**Re: Reclamation and Revegetation Report and Restoration Complete Request
NIMITZ MDP1 13 1 Federal Com #311H
Incident Number nAPP2400330251
Eddy County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Oxy USA Inc. (Oxy), has prepared the following *Reclamation and Revegetation Report and Restoration Complete Request (Report)* for the NIMITZ MDP1 13 1 Federal Com #311H (Site). The *Report* documents the Site history, reclamation activities, and vegetation assessment activities completed at the Site. Based on the findings included in this *Report*, Oxy is respectfully requesting Restoration Complete Status for this Site.

BACKGROUND

The Site is located in Unit D, Section 24, Township 24 South, Range 30 East, in Eddy County, New Mexico (32.209823°, -103.838935°) and is associated with oil and gas exploration and production operations on Federal land managed by the Bureau of Land Management (BLM)

On December 31, 2023, a flowline rupture resulted in the release of approximately 50 barrels (bbls) of crude oil and 10 bbls of produced water into the surrounding pasture. Approximately 20 bbls of crude oil and 5 bbls of produced water were recovered. Oxy reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Notification of Release (NOR) Form on January 3, 2024. The release was assigned Incident Number nAPP2400330251.

Delineation and excavation of impacted soil was completed at the Site between March 2024 and May 2024. The final excavation extent measured approximately 25,752 square feet. A total of approximately 2,634 cubic yards of impacted soil were removed during excavation activities. Based on the delineation and excavation soil sample analytical results, a *Closure Report* was submitted to the NMOCD on June 20, 2024. The NMOCD approved the *Closure Report* on June 27, 2024. Additional details regarding the release, Site Characterization, delineation and excavation activities, and soil sample analytical results can be referenced in the approved *Closure Report*, included as an attachment in this report. Remediation of the release was completed in accordance with Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC).

RECLAMATION ACTIVITIES

Upon completion of excavation activities and receipt of final laboratory analytical results, the excavation was backfilled with locally procured soil and the disturbed area was restored to its original condition. The excavation extent and reclamation area are shown on the attached Figure 1. Photographs of the current Site conditions are provided in Appendix A.

One representative 5-point composite sample (BS01) was collected from the topsoil backfill material on June 16, 2025. The backfill soil sample was transported under strict chain-of-custody procedures to Cardinal Laboratories in Hobbs, New Mexico, for analysis of the following constituents of concern (COCs): total petroleum hydrocarbons (TPH)—gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following Standard Method 4500.

Laboratory analytical results for the backfill soil sample confirmed compliance with NMOCD requirements for the reclaimed area to contain non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 milligrams per kilogram (mg/kg) and TPH concentrations less than 100 mg/kg. The laboratory analytical results are summarized in the attached Table 1 and the complete laboratory analytical report is included as Appendix B.

The reclaimed area was drill seeded during June 2024, with the below Pecos District BLM seed mix for shallow sand and sandy, SD-3 Ecological Site. The seed was applied at the below rate specified in pounds of pure live seed (PLS) per acre.

Species/Cultivar	PLS/Acre
Black grama (<i>Bouteloua eriopoda</i>)	3.0
Sideoats grama (<i>Bouteloua curtipendula</i>)	2.0
Sand dropseed (<i>Sporobolus cryptandrus</i>)	1.5
Desert Globemallow (<i>Sphaeralcea ambigua</i>)	1.0
Croton (<i>Croton</i> spp.)	1.0

Photographs of the current Site conditions are provided in Appendix A.

VEGETATION ASSESSMENT ACTIVITIES

On August 5, 2025, Ensolum personnel completed a Site inspection to assess revegetation progress utilizing the Line-Point Intercept (LPI) method. The LPI method was used to evaluate the vegetative cover across the reclaimed area in comparison to adjacent undisturbed native reference areas. This method was selected to determine whether the reclaimed areas met or exceeded the 70 percent (%) vegetation cover threshold required for final reclamation and revegetation success, as measured against native baseline conditions. At each assessment location, a 50-foot transect line was established within the most representative portion of both the reclaimed area and its corresponding reference site. Vegetation presence was recorded at 1-foot intervals along each transect. If vegetation was absent at a given point, the location was recorded as bare ground (abbreviated as "S"). Global Positioning System (GPS) coordinates for each transect were collected using a GPS receiver and Field Maps application. The location of each LPI transect is presented in Figure 2.

