UPSET VENT EVENT SPECIFIC JUSTIFICATIONS FORM

Facility: Corral 1S CS

Vent Date: 06/24/2022

Duration of event: 7 Hours 0 Minutes

MCF Vented: 131

Start Time: 05:00 PM

End Time: 11:59 PM

Cause: Equipment Malfunction > VRU > Dump Issue on VRT

Method of Flared Gas Measurement: Gas Flare Meter

Comments: This upset event was not caused by any wells associated with the facility.

1. Reason why this event was beyond Operator's control:

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, this venting event began on June 24, 2022, around 05:00 PM and ended the next day on June 25, 2022, around 07:00 AM. Venting arose when the VRT malfunctioned on a hihi level, which was caused by the rising dumping frequency from the compression equipment, thusly overloading the VRU and triggering an automatic shutdown of the unit. While the VRU was shut down, the tank pressure rose above the venting threshold for the thief hatches on top of the tanks, which then triggered the tanks to vent, which was not discovered until June 25, 2022, when the Oxy production tech was making his daily inspection of the facility and its equipment. Once the venting was discovered, the Oxy production tech quickly adjusted the dumping cycle on the VRT and then proceeded to restart the VRU. After some time, the venting ceased. The facility equipment was running and operating as designed prior to the malfunctions occurring.

2. Steps Taken to limit duration and magnitude of venting or flaring:

In this case, this venting event began on June 24, 2022, around 05:00 PM and ended the next day on June 25, 2022, around 07:00 AM. Venting arose when the VRT malfunctioned on a hihi level, which was caused by the rising dumping frequency from the compression equipment, thusly overloading the VRU and triggering an automatic shutdown of the unit. While the VRU was shut down, the tank pressure rose above the venting threshold for the thief hatches on top of the tanks, which then triggered the tanks to vent, which was not discovered until June 25, 2022, when the Oxy production tech was making his daily inspection of the facility and its equipment. Once the venting was discovered, the Oxy production tech quickly adjusted the dumping cycle on the VRT and then proceeded to restart the VRU. After some time, the venting ceased. The facility equipment was running and operating as designed prior to the malfunctions occurring.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy is limited in the corrective actions to eliminate the cause and reoccurrence of venting in this type of equipment malfunction as notwithstanding normal equipment design and operation, emergencies, and malfunctions, can occur without warning, be sudden, unforeseeable, and unavoidable. In addition, field operation equipment is inherently dynamic and even the smallest mechanical issue can be sudden, reasonably unforeseeable, and unexpected which can cause malfunctions to occur without warning. Oxy continually strives to maintain and operate in a manner consistent with good practice for minimizing emissions and reducing the number of emission events. It is OXY's policy to flare, rather than vent, during an unforeseen and unavoidable emergency or malfunction, to minimize emissions as much as possible, yet, in this circumstance, a sudden and unexpected equipment malfunction caused venting to occur, which was unavoidable. OXY made every effort to control and minimize emissions as much as possible during this sudden and unexpected venting event.

DEFINITIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 125259
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

DEFINITIONS

For the sake of brevity and completeness, please allow for the following in all groups of questions and for the rest of this application:

- this application's operator, hereinafter "this operator";
- venting and/or flaring, hereinafter "vent or flare";
- any notification or report(s) of the C-129 form family, hereinafter "any C-129 forms";
- the statements in (and/or attached to) this, hereinafter "the statements in this";
- and the past tense will be used in lieu of mixed past/present tense questions and statements.

QUESTIONS

Action 125259

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 125259
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Prerequisites	
<i>Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.</i>	
Incident Operator	[16696] OXY USA INC
Incident Type	Flare
Incident Status	Closure Approved
Incident Well	Not answered.
Incident Facility	[fAPP2126641362] CORRAL #1 COMP STATION
<i>Only valid Vent, Flare or Vent with Flaring incidents (selected above in the Application Details section) that are assigned to your current operator can be amended with this C-129A application.</i>	

Determination of Reporting Requirements	
<i>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.</i>	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
<i>An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.</i>	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Venting > Equipment Malfunction > VRU > Dump Issue on VRT

Representative Compositional Analysis of Vented or Flared Natural Gas	
<i>Please provide the mole percent for the percentage questions in this group.</i>	
Methane (CH4) percentage	76
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
<i>If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.</i>	
Methane (CH4) percentage quality requirement	0
Nitrogen (N2) percentage quality requirement	0
Hydrogen Sulfide (H2S) PPM quality requirement	0
Carbon Dioxide (CO2) percentage quality requirement	0
Oxygen (O2) percentage quality requirement	0

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 125259
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	06/24/2022
Time vent or flare was discovered or commenced	05:00 PM
Time vent or flare was terminated	11:59 PM
Cumulative hours during this event	7

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Cause: Other Other (Specify) Natural Gas Vented Released: 131 Mcf Recovered: 0 Mcf Lost: 131 Mcf]
Natural Gas Flared (Mcf) Details	Not answered.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	vent meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	0
Date notified of downstream activity requiring this vent or flare	01/01/1900
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, this venting event began on June 24, 2022, around 05:00 PM and ended the next day on June 25, 2022, around 07:00 AM. Venting arose when the VRT malfunctioned on a hihi level, which was caused by the rising dumping frequency from the compression equipment, thusly overloading the VRU and triggering an automatic shutdown of the unit. While the VRU was shut down, the tank pressure rose above the venting threshold for the thief hatches on top of the tanks, which then triggered the tanks to vent, which was not discovered until June 25, 2022, when the Oxy production tech was making his daily inspection of the facility and its equipment. Once the venting was discovered, the Oxy production tech quickly adjusted the dumping cycle on the VRT and then proceeded to restart the VRU. After some time, the venting ceased. The facility equipment was running and operating as designed prior to the malfunctions occurring.
Steps taken to limit the duration and magnitude of vent or flare	In this case, this venting event began on June 24, 2022, around 05:00 PM and ended the next day on June 25, 2022, around 07:00 AM. Venting arose when the VRT malfunctioned on a hihi level, which was caused by the rising dumping frequency from the compression equipment, thusly overloading the VRU and triggering an automatic shutdown of the unit. While the VRU was shut down, the tank pressure rose above the venting threshold for the thief hatches on top of the tanks, which then triggered the tanks to vent, which was not discovered until June 25, 2022, when the Oxy production tech was making his daily inspection of the facility and its equipment. Once the venting was discovered, the Oxy production tech quickly adjusted the dumping cycle on the VRT and then proceeded to restart the VRU. After some time, the venting ceased. The facility equipment was running and operating as designed prior to the malfunctions occurring.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy is limited in the corrective actions to eliminate the cause and reoccurrence of venting in this type of equipment malfunction as notwithstanding normal equipment design and operation, emergencies, and malfunctions, can occur without warning, be sudden, unforeseeable, and unavoidable. In addition, field operation equipment is inherently dynamic and even the smallest mechanical issue can be sudden, reasonably unforeseeable, and unexpected which can cause malfunctions to occur without warning.
