potential benefits to retain well RW-2 as well as other abandoned wells. Although no revision to the Report is warranted, existing wells must not be plugged and abandoned without NMED's prior approval in the future.	

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
Comment 7:	**Response 7:**
Although all analytical tables included in the Report identify analytes whose limit of detection (LOD) value exceeds the applicable screening level with bold font (e.g., **ND(2.9)** for 1,2-dibromo-3-chloropropane), Section 4.0 (Summary and Conclusions), pages 19 through 20, does not provide a discussion regarding such analytes. All data provided by analyses where LOD values exceed the screening levels are considered data quality exceptions and cannot be used to demonstrate compliance. All data quality exceptions must be identified in the text as well as tables, or figures. Revise the Report to include a discussion in the appropriate section(s) and provide replacement pages.	In Section 4.0 (Summary and Conclusions), page 20 of 21, bullet 3, text was added to discuss the analytes with non-detect exceedances. The bullet added states: "There were some groundwater analytes that had detection limits that exceeded the applicable standards. Groundwater analytes included: 1,2,3-Trichloropropane, 1,2-Dibromo-3-Chloropropane, 1,2-Dibromoethane, Hexachlorobutadiene, 2,6-Dinitrotoluene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Bis(2-chloroethyl)ether, Dibenzo(a,h)anthracene, Hexachlorobenzene, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene, N-Nitrosodimethylamine, N-Nitrosodi-n-propylamine, total beryllium, total cadmium, and TPH-ORO. 1-Methylnapthalene had a standard exceedance that was evaluated to be undetected at the reported concentration in data validation, resulting in a non-detect standard exceedance. Vinyl chloride also had one non-detect standard exceedance. It should be noted that standard exceedances, even if a non-detection, are considered data quality exceptions. Therefore, those values cannot evaluate compliance for those constituents."
Comment 8:	**Response 8:**
Figure 2-1 (New Well Locations and abandoned Wells July and August 2021) contains a typographical error. Although well MKTF-17 was abandoned, well MKTF-07 was identified as the abandoned well in Figure 2-1. Correct the typographical error in Figure 2-1 and provide a replacement figure. In addition, although Figure 2-1 depicts the locations of new wells, soil	Figure 2-1 (New Well Locations and Abandoned Wells July and August 2021) has been updated to correct the typographical error. MKTF-17 is now identified correctly.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) Comment Letter "Approval with Modifications Well Installation and Abandonment Report" (January 24, 2022)

NMED Comments	Refinery Responses
borings and abandoned wells, existing wells are not shown on the figure. It is helpful to include a figure that presents both the existing and new wells to have a full depiction of well locations described in the text of the Report. Provide a separate figure that presents both the existing and new wells.	A new figure (Figure 2-2: Facility and Well Locations) has been added to the Report. This figure depicts current well locations as of the end of 2021. To clarify the text, Section 2.2 (Drilling), page 8 of 21, was updated to state: "New monitoring well locations and abandoned wells are shown on Figure 2-1. Current monitoring well locations as of December 2021 are shown on Figure 2-2."

Executive Summary

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery) proposed the installation of 13 wells: 6 existing wells were abandoned and replaced due to submerged well screens, and 7 new wells were planned to aid in evaluation of the separate phase hydrocarbon (SPH) and dissolved-phase plumes. However, 4 of the 7 new wells were not installed. Groundwater was not encountered during drilling in two of the on-site borings, and property access was not granted for the two off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). In summary, six wells were abandoned, and nine wells were installed.

The objectives and the key findings of the well installation activities are described below.

- Replacement monitoring wells MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R were installed such that the well screens are appropriately positioned to allow SPH, if present, to enter the well. These data will be used to further delineate the SPH plume. Soil samples were collected from within the borings at the zone with the highest total organic vapor (TOV) reading and at the bottom of the boring. Total petroleum hydrocarbon – gasoline range organics (TPH-GRO) was detected in each soil sample at or near the zone with the highest TOV reading exceeding the residential and industrial soil screening levels (RSSL and ISSL, respectively), with the exception of MKTF-02R and MKTF-04R. MKTF-02R and MKTF-04R sample concentrations only exceeded the RSSL. The other target soil analytes were below the ISSLs and RSSLs. Groundwater was collected from the replacement wells except for well RW-2R, which had SPH. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater cleanup and/or screening standards. SVOCs above groundwater standards were limited to naphthalene and 1-methylnaphthalene. Total barium, cobalt, iron, lead, and manganese were detected above standards in most samples. Dissolved metal detections primarily consisted of barium, cobalt, and manganese. General chemistry detections above standards were primarily TPH-DRO and TPH-GRO. Chloride was detected above standards in two wells; sulfate and TPH-ORO were detected in one well above standards.
- Monitoring well OW-66 was installed between monitoring wells OW-13 and OW-29 to further evaluate groundwater flow direction in the area. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO in soil was detected at or near the zone with the highest TOV reading, exceeding the RSSL and ISSL. The other target soil analytes were below the ISSLs and RSSLs. A groundwater sample was collected from the well. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to 1-methylnaphthalene,

2-methylnaphthalene, and naphthalene. Total and dissolved cobalt and manganese and total nickel were detected in the sample above standards. General chemistry data exceedances above standards included chloride, TPH-DRO, and TPH-GRO exceeded the applicable standards.

- Boring OW-13A was drilled to assess the dissolved-phase methyl tert butyl ether (MTBE) in the groundwater in the vicinity of monitoring well OW-13. The well was to be installed at the upper sand (alluvium)/Chinle interface and not in the Chinle formation. Groundwater was not encountered in boring OW-13A in either the upper sand (alluvium) or Chinle formation. Therefore, no well was installed. Based on the boring log for OW-13A (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents, including MTBE. Analytical results indicated that total metals concentrations were below the ISSLs and RSSLs.
- Monitoring wells OW-67 and OW-68 were installed in the upper sand (alluvium) aquifer to assess previously detected elevated concentrations of chloride and sulfate observed at monitoring well SMW-2 that may be attributable to ~~northwest of~~ evaporation pond (EP) 2 by installing the wells at depths corresponding to the base~~and monitoring well GWM-1 and east~~ of EP-2. The investigation indicates that the source of sulfate and chloride is not EP-2. TPH-GRO was detected in monitoring well OW-66 soil exceeding the RSSL and ISSL. Soil samples collected from OW-67 and OW-68 did not show the presence of TPH, VOC, or SVOC constituents and metals data were below the ISSLs and RSSLs. Groundwater was collected from the monitoring wells. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. No VOCs or SVOCs were detected above applicable standards. Total and dissolved cobalt, and manganese were detected in the sample above standards. Total fluoride exceeded the standard in monitoring well OW-68. General chemistry data exceedances above standards included chloride, sulfate, TPH-DRO, and TPH-GRO exceeded the applicable standards. TPH-ORO was also detected above the standard in monitoring well OW-68.
- Boring OW-69 was drilled to assess previously detected elevated concentrations of chloride and sulfate northwest of ~~evaporation pond (~~EP-2~~) 2~~ and monitoring well GWM-1 and east of EP-2 by drilling to the Chinle/Alluvium aquifer interface. The well was to be installed in the upper sand (alluvium) aquifer. Groundwater was not encountered in boring OW-69 in the upper sand (alluvium) or Chinle formation. Therefore, no well was installed. Based on the boring log for OW-69 (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents. Analytical results indicated that total metals concentrations were below the ISSLs and RSSLs.
- Two proposed monitoring wells, located off site of the Refinery property, were not installed. The off-site monitoring wells will be installed after site access is obtained from the property owners.

1.0 Introduction and Background

The Western Refining Southwest LLC, Marathon Gallup Refinery (Refinery) is located on 810 acres approximately 17 miles east of Gallup, New Mexico, along the north side of Interstate Highway I-40 in McKinley County. The physical address is I 40, Exit #39 Jamestown, New Mexico 87347. Figure 1-1 presents the Refinery location as well as regional features.

1.1 Background

The Refinery has been indefinitely idled since April 2020. Historically, the Refinery generally processed crude oil transported to the facility by pipeline or tanker truck. Various process units were operated at the facility, including crude distillation, reforming, fluidized catalytic cracking, alkylation, sulfur recovery, merox treater, and hydrotreating. Refinery operations have produced gasoline, diesel fuels, jet fuels, kerosene, propane, butane, and residual fuel.

1.2 Scope and Objectives

In 2018 and 2019, the New Mexico Environment Department (NMED) requested 13 monitoring wells to be installed at the Refinery. Six existing monitoring wells were to be abandoned and replaced due to submerged well screens. An additional seven new monitoring wells were to be installed to aid in evaluation of the separate phase hydrocarbon (SPH) and dissolved-phase plumes. The proposed locations and NMED objectives for the 13 monitoring wells are summarized in Table 1-1.

The project objectives were to:

- Abandon and replace monitoring wells MKTF-01, MKTF-02, MKTF-04, MKTF-17, MKTF-18, and RW-2 to monitor for the presence of SPH.
- Install one monitoring well in the Chinle aquifer to further evaluate groundwater flow direction between monitoring wells OW-13 and OW-29 in the upper sand (alluvium)/Chinle interface.
- Install one shallow monitoring well in the upper sand (alluvium)/Chinle interface to assess the dissolved-phase methyl tert butyl ether (MTBE) plume in the groundwater in the vicinity of deep monitoring well OW-13.
- Install three shallow monitoring wells in the upper sand (alluvium) aquifer to assess elevated detections of chloride and sulfate northwest of evaporation pond (EP) 2 and monitoring well GWM-1 and east of EP-2.
- Install one off-site monitoring well in the Sonsela aquifer west of monitoring well OW-1 to act as a sentinel monitoring well to monitor for potential MTBE migration.
- Install one off-site monitoring well in the upper sand (alluvium)/Chinle interface northeast of monitoring well OW-30 to delineate the potential MTBE plume in this area.

1.3 Deviations from the Scope of Work

The scope of work proposed 13 monitoring wells for installation. However, 4 of the 13 monitoring wells were not installed. Groundwater was not encountered during drilling in two of the borings: the shallow monitoring well adjacent to OW-13 and the monitoring well east of EP-2. In addition, property access was not granted for the two proposed off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). The off-site monitoring wells will be installed after site access is obtained by the property owners. In summary, six wells were abandoned, and nine wells were installed.

1.4 Document Organization

This report provides the monitoring well installation and data. It is organized by the following sections and topics.

- Section 2 provides a discussion on the drilling and sample collection.
- Section 3 presents the soil and groundwater sample information and data discussion.
- Section 4 discusses the summary and conclusions.

2.0 Well Installation Activities

This section provides information pertaining to the drilling and sampling activities. The drilling and well installation field work was completed between July 19, 2021, and August 16, 2021. Groundwater sampling was conducted on September 17, 2021.

Information regarding the well installation, soil sample collection, and soil analytical results for monitoring wells OW-67, OW-68, and boring OW-69 was provided in the "Investigation Report, SMW-1 and GWM-1 Areas" (Western 2021) submitted to NMED on September 30, 2021. Iron and manganese soil data were not available for the September report and are included in Section 3.0. Groundwater information collected from monitoring wells OW-67 and OW-68 is also presented in Section 3.0 of this report.

2.1 Pre-investigation Activities

Subsurface utility locates were conducted in a two-step process. A subsurface geophysical survey was conducted for each of the 11 proposed monitoring well locations. After the geophysical survey, v-trenches were air-knifed to a depth of approximately 5 feet below ground surface (ft bgs). The monitoring well locations shown on Figure 2-1 reflect location changes due to subsurface conflicts detected through the use of the geophysical survey and/or access issues with the hollow stem auger rig. One location, RW-2R, was moved due to observed utilities in the v-trench excavation. The location was moved and advanced to a depth of 5 ft bgs with no conflicts at the new location.

2.2 Drilling

Drilling and soil sampling activities were completed using a hollow-stem auger with split spoon sampler. Soil was collected continuously from borings OW-66, OW-67, OW-68, and OW-69. Soil was collected at approximately 5 ft intervals for the replacement and shallower completed monitoring wells (OW-13A, MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R). ~~M~~New monitoring well locations and abandoned wells are shown on Figure 2-1. Current monitoring well locations as of December 2021 are shown on Figure 2-2.

Borings were logged by a field geologist, working under the supervision of a senior geologist, using the Unified Soil Classification System (USCS). The boring logs and well construction information, if applicable, are provided in Appendix A. Well construction details are summarized in Table 2-1. During drilling, field screening for total organic volatiles (TOV) was conducted with a photoionization detector (PID) on approximate 2-ft intervals. TOV readings are included on the attached logs.

2.3 Soil Borings

Groundwater was not encountered in two of the proposed monitoring well locations, OW-13A and OW-69 (Figure 2-1). Using the auger as a tremie pipe, the borings were abandoned by hydrating bentonite chips in 5-ft increments from total depth to ground surface.

