## 2023 Remediation Summary and Soil Closure Request Report

# 1 Introduction

Arcadis U.S., Inc. (Arcadis) has prepared this Remediation Summary and Soil Closure Request Report (Report), on behalf of Chevron U.S.A., Inc. (Chevron), for the release site known as the Old Indian Draw Unit #001 (Site).

# 2 Project Summary

The Site is located approximately 8-miles southeast of the City of Carlsbad in Unit Letter J, Section 18, Township 22 South, Range 28 East. Old Indian Draw Unit #001 Site is a restored former well pad and tank battery characterized with numerous active and inactive underground utilities that transect the Site as of October 31, 2023. The Site is located on land owned by the United States Department of the Interior and administered by the Bureau of Land Management (BLM). The site location map is depicted on **Figure 1**.

Four open incident numbers are associated with the Site. While environmental records suggest limited remediation activities were conducted at the Site, the incidents were not closed prior to restoring the well pad and tank battery facility. The following Incident numbers associated with the Old Indian Draw Unit #001 Site are being assessed concurrently:

## 2023 Remediation Summary and Soil Closure Request Report

### 3 Soil and Groundwater Assessment Summary

On August 17-19, 2021, Larson & Associates, Inc. (Larson) conducted an initial assessment at the Site. During the initial assessment, soil samples were collected at depths ranging from 3 to 20 feet below ground surface (bgs) at 16 locations (S-1 through S-16) utilizing air rotary drilling methods. The collected soil samples were submitted to the laboratory for analysis of chloride; benzene, toluene, ethylbenzene, and xylenes (BTEX); and total petroleum hydrocarbons (total TPH).

Laboratory analytical results indicated BTEX and total TPH concentrations were below the applicable laboratory method detection limits (MDLs) for BTEX and total TPH constituents in each of the submitted soil samples with the exception of minor detections for TPH (C12-C28 range) at a depth of 1 foot bgs at S-2 (182 milligrams per kilogram (mg/kg)), total TPH at S-5 at 1 foot bgs (57.1 mg/kg), benzene (0.00515 mg/kg) and BTEX (0.0117 mg/kg) at S-7 at 1 foot bgs, and benzene (0.00437 mg/kg) and BTEX (0.00435 mg/kg and 0.0102 mg/kg) at S-13 at depths of 1 to 3 feet bgs. Vertical delineation in soil for BTEX and TPH constituents was achieved at all sampling locations. Analytical results indicated chloride concentrations ranged from 8.62 mg/kg in soil sample S-15 at 1-foot bgs to 13,600 mg/kg in soil sample S-8 at 10 feet bgs.

On March 8, 2022, Larson revisited the Site in an effort to further characterize chloride impacts. During the Site visit, an air rotary drill rig was utilized to install investigative soil borings proximate to 6 of the previously drilled locations characterized by soil samples that were above the NMOCD regulatory limit of 600 mg/kg for chloride (S-3, S-7, S-8, S-9, S-10, and S-12). The 6 borings were installed at depths ranging from 15 feet bgs to approximately 45 feet bgs. Soil borings S-7 and S-8 were installed in the center of the pad to approximately 45 feet bgs. Larson's assessment activities confirmed chloride impact to soil to depths of approximately 45 feet bgs in the areas characterized by soil borings S-7 and S-8, indicating potential groundwater impact from chloride. No detections for BTEX or TPH were reported in any soil samples collected from the 16 locations during this subsequent soil assessment.

Arcadis began additional soil assessment activities across the former pad area on January 23, 2023, utilizing a stainless-steel hand auger. During soil assessment activities, a resilient rock layer was encountered at depths ranging from approximately 1-foot to 2.5-feet bgs at all boring locations.

Arcadis collected 62 soil samples (G-1 through G-62) in an approximate grid pattern across the former pad area at depths ranging from approximately six inches bgs to 2 feet bgs in an effort to further characterize the horizontal extent of chloride impacts at the Site. The collected soil samples were field screened for evaluation of estimated concentrations of chloride. Select soil samples that field screened below applicable screening limits for chloride (600 mg/kg) were submitted for analytical confirmation to Eurofins/Xenco Laboratories in Midland, Texas for BTEX, total TPH and chloride analyses. The collection of soil samples from deeper intervals was precluded due to the presence of a resilient calcrete rock layer at all sample locations.

On February 13, 2023, Arcadis oversaw the installation of a temporary monitoring well at the Old Indian Draw Unit 001 Site. The temporary monitoring well was installed in the center of the pad approximately 10 feet northeast of the southern wellhead P&A marker at the Site. During the installation of the temporary monitoring well, soil samples were collected from select intervals for laboratory analysis of chloride, BTEX and total TPH. Laboratory analytical results from soil samples collected during the installation of the temporary monitoring well indicated chloride concentrations above applicable NMOCD screening criteria in soil extend to the groundwater bearing unit encountered at approximately 46 feet bgs. BTEX and total TPH concentrations were below the applicable laboratory MDLs in all soil samples analyzed for those constituents with the exception of a TPH Gasoline Range

## 2023 Remediation Summary and Soil Closure Request Report

Organic (GRO C6-C10) detection at an estimated concentration of 31.1 mg/kg at a depth of approximately 5 feet bgs.

