Dear Mr. Buchanan:

On behalf of ETP Crude LLC (ETPC), formerly Centurion Pipeline, LP, GHD Services Inc. (GHD) is submitting the *2024 Annual Groundwater Monitoring Report* (Report) for the above-referenced property (Site) to the New Mexico Oil Conservation Division (NMOCD). The Report summarizes activities performed at the Site during 2024.

Should you have any questions or comments regarding this submittal, please do not hesitate to contact the undersigned.

Regards,

GHD

Appendix A	Laboratory Analytical Reports
------------	-------------------------------

# 1. Introduction

This report presents the results of groundwater monitoring activities performed in 2024 by GHD Services Inc. (GHD) at the ETP Crude LLC (ETPC) Brahaney Gathering System (Site). The Site is located approximately seventeen miles southeast of Tatum, Lea County, New Mexico (**Figure 1**). Geographic coordinates for the Site are 33.214605° North and 103.109983° West. The Site is located in Section 4, Township 13 South, and Range 38 East. The property on which the Site is located is owned by Wes Harris. The Site is regulated by the New Mexico Oil Conservation Division (NMOCD) under remediation permit number 1RP-2794 and is associated with incident number nGRL1210048391.

## 1.1 Background

The Site has been in active assessment and remediation since 2011, when two releases were discovered the Brahaney Gathering System 8-inch steel transmission pipeline (Pipeline). A total of six groundwater monitoring wells have been installed at the Site between 2011 and 2013 (**Figure 2**).

In February 2011, approximately 20 barrels (bbls) of sweet crude oil were released from the Pipeline due to internal corrosion. The pipeline was immediately shut-in and excavated for inspection. Approximately 300-linear feet of Pipeline was replaced on February 12, 2011. No crude oil was reportedly recovered during emergency response activities. Initial remediation and assessment activities were conducted by B&H Environmental Services.

Approximately 4,130-cubic yards (cy) of spill-impacted soil was excavated from the Site, of which; 225 cy were transported to Centurion Wasson Station for berm construction and 834-cubic yards were transported to Gandy's Landfarm in New Mexico. The remaining 3,200 cy of impacted soil was blended on-Site with clean backfill material from a nearby borrow pit. The excavated area was returned to natural grade and restoration was completed on June 24, 2011. Following backfilling activities, two permanent groundwater monitoring wells (MW-1 and MW-2) were installed in the vicinity of the release to evaluate potential impacts to groundwater.

On September 25, 2011, approximately 4-5 bbls of sweet crude oil were reportedly released from the Pipeline, due to internal corrosion. The Pipeline was immediately shut-in and repaired. An approximate 160 square foot (sq ft) area of crude oil affected soil near the release point was excavated, sampled, and transported off-Site to the Gandy Marly Landfill on September 28, 2011. The excavation was backfilled with soil purchased from the landowner to a depth of 5 feet below ground surface (ft bgs). A 20-mil liner was subsequently installed and then backfilled to surface. Between January 30 and February 6, 2013, four groundwater monitoring wells (MW-3 through MW-6) were installed in the vicinity of the release to evaluate potential impacts to groundwater. Periodic groundwater monitoring has been conducted at the Site since 2013.

Semi-annual groundwater monitoring events were completed in 2024 and are discussed in this report.

## 1.2 Geology and Hydrogeology

The Site is located on the Northwestern Shelf of the Permian Basin between the Matador Arch and Pedernal Uplift and is underlain by the Ogallala formation which is Pliocene to Middle Miocene in age. The Ogallala formation consists of poorly consolidated silt, sand, gravel and petrocalcic soils, and ranges from zero to 500 ft thick. Its base lies unconformably on the Triassic Dockum group which is divided into the Santa Rosa sandstone and Chinle formation. Rocks of Cretaceous age were deposited in Lea County but have been almost entirely removed by erosion (Nicholson and Clebsch, 1961).

According to the New Mexico Water Resources Assessment 2001 Plate 3, the regional groundwater gradient in the area is to the southeast and shifts to the southwest towards the Pecos River when transitioning from east to west into the Lower Pecos Valley from the Southern High Plains. The depth to groundwater at the Site ranges from approximately 95 to 102 ft bgs.

## 2. Groundwater Monitoring

GHD performed semi-annual monitoring events in March and September 2024. The monitoring program included gauging and collection of groundwater samples from monitoring wells MW-1 through MW-5. Due to insufficient volume of water, monitoring well MW-6 was not sampled during the September 2024 monitoring event.

