### UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM

**Facility:** Corral 2S CS

**Date:** 07/26/2022

**Duration of event:** 35 Minutes

**MCF Flared:** 166

**Start Time:** 12:15 AM

**End Time:** 12:50 PM

**Cause:** Unplanned Compression Maintenance > Corral 1S CS > Units 2 & 3

**Method of Flared Gas Measurement:** Gas Flare Meter

**Comments:**

---

**1. Reason why this event was beyond Operator's control:**

In this case, this was unplanned preventative maintenance work on gas compressor units 2 & 3, by USA Compression and their team, which necessitated the units to be shut down. As this was unplanned maintenance, there was not enough compression available to handle the volume of production while these units were shut down, and therefore, OXY routed the stranded gas to flare until Oxy production techs could lower the well injection rates. Once the well injection rates were lowered, flaring ceased. USA Compression and their team brought the gas compressor units back to working order in a short period of time.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

Internal OXY procedures ensure that upon gas compressor unit and/or multiple unit shutdown, increased sensor pressure/level alarms, other process equipment issues, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible in order to take prompt corrective action and minimize emissions. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, this was unplanned preventative maintenance work on gas compressor units 2 & 3, by USA Compression and their team, which necessitated the units to be shut down. As this was unplanned maintenance, there was not enough compression available to handle the volume of production while these units were shut down, and therefore, OXY routed the stranded gas to flare until Oxy production techs could lower the well injection rates. Once the well injection rates were lowered, flaring ceased. USA Compression and their team brought the gas compressor units back to working order in a short period of time OXY made every effort to control and minimize emissions as much as possible. Oxy production techs remained on-site to continually monitor the well program so that manual adjustments of the well pressure gas rates could be done whenever the well surges overloaded the facility's compression equipment. All Oxy's facility equipment were operating as designed prior to this event occurring.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy is limited in its corrective action to eliminate the cause and reoccurrence of flaring during an unplanned preventative maintenance visit as OXY makes every effort to control and minimize emissions as much as possible during these types of visits when they are scheduled in advance and Oxy has been made aware of such. The only actions that Oxy can take during unplanned preventative maintenance visits is lower the well injection rates until flaring ceases and all operational equipment is brought back to normal working service.

DEFINITIONS

Action 132911

**DEFINITIONS**

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 132911
	Action Type: [C-129] Venting and/or Flaring (C-129)

**DEFINITIONS**

For the sake of brevity and completeness, please allow for the following in all groups of questions and for the rest of this application:

- this application's operator, hereinafter "this operator";
- venting and/or flaring, hereinafter "vent or flare";
- any notification or report(s) of the C-129 form family, hereinafter "any C-129 forms";
- the statements in (and/or attached to) this, hereinafter "the statements in this";
- and the past tense will be used in lieu of mixed past/present tense questions and statements.

QUESTIONS

Action 132911

**QUESTIONS**

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 132911
	Action Type: [C-129] Venting and/or Flaring (C-129)

**QUESTIONS**

<b>Prerequisites</b>	
<i>Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.</i>	
Incident Well	Not answered.
Incident Facility	[fAPP2126640958] CORRAL #2 SOUTH COMP STATION

<b>Determination of Reporting Requirements</b>	
<i>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.</i>	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
<i>An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.</i>	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

<b>Equipment Involved</b>	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Unplanned Compression Maintenance > Corral 1S CS > Units 2 & 3

<b>Representative Compositional Analysis of Vented or Flared Natural Gas</b>	
<i>Please provide the mole percent for the percentage questions in this group.</i>	
Methane (CH4) percentage	78
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
<i>If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.</i>	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

**QUESTIONS (continued)**

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 132911
	Action Type: [C-129] Venting and/or Flaring (C-129)

**QUESTIONS**

<b>Date(s) and Time(s)</b>	
Date vent or flare was discovered or commenced	07/26/2022
Time vent or flare was discovered or commenced	12:15 PM
Time vent or flare was terminated	12:50 PM
Cumulative hours during this event	1

<b>Measured or Estimated Volume of Vented or Flared Natural Gas</b>	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Repair and Maintenance   Other (Specify)   Natural Gas Flared   Released: 166 Mcf   Recovered: 0 Mcf   Lost: 166 Mcf
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

<b>Venting or Flaring Resulting from Downstream Activity</b>	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

<b>Steps and Actions to Prevent Waste</b>	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	In this case, this was unplanned preventative maintenance work on gas compressor units 2 & 3, by USA Compression and their team, which necessitated the units to be shut down. As this was unplanned maintenance, there was not enough compression available to handle the volume of production while these units were shut down, and therefore, OXY routed the stranded gas to flare until Oxy production techs could lower the well injection rates. Once the well injection rates were lowered, flaring ceased. USA Compression and their team brought the gas compressor units back to working order in a short period of time.
Steps taken to limit the duration and magnitude of vent or flare	Internal OXY procedures ensure that upon gas compressor unit and/or multiple unit shutdown, increased sensor pressure/level alarms, other process equipment issues, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible in order to take prompt corrective action and minimize emissions. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, this was unplanned preventative maintenance work on gas compressor units 2 & 3, by USA Compression and their team, which necessitated the units to be shut down. As this was unplanned maintenance, there was not enough compression available to handle the volume of production while these units were shut down, and therefore, OXY routed the stranded gas to flare until Oxy production techs could lower the well injection rates. Once the well injection rates were lowered, flaring ceased. USA Compression and their team brought the gas compressor units back to working order in a short period of time OXY made every effort to control and minimize emissions as much as possible. Oxy production techs remained on-site to continually monitor the well program so that manual adjustments of the well pressure gas rates could be done whenever the well surges overloaded the facility's compression equipment. All Oxy's facility equipment were operating as designed prior to this event occurring.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy is limited in its corrective action to eliminate the cause and reoccurrence of flaring during an unplanned preventative maintenance visit as OXY makes every effort to control and minimize emissions as much as possible during these types of visits when they are scheduled in advance and Oxy has been made aware of such. The only actions that Oxy can take during unplanned preventative maintenance visits is lower the well injection rates until flaring ceases and all operational equipment is brought back to normal working service.
