If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
The rig was filling the frac tanks on-site in preparation of running acid on the SWD well, the pumps were shut down however the valves were misaligned by the rig crew and the water continued to gravitate into the tanks from the Legg Federal SWD water source causing the frac tanks to overflow undetected.

Describe Area Affected and Cleanup Action Taken.*
The frac tanks were set inside a plastic lined containment. The frac containment overflowed into a secondary earthen containment that was breached allowing water to leave the pad area and travel down a dry drainage ditch then eventually spread out into the pasture area north of the drilling pad. The spill impacted approximately 7200 sq.ft. of pad area and approximately 2700 sq.ft. of pasture area. Approximately 800 bbls of produced water were recovered from the lined frac containment and approximately 200 bbls were recovered from the earthen backup containment. Remediation activities are scheduled to begin as soon as the BLM arch survey is cleared. The rig moved off location on 4/22/14.
The spill area will be cleaned up in accordance to the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Describe Cause of Problem and Remedial Action Taken.*
An 8"x6" reducer failed on the suction side of the SWD horizontal pumps. The pumps shut down on low suction and the valves to the pump were manually closed. The fitting was replaced.

Describe Area Affected and Cleanup Action Taken.*
The SWD pumps were enclosed in 0 perm containment with a holding capacity of approximately 500 bbls. The fluid ran over the containment walls and impacted approximately 900 sq.ft. of caliche pad. The spill traveled off the pad via a narrow gully for approximately 750 ft. spread out and impacted approximately 6,400 sq.ft. of pasture area. All of the fluid on the pad and pasture area soaked into the ground. BOPCO is in the process of setting up an Arch survey to gain access to the area to be remediated.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
A fiberglass connection failed on the suction line to the SWD H-pumps, the pumps were shut down and valves were closed to isolate the damaged area. Crews started re-building the suction line header the day of the spill.

Describe Area Affected and Cleanup Action Taken.*
The spill was mostly contained in the 0-perm containment around the SWD pumps. A vacuum truck recovered 110 bbls from the containment and approximately 2 bbls off the ground. The pad area that was impacted by the release was the same area as impacted by a previous spill, reference 2RP-2440. The area had been recently sampled and reviewed by the BLM. Remediation activities were scheduled to begin when the drilling equipment was moved off the location.
The spill area will be cleaned up in accordance to the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Describe Cause of Problem and Remedial Action Taken.*
A bolt on the jet pump suction strainer sheared off, releasing water on the well pad and containment. The transfer pump to the jet pump shut down on low discharge which automatically shut down the jet pump.

Describe Area Affected and Cleanup Action Taken.*
The release was partly contained in the 0 perm containment around the pump, the remainder of the fluid impacted approximately 1500 sq.ft. of caliche well pad. This area has had previous reportable spills. It was estimated that 40 bbls of PW was recovered from the containment and 10 bbls picked up from the pad.
The spill area will be cleaned up in accordance to the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Describe Cause of Problem and Remedial Action Taken.*
A 2"x3" swedge on the triplex jet pump failed. The well was shut in until repairs can be made.

Describe Area Affected and Cleanup Action Taken.*
The release affected the impermeable lined containment and approximately 1 bbl of PW misted outside containment and impacted roughly 1250 square feet of caliche pad. All free-standing liquids were recovered from the containment and the containment and equipment were power washed. XTO mapped the extent of the release visually then excavated impacted material from pad surface. Impacted gravel was taken to Lea Land for disposal. Soil samples were collected to confirm compliance with NMOCD site specific standards. A XTO Maintenance Supervisor who is competent in the operation, maintenance, and inspection of all on-site equipment and facilities visually inspected the containment and verified there was no visual evidence of a liner breach. XTO will provide a closure report documenting soil removal and disposal, confirmation soil sampling results, and any other site remediation activities to the NMOCD upon receipt of laboratory analytical results.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: ***Each of the following items must be included in the closure report.***

☑ A scaled site and sampling diagram as described in 19.15.29.11 NMAC

☑ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)

