2023 Annual Groundwater Monitoring Report
Bell Lake Gas Plant
Lea County, New Mexico
New Mexico Oil Conservation Division AP-120
Incident Number nAUTOfaB000034

Dear Ms. Velez,

On behalf of Transwestern Pipeline Company, LLC (Transwestern), GHD Services Inc. (GHD) is submitting the *2023 Annual Groundwater Monitoring Report* (Report) for the above-referenced property (Site) to the New Mexico Oil Conservation Division (NMOCD). The Report summarizes activities performed at the Site during 2023 in accordance with GHD's proposed recommendations in the *2022 Annual Groundwater Monitoring Report*.

Should you have any questions or comments regarding this submittal, please contact the undersigned.

Regards,

Blair Owen

Encl. 2023 Annual Groundwater Monitoring Report

Copy to: Stacy Boultinghouse, Energy Transfer
 New Mexico State Land Office (property owner)
 Stephen Weathers, P66 (property owner)

Review of the 2023 Annual Groundwater Monitoring Report for Bell Lake Gas Plant:
 Content is satisfactory
 1. Consult with OSE on plans to plug SVE wells: SVE-1, SVE-4, SVE-8, SVE-9, SVE-10, SVE-12, and SVE-13. Please proceed to upload permits or plans on the OCD online portal.
 2. Continue to conduct groundwater monitoring semi-annually for BTEX, chloride, and TDS as prescribed.
 3. Submit the next annual groundwater

monitoring report by April 1, 2025.

2023 Annual Groundwater Monitoring Report

------------	-------------------------------

1. Introduction

1.1 Purpose

This report presents the results of groundwater monitoring activities performed during 2023 by GHD Services Inc. at the Transwestern Pipeline Company, LLC. (Transwestern) Bell Lake Gas Plant (Site). The Site is located approximately 21 miles northwest of Jal, New Mexico in Section 1, Township 24 South, Range 33 East in Lea County, New Mexico (**Figure 1**).

The compressor station at the Site is owned and operated by DCP Operating Company LP; however, groundwater remediation activities remain the responsibility of Transwestern. Land adjacent to the Site is owned by the State of New Mexico State Land Office. The Site is regulated by the New Mexico Oil Conservation Division (NMOCD) under Abatement Plan (AP)-120 (associated with incident number nAUTOAB000034).

1.2 Background

The Bell Lake Gas Plant began operating in 1961. Pipeline liquid wastes generated at the Site were historically placed in three unlined impoundments located on the northeastern quarter of the facility property. Wastes were also placed in one concrete-lined impoundment located near the northwestern corner of the property. The pipeline liquid wastes placed in the unlined impoundments appear to have impacted the shallow, unconfined, perched groundwater-bearing unit at the Site. Primary constituents of concern (COCs) related to the release are benzene, toluene, ethylbenzene, total xylenes (BTEX), total dissolved solids (TDS), and chloride.

A total of 21 monitoring wells (MW-1 through MW-19, MW-20R, MW-21) and 13 SVE wells (SVE-1 through SVE-13) have been installed at the Site between 1993 and 2017. Only MW-3 and MW-7 have been plugged and abandoned; the remainder are active. Groundwater monitoring has been conducted at the Site since 1993 and began as annual monitoring but increased to semi-annual in 1995 and has remained as such since then, except for 1996 when monitoring was conducted quarterly.

A soil vapor extraction (SVE) system with three SVE wells was placed in service at the Site in June 1996. The original system was expanded by four wells in 1997 and again by six wells in 1999. The SVE system operated from 1998 to 2012 to recover light non-aqueous phase liquid (LNAPL) from the Site's subsurface. SVE system monitoring results indicated that the volatile organic compound content in extracted vapor declined from an initial high of 4,000 micrograms per liter ($\mu\text{g}/\text{L}$) in January 1998 to a low of 140 $\mu\text{g}/\text{L}$ in October 2012. As a result, operation of the SVE system was discontinued in October 2012. It is estimated a total of approximately 3,618 gallons of LNAPL was recovered by the SVE system between 1998 and 2012.

Semi-annual groundwater monitoring continued at the Site in May and October 2023 and details of those events are discussed further in this report.

1.3 Geology and Hydrogeology

The Site is underlain by recent Quaternary alluvial and terrace deposits consisting primarily of loosely consolidated sands and gravels. A dense clay layer was observed at a total depth of 104 feet below ground surface (ft bgs) in boring MW-3. This clay is likely the basal confining layer for the shallow, unconfined, perched aquifer encountered below the Site.

The perched groundwater zone is present at the Site at approximately 90 ft bgs. Elevation of the perched groundwater has been stable at the Site since first recorded in 1993. There are no known uses of the perched zone within a 2-mile radius of the Site.