Boring OW-13A was advanced to a depth of 25.5 ft bgs. Bedrock (siltstone) was observed at a depth of approximately 13 feet ft bgs. The rig was advanced to a total depth of 25.5 ft bgs, with no observable saturated interval in the upper sand (alluvium) or the Chinle formation. Because the well was to be installed at the upper sand (alluvium)/Chinle interface and not in the Chinle formation, the boring was not advanced past 25.5 ft and no monitoring well was installed. TOV was measured at 0 parts per million (ppm) throughout the boring except at 15 ft bgs where the TOV was 4.1 ppm.

Boring OW-69 was advanced to a depth of 26 ft bgs. Bedrock (mudstone) was observed at a depth of approximately 10 ft bgs to the bottom of the boring. The rig was advanced to a total depth of 26 ft bgs, with no observable saturated interval in the upper sand (alluvium) or Chinle formation. Because the well was to be installed in the upper sand (alluvium) and not in the Chinle formation, the boring was not advanced past 26 ft bgs and no monitoring well was installed. TOV concentrations ranged from 0 ppm at 25 ft bgs to 2.4 ppm at 5 ft bgs.

2.4 Well Installation

The nine monitoring wells installed were constructed using blank 2-inch schedule 40 polyvinyl chloride (PVC) casing and 2-inch schedule 40 PVC 0.01-inch slot screen. Silica sand was emplaced from the bottom of the borehole to approximately 2 feet (ft) above the top of the screen. The remaining annular space was filled with bentonite to 1 ft bgs followed by concrete to surface. Specific monitoring well construction information is provided below and summarized in Table 2-1:

- Monitoring well OW-66. The total depth of the boring was 26 ft bgs. TOV concentrations were less than 1 ppm from 0 to 14 ft bgs. TOV ranged from 1,150 ppm at 25 ft bgs to 1,891 ppm at 17 ft bgs. Water was encountered at 14 ft bgs. The screened interval was installed from 10 to 25 ft bgs, with sand from 8 to 26 ft bgs. A sanitary seal consisting of bentonite was then placed from 1 to 8 ft bgs, above which concrete was placed to surface. The well was completed with an approximately 3 ft tall 4-inch diameter aboveground steel monument with two crash bollards.
- Monitoring well OW-67. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 0 to 1.9 ppm, which was measured at 17 ft bgs. Water was encountered at 12.4 ft bgs. The screened interval was installed from 10 to 25 ft bgs, with sand from 8 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 8 ft bgs, above which concrete was placed to surface. The well was completed with an approximately 3 ft tall 4-inch diameter aboveground steel monument with a crash bollard.
- Monitoring well OW-68. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 0.8 at 2 ft bgs to 4.4 ppm at 23 ft bgs. Water was encountered at 21 ft bgs. The screened interval was installed from 5 to 25 ft bgs, with sand from 3 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 2 to 3 ft bgs, above which concrete was placed to surface. The well was completed with a flush mounted well box.
- Replacement monitoring well MKTF-01R. The total depth of the boring was 19 ft bgs. TOV concentrations ranged from 2.7 ppm at 17 ft bgs to 803 ppm at 5 ft bgs. Water was

encountered at 4 ft bgs during drilling; the depth to water (DTW) in June 2021 was 6.12 ft bgs. The screened interval was installed from 3 to 18 ft bgs, with sand 2 to 19 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 2 ft bgs, above which concrete was placed to surface. The well was completed with a flush-mounted well box.

- Replacement well MKTF-02R. The total depth of the boring was 19 ft bgs. Water was not encountered in the boring; however, a hydrocarbon odor was noted from ground surface to approximately 5 ft bgs, where the highest TOV reading was recorded (1,140 ppm). The DTW in June 2021 was 8.02 ft bgs. Because groundwater has historically been measured in MKTF-02, the replacement well was completed. The screened interval was installed from 3 to 18 ft bgs, with sand from 2 to 19 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 2 ft bgs, above which concrete was placed to surface. The well was completed with a flush mounted well box and a bollard.
- Replacement well MKTF-04R. The total depth of the boring was 20 ft bgs. TOV concentrations ranged from 0 to 405.9 ppm, measured at 9 ft bgs. Water was encountered at 8 ft bgs during drilling; the DTW in June 2021 was 9.22 ft bgs. The screened interval was installed 4 to 19 ft bgs, with sand 3 to 20 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box.
- Replacement well MKTF-17R. The total depth of the boring was 21 ft bgs. TOV concentrations ranged from 0 ppm at 21 ft bgs to 2,676 ppm at 5 ft bgs. Water was encountered at 6.5 ft bgs during drilling; the DTW in June 2021 was 15.15 ft bgs. The screened interval was from 5 to 20 ft bgs, with sand from 3 to 21 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box and a bollard.
- Replacement well MKTF-18R. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 3 ppm at 19 ft bgs to 1,554 ppm at 8 ft bgs. Water was encountered at 9.5 ft bgs during drilling; the DTW in June 2021 was 9.21 ft bgs. The screened interval was from 5 to 25 ft bgs, with sand from 3 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box.
- Replacement well RW-2R. The total depth of the boring was 33 ft bgs. TOV concentrations ranged from 51.1 ppm at 10 ft bgs to 1,348 ppm at 30 ft bgs. Water was encountered at 16.5 ft bgs during drilling; the DTW in June 2021 was 23.86 ft bgs. The screened interval was from 11.5 to 31.5 ft bgs, with sand from 9.5 to 33 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 6.5 to 9.5 ft bgs, above which was placed concrete to surface. The well was completed with an approximately 3 ft tall 6-inch diameter aboveground steel monument.

2.5 Well Abandonment

Because wells MKTF-01, MKTF-02, MKTF-04, MKTF-17, MKTF-18, and RW-2 were not correctly constructed (i.e., the tops of the well screens were submerged below the water table surface and therefore could not monitor for the presence of SPH), they were abandoned after the replacement wells were installed. The above ground pipes were cut off at below ground surface. The total depth of the existing wells was measured, and a stinger pipe was placed to the bottom of the well. Cement was then tremied through the stinger pipe, filling the well from the bottom up. The concrete pads were destroyed and removed.

In the Comment 3 of the letter "Approval with Modifications, Hydrocarbon Seep Interim Measures 2021 Second Quarter Status Report" dated September 14, 2021, NMED stated, "Existing Wells MKTF-1, MKTF-2, MKTF-4, MKTF-17, and MKTF-18 must not be plugged and abandoned; they must be preserved at this time." However, the wells were abandoned in July 2021 and August 2021, in accordance with previous correspondence, before the September 2021 letter was received. The replacement wells will provide enhanced information (the ability to monitor for SPH) in addition to providing equivalent dissolved constituent data while reducing the liability of maintaining duplicative shallow groundwater wells.

2.6 Well Development

The depth to water and total depth were measured at the nine monitoring wells prior to well development. SPH was not detected in the wells except for RW-2R (apparent SPH thickness of 2.67 feet). For monitoring wells OW-67 and OW-68, 10 casing volumes were bailed from each well. Additional groundwater was then removed until the field parameters equilibrated. A YSI multiprobe meter was used to collect measurements (conductivity, pH, temperature, dissolved oxygen, and salinity). The remaining seven monitoring wells went dry during bailing the 10 casing volumes; therefore, groundwater measurements were collected during purging and sampling on September 17, 2021. Well development field forms are included as Appendix B.

2.7 Elevation Survey

The nine monitoring wells were surveyed after completion by a licensed New Mexico land surveyor. The two borings (OW-13A and OW-69) were logged with a hand-held global positioning system device. The elevations will be submitted in the 2021 annual groundwater report.

2.8 Investigation Derived Waste

Soil generated during drilling was drummed and transferred to the 90-day storage pad and samples collected. The labeled drums will be shipped off site to an appropriate disposal facility after data are received. Water generated during development, purging, and sampling activities was placed into a labeled drum for processing by the Refinery.

3.0 Sample Collection and Analytical Results

This section presents soil and groundwater sample collection and data results. Soil results are summarized in Tables 3-1 through 3-4. Groundwater results are summarized in Tables 3-5 through 3-10.

3.1 Sample Collection and Analysis

Samples were collected for analysis following procedures outlined in the approved work plans, "Work Plan 2015 Annual Groundwater Report Comments", dated October 2018, and revised June & October 2019 (DiSorbo 2019a) and "Work Plan SMW-2 and GWM-1 Areas" dated August 2018 and revised August 2019 (DiSorbo 2019b). The monitoring well installations followed their respective work plans.

3.1.1 Soil Sampling

Soil samples were collected in two separate events, July 19 to July 22, 2021, and August 13 to August 16, 2021. Two soil samples from each boring were selected for analysis, one at the depth with the highest PID reading and one at the bottom of the boring. Samples were collected as follows:

- MKTF-01R at 6 ft bgs and 18 ft bgs
- MKTF-02R at 6 ft bgs and 18 ft bgs
- MKTF-04R at 8.2 to 8.7 ft bgs and 19.5 to 20 ft bgs
- MKTF-17R at 6.5 to 7 ft bgs and 20.5 to 21 ft bgs
- MKTF-18R at 9.5 to 10 ft bgs and 25.5 to 26 ft bgs
- OW-13A at 14 ft bgs and 25.5 ft bgs
- OW-66 at 18 ft bgs and 25 ft bgs
- OW-67 at 17 ft bgs and 26 ft bgs
- OW-68 at 22 ft bgs and 26 ft bgs
- OW-69 at 6 ft bgs and 26 ft bgs
- RW-2R at 16.5 to 17 ft bgs and 32.5 to 33 ft bgs

Duplicates were collected at MKTF-17R (20.5 to 21 ft bgs) and RW-2R (16.5 to 17 ft bgs). Soil samples were submitted for analysis of:

- Total Petroleum hydrocarbons, gasoline range organics (TPH-GRO) by Environmental Protection Agency (EPA) Method 8015M/D
- TPH, diesel range organics (TPH-DRO) by EPA Method 8015D

- TPH, motor oil range organics (TPH-MRO) by EPA Method 8015D
- Volatile Organic Compounds (VOCs) including fuel oxygenates by EPA Method 8260B
- Semi-volatile organic compounds (SVOCs) by EPA Method 8270
- Resource Conservation Recovery Act (RCRA) Metals: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver, and iron and manganese by EPA Method 6010B

3.1.2 Soil Sample Results

TPH and benzene, toluene, ethylbenzene, and xylenes (BTEX) data are presented in Table 3-1; VOC data are presented in Table 3-2; SVOC data are presented in Table 3-3; and metals data are presented in Table 3-4. Data were compared to the 2019 NMED Residential and Industrial Soil Screening Levels (RSSLs and ISSLs, respectively) (NMED 2019). None of the soil samples exceed RSSLs or ISSLs for TPH-DRO, TPH-MRO, BTEX, MTBE, VOCs, SVOCs, or metals. TPH GRO exceeded the screening levels in several borings. TPH-GRO data are summarized below.

- MKTF-01R. The sample collected at 6 ft bgs had an estimated TPH-GRO concentration of an estimated concentration (J) 1,100 milligrams per kilogram (mg/kg), exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (18 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-02R. The sample collected at 6 ft bgs had an estimated TPH-GRO concentration of 260 J mg/kg, exceeding the RSSL (100 mg/kg) and not exceeding the ISSL. The sample collected at the bottom of the boring (18 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-04R. The sample collected at 8.2 to 8.7 ft bgs had a TPH-GRO concentration of 300 mg/kg, exceeding the RSSL (100 mg/kg) and not exceeding the ISSL. The sample collected at the bottom of the boring (19.5 to 20 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-17R. The sample collected at 6.5 to 7 ft bgs had a TPH-GRO concentration of 2,100 mg/kg, exceeding RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (20.5 to 21 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-18R. The sample collected at 9.5 to 10 ft bgs had a TPH-GRO concentration of 2,400 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively. The sample collected at the bottom of the boring (25.5 to 26 ft bgs) did not exceed the RSSL or ISSL.
- OW-13A. Neither sample exceeded the RSSL or ISSL.

- OW-66. The sample collected at 18 ft bgs had a TPH-GRO concentration of 1,800 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (26 ft bgs) did not exceed the RSSL or ISSL.
- OW-67. Neither sample exceeded the RSSL or ISSL.
- OW-68. Neither sample exceeded the RSSL or ISSL.
- OW-69. Neither sample exceeded the RSSL or ISSL.
- RW-2R. The sampled collected at 16 to 17 ft had a TPH-GRO concentration of 1,900 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (32.5 to 33 ft bgs) did not exceed the RSSL or ISSL.

Iron and manganese results were inadvertently left off the analyte list for OW-67, OW-68, and OW-69 (Western 2021). Those data are included in this report. As indicated above, the samples were below RSSLs and ISSLs.

Soil laboratory reports are included as Appendix C.