☑ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)

☑ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Was this a major release as defined by 19.15.29.7(A) NMAC? ☐ Yes ☐ No	If YES, for what reason(s) does the responsible party consider this a major release?
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)?	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☐ The source of the release has been stopped.
☐ The impacted area has been secured to protect human health and the environment.
☐ Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.
☐ All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☒ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☒ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☒ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☒ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☒ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☒ Yes ☐ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☒ No
Did the release impact areas **not** on an exploration, development, production, or storage site?	☐ Yes ☒ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: ***Each of the following items must be included in the report.***

☒ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
☒ Field data
☒ Data table of soil contaminant concentration data
☒ Depth to water determination
☒ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
☒ Boring or excavation logs
☒ Photographs including date and GIS information
☒ Topographic/Aerial maps
☒ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

Receipt
The samples were received on 4/27/2021 11:31 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.8º C.

Receipt Exceptions

The following samples analyzed for method BTEX 8021 were received and analyzed from an unpreserved bulk soil jar: FS01 (890-582-1), FS02 (890-582-2), FS03 (890-582-3), FS04 (890-582-4), SW01 (890-582-5) and SW02 (890-582-6).

GC VOA
Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-2384 and analytical batch 880-2381 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: Internal standard responses were outside of acceptance limits for the following samples: FS03 (890-582-3) and SW01 (890-582-5). The sample(s) shows evidence of matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 5/6/2021 10:35 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.4º C.

Receipt Exceptions

The following samples analyzed for method BTEX 8021 were received and analyzed from an unpreserved bulk soil jar: FS10 (890-634-1) and FS11 (890-634-2).

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The matrix spike (MS) recoveries for analytical batch 880-2819 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.
The associated samples are: FS10 (890-634-1) and FS11 (890-634-2).

The matrix spike duplicate (MSD) recoveries for analytical batch 880-2819 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.
The associated samples are: FS10 (890-634-1) and FS11 (890-634-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The sample was received on 5/6/2021 10:52 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.8°C

Receipt Exceptions
The following samples analyzed for method BTEX 8021 were received and analyzed from an unpreserved bulk soil jar: SW09 (890-635-1).

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
Method 300_ORGFM_28D: The matrix spike (MS) recoveries for analytical batch 880-2819 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.The associated samples are: SW09 (890-635-1) and (890-636-A-8-C).The matrix spike duplicate (MSD) recoveries for analytical batch 880-2819 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.The associated samples are: SW09 (890-635-1) and (890-636-A-8-C).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The samples were received on 5/6/2021 10:50 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.8º C.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The matrix spike (MS) recoveries for analytical batch 880-2819 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.
The associated samples are: FS01 (890-636-1), FS02 (890-636-2), FS03 (890-636-3), FS04 (890-636-4), FS05 (890-636-5), FS06 (890-636-6), FS07 (890-636-7), FS08 (890-636-8), FS09 (890-636-9), FS10 (890-636-10), FS11 (890-636-11), FS12 (890-636-12), FS13 (890-636-13), FS14 (890-636-14), FS15 (890-636-15), FS16 (890-636-16) and FS17 (890-636-17).

The matrix spike duplicate (MSD) recoveries for analytical batch 880-2819 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Receipt
The samples were received on 5/7/2021 10:47 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.4º C.

Receipt Exceptions

The following samples analyzed for method BTEX 8021 were received and analyzed from an unpreserved bulk soil jar: SW01 (890-646-1), SW02 (890-646-2), SW03 (890-646-3), FS19 (890-646-4), FS20 (890-646-5) and FS21 (890-646-6).

GC VOA
Method 8021B: The matrix spike duplicate (MSD) recoveries for preparation batch 880-2886 and analytical batch 880-2884 Benzene were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: Internal standard responses were outside of acceptance limits for the following sample: SW02 (890-646-2). The sample(s) shows evidence of matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 5/17/2021 4:40 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.8º C.

