Review for the Groundwater Remediation Report for GCU#153E: Content Satisfactory

 Continue to conduct groundwater monitoring

GROUNDWATER Ras prescribed by TION REPORT

Please update OCD on the status of the SVE system installation at the site.
 Please submit documentation and annual reports regularly by, and no later, than

GCU #153E

(C) SECTION 28, T29N, R12W, NMPM SAN JUAN COUNTY, NEW MEXICO

PREPARED FOR: NEW MEXICO OIL CONSERVATION DIVISION

JANUARY 2022

PREPARED BY: SIMCOE LLC 1100 Main Ave., Suite 101 Durango, Colorado 81301

SIMCOE LLC GCU # 153E

Unit Letter C, Sec. 28, T29N, R12W

Incident #: NAUTOfAB00208

Monitor Well Sampling Dates:

02/10/12, 06/29/12, 09/27/12, 11/26/12, 02/27/13, 05/31/13,08/28/13, 12/11/13, 02/27/14, 05/28/14, 08/28/14, 12/01/14, 03/30/15, 05/11/15, 08/26/15, 06/22/16, 05/26/17, 06/26/18, 06/21/19, 03/24/20, 03/03/21

Pit Closure & Background:

A site earthen dehydrator pit closure was initiated in December 1994 by removing impacted soils via excavation. Documentation for this work and subsequent groundwater monitoring data for the site was previously submitted to the New Mexico Oil Conservation Division (**NMOCD**) for review. The reporting herein is for site monitoring conducted from 2020-2021

Groundwater Monitor Well Sampling Procedures:

Groundwater monitor well MW #3R was purged three wellbore volumes using a new disposable bailer, then given a sufficient amount of time to allow recovery prior to each sample collection. The groundwater samples were collected following US EPA: SW-846 protocol, were placed into laboratory supplied containers with appropriate preservative, and stored in an ice chest for express delivery to an analytical laboratory for testing under strict chain-of-custody procedures. Analytical testing for benzene, toluene, ethylbenzene, and total xylenes (BTEX) by US EPA Method 8021B was conducted.

Fluids generated during monitor well purging were managed by discarding into the separator below-grade tank (BGT) or above-grade tank (AGT) located on the well site. The BGT and AGT contents are eventually disposed through approved NMOCD operational procedures for removal of produced fluids.

Water Quality and Gradient Information:

Quarterly sampling of the groundwater monitor well MW #3R was conducted from 2013 to the third quarter of 2015. Annually sampling initiated in 2016 and continues to the present. A historical summary of laboratory analytical results is included within the table on the following pages.

Groundwater contour maps (Figure 2 through Figure 12) reveal the relative elevations from the site wells have consistently shown an apparent southwest flow direction.

Summary and/or Recommendations:

SIMCOE has been on hold from the City of Farmington since the spring of 2020 for an electrical drop pole to initiate the NMOCD approved soil vapor extraction system (SVE). Hydrocarbon impacts still remain above the New Mexico Water Quality Control Commission's groundwater standard for benzene within monitor well MW #3R. Continued site monitoring per the previous operator's NMOCD approved Ground Water Management Plan is still recommended.

Mr. Steve Moskal 1199 Main Ave, Suite 101 Durango, CO 81303

Re: Gallegos Canyon Unit #153 (3RP-17) API# 30-045- 24292

Dear Mr. Moskal.

OCD has reviewed the subject work plan. OCD approves this work plan with the following conditions.

1.) BP will maintain a SVE runtime greater than or equal to 90% per quarter.

- 2.) BP will collect an initial gas sample for laboratory analysis shortly after the startup of SVE Operations and then a quarterly sample thereafter. The gas sample will be analyzed for EPA Method 8260 Full List and include Carbon dioxide and Oxygen.
 - The gas sample port needs to be installed prior to the inlet of the vacuum pump but, after the convergence of all sve wells.
- BP will submit to OCD District III a quarterly update report detailing remediation operations the report will include at a minimum.
 - Summary of remediation activity for the quarter.
 - o SVE run time
 - SVE mass removal and product recovery.
 - o Gas Sample Analysis

BP will submit to the OCD District III a closure sampling plan prior to initiating closure of the site.

FAX:

RE: GCU 153E OrderNo.: 2103242

Dear Steve Moskal:

Hall Environmental Analysis Laboratory received 1 sample(s) on 3/4/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

Laboratory Manager
