## **Executive Summary**

Devon Energy Production Company, LP (Devon) retained Vertex Resource Services Inc. (Vertex) to complete a reclamation closure for the Rattlesnake Federal Unit #001 located on federal land in Unit B, Section 26, Township 26 South, Range 34 East (hereafter referred to as “site”). The site visit was conducted on July 7, 2025.

The site was remediated to reclamation criteria at the time of the incident then backfilled with clean locally sourced material. A sample of the backfill was submitted for laboratory analysis, analyzed for contamination, and found to be below the strictest criteria. The soil quality of the backfill was tested and compared to the soil quality in the surrounding undisturbed pastureland. The soil samples were field tested for pH, nitrogen, phosphorous, and potassium. Results showed samples had comparable nutrient concentrations as the pastureland control.

## 1.0 Introduction

Devon Energy Production Company, LP retained Vertex Resource Services Inc. (Vertex) to complete a reclamation closure for the Rattlesnake Federal Unit #001 located on federal land in Unit B, Section 26, Township 26 South, Range 34 East (hereafter referred to as "site").

This document provides a description of the site, summary of the previous environmental work, and details of the fulfillment of the reclamation criteria for incidents nKJ1600727914 and nOY1711838821.

## 2.0 Site Evaluation

The site had been previously excavated to reclamation criteria by Vertex. The Remediation Closure Report was accepted by New Mexico Oil Conservation Division on May 9, 2025. The release area occurred on the former production pad (Figures 1 and 2).

## 3.0 Reclamation Compliance

### 3.1 Backfill Sample

The location was originally backfilled upon the completion of remediation. A sample of the backfill was collected on December 5, 2024 and analysed for contaminants regulated in *New Mexico Administrative Code* 19.15.29.12 Table 1 by Envirotech, Inc. Laboratory analysis of the original backfill material determined that it did not meet the applicable reclamation standards and the material was subsequently removed from the site. Replacement backfill was imported and sampled on January 14, 2025. Analytical testing performed by Cardinal Laboratories confirmed that the new material complied with the required reclamation specifications (Appendix B).

### 3.2 Production Pad Decommission

The production pad has been decommissioned with all related oil and gas production equipment removed from the location and the former caliche production pad ripped. The rip area covered the incidents and contoured them to match the surrounding area. The reclamation plan for the production pad will be submitted in an independent report from this reclamation closure of the incidents.

### 3.3 Backfill Quality in the Former Production Pad

One backfill sample from each incident was analyzed for soil quality, with nearby historically undisturbed pastureland serving as the control reference. The three samples were collected and field-tested for pH, nitrogen, phosphorus, and potassium concentrations.

The pH was evaluated using a pH indicator and categorized as alkaline, neutral, or acidic. Nutrient concentrations for nitrogen, phosphorus, and potassium were assigned qualitative rankings of very low, low, medium, or high based on optical density. These rankings were standardized by placing the vials against a white background and referencing a color chart. Additionally, visual comparisons of sample opacity were used to assess relative nutrient concentrations between the backfill and control samples.

Results indicated that the PH of the backfills were slightly alkaline while the pastureland control was neutral. Nitrogen levels in both the northern and southern backfill areas were classified as very low, consistent with the very low nitrogen content observed in the pastureland control. Phosphorus levels in the backfills were high, compared to medium in the pastureland. Potassium concentrations were medium in both the backfill and the pastureland samples, indicating similarity (Appendix A).

Based on these results, the nutrient profile of the backfill material is generally comparable to that of the surrounding undisturbed pastureland, supporting its suitability for reclamation use (Appendix B).

### **3.4 Regrowth in the Former Production Pad**

The former production pad release areas are mostly void of vegetation. The major species present were native grasses and flowers. The surrounding undisturbed pastureland was primarily composed of sparsely populated Honey Mesquite with interspersed native flora. The while the flora does not necessarily match the surrounding landscape, mesquite-dominated landscapes are often a result of overgrazing or a late-stage succession, suggesting the clean nutrient rich topsoil may be being naturally revegetated by the interspersed flora in the pastureland.

## **4.0 Revegetation Plan and Monitoring Program**

The seeding of the incidents, per the landowners' guidelines, will occur as a part of the reclamation of the decommissioned production pad. Post seeding, bi-annual inspections will be conducted during the growing season to monitor site progression and assess the need for any additional best management practices (BMPs). Inspections will include photographs of the site and BMPs implemented.

### **4.1 Final Assessment**

During the bi-annual inspections, if site conditions are at or nearing background conditions, a final revegetation report will be completed. The report will provide a summary of restoration work performed, a summary and interpretation of monitoring data collected, and interpretation of historical monitoring data, if applicable.

## **5.0 Reclamation Closure Request**

Vertex Resource Group requests on behalf of Devon Energy that Reclamation Closure is accepted for incident nKJ1600727914, nOY1711838821.

**NITROGEN, PHOSPHORUS & POTASH TESTS**  
 Fill a clean jar or can with 1 part soil and 5 parts water. Thoroughly shake and settle together for at least one minute and then allow the mixture to stand and settle (30 minutes to 24 hours, depending on soil). If the soil is very sandy, it will settle out faster than a coarse sandy soil. The clarity of the solution will not affect the test.

Is this a gas only submission (i.e. only significant Mcf values reported)	<b>No, according to supplied volumes this does not appear to be a "gas only" report.</b>
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	<b>No</b>
Reasons why this would be considered a submission for a notification of a major release	<i>Unavailable.</i>

*With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.*

**Initial Response**

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.*

The source of the release has been stopped	<b>True</b>
The impacted area has been secured to protect human health and the environment	<b>True</b>
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	<b>True</b>
All free liquids and recoverable materials have been removed and managed appropriately	<b>True</b>
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment.