### 2.1 Monitoring Well Gauging

On March 14 and September 24, 2024, GHD personnel measured the depth to groundwater in monitoring wells MW-1 through MW-6 using an electronic oil/water interface probe (IP). Light non-aqueous phase liquid (LNAPL) has never been detected in monitoring wells at the Site. The IP was cleaned with laboratory-grade soap and purified water prior to gauging each monitoring well. Depth to groundwater and calculated groundwater elevations are summarized in **Table 1**.

Based on the data collected in 2024, groundwater flow is generally to the south and is consistent with historical data for the Site. Groundwater potentiometric surface maps for the March and September 2024 monitoring events are presented as **Figures 3 and 4**. The groundwater gradient was calculated to be approximately 0.0050 foot per foot (ft/ft) in March and September 2024.

### 2.2 Groundwater Sampling

Following gauging during each 2024 monitoring event, GHD personnel utilized a bladder pump to purge a minimum of three well volumes of groundwater or until the well was dry. Groundwater quality field parameters of temperature, pH, oxidation reduction potential, and conductivity were collected with a field-calibrated multi-parameter groundwater quality meter to confirm stabilization of the groundwater prior to the collection of groundwater samples. A summary of groundwater field parameters is presented in **Table 2**.

Following purging and confirmation of groundwater stabilization, groundwater samples were collected and placed in laboratory-prepared sample containers, labeled, packed in a cooler with ice, and transported under chain-of-custody documentation to ALS Environmental (ALS) in Houston, Texas. All samples were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) by United States Environmental Protection Agency (EPA) Method SW8260C, total petroleum hydrocarbons (TPH) gasoline range organics (GRO) by EPA Method 8015C, TPH diesel range organics (DRO) by EPA Method 8015M, and chlorides by EPA Method 300.0.

### 2.3 Quality Assurance/Quality Control

During each groundwater monitoring event, a field duplicate and trip blank were collected as Quality Assurance/Quality Control (QA/QC) samples and subsequently submitted for laboratory analysis.

### 2.4 Analytical Results

The New Mexico Water Quality Control Commission (NMWQCC) mandates that groundwater quality in New Mexico be protected, and has issued groundwater quality standards in Title 20, Chapter 6, Part 2, Section 3103 of the New Mexico Administrative Code (20.6.2.3103 NMAC). Groundwater quality standards have been set for the protection of human health, domestic water supply, and irrigation use.

The groundwater analytical results for 2024 are summarized in **Table 3**, and the corresponding laboratory analytical reports are included in Appendix A. A COC concentration map is presented as **Figure 5**. A summary of analytical results for 2024 is provided below:

- Concentrations of BTEX and TPH were not detected above laboratory detection limits in all groundwater samples collected from monitoring wells MW-1 through MW-6 during 2024.

- Concentrations of chlorides were detected in all groundwater samples collected from monitoring wells MW-1 through MW-6 during 2024; however, the concentrations did not exceed NMWQCC criteria.

## 3. Summary and Recommendations

### 3.1 Summary

The following summarizes the information and data presented in this report.

- LNAPL was not detected in any of the on-Site monitoring wells during 2024.
- Concentrations of BTEX, TPH, and chlorides are not present in groundwater at the Site above laboratory detection limits and/or applicable NMWQCC criteria.

### 3.2 Recommendations

Based on the results of the 2024 groundwater monitoring events, GHD recommends the following in 2025:

- BTEX concentrations have been below NMWQCC standards for twelve consecutive quarters in all monitoring wells at the Site (MW-1 through MW-6).  
The Site is located in a remote area, whereby the only human presence at the Site would be related to subgrade pipeline repair, or other similar oil field tasks.
- The Site currently meets the standards and requirements set forth in 19.15.30.9 NMAC for abatement completion for the groundwater portion of this incident.
- A solid-matrix work plan for a one-time sampling of the vadose zone has been prepared for approval to close the soil portion of this incident with the NMOCD.

## 4. Scope and Limitations

*This report has been prepared by GHD for ETP Crude LLC and may only be used and relied on by ETP Crude LLC for the purpose agreed between GHD and ETP Crude LLC.*

*GHD otherwise disclaims responsibility to any person other than ETP Crude LLC arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.*

*The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.*

*The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.*

*The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.*

## Notes:

°C - degrees Celsius.

µS/cm - microsiemens per centimeter.

mg/L - milligrams per liter.

"--" - not measured due to insufficient volume of water.

mV - millivolts.

DO - dissolved oxygen.