Receipt Exceptions

The following samples analyzed for method BTEX 8021 were received and analyzed from an unpreserved bulk soil jar: SS07A (890-680-1), SS07B (890-680-2), SS09A (890-680-3) and SS09B (890-680-4).

GC VOA
Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-3194 and analytical batch 880-3197 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8015B NM: Manual integration was performed on the following samples: SS07A (890-680-1), SS07B (890-680-2) and SS09A (890-680-3). The oil range detections in these samples was the result of baseline rise and was not an actual indication of oil range hydrocarbons.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The sample was received on 5/18/2021 3:04 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C

GC VOA
Method 8021B: Surrogate recovery for the following sample was outside control limits: SW05 (890-688-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-3220 recovered above the upper control limit for Diesel Range Organics (Over C10-C28) and Gasoline Range Organics (GRO)-C6-C10 The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The sample was received on 5/18/2021 3:04 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C

GC VOA
Method 8021B: Surrogate recovery for the following sample was outside control limits: SW04 (890-689-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The LCS duplicate was biased low for benzene, due to method requirements only calling for an acceptable laboratory control spike the data was reported as a rush was requested by the client, however another LCSD will be analyzed at the completion of the sequence to confirm the low benzene bias was as a result of a bad injection and has no adverse affect on the data reported.SW04 (890-689-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
Method 8021B: The LCS duplicate was biased low for benzene, due to method requirements only calling for an acceptable laboratory control spike the data was reported as a rush was requested by the client, however another LCSD will be analyzed at the completion of the sequence to confirm the low benzene bias was as a result of a bad injection and has no adverse affect on the data reported.SW03 (890-690-1)

Receipt
The sample was received on 5/18/2021 3:04 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.2º C.

GC VOA
Method 8021B: The LCS duplicate was biased low for benzene, due to method requirements only calling for an acceptable laboratory control spike the data was reported as a rush was requested by the client, however another LCSD will be analyzed at the completion of the sequence to confirm the low benzene bias was as a result of a bad injection and has no adverse affect on the data reported.

Receipt
The sample was received on 5/18/2021 3:04 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C

GC VOA
Method 8021B: Surrogate recovery for the following sample was outside control limits: SW01 (890-692-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The LCS duplicate was biased low for benzene, due to method requirements only calling for an acceptable laboratory control spike the data was reported as a rush was requested by the client, however another LCSD will be analyzed at the completion of the sequence to confirm the low benzene bias was as a result of a bad injection and has no adverse affect on the data reported.SW01 (890-692-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The samples were received on 5/18/2021 3:04 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.2º C.

GC VOA
Method 8021B: Surrogate recovery for the following sample was outside control limits: FS23 (890-693-2). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: Surrogate recovery for the following samples were outside control limits: FS24 (890-693-3) and FS26 (890-693-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8015B NM: All quality control biased high indicating possible high bias in samples. All samples are non-detect under the implied high bias therefore the data has been qualified and reported.

(CCV 880-3220/30), (CCV 880-3220/44), (LCS 880-3250/2-A), (LCSD 880-3250/3-A), (890-693-A-1-F MS) and (890-693-A-1-G MSD)

Method 8015B NM: All quality control biased high indicating possible high bias in samples. All samples are non-detect under the implied high bias therefore the data has been qualified and reported.
FS30 (890-693-9), FS31 (890-693-10), FS32 (890-693-11), FS33 (890-693-12) and FS34 (890-693-13)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 880-3258 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.The associated samples are: FS30 (890-693-9), FS31 (890-693-10), FS32 (890-693-11), FS33 (890-693-12) and FS34 (890-693-13).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Eddy County, New Mexico

To Whom It May Concern:

WSP USA Inc. (WSP), on behalf of XTO Energy, Inc. (XTO), presents the following Closure and Deferral Request following execution of the Remediation Work Plans that were approved by the New Mexico Oil Conservation Division (NMOCD) for this location on December 10 and 11, 2020. This report provides an summary to the remediation activities completed at the James Ranch Unit Drilling Island 1 (Site) to address impacted soil resulting from eighteen releases that occurred at the Site between April 2014 and April 2020. The Site is located in Units B, C, F, G and H, Section 21, Township 22 South, Range 30 East, in Eddy County, New Mexico (Figure 1).