On February 13, 2023, the temporary monitoring well was developed utilizing Environmental Protection Agency (EPA) Standard Methods. Following development activities on the temporary monitoring well, a groundwater sample was collected and submitted to the laboratory for analysis of chloride, total dissolved solids (TDS), and BTEX concentrations. Laboratory analytical results indicated chloride and TDS concentrations were above the New Mexico Environment Department Water Quality Control Commission (NMWQCC) Groundwater Standards of 250 milligrams per liter (mg/L) for chloride and 1,000 mg/L for TDS. Chloride was reported at 10,400 mg/L and TDS was reported at 15,100 mg/L. BTEX constituents were not detected in groundwater above laboratory MDLs.

One additional test trench (S-1) was installed with an excavator down to approximately 2 feet bgs (the top of the calcrete rock layer) northeast of the pad area on February 22, 2023, to further horizontal delineation of chloride impact to soil. Two soil samples were collected from S-1 at depths of 1-foot bgs and 2 feet bgs and were reported with chloride concentrations of 73.1 mg/kg and 357 mg/kg, respectively.

Evaluation of soil data collected to date confirmed horizontal delineation of the release area was accomplished in conjunction with the initial Larson soil assessment activities conducted in 2021 and 2022. Groundwater impacts will be further evaluated and an Abatement Plan per NMAC 19.15.30 is anticipated to be submitted to NMOCD for the Site.

Analytical results from the soil assessments, groundwater analytical results from groundwater samples collected from the temporary monitoring well, and associated laboratory analytical reports are included in the approved Variance Request in **Appendix C**.

## 4 Closure Criteria for Soils Impacted by a Release

Constituent	Limit (mg/kg)
Chloride	600 mg/kg
TPH (GRO+DRO+MRO)	100 mg/kg
BTEX	50 mg/kg
Benzene	10 mg/kg

The NMOCD classifies the Site at the most stringent regulatory limits due to the depth to groundwater confirmed at approximately 46 feet below ground surface (bgs). Per Table I of New Mexico Administrative Code (NMAC) part 19.15.29.12, the above closure criteria applies to a site with depth to ground water less than 50 feet bgs feet.

## 5 Remediation Activities Summary

### 5.1 Soil Removal

Soil remediation activities (excavation) were performed by Arcadis and eTECH Environmental and Safety (eTECH) from May 22 through July 13, 2023. PID readings, chloride field screening utilizing Hach® test strip results, and

## 2023 Remediation Summary and Soil Closure Request Report

analytical results from the assessment activities were evaluated assuming the most stringent NMOCD closure criteria for soil prior to and during remediation activities to determine the horizontal and vertical extent of soil affected by the releases.

The release area covered an approximate 136,500 square foot area along the lease road and within the historical pad area. Excavation activities were conducted to a maximum depth of approximately 2 feet bgs within the release area due to encountering base rock at those depths. Repeated attempts to break through the resilient base rock layer utilizing an excavator equipped with a trenching bucket and "rock teeth" yielded limited results. As such, excavation activities were halted, and a Variance Request was submitted to NMOCD and BLM for approval.

## 5.2 Variance Request Submittal

A Variance Request was submitted to the NMOCD on April 18, 2023, requesting approval to cease further excavation activities within the release area and to subsequently line the excavated area prior to backfilling. The Variance Request was approved by NMOCD on July 14, 2023. The approved site remediation activities and associated stipulations are outlined in the Variance Request attached in **Appendix C**.

At this time, approximately 8,232 cubic yards of impacted soil were excavated, stockpiled on-site adjacent to the release area on 20 mil plastic sheeting, and covered with 20 mil plastic sheeting during remediation activities prior to disposal activities. The limits of the excavation are presented on **Figure 2**.

The stockpiled soil was disposed offsite at the Lea Land Landfill facility located at Mile Marker 64, US Highway 62/180 East, Carlsbad, New Mexico as Class 2 non-hazardous material. Copies of disposal manifests can be provided upon request.

## 5.3 Excavation Confirmation Sampling Activities

Following the initial termination of excavation activities, Arcadis personnel conducted excavation confirmation soil sampling activities on July 14 through August 4, 2023 for laboratory analysis to document BTEX, Total TPH, and chloride concentrations in soil within the sidewalls and base of the excavation area. These activities included collection of a total of 273 composite base samples (B-1 through B-273) and 8 composite sidewall samples (SW-1 through SW-8A). Five composite sidewall samples (SW-2, SW-3, SW-4, SW-7 and SW-8) were determined to have Total TPH concentrations greater than the applicable NMAC standards specified within 19.15.29. Additional soil was excavated from those areas and five additional composite sidewall samples (SW-2A, SW-3A, SW-4A, SW-7A and SW-8A) were collected for laboratory analyses.