3.2 Groundwater Sampling and Results

Samples were collected for analysis following procedures outlined in the approved work plans, "Work Plan 2015 Annual Groundwater Report Comments" dated October 2018 and revised June & October 2019 (DiSorbo 2019a) and "Work Plan SMW-2 and GWM-1 Areas" dated August 2018 and revised August 2019 (DiSorbo 2019b).

3.2.1 Groundwater Sampling

Samples were collected from eight of the nine new monitoring wells on September 17, 2021: MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, OW-66, OW-67, and OW-68. Replacement well RW-2R was not sampled due to the presence of SPH. A duplicate sample was collected from MKTF-18R. Groundwater samples were submitted for analysis of:

- TPH-GRO by EPA Method 8015D
- TPH-DRO by EPA Method 8015D
- TPH-MRO by EPA Method 8015D
- VOCs (including fuel oxygenates) by EPA Method 8260B
- SVOCs by EPA Method 8270C and 8270SIM

- Total Metals: barium, beryllium, cadmium, calcium, chromium, cobalt, iron, magnesium, manganese, nickel, potassium, silver, sodium, vanadium, and zinc by EPA Method 200.7; antimony, arsenic, lead, and selenium by EPA Method 200.8; and mercury by EPA Method 245.1
- Dissolved Metals: barium, beryllium, cadmium, chromium, cobalt, iron, manganese, nickel, silver, vanadium, and zinc by EPA Method 200.7; antimony, arsenic, lead, and selenium by EPA Method 200.8; and mercury by EPA Method 245.1
- Anions: fluoride, chloride, nitrate-nitrogen (as N), nitrite-nitrogen (as N), and sulfate by EPA Method 300.0
- Alkalinity: bicarbonate (as $CaCO_3$), carbonate (as $CaCO_3$), and total alkalinity (as $CaCO_3$) by method SM2320B

3.2.2 Fluid Level Measurements

Fluid levels were measured during well development and sample collection. The data are provided in Table 2-1. Observable SPH thickness was measured in replacement well RW-2R at 2.67 ft. Replacement well RW-2R was not sampled for analytical parameters.

3.2.3 Groundwater Analytical Results

Groundwater was analyzed for VOCs (Table 3-5), SVOCs (Table 3-6), total and dissolved metals (Table 3-7 and 3-8, respectively), and general chemistry (Table 3-9). Field parameters collected during sample collection are provided in Table 3-10. Laboratory data and the data validation report are provided in Appendices C and D, respectively. Data were compared to applicable cleanup levels as indicated on Tables 3-5 through 3-9.

VOCs

A summary of the groundwater data exceeding applicable VOC cleanup levels is provided below.

- MKTF-01R. VOC results from MKTF-01R showed estimated (J) concentrations of 1,2,4-trimethylbenzene (310 J micrograms per liter [ug/L]), 1-methyl naphthalene (28 J ug/L), benzene (7,100 J ug/L), and naphthalene (52 J ug/L). Vinyl chloride and xylenes were detected at 22 ug/L and 850 ug/L, respectively.
- MKTF-02R. VOC results from MKTF-02R showed estimated concentrations of benzene (29 J ug/L). Other VOCs detected above standards include 1,1,2-trichloroethane (7.9 ug/L), 1,1-dichloroethane (110 ug/L), 1,1-dichloroethene (280 ug/L), 1,2-dichloroethane (67 ug/L), and trichloroethene (23 ug/L).

- MKTF-04R. VOC results from MKTF-04R showed estimated concentrations of 1,2,4-trimethylbenzene (160 J ug/L), 1-methylnaphthalene (48 J ug/L), 2-methylnaphthalene (59 J ug/L), benzene (1,100 J ug/L), MTBE (1,600 J ug/L), and naphthalene (81 J ug/L). Other VOC results detected above standards include 1,1-dichloroethane (35 ug/L) and 1,1-dichloroethene (45 ug/L).
- MKTF-17R. VOC results from MKTF-17R showed estimated concentrations of 1,2,4-trimethylbenzene (430 J ug/L), 1,3,5-trimethylbenzene (120 J ug/L), 1-methylnaphthalene (27 J ug/L), benzene (1,600 J ug/L), MTBE (3,900 J ug/L), naphthalene (72 J ug/L), and toluene (5,400 J ug/L). Other VOC results detected above standards included xylenes (2,700 ug/L).
- MKTF-18R. VOC results from MKTF-18R showed estimated concentrations of 1,1-dichloroethane (32 J ug/L), 1,2,4-trimethylbenzene (780 J ug/L), 1-methylnaphthalene (200 J ug/L), 2-methylnaphthalene (300 J ug/L), benzene (3,700 J ug/L), MTBE (200 J ug/L), naphthalene (77 J ug/L), and toluene (1,800 J ug/L).
- OW-66. VOC results from OW-66 showed estimated concentrations of 1,2,4-trimethylbenzene (1,300 J ug/L), 1,3,5-trimethylbenzene (350 J ug/L), 2-methylnaphthalene (61 J ug/L), benzene (12,000 J ug/L), bromodichloromethane (2.1 J ug/L), chloromethane (28 J ug/L), dibromochloromethane (6.2 J ug/L), ethylbenzene (720 J ug/L), MTBE (680 J ug/L), and toluene (9,200 J ug/L). Other VOCs include naphthalene (130 ug/L) and xylenes (6,200 ug/L).
- OW-67. No VOCs were detected above applicable standards.
- OW-68. No VOCs were detected above applicable standards.

SVOCs

A summary of the groundwater data exceeding applicable SVOC cleanup levels is provided below.

- MKTF-01R. No SVOCs were detected above applicable standards.
- MKTF-02R. No SVOCs were detected above applicable standards.
- MKTF-04R. No SVOCs were detected above applicable standards..
- MKTF-17R. SVOC results from MKTF-17R showed estimated concentrations of 1-methylnaphthalene (15 J ug/L) and naphthalene (38 J ug/L).
- MKTF-18R. SVOC results from MKTF-18R showed estimated concentrations of 1-methylnaphthalene (27 J ug/L) and naphthalene (87 J ug/L).
- OW-66. SVOC results from OW-66 showed estimated concentrations of 1-methylnaphthalene (33 J ug/L) and 2-methylnaphthalene (51 J ug/L). Other SVOCs detected above standards include naphthalene (110 ug/L).
- OW-67. No SVOCs were detected above applicable standards.
- OW-68. No SVOCs were detected above applicable standards.

Total Metals

A summary of the groundwater data exceeding applicable metals cleanup levels is provided below.

- MKTF-01R. Total metals exceeding standards included barium (5,400 ug/L), cobalt (12 ug/L), and manganese (3,400 ug/L).
- MKTF-02R. No total metals were detected above applicable standards.
- MKTF-04R. Total metals exceeding standards included cobalt (9 ug/L) and manganese (2,700 ug/L).
- MKTF-17R. Total metals exceeding standards included manganese (3,400 ug/L).
- MKTF-18R. Total metals results from MKTF-18R showed estimated concentrations of iron (17,000 J ug/L), lead (46 J ug/L), and manganese (2,900 J ug/L). Other total metals exceeding standards included barium (2,000 ug/L) and cobalt (15 ug/L).
- OW-66. Total metals results from OW-66 showed estimated concentrations of nickel (380 J ug/L). Other total metals exceeding standards included cobalt (10 ug/L) and manganese (2,600 ug/L).
- OW-67. Total metals results from OW-67 showed estimated concentrations of cobalt (29 J ug/L). Other total metals exceeding standards included manganese (8,000 ug/L).
- OW-68. Total metals exceeding standards included cobalt (100 ug/L), fluoride (6,400 ug/L), and manganese (11,000 ug/L).

Dissolved Metals

A summary of the groundwater data exceeding applicable metals cleanup levels is provided below.

- MKTF-01R. Dissolved metals results from MKTF-01R showed estimated concentrations of arsenic (6.6 J ug/L). Other dissolved metals exceeding standards included barium (4,700 ug/L), cobalt (8 ug/L), and manganese (3,100 ug/L).
- MKTF-02R. No dissolved metals exceeded applicable standards.
- MKTF-04R. Dissolved metals results from MKTF-04R showed estimated concentrations of arsenic (3.6 J ug/L). Other dissolved metals exceeding standards included manganese (2,400 ug/L).
- MKTF-17R. Dissolved metals results from MKTF-17R showed estimated concentrations of arsenic (4.6 J ug/L). Other dissolved metals exceeding standards included manganese (2,800 ug/L).
- MKTF-18R. Dissolved metals results from MKTF-18R showed estimated concentrations of arsenic (2.6 J ug/L). Other dissolved metals exceeding standards included cobalt (8.8 ug/L).

- OW-66. Dissolved metals results from OW-66 showed estimated concentrations of arsenic (3.7 J ug/L). Other dissolved metals exceeding standards included cobalt (8.4 ug/L) and manganese (2,400 ug/L).
- OW-67. Dissolved metals results from OW-67 showed estimated concentrations of arsenic (2.3 J ug/L). Other dissolved metals exceeding standards included cobalt (11 ug/L) and manganese (7,400 ug/L).
- OW-68. Dissolved metals results from OW-68 showed estimated concentrations of arsenic (5.5 J ug/L). Other dissolved metals exceeding standards included cobalt (79 ug/L) and manganese (9,600 ug/L).

General Chemistry

A summary of the groundwater general chemistry data exceeding applicable cleanup levels is provided below.

- MKTF-01R. TPH-DRO, TPH-GRO, and TPH-ORO exceeded applicable standards at 2,200 ug/L, 5,200 ug/L, and 96 ug/L, respectively.
- MKTF-02R. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 1,800,000 ug/L, 220 ug/L, and 560 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 710,000 J ug/L.
- MKTF-04R. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 1,200,000 ug/L, 1,200 ug/L, and 19,000 ug/L, respectively.
- MKTF-17R. TPH-DRO and TPH-GRO exceeded applicable standards at 1,800 ug/L and 29,000 ug/L, respectively.
- MKTF-18R. TPH-DRO and TPH-GRO had estimated concentrations exceeding standards of 2,600 J ug/L and 5,000 J ug/L, respectively.
- OW-66. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 320,000 ug/L, 4,000 ug/L, and 69,000 ug/L, respectively.
- OW-67. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 4,900,000 ug/L, 560 ug/L, and 410 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 760,000 J ug/L.
- OW-68. Chloride, TPH-DRO, TPH-GRO, and TPH-ORO exceeded applicable standards at 5,100,000 ug/L, 1,100 ug/L, 1,700 ug/L, and 120 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 800,000 J ug/L.

4.0 Summary and Conclusions

The Refinery proposed the installation of 13 monitoring wells: 6 existing wells were to be abandoned and replaced due to submerged well screens. 7 new monitoring wells were planned to be installed to aid in evaluation of the SPH and dissolved-phase plumes. However, 4 of the 7 new monitoring wells were not installed for the following reasons; groundwater was not encountered during drilling in two of the borings, the shallow monitoring well adjacent to OW-13 (boring OW-13A) and the monitoring well east of EP-2 (boring OW-69), and, property access was not granted for the two off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). In summary, six wells were abandoned, and nine wells were installed.

The objectives presented in Section 1.2 were met and the key findings are described below.

- Replacement wells MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R were installed such that the well screens are appropriately positioned to allow SPH, if present, to enter the well. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO was detected in each soil sample at or near the zone with the highest TOV reading exceeding the RSSL and ISSL, with the exception of MKTF-02R and MKTF-04R where samples only exceeded the RSSL. The other target soil analytes were below the ISSLs and RSSLs. Groundwater was collected from the replacement wells except for well RW-2R, which had SPH. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to naphthalene and 1-methylnaphthalene. Total barium, cobalt, iron, lead, and manganese were detected above standards in most samples. Dissolved metal detections primarily consisted of barium, cobalt, and manganese. General chemistry detections above standards were primarily TPH-DRO and TPH-GRO. Chloride was detected above standards in two wells; sulfate and TPH-ORO were detected in one well above standards.
- Monitoring well OW-66 was installed between monitoring wells OW-13 and OW-29 to further evaluate groundwater flow direction in the area. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO in soil was detected at or near the zone with the highest TOV reading, exceeding the RSSL and ISSL. The other target soil analytes were below the ISSLs and RSSLs. A groundwater sample was collected from the well. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Total and dissolved cobalt and manganese and total

nickel were detected in the sample above standards. General chemistry data exceedances above standards included chloride, TPH-DRO, and TPH-GRO exceeded the applicable standards.

