UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Corral 2S CS**Date:** 07/26/2022**Duration of event:** 6 Hours**MCF Flared:** 121**Start Time:** 07:00 AM**End Time:** 08:00 AM**Cause:** Downstream Activity> ETC> Unexpected Shut-In > Compression Equipment Issues**Method of Flared Gas Measurement:** Gas Flare Meter**Comments:** Event was not initially reported as a major flare event to NMOCD as the initial reported volume did not exceed 500 MCF and/or last more than 8 hours.

1. Reason why this event was beyond Operator's control:

The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, third party pipeline operator, ETC, apparently was having continuing facility compressor equipment issues, which initially began on 07/25/2022. On 07/25/2022, ETC personnel informed OXY field personal, approximately about 03:30 PM, that they would be shutting in/curtailing their sales gas pipeline service to Oxy unexpectedly, and within 45 minutes from initial notice provided. The ETC communication regarding the unexpected shut-in was extremely short notice and provided little time for Oxy to make alternative offloading arrangements with Enterprise. Oxy was able to send some of its stranded gas to Enterprise, but they were unable to take all its gas, as they were overloaded, so Oxy's intake volume rates were reduced by Enterprise, prompting Oxy to flare the stranded gas not pushed into the Enterprise sales pipeline. On 07/26/2022, after the initial episode of flaring, which began at 12:00 AM and ceased at 06:00 AM, ETC began having issues yet again, and Oxy, for a second time, must offload to Enterprise again, as ETC shut in for a second time with no notice. Enterprise was overloaded as well, due to ETC's curtailment, and therefore, Oxy routed all its gas not pushed into the Enterprise sales gas service pipeline to flare. ETC having compression issues again, is downstream of Oxy's custody transfer point yet ETC's downstream issues greatly impacted the gas flow from Oxy's upstream facility, which then triggered another initial flaring episode to occur; and as Enterprise was not capable of handling all Oxy's gas on short notice, they began cutting back Oxy's volume rates, which aided in triggering additional intermittent flaring instances to occur, within the specified timeframe listed above.

2. Steps Taken to limit duration and magnitude of venting or flaring:

This facility is unmanned, except when Oxy production techs are gathering data daily or conducting daily walk-throughs to ensure that there are no problems, circumstances and/or assist other personnel on-site for maintenance purposes. It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as the part of the overall process or steps to take to limit duration and magnitude of flaring. Oxy personnel are in the field 24/7 and can physically see when we are flaring, which in turn, are

communicated to additional Oxy field personnel. Internal OXY procedures ensure that upon gas compressor unit and/or multiple unit shutdown, increased sensor pressure/level alarms, other process equipment issues, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible in order to take prompt corrective action and minimize emissions. Oxy production technicians must assess whether the issue or circumstance is due to damage and repair is needed, or whether there are other reasons for its cause. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, third party pipeline operator, ETC, apparently was having continuing facility compressor equipment issues, which initially began on 07/25/2022. On 07/25/2022, ETC personnel informed OXY field personal, approximately about 03:30 PM, that they would be shutting in/curtailing their sales gas pipeline service to Oxy unexpectedly, and within 45 minutes from initial notice provided. The ETC communication regarding the unexpected shut-in was extremely short notice and provided little time for Oxy to make alternative offloading arrangements with Enterprise. Oxy was able to send some of its stranded gas to Enterprise, but they were unable to take all its gas, as they were overloaded, so Oxy's intake volume rates were reduced by Enterprise, prompting Oxy to flare the stranded gas not pushed into the Enterprise sales pipeline. On 07/26/2022, after the initial episode of flaring, which began at 12:00 AM and ceased at 06:00 AM, ETC began having issues yet again, and Oxy, for a second time, must offload to Enterprise again, as ETC shut in for a second time with no notice. Enterprise was overloaded as well, due to ETC's curtailment, and therefore, Oxy routed all its gas not pushed into the Enterprise sales gas service pipeline to flare. ETC having compression issues again, is downstream of Oxy's custody transfer point yet ETC's downstream issues greatly impacted the gas flow from Oxy's upstream facility, which then triggered another initial flaring episode to occur; and as Enterprise was not capable of handling all Oxy's gas on short notice, they began cutting back Oxy's volume rates, which aided in triggering additional intermittent flaring instances to occur, within the specified timeframe listed above. Until ETC was able to begin taking gas again, plus able to handle the volume of gas sent to them, the unexpected shut-in/curtailment forced Oxy's upstream facility to route its stranded gas, not pushed into the Enterprise sales gas service pipeline, as a secondary offloading operator, to flare. All Oxy's facility equipment were operating as designed prior to this event occurring.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an ETC gas flow pipeline restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening or reoccurring. ETC's downstream facility issues will re-occur from time to time and cause them to shut in their sales gas service pipeline to Oxy, which, is out of Oxy's control to avoid or prevent from happening yet directly impacts Oxy's ability to send gas to them and directly causes Oxy's upstream facility to flare. When ETC's downstream facility and/or its facility equipment has issues or greatly struggles to handle the volume of gas being sent to them by Oxy, ETC then restricts Oxy's ability to send gas, which then prompts Oxy to route all its stranded gas not pushed into an available secondary offload gas pipeline operator, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with ETC personnel during these types of situations.