All composite samples were collected at intervals to maintain an approximate 500 square foot sample space or less as approved in the attached variance found in **Appendix C**.

The soil confirmation soil samples were collected in four-ounce jars provided by Eurofins located in Midland, Texas, then placed on ice and shipped to Eurofins to be analyzed for chloride by USEPA Method 300; TPH by USEPA Method 8015M for GRO, DRO, and ORO; and BTEX by USEPA Method 8021. Analytical results are shown in **Table 1**. Sidewall composite confirmation sample locations are depicted on **Figure 2**, and excavation base composite confirmation sample locations are depicted on **Figure 3-1** through **Figure 3-9**. Laboratory analytical reports are included in **Appendix E**.

## 2023 Remediation Summary and Soil Closure Request Report

### 5.4 Chloride

212 of the 273 composite confirmation soil samples collected within the base of excavated area were above the NMAC reclamation limit of 600 mg/kg following remediation activities. Chloride concentrations exceeding the NMAC reclamation limit remaining in-situ ranged from 610 mg/kg to 19,700 mg/kg. No sidewall samples exceeded the reclamation limit following excavation activities.

### 5.5 TPH

163 of the 273 composite confirmation soil samples collected within the base of excavated area were above the NMAC reclamation limit of 100 mg/kg following remediation activities. Total TPH concentrations exceeding the NMAC reclamation limit remaining in-situ ranged from 102 mg/kg to 14,900 mg/kg. No sidewall samples exceeded the reclamation limit following excavation activities.

### 5.6 BTEX

Benzene concentrations were reported below the NMAC standard of 10 mg/kg at all composite confirmation soil sample locations. BTEX concentrations were reported below the NMAC standard of 50 mg/kg at all composite confirmation soil sample locations.

### 5.7 Soil Amendments and Liner Installation

Following excavation activities and approval of the Variance Request from NMOCD, a layer of gypsum was applied to the base of the excavation area to inhibit the downward migration of chloride remaining in-situ. A geosynthetic liner was installed above the gypsum layer and an additional layer of gypsum was installed atop the liner to prohibit potential upward migration of chloride remaining in-situ to further support revegetation of the remediated area as approved in the Variance Request.

Photographic documentation of all excavation activities is attached in the **Appendix D**.

## 6 Restoration, Reclamation, and Re-Vegetation Plan

Upon receiving laboratory analytical results from the excavation confirmation soil samples confirming impacted soil over the applicable restoration closure limits had been removed laterally and excavated to the extent possible vertically down to the base rock layer, the lined excavated area was backfilled with locally sourced, non-impacted "like" material placed at or near the original relative positions. The affected area was contoured and compacted to achieve erosion control, stability, and preservation of surface water flow to the extent practicable. The excavated area within the affected pasture was topped with a topsoil similar to native surrounding pasture material and reseeded with a BLM-approved seed mixture on September 20, 2023.

## 7 Summary

Analytical results for remediation activities conducted in 2023 indicate that the horizontal and vertical extent of chloride, total TPH, and BTEX impact in soil above NMAC Closure Criteria for a site with depth to groundwater less than 50 feet bgs have been delineated both horizontally and vertically. Impacted soil above the applicable

## 2023 Remediation Summary and Soil Closure Request Report

NMAC Closure Criteria has been excavated from the release area horizontally and removed vertically to the base rock layer as stipulated in the approved Variance Request. Soil amendments and a geosynthetic liner were installed prior to backfilling the excavation area as stipulated in the approved Variance Request.

## 8 Soil Closure Request

Remediation activities were conducted in accordance with the NMOCD regulatory guidelines stipulated in NMAC 19.15.29 and an approved Variance Request. Impacted soil affected above the NMOCD Closure Criteria and/or NMOCD Reclamation Standard was excavated and transported to an NMOCD-approved disposal facility. Laboratory analytical results from confirmation soil samples indicate concentrations of BTEX, Total TPH and chloride are below the NMOCD Closure Criteria in each of the submitted soil sidewall samples collected from the remediated area. Soil amendments (gypsum) and a geosynthetic liner were installed within the base of the excavation area as stipulated in the approved Variance Request.

