

**AKM MEASUREMENT SERVICES,LLC. Natural Gas Analysis Report**  
 GPA 2172-09/API 14.5 Report with GPA 2145-16 Physical Properties

<b>Sample Information</b>	
Sample Name	LOST TANK 18 FACILITY PROD 2
Technician	ANTHONY DOMINGUEZ
Analyzer Make & Model	INFICON MICRO GC
Last Calibration/Validation Date	12-15-2023
Meter Number	16412P
Air temperature	59
Flow Rate (MCF/Day)	19315
Heat Tracing	HEATED HOSE & GASIFIER
Sample description/mtr name	LOST TANK 18 FACILITY PROD 2
Sampling Method	FILL & EMPTY
Operator	OCCIDENTAL PETROLEUM, OXY USA INC
State	NEW MEXICO
Region Name	PERMIAN_RESOURCES
Asset	NEW MEXICO
System	LOST TANK
FLOC	OP-DELNE-BT010
Sample Sub Type	CTB
Sample Name Type	METER
Vendor	AKM MEASUREMENT
Cylinder #	38967
Sampled by	SCOTT
Sample date	12-11-2023
Analyzed date	12-19-2023
Method Name	C9
Injection Date	2023-12-19 17:22:49
Report Date	2023-12-19 17:24:34
EZReporter Configuration File	1-16-2023 OXY GPA C9+ H2S #2.cfgx
Source Data File	c9df624d-557a-4940-b08e-304ec2186c4a
NGA Phys. Property Data Source	GPA Standard 2145-16 (FPS)
Data Source	INFICON Fusion Connector

**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility:** Lost Tank 5 CPF**Flare Date:** 07/02/2024**Duration of Event:** 1 Hour 5 Minutes**MCF Flared:** 200**Start Time:** 09:00 AM**End Time:** 10:05 AM**Cause:** Emergency Flare > Downstream Activity > MPLX > Multiple Intake Gas Flow Restrictions**Method of Flared Gas Measurement:** Gas Flare Meter**1. Reason why this event was beyond Operator's control:**

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, MPLX, third-party downstream operator, suddenly and unexpectedly continuously pinched back their intake offload sales line, multiple times within in a 24-hour period, due to on-going Preakness plant issues on their end, which in turn, caused high line pressure to occur several times, which then triggered a brief intermittent flaring instances to occur. In every intermittent instance of flaring, Oxy field personnel were not notified by MPLX personnel that they were going to reduce their gas flow intake from Oxy as this was not communicated to OXY in advance. Field production techs had to call MPLX personnel and USA Compression personnel at the Lost Tank Boo 13 to inquire as to why high line pressure was happening. All OXY operations and facility equipment were running at maximized optimization prior to each intermittent flaring event occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible. The duration and volume of this flaring event is a combination of multiple intermittent flaring instances within a 24-hour period.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. In this case, MPLX, third-party downstream operator, suddenly and unexpectedly continuously pinched back their intake offload sales line due to plant issues on their end, multiple times within in a 24-hour period, which in turn, caused high line pressure to occur several times, which then triggered a brief intermittent flaring instances to occur. In every intermittent instance of flaring, Oxy field personnel were not notified by MPLX personnel that they were going to reduce their gas flow intake from Oxy as this was not communicated to OXY in advance. Field production techs had to call MPLX personnel and USA Compression personnel at the Lost Tank Boo 13 to inquire as to why high line pressure was happening. Field production techs had to call MPLX personnel and USA Compression personnel at the Lost Tank Boo 13 to inquire as to why high line pressure was happening. All OXY operations and facility equipment were running at maximized optimization prior to each intermittent flaring event occurring. During each instance of flaring which was triggered by MPLX's sudden and unexpected gas intake restrictions, steps were immediately taken by Oxy field personnel to reduce and mitigate the volume of gas being sent to flare by reducing production to the Lost Tank 5 CPF by choking back its high GOR production wells. There is no other option to reroute or offload