The Remediation Work Plans (Work Plans) submitted to the NMOCD proposed to address the impacted soil resulting from the releases through excavation and delineation of impacted soil, and installation of 30-mil impermeable liners to address identified impacts deeper than four feet in the subsurface. The following report describes the implementation of the final remediation activities as outlined in the Work Plans. Based on the excavation and delineation activities, soil sample laboratory analytical results, and completion of remediation activities as outlined in the approved Work Plan, XTO is requesting closure for Incident Numbers nHMP1416331258, nHMP1411836637, nAB1422639350, nAB1503439598, nAB1516652299, nAB1520256930, nAB1602952102, nAB1611933379, nAB1625130938, nAB1736044200, nAB1805036031, nAB1814128830 NRM2006432204, NRM2011445697, NRM2011535196, NRM2011559899, and NRM2002747253. Due to active production equipment and safety policy associated with working around those, XTO is requesting deferral of Incident number NRM1935433078 until the facility is decommissioned or until major facility construction occurs.

BACKGROUND

On April 23, 2020 and October 6, 2020, WSP submitted Work Plans to the NMOCD for eighteen releases that occurred at the Site between April 2014 and April 2020. A total of 3,687 barrels (bbls) of produced water and 13.41 bbls of crude oil were released onto the well pad and adjacent pasture. Approximately 2,599 bbls of produced water and 10.1 bbls of crude oil were recovered. XTO or the former operator reported each release to the NMOCD on a Form C-141. The releases are described in further detail in the original Work Plans. The releases were assigned Incident Numbers nHMP1416331258, nHMP1411836637, nAB1422639350, nAB1503439598, nAB1516652299, nAB1520256930, nAB1602952102, nAB1611933379, nAB1625130938, nAB1736044200, nAB1805036031, nAB1814128830 NRM2006432204, NRM2011445697, NRM2011535196, NRM2011559899, NRM1935433078, and NRM2002747253.

The Work Plans detailed site characterization according to Table 1, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC). Based on the site characterization, the following Closure Criteria were applied:

- Benzene: 10 milligrams per kilogram (mg/kg);
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg;
- Total petroleum hydrocarbons (TPH): 100 mg/kg; and
- Chloride: 600 mg/kg.

The Site receptors are identified on Figure 1 and the release locations are presented on Figure 2.

REMEDIATION WORK PLAN IMPLEMENTATION

The following sections of this report describe the remediation activities completed at the Site in order to fulfill the scope of work outlined in the approved Work Plans. All previous remediation activities, soil sample analytical results, and the detailed site characterization can be referenced in the original reports.

Northeast and Southwest Release Areas: Incident Numbers nHMP1411836637, nAB1503439598, nAB1516652299, nAB1520256930, nAB1602952102, nAB1611933379, nAB1625130938, nAB1736044200 and NRM2011559899

During April and May 2021, WSP personnel were at the Site to oversee delineation and excavation of impacted soil in the northeast and southwest release areas, and the installation of a liner in the open excavations. To delineate impacts to soil and direct excavation activities, WSP screened soil for volatile aromatic hydrocarbons and chloride utilizing a calibrated photo-ionization detector (PID) and Hach® chloride QuanTab® test strips, respectively.

Delineation activities were conducted to define the vertical exent of chloride impacted soil prior to excavation activities and liner installation. Four potholes (LDP01-NE through LDP04-NE) were advanced in the northeast release area to depths ranging from 15 feet to 24.5 feet bgs and seven potholes (LDP01-SW through LDP07-SW) were advanced in the southwest release area to a depth of 13 feet bgs. At minimum, two soil samples were collected from each pothole for laboratory analysis: the depth representative of the excavation floor (4 feet bgs) and the depth that indicated clean vertical delineation. Field screening results and observations for the potholes were logged on lithologic/soil sampling logs, which are included in Attachment 1. The pothole locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 3.