Based on laboratory analytical results and field activities conducted to date, no additional soil assessment or soil remediation activities are recommended at this time for the Site. Arcadis requests closure associated with soil impact at the Site be granted to the Old Indian Draw Unit #001 Site for Incident ID number's NKMW1105550129 (2RP-611), NMLB1226438559 (2RP-1297), NJMW1334440905 (2RP-2104), and NAB1433953640 (2RP-2644). Chesapeake had a release this am at 8:30 am on the Old Indian Draw UT CTB. A one inch nipple ruptured releasing produced water to the ground surface, pumpers are still investigating the amount of fluid lost and have vacuum truck in route to recover the fluid on location. Environmental plus crew has been dispatched to the release to start clean up phase, once we have all the details we will follow up with a C-141. If you have any questions please let me know.

Gentlemen,

Attached for your review is the Initial C-141 for the Indian Draw Tank Battery operated by Chevron.

This tank battery is scheduled to be replaced in February 2015 with construction of the new battery location currently underway. Chevron proposes the stained caliche in the area of the release be removed, hauled to state approved disposal facility, and replaced with clean caliche. Full remediation of the old tank battery area shall occur when the new tank battery comes online.

Dear Mr. Velez,

Arcadis U.S., Inc. (Arcadis) has prepared this Soil Remediation Work Plan/Variance Request on behalf of Chevron U.S.A. Inc. (Chevron), for proposed soil remediation activities at the Old Indian Draw Unit #001 (Site), located in Eddy County, New Mexico.

## Background

The Site is located approximately 8-miles southeast of the City of Carlsbad in Unit Letter J, Section 18, Township 22 South, Range 28 East. The former Old Indian Draw Unit #001 is an approximate 2.5-acre restored former well pad and tank battery characterized by numerous active and inactive underground utilities that transect the Site. The underground utilities are anticipated to remain active until production operations cease in the area. The Site is located on land owned by the United States Department of the Interior and administered by the Bureau of Land Management (BLM). The site location map is provided as **Figure 1**.

Four open incident numbers are associated with the Site. While environmental records suggest limited remediation activities were conducted at the Site, the incidents were not closed prior to restoring the well pad and tank battery facility. The following Incident numbers associated with the Old Indian Draw Unit #001 Site are being assessed concurrently:

1. Incident No: NKMW1105550129 (2RP-611) – listed under Chesapeake Operating, Inc.

On February 17, 2011, an equipment failure caused a release of approximately 70 barrels (bbls) of produced water, of which 60 bbls of produced water were recovered. The Initial C-141 Form was submitted to the New Mexico Oil Conservation Division (NMOCD) on February 18, 2011, and assigned remediation permit number 2RP-611.

2. Incident No: NMLB1226438559 (2RP-1297) – listed under Chesapeake Operating, Inc.

On August 20, 2012, an equipment failure caused a release of approximately 300 bbls of produced water, of which 170 bbls of produced water were recovered. The Initial C-141 Form was submitted to the NMOCD on September 10, 2012, and assigned remediation permit number 2RP-1297.

3. Incident No: NJMW1334440905 (2RP-2104) – listed under Chesapeake Operating, Inc.

On December 2, 2013, an equipment failure caused a release of approximately 80 bbls of produced water, of which 60 bbls of produced water were recovered. The Initial C-141 Form was submitted to the NMOCD on December 6, 2013, and assigned remediation permit number 2RP-2104. This location is included in the November 2018 Ongoing Corrective Actions/Remediations Agreed Compliance Order-Releases (ACO) between Chevron and NMOCD.

4. Incident No: NAB1433953640 (2RP-2644) – listed under Chevron U.S.A. Inc.

On October 18, 2014, a release of approximately 13 bbls of produced water and oil, of which 11 bbls of produced water and oil were recovered. The Initial C-141 Form was submitted to the NMOCD on December 3, 2014, and assigned remediation permit number 2RP-2644. This location is included in the November 2018 Ongoing Corrective Actions/Remediations ACO between Chevron and NMOCD.

Mr. Velez  
NMOCD  
April 18, 2023

Soil and groundwater assessment activities to further evaluate current site conditions associated with the four incidents were conducted in August 2021, March 2022, and resumed in January 2023 through the present date. Additional remediation activities are pending approval of this Work Plan/Variance Request. The four Initial C-141 Forms for this Site are included in **Appendix A**

## Initial Soil Investigation

Between August 17-19, 2021, Larson & Associates, Inc. (Larson) conducted an initial assessment at the Site. During the initial assessment, soil samples were collected at depths ranging from 1 to 20 feet below ground surface (bgs) at 16 locations (S-1 through S-16) utilizing air rotary drilling methods. The collected soil samples were submitted to the laboratory for analysis of chloride; benzene, toluene, ethylbenzene, and xylenes (BTEX); and total petroleum hydrocarbons (Total TPH).

