To Whom it May Concern:

Ensolum, LLC (Ensolum), on behalf of Devon Energy Production Company, LP (Devon), has prepared this *Closure Request* to document excavation and soil sampling activities performed to address two produced water releases at the Broadside 12 Facility 1 and Broadside 13 W Federal Com #001H (collectively referred to as the Site). Based on the excavation activities and analytical results from the soil sampling events, Devon is submitting this *Closure Request*, describing remediation that has occurred and requesting closure for Incident Numbers nAPP2519539659 & nAPP2524743023.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in Unit N, Section 12, Township 24 South, Range 33 East, in Lea County, New Mexico and is associated with oil and gas exploration and production operations on Private Land owned by Quail Ranch LLC.

On July 13, 2025, the threads on a pipeline fitting failed, which resulted in the release of approximately 30 barrels (bbls) of produced water onto the caliche pad and into the adjacent off-pad pasture area. A vacuum truck was dispatched to the Site to recover free-standing fluid, and approximately 3 bbls of produced water were recovered. Devon reported the release to the New Mexico Oil Conservation Division (NMOCD) via Notification of Release (NOR) on July 14, 2025, and submitted a Release Notification Form C-141 (Form C-141) on July 15, 2025. The release was assigned Incident Number nAPP2519539659. The Form C-141 can be referenced on the NMOCD Portal. This release is associated with Broadside 12 Facility 1 located at (32.22569°, -103.52662°).

On September 03, 2025, a water dump line developed a pinhole leak, which resulted in the release of approximately 10 bbls of produced water into a lined secondary containment. 10 bbls of produced water were recovered. Devon reported the release to the NMOCD via NOR on September 04, 2025, and submitted a Form C-141 on September 09, 2025. The release was assigned Incident Number nAPP2524743023. The Form C-141 can be referenced on the NMOCD Portal. This release is associated with the Broadside 13 W Federal Com #001H, which is the wellhead on the Site located at (32.22580359°, -103.5270716°).

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC) Site Assessment/Characterization. Potential Site receptors are identified on Figure 1.

Depth to groundwater at the Site is estimated to be greater than 105 feet below ground surface (bgs) based on a soil boring completed by John Scarborough Drilling Inc. on June 06, 2024. Soil boring C-04838 POD1 is located approximately 0.47 miles northeast of the Site and was drilled to a total depth of 105 feet bgs, with no groundwater encountered. There are no regional or Site-specific hydrogeological conditions, such as shallow surface water, known karst features, wetlands, or vegetation to suggest the Site is conducive to shallower groundwater. The location of the boring is presented on Figure 1, and the referenced well record is included in Appendix A.

The closest continuously flowing or significant watercourse to the Site is an intermittent dry wash, located approximately 2.36 miles southwest of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is underlain by stable geology (low potential karst designation area). Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH)-gasoline range organics (GRO) and TPH-diesel range organics (DRO): 1,000 mg/kg
- TPH: 2,500 mg/kg
- Chloride: 20,000 mg/kg

A reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH was applied to the top 4 feet of the pasture area that was impacted by the release, per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation.

SITE ASSESSMENT ACTIVITIES

On July 14, 2025, Ensolum personnel visited the Site to evaluate the release extent for Incident Number nAPP2519539659 based on information provided on the Form C-141 and visual observations. On September 12, 2025, Ensolum personnel returned to the Site to evaluate the release extent for incident Number nAPP2524743023. The release extents were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figure 2.

DELINEATION AND LINER INTEGRITY INSPECTION

On July 15 and 21, 2025, August 15, 2025, and November 03 through 05, 2025, Ensolum personnel were onsite to conduct lateral and vertical delineation sampling activities. Nine delineation soil samples (SS01 through SS09) were collected from around the release extents and lined containment at ground

surface and 1-foot below ground surface (bgs) to assess the lateral extent of both releases. Fifteen boreholes (BH01 through BH15) were advanced via hand auger within the release extent and beneath the secondary lined containment to assess the vertical extent of both releases. The boreholes were advanced to depths ranging from ground surface to 10 feet bgs. Discrete delineation soil samples were collected from each borehole and field screened for chloride utilizing Hach® chloride QuanTab® test strips. Field screening results and observations for the boreholes were logged on lithologic soil sampling logs, which are included in Appendix B. The delineation soil sample locations are depicted on Figure 2.

On October 27, 2025, Ensolium personnel competent in conducting liner inspections arrived onsite to visually inspect the integrity of the containment liner. Prior to conducting the inspection, NMOCDC was provided with a 48-hour liner inspection notification via web portal on October 23, 2025. The liner was found to be insufficient during the inspection. Multiple holes were located beneath the gravel inside of the containment. Photographs taken during the liner inspection are included in Appendix C.

The delineation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice and transported under strict chain-of-custody procedures to Envirotech Analysis Laboratory (Envirotech) in Farmington, New Mexico, for analysis of the following chemicals of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-GRO, TPH-DRO, and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

EXCAVATION AND CONFIRMATION SOIL SAMPLING ACTIVITIES

Between October 10 and October 14, 2025, Ensolium personnel oversaw the excavation of waste-containing soil from the release area on the east side of the tank battery containment. Excavation activities were performed utilizing a backhoe to depths ranging from 0.5 feet to 4 feet bgs. To direct excavation activities, soil was field screened for chloride as previously described above. Photographic documentation is included in Appendix C.

