Natural Gas Flared (Mcf) Details	Not answered.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Not answered.
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	Gas was vented to atmosphere to purge the compressor station for initial startup of the station. Purging is done to remove the O2 from the system to protect personnel and equipment.
Steps taken to limit the duration and magnitude of vent or flare	Gas was vented until the station was purged. This was done in as timely as possible to reduce duration of the emission event.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	The station was purged of oxygen, the emission event ended. Once the emission event ended the station was put into service to begin operation.