Impacted soil was excavated to an approximate depth of 4 feet bgs in the northeast and southwest approved liner installation areas. Excavation continued laterally until sidewall samples were compliant with the Closure Criteria in the top four feet. Following removal of impacted soil, WSP collected 5-point composite soil samples every 500 square feet, a frequency approved in the Work Plans, from the sidewalls of the excavations. The 5-point composite soil samples were collected by depositing five aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite samples LN-SW01 through LN-SW07 were collected from the sidewalls of the northeast excavation. Composite samples LW-SW01 through LW-SW07 were collected from the sidewall of southwest excavation. The excavation sample locations were mapped utilizing a GPS unit and are depicted on Figure 4.

The delineation and excavation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported at or below 4 degrees Celsius (°C) under strict chain-of-custody (COC) procedures to Eurofins Laboratories (Eurofins) in Midland, Texas, for analysis of BTEX following EPA Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

Laboratory analytical results indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in the pothole delineation soil samples collected at the terminal depth. Laboratory analytical results indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in the excavation sidewall samples collected from the final excavation extents. Laboratory analytical results are summarized in Table 1 with the corresponding Incident Numbers and the complete laboratory analytical reports are provided in Attachment 2.

Upon confirmation of the delineation and excavation soil sample analytical results, liner installation was completed as outlined in the approved Work Plans. XTO installed approximately 43,000 square feet of 30-mil impermeable liner in the floor of the northeast and southwest excavations to mitigate future chloride impacts into the subsurface (Figure 4). No residual

benzene, BTEX or TPH remained in the soil beneath the liners. After liner installation, the excavations were backfilled with clean backfill material and contoured to match preexisting Site conditions. Photographic documentation was conducted during delineation, excavation, and liner installation activities. A photographic log is provided in Attachment 3.

East, North, Northwest, and West Release Areas: Incident Numbers nHMP1416331258, nAB1422639350, nAB1805036031, nAB1814128830, NRM2006432204, NRM2011445697, NRM2011535196, NRM2002747253

During April and May 2021, delineation and excavation activities were completed in the east, north, northwest, and west release areas as outline in the approved Work Plans. To direct delineation and excavation activities, WSP screened soil for volatile aromatic hydrocarbons and chloride as described above.

Impacted soil was excavated to depths ranging from 1 foot to 12 feet bgs in the east, north, northwest, and west release areas. Excavations continued laterally and vertically until sidewall and floor samples were compliant with the Closure Criteria. Following removal of impacted soil, WSP collected 5-point composite soil samples every 500 square feet from the sidewalls (labeled as SW) and floors (labeled as FS) of each excavation. The excavation soil sample locations were mapped utilizing a GPS unit and are depicted on Figure 5 through Figure 8. The 5-point composite soil samples were collected, handled and analyzed as described above.

Laboratory analytical results indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in all excavation floor and sidewall samples collected from the final excavation extents. Laboratory analytical results are summarized in Table 1 with the corresponding Incident Numbers and the complete laboratory analytical reports are provided in Attachment 2.

WSP personnel utilized a hand auger to complete additional delineation activities in the west release extents, in areas requiring further vertical and/or lateral delineation to confirm the presence or absence of impacted soil. Four boreholes (BH01 through BH04) were advanced to a depth of 4 feet bgs within the west release extents associated with Incident Numbers nAB1422639350 and nAB1503439598. Two additional delineation points (SS07 and SS09) were advanced to a depth of 4 feet bgs at locations previously sampled for Incident Number NRM2002747253, that warranted additional subsurface investigation. Two soil samples were collected from each delineation point for laboratory analysis: the sample depth with the highest field screening result (approximately 1 foot bgs) and the sample from the final depth (approximately 4 feet bgs). The delineation soil samples were collected, handled and analyzed as described above. The delineation sample locations were mapped utilizing a handheld GPS unit and are depicted on Figure 9. Photographic documentation was conducted during delineation and excavation activities. A photographic log is provided in Attachment 3.