Laboratory analytical results indicated BTEX and Total TPH concentrations were below the applicable laboratory method detection limits (MDLs) in each of the submitted soil samples with the exception of minor detections for TPH (C12-C28 range) at a depth of 1 foot bgs at S-2 (182 milligrams per kilogram (mg/kg)), Total TPH at S-5 at 1 foot bgs (57.1 mg/kg), benzene (0.00515 mg/kg) and BTEX (0.0117 mg/kg) at S-7 at 1 foot bgs, and benzene (0.00437 mg/kg) and BTEX (0.00435 mg/kg and 0.0102 mg/kg) at S-13 at depths of 1 to 3 feet bgs. Vertical delineation in soil for BTEX and TPH constituents was achieved at all sampling locations. Analytical results indicated chloride concentrations ranged from 8.62 mg/kg in soil sample S-15 at 1-foot bgs to 13,600 mg/kg in soil sample S-8 at 10 feet bgs.

On March 8, 2022, Larson revisited the Site in an effort to further characterize chloride impacts. During the Site visit, an air rotary drill rig was utilized to install investigative soil borings proximate to 6 of the previously drilled locations characterized by soil samples that were above the NMOCD regulatory limit of 600 mg/kg for chloride (S-3, S-7, S-8, S-9, S-10, and S-12). The 6 borings were installed at depths ranging from 15 feet bgs to approximately 45 feet bgs. Soil borings S-7 and S-8 were installed in the center of the pad to approximately 45 feet bgs. Larson's assessment activities confirmed chloride impact to soil to depths of approximately 45 feet bgs in the areas characterized by soil borings S-7 and S-8, indicating potential groundwater impact from chloride. No detections for BTEX or TPH were reported in any soil samples collected from the 6 locations during this subsequent soil assessment.

Analytical results from the Larson assessment are depicted in **Table 1**. Soil boring locations completed by Larson are depicted on **Figure 2**.

## Safety Concerns

Hydrogen sulfide concentrations have been documented as high as 40,000 parts per million (ppm) from nearby production facilities, and active ancillary fiberglass flow lines that transect the Site are inferred to contain similar concentrations. High consequence health and safety risks (explosion, nervous system impairment and death from concentrations as low as 100 ppm) associated with a potential release from damaged underground fiberglass flowlines and/or a line strike are an ongoing concern at this Site.

Hydro excavation activities began in January 2023 within the impacted areas in an effort to daylight and/or exhume the active underground utilities including numerous fiberglass crude oil flowlines, fiberglass produced water injection lines, electrical lines, and additional ancillary underground utilities associated with previous and

Mr. Velez  
NMOCD  
April 18, 2023

ongoing oil and gas production operations proximate to the former pad area. Multiple hydro excavation units are currently being utilized at the Site.

Risks of potential unanticipated/undetected damage to active underground fiberglass production lines by yellow iron type excavation activities within base rock material proximate to the fiberglass production lines are also a significant concern for continued operations within the well field.

## Additional Field Activities Summary

Arcadis began additional soil assessment activities across the former pad area on January 23, 2023, utilizing a stainless-steel hand auger. During soil assessment activities, a resilient rock layer was encountered at depths ranging from approximately 1-foot to 2.5-feet bgs at all boring locations. The depth to resilient rock encountered during assessment activities throughout the Site is depicted on **Figure 3**.

Arcadis collected 62 soil samples (G-1 through G-62) in an approximate grid pattern across the former pad area at depths ranging from approximately six inches bgs to 2 feet bgs in an effort to further characterize the horizontal extent of chloride impacts at the Site. The collected soil samples were field screened for concentrations of chloride. Select soil samples that field screened below applicable screening limits for chloride (600 mg/kg) were submitted for analytical confirmation to Eurofins/Xenco Laboratories in Midland, Texas for BTEX, Total TPH and chloride analyses. The collection of soil samples from deeper intervals was precluded due to the presence of the resilient calcrete rock layer at all sample locations. The soil sample locations are depicted on **Figure 2**.

On February 13, 2023, Arcadis oversaw the installation of a temporary monitoring well (TW-1) at the Site. The temporary monitoring well was installed in the center of the pad approximately 10 feet northeast of the southern wellhead P&A marker at the Site. During the installation of the temporary monitoring well, soil samples were collected from select intervals for laboratory analysis of BTEX, Total TPH, and/or chloride. Laboratory analytical results from soil samples collected during the installation of the temporary monitoring well indicated chloride concentrations above NMOCD closure criteria in soil extend to the groundwater bearing unit encountered at approximately 46 feet bgs; BTEX and Total TPH concentrations were below the applicable laboratory MDLs in all soil samples analyzed for those constituents with the exception of a TPH Gasoline Range Organic (GRO C6-C10) detection at an estimated concentration of 31.1 mg/kg at a depth of approximately 5 feet bgs.

