Devon Energy Production Company (Devon) has contracted Pima Environmental Services, LLC (Pima) to prepare this Reclamation Closure Report for a crude oil and produced water mixed release that happened at the Cotton Draw 13 Federal #1H (Cotton). This incident was assigned Incident ID nAB1908044051, by the New Mexico Oil Conservation Division (NMOCD).

#### Site Information and Site Characterization

The Cotton is located approximately twenty (20) miles southeast of Malaga, NM. This spill site is in Unit M, Section 13, Township 25S, Range 31E, Latitude 32.123831 Longitude -103.73753499, Eddy County, NM. A Location Map can be found in Figure 1.

Based upon the New Mexico Office of the State Engineer (C-04618-POD1) well water data, depth to the nearest groundwater in this area is greater than 55 feet below grade surface (bgs), located approximately 1.24 miles away from this release area. According to the United States Geological Survey (USGS 320932103443801 25S.31E.02.23441) well water data, depth to the nearest groundwater in this area is 390 feet bgs, located more than 2 miles away from this release area. See Appendix A for referenced water surveys and water-related maps.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is made up of Eolian and piedmont deposits. Interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits. The soil in this area is made up of Berino complex, 0 to 3 percent slopes, eroded according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage courses in this area are well-drained. There is a low potential for karst geology to be present around the Cotton (Figure 3). A Topographic Map can be found in Figure 2.

#### Release Information

**nAB1908044051:** On March 7, 2019, The dump valve on a 2-phase separator failed to open and sent fluid to the gas scrubber separator. The dump valve on the gas scrubber was seized closed resulting in the separator swamping and sending fluid out the flare. Affected area 72'x17'x1/4". The release occurred at the flare, there is no secondary containment around the flare, a vacuum truck was dispatched to recover any standing fluids. Approximately 4 barrels (bbls) of crude oil and 9.8 bbls of produced water were released. Approximately 2 bbls of crude oil and 7 bbls of produced water were recovered.

#### Countermeasures due to Remediation Closure Report Denied

On March 26, 2021, the NMOCD denied the remediation closure report citing:

"The OCD has rejected the submitted *Application for administrative approval of a release notification and corrective action* (C-141), for incident ID (n#) nAB1908044051, for the following reasons:

- **When nearby wells are used to determine depth to groundwater, the wells should be no further than ½ mile away from the site, and data should be no more than 25 years old, and well construction information should be provided. If evidence of depth to ground water within a ½ mile radius of the site cannot be provided, impacted soils will need to meet Table 1 Closure Criteria for ground water at a depth of 50 feet or less.**

- All off pad areas must contain a minimum of 4 feet non-waste containing uncontaminated, earthen material with chloride concentrations less than 600 mg/kg. In the pasture area, 4 feet below the ground surface, soil contamination limits revert back to Table 1 "Closure Criteria for Soils Impacted by a Release" included in the spill rule <http://164.64.110.134/parts/title19/19.015.0029.html>

The rejected C-141 can be found in the OCD Online: Permitting - Action Status, under the Application ID: 16106. Please review and make the required correction(s) prior to resubmitting. If you have any questions why this application was rejected or believe it was rejected in error, please contact me prior to submitting an additional C-141."

On May 10, 2023, Pima mobilized personnel and equipment to the site to reassess the release area and completely delineate vertically and horizontally. The impacted area measures approximately 3,766 square feet and remediation activities were performed in October and December of 2020, according the previously denied closure report located in the OCD Online: Permitting – Action Status, under the Application ID: 16106. Samples were collected from 5 different sample points on the pad from depth intervals of 1', 2', 3', and 4' bgs. Two of the sample points were advanced to 5' bgs. Samples were collected from 3 different sample points in the pasture from depth intervals of 1' and 2' bgs. Samples were then collected from 8 different sample points around the edge of the release area, which were each composite samples consisting of 0', 1', 2', 3', and 4' depths bgs. The samples were immediately put on ice, jarred, and delivered to Envirotech Labs for official testing. All samples were analyzed for all constituents listed on Table 1 19.15.29.12 NMAC. The results of this sampling event can be seen in the following data table. An Updated Delineation Map can be found in Figure 4.

With the depth to ground water at this release area being defined as less than 50 feet bgs, contamination over the regulatory limits was found at the S-3 sample point.