- There were some groundwater analytes that had detection limits that exceeded the applicable standards. Groundwater analytes included: 1,2,3-Trichloropropane, 1,2-Dibromo-3-Chloropropane, 1,2-Dibromoethane, Hexachlorobutadiene, 2,6-Dinitrotoluene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Bis(2-chloroethyl)ether, Dibenzo(a,h)anthracene, Hexachlorobenzene, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene, N-Nitrosodimethylamine, N-Nitrosodi-n-propylamine, total beryllium, total cadmium, and TPH-ORO. 1-Methylnapthalene had a standard exceedance that was evaluated to be undetected at the reported concentration in data validation, resulting in a non-detect standard exceedance. Vinyl chloride also had one non-detect standard exceedance. It should be noted that standard exceedances, even if a non-detection, are considered data quality exceptions. Therefore, those values cannot evaluate compliance for those constituents.
- Boring OW-13A was installed to assess the dissolved-phase MTBE in the groundwater in the vicinity of the deep monitoring well OW-13. Groundwater was not encountered in boring OW-13A and, therefore, no well was installed. Based on the boring log for OW-13A (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents, including MTBE. Analytical results indicate that total metals concentrations were below the ISSLs and RSSLs.
- Monitoring wells OW-67 and OW-68 ~~and boring OW-69~~ were installed in the upper sand (alluvium) aquifer to assess elevated detections of chloride and sulfate observed at monitoring well SMW-2 that may be attributable to ~~northwest of evaporation pond (EP) 2~~EP-2 by installing the wells at depths corresponding to the base~~and monitoring well GWM-1 and east~~ of EP-2. The investigation indicates that the source of sulfate and chloride is not EP-2. Boring OW-69 was drilled to assess previously detected elevated concentrations of chloride and sulfate northwest of EP-2 and monitoring well GWM-1 and east of EP-2 by drilling to the Chinle/Alluvium aquifer interface. TPH-GRO was detected in monitoring well OW-66 exceeding the RSSL and ISSL. Soil samples collected from borings OW-67 and OW-68 did not show the presence of TOC, VOC, or SVOC constituents, and metals concentrations were below the ISSLs and RSSLs. Groundwater was collected from the monitoring wells. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. No VOCs or SVOCs were detected above applicable standards. Total and dissolved cobalt, and manganese were detected in the sample above standards. Total fluoride exceeded the standard in monitoring well OW-68. General chemistry data exceedances above standards included chloride, sulfate, TPH-DRO, and TPH-GRO exceeded the applicable standards. TPH-ORO was also detected above the standard in monitoring well OW-68.
- Two proposed monitoring wells, located off site of the Refinery property, were not installed. The off-site monitoring wells will be installed after access is obtained from the property owners.

Executive Summary

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery) proposed the installation of 13 wells: 6 existing wells were abandoned and replaced due to submerged well screens, and 7 new wells were planned to aid in evaluation of the separate phase hydrocarbon (SPH) and dissolved-phase plumes. However, 4 of the 7 new wells were not installed. Groundwater was not encountered during drilling in two of the on-site borings, and property access was not granted for the two off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). In summary, six wells were abandoned, and nine wells were installed.

The objectives and the key findings of the well installation activities are described below.

- Replacement monitoring wells MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R were installed such that the well screens are appropriately positioned to allow SPH, if present, to enter the well. These data will be used to further delineate the SPH plume. Soil samples were collected from within the borings at the zone with the highest total organic vapor (TOV) reading and at the bottom of the boring. Total petroleum hydrocarbon – gasoline range organics (TPH-GRO) was detected in each soil sample at or near the zone with the highest TOV reading exceeding the residential and industrial soil screening levels (RSSL and ISSL, respectively), with the exception of MKTF-02R and MKTF-04R. MKTF-02R and MKTF-04R sample concentrations only exceeded the RSSL. The other target soil analytes were below the ISSLs and RSSLs. Groundwater was collected from the replacement wells except for well RW-2R, which had SPH. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater cleanup and/or screening standards. SVOCs above groundwater standards were limited to naphthalene and 1-methylnaphthalene. Total barium, cobalt, iron, lead, and manganese were detected above standards in most samples. Dissolved metal detections primarily consisted of barium, cobalt, and manganese. General chemistry detections above standards were primarily TPH-DRO and TPH-GRO. Chloride was detected above standards in two wells; sulfate and TPH-ORO were detected in one well above standards.
- Monitoring well OW-66 was installed between monitoring wells OW-13 and OW-29 to further evaluate groundwater flow direction in the area. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO in soil was detected at or near the zone with the highest TOV reading, exceeding the RSSL and ISSL. The other target soil analytes were below the ISSLs and RSSLs. A groundwater sample was collected from the well. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to 1-methylnaphthalene,

2-methylnaphthalene, and naphthalene. Total and dissolved cobalt and manganese and total nickel were detected in the sample above standards. General chemistry data exceedances above standards included chloride, TPH-DRO, and TPH-GRO exceeded the applicable standards.

- Boring OW-13A was drilled to assess the dissolved-phase methyl tert butyl ether (MTBE) in the groundwater in the vicinity of monitoring well OW-13. The well was to be installed at the upper sand (alluvium)/Chinle interface and not in the Chinle formation. Groundwater was not encountered in boring OW-13A in either the upper sand (alluvium) or Chinle formation. Therefore, no well was installed. Based on the boring log for OW-13A (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents, including MTBE. Analytical results indicated that total metals concentrations were below the ISSLs and RSSLs.
- Monitoring wells OW-67 and OW-68 were installed in the upper sand (alluvium) aquifer to assess previously detected elevated concentrations of chloride and sulfate observed at monitoring well SMW-2 that may be attributable to evaporation pond (EP) 2 by installing the wells at depths corresponding to the base of EP-2. The investigation indicates that the source of sulfate and chloride is not EP-2. TPH-GRO was detected in monitoring well OW-66 soil exceeding the RSSL and ISSL. Soil samples collected from OW-67 and OW-68 did not show the presence of TPH, VOC, or SVOC constituents and metals data were below the ISSLs and RSSLs. Groundwater was collected from the monitoring wells. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. No VOCs or SVOCs were detected above applicable standards. Total and dissolved cobalt, and manganese were detected in the sample above standards. Total fluoride exceeded the standard in monitoring well OW-68. General chemistry data exceedances above standards included chloride, sulfate, TPH-DRO, and TPH-GRO exceeded the applicable standards. TPH-ORO was also detected above the standard in monitoring well OW-68.
- Boring OW-69 was drilled to assess previously detected elevated concentrations of chloride and sulfate northwest of EP-2 and monitoring well GWM-1 and east of EP-2 by drilling to the Chinle/Alluvium aquifer interface. The well was to be installed in the upper sand (alluvium) aquifer. Groundwater was not encountered in boring OW-69 in the upper sand (alluvium) or Chinle formation. Therefore, no well was installed. Based on the boring log for OW-69 (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents. Analytical results indicated that total metals concentrations were below the ISSLs and RSSLs.
- Two proposed monitoring wells, located off site of the Refinery property, were not installed. The off-site monitoring wells will be installed after site access is obtained from the property owners.

1.0 Introduction and Background

The Western Refining Southwest LLC, Marathon Gallup Refinery (Refinery) is located on 810 acres approximately 17 miles east of Gallup, New Mexico, along the north side of Interstate Highway I-40 in McKinley County. The physical address is I 40, Exit #39 Jamestown, New Mexico 87347. Figure 1-1 presents the Refinery location as well as regional features.

1.1 Background

The Refinery has been indefinitely idled since April 2020. Historically, the Refinery generally processed crude oil transported to the facility by pipeline or tanker truck. Various process units were operated at the facility, including crude distillation, reforming, fluidized catalytic cracking, alkylation, sulfur recovery, merox treater, and hydrotreating. Refinery operations have produced gasoline, diesel fuels, jet fuels, kerosene, propane, butane, and residual fuel.

1.2 Scope and Objectives

In 2018 and 2019, the New Mexico Environment Department (NMED) requested 13 monitoring wells to be installed at the Refinery. Six existing monitoring wells were to be abandoned and replaced due to submerged well screens. An additional seven new monitoring wells were to be installed to aid in evaluation of the separate phase hydrocarbon (SPH) and dissolved-phase plumes. The proposed locations and NMED objectives for the 13 monitoring wells are summarized in Table 1-1.

The project objectives were to:

- Abandon and replace monitoring wells MKTF-01, MKTF-02, MKTF-04, MKTF-17, MKTF-18, and RW-2 to monitor for the presence of SPH.
- Install one monitoring well in the Chinle aquifer to further evaluate groundwater flow direction between monitoring wells OW-13 and OW-29 in the upper sand (alluvium)/Chinle interface.
- Install one shallow monitoring well in the upper sand (alluvium)/Chinle interface to assess the dissolved-phase methyl tert butyl ether (MTBE) plume in the groundwater in the vicinity of deep monitoring well OW-13.
- Install three shallow monitoring wells in the upper sand (alluvium) aquifer to assess elevated detections of chloride and sulfate northwest of evaporation pond (EP) 2 and monitoring well GWM-1 and east of EP-2.
- Install one off-site monitoring well in the Sonsela aquifer west of monitoring well OW-1 to act as a sentinel monitoring well to monitor for potential MTBE migration.
- Install one off-site monitoring well in the upper sand (alluvium)/Chinle interface northeast of monitoring well OW-30 to delineate the potential MTBE plume in this area.

1.3 Deviations from the Scope of Work

The scope of work proposed 13 monitoring wells for installation. However, 4 of the 13 monitoring wells were not installed. Groundwater was not encountered during drilling in two of the borings: the shallow monitoring well adjacent to OW-13 and the monitoring well east of EP-2. In addition, property access was not granted for the two proposed off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). The off-site monitoring wells will be installed after site access is obtained by the property owners. In summary, six wells were abandoned, and nine wells were installed.

1.4 Document Organization

This report provides the monitoring well installation and data. It is organized by the following sections and topics.

- Section 2 provides a discussion on the drilling and sample collection.
- Section 3 presents the soil and groundwater sample information and data discussion.
- Section 4 discusses the summary and conclusions.

2.0 Well Installation Activities

This section provides information pertaining to the drilling and sampling activities. The drilling and well installation field work was completed between July 19, 2021, and August 16, 2021. Groundwater sampling was conducted on September 17, 2021.

Information regarding the well installation, soil sample collection, and soil analytical results for monitoring wells OW-67, OW-68, and boring OW-69 was provided in the "Investigation Report, SMW-1 and GWM-1 Areas" (Western 2021) submitted to NMED on September 30, 2021. Iron and manganese soil data were not available for the September report and are included in Section 3.0. Groundwater information collected from monitoring wells OW-67 and OW-68 is also presented in Section 3.0 of this report.

2.1 Pre-investigation Activities

Subsurface utility locates were conducted in a two-step process. A subsurface geophysical survey was conducted for each of the 11 proposed monitoring well locations. After the geophysical survey, v-trenches were air-knifed to a depth of approximately 5 feet below ground surface (ft bgs). The monitoring well locations shown on Figure 2-1 reflect location changes due to subsurface conflicts detected through the use of the geophysical survey and/or access issues with the hollow stem auger rig. One location, RW-2R, was moved due to observed utilities in the v-trench excavation. The location was moved and advanced to a depth of 5 ft bgs with no conflicts at the new location.

2.2 Drilling

Drilling and soil sampling activities were completed using a hollow-stem auger with split spoon sampler. Soil was collected continuously from borings OW-66, OW-67, OW-68, and OW-69. Soil was collected at approximately 5 ft intervals for the replacement and shallower completed monitoring wells (OW-13A, MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R). New monitoring well locations and abandoned wells are shown on Figure 2-1. Current monitoring well locations as of December 2021 are shown on Figure 2-2.

Borings were logged by a field geologist, working under the supervision of a senior geologist, using the Unified Soil Classification System (USCS). The boring logs and well construction information, if applicable, are provided in Appendix A. Well construction details are summarized in Table 2-1. During drilling, field screening for total organic volatiles (TOV) was conducted with a photoionization detector (PID) on approximate 2-ft intervals. TOV readings are included on the attached logs.

2.3 Soil Borings

Groundwater was not encountered in two of the proposed monitoring well locations, OW-13A and OW-69 (Figure 2-1). Using the auger as a tremie pipe, the borings were abandoned by hydrating bentonite chips in 5-ft increments from total depth to ground surface.

Boring OW-13A was advanced to a depth of 25.5 ft bgs. Bedrock (siltstone) was observed at a depth of approximately 13 feet ft bgs. The rig was advanced to a total depth of 25.5 ft bgs, with no observable saturated interval in the upper sand (alluvium) or the Chinle formation. Because the well was to be installed at the upper sand (alluvium)/Chinle interface and not in the Chinle formation, the boring was not advanced past 25.5 ft and no monitoring well was installed. TOV was measured at 0 parts per million (ppm) throughout the boring except at 15 ft bgs where the TOV was 4.1 ppm.

