## Executive Summary

Remediation and reclamation activities were conducted at the Outland State Unit 121H to address a crude oil release associated with the shutdown of the LACT units and a subsequent overflow from the oil tank battery. Diamondback Disposal Services, Inc. (Diamondback) performed all cleanup and restoration activities on behalf of Permian Resources Operating, LLC (Permian) under Release Number NAPP2507458316. Approximately 30 barrels of crude oil were released, none of which were recovered, requiring full remediation of the affected area. A liner inspection performed on September 17, 2025, confirmed full integrity of the secondary containment system.

The site is located in Unit M, Section 13, Township 21S, Range 34E, at coordinates 32.474267, -103.428259 (NAD83), approximately 15.8 miles west of Eunice, New Mexico, under NMSLO Lease #B068070011. All work was performed in accordance with the New Mexico Oil Conservation Division (NMOCD) requirements under 19.15.29 NMAC, the Cultural Properties Protection Rule (19.2.24 NMAC), and the State Land Office reclamation standards under 19.2.100.67 NMAC.

Initial delineation performed on May 19, 2025, identified isolated exceedances of Recommended Remediation Action Levels (RRALs) for total petroleum hydrocarbons (TPH). Excavation occurred between July 21 and July 23, 2025, to remove impacted material. Field screening was conducted throughout excavation, and all confirmation samples collected on July 23 and July 24, 2025, met the most stringent closure criteria applicable to sites with groundwater depths less than 50 feet below ground surface. Approximately 624 cubic yards of impacted soil were transported to the Lea Land LLC facility for disposal.

Clean, verified backfill material was stockpiled onsite on 8-mil liner and sampled under full chain of custody. A five-point composite of the backfill stockpile was collected and submitted to an accredited third-party laboratory for analysis. Results confirmed compliance with all RRALs for BTEX, TPH, and chlorides. The verified backfill was placed and graded to restore the pad to operational condition, with proper drainage established. All remediation and reclamation activities were completed in accordance with applicable regulatory standards, and closure approval is respectfully requested from the New Mexico Oil Conservation Division and the New Mexico State Land Office.

## Introduction

This report documents remediation activities at the Outland State Unit 121H. Diamondback Disposal Services, Inc. (Diamondback) performed cleanup and site restoration on behalf of Permian Resources Operating, LLC (Permian) under Release Number nAPP2507458316. The release occurred after Delek shut down the LACT units, and the night pumper was unable to keep up with rising oil tank (OT) levels, resulting in an overflow from the tank battery. Minor overspray was contained within the lined secondary containment area; however, the majority of the release pooled outside containment on the adjacent pad surface. The total volume released was approximately 30 barrels of crude oil, of which no product was recovered, leaving an estimated 30 barrels requiring remediation. The containment area was cleaned, and the affected soils outside containment were scraped and transported for disposal the following day. A liner inspection was performed on September 17, 2025, confirming that the containment liner maintained full integrity and that no breach occurred within the tank battery.

The site is located in Unit M, Section 13, Township 21S, Range 34E, at coordinates 32.474267, -103.428259 (NAD83), governed by NMSLO Lease #B068070011. The location lies approximately 15.8 miles west of Eunice, New Mexico. All activities were conducted in accordance with applicable regulatory requirements, including the New Mexico Oil Conservation Division rules under 19.15.29 NMAC, the Cultural Properties Protection Rule (NMAC 19.2.24), and the State Land Office's reclamation authority under NMAC 19.2.100.67.

The site can be accessed from the intersection of NM-176 and County Road 30. Head south on County Road 30 for 0.9 miles to the location entrance on the left.

A map is located in appendix B

## Site Characterization

Reclamation and remediation activities were confined to previously disturbed portions of the well pad. Environmental and regulatory reviews were conducted to confirm site conditions and applicable requirements. The site is located approximately 15.8 miles west of the City of Eunice, New Mexico.

## **Biological and Environmental Factors**

- A review of the U.S. Fish & Wildlife Service's Information for Planning and Consultation (IPaC) identified the following species for consideration within the project area:
  - Lesser Prairie-Chicken (*Tympanuchus pallidicinctus*) – Endangered
  - Northern Aplomado Falcon (*Falco femoralis septentrionalis*) – Experimental, Non-Essential
  - Monarch Butterfly does not have designated critical habitat within the site.
- The Northern Harrier (*Circus hudsonius*), listed as a Bird of Conservation Concern, is known to occur in the region and has an active breeding season from April 1 to September 15
- BLM species mapping confirms that no designated sensitive species habitat overlaps the release site
- Surface disturbance did not extend beyond the existing footprint; therefore, the project remains in compliance with the Cultural Properties Protection Rule (NMAC 19.2.24)..
- Biological compliance measures were followed, including seasonal timing restrictions and biological surveys where required.

### **Water Resources and Remediation Considerations**

- A registered water well is located approximately 0.5 miles from the site. According to the CP-1848 well log, groundwater was encountered between 65 and 80 feet below ground surface, with a static water level of 68.9 feet.
- The nearest freshwater well and residence are located approximately 2.0 miles southeast of the release.
- The nearest significant watercourse, as defined on the USGS 7.5-minute quadrangle map, is located approximately 1.3 miles north of the release area.
- The nearest wetland feature is a freshwater emergent wetland located approximately 524 feet south of the release area.
- Based on this information, groundwater depth is confirmed to be greater than 65 feet bgs (see Appendix B).
- The site lies within an area of low karst potential, and FEMA flood mapping designates the site as Zone X (see Appendix A).