On May 6, 2024, Pima personnel returned to the site to complete the assessment of the pasture area. Verification was needed that the top 4 feet of soil contained non-waste, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg. The three sample points from the previous sampling event were each advanced to depths of 3' and 4' bgs. The samples were immediately put on ice, jarred, and delivered to Envirotech Labs for official testing. All samples were analyzed for all constituents listed on Table 1 19.15.29.12 NMAC. The results of this sampling event can be seen in the following data table.

On June 28, 2024, Pima and the Devon construction department mobilized personnel and equipment to the site to excavate the area surrounding sample point S-3. An area measuring approximately 234 square feet was flagged then excavated utilizing mechanical excavation means to a depth of 3.5' bgs. After Devon submitted a 48-hour sampling notification, OCD Online: Permitting – Action Status, under the Application ID: 357729 (Appendix C), one confirmation composite base sample was collected from the base of the excavation and one confirmation composite wall sample was collected from the walls of the excavation. Furthermore, because the surface in the pasture has not been tested, 3 more confirmation composite samples were collected from the S-6, S-7, and S-8 sample points. After collection, each sample was immediately put on ice, jarred, and delivered to Envirotech Labs for official testing. All samples were analyzed for all constituents listed on Table 1 19.15.29.12 NMAC. The results of this sampling event can be seen in the following data table. Complete Laboratory Reports can be found in Appendix E. Photographic Documentation can be found in Appendix D. All previously submitted lab data and remediation activities can be found in the denied closure report at OCD Online: Permitting – Action Status, under the Application ID: 16106.

Based on these lab results, the contaminant levels for all samples collected are under the regulatory limits according to the <50' depth to groundwater section of Table 1 19.15.29.12 NMAC. This excavation sufficiently removed all contaminated soil, which was hauled to R360, an NMOCD-approved disposal facility. Clean, fresh backfill material was brought in to backfill the excavation. The area was repacked and back dragged to match the surrounding pad.

A Remediation Closure Report was submitted to the OCD on July 12, 2024, and was approved on August 21, 2024 (Permitting - Action Status, under the Application ID: 363599)

Pima returned to the Cotton on November 12, 2025, to collect two composite backfill samples from the area that was previously excavated and backfilled with clean material. The results of this sampling event can be seen in the following data table. A complete Laboratory Report can be found in Appendix E.

**Reclamation Activities**

Seeding will be completed in April 2026. Devon personnel will monitor vegetative growth to ensure the reclamation activities performed were sufficient. Monitoring will include inspections conducted at least semi-annually until revegetation is considered complete. The inspections will include monitoring and treating the reclamation for unauthorized traffic, erosion, and invasive or noxious weeds. When it has been determined that vegetation has been established that reflects pre-disturbance vegetation cover with a total percent plant cover of greater than 70% of pre-disturbance area levels, excluding invasion or noxious weeds, a final revegetation report will be submitted for review/approval.

**Closure Request**

Devon has met all applicable closure requirements outlined in 19.15.29.12 NMAC and respectfully submits this Reclamation Closure Report for approval. Once NMOCD approves the Reclamation Report, revegetation plan will be submitted for approval.

**MAP INFORMATION**

The soil surveys that comprise your AOI were mapped at 1:20,000.

**Warning:** Soil Map may not be valid at this scale.  
Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
Web Soil Survey URL:  
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico  
Survey Area Data: Version 19, Sep 7, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

**Summary:**

*chensley (3/26/2021)*, When nearby wells are used to determine depth to groundwater, the wells should be no further than ½ mile away from the site, and data should be no more than 25 years old, and well construction information should be provided. If evidence of depth to ground water within a ½ mile radius of the site cannot be provided, impacted soils will need to meet Table 1 Closure Criteria for ground water at a depth of 50 feet or less.

*chensley (3/26/2021)*, All off pad areas must contain a minimum of 4 feet non-waste containing uncontaminated, earthen material with chloride concentrations less than 600 mg/kg. In the pasture area, 4 feet below the ground surface, soil contamination limits revert back to Table 1 "Closure Criteria for Soils Impacted by a Release" included in the spill rule <http://164.64.110.134/parts/title19/19.015.0029.html>

*With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.*

**Initial Response**

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.*

The source of the release has been stopped	<b>True</b>
The impacted area has been secured to protect human health and the environment	<b>True</b>
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	<b>True</b>
All free liquids and recoverable materials have been removed and managed appropriately	<b>True</b>
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