On February 16, 2023, the temporary monitoring well was developed utilizing Environmental Protection Agency (EPA) Standard Methods. Following development activities on the temporary monitoring well, a groundwater sample was collected and submitted to the laboratory for analysis of chloride, total dissolved solids (TDS), and BTEX concentrations. Laboratory analytical results indicated chloride and TDS concentrations were above the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards of 250 milligrams per liter (mg/L) for chloride and 1,000 mg/L for TDS. Chloride was reported at 10,400 mg/L and TDS was reported at 15,100 mg/L. BTEX constituents were not detected in groundwater above the applicable laboratory MDLs. A copy of the Temporary Monitoring Well Boring Log is provided as **Appendix B**.

One additional soil sample test trench (S-1) was installed with an excavator down to approximately 2 feet bgs (the top of the calcrete rock layer) northeast of the pad area on February 22, 2023, to further horizontal delineation of chloride impact to soil. The two soil samples collected from S-1 at depths of 1-foot bgs and 2 feet bgs were reported with chloride concentrations of 73.1 mg/kg and 357 mg/kg, respectively.

Evaluation of soil data collected to date confirmed horizontal delineation of the release area was accomplished in conjunction with the initial Larson soil assessment activities conducted in 2021 and 2022. Groundwater impacts

Mr. Velez  
NMOCD  
April 18, 2023

will be further evaluated and an Abatement Plan per NMAC 19.15.30 is anticipated to be submitted to the NMOCD for the Site following completion of soil remediation and reclamation activities.

Analytical results from the subsequent Arcadis soil assessments can be found in **Table 2**, groundwater analytical results from groundwater samples collected from the temporary monitoring well can be found in **Table 3**. The soil sample and temporary monitoring well locations installed by Arcadis are depicted on **Figure 2**. Current site conditions, utilities, and the resilient rock layer encountered are documented in the attached **Photographic Log** and on **Figure 3**. Laboratory analytical reports for soil and groundwater data collected are included in **Appendix C**.

## Variance Request

Numerous active and inactive underground utilities have been identified throughout the site boundaries at depths ranging from approximately 3 to 4 feet bgs. Repeated attempts to break through the resilient calcrete rock layer encounter across the Site at depths ranging from approximately 1 foot bgs to 2.5 feet bgs utilizing a track hoe equipped with a trenching bucket and "rock teeth" yielded limited results following attempts at locations safely distanced from known underground utilities.

Continued excavation activities below the calcrete rock layer are believed not practicable based on the Site's geologic conditions and the associated high-risk potential to damage subsurface utilities which has the potential to cause harm to human health and the environment.

Analytical data collected during assessment activities confirm soil within the release area has been horizontally delineated for chloride, chloride impact to soil extends to the groundwater bearing unit, and that groundwater is impacted with chloride and TDS above applicable NMAC/ NMWQCC screening standards. Assessment activities confirm limited vertically delineated impacts above applicable screening standards for BTEX or TPH are currently present in surface soil but have not migrated to groundwater at the Site. BTEX and TPH concentrations detected in soil are not believed a risk to groundwater.

As such, Arcadis is requesting approval of the following Variance for soil remediation activities:

- Based on the size of the Site and the amount of initial assessment data, Arcadis requests a variance to increase the composite confirmation soil sampling frequency to 500 square feet for excavation base and sidewalls samples within the approximate 2.5-acre release area.
- Due to the abundance of buried fiberglass utilities containing high H<sub>2</sub>S fluids and the resilient nature of the calcrete rock layer encountered throughout the release area, Arcadis is requesting a variance to limit excavation activities to include only removing impacted soil affected above the NMOCD Reclamation Standards present within the release area to the maximum extent practicable (to the surface of the calcrete rock layer).
- Should any impacted areas be confirmed to not be restricted by the calcrete rock layer and are not immediately adjacent to existing underground utilities, excavation activities will be continued to depths practical with standard excavation equipment.
- Following excavation of impacted soil affected above the NMOCD closure criteria, a layer of gypsum and/or a desalination product will be installed on the floor of the excavated area. This control is designed to inhibit the downward migration of chloride remaining in-situ.

Mr. Velez  
NMOCD  
April 18, 2023

- Arcadis requests approval to install a geosynthetic liner atop impacted areas exhibiting BTEX, TPH and/or chloride concentrations above the NMOCD Closure Criteria remaining in-situ. The liner will be installed atop the resilient calcrete rock layer and a connecting bentonite slurry liner will be installed below the existing underground utilities. This engineering control is designed to inhibit the vertical migration of site constituents of concern in soil to groundwater along with the upward migration of chloride to further support revegetation of the remediated area.
- Upon installing the geosynthetic liner, the excavated areas will be backfilled with locally sourced, non-impacted "like" material.
- Upon completion of remediation activities, the area will be reseeded with a BLM approved seed mixture during the first favorable growing season following closure of the Site.

Upon completion of the remediation and reclamation activities, a *Remediation Summary and Soil Closure Request* will be submitted to the NMOCD, containing a detailed summary of the field activities and laboratory analytical results.