Boring OW-69 was advanced to a depth of 26 ft bgs. Bedrock (mudstone) was observed at a depth of approximately 10 ft bgs to the bottom of the boring. The rig was advanced to a total depth of 26 ft bgs, with no observable saturated interval in the upper sand (alluvium) or Chinle formation. Because the well was to be installed in the upper sand (alluvium) and not in the Chinle formation, the boring was not advanced past 26 ft bgs and no monitoring well was installed. TOV concentrations ranged from 0 ppm at 25 ft bgs to 2.4 ppm at 5 ft bgs.

2.4 Well Installation

The nine monitoring wells installed were constructed using blank 2-inch schedule 40 polyvinyl chloride (PVC) casing and 2-inch schedule 40 PVC 0.01-inch slot screen. Silica sand was emplaced from the bottom of the borehole to approximately 2 feet (ft) above the top of the screen. The remaining annular space was filled with bentonite to 1 ft bgs followed by concrete to surface. Specific monitoring well construction information is provided below and summarized in Table 2-1:

- Monitoring well OW-66. The total depth of the boring was 26 ft bgs. TOV concentrations were less than 1 ppm from 0 to 14 ft bgs. TOV ranged from 1,150 ppm at 25 ft bgs to 1,891 ppm at 17 ft bgs. Water was encountered at 14 ft bgs. The screened interval was installed from 10 to 25 ft bgs, with sand from 8 to 26 ft bgs. A sanitary seal consisting of bentonite was then placed from 1 to 8 ft bgs, above which concrete was placed to surface. The well was completed with an approximately 3 ft tall 4-inch diameter aboveground steel monument with two crash bollards.
- Monitoring well OW-67. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 0 to 1.9 ppm, which was measured at 17 ft bgs. Water was encountered at 12.4 ft bgs. The screened interval was installed from 10 to 25 ft bgs, with sand from 8 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 8 ft bgs, above which concrete was placed to surface. The well was completed with an approximately 3 ft tall 4-inch diameter aboveground steel monument with a crash bollard.
- Monitoring well OW-68. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 0.8 at 2 ft bgs to 4.4 ppm at 23 ft bgs. Water was encountered at 21 ft bgs. The screened interval was installed from 5 to 25 ft bgs, with sand from 3 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 2 to 3 ft bgs, above which concrete was placed to surface. The well was completed with a flush mounted well box.
- Replacement monitoring well MKTF-01R. The total depth of the boring was 19 ft bgs. TOV concentrations ranged from 2.7 ppm at 17 ft bgs to 803 ppm at 5 ft bgs. Water was

encountered at 4 ft bgs during drilling; the depth to water (DTW) in June 2021 was 6.12 ft bgs. The screened interval was installed from 3 to 18 ft bgs, with sand 2 to 19 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 2 ft bgs, above which concrete was placed to surface. The well was completed with a flush-mounted well box.

- Replacement well MKTF-02R. The total depth of the boring was 19 ft bgs. Water was not encountered in the boring; however, a hydrocarbon odor was noted from ground surface to approximately 5 ft bgs, where the highest TOV reading was recorded (1,140 ppm). The DTW in June 2021 was 8.02 ft bgs. Because groundwater has historically been measured in MKTF-02, the replacement well was completed. The screened interval was installed from 3 to 18 ft bgs, with sand from 2 to 19 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 2 ft bgs, above which concrete was placed to surface. The well was completed with a flush mounted well box and a bollard.
- Replacement well MKTF-04R. The total depth of the boring was 20 ft bgs. TOV concentrations ranged from 0 to 405.9 ppm, measured at 9 ft bgs. Water was encountered at 8 ft bgs during drilling; the DTW in June 2021 was 9.22 ft bgs. The screened interval was installed 4 to 19 ft bgs, with sand 3 to 20 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box.
- Replacement well MKTF-17R. The total depth of the boring was 21 ft bgs. TOV concentrations ranged from 0 ppm at 21 ft bgs to 2,676 ppm at 5 ft bgs. Water was encountered at 6.5 ft bgs during drilling; the DTW in June 2021 was 15.15 ft bgs. The screened interval was from 5 to 20 ft bgs, with sand from 3 to 21 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box and a bollard.
- Replacement well MKTF-18R. The total depth of the boring was 26 ft bgs. TOV concentrations ranged from 3 ppm at 19 ft bgs to 1,554 ppm at 8 ft bgs. Water was encountered at 9.5 ft bgs during drilling; the DTW in June 2021 was 9.21 ft bgs. The screened interval was from 5 to 25 ft bgs, with sand from 3 to 26 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 1 to 3 ft bgs, above which was placed concrete to surface. The well was completed with a flush mounted well box.
- Replacement well RW-2R. The total depth of the boring was 33 ft bgs. TOV concentrations ranged from 51.1 ppm at 10 ft bgs to 1,348 ppm at 30 ft bgs. Water was encountered at 16.5 ft bgs during drilling; the DTW in June 2021 was 23.86 ft bgs. The screened interval was from 11.5 to 31.5 ft bgs, with sand from 9.5 to 33 ft bgs. A sanitary seal consisting of hydrated bentonite was then placed from 6.5 to 9.5 ft bgs, above which was placed concrete to surface. The well was completed with an approximately 3 ft tall 6-inch diameter aboveground steel monument.

2.5 Well Abandonment

Because wells MKTF-01, MKTF-02, MKTF-04, MKTF-17, MKTF-18, and RW-2 were not correctly constructed (i.e., the tops of the well screens were submerged below the water table surface and therefore could not monitor for the presence of SPH), they were abandoned after the replacement wells were installed. The above ground pipes were cut off at below ground surface. The total depth of the existing wells was measured, and a stinger pipe was placed to the bottom of the well. Cement was then tremied through the stinger pipe, filling the well from the bottom up. The concrete pads were destroyed and removed.

In the Comment 3 of the letter "Approval with Modifications, Hydrocarbon Seep Interim Measures 2021 Second Quarter Status Report" dated September 14, 2021, NMED stated, "Existing Wells MKTF-1, MKTF-2, MKTF-4, MKTF-17, and MKTF-18 must not be plugged and abandoned; they must be preserved at this time." However, the wells were abandoned in July 2021 and August 2021, in accordance with previous correspondence, before the September 2021 letter was received. The replacement wells will provide enhanced information (the ability to monitor for SPH) in addition to providing equivalent dissolved constituent data while reducing the liability of maintaining duplicative shallow groundwater wells.

2.6 Well Development

The depth to water and total depth were measured at the nine monitoring wells prior to well development. SPH was not detected in the wells except for RW-2R (apparent SPH thickness of 2.67 feet). For monitoring wells OW-67 and OW-68, 10 casing volumes were bailed from each well. Additional groundwater was then removed until the field parameters equilibrated. A YSI multiprobe meter was used to collect measurements (conductivity, pH, temperature, dissolved oxygen, and salinity). The remaining seven monitoring wells went dry during bailing the 10 casing volumes; therefore, groundwater measurements were collected during purging and sampling on September 17, 2021. Well development field forms are included as Appendix B.

2.7 Elevation Survey

The nine monitoring wells were surveyed after completion by a licensed New Mexico land surveyor. The two borings (OW-13A and OW-69) were logged with a hand-held global positioning system device. The elevations will be submitted in the 2021 annual groundwater report.

2.8 Investigation Derived Waste

Soil generated during drilling was drummed and transferred to the 90-day storage pad and samples collected. The labeled drums will be shipped off site to an appropriate disposal facility after data are received. Water generated during development, purging, and sampling activities was placed into a labeled drum for processing by the Refinery.

3.0 Sample Collection and Analytical Results

This section presents soil and groundwater sample collection and data results. Soil results are summarized in Tables 3-1 through 3-4. Groundwater results are summarized in Tables 3-5 through 3-10.

3.1 Sample Collection and Analysis

Samples were collected for analysis following procedures outlined in the approved work plans, "Work Plan 2015 Annual Groundwater Report Comments", dated October 2018, and revised June & October 2019 (DiSorbo 2019a) and "Work Plan SMW-2 and GWM-1 Areas" dated August 2018 and revised August 2019 (DiSorbo 2019b). The monitoring well installations followed their respective work plans.

3.1.1 Soil Sampling

Soil samples were collected in two separate events, July 19 to July 22, 2021, and August 13 to August 16, 2021. Two soil samples from each boring were selected for analysis, one at the depth with the highest PID reading and one at the bottom of the boring. Samples were collected as follows:

- MKTF-01R at 6 ft bgs and 18 ft bgs
- MKTF-02R at 6 ft bgs and 18 ft bgs
- MKTF-04R at 8.2 to 8.7 ft bgs and 19.5 to 20 ft bgs
- MKTF-17R at 6.5 to 7 ft bgs and 20.5 to 21 ft bgs
- MKTF-18R at 9.5 to 10 ft bgs and 25.5 to 26 ft bgs
- OW-13A at 14 ft bgs and 25.5 ft bgs
- OW-66 at 18 ft bgs and 25 ft bgs
- OW-67 at 17 ft bgs and 26 ft bgs
- OW-68 at 22 ft bgs and 26 ft bgs
- OW-69 at 6 ft bgs and 26 ft bgs
- RW-2R at 16.5 to 17 ft bgs and 32.5 to 33 ft bgs

Duplicates were collected at MKTF-17R (20.5 to 21 ft bgs) and RW-2R (16.5 to 17 ft bgs). Soil samples were submitted for analysis of:

- Total Petroleum hydrocarbons, gasoline range organics (TPH-GRO) by Environmental Protection Agency (EPA) Method 8015M/D
- TPH, diesel range organics (TPH-DRO) by EPA Method 8015D

- TPH, motor oil range organics (TPH-MRO) by EPA Method 8015D
- Volatile Organic Compounds (VOCs) including fuel oxygenates by EPA Method 8260B
- Semi-volatile organic compounds (SVOCs) by EPA Method 8270
- Resource Conservation Recovery Act (RCRA) Metals: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver, and iron and manganese by EPA Method 6010B

3.1.2 Soil Sample Results

TPH and benzene, toluene, ethylbenzene, and xylenes (BTEX) data are presented in Table 3-1; VOC data are presented in Table 3-2; SVOC data are presented in Table 3-3; and metals data are presented in Table 3-4. Data were compared to the 2019 NMED Residential and Industrial Soil Screening Levels (RSSLs and ISSLs, respectively) (NMED 2019). None of the soil samples exceed RSSLs or ISSLs for TPH-DRO, TPH-MRO, BTEX, MTBE, VOCs, SVOCs, or metals. TPH GRO exceeded the screening levels in several borings. TPH-GRO data are summarized below.

- MKTF-01R. The sample collected at 6 ft bgs had an estimated TPH-GRO concentration of an estimated concentration (J) 1,100 milligrams per kilogram (mg/kg), exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (18 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-02R. The sample collected at 6 ft bgs had an estimated TPH-GRO concentration of 260 J mg/kg, exceeding the RSSL (100 mg/kg) and not exceeding the ISSL. The sample collected at the bottom of the boring (18 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-04R. The sample collected at 8.2 to 8.7 ft bgs had a TPH-GRO concentration of 300 mg/kg, exceeding the RSSL (100 mg/kg) and not exceeding the ISSL. The sample collected at the bottom of the boring (19.5 to 20 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-17R. The sample collected at 6.5 to 7 ft bgs had a TPH-GRO concentration of 2,100 mg/kg, exceeding RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (20.5 to 21 ft bgs) did not exceed the RSSL or ISSL.
- MKTF-18R. The sample collected at 9.5 to 10 ft bgs had a TPH-GRO concentration of 2,400 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively. The sample collected at the bottom of the boring (25.5 to 26 ft bgs) did not exceed the RSSL or ISSL.
- OW-13A. Neither sample exceeded the RSSL or ISSL.

- OW-66. The sample collected at 18 ft bgs had a TPH-GRO concentration of 1,800 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (26 ft bgs) did not exceed the RSSL or ISSL.
- OW-67. Neither sample exceeded the RSSL or ISSL.
- OW-68. Neither sample exceeded the RSSL or ISSL.
- OW-69. Neither sample exceeded the RSSL or ISSL.
- RW-2R. The sampled collected at 16 to 17 ft had a TPH-GRO concentration of 1,900 mg/kg, exceeding the RSSL and ISSL (100 mg/kg and 500 mg/kg, respectively). The sample collected at the bottom of the boring (32.5 to 33 ft bgs) did not exceed the RSSL or ISSL.

Iron and manganese results were inadvertently left off the analyte list for OW-67, OW-68, and OW-69 (Western 2021). Those data are included in this report. As indicated above, the samples were below RSSLs and ISSLs.

Soil laboratory reports are included as Appendix C.

3.2 Groundwater Sampling and Results

Samples were collected for analysis following procedures outlined in the approved work plans, "Work Plan 2015 Annual Groundwater Report Comments" dated October 2018 and revised June & October 2019 (DiSorbo 2019a) and "Work Plan SMW-2 and GWM-1 Areas" dated August 2018 and revised August 2019 (DiSorbo 2019b).

