Was this a major release as defined by 19.15.29.7(A) NMAC?

Yes No

If YES, for what reason(s) does the responsible party consider this a major release?
25 bbls recovered

If YES, was immediate notice given to the OCD? By whom? When and by what means (phone, email, etc)?
Immediate notification was given to the State Land Office via email on August 8, 2022. Mike Bratcher of the OCD was emailed on August 11th, 2022 once initial clean up response was initiated.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

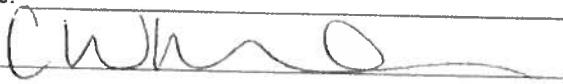

- The source of the release has been stopped.
- The impacted area has been secured to protect human health and the environment.
- Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.
- All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

**Re: Site Closure Report
Delek LACT Earthstone Squeeze Release Site
3 Bear Energy-Cottonwood, LLC
Incident ID: nAPP2223528506
N-2-22S-34E, Lea County, New Mexico**

1. Introduction

GHD Services, Inc. (GHD), on behalf of 3 Bear Energy-Cottonwood, LLC, which is owned and operated by Delek Logistics Partners, LP (Delek), submits this Site Closure Report to the State of New Mexico Energy, Minerals and Resource Oil Conservation Division (OCD) District II Office. This report provides documentation of remedial activities in the crude oil impacted area at the LACT Earthstone Squeeze Release Site (Site). Earthstone Energy, Inc. is the operator of the pad location and associated equipment surrounding the release area. The Site is located in Unit Letter N Section 2 of Township 22 South and Range 34 East in Lea County, New Mexico. The GPS coordinates for the release site are 32.41427° N Latitude and 103.444° W Longitude. The surface owner of the land where the release occurred is Merchant Livestock. Figure 1 depicts the Site location. The Site and other details are depicted on Figure 2.

2. Background and Regulatory Notification Information

The release is subject to the jurisdiction of the OCD District II Office in Artesia, New Mexico. Notice was given to the OCD via Notification of Release (NOR) Submission, Action 136652. A C-141 Release Notification for this release was submitted to the OCD on August 23, 2022. The C-141 stated that the volume of crude oil released is unknown. The OCD assigned the release with Incident Number nAPP2223528506. The release occurred as the result of a human error which caused the release from a valve at the LACT unit onto the facility pad. Approximately 25 barrels (bbls) of crude oil were recovered.

3. Site Characterization and Closure Criteria

GHD characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, from New Mexico Administrative Code (NMAC) Title 19, Chapter 15, Part 29, Section 12 (NMAC 19.15.29.12) (NMAC Table I Closure Criteria).

According to the Site characterization evaluation and 19.15.29.12.C(4)(a)(i), the Site is located within an area of low karst potential. No groundwater data was available within one-half mile of the Site. In addition, no receptors (i.e. water wells, playas, wetlands, waterways, lakebeds, or ordinance boundaries) were located within each regulatory specified distance and/or boundary from the Site. Also based on our review, the Site is not located in a mapped floodplain. Documentation of the Site characterization and receptor review are included as Attachment A. Based on the results of the site characterization, the closure criteria are listed below:

General Site Characterization and Groundwater Information:

Site Characterization	Average Groundwater Depth (ft)
No Receptors Found	Unknown, treated as less than fifty (50) feet

Closure Criteria for Soils Impacted by a Release (NMAC 19.15.29.12)

Regulatory Standard	Chloride	TPH (GRO+DRO+MRO)	BTEX	Benzene
19.15.29.13 Restoration, Reclamation and Re-Vegetation (Impacted Area 0-4 feet)	600 mg/kg	100 mg/kg	50 mg/kg	10 mg/kg
19.15.29.12 NMAC Table I Closure Criteria for Soils Impacted by a Release	600 mg/kg	100 mg/kg	50 mg/kg	10 mg/kg

4. Soil Remediation Activities

4.1 Initial Remedial Excavation and Soil Assessment Activities

On August 8, 2022, Delek's contractors Frontier Development, Inc. (Frontier) initiated soil excavation activities. Following the removal of the crude oil impacted soil, Delek contracted GHD to assess the release area. GHD conducted initial soil assessment sampling on August 12, 2022, with the collection of soil samples from four (4) locations across the Site (HA-1, HA-2, BH Grab-1, and SW Grab-1). Samples were submitted to Eurofins Environmental Testing America (Eurofins), located in Midland, Texas and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA SW846 Method 8021B, total petroleum hydrocarbons (TPH) by EPA SW846 Method 8015B Modified, and chloride by EPA Methods For Chemical Analysis of Water and Wastes (MCAWW) Method 300.0. Analytical results indicated benzene, BTEX, and TPH concentrations to be below the applicable NMAC Table I Closure Criteria. Analytical results indicated three (3) of the soil samples (HA1-S, BH Grab-1, and SW Grab-1) exhibited chloride concentrations above NMAC Table I Closure Criteria. Sample locations are presented on Figure 2 and summarized in Table 1. The laboratory analytical report and chain of custody (COC) are attached as Attachment B.