If you have any questions or comments with regards to this work plan and variance request, please do not hesitate to contact Scott Foord at 713.953.4853 or by e-mail at William.Foord@arcadis.com.

Sincerely,

If a Watercourse was Impacted, Describe Fully.\* Not Applicable

Describe Cause of Problem and Remedial Action Taken.\* Approximately 13 bbls of produced water and oil were released when a valve was left open and fluid gravity fed to the ground. A vacuum truck was dispatched to pick up any free standing liquids. Approximately 11 bbls were recovered.

Describe Area Affected and Cleanup Action Taken.\* Approximately 3,000 square feet of surface area was impacted by the release. This tank battery is scheduled to be replaced in February 2015 with construction of the new battery location currently underway. Chevron proposes the stained caliche in the area of the release be removed, hauled to state approved disposal facility, and replaced with clean caliche. Full remediation of the old tank battery area shall occur when the new tank battery comes online. At that time soil samples will be collected from the area and submitted to Cardinal Laboratories for testing. Upon receipt of laboratory analytical data from soil samples to be collected during delineation operations, EPI will prepare and present a Remediation Proposal for NMOCD approval.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Gentlemen,

Attached for your review is the Initial C-141 for the Indian Draw Tank Battery operated by Chevron.

This tank battery is scheduled to be replaced in February 2015 with construction of the new battery location currently underway. Chevron proposes the stained caliche in the area of the release be removed, hauled to state approved disposal facility, and replaced with clean caliche. Full remediation of the old tank battery area shall occur when the new tank battery comes online.

Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD\_NM: Surrogate recovery for the following sample was outside control limits: G-63-S-0-6'-20230802 (890-4069-6). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD\_NM: The method blank for preparation batch 880-46071 and analytical batch 880-46062 contained Gasoline Range Organics (GRO)-C6-C10 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD\_NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-46071 and analytical batch 880-46062 recovered outside control limits for the following analytes: Diesel Range Organics (Over C10-C28).

Method 8015MOD\_NM: Spike compounds were inadvertently omitted during the extraction process for the matrix spike/matrix spike duplicate (MS/MSD); therefore, matrix spike recoveries are unavailable for preparation batch 880-46071 and analytical batch 880-46062. The associated laboratory control sample (LCS) met acceptance criteria.

##### **GC VOA**

Method 8021B: Surrogate recovery for the following sample was outside control limits: (MB 880-58463/5-A). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: B-21-S-2'-20230714 (880-30781-21), B-22-S-2'-20230714 (880-30781-22), B-23-S-2'-20230714 (880-30781-23), B-25-S-2'-20230714 (880-30781-25) and B-29-S-2'-20230714 (880-30781-29). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The continuing calibration verification (CCV) associated with batch 880-58417 recovered above the upper control limit for Benzene. An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is impacted: (CCV 880-58417/20).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

##### **GC Semi VOA**

Method 8015MOD\_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-58651 and analytical batch 880-58600 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD\_NM: The CCV was biased low for both diesel and gasoline hydrocarbons. Another CCV was analyzed and acceptable within 12 hours; therefore, the data was qualified and reported.(CCV 880-58684/31)

Method 8015MOD\_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-58652 and analytical batch 880-58684 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: B-21-S-2'-20230714 (880-30781-21), B-23-S-2'-20230714 (880-30781-23), B-24-S-2'-20230714 (880-30781-24), B-25-S-2'-20230714 (880-30781-25), B-26-S-2'-20230714 (880-30781-26), B-28-S-2'-20230714 (880-30781-28), B-29-S-2'-20230714 (880-30781-29), (MB 880-58652/1-A), (880-30781-A-22-F MS) and (880-30781-A-22-G MSD). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

##### **Narrative**

##### **Job Narrative** **880-30948-1**

##### **Receipt**

The samples were received on 7/19/2023 11:55 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.2°C

##### **GC VOA**

Method 8021B: The laboratory control sample (LCS) associated with preparation batch 880-58638 and analytical batch 880-58621 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

##### **GC Semi VOA**

Method 8015MOD\_NM: The CCV was biased low for both diesel and gasoline hydrocarbons. Another CCV was analyzed and acceptable within 12 hours; therefore, the data was qualified and reported.(CCV 880-58684/31)

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: B-30-S-2'-20230717 (880-30948-1), B-31-S-2'-20230717 (880-30948-2), B-32-S-2'-20230717 (880-30948-3), B-33-S-2'-20230717 (880-30948-4), B-34-S-2'-20230717 (880-30948-5), B-35-S-2'-20230717 (880-30948-6), B-36-S-2'-20230717 (880-30948-7), B-37-S-2'-20230717 (880-30948-8), B-38-S-2'-20230717 (880-30948-9), B-39-S-2'-20230717 (880-30948-10), B-40-S-2'-20230717 (880-30948-11), (MB 880-58652/1-A), (880-30781-A-22-F MS) and (880-30781-A-22-G MSD). Evidence of matrix interferences is not obvious.