3.2.1 Groundwater Sampling

Samples were collected from eight of the nine new monitoring wells on September 17, 2021: MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, OW-66, OW-67, and OW-68. Replacement well RW-2R was not sampled due to the presence of SPH. A duplicate sample was collected from MKTF-18R. Groundwater samples were submitted for analysis of:

- TPH-GRO by EPA Method 8015D
- TPH-DRO by EPA Method 8015D
- TPH-MRO by EPA Method 8015D
- VOCs (including fuel oxygenates) by EPA Method 8260B
- SVOCs by EPA Method 8270C and 8270SIM

- Total Metals: barium, beryllium, cadmium, calcium, chromium, cobalt, iron, magnesium, manganese, nickel, potassium, silver, sodium, vanadium, and zinc by EPA Method 200.7; antimony, arsenic, lead, and selenium by EPA Method 200.8; and mercury by EPA Method 245.1
- Dissolved Metals: barium, beryllium, cadmium, chromium, cobalt, iron, manganese, nickel, silver, vanadium, and zinc by EPA Method 200.7; antimony, arsenic, lead, and selenium by EPA Method 200.8; and mercury by EPA Method 245.1
- Anions: fluoride, chloride, nitrate-nitrogen (as N), nitrite-nitrogen (as N), and sulfate by EPA Method 300.0
- Alkalinity: bicarbonate (as $CaCO_3$), carbonate (as $CaCO_3$), and total alkalinity (as $CaCO_3$) by method SM2320B

3.2.2 Fluid Level Measurements

Fluid levels were measured during well development and sample collection. The data are provided in Table 2-1. Observable SPH thickness was measured in replacement well RW-2R at 2.67 ft. Replacement well RW-2R was not sampled for analytical parameters.

3.2.3 Groundwater Analytical Results

Groundwater was analyzed for VOCs (Table 3-5), SVOCs (Table 3-6), total and dissolved metals (Table 3-7 and 3-8, respectively), and general chemistry (Table 3-9). Field parameters collected during sample collection are provided in Table 3-10. Laboratory data and the data validation report are provided in Appendices C and D, respectively. Data were compared to applicable cleanup levels as indicated on Tables 3-5 through 3-9.

VOCs

A summary of the groundwater data exceeding applicable VOC cleanup levels is provided below.

- MKTF-01R. VOC results from MKTF-01R showed estimated (J) concentrations of 1,2,4-trimethylbenzene (310 J micrograms per liter [ug/L]), 1-methyl naphthalene (28 J ug/L), benzene (7,100 J ug/L), and naphthalene (52 J ug/L). Vinyl chloride and xylenes were detected at 22 ug/L and 850 ug/L, respectively.
- MKTF-02R. VOC results from MKTF-02R showed estimated concentrations of benzene (29 J ug/L). Other VOCs detected above standards include 1,1,2-trichloroethane (7.9 ug/L), 1,1-dichloroethane (110 ug/L), 1,1-dichloroethene (280 ug/L), 1,2-dichloroethane (67 ug/L), and trichloroethene (23 ug/L).

- MKTF-04R. VOC results from MKTF-04R showed estimated concentrations of 1,2,4-trimethylbenzene (160 J ug/L), 1-methylnaphthalene (48 J ug/L), 2-methylnaphthalene (59 J ug/L), benzene (1,100 J ug/L), MTBE (1,600 J ug/L), and naphthalene (81 J ug/L). Other VOC results detected above standards include 1,1-dichloroethane (35 ug/L) and 1,1-dichloroethene (45 ug/L).
- MKTF-17R. VOC results from MKTF-17R showed estimated concentrations of 1,2,4-trimethylbenzene (430 J ug/L), 1,3,5-trimethylbenzene (120 J ug/L), 1-methylnaphthalene (27 J ug/L), benzene (1,600 J ug/L), MTBE (3,900 J ug/L), naphthalene (72 J ug/L), and toluene (5,400 J ug/L). Other VOC results detected above standards included xylenes (2,700 ug/L).
- MKTF-18R. VOC results from MKTF-18R showed estimated concentrations of 1,1-dichloroethane (32 J ug/L), 1,2,4-trimethylbenzene (780 J ug/L), 1-methylnaphthalene (200 J ug/L), 2-methylnaphthalene (300 J ug/L), benzene (3,700 J ug/L), MTBE (200 J ug/L), naphthalene (77 J ug/L), and toluene (1,800 J ug/L).
- OW-66. VOC results from OW-66 showed estimated concentrations of 1,2,4-trimethylbenzene (1,300 J ug/L), 1,3,5-trimethylbenzene (350 J ug/L), 2-methylnaphthalene (61 J ug/L), benzene (12,000 J ug/L), bromodichloromethane (2.1 J ug/L), chloromethane (28 J ug/L), dibromochloromethane (6.2 J ug/L), ethylbenzene (720 J ug/L), MTBE (680 J ug/L), and toluene (9,200 J ug/L). Other VOCs include naphthalene (130 ug/L) and xylenes (6,200 ug/L).
- OW-67. No VOCs were detected above applicable standards.
- OW-68. No VOCs were detected above applicable standards.

SVOCs

A summary of the groundwater data exceeding applicable SVOC cleanup levels is provided below.

- MKTF-01R. No SVOCs were detected above applicable standards.
- MKTF-02R. No SVOCs were detected above applicable standards.
- MKTF-04R. No SVOCs were detected above applicable standards..
- MKTF-17R. SVOC results from MKTF-17R showed estimated concentrations of 1-methylnaphthalene (15 J ug/L) and naphthalene (38 J ug/L).
- MKTF-18R. SVOC results from MKTF-18R showed estimated concentrations of 1-methylnaphthalene (27 J ug/L) and naphthalene (87 J ug/L).
- OW-66. SVOC results from OW-66 showed estimated concentrations of 1-methylnaphthalene (33 J ug/L) and 2-methylnaphthalene (51 J ug/L). Other SVOCs detected above standards include naphthalene (110 ug/L).
- OW-67. No SVOCs were detected above applicable standards.
- OW-68. No SVOCs were detected above applicable standards.

Total Metals

A summary of the groundwater data exceeding applicable metals cleanup levels is provided below.

- MKTF-01R. Total metals exceeding standards included barium (5,400 ug/L), cobalt (12 ug/L), and manganese (3,400 ug/L).
- MKTF-02R. No total metals were detected above applicable standards.
- MKTF-04R. Total metals exceeding standards included cobalt (9 ug/L) and manganese (2,700 ug/L).
- MKTF-17R. Total metals exceeding standards included manganese (3,400 ug/L).
- MKTF-18R. Total metals results from MKTF-18R showed estimated concentrations of iron (17,000 J ug/L), lead (46 J ug/L), and manganese (2,900 J ug/L). Other total metals exceeding standards included barium (2,000 ug/L) and cobalt (15 ug/L).
- OW-66. Total metals results from OW-66 showed estimated concentrations of nickel (380 J ug/L). Other total metals exceeding standards included cobalt (10 ug/L) and manganese (2,600 ug/L).
- OW-67. Total metals results from OW-67 showed estimated concentrations of cobalt (29 J ug/L). Other total metals exceeding standards included manganese (8,000 ug/L).
- OW-68. Total metals exceeding standards included cobalt (100 ug/L), fluoride (6,400 ug/L), and manganese (11,000 ug/L).

Dissolved Metals

A summary of the groundwater data exceeding applicable metals cleanup levels is provided below.

- MKTF-01R. Dissolved metals results from MKTF-01R showed estimated concentrations of arsenic (6.6 J ug/L). Other dissolved metals exceeding standards included barium (4,700 ug/L), cobalt (8 ug/L), and manganese (3,100 ug/L).
- MKTF-02R. No dissolved metals exceeded applicable standards.
- MKTF-04R. Dissolved metals results from MKTF-04R showed estimated concentrations of arsenic (3.6 J ug/L). Other dissolved metals exceeding standards included manganese (2,400 ug/L).
- MKTF-17R. Dissolved metals results from MKTF-17R showed estimated concentrations of arsenic (4.6 J ug/L). Other dissolved metals exceeding standards included manganese (2,800 ug/L).
- MKTF-18R. Dissolved metals results from MKTF-18R showed estimated concentrations of arsenic (2.6 J ug/L). Other dissolved metals exceeding standards included cobalt (8.8 ug/L).

- OW-66. Dissolved metals results from OW-66 showed estimated concentrations of arsenic (3.7 J ug/L). Other dissolved metals exceeding standards included cobalt (8.4 ug/L) and manganese (2,400 ug/L).
- OW-67. Dissolved metals results from OW-67 showed estimated concentrations of arsenic (2.3 J ug/L). Other dissolved metals exceeding standards included cobalt (11 ug/L) and manganese (7,400 ug/L).
- OW-68. Dissolved metals results from OW-68 showed estimated concentrations of arsenic (5.5 J ug/L). Other dissolved metals exceeding standards included cobalt (79 ug/L) and manganese (9,600 ug/L).

General Chemistry

A summary of the groundwater general chemistry data exceeding applicable cleanup levels is provided below.

- MKTF-01R. TPH-DRO, TPH-GRO, and TPH-ORO exceeded applicable standards at 2,200 ug/L, 5,200 ug/L, and 96 ug/L, respectively.
- MKTF-02R. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 1,800,000 ug/L, 220 ug/L, and 560 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 710,000 J ug/L.
- MKTF-04R. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 1,200,000 ug/L, 1,200 ug/L, and 19,000 ug/L, respectively.
- MKTF-17R. TPH-DRO and TPH-GRO exceeded applicable standards at 1,800 ug/L and 29,000 ug/L, respectively.
- MKTF-18R. TPH-DRO and TPH-GRO had estimated concentrations exceeding standards of 2,600 J ug/L and 5,000 J ug/L, respectively.
- OW-66. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 320,000 ug/L, 4,000 ug/L, and 69,000 ug/L, respectively.
- OW-67. Chloride, TPH-DRO, and TPH-GRO exceeded applicable standards at 4,900,000 ug/L, 560 ug/L, and 410 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 760,000 J ug/L.
- OW-68. Chloride, TPH-DRO, TPH-GRO, and TPH-ORO exceeded applicable standards at 5,100,000 ug/L, 1,100 ug/L, 1,700 ug/L, and 120 ug/L, respectively. Sulfate had an estimated concentration exceeding standards of 800,000 J ug/L.

4.0 Summary and Conclusions

The Refinery proposed the installation of 13 monitoring wells: 6 existing wells were to be abandoned and replaced due to submerged well screens. 7 new monitoring wells were planned to be installed to aid in evaluation of the SPH and dissolved-phase plumes. However, 4 of the 7 new monitoring wells were not installed for the following reasons; groundwater was not encountered during drilling in two of the borings, the shallow monitoring well adjacent to OW-13 (boring OW-13A) and the monitoring well east of EP-2 (boring OW-69), and, property access was not granted for the two off-site monitoring wells (west of monitoring well OW-1 and northeast of monitoring well OW-30). In summary, six wells were abandoned, and nine wells were installed.

The objectives presented in Section 1.2 were met and the key findings are described below.

- Replacement wells MKTF-01R, MKTF-02R, MKTF-04R, MKTF-17R, MKTF-18R, and RW-2R were installed such that the well screens are appropriately positioned to allow SPH, if present, to enter the well. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO was detected in each soil sample at or near the zone with the highest TOV reading exceeding the RSSL and ISSL, with the exception of MKTF-02R and MKTF-04R where samples only exceeded the RSSL. The other target soil analytes were below the ISSLs and RSSLs. Groundwater was collected from the replacement wells except for well RW-2R, which had SPH. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to naphthalene and 1-methylnaphthalene. Total barium, cobalt, iron, lead, and manganese were detected above standards in most samples. Dissolved metal detections primarily consisted of barium, cobalt, and manganese. General chemistry detections above standards were primarily TPH-DRO and TPH-GRO. Chloride was detected above standards in two wells; sulfate and TPH-ORO were detected in one well above standards.
- Monitoring well OW-66 was installed between monitoring wells OW-13 and OW-29 to further evaluate groundwater flow direction in the area. Soil samples were collected at the zone with the highest TOV reading and at the bottom of the boring. TPH-GRO in soil was detected at or near the zone with the highest TOV reading, exceeding the RSSL and ISSL. The other target soil analytes were below the ISSLs and RSSLs. A groundwater sample was collected from the well. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or "J" concentration. The samples had detections of VOCs indicative of gasoline and chlorinated VOCs above groundwater standards. SVOCs above groundwater standards were limited to 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Total and dissolved cobalt and manganese and total

nickel were detected in the sample above standards. General chemistry data exceedances above standards included chloride, TPH-DRO, and TPH-GRO exceeded the applicable standards.