ORP - oxidation reduction potential.

Notes:

- 1) Analytical results are presented in milligrams per liter (mg/L).
- 2) NMWQCC = New Mexico Water Quality Control Commission.
- 3) ne - not established.
- 4) -- = not analyzed.
- 5) < - Analyte was not detected at or above the laboratory reporting limit.
- 6) J = Concentration is less than the quantitation limit and is an estimated value.
- 7) B - The same analyte is found in the associated blank.
- 8) Shaded/bolded results exceed their respective NMWQCC groundwater quality standard.
- 9) Analytical data from 2016 to 2022 was supplied by Apex TITAN, Inc.
- 10) TPH - total petroleum hydrocarbons, GRO - gasoline range organics, DRO - diesel range organics, TDS - total dissolved solids.

## NOTES:

1. GROUNDWATER CONCENTRATION PRESENTED IN MILLIGRAMS PER LITER (mg/L).
2. BOLDED CELLS INDICATE LABORATORY DETECTION OF ANALYTE.
3. HIGHLIGHTED CELLS INDICATE EXCEEDANCE OF THE RESPECTIVE NMWQCC STANDARD.
4. MW-6 CONTAINED INSUFFICIENT WELL VOLUME IN MARCH 2024 TO FILL ALL SAMPLE VIALS; THEREFORE, SAMPLE COLLECTED FROM MW-6 COULD NOT BE SUBMITTED FOR TPH-DRO ANALYSIS.
5. MW-6 CONTAINED INSUFFICIENT WELL VOLUME IN SEPTEMBER 2024; THEREFORE, NO GROUNDWATER SAMPLE WERE COLLECTED.

Laboratory Results for: **12621862 - ET Brahaney Gathering System**

Dear Chris Knight,

ALS Environmental received 6 sample(s) on Mar 16, 2024 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

Generated By: JUMOKE.LAWAL

**CASE NARRATIVE****Work Order Comments**

- Login Comments: Sample MW-6 received 4 vials empty and only 2 vials with sample. 1 of the vials had an air bubble. Sample MW-6 collection time on COC and sample label differ. COC: 12:30, Label: 11:30.
- Sample MW-1 collection time on COC and sample label differ. COC: 11:50, Label: 10:50.
- Both samples logged in according to COC.

**GC Semivolatiles by Method SW8015M****Batch ID: 209129**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**GC Volatiles by Method SW8015****Batch ID: R462163,R462190**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**GCMS Volatiles by Method SW8260****Batch ID: R461698**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**WetChemistry by Method E300****Batch ID: R462049**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**QUALIFIERS,  
ACRONYMS, UNITS**

<b>Qualifier</b>	<b>Description</b>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

<b>Acronym</b>	<b>Description</b>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<b>Unit Reported</b>	<b>Description</b>
mg/L	Milligrams per Liter

Laboratory Results for: **12621862 - ET Brahaney Gathering System**

Dear Chris Knight,

ALS Environmental received 2 sample(s) on Mar 21, 2024 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

**CASE NARRATIVE**

---

**GC Semivolatiles by Method SW8015M**

**Batch ID: 209403**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

---

**GC Volatiles by Method SW8015**

**Batch ID: R462711**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

---

**GCMS Volatiles by Method SW8260**

**Batch ID: R462067**

**Sample ID: VLCSW-240324**

- Insufficient sample received to perform MS/MSD. An LCS/LCSD was performed as batch quality control.

---

**WetChemistry by Method E300**

**Batch ID: R462049**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

Laboratory Results for: **12621862 - ET Brahaney Gathering System**

Dear Chris Knight,

ALS Environmental received 7 sample(s) on Sep 25, 2024 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

Generated By: JUMOKE.LAWAL

**CASE NARRATIVE****GC Semivolatiles by Method SW8015M****Batch ID: 218214**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**GC Volatiles by Method SW8015****Batch ID: R478593**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**GCMS Volatiles by Method SW8260****Batch ID: R478326****Sample ID: VLCSW-240926**

- Ethylbenzene and Toluene failed outside of QC control limits high. Samples are ND.
- Insufficient sample received to perform MS/MSD. An LCS/LCSD was performed as batch quality control.

**WetChemistry by Method E300****Batch ID: R478588**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**QUALIFIERS,  
ACRONYMS, UNITS**

<b>Qualifier</b>	<b>Description</b>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

<b>Acronym</b>	<b>Description</b>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<b>Unit Reported</b>	<b>Description</b>
mg/L	Milligrams per Liter
