**Re: Closure Report for the EOG Resources, Big Eddy Unit 079Y, Unit J, Section 21, Township 21 South, Range 28 East, Eddy County, New Mexico.
NMLB052841155**

Oil Conservation Division:

Tetra Tech, Inc. (Tetra Tech) was contacted by EOG Resources (EOG) to assess and remediate a release that occurred at the EOG Resources, Big Eddy Unit 079Y, Unit J, Section 21, Township 21 South, Range 28 East, Eddy County, New Mexico (Site). The site coordinates are 32.4639549°, -104.0894318°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico Incident Detail Form, the release was discovered on October 7, 2005, and released approximately 150 barrels of produced water due to a tank overflow. Approximately 150 barrels of produced water were recovered. The release occurred in the berm of a tank battery. Additionally, visible contamination was mentioned in the sandy area South of the tank battery, in the area of the Northeast corner of location containing a decommissioned heater treater, and in an area West of the battery where contaminated soil was stockpiled onsite without the use of plastic. The New Mexico Incident Detail Form and C-141 form is included in Appendix A.

Site Characterization

A site characterization was performed for the site and no lakebeds, sinkholes, playa lakes, residences, schools, hospitals, institutions, churches, springs, private domestic water wells, wetlands, incorporated municipal boundaries, subsurface mines, or floodplains are located within the specified distances. However, the site is located in a medium karst potential area.

The nearest well is listed on the USGS National Water Information System is in section 17 approximately 1.17 miles from the site, and has a reported depth to groundwater of 45.78' below surface.

Additionally, during the investigation activities, one bore hole was drilled at the site to a

total depth of 55' feet below surface, and no water was encountered during drilling activities. Additionally, 72 hours after drilling activities commenced, the bore hole was investigated for the presence of groundwater, no groundwater was detected at the site. The drilling log and site characterization data is included in Appendix B.

Regulatory

A risk-based evaluation was performed for the site following the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills, and Releases, updated August 14, 2018. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene, and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the site characterization, beyond the top 4.0' of soil, the proposed RRAL for TPH is 1,000 mg/kg (GRO + DRO) and 2,500 mg/kg (GRO + DRO + MRO). Additionally, based on the site characterization, beyond the top 4.0' of soil, the proposed RRAL for chlorides is 10,000 mg/kg.

Soil Assessment and Analytical Results

Initial Assessment

Between January 27, 2021 and May 26, 2021, Tetra Tech personnel were onsite to evaluate and sample the mentioned areas in the incident report. A total of seven (7) auger holes (AH-1 through AH-7) were installed in the release footprint with depths ranging from surface to 1.5' below surface. Due to the dense lithology in the area, refusal was hit shallow in all auger holes. Selected samples were submitted to the laboratory for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B, and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix D. The results of the sampling are summarized in Table 1. The sample locations are shown in Figure 3

Referring to Table 1, all samples submitted did not show benzene, total BTEX, or TPH concentrations above the RRALs. Additionally, the areas of auger holes (AH-1 through AH-4 and AH-7) showed chloride concentrations below RRALs. However, the areas of auger holes (AH-5 and AH-6) showed chloride concentrations above RRALs, with concentrations ranging from 1,140 mg/kg to 1,850 mg/kg, at depths ranging from surface to 1.5' below surface. Vertical delineation was not found in the areas of auger holes (AH-5 and AH-6) during site assessment activities.

Remediation and Reclamation Activities

Tetra Tech personnel were onsite March 12, 2021 through April 1, 2021, to supervise the remediation and collect confirmation samples. The impacted areas were excavated to depths ranging from 1.5' below surface and 8.0' below surface, as shown on Figure 4 and Table 2.

Confirmation bottom hole and sidewall samples were collected every 200 square feet, a total of 9 bottom hole samples (Bottom Hole 1 through Bottom Hole 9) and 10 sidewall samples (SW-1 through SW-10) were collected to ensure proper removal of the impacted soils. The samples were submitted to the laboratory to be analyzed for TPH method 8015 extended, BTEX method 8021B, and Chloride by EPA Method 300.0. The sampling results are summarized in

Table 1. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix D. The excavation depths, and sample locations are shown in Figure 4.

