**Re: Closure Request Addendum
Broadcaster 29 Federal 003H
Incident Numbers NAPP2132773092 & NAPP2201938653
Lea County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of COG Operating, LLC (COG), has prepared this *Closure Request Addendum* to provide an update to the lateral delineation soil sampling activities performed at the Broadcaster 29 Federal 003H (Site). The purpose of the lateral delineation soil sampling activities was to address the denial by the New Mexico Oil Conservation Division (NMOCD) of an original *Closure Request*, dated October 27, 2022. In the denial, NMOCD expressed concern that the release was not laterally delineated. Based on additional sampling activities, COG is requesting closure for Incident Numbers NAPP2132773092 and NAPP2201938653.

All of the release details regarding the incidents, site characterization, and remediation conducted can be referenced in the original *Closure Request*. NMOCD denied the *Closure Request* on November 28, 2022, for the following reason:

Closure Report Denied. Release not laterally delineated (SS01, SS02, & SS03). Delineation samples should be delineated to 600 mg/kg for chlorides and 100 mg/kg for TPH to define the edge of the release, regardless of DTW measurement. Please resubmit a revised closure report to the OCD portal by December 28, 2022.

It should be noted the soil represented by SS02 was removed during the excavation. Soil remaining in place at that location is represented by subsequent excavation confirmation sample FS01. All delineation samples (including SS01 and SS03) and excavation confirmation sample FS01 meet Table I Closure Criteria, indicating the soil impacted by the release was remediated correctly. It appears NMOCD's concern is that the release was not delineated laterally to the reclamation requirement. All delineation samples near and in the direction of the edge of the well pad, where the reclamation requirement might apply, are below 100 mg/kg TPH and 600 mg/kg chloride. Soil samples SS01, SS03, and FS01 exceed 100 mg/kg TPH and are north and northwest of the flare stack on the well pad.

ADDITIONAL DATA

Based on NMOCD's request, on December 9, 2022, three soil samples (SS08-SS10) were collected adjacent SS01, SS03, and FS01 in the direction of the well pad from a depth of 0.5 feet bgs to assess the lateral extent of the releases. The delineation soil samples were field screened for volatile organic compounds (VOCs) utilizing a calibrated photoionization detector (PID) and chloride utilizing Hach®

chloride QuanTab® test strips, respectively. The soil sample locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 1.

The soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Eurofins Laboratories (Eurofins) in Carlsbad, New Mexico, for analysis of the following chemicals of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-GRO, TPH-DRO, and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

Laboratory analytical results for all three delineation soil samples indicated concentrations of all COCs were compliant with the reclamation requirement (less than 100 mg/kg TPH). Laboratory analytical results are summarized in Table 1 and laboratory analytical reports are included in Appendix A.

CLOSURE REQUEST

Laboratory analytical results for the additional lateral delineation soil samples indicated concentrations of all COCs were compliant with the reclamation requirement. As such, COG respectfully requests closure for Incident Numbers NAPP2132773092 and NAPP2201938653. The Final C-141 is included in Appendix B.

If you have any questions or comments, please contact Ms. Kalei Jennings at (817) 683-2503 or kjennings@ensolum.com.

Receipt

The sample was received on 12/12/2022 12:41 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

Receipt Exceptions

The following sample was received and analyzed from an unpreserved bulk soil jar: SS10 (890-3623-1).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-41840 and analytical batch 880-42076 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 880-41755 and analytical batch 880-42176 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

	Job Narrative 890-3626-1

Receipt

The sample was received on 12/12/2022 12:41 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

Receipt Exceptions

The following sample was received and analyzed from an unpreserved bulk soil jar: SS08 (890-3626-1).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

Method 8015MOD_NM: The method blank for preparation batch 880-41841 and analytical batch 880-42076 contained Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)?	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☐ The source of the release has been stopped.	
☐ The impacted area has been secured to protect human health and the environment.	
☐ Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.	
☐ All free liquids and recoverable materials have been removed and managed appropriately.	
If all the actions described above have <u>not</u> been undertaken, explain why:	
Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
