Background:

The site is located in Unit Letter L (Lot 5), Section 6, Township 23 South, Range 32 East, approximately thirty-five miles west of Eunice, in Lea County, New Mexico. The site is located on public land managed by the Bureau of Land Management. Topographic Map and OSE POD Locations Map, are included as Figure 1 and Figure 2, respectively.

The release occurred on an active layflat water line; Latitude 32.33693 North, Longitude - 103.72288 West. The Initial NMOCD Form C-141 indicated that on December 8, 2024, approximately 473 BBL of produced water were released due to a blow out on the water line. A crew was dispatched to the release site and the line was repaired. Previously submitted pages of the NMOCD Form C-141 are available on the NMOCD Imaging System.

NMOCD Site Classification:

A search of the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) groundwater databases was completed in effort to determine the horizontal distance to known water sources within a half mile radius of the Release Site. Depth to groundwater was determined to be greater than 105 ft using a direct measurement in a temporary borehole installed by Devon Energy Partners (POD C-04951) within ½ mile of the site.

The site was delineated and further remediated to the NMOCD Closure Criteria shown below. Utilizing this information, the NMOCD Closure Criteria for the Site were determined as follows:

Table 1 NMOCD Closure Criteria

>100 feet	Chloride***	EPA 300.0 or SM4500 C1 B	20,000 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	2,500 mg/kg
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

**Delineation:**

On April 7, 2024, Select Water Solutions, LLC conducted an initial site assessment consisting of photographing and mapping the release area, as well as taking delineation samples from surface to 4 ft bgs. Horizontal samples were also taken at this time. Laboratory analysis for all constituents indicated that the areas of SP1-SP6 were below NMOCD closure criteria for chlorides, BTEX, and TPH at 4 ft bgs. Laboratory results indicated all horizontal locations except HZ7 were below NMOCD closure criteria.

During delineation activities, sample test trenches were advanced in the release area in effort to determine the vertical extent of contamination. These sample locations are identified by SP designation. In addition, sample test trenches were advanced along the outside edges of the release area in effort to determine the horizontal extent of contamination. These sample locations are identified by HZ designation. During the advancement of the test trenches, soil samples were collected and field screened for the presence of chloride concentrations utilizing a Hach Quantab® chloride test kit.

Remediation Activities:

Between June and September of 2025, approximately 4000 cubic yards of impacted soil were excavated from the release area by Apeck Construction from an area totaling 26,000 square feet. Multiple events of large rainfall effected progress and reliable screening. Eventually, field testing of the excavation indicated that the area was below NMOCD closure criteria. NMOCD was notified of closure sampling to take place on August 13, 2025. Five-point-composite samples were taken every 200 square feet from the floor and sidewalls of the excavation and sent to Envirotech Laboratory in Farmington, NM for all constituent testing. Lab analyticals indicated that the areas of SW7, SW9, SW15, C10-C14, C32-C36, C60-C68, and C77-C81 were above NMOCD closure criteria. Those areas were then scraped and resampled after hitting a hard caliche layer, as well as after yet another large rainfall. Approximately 1 foot was excavated over the areas, with no sidewalls present as the further excavation was sloped for safety purposes due to the unstable soil quality. NMOCD was notified of further closure sampling of those areas to occur August 27, 2025. Five-point-composite samples were taken again every 200 square feet and sent to Envirotech for testing. All sample results indicated that the aforementioned areas were below NMOCD closure criteria for all constituents.

All contaminated material was hauled to Lea Land Landfill for disposal and the area was backfilled with locally source, like material. A backfill sample was sent to the lab for testing of all constituents on August 27, 2025 and lab analytical showed the backfill material was free of all contaminants.

Restoration, Reclamation, and Re-Vegetation:

Once analytical results confirmed that contaminated soils had been successfully remediated, the excavated area was backfilled and contoured to achieve erosion control and preserve surface water flow. The affected area was reseeded with an approved seed mixture and will

be monitored for restoration of 75% of initial ground coverage according to NMOCD standards. All areas not reasonably needed for production were restored to pre-existing conditions.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico

Survey Area Data: Version 21, Sep 9, 2025

Soil Survey Area: Lea County, New Mexico

Survey Area Data: Version 22, Sep 9, 2025

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Good afternoon,

This email is to notify BLM of a produced water release that occurred 12/8/2024 on federally managed lands. The spill was in result of an automation malfunction, causing a layflat line to overpressure and blow out. Approximately 473 BBL produced water were lost, with 165 BBL recovered. The spill occurred on ROW and pasture nearby. Attached are the initial C-141, pictures, spill path .kmz, and spill calculation. Coordinates are : 32.336931, -103.722881.

Please let me know if you have any questions.

Thank you!

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