to a secondary downstream operator from this facility. All OXY operations and facility equipment were. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an MPLX gas flow pipeline restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. MPLX's downstream facilities and associated gas plants and/or operators, will or may have equipment issues which will reoccur from time to time and may trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When MPLX has downstream activity issues or greatly struggles to handle the volume of gas being sent to them by Oxy, MPLX then suddenly and unexpectedly restricts Oxy's ability to send gas, which then prompts Oxy to route all of its stranded gas not pushed into the gas pipeline, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with MPLX personnel that proper communication is necessary in advance during these types of situations.

QUESTIONS

Action 363724

**QUESTIONS**

Operator:  OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:  16696
	Action Number:  363724
	Action Type:  [C-129] Venting and/or Flaring (C-129)

**QUESTIONS**

<b>Prerequisites</b>	
Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.	
Incident Well	Unavailable.
Incident Facility	[fAPP2410600153] Lost Tank 5 Tankless CPF

**Determination of Reporting Requirements**

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.

Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.

An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.

Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

**Equipment Involved**

Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Downstream Activity > MPLX > Multiple Intake Gas Flow Restrictions

**Representative Compositional Analysis of Vented or Flared Natural Gas**

Please provide the mole percent for the percentage questions in this group.

Methane (CH4) percentage	71
Nitrogen (N2) percentage, if greater than one percent	2
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	1
Oxygen (O2) percentage, if greater than one percent	0

If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.

Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2

Action 363724

**QUESTIONS (continued)**

Operator:  OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:  16696
	Action Number:  363724
	Action Type:  [C-129] Venting and/or Flaring (C-129)

**QUESTIONS**

<b>Date(s) and Time(s)</b>	
Date vent or flare was discovered or commenced	07/02/2024
Time vent or flare was discovered or commenced	09:00 AM
Time vent or flare was terminated	10:05 AM
Cumulative hours during this event	1

<b>Measured or Estimated Volume of Vented or Flared Natural Gas</b>	
Natural Gas Vented (Mcf) Details	<i>Not answered.</i>
Natural Gas Flared (Mcf) Details	Cause: Other   Other (Specify)   Natural Gas Flared   Released: 200 Mcf   Recovered: 0 Mcf   Lost: 200 Mcf.
Other Released Details	<i>Not answered.</i>
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

<b>Venting or Flaring Resulting from Downstream Activity</b>	
Was this vent or flare a result of downstream activity	Yes
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	[14035] MARATHON OIL CO
Date notified of downstream activity requiring this vent or flare	<i>Not answered.</i>
Time notified of downstream activity requiring this vent or flare	<i>Not answered.</i>

<b>Steps and Actions to Prevent Waste</b>	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, MPLX, third-party downstream operator, suddenly and unexpectedly continuously pinched back their intake offload sales line, multiple times within in a 24-hour period, due to on-going Preakness plant issues on their end, which in turn, caused high line pressure to occur several times, which then triggered a brief intermittent flaring instances to occur. In every intermittent instance of flaring, Oxy field personnel were not notified by MPLX personnel that that they were going to reduce their gas flow intake from Oxy as this was not communicated to OXY in advance. Field production techs had to call MPLX personnel and USA Compression personnel at the Lost Tank Boo 13 to inquire as to why high line pressure was happening. All OXY operations and facility equipment were running at maximized optimization prior to each intermittent flaring event occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible. The duration and volume of this flaring event is a combination of multiple intermittent flaring instances within a 24-hour period.
	It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to

Steps taken to limit the duration and magnitude of vent or flare	<p>minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. In this case, MPLX, third-party downstream operator, suddenly and unexpectedly continuously pinched back their intake offload sales line due to plant issues on their end, multiple times within in a 24-hour period, which in turn, caused high line pressure to occur several times, which then triggered a brief intermittent flaring instances to occur.