Additionally, during remediation activities in March and prior to the drilling activities, select samples (BH-1 and BH-2, and SW-1 through SW-4) were collected and submitted to the laboratory to be analyzed for TPH method 8015 extended, BTEX method 8021B, and Chloride by EPA Method 300.0, to determine accurate concentrations and help determine remediation activities moving forward. The sampling results are shown in Table 2, highlighted in orange, and showing their respective locations. The sample locations are shown in Figure 4.

Referring to Table 1, all final confirmation samples collected showed benzene, total BTEX, and TPH concentrations below the laboratory reporting limits. Additionally, all final samples showed chloride concentrations below the RRAL and the 600 mg/kg threshold in the top 4.0' of soil.

Approximately 304 cubic yards of material was excavated and transported offsite for proper disposal. The areas were then backfilled with clean material to surface grade.

Conclusion

Based on the laboratory results, remediation activities performed, EOG requests closure of this spill issue. The final C-141 is enclosed in Appendix A. If you have any questions or comments concerning the assessment or remediation activities for this site, please call at (432) 682-4559.

10/27/2005	<p>Release notification called in to District 2 office by Yates Pet rep, Dan Dolan. C-141 rec'd via fax 10/10/05. C-141 reports 150 bbls PW released with 150 bbls recovered. Per C-141: Cause of Problem and Remedial Action Taken listed as: "Due to Pump failure, a tank overflowed spilling 150 bbl Water, and a small amount of tank bottom inside berm." Area Affected and Cleanup Action Taken listed as: "Inside Berm of tank battery, free fluid was picked up, the dirty soil was being picked up, the area will be tested for chlorides and TPH and brought to OCD levels. Ranking for this area is Depth to ground water-0, wellhead protection area-0, surface water-0" This C-141 was denied and a request made for an amended form to be submitted. An inspection of the site was made on 10/11/05 by an OCD field inspector. Heavy oil type fluids were still standing in the berm area at time of inspection. Photos taken showing pooled fluids. An inspection of site on 10/12/05 was made. Backhoe Services was on location removing top layer of contaminated soils on South side of Tank Battery. An excavation around the West fiberglass tank was made on the South side of the tank. Contaminates exposed indicate tank is leaking or has had multiple releases over a period of time. Heavy contamination was being encountered at the 1' bgs level. Sandy pasture area just South of Tank Battery has had a produced fluid release at some point. Contamination visible in several areas in the pasture. Area at Northeast corner of location has a decommissioned heater treater. Area surrounding vessel has contamition evident. Backhoe operator has removed an estimated 6-10 yds of heavily contaminated soils from release area. Materials are stockpiled on location at West end of Battery. Materials are not on plastic. Soils obtained at Northwest corner of location and Berm replaced around tanks. Dirt contractor then left location. Pressure limiting device on injection pump is set at 1200 psi. Valve is closed on device rendering it unable to limit pressures. Amended C-141 was received 10/18/2005. Reported release: 30 bbls oil/emulsion and 160 bbls water. Reported recovery: 15 bbl oil/emulsion and 150 bbls water.</p>

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: *Each of the following items must be included in the report.*

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination
- Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- Boring or excavation logs
- Photographs including date and GIS information
- Topographic/Aerial maps
- Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Brittany Long:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 686479. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 686479 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Analytical non conformances and comments:

Batch: LBA-3149481 BTEX by EPA 8021B

Lab Sample ID 686479-001 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Benzene, Ethylbenzene, Toluene, m,p-Xylenes, o-Xylene recovered below QC limits in the Matrix Spike. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 686479-001, -002, -003, -004, -005.

The Laboratory Control Sample for Toluene, Benzene, m,p-Xylenes, Ethylbenzene, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Benzene, Ethylbenzene, Toluene, m,p-Xylenes, o-Xylene Relative Percent Difference (RPD) between matrix spike and duplicate were above quality control limits.

Samples in the analytical batch are: 686479-001, -002, -003, -004, -005

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.