The reclaimed area exhibited 71% vegetative cover and the corresponding native reference site exhibited 89% vegetative cover. This results in a vegetation establishment of 80% vegetative cover,

relative to the reference site. This calculated value exceeds the nominal 70% threshold, and the Site is considered to meet reclamation success criteria based on uniform vegetative cover, the presence of native species, and compliance with the intent of 19.15.29.13.D.(3) NMAC. Tumbleweed was present along the pipeline right-of-way that travels through the Site. The vegetative cover was generally uniform across the Site, and the species present were consistent with the approved seed mix and native to the area. Photographic documentation of the Site inspection is included in Appendix A. The LPI field forms are included in Appendix C.

REVEGETATION APPROVAL REQUEST

Based on the reclamation activities and vegetation assessment activities completed to date, Oxy respectfully requests approval of this *Report* and a status update to *Re-vegetation Report Approved, Restoration Complete* for Incident Number nAPP2400330251.

1.0 INTRODUCTION

1.1 Site Description & Background

Operator:	OXY USA, Inc. (Oxy)
Site Name:	NIMITZ MDP1 13 1 Federal Com #311H
Location*:	Unit D, Section 24, Township 24 South, Range 30 East 32.209823° N, 103.838935° W Eddy County, New Mexico
Property:	Federal land managed by the Bureau of Land Management (BLM)
Regulatory:	New Mexico Energy, Minerals and Natural Resources Department (EMNRD) Oil Conservation Division (OCD)

* - Public Land Survey System (PLSS) Location and Global Positioning System (GPS) coordinates updated to reflect accurate release location pursuant to submission of the New Mexico EMNRD OCD online Notification of Release (NOR).

On December 31, 2023, Oxy had a release of crude oil and produced water at the Site due to a flow line rupture. The flow line was isolated, depressurized, locked, and tagged out. Approximately 50 barrels (bbls) of crude oil and 10 bbls of produced water released onto the ground surface, with approximately 20 bbls of crude oil and 5 bbls of produced water recovered. Oxy reported the release to the New Mexico EMNRD OCD online portal NOR form on January 3, 2024. The release was assigned Incident Number nAPP2400330251.

The **Topographic Map** depicting the location of the Site is included as **Figure 1**, and the **Site Vicinity Map** is included as **Figure 2** in **Appendix A**.

1.2 Project Objective

The primary objective of the closure activities was to reduce chemicals of concern (COC) concentrations in the on-Site soil to be in compliance with the applicable New Mexico EMNRD OCD closure criteria concentrations.

2.0 CLOSURE CRITERIA

The Site is subject to regulatory oversight by the New Mexico EMNRD OCD. In order to address activities related to exempt oil and gas releases, the New Mexico EMNRD OCD references New Mexico Administrative Code (NMAC) 19.15.29 *Releases*, which establishes investigation and abatement action requirements for sites subject to reporting and/or corrective action. Ensolum, LLC (Ensolum) utilized information provided by Oxy, the general Site characteristics, and information available from the New Mexico Office of the State Engineer (OSE) and the New Mexico EMNRD OCD Imaging database to

determine the appropriate closure criteria for the Site. Supporting documentation and figures associated with the following bullets are provided in **Appendix B**, and included as **Figure 4** in **Appendix A**.

- No exploratory water wells were identified within a 0.5-mile radius of the Site on the OSE Water Rights Reporting System (WRRS) database. However, there is one well record reported within 0.62-miles of the Site (C-04575-POD1) that was installed in 2022 to a depth of 105 feet below ground surface (bgs) as a temporary well, with no groundwater encountered.
 - On January 22, 2024, Ensolum, on behalf of Oxy, requested a depth to water (DTW) Closure Criteria Variance Request to utilize the OSE WRRS well C-04575-POD1. Due to the regional depth to groundwater being greater than 100 feet bgs and the Site being in a low karst potential area, the Closure Criteria Variance Request to reflect groundwater >100 feet as shown in Table 1 of 19.15.29.12 NMAC for any off-pad remediation of soils greater than 4 feet bgs was granted by the New Mexico EMNRD OCD on January 23, 2024.
- The Site is not located within 300 feet of a New Mexico ENMRD OCD-defined continuously flowing watercourse or significant watercourse.
- The Site is not located within 200 feet of a lakebed, sinkhole, or playa lake.
- The Site is not located within 300 feet from a permanent residence, school, hospital, institution, or church.
- According to the OSE WRSS database there are no private, domestic freshwater wells used by less than five households for domestic or stock water purposes identified within 500 feet of the Site.
- According to the OSE WRSS database there are no freshwater wells identified within 1,000 feet of the Site.
- The Site is not located within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to New Mexico Statute Annotated (NMSA) 1978, Section 3-27-3.
- The Site is not located within 300 feet of a wetland.
- Based on information identified on the New Mexico Mining and Minerals Division’s Geographical Information System (GIS), Maps and Mine Data database, the Site is not located within an area overlying a subsurface mine.
- Based on the Karst Occurrence Potential (.kmz) provided by the BLM, the Site is not located within an unstable area, also referred to as high karst potential.
- The Site is not located within a 100-year floodplain.