- There were some groundwater analytes that had detection limits that exceeded the applicable standards. Groundwater analytes included: 1,2,3-Trichloropropane, 1,2-Dibromo-3-Chloropropane, 1,2-Dibromoethane, Hexachlorobutadiene, 2,6-Dinitrotoluene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Bis(2-chloroethyl)ether, Dibenzo(a,h)anthracene, Hexachlorobenzene, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene, N-Nitrosodimethylamine, N-Nitrosodi-n-propylamine, total beryllium, total cadmium, and TPH-ORO. 1-Methylnapthalene had a standard exceedance that was evaluated to be undetected at the reported concentration in data validation, resulting in a non-detect standard exceedance. Vinyl chloride also had one non-detect standard exceedance. It should be noted that standard exceedances, even if a non-detection, are considered data quality exceptions. Therefore, those values cannot evaluate compliance for those constituents.
- Boring OW-13A was installed to assess the dissolved-phase MTBE in the groundwater in the vicinity of the deep monitoring well OW-13. Groundwater was not encountered in boring OW-13A and, therefore, no well was installed. Based on the boring log for OW-13A (Appendix A), no olfactory or visual evidence of SPH was observed. In addition, soil analytical data did not show the presence of TPH, VOC, or SVOC constituents, including MTBE. Analytical results indicate that total metals concentrations were below the ISSLs and RSSLs.
- Monitoring wells OW-67 and OW-68 were installed in the upper sand (alluvium) aquifer to assess elevated detections of chloride and sulfate observed at monitoring well SMW-2 that may be attributable to EP-2 by installing the wells at depths corresponding to the base of EP-2. The investigation indicates that the source of sulfate and chloride is not EP-2. Boring OW-69 was drilled to assess previously detected elevated concentrations of chloride and sulfate northwest of EP-2 and monitoring well GWM-1 and east of EP-2 by drilling to the Chinle/Alluvium aquifer interface. TPH-GRO was detected in monitoring well OW-66 exceeding the RSSL and ISSL. Soil samples collected from borings OW-67 and OW-68 did not show the presence of TOC, VOC, or SVOC constituents, and metals concentrations were below the ISSLs and RSSLs. Groundwater was collected from the monitoring wells. VOCs, SVOCs, total and dissolved metals, and general chemistry analytes were detected in the wells; however, several of the detections were an estimated or “J” concentration. No VOCs or SVOCs were detected above applicable standards. Total and dissolved cobalt, and manganese were detected in the sample above standards. Total fluoride exceeded the standard in monitoring well OW-68. General chemistry data exceedances above standards included chloride, sulfate, TPH-DRO, and TPH-GRO exceeded the applicable standards. TPH-ORO was also detected above the standard in monitoring well OW-68.
- Two proposed monitoring wells, located off site of the Refinery property, were not installed. The off-site monitoring wells will be installed after access is obtained from the property owners.

MKTF-17R	Adjacent to MKTF-17		Abandon & Replace	Chinle-Alluvium Interface	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 40. January 31.
MKTF-18R	Adjacent to MKTF-18		Abandon & Replace	Chinle-Alluvium Interface	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 40. January 31.
RW-2R	Adjacent to RW-2	The screen in well RW-2 has historically been or is currently (as of 2019) submerged. NMED requested a replacement well be installed with the appropriate screened interval to delineate the SPH plume.	Abandon & Replace	Chinle-Alluvium Interface	2019. NMED. Disapproval, Work Plan 2015 Annual Groundwater Report Comments, Western Refining Southwest, Inc., Gallup Refinery, Comment 4, January 28.
OW-66	Midway between OW-29 and OW-13	Wells OW-50 and OW-52 may be located cross-gradient relative to the piezometric groundwater flow direction and a change of flow direction from north to west may be occurring between well OW-13 (screened in the Sonsela formation) and well OW-29 (screened in the Chinle formation). NMED requested a well screened across the Chinle-Alluvium interface between well OW-13 and well OW-29 to clarify groundwater flow direction.	New	Chinle-Alluvium Interface	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 18.3. January 31.
OW-13A [1] (Not Installed)	Adjacent to OW-13 (shallow)	The MTBE plume may be migrating in a westerly direction. Although well OW-13 is appropriately located to define the west boundary of the plume, well OW-13 is screened in the Sonsela formation and not monitoring the same stratigraphic units as other monitoring wells in the area. Therefore, well OW-13 may not provide relevant information to characterize the groundwater flow direction or detect the MTBE/benzene plumes. NMED requested a well screened across the Chinle-Alluvium interface in the vicinity of OW-13 to clarify groundwater flow direction.	New	Chinle-Alluvium Interface	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 18.4. January 31.
OW-67	Near MW-4 (north boundary of EP-2)	The initial site investigation identified the Land Treatment Unit as a potential source of elevated chloride and sulfate concentrations detected in well SMW-2. The investigation report recommended additional evaluation at evaporation pond EP-2 by installing two monitoring wells.	New	Uppermost saturated interval (i.e., Upper Sand)	This area was initially identified by the New Mexico Environment Department (NMED) in comment letters regarding the 2013 and 2014 Annual Wide Ground Water Monitoring Reports as requesting additional groundwater monitoring wells and again in the a comment letter on the 2016 Annual Ground Water Monitoring Report. The *Investigation Work Plan SMW-2 and GWM-1 Areas* was approved by NMED on July 1, 2020.
OW-68	Between MW-4 and OW-60 (north boundary of EP-2)		New	Uppermost saturated interval (i.e., Upper Sand)	
OW-69 [1] (Not Installed)	Between GWM-1 and EP-2	SPH was observed in GWM-1 in 2016. Due to the location of GWM-1, a potential source of SPH is the aeration lagoons AL-1 and AL-2. NMED requested a monitoring well downgradient from well GWM-1 (halfway between the eastern perimeter of pond EP-1 and well GWM-1) to evaluate the extent of SPH in the shallow aquifer. The well would also serve as a sentinel well for the eastern perimeter of EP-2.	New	Shallow	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2016, Comment 9. June 4. 2019. NMED. Disapproval, Investigation Work Plan [SMW-2] and [GWM-1] Areas. February 20. The *Investigation Work Plan SMW-2 and GWM-1 Areas* was approved by NMED on July 1, 2020.
Not Installed [2]	West of OW-1	Well OW-1 has had MTBE detections below the applicable standard during 2017. NMED believes this could be the leading edge of the MTBE plume. Because there is a water supply well approximately 1-mile downgradient, MPC must ensure that no contaminants migrate further downgradient of OW-1 and off site. NMED has requested a sentinel well screened in the Sonsela formation west of OW-1 to monitor for potential MTBE migration.	New	Sonsela	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 22. January 31.
Not Installed [2]	NE of OW-30	MTBE has been detected in OW-30 at concentrations above the applicable standard since 2007. NMED noted that the data also have shown a steady increase indicating that the MTBE plume may be migrating in a northeastern direction. Since there is no monitoring well to define northeastern extent of the plume beyond the property boundary, NMED has requested a monitoring well be installed approximately 500 feet northeast of well OW-30 to delineate the potential plume. The new well should be screened across the Chinle-Alluvium interface.	New	Chinle-Alluvium Interface	2018. NMED. Disapproval, Annual Groundwater Monitoring Report, Gallup Refinery - 2015, Comment 18.2. January 31.

Definitions:
NA = not applicable
DTW = depth to water
SPH = separate phase hydrocarbons
NS = Not Surveyed
NM = Not Measured
DRY = no water detected
in = inch
ft = feet

Notes:
1. Corrected Water Table Elevation applies only if SPH thickness column measurement exists. (0.8 X SPH thickness + Groundwater Elevation)
Negative number in Stick up Length column indicates well is flushmount and located at or below ground level.
Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions.

WELL COMPLETION LOG

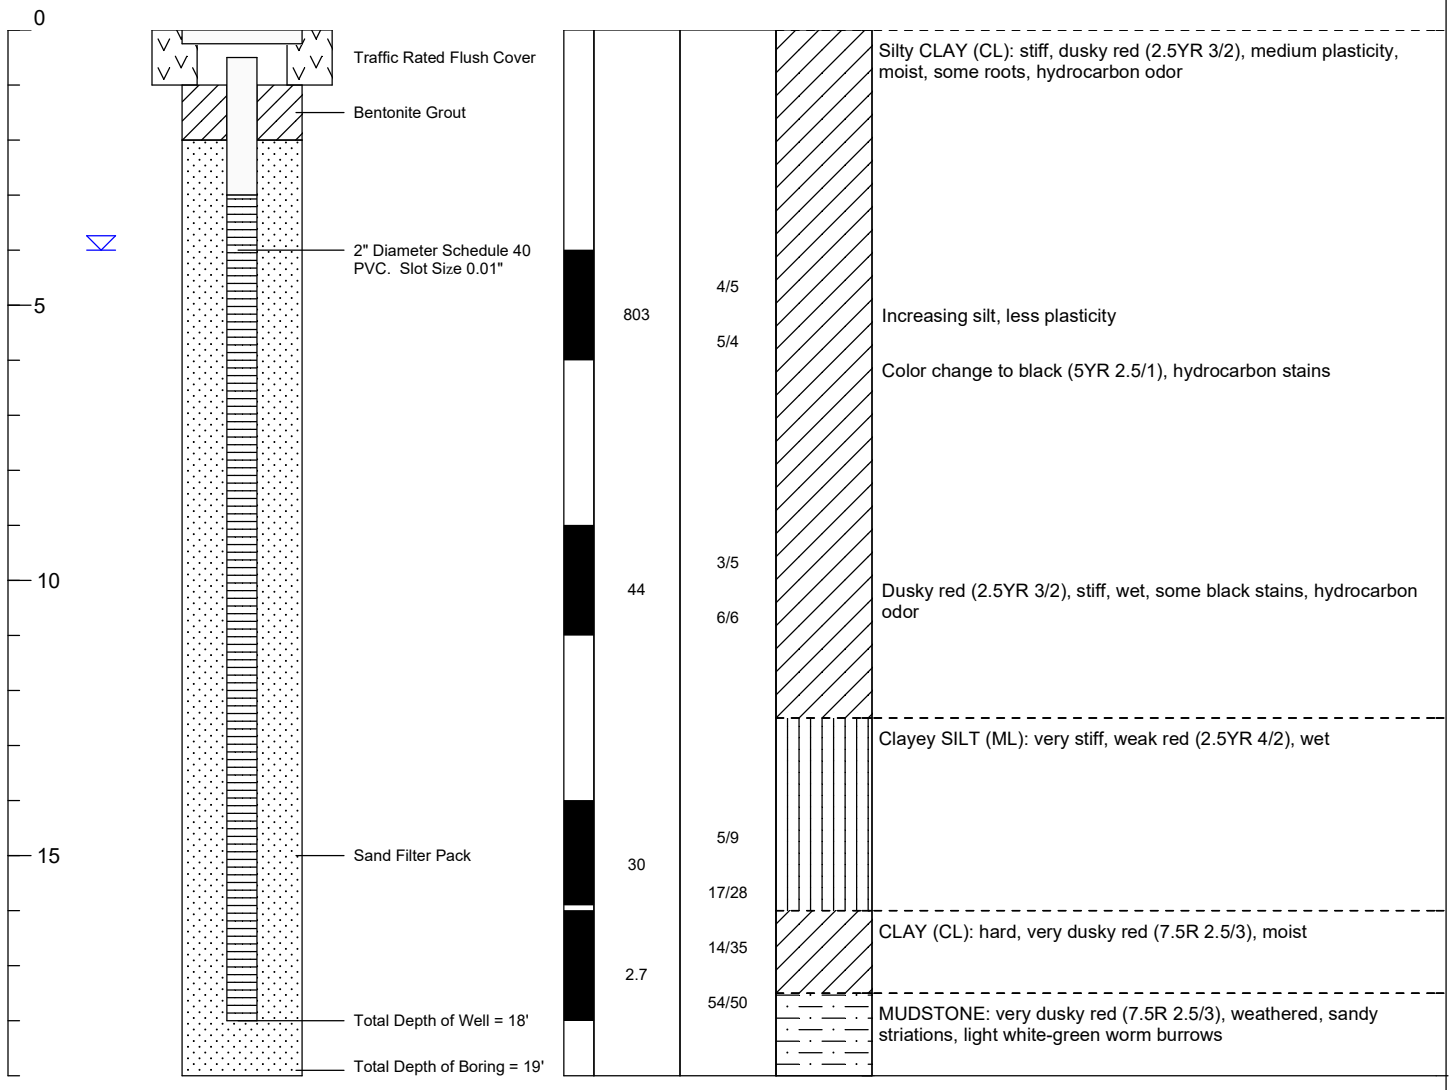
WELL ID: MKTF-01R

Client: Marathon
Project Name: Additional Well Installation
Field Geologist: Mackensie Swift, Will Glenn
Well Location: Gallup Refinery, Gallup, NM
Ground Surface Elevation:
Top of Casing Elevation:

Contractor: Terracon
Driller: JC, EJ
Drilling Method: Hollow Stem Auger
Borehole Diameter: 8"
Total Depth Drilled: 19'
Depth of Set Well: 18'

Date Started: July 22, 2021
Date Completed: July 22, 2021
Checked By: MS, WG
Easting:
Northing:
Sample Type: Split Spoon

Depth of First Encountered Water: 4'
Water Level in Completed Well:



Trihydro Corporation
2501 Cherry Ave. Suite 200, Signal Hill, CA
Phone (562) 453-3536
Fax (562) 453-3555

NOTES: OVA calibrated with 100 ppm isobutylene

DO NOT USE WELL LOG SEPARATE FROM THE ASSOCIATED REPORT

WELL COMPLETION LOG

RE: Well Installations 2021 OrderNo.: 2107A83

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 11 sample(s) on 7/21/2021 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued August 04, 2021.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

4901 Hawkins NE
Albuquerque, NM 87109

RE: Well Installations 2021 OrderNo.: 2107C60

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 5 sample(s) on 7/23/2021 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued August 18, 2021.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

4901 Hawkins NE
Albuquerque, NM 87109

Nitrobenzene	ND	0.079	0.39		mg/Kg	1	8/17/2021 3:19:55 PM	61594

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Sample Log-In Check List

Client Name: **Marathon** Work Order Number: **2107C60** RcptNo: **1**

Received By: **Desiree Dominguez** **7/23/2021 4:57:00 PM** DD

Completed By: **Isaiah Ortiz** **7/26/2021 9:18:14 AM** I-O

Reviewed By: JR 7/26/21

Chain of Custody

1. Is Chain of Custody complete?	Yes ☑	No ☐	Not Present ☐
2. How was the sample delivered?	Courier		

Log In

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☐	No ☐	NA ☑
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	

# of preserved bottles checked for pH: (<2 or >12 unless noted)

Adjusted?

