### **UPSET EVENT SPECIFIC JUSTIFICATIONS FORM**

Facility: Federal 1-1 CTB	Date: 08/19/2021
Duration of event: 24 Hours	MCF Flared: 1564
Start Time: 12:00 AM	End Time: 11:59 PM
<b>Cause:</b> Downstream Activity > DCP > Scheduled Supersystem Maintenance	
Method of Flared Gas Measurement: Gas Flare Meter 68873	

Well API Associated with Facility: 30-015-26843 Federal 1 #004

**Comments:** This upset event was not caused by any wells associated with the facility. This emissions event was caused by a third-party pipeline operator's downstream activity, which is beyond the owner/operator's control.

#### 1. Reason why this event was beyond Operator's control:

This emissions event was caused by a third-party pipeline operator's downstream facility maintenance activity, which is beyond Oxy's control to prevent or control from happening. This complete shut-in of the gas pipeline by third-party pipeline operator, DCP, is downstream of Oxy's custody transfer point. Oxy was notified in advance on or around August 10, 2021, by DCP personnel, by written correspondence, that an immediate required maintenance of their supersystem was scheduled to be performed on or around an estimated date of August 18, 2021, which would affect DCP's ability to process volumes within their supersystem, which in turn affects Oxy's upstream facility and its ability to send its gas to DCP. During DCP's supersystem immediate maintenance period, estimated to last only 48 hours, DCP would be unable to take gas from its operators.

This event is part of a five (5) day flaring occurrence due to DCP's supersystem maintenance period occurring from August 17, 2021 to August 21, 2021. DCP began their supersystem maintenance procedures a day earlier than previously notified, occurring on August 17, 2021 as DCP needed to depressurize their system and requested that Oxy shut in production/wells. DCP's pipeline, due to their depressurization needs, subsequently shut in the gas pipeline to Oxy, which affected Oxy's upstream facility operations. DCP did not call for gas or open the pipeline to take gas from Oxy until August 21, 2021. DCP's supersystem maintenance activity lasted more than the initial 48 hours they indicated to Oxy. Oxy flared continuously during DCP's complete and total shut-in of their pipeline to Oxy while they conducted downstream maintenance activities.

The Federal 1-1 CTB flare is a gas gathering flare system for multiple tank batteries across Oxy's defined Lost Tank area. Oxy made every effort to shut in as much of production/wells as possible, yet it was absolutely critical to Oxy's operational safety and start up procedures to allow some production to occur at this facility, as it was necessary to maintain a minimal amount of gas flow to restart the facility's compression equipment, specifically the gas lift compressors, across the Lost Tank area, when DCP was ready and able to start taking gas. The minimal amount of gas flow allowed to be produced and flare was done out of necessity to protect personnel and equipment as a safeguard against potential issues that could occur when restarting production across the Lost Tank area.

### 2. Steps Taken to limit duration and magnitude of venting or flaring:

This emissions event was caused by a third-party pipeline operator's downstream facility maintenance activity, which is beyond Oxy's control to prevent or control from happening. This complete shut-in of the gas pipeline by third-party pipeline operator, DCP, is downstream of Oxy's custody transfer point. Oxy was notified in advance on or around August 10, 2021, by DCP personnel, by written correspondence, that an immediate required maintenance was scheduled to be performed on or around an estimated date of August 18, 2021, which would affect DCP's ability to process volumes within their supersystem, which in turn affects Oxy's upstream facility and its ability to send its gas to DCP. During DCP's supersystem immediate maintenance period, estimated to last only 48 hours, DCP would be unable to take gas from its operators. DCP's supersystem maintenance activity lasted more than the initial 48 hours they indicated to Oxy.

The steps taken to limit duration and magnitude of flaring during DCP's supersystem maintenance period occurring from August 17, 2021 to August 21, 2021 was to shut in as much of production/wells as much as possible. The Federal 1-1 CTB flare is a gas gathering flare system for multiple tank batteries across Oxy's Lost Tank area. Oxy made every effort to shut in as much of production/wells as possible, yet it was absolutely critical to Oxy's operation practices to allow some production to occur, as it was necessary to maintain a minimal amount of gas flow to restart the facility's compression equipment, specifically the gas lift compressors, across the Lost Tank area, when DCP was ready and able to start taking gas. The minimal amount of gas flow allowed to be produced and flare was done out necessity to protect personnel and equipment as a safeguard against potential issues that could occur when restarting production across the Lost Tank area. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible.

In addition, Oxy production techs and essential personnel maintained constant communication with DCP personnel, during this flaring period, to prepare for the re-opening of DCP's pipeline and their gas services to recommence. During this time, Oxy production techs also continually monitored the flare during this flaring period.