Based on the identified siting criteria, cleanup goals for soils remaining in place at the Site include:

Closure Criteria for Soils Less Than 4 ft bgs Impacted by a Release			
Minimum depth below any point within horizontal boundary of the release to groundwater less than 10,000 mg/l TDS	Constituent	Method	Limit
≤ 50 feet	Chloride	EPA 300.0 or SM4500 Cl B	600 mg/kg

	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	100 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

3.0 SOIL REMEDIATION ACTIVITIES

On December 31, 2023, Oxy had a release of crude oil and produced water at the Site due to a flow line rupture. The flow line was isolated, depressurized, locked, and tagged out. Approximately 50 bbls of crude oil and 10 bbls of produced water released onto the ground surface, with approximately 20 bbls of crude oil and 5 bbls of produced water recovered.

On March 1, 2024, Ensolum arrived on-Site to collect 64 composite soil samples from the excavation floor (FS-1 through FS-64) and six composite soil samples from the excavation sidewalls (SW-1 through SW-6). Additionally, Ensolum collected 10 delineation soil samples (DS-1 through DS-10) from locations outside the perimeter of the excavation. The excavation floor samples were collected at a depth of 1.5 feet bgs, the excavation sidewall samples were collected at a depth of 0-1.5 feet bgs, and the delineation samples were collected at a depth of 0.25 feet bgs. Based on laboratory analytical data, additional excavation and/or remediation was necessary.

On April 5, 2024, subsequent to completion of additional excavation activities, Ensolum arrived on-Site to collect 32 composite soil re-samples from the excavation floor (FS-2, FS-13, FS-15, FS-16, FS-18, FS-19, FS-24 through FS-32, FS-34 through FS-43, FS-47 through FS-52, and FS-54) at depths ranging from 2 to 3 feet bgs. In addition, Ensolum collected two delineation soil samples (DS-7 and DS-10) from locations outside the perimeter of the excavation, at a depth of 0.5 feet bgs. Based on laboratory analytical data, additional excavation and/or remediation was necessary.

On May 9 and 10, 2024, subsequent to completion of additional excavation activities, Ensolum arrived on-Site to collect 23 composite soil re-samples from the excavation floor (FS-13, FS-18, FS-19, FS-24 through FS-29, FS-34 through FS-42, FS-47, FS-50, FS-51, FS-52, and FS-54) at depths ranging from 4 to 6 feet bgs, and seven composite soil samples from the excavation sidewalls (SW-7 through SW-13) at depths of 0-4 feet bgs. Based on laboratory analytical data, no additional excavation activities or remediation activities were necessary.

The composite soil samples were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), total petroleum hydrocarbons (TPH), gasoline range organics (GRO), diesel range organics (DRO), motor oil/lube oil range organics (MRO), and chloride in accordance with the New Mexico EMNRD OCD Closure Criteria for Soils Impacted by a Release (NMOCD Closure Criteria).

The final excavation area measured approximately 289 feet long and 113 feet wide at the maximum extents, with a depth ranging from 1.5 - 6 feet bgs.

The excavation measured approximately 25,752 square feet in areal extent. A total of 2,643 cubic yards (cy) of impacted soil was removed during the excavation activities. The impacted soil was transported and properly disposed of at the Lea Land Facility located in Hobbs, New Mexico. After completion of confirmation sampling, the excavation was secured with fencing. Backfill of excavation was completed utilizing material purchased locally and recontoured to match pre-existing conditions. A BLM-approved seed mixture was sown into the surface area of the backfill for re-vegetation.

Figure 3 is a map that identifies approximate soil sample locations and depicts the approximate dimensions of the impacted soil and excavation extent with respect to the release (**Appendix A**). Photographic documentation of the field activities is included in **Appendix C**.

4.0 SOIL SAMPLING PROGRAM

Ensolum's soil sampling program from March 1, 2024 through May 10, 2024 included the collection of a total of 119 composite soil samples from 64 locations from the excavation floor (FS-1 through FS-64), 13 composite soil samples from 13 locations from the excavation sidewalls (SW-1 through SW-13), and 12 delineation soil samples from 10 locations outside of the release area and the pipeline repair over excavation extent (DS-1 through DS-10) for laboratory analysis.

