The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True

Remediation Closure Request

Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.

Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	6498
What was the total volume (cubic yards) remediated	672
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	0
What was the total volume (in cubic yards) reclaimed	0
Summarize any additional remediation activities not included by answers (above)	The leak area near SP1 and SP2 (RED shade on diagram) was excavated to a depth of 3 feet. The leak area near SP3 - SP8 (GREEN shade on diagram) was excavated to a depth of 2 feet. OXY will collected sidewall and confirmation samples every 300 square feet.

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

rhamlet	The Remediation Closure Report is Approved. This report was approved on the basis that the release was remediated to the strictest closure criteria standard in Table 1 of the OCD Spill Rule. Future reports will need to include a site characterization summary detailing any key environmental receptors impacted by the release (karst, wetland, 100-year floodplain, etc.). Also, the distance from the release area to the nearest well utilized for depth to groundwater determination. Finally, based on the site characterization, outlines which NMOCD Table 1 Closure Criteria are applicable for the release area.	2/26/2026
rhamlet	The "Remediation Specifications" section of the report says, "OXY will collected sidewall and confirmation samples every 300 square feet." The OCD Spill Rule states, Alternately, without division approval, the responsible party may elect to perform a composite and grab sample plan of the remediated area where each composite sample is not representative of more than 200 square feet." I'm assuming OXY mistakenly included this on the report. Please, correct these issues on future reports so they aren't denied.	2/26/2026