On August 23, 2022, GHD and Frontier, returned to the Site to conduct additional assessment soil sampling with the installation of seven (7) test pits within the suspected impacted area. Soil samples were collected at varying

depths from surface level to 10 feet below ground surface (bgs). Based on the initial assessment soil sampling having chloride exceedances, the additional assessment soil samples were only field screened for chlorides to provide guidance for on-going remedial excavation activities. The soil sample assessment locations are presented on Figure 2. Field Screening results are summarized in Table 1.

Based on the results of the field screening activities, additional excavation, and confirmation soil sampling was conducted. A photographic log is included as Attachment C.

4.2 Excavation Confirmation Soil Sampling Activities

On October 5, 2022, GHD collected twenty-three (23) composite excavation bottom hole soil samples (BH1-BH23), eight (8) composite excavation sidewall soil samples (LACT WALL 1, LACT WALL 2, and SW1-SW6), and one (1) discrete soil sample (LACT STAIN). The excavation bottom hole soil samples were collected at a depth of four (4) feet bgs and the excavation sidewall soil samples were collected at depths from zero (0) to four (4) feet bgs. The soil samples were analyzed for BTEX by EPA SW846 Method 8021B, TPH by EPA SW846 Method 8015B Modified, and chloride by EPA MCAWW Method 300.0 by Eurofins in Carlsbad, New Mexico.

None of the confirmation soil samples exhibited benzene or BTEX concentrations above the NMAC Table I Closure Criteria. Five (5) of the confirmation soil samples exhibited TPH concentrations above the NMAC Table I Closure Criteria (BH19, BH23, LACT STAIN, LACT WALL 1, and LACT WALL 2). Analytical results indicated twenty (20) of the confirmation soil samples exhibited chloride concentrations above NMAC Table I Closure Criteria (BH3, BH4, BH7-BH16, BH18, BH21, LACT WALL 1, SW1, SW3, SW4, SW6). Sample locations are presented on Figure 2 with the analytical data being summarized in Table 1. The laboratory analytical report and COC are attached as Attachment B. In accordance with 19.15.29.12 D(1)(a) NMAC, sampling notifications are included as Attachment D.

4.3 Additional Remedial Excavation and Soil Sampling Activities

On November 4, 2022, GHD, and Frontier, returned to the Site to conduct additional remedial excavation activities around soil sample location BH19 due to TPH having exceeded the NMAC Table I Closure Criteria. This area was excavated to a depth of seven (7) feet bgs. Following excavation activities, a composite soil sample was collected (BH19A) and submitted to Eurofins, located in Midland, Texas. The sample was analyzed for BTEX by EPA SW846 Method 8021B, TPH by EPA SW846 Method 8015B Modified, and chloride by EPA MCAWW Method 300.0. Benzene, BTEX, and TPH concentrations were determined to be below NMAC Table I Closure Criteria. Analytical results indicated the soil sample exhibited chloride concentrations above NMAC Table I Closure Criteria. Sample locations are presented on Figure 2 with the analytical data being summarized in Table 1. The laboratory analytical report and COC are attached as Attachment B. A photographic log is included as Attachment C. In accordance with 19.15.29.12 D(1)(a) NMAC, sampling notifications are included as Attachment D.

4.4 Waste Management and Site Restoration Activities

Waste management activities were performed in coordination with Delek directives. Frontier obtained regulatory approval via the successful processing of Form C-138 Request for Approval to Accept Solid Waste. The waste was approved for acceptance at the OCD-permitted (NM1-006), R360 Halfway Facility located at 6601 Hobbs Hwy US 62/180 Mile Marker 66, Carlsbad, New Mexico 88220. Approximately 900 cubic yards of impacted soils were removed from the remedial excavation and disposed of. The approved C-138 and waste manifests are

available upon request but are not attached due to the size of the file. A summary of soil disposal information is included in Table 3.

Based on the benzene, BTEX, and TPH analytical results being below the applicable NMAC Table I Closure Criteria, no further excavation was conducted. The excavation was backfilled with non-impacted soil imported to the Site from a locally sourced caliche and topsoil pit and compacted with heavy tracked equipment. A photographic log is included as Attachment C.

5. Chloride Impacted Soil Review

During the initial assessment and remedial excavation activities, chloride impacted soils were documented through field screening and laboratory testing of collected soil samples. Chloride impacted soils were initially assumed to be related to the released crude oil; however, additional analysis of impacted soil and the crude oil suggests the chloride impacts may not be related to this crude oil release.