### **Soil Remediation Standards**

All on-pad contamination was remediated using the most stringent closure criteria listed in Table 1 of 19.15.29.12 NMAC, even though the applicable standard for this site corresponds to groundwater between 50 and 100 feet below ground surface.

**Table 1: NMAC 19.15.29.12 Closure Criteria**

### Remediation/Reclamation Activities

Between July 21, 2025, and July 23, 2025, Diamondback Disposal Services, Inc. excavated impacted material from the Outland State Unit 121H site. The excavated soil was temporarily stockpiled on 8-mil plastic liner before being transported to the Lea Land LLC facility for final disposal. During excavation, field screening was conducted to monitor chloride concentrations and total petroleum hydrocarbons in accordance with applicable regulatory standards.

The initial delineation was conducted on May 19, 2025, prior to excavation activities. Analytical results from this sampling event identified exceedances of the Recommended Remediation Action Levels (RRALs) listed in Table 1 of 19.15.29.12 NMAC. Based on these findings, the excavation boundaries were expanded in the affected areas to ensure complete removal of impacted material.

The New Mexico Oil Conservation Division (NMOCD) was notified of the intent to begin confirmation sampling on July 21, 2025, and official C-141N notifications were acknowledged for sampling events scheduled on July 23, 2025, and July 24, 2025, at 08:00 AM. Five-point composite samples were collected from sidewall and floor areas at a density of no more than 200 square feet per sample. All samples were immediately packaged and submitted to an accredited third-party laboratory for analysis in accordance with regulatory requirements. Chain of custody was maintained throughout collection, handling, and delivery.

Confirmation sampling was performed after excavation. All floor and wall composites met the applicable closure standards on the initial round of laboratory analysis; no additional excavation or re-

sampling was required. Backfill remained stockpiled onsite and was placed only after receipt of the final laboratory results dated August 1, 2025.

Following excavation, approximately 624 cubic yards of impacted material were transported to the Lea Land LLC facility for disposal. All analytical results associated with delineation, confirmation, and backfill verification demonstrated compliance with the Recommended Remediation Action Levels (RRALs) established under 19.15.29.12 NMAC. Clean backfill material was stockpiled onsite on 8-mil liner pending receipt of final laboratory results. A five-point composite sample of the backfill stockpile was collected and submitted under full chain of custody to an accredited third-party laboratory for verification. Laboratory analyses confirmed that the delineation and confirmation samples met closure criteria on the initial round of testing and that the backfill material met all RRALs for BTEX, TPH, and chlorides. The verified material was then placed and graded in accordance with site restoration requirements to ensure proper drainage and restore the pad to its full operational condition. A summary of all analytical results is provided in Appendix C, and the original laboratory reports and chain-of-custody documentation are included in Appendix F.

### Conclusion

Remediation activities at the OUTLAND STATE UNIT 121H, located in Unit M, Section 13, Township 21S, Range 34E at coordinates 32.474267, -103.428259 (NAD83), approximately 15.8 miles west of the City of Eunice, New Mexico, have been conducted in accordance with applicable regulatory requirements. The project addressed a release associated with a shutdown of the LACT units and a failure to manage rising oil tank levels. A total of approximately 624 cubic yards of impacted material was excavated, transported, and disposed of at the Lea Land LLC facility.

Diamondback Disposal Services, Inc. conducted field screening throughout excavation to ensure compliance with closure criteria under 19.15.29.12 NMAC. Although the applicable groundwater standard for this site falls within the 50–100 foot depth category, the site was remediated to the most stringent standards for groundwater less than 50 feet below ground surface. Initial delineation identified two exceedances outside the originally defined spill boundary; both locations were addressed through additional excavation and follow-up sampling. Chain of custody was maintained throughout all

sampling activities, and final laboratory results confirmed compliance with the Recommended Remediation Action Levels.

Backfill and site restoration have been completed using approximately 624 cubic yards of clean caliche backhauled from the Lea Land LLC facility. The material was placed and graded to restore the pad to its original condition, with contours adjusted to support proper drainage. As all activity remains within the permitted pad area, no reseeding or revegetation is required under current regulatory standards.

Diamondback Disposal Services, Inc. has completed all reclamation activities associated with Release Number NAPP2507458316 and respectfully requests closure approval from both the New Mexico Oil Conservation Division (NMOCD) and the New Mexico State Land Office (NMSLO). Hi Matt,

I am reviewing the submitted remediation closure report for nAPP2507458316 OUTLAND STATE UNIT 121H and have a question for you regarding release location. The NOR put the release location as 32.474267,-103.428259 which is on the pad here:

However, on pg. 16 of report the Figure shows the release location east of that pad. Can you give the lat/long for release and confirm if they are indeed on a different pad. I am attaching a snip of the Figure I am referring to here:

Kind regards,

Shelly

	Action Type: [C-141] Remediation Closure Request C-141 (C-141-v-Closure)

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

**Initial Response**

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