Checked by: SPA 7.26.21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

Person Notified: Date:

By Whom: Via: ☐ eMail ☐ Phone ☐ Fax ☐ In Person

RE: Additional Well Install OrderNo.: 2109A01

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 12 sample(s) on 9/18/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

RE: MKTF Well Installation OrderNo.: 2108857

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 11 sample(s) on 8/17/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Data Validator: Charles Ballek, Senior Chemist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-09-17-21	2109A01-001
MKTF-17R	2109A01-002
MKTF-18R	2109A01-003
MKTF-04R	2109A01-004
MKTF-01R	2109A01-005
MKTF-02R	2109A01-006
OW-68	2109A01-007
OW-67	2109A01-008
OW-66	2109A01-009
DUP-09-17-21	2109A01-010
FB-09-17-21	2109A01-011
Trip Blank	2109A01-012

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
JB	Estimated concentration due to blank contamination
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,650 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify analytical non-conformances related to this data set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. J – Analyte detected below quantitation limits D – Sample Diluted Due to Matrix S – % Recovery outside of range due to dilution or matrix * – Value exceeds Maximum Contaminant Level	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples. Method 8260B: Dilution factors of 5 to 200 times were applied to select samples for the analysis of VOCs. Method 8270C: Samples MKTF-17R, MKTF-18R, MKTF-04R, MKTF-01R, OW-66, and DUP-09-17-21 were diluted by factors of 10 times for the analysis of select SVOC target analytes. Method 8270C-SIM: Dilution factors of 10 times were applied to samples MKTF-17R, MKTF-18R, MKTF-04R, MKTF-01R, OW-66, and DUP-09-17-21 for the analysis of anthracene and/or dibenz(a,h)anthracene. Method 8015: Samples MKTF-17R, MKTF-18R, MKTF-04R, MKTF-01R, MKTF-02R, and OW-66 were diluted by factors of 5 or 10 times for the analysis of select GRO, DRO, and/or MRO. Method 300.0: Dilution factors of 5 to 500 times were applied to the submitted samples except sample EB-09-17-21 for the analysis of anions. Method 200.7: Samples were diluted by factors of 5 to 50 times for the analysis of total and dissolved metals. Method 200.8: Dilution factors of 5 to 10 times were applied to the submitted samples for the analysis of total and dissolved metals.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received at Hall Environmental on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 1.6°C and 4.9°C as noted on the *Sample Log-in Check List*. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen. The laboratory noted that additional nitric acid was added to the containers designated for metals analyses for some samples to achieve the required pH less than 2. Validation action was not required.	

VALIDATION CRITERIA CHECKLIST	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were digested/extracted and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Initial and continuing calibration data were not included as part of this data set.	
10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?	N/A
Comments: Initial and continuing calibration data were not included as part of this data set.	
11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.	
12. Were target analytes reported as not detected in the laboratory blanks?	No
Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception. **Pyrene was detected in the method blank for Method 8270 batch 62703 at a concentration of 0.18 µg/L. Pyrene was detected in associated sample OW-68 at a concentration less than the applicable reporting limit, and the result was assigned a U qualifier.** Pyrene was not detected in the remaining associated samples, and qualification of those results was not required based on the method blank detection.	

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
8260B	VOCs	R81501	Not Prepared
8260B	VOCs	R81542	Not Prepared
8260B	Benzene	R81622	Not Prepared
8270C	SVOCs	62689	Not Prepared

Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from project samples were within laboratory and data validation QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within laboratory QC limits.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

Method	Sample	Surrogate	Surrogate Recovery	QC Limits
8270C	MKTF-17R	2-Fluorophenol	0%	15-87%
8270C-SIM	OW-68	2,4,6-Tribromophenol	98.5%	23.4-71.6%
8270C-SIM	OW-67	2,4,6-Tribromophenol	84.5%	23.4-71.6%
8270C	OW-66	2-Fluorophenol	0%	15-87%

Since Method 8270C and Method 8270C-SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for samples MKTF-17R, OW-68, OW-67, and OW-66, and qualification of sample data was not required.

The SVOC and DRO/MRO results were not qualified based on surrogate non-conformances in the Method 8270C-SIM and Method 8015D MOD analyses since the applied dilution of 10 times or greater resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-09-17-21, and one equipment blank sample, EB-09-17-21, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank, field blank, and equipment blank samples, with the following exceptions.

Blank Sample ID	Method	Analyte	Concentration	Units
FB-09-17-21	**SW8260B**	**1,2,4-Trimethylbenzene**	**0.16**	**µg/L**
FB-09-17-21	**SW8260B**	**1-Methylnaphthalene**	**0.94**	**µg/L**
FB-09-17-21	**SW8260B**	**2-Butanone**	**2.2**	**µg/L**
FB-09-17-21	SW8260B	2-Methylnaphthalene	1.0	µg/L
FB-09-17-21	**SW8260B**	**Acetone**	**7.3**	**µg/L**
FB-09-17-21	**SW8260B**	**Benzene**	**0.42**	**µg/L**
FB-09-17-21	SW8260B	Naphthalene	0.63	µg/L
EB-09-17-21	SW8260B	Acetone	3.8	µg/L
EB-09-17-21	SW8015	Diesel Range Organics (DRO)	0.019	mg/L
EB-09-17-21	E300.0	Chloride	0.29	mg/L
EB-09-17-21	**E300.0**	**Nitrogen, Nitrate (As N)**	**0.31**	**mg/L**
EB-09-17-21	**E300.0**	**Sulfate**	**1.7**	**mg/L**
EB-09-17-21	**E200.7**	**Zinc, Dissolved**	**0.0071**	**mg/L**
EB-09-17-21	**E200.8**	**Lead**	**0.00052**	**mg/L**

Detections of the identified analytes in the associated samples that were less than the blank results or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than 10 times the blank concentration did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-09-17-21 was collected as a field duplicate of sample MKTF-18R.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comment: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for several analytes exceeded the data validation limit of 30%. The reported results for these analytes were assigned J qualifiers for the parent and field duplicate samples, MKTF-18R and DUP-09-17-21, due to evidence of poor precision.

The RPD values for several analytes greatly exceeded the data validation limit of 30% with RPD values greater than 100%. The reported results for these analytes were assigned J qualifiers for samples MKTF-18R and DUP-09-17-21, and J/UJ qualifiers for the results in the associated samples due to evidence of extremely poor precision (RPD > 100%).

RPD values could not be calculated for several analytes for the field duplicate pair MKTF-18R and DUP-09-17-21 since the analyte was detected in the one sample and was undetected in the other. Since the detection was greater than two times the reporting limit, the results for these analytes were assigned J and UJ qualifiers due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were not prepared for the analytical batches in this data set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? No

Comments: Anthracene was analyzed by both Method 8270C and Method 8270-SIM for sample MKTF-17R. Anthracene was detected in the sample by Method 8270C-SIM at a concentration less than the reporting limit for Method 8270C and qualification of data was not required. Dibenz(a,h)anthracene was analyzed by both Method 8270C and Method 8270-SIM for several samples. Dibenz(a,h)anthracene was not detected by both methods and qualification of results was not required.

Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C for the submitted samples. The results for these analytes were reported as not detected by both methods, with the following exceptions.

Sample	Analyte	Method 8260B (µg/L)	Method 8270C (µg/L)	Reporting Limits (8260/8270)	RPD
DUP-09-17-21	1,2-Dichlorobenzene	0.57	ND	1.0 / 5.0	----
DUP-09-17-21	**1-Methylnaphthalene**	**43**	**27**	**4.0 / 1.0**	**45.7%**
MKTF-01R	1-Methylnaphthalene	28	11	20 / 1.0	87.2% ◄
MKTF-04R	1-Methylnaphthalene	48	9.0	20 / 1.0	137% ◄

MKTF-18R	**1-Methylnaphthalene**	**200**	**110**	**20 / 1.0**	**58.1%**
OW-66	1-Methylnaphthalene	35	33	40 / 1.1	5.9% ◄
DUP-09-17-21	**2-Methylnaphthalene**	**54**	**19**	**4.0 / 1.0**	**95.9%**
MKTF-01R	2-Methylnaphthalene	25	8.2	20 / 1.0	101% ◄
MKTF-04R	2-Methylnaphthalene	59	6.2	20 / 1.0	162% ◄
MKTF-17R	2-Methylnaphthalene	34	16	20 / 1.0	72.0% ◄
MKTF-18R	**2-Methylnaphthalene**	**300**	**130**	**20 / 1.0**	**79.1%**
OW-66	2-Methylnaphthalene	61	51	40 / 1.1	17.9% ◄
DUP-09-17-21	**Naphthalene**	**77**	**42**	**2.0 / 1.0**	**58.8%**
MKTF-01R	**Naphthalene**	**52**	**21**	**10 / 1.0**	**84.9%**
MKTF-04R	**Naphthalene**	**81**	**15**	**10 / 1.0**	**138%**
MKTF-17R	**Naphthalene**	**72**	**38**	**10 / 1.0**	**61.8%**
MKTF-18R	**Naphthalene**	**170**	**87**	**10 / 1.0**	**64.6%**
OW-66	Naphthalene	130	110	20 / 1.0	16.7%

◄ – one or both results were within 5 times the applicable reporting limit.

----- – RPD could not be calculated.

The bold results in the table above were greater than 5 times the applicable reporting limits and the relative percent differences between the Method 8260B and Method 8270C results were greater than the acceptable limit for aqueous samples of 30%. These results were assigned J qualifiers due to the discrepancies between the concentrations.

VALIDATION CRITERIA CHECKLIST	
The differences between the remaining results reported by both Method 8260B and Method 8270C were evaluated to be within the measurement uncertainty of the analytical methods at concentrations near or below the reporting limits. Qualification of results was not required.	
• Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?	No
Comments: The reported concentrations for total metals in the submitted samples were greater than the dissolved results, or the differences were within the measurement uncertainty for the methods, with the following exception.	
The reported dissolved zinc result of 0.034 mg/L for sample MKTF-02R was greater than the total zinc concentration of 0.019 mg/L. These results were within 5 times the applicable reporting limits and qualification of results was not required.

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

RPD values could not be calculated for several analytes since the analyte was detected in the one sample and was undetected in the other. Since the reported detection was greater than two times the applicable reporting limit, the

Client Sample ID: MKTF-18R Field Duplicate Sample ID: DUP-09-17-21				
Method	**Analyte**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
results for these analytes in samples MKTF-18R and DUP-09-17-21 were assigned J and UJ qualifiers, as appropriate, due to evidence of poor precision. +/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required. **The RPD values for several analytes exceeded the data validation limit of 30%. The reported results for these analytes were assigned J qualifiers for the parent and field duplicate samples, MKTF-18R and DUP-09-17-21, due to evidence of poor precision.** **The RPD values for several analytes greatly exceeded the data validation limit of 30% with RPD values greater than 100%. The reported results for these analytes were assigned J qualifiers for samples MKTF-18R and DUP-09-17-21, and J/UJ qualifiers for the results in the associated samples due to evidence of extremely poor precision (RPD > 100%).**				

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
MBD	Method blank detection
FBD	Field blank detection
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