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 132731
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS**Prerequisites**

Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.

Incident Well	Not answered.
Incident Facility	[fAPP2126640958] CORRAL #2 SOUTH COMP STATION

Determination of Reporting Requirements

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.

Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.

An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.

Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved

Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Downstream Activity> ETC> Unexpected Shut-In > Compression Equipment Issues

Representative Compositional Analysis of Vented or Flared Natural Gas

Please provide the mole percent for the percentage questions in this group.

Methane (CH4) percentage	78
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0

If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.

Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2

Action 132731

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 132731
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	07/26/2022
Time vent or flare was discovered or commenced	07:00 AM
Time vent or flare was terminated	08:00 AM
Cumulative hours during this event	1

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 121 Mcf Recovered: 0 Mcf Lost: 121 Mcf]
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	On 07/25/2022, ETC personnel informed OXY field personal, approximately about 03:30 PM, that they would be shutting in/curtailing their sales gas pipeline service to Oxy unexpectedly, and within 45 minutes from initial notice provided. The ETC communication regarding the unexpected shut-in was extremely short notice and provided little time for Oxy to make alternative offloading arrangements with Enterprise. Oxy was able to send some of its stranded gas to Enterprise, but they were unable to take all its gas, as they were overloaded, so Oxy's intake volume rates were reduced by Enterprise, prompting Oxy to flare the stranded gas not pushed into the Enterprise sales pipeline. On 07/26/2022, after the initial episode of flaring, which began at 12:00 AM and ceased at 06:00 AM, ETC began having issues yet again, and Oxy, for a second time, must offload to Enterprise again, as ETC shut in for a second time with no notice. Enterprise was overloaded as well, due to ETC's curtailment, and therefore, Oxy routed all its gas not pushed into the Enterprise sales gas service pipeline to flare. ETC having compression issues again, is downstream of Oxy's custody transfer point yet ETC's downstream issues greatly impacted the gas flow from Oxy's upstream facility, which then triggered another initial flaring episode to occur; and as Enterprise was not capable of handling all Oxy's gas on short notice, they began cutting back Oxy's volume rates, which aided in triggering additional intermittent flaring instances to occur, within the specified timeframe listed above.
Steps taken to limit the duration and magnitude of vent or flare	In this case, third party pipeline operator, ETC, apparently was having continuing facility compressor equipment issues, which initially began on 07/25/2022. On 07/25/2022, ETC personnel informed OXY field personal, approximately about 03:30 PM, that they would be shutting in/curtailing their sales gas pipeline service to Oxy unexpectedly, and within 45 minutes from initial notice provided. The ETC communication regarding the unexpected shut-in was extremely short notice and provided little time for Oxy to make alternative offloading arrangements with Enterprise. Oxy was able to send some of its stranded gas to Enterprise, but they were unable to take all its gas, as they were overloaded, so Oxy's intake volume rates were reduced by Enterprise, prompting Oxy to flare the stranded gas not pushed into the Enterprise sales pipeline. On 07/26/2022, after the initial episode of flaring, which began at 12:00 AM and ceased at 06:00 AM, ETC began having issues yet again, and Oxy, for a second time, must offload to Enterprise again, as ETC shut in for a second time with no notice. Enterprise was overloaded as well, due to ETC's curtailment, and therefore, Oxy routed all its gas not pushed into the Enterprise sales gas service pipeline to flare. ETC having compression issues again, is downstream of Oxy's custody transfer point yet ETC's downstream issues greatly impacted the gas flow from Oxy's upstream facility, which then triggered another initial flaring episode to occur; and as Enterprise was not capable of handling all Oxy's gas on short notice, they began cutting back Oxy's volume rates, which aided in triggering additional intermittent flaring instances to occur, within the specified timeframe listed above. Until ETC was able to begin taking gas again, plus able to handle the volume of gas sent to them, the unexpected shut-in/curtailment forced Oxy's upstream facility to route its stranded gas, not pushed into the Enterprise sales gas service pipeline.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an ETC gas flow pipeline restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening or reoccurring. ETC 's downstream facility issues will re-occur from time to time and cause them to shut in their sales gas service pipeline to Oxy, which, is out of Oxy's control to avoid or prevent from happening yet directly impacts Oxy's ability to send gas to them and directly causes Oxy's upstream facility to flare. When ETC 's downstream facility and/or its facility equipment has issues or greatly struggles to handle the volume of gas being sent to them by Oxy, ETC then restricts Oxy's ability to send gas, which then prompts Oxy to route all its stranded gas not pushed into an available secondary offload gas pipeline operator, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with ETC personnel during these types of situations.