A discrete soil sample of crude oil-stained soil collected immediately beneath one of the LACT Units (LACT STAIN) was submitted for the determination of BTEX by EPA SW846 Method 8021B, TPH by EPA SW846 Method 8015B Modified, and chloride by EPA MCAWW Method 300.0. Based on the analytical results, benzene was reported to be 0.114 mg/kg and BTEX was determined to be 9.87 mg/kg. TPH was reported to be 27,100 mg/kg and 148 mg/kg of chlorides was detected. On November 4, 2022, a sample of crude oil (Product Sample) was collected from the LACT Unit and submitted for chloride analysis. Chloride was detected in the sample with a concentration of 219 mg/kg. Both the crude oil-stained soil and crude oil contained roughly the same concentrations of chlorides which supports the fact that the identified chloride impacts, which concentrations ranged from 79.9 mg/kg to 4,410 mg/kg, are not related to the crude oil release. Analytical results for LACT STAIN are summarized in Table 1 and the analytical results for the crude oil sample are summarized in Table 2 with the laboratory analytical reports and COCs included in Attachment B.

As a result of the stained soil and crude oil sampling and analysis, remedial excavation activities focused solely on the removal of benzene, BTEX, and TPH impacted soils within the release area. The source and extent of chloride impacted soil was not further investigated by Delek or its contractors.

Earthstone Energy, Inc is the current operator of the pad where the release occurred and is most likely the responsible party of the chloride impacted soil. On November 4, 2022, during remedial excavation and soil sampling activities, GHD personnel witnessed contractors for Earthstone cleaning up a produced water release that occurred within the adjacent tank battery. Photographs of the Earthstone pad have been provided in Attachment C showing other potential impacts to the pad that were not related to the Delek crude oil release.

6. nAPP2223528506 Deferral and Closure Request

Site characterization, soil delineation, and remediation activities for Incident nAPP2223528506 have been performed in accordance with applicable OCD guidance and regulations. GHD, on behalf of Delek, requests deferral of the remediation of crude oil impacted soils immediately surrounding the two (2) LACT Units represented by soil samples BH23, LACT STAIN, LACT WALL 1, and LACT WALL 2 due to equipment structural stability concerns. These areas will be remediated when the oil and gas production equipment is removed from the Site during Site decommissioning. Based upon supporting documentation provided in this report, GHD, on behalf of Delek, respectfully requests closure of nAPP2223528506.

If you have any questions or comments concerning this Site Closure Report, please do not hesitate to contact our Midland office at (432) 686-0086.

Sincerely,

GHD

No additional comments.

**Receipt**

The samples were received on 8/15/2022 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.5° C.

**GC VOA**

Method 8021B: The continuing calibration verification (CCV) associated with batch 880-32252 recovered above the upper control limit for Benzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 880-32252/2).

Method 8021B: Surrogate recovery for the following samples were outside control limits: (MB 880-32250/5-A) and (880-18062-A-1-F MSD). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**General Chemistry**

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Organic Prep**

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

##### **Narrative**

##### **Job Narrative 890-3151-1**

##### **Comments**

No additional comments.

##### **Receipt**

The samples were received on 10/5/2022 2:37 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 17.8° C.

##### **GC VOA**

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 880-36687 and analytical batch 880-36926 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: The continuing calibration verification (CCV) associated with batch 880-36926 recovered above the upper control limit for m-Xylene & p-Xylene and o-Xylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 880-36926/33).

Method 8021B: Surrogate recovery for the following samples were outside control limits: LACT STAIN (890-3151-24) and LACT WALL 1 (890-3151-25). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: Surrogate recovery for the following sample was outside control limits: BH7 (890-3151-7). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: LACT WALL 2 (890-3151-26). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### **GC Semi VOA**

Method 8015B NM: The surrogate recovery for the blank associated with preparation batch 880-36385 and analytical batch 880-36313 was outside the upper control limits.

Method 8015B NM: The surrogate recovery for the blank associated with preparation batch 880-36387 and analytical batch 880-36315 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### **General Chemistry**

Method 300.0: Spike compounds were inadvertently omitted during the extraction process for the matrix spike/matrix spike duplicate (MS/MSD); therefore, matrix spike recoveries are unavailable for preparation batch 880-36391 and analytical batch 880-36602. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 880-36391 and analytical batch 880-36602 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### **Organic Prep**

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

##### **VOA Prep**

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Receipt Exceptions**

The following sample was received and analyzed from an unpreserved bulk soil jar: BH19A (880-21167-1).

**GC VOA**

Method 8021B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-38736 and analytical batch 880-38705 recovered outside control limits for the following analytes: Benzene, Toluene, Ethylbenzene, m-Xylene & p-Xylene and o-Xylene.

Method 8021B: LCSD biased low. Since only an acceptable LCS is required per the method, the data has been qualified and reported.