Method 8015MOD\_NM: The continuing calibration verification (CCV) associated with batch 880-59067 recovered above the upper control limit for Gasoline Range Organics (GRO)-C6-C10. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 880-59067/31).

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: (CCV 880-59067/31), (CCV 880-59067/47) and (CCV 880-59067/58). Evidence of matrix interferences is not obvious.

Method 8015MOD\_NM: The surrogate recovery for the blank associated with preparation batch 880-58804 and analytical batch 880-59067 was outside the upper control limits.

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: B-43-S-2'-20230717 (880-30948-14), B-44-S-2'-20230717 (880-30948-15), B-45-S-2'-20230717 (880-30948-16), B-46-S-2'-20230717 (880-30948-17), B-50-S-2'-20230717 (880-30948-21), B-54-S-2'-20230717 (880-30948-25) and (880-30948-A-15-D MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD\_NM: The method blank for preparation batch 880-58804 and analytical batch 880-59067 contained Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD\_NM: The surrogate recovery for the blank associated with preparation batch 880-58806 and analytical batch 880-59069 was outside the upper control limits.

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: (880-30948-A-40-E MS) and (880-30948-A-40-F MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: B-66-S-2'-20230717 (880-30948-37), B-71-S-2'-20230717 (880-30948-42) and B-72-S-2'-20230717 (880-30948-43). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

**Case Narrative**

Client: ARCADIS US Inc  
Project/Site: Chevron Old Indian Draw Unit 001

Job ID: 880-32136-1  
SDG: Eddy County NM

**Job ID: 880-32136-1****Laboratory: Eurofins Midland****Narrative****Job Narrative  
880-32136-1****Receipt**

The sample was received on 8/16/2023 10:54 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C

**GC VOA**

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-60364 and analytical batch 880-60348 was outside the upper control limits.

Method 8021B: The continuing calibration verification (CCV) associated with batch 880-60348 recovered below the lower control limit for o-Xylene. An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is impacted: (CCV 880-60348/33).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**

Method 8015MOD\_NM: Surrogate recovery for the following sample was outside control limits: (CCV 880-60420/5). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**HPLC/IC**

Method 300\_ORGFM\_28D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-60393 and analytical batch 880-60415 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The associated samples are: B-254-S-2'-20230815 (880-32136-1), (880-32136-A-1-C MS) and (880-32136-A-1-D MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Hello Nelson and Shelly,

Chevron has been working on some older spills and completed all the final sampling events before the 12-1-23 changes. Therefore, we were unable to add sampling notices to the website before we completed the final sampling event. I am asking for permission to submit these reports without the final sampling notifications. Please let me know how to proceed.

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.

*With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.*

<b>Initial Response</b>	
<i>The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.</i>	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

**Remediation Closure Request**

*Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.*

Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	136500
What was the total volume (cubic yards) remediated	8232
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	136500
What was the total volume (in cubic yards) reclaimed	8232
Summarize any additional remediation activities not included by answers (above)	"Analytical results associated with recent remediation activities conducted in 2023 indicate that the horizontal and vertical extent of chloride, TPH, and BTEX impact in soil above NMAC screening standards for a site with depth the groundwater less than 50 feet bgs have been delineated both horizontally and vertically, and excavated from the impacted area based on the approved variance. "

*The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

<b>Reclamation Report</b> <i>Only answer the questions in this group if all reclamation steps have been completed.</i>	
Requesting a reclamation approval with this submission	Yes
What was the total reclamation surface area (in square feet) for this site	136500
What was the total volume of replacement material (in cubic yards) for this site	8232
<i>Per Paragraph (1) of Subsection D of 19.15.29.13 NMAC the reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.</i>	
Is the soil top layer complete and is it suitable material to establish vegetation	Yes
On what (estimated) date will (or was) the reseeding commence(d)	09/20/2023
Summarize any additional reclamation activities not included by answers (above)	Upon receiving laboratory analytical results from the excavation confirmation soil samples confirming impacted soil over the applicable restoration closure limits had been removed laterally and excavated to the extent possible vertically down to the base rock layer, the lined excavated area was backfilled with locally sourced, non-impacted "like" material placed at or near the original relative positions. The affected area was contoured and compacted to achieve erosion control, stability, and preservation of surface water flow to the extent practicable. The excavated area within the affected pasture was topped with a topsoil similar to native surrounding pasture material and reseeded with a BLM-approved seed mixture on September 20, 2023.
<i>The responsible party must attach information demonstrating they have complied with all applicable reclamation requirements and any conditions or directives of the OCD. This demonstration should be in the form of attachments (in .pdf format) including a scaled site map, any proposed reseeding plans or relevant field notes, photographs of reclaimed area, and a narrative of the reclamation activities. Refer to 19.15.29.13 NMAC.</i>