### 3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy is unable to take any corrective actions to eliminate this cause and potential reoccurrence of this circumstance of flaring as this emissions event was caused by a third-party pipeline operator's downstream facility maintenance activity, which is beyond Oxy's control to avoid, prevent or control from happening. This complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point. While this event was out of Oxy's control to avoid or prevent from happening, Oxy made every effort to minimize emissions while DCP was having downstream maintenance activity issues.

		[C-129] Venting and/or Flaring (C-129)	
QUESTIONS			
Prerequisites			
Any messages presented in this section, will prevent submission of this application. Please resolve t	hese issues before continuing with	the rest of the questions.	
Incident Well	[30-015-26843] FEDERAL 1	#004	
Incident Facility	Not answered.		
Determination of Reporting Requirements			
Answer all questions that apply. The Reason(s) statements are calculated based on your answers ar	d may provide addional quidance.		
Was or is this venting and/or flaring caused by an emergency or malfunction	No		
Did or will this venting and/or flaring last eight hours or more cumulatively within			
any 24-hour period from a single event	Yes		
Is this considered a submission for a notification of a major venting and/or flaring	Yes, major venting and/or f	laring of natural gas.	
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during v	enting and/or flaring that is or may	be a major or minor release under 19.15.29.7 NMAC.	
Was there or will there be at least 50 MCF of natural gas vented and/or flared	Yes		
during this event	165		
Did this venting and/or flaring result in the release of <b>ANY</b> liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a			
surface, a watercourse, or otherwise, with reasonable probability, endanger public	No		
health, the environment or fresh water			
Was the venting and/or flaring within an incorporated municipal boundary or			
withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Natural Gas Vented (Mcf) Details

Not answered.

### *Received by OCD: 9/3/2021 12:44:40 PM*

Natural Gas Flared (Mcf) Details	Cause: Other   Other (Specify)   Natural Gas Flared   Released: 1,564 Mcf   Recovered: 0 Mcf   Lost: 1,564 Mcf ]	
Other Released Details	Not answered.	
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter	
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.	

Venting or Flaring Resulting from Downstream Activity		
Was or is this venting and/or flaring a result of downstream activity	Yes	
Date notified of downstream activity requiring this venting and/or flaring	08/10/2021	
Time notified of downstream activity requiring this venting and/or flaring	07:38 PM	

Steps and Actions to Prevent Waste			
For this event, the operator could not have reasonably anticipated the current event and it was beyond the operator's control.	True		
Please explain reason for why this event was beyond your operator's control	See Justification Form > This event is part of a five (5) day flaring occurrence due to DCP's supersystem maintenance period occurring from August 17, 2021 to August 21, 2021. DCP began their supersystem maintenance procedures a day earlier than previously notified, occurring on August 17, 2021 as DCP needed to depressurize their system and requested that Oxy shut in production/wells. DCP's pipeline, due to their depressurization needs, subsequently shut in the gas pipeline to Oxy, which affected Oxy's upstream facility operations. DCP did not call for gas or open the pipeline to take gas from Oxy until August 21, 2021. DCP's updated to Oxy. Oxy flared continuously during DCP's complete and total shut-in of their pipeline to Oxy while they conducted downstream maintenance activities.		
Steps taken to limit the duration and magnitude of venting and/or flaring	See Justification Form > The steps taken to limit duration and magnitude of flaring during DCP's supersystem maintenance period occurring from August 17, 2021 to August 21, 2021 was to shut in as much of production/wells as much as possible. The Federal 1-1 CTB flare is a gas gathering flare system for multiple tank batteries across Oxy's Lost Tank area. Oxy made every effort to shut in as much of production/wells as possible, yet it was absolutely critical to Oxy's operation practices to allow some production to occur, as it was necessary to maintain a minimal amount of gas flow to restart the facility's compression equipment, specifically the gas lift compressors, across the Lost Tank area, when DCP was ready and able to start taking gas. The minimal amount of gas flow allowed to be produced and flare was done out necessity to protect personnel and equipment as a safeguard against potential issues that could occur when restarting production across the Lost Tank area. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible.		
Corrective actions taken to eliminate the cause and reoccurrence of venting and/or flaring	See Justification Form > Oxy is unable to take any corrective actions to eliminate this cause and potential reoccurrence of this circumstance of flaring as this emissions event was caused by a third-party pipeline operator's downstream facility maintenance activity, which is beyond Oxy's control to avoid, prevent or control from happening. This complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point. While this event was out of Oxy's control to avoid or prevent from happening. Oxy made every effort to minimize emissions while DCP was having downstream maintenance activity issues.