A water supply well, located in the southeast part of the Site, has historically provided water for use at the Site and for cattle grazing. This well was completed in 1967 to a total depth of 659 ft and is screened from 550 to 659 ft bgs. Historical analytical results from samples collected from the on-Site water supply well do not indicate migration of BTEX constituents into this water bearing zone.

2. Groundwater Monitoring

GHD performed semi-annual groundwater monitoring events at the Site on June 8 and October 5, 2022. The monitoring program included gauging the network of 19 monitoring wells and 13 SVE wells and collecting groundwater samples from the following wells during each respective event.

May 23-24, 2023 – 13 Wells

- MW-2, MW-6, MW-9, MW-12 through MW-17, MW-20R, SVE-3, SVE-5, and SVE-6

October 4-6, 2023 – 18 Wells

- MW-2, MW-6, MW-9, MW-10, MW-12 through MW-19, MW-20R, MW-21, SVE-3, SVE-5, SVE-6, and the water supply well

2.1 Monitoring Well Gauging

On May 23 and October 4, 2023, GHD personnel measured the depth to groundwater and LNAPL thickness, if present, in the network of 32 wells that are gauged using an electronic oil/water interface probe (IP). LNAPL was not detected or observed in any of the wells during either event but has historically been present at the Site. The IP was cleaned with laboratory-grade soap (Alconox) and deionized water prior to gauging each well. Depth to groundwater, historical LNAPL thickness, and calculated groundwater elevations are summarized in **Table 1**.

Based on the data collected in 2023, groundwater flow is generally southeast and is consistent with historical data for the Site. The groundwater gradient was calculated to be approximately 0.0014 ft/ft for May and October. Groundwater potentiometric surface maps are presented as **Figure 3** and **Figure 4**.

2.2 Groundwater Sampling

Following gauging in May and October, water was purged from Site wells with a low flow bladder pump using new polyethylene tubing for each well to purge water until temperature, dissolved oxygen, pH, Oxidation-reduction potential, and specific conductance have stabilized. Purge water generated during monitoring events was managed in such a way as to allow evaporation on a contained impervious surface at the Site. Groundwater quality field parameters of temperature, pH, oxidation reduction potential, and conductivity were collected with a multi-parameter groundwater quality meter and recorded on groundwater sampling forms. A summary of groundwater quality field parameters is presented in **Table 2**.

Following purging, groundwater samples were collected via the polyethylene tubing attached to a low flow bladder pump. Samples were collected, placed in laboratory-prepared sample containers, labeled, packed in a cooler with ice, and transported under chain-of-custody documentation to ALS Life Sciences Division, Environmental laboratory in Houston, Texas. All samples were analyzed for chloride by EPA Method 300.0 and TDS by Standard Method 2540C. Only samples collected from MW-2, MW-6, MW-9, MW-10, SVE-3, SVE-5, SVE-6, and the water supply well were analyzed for BTEX by Environmental Protection Agency (EPA) Method 8260.

2.3 Quality Assurance/Quality Control

During each groundwater monitoring event, a field duplicate was collected for every 10 samples as a quality assurance/quality control (QA/QC) sample and subsequently submitted for laboratory analysis. A trip blank was also submitted for each shipment of samples as a QA/QC sample for each groundwater monitoring event.

2.4 Analytical Results

The New Mexico Water Quality Control Commission (NMWQCC) mandates that groundwater quality in New Mexico be protected, and has issued groundwater quality standards in Title 20, Chapter 6, Part 2, Section 3103 of the New Mexico Administrative Code (20.6.2.3103 NMAC). Groundwater quality standards have been set for the protection of human health, domestic water supply, and irrigation use.

The groundwater analytical results for 2023 are summarized in **Table 3** and the corresponding laboratory analytical reports are included in **Appendix A**. A COC concentration map is presented as **Figure 5**. All samples were analyzed for chloride and TDS. Only samples collected from MW-2, MW-6, MW-9, MW-10, SVE-3, SVE-5, SVE-6, and the water well were analyzed for BTEX. A summary of exceedances is discussed below.

Benzene

In May 2023, benzene was detected in four of the six samples collected from the wells at concentrations that exceeded the NMWQCC standard.

In October 2023, benzene was detected in six of the eight samples collected from the wells at concentrations that exceeded the NMWQCC standard.

Chloride

In May 2023, chloride was detected in 11 of the 13 samples collected from the wells at concentrations that exceeded the NMWQCC standard.

In October 2023, chloride was detected in 12 of the 18 samples collected from the wells at concentrations that exceeded the NMWQCC standard.

TDS

In May 2023, TDS was detected in 12 of the 13 samples collected from the wells at concentrations that exceeded the NMWQCC standard.

In October 2023, TDS was detected in 12 of the 18 samples collected from the wells at concentrations that exceeded the NMWQCC standard.

