UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Falcon Ridge Tankless CPF**Flare Date:** 12/26/2023**Duration of Event:** 2 Hours 45 Minutes**MCF Flared:** 175**Start Time:** 12:10 AM**End Time:** 02:55 AM**Cause:** Emergency Flare > Production Separators > Bold Chemical Treatment Skids**Method of Flared Gas Measurement:** Gas Flare Meter

1. Reason why this event was beyond Operator's control:

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, as gas volumes increased from the flowback wells as Oxy field personnel advanced chokes, the increased flow caused throughput restrictions within the BOLD treatment skids, several times within a 24-hour period. The restrictions on the gas flow caused the pressure on the produced gas through the facility to increase on numerous occasions throughout the day, which then triggered intermittent flaring instances to occur. Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-party BOLD chemical company is supposed to notify OXY and its field personnel of any issues and Oxy must rely on BOLD personnel to initiate adjustments on their equipment, when circumstances such as these occurs. This malfunctioning event is out of OXY's control. OXY made every effort to control and minimize emissions as much as possible.

2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as the part of the overall process or steps to take to limit duration and magnitude of flaring. Oxy personnel are in the field 24/7 and can physically see when we are flaring which in turn are communicated to additional Oxy field personnel. Internal OXY procedures ensure that upon notice of flaring, malfunction gas compressor unit and/or multiple unit shutdown alarms, increased sensor line pressure alarms, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. Oxy production technicians must assess whether the issue or circumstance is due to damage and repair is needed, or whether there are other reasons for its cause. In this case, as gas volumes increased from the flowback wells as Oxy field personnel advanced chokes, the increased flow caused throughput restrictions within the BOLD treatment skids, several times within a 24-hour period. The restrictions on the gas flow caused the pressure on the produced gas through the facility to increase on numerous occasions throughout the day, which then triggered intermittent flaring instances to occur. Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-

party BOLD chemical company is supposed to notify OXY and its field personnel of any issues and Oxy must rely on BOLD personnel to initiate adjustments on their equipment when circumstances such as these occurs. Oxy field personnel and BOLD chemical team personnel, once they arrived on-site, were able to make adjustments to flow control, which then prompted flaring to cease during each occurrence. OXY made every effort to control and minimize emissions as much as possible during this event.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy is limited in the corrective actions to eliminate this type of cause and potential reoccurrence of flaring as Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-party BOLD chemical company is supposed to notify OXY and its field personnel of any issues, which in this case was not done. Oxy and BOLD chemical company are evaluating alternative measures consistent with flow control automation. The only actions that Oxy can take and handle that is within its control, is to continually work with BOLD chemical company personnel to resolve those issues that may arise in a timely manner, should they occur suddenly and without warning.

QUESTIONS

Action 302377

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:	16696
	Action Number:	302377
	Action Type:	[C-129] Venting and/or Flaring (C-129)

QUESTIONS

Prerequisites Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.	
Incident Well	Unavailable.
Incident Facility	[fAPP2331575145] Falcon Ridge Tankless CPF

Determination of Reporting Requirements Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Production Separators > Bold Chemical Treatment Skids

Representative Compositional Analysis of Vented or Flared Natural Gas Please provide the mole percent for the percentage questions in this group.	
Methane (CH4) percentage	74
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	10
Carbon Dioxide (C02) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sufide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (C02) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2
Action 302377

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 302377
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	12/26/2023
Time vent or flare was discovered or commenced	12:10 AM
Time vent or flare was terminated	02:55 AM
Cumulative hours during this event	3

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 175 Mcf Recovered: 0 Mcf Lost: 175 Mcf.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, as gas volumes increased from the flowback wells as Oxy field personnel advanced chokes, the increased flow caused throughput restrictions within the BOLD treatment skids, several times within a 24-hour period. The restrictions on the gas flow caused the pressure on the produced gas through the facility to increase on numerous occasions throughout the day, which then triggered intermittent flaring instances to occur. Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-party BOLD chemical company is supposed to notify OXY and its field personnel of any issues and Oxy must rely on BOLD personnel to initiate adjustments on their equipment, when circumstances such as these occurs. This malfunctioning event is out of OXY's control. OXY made every effort to control and minimize emissions as much as possible. In this case, as gas volumes increased from the flowback wells as Oxy field personnel advanced chokes, the increased flow caused throughput restrictions within the BOLD treatment skids, several times within a 24-hour period. The restrictions on the gas flow

Steps taken to limit the duration and magnitude of vent or flare	caused the pressure on the produced gas through the facility to increase on numerous occasions throughout the day, which then triggered intermittent flaring instances to occur. Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-party BOLD chemical company is supposed to notify OXY and its field personnel of any issues and Oxy must rely on BOLD personnel to initiate adjustments on their equipment when circumstances such as these occurs. Oxy field personnel and BOLD chemical team personnel, once they arrived on-site, were able to make adjustments to flow control, which then prompted flaring to cease during each occurrence. OXY made every effort to control and minimize emissions as much as possible during this event.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy is limited in the corrective actions to eliminate this type of cause and potential reoccurrence of flaring as Oxy does not have any flow control alarms on the Bold treatment skids, which is owned and operated by a third-party vendor. The adjustments of the flow control must be completed with and by the BOLD chemical treatment team. The third-party BOLD chemical company is supposed to notify OXY and its field personnel of any issues, which in this case was not done. Oxy and BOLD chemical company are evaluating alternative measures consistent with flow control automation. The only actions that Oxy can take and handle that is within its control, is to continually work with BOLD chemical company personnel to resolve those issues that may arise in a timely manner, should they occur suddenly and without warning.