Laboratory analytical results indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in the delineation samples from boreholes BH01 through BH04, SS07, and SS09 and confirmed the absence of impacted soil in these areas. Laboratory analytical results are summarized in Table 1 with the corresponding Incident Numbers and the complete laboratory analytical reports are provided in Attachment 2.

CLOSURE REQUEST

Incident Numbers nHMP1416331258, nHMP1411836637, nAB1422639350, nAB1503439598, nAB1516652299, nAB1520256930, nAB1602952102, nAB1611933379, nAB1625130938, nAB1736044200, nAB1805036031, nAB1814128830, NRM2006432204, NRM2002747253, NRM2011445697, NRM2011535196, and NRM2011559899

Final remediation activities were completed as outlined in the approved Work Plans. A total of approximately 11,790 cubic yards of impacted soil were excavated, hauled from the Site, and disposed of at R360 Hobbs, New Mexico under XTO approved manifests. All excavation confirmation soil samples collected followed the approved 500 square foot sampling variance. Laboratory analytical results for the final excavation floor and sidewall samples indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in all unlined excavation areas.

Two excavation areas totaling approximately 43,000 square feet were lined with a 30-mil impermeable liner over the residual chloride impacted soil to mitigate future impacts into the subsurface. The lined excavations were vertically delineated by eleven potholes within the release extents and horizontally delineated by excavation sidewall samples. Excavations have been backfilled and recontoured to match the original grade.

WSP and XTO believe these remedial actions are protective of human health, the environment, and groundwater. As such, XTO respectfully requests no further action for Incident Numbers nHMP1416331258, nHMP1411836637, nAB1422639350, nAB1503439598, nAB1516652299, nAB1520256930, nAB1602952102, nAB1611933379, nAB1625130938, nAB1736044200, nAB1805036031, nAB1814128830, NRM2006432204, NRM2002747253, NRM2011445697, NRM2011535196 and NRM2011559899.

DEFERRAL REQUEST

Incident Number NRM1935433078

Excavation of impacted soil in the southwest release extent, associated with Incident Number NRM1935433078, was limited by the presence of active pipelines. An estimated 645 cubic yards of impacted soil remain in place in the southern portion of the well pad.

On May 11, 2021, additional delineation samples were collected from the previous BH01 and BH02 borehole locations to define the vertical extent of impacted soil. WSP screened soil for volatile aromatic hydrocarbons and chloride as described above. Soil samples BH01C and BH02C were collected from the delineation points from a depth of 8 feet bgs. The delineation soil samples were collected, handled and analyzed as described above.

Laboratory analytical results indicated that benzene, BTEX, TPH, and chloride concentrations were compliant with the Closure Criteria in vertical delineation soil samples BH01C and BH02C. Laboratory analytical results are summarized in Table 1 and the complete laboratory analytical reports are provided in Attachment 2.

Based on laboratory analytical results, the vertical extent of impacted soil does not exceed 8 feet bgs. The impacted soil remaining in place immediately adjacent to active pipelines, is delineated vertically by delineation soil samples BH01C and BH02C and laterally by delineation samples from boreholes BH04 through BH07, as described in the original Work Plan. An estimated 645 cubic yards of impacted soil are estimated to be left in place. The deferral request area is shown on Figure 10.

XTO requests to complete remediation during any major future well pad construction/alteration or final plugging and abandonment, whichever occurs first. WSP and XTO do not believe deferment will result in imminent risk to human health, the environment, or groundwater. Based on the additional data collected as described in this report, impacts have been fully delineated, and no further soil removal can occur safely at this time. XTO requests deferral of final remediation for Incident Number NRM1935433078.

XTO and WSP have completed the remediation activities outlined in the approved Work Plans for all eighteen reportable release that occurred at the Site. If you have any questions or comments, please do not hesitate to contact Ms. Ashley Ager at (970) 385-1096.

Sincerely,