3. Summary and Recommendations

3.1 Summary

The following summarizes the information and data present in this report.

- Benzene, chloride, and TDS were detected in the groundwater samples collected from the wells at the Site in May and October at concentrations that exceeded the NMWQCC standards. In general, across the Site, concentrations of these COCs increased slightly or remained consistent with historical events.
- LNAPL was not observed in any of the monitoring or SVE wells during 2023 monitoring activities.
- Chloride and TDS in groundwater are not delineated to the east, southeast, and south.

3.2 Recommendations

Based on the results of the 2023 groundwater monitoring events, GHD recommends the following:

- Plug SVE wells SVE-1, SVE-4, SVE-8, SVE-9, SVE-10, SVE-12, and SVE-13 as SVE activities are no longer conducted at the Site. These wells are not part of the sampling plan and there are other monitoring wells surrounding these SVE wells that provide sufficient delineation of the contaminant plume.

Continue semi-annual groundwater monitoring to monitor concentrations of BTEX, chloride, and TDS in groundwater at the Site.

4. Scope and Limitations

This report has been prepared by GHD for Transwestern Pipeline Company, LLC and may only be used and relied on by Transwestern Pipeline Company, LLC for the purpose agreed between GHD and Transwestern Pipeline Company, LLC as set out in this report.

GHD otherwise disclaims responsibility to any person other than Transwestern Pipeline Company, LLC arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

Accessibility of documents

If this report is required to be accessible in any other format, this can be provided by GHD upon request and at an additional cost if necessary.

Notes:

- 1) ft bgs = feet below ground surface
- 2) TOC = top of casing
- 3) ft AMSL = feet above mean sea level
- 4) LNAPL = light non-aqueous phase liquids
- 5) -- = not detected or not applicable
- 6) A specific gravity value of 0.80 was used to calculate the groundwater elevation wells where LNAPL was present.
- (b) Corrections to ground water surface elevation for presence of hydrocarbon is calculated assuming a specific gravity of 0.8
- (c) TOC elevation based on survey by John West Surveying Co. on 12/28/95
- (d) TOC elevation based on survey by CES (GCR) on 01/09/98
- (e) TOC elevation based on survey by CES (GCR) on 08/11/99
- (f) TOC elevation based on survey by John West Surveying Co. on 12/27/99 w/adjustments: MW-2=+0.06, MW-7 & SVE-1-13=+0.08, MW-10-13=+0.02
- (g) TOC elevation based on survey by John West Surveying Co. on 01/09/03
- (h) TOC elevation based on survey by High Mesa on 1/25/19

Notes:

- 1) Analytical results are presented in micrograms per liter ($\mu\text{g/L}$) except for chloride and TDS, which are presented in milligrams per liter (mg/L).
- 2) TDS - total dissolved solids
- 3) NMWQCC = New Mexico Water Quality Control Commission
- 4) < - Analyte was not detected at or above the laboratory reporting limit.
- 5) -- = not analyzed
- 6) Shaded/bolded results exceed their respective NMWQCC groundwater quality standard.

Laboratory Results for: **12603944 - Bell Lake 2023**

Dear Blair Owen,

ALS Environmental received 15 sample(s) on May 26, 2023 for the analysis presented in the following report.

This is a REVISED REPORT. Please see the Case Narrative for discussion concerning this revision.

Regards,

Revision:1

ALS Houston, US

Date: 16-Nov-23

Client: GHD
Project: 12603944 - Bell Lake 2023
Work Order: HS23051877

CASE NARRATIVE**Work Order Comments**

- This report was revised 11/16/23 to change the sampled date on HS23051877-05 to 05/23/23 09:50.

Work Order Comments

- Receiving notes:
SVE-9-20230524 on COC is labeled as SVE-5-20230524 (Date/time match);
Per email from Blair Owen 6/1/23, log sample per Label information.

GCMS Volatiles by Method SW8260**Batch ID: R436754,R436760,R436988**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

WetChemistry by Method E300**Batch ID: R437583****Sample ID: MW-17-20230524 (HS23051877-06MS)**

- The MS and/or MSD recovery was outside of the control limits; however, the result in the parent sample is greater than 4x the spike amount. (Chloride)

WetChemistry by Method M2540C**Batch ID: R436677,R436808,R436825**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**QUALIFIERS,
ACRONYMS, UNITS**

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

Acronym	Description
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

Unit Reported	Description
mg/L	Milligrams per Liter

Work Order: **HS23100546**

Laboratory Results for: **12603944 - Bell Lake 2023**

Dear Blair Owen,

ALS Environmental received 22 sample(s) on Oct 07, 2023 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

Generated By: DAYNA.FISHER

**QUALIFIERS,
ACRONYMS, UNITS**

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

Acronym	Description
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

Unit Reported	Description
mg/L	Milligrams per Liter