Following removal of impacted soil, 5-point composite soil samples were collected every 200 square feet from the floor of the excavation. The 5-point composite soil samples were collected by placing five equivalent aliquots of soil in a resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples FS01 through FS32 were collected from the floors of the excavations and sidewall soil samples SW01 through SW07 were collected from the outside walls of the excavation and against the lined tank containment at depths ranging from the ground surface to 4 feet bgs. The soil samples were handled and analyzed as previously described. The excavation extents and excavation soil sample locations were mapped utilizing a handheld GPS unit and are depicted on Figure 3.

The final excavation extent measured approximately 6,302 square feet. A total of approximately 980 cubic yards of soil were removed during excavation activities, and the lined containment measured 7,045 square feet and 60 yards of gravel were removed during excavation activities. The waste-containing soil was transported and properly disposed of at the Northern Delaware Basin Facility. Subsequent to receipt of confirmation laboratory analytical results, the excavation was backfilled with clean fill material and recontoured to match pre-existing conditions.

LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for lateral delineation soil samples (SS01 through SS09) collected at ground surface and 1-foot bgs indicated all COC concentrations were compliant with the strictest Closure Criteria, successfully defining the lateral extent of both releases.

Closure Request
Broadside 12 Facility 1 & Broadside 13 W Federal Com #001H

Laboratory analytical results for the vertical delineation soil samples collected from boreholes BH01 through BH15 indicated all COC concentrations were compliant with Site Closure Criteria at depths ranging from 0.5 feet bgs to 10 feet bgs. Laboratory analytical results for the vertical delineation soil samples collected from boreholes BH04 and BH05 indicated waste-containing soil was identified in the top 4 feet of the off-pad area.

Laboratory analytical results for the excavation floor soil samples FS01 through FS03, collected at a depth of 0.5 feet bgs, indicated all COC concentrations were compliant with the Site Closure Criteria. Laboratory analytical results for the excavation floor soil samples FS04 through FS32 collected at depths ranging from 0.5 feet to 4 feet bgs and excavation sidewall soil samples SW01 through SW07, collected from ground surface to 4 feet bgs, indicated all COC concentrations were compliant with the most stringent Table I Closure Criteria. Laboratory analytical results are summarized in Table 1, Table 2, and Table 3, and the complete laboratory analytical reports are included as Appendix D.

RECLAMATION PLAN

A portion of the release occurred off pad in the pasture, and as such, a reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH were applied to the top 4 feet of the subsurface that was impacted by the release per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation. The following Reclamation Plan proposes reclamation of the excavated area:

- The excavation was backfilled with locally sourced caliche (BF01) and topsoil (BF02) to match surrounding grade. Laboratory analytical results are summarized in Table 4 and laboratory analytical reports are included as Appendix D;
- Soil in the vicinity of the release includes: Pyote and Maljamar fine sands, Fine sand, 0 to 30 inches and Fine sandy loam, 30 to 60 inches according to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey completed on September 02, 2025;
- The backfilled areas will be seeded utilizing a weed-free seed mix designed by the BLM to meet reclamation standards for this region, which will be: BLM Seed Mixture #2, for Sandy Sites;
- The seed mixture will be distributed with either a push broadcaster seed spreader, tractor operated broadcast seed spreader, drill seeding, or other means;
- Application of the seed mixture will be at a coverage of 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method;
- Erosion control management is not anticipated, but if needed, will potentially include:
 - The placement of waddles in areas with a propensity for high run off rates;
 - Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
 - Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas;
- Seeding is anticipated to be completed in the Spring when temperatures and precipitation is most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost. Ensolum understands the optimal time to seed is between July and early September, which will be adhered to for this Site;

- Annual inspections (at a minimum) will take place on the location until revegetation is consistent with local natural vegetation density. The Site will be inspected the following Fall to assess the success of regrowth. If necessary, an additional application of the BLM-approved pure live seed mixture will be applied as well as any needed BMPs will be installed to support growth and limit erosion;
- Upon completion of revegetation, a copy of the C-103 submitted to NMOCD will also be submitted to BLM for final inspection and release.

CLOSURE REQUEST

Site assessment and excavation activities were conducted at the Site to address the July 13, 2025, and September 3, 2025, produced water releases. Following remediation efforts, 32 composite confirmation floor soil samples (FS01 through FS32) and seven composite confirmation sidewall samples (SW01 through SW07) were collected. A liner inspection and delineation concluded that there was no contaminated soil left in place beneath the secondary lined containment. Laboratory analytical results for the excavation soil samples collected from the final excavation extent indicated all COC concentrations were in compliance with Site Closure Criteria and/or with the reclamation requirements where applicable. Based on the soil sample analytical results, no further remediation was required. Reclamation will be completed as described above.

Based on horizontal and vertical delineation sampling, depth to groundwater greater than 105 feet bgs, and confirmation soil sample laboratory analytical results in compliance with their respective Closure Criteria and reclamation requirements, Devon believes these remedial actions have been protective of human health, the environment, and groundwater. As such, Devon respectfully requests closure for Incident Numbers nAPP2519539659 & nAPP2524743023.

	Action Type: [C-141] Remediation Closure Request C-141 (C-141-v-Closure)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