The soil samples were collected and placed in laboratory prepared glassware, labeled/sealed using laboratory supplied labels and custody seals, and stored on ice in a cooler. The samples were relinquished to Cardinal Laboratories in Hobbs, New Mexico, under proper chain-of-custody procedures.

5.0 SOIL LABORATORY ANALYTICAL METHODS

The composite soil samples were analyzed for BTEX following United States Environmental Protection Agency (EPA) SW-846 Method 8021B, TPH GRO/DRO/MRO following EPA SW-846 Method 8015M/D, and chloride using SM4500Cl-B.

Laboratory analytical results are summarized in **Table 1** in **Appendix D**. The executed chain-of-custody forms and laboratory data sheets are provided in **Appendix E**.

6.0 DATA EVALUATION

Ensolum compared the benzene, total BTEX, TPH-GRO/DRO/MRO, and chloride concentrations or laboratory sample detection limits (SDLs) associated with the final composite excavation soil samples (FS-1 through FS-64 and SW-1 through SW-13) and the final delineation soil samples (DS-1 through DS-10) for soils left in place at the Site to the NMOCD Closure Criteria.

- Laboratory analytical results indicate benzene concentrations for the final composite soil samples collected from the excavation area and the final delineation samples do not exceed the laboratory SDLs, which are below the NMOCD Closure Criteria of 10 milligrams per kilogram (mg/kg).
- Laboratory analytical results indicated that total BTEX concentrations for the final composite soil samples collected from the excavation area and the final delineation samples do not exceed the laboratory SDLs, which are below the NMOCD Closure Criteria of 50 mg/kg.
- Laboratory analytical results indicated combined TPH-GRO/DRO/MRO concentrations for the final composite soil samples collected from the excavation area and the final delineation soil samples do not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 100 mg/kg.
- Laboratory analytical results indicated chloride concentrations for the final composite soil samples collected from the excavation area and the final delineation soil samples do not exceed the applicable NMOCD Closure Criteria of 600 mg/kg.

Laboratory analytical results are summarized in **Table 1** in **Appendix D**.

7.0 RECLAMATION AND RE-VEGETATION

The release occurred off pad and as such, a reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH was applied to the top 4 feet of the off pad area that was impacted by the release per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation. The following Reclamation Plan addresses reclamation of the off-pad area: Soil in the vicinity of the release include: predominately gravelly fine sandy loam;

- The backfilled areas were seeded utilizing a weed-free seed mix designed by the BLM to meet reclamation standards for this region, which was: Pecos District BLM Seed Mix for Shallow Sand and Sandy, SD-3 Ecological Site;

- The seed mixture was distributed with one of the following methods: push broadcaster seed spreader / tractor operated broadcast seed spreader / drill seeding / other means;
- Application of the seed mixture was at a coverage of either 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method, or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method, whichever was more applicable;
- Erosion control management will potentially include:
 - The placement of wattles in areas with a propensity for high run off rates;
 - Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
 - Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas;
- Backfilling of the excavation utilized locally purchased material and recontoured to pre-existing conditions;
- Seeding was completed during the month of June 2024, during the month(s) when temperatures and precipitation is/are most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost.
- Annual inspections (at a minimum), will take place on the location until revegetation is consistent with local natural vegetation density. The Site will be inspected the following Spring/Fall to assess the success of regrowth. If necessary, an additional application of the BLM-approved pure live seed mixture will be applied as well as any needed BMPs will be installed to support growth and limit erosion.

8.0 FINDINGS AND RECOMMENDATION

- On December 31, 2023, Oxy had a release of crude oil and produced water at the Site due to a flow line rupture. The flow line was isolated, depressurized, locked, and tagged out. Approximately 50 bbls of crude oil and 10 bbls of produced water released onto the ground surface, with approximately 20 bbls of crude oil and 5 bbls of produced water recovered.
- Ensolum's soil sampling program from March 1, 2024 through May 10, 2024 included the collection of a total of 119 composite soil samples from 64 soil sample locations from the excavation floor (FS-1 through FS-64), 13 sidewall soil samples from 13 soil sample locations (SW-1 through SW-13), and 12 delineation soil samples from 10 locations outside of the excavation area (DS-1 through DS-10) for laboratory analysis. The composite floor samples were collected at depths ranging from 1.5 to 6 feet bgs and the sidewall samples were collected at a depths ranging from 0-4 feet bgs. Additionally, the delineation samples were collected outside of the excavation area at a depths ranging from 0.25 to 0.5 feet bgs.
- The primary objective of the closure activities was to reduce COC concentrations in the on-Site soil to be in compliance with applicable NMOCD Closure Criteria for Soils Impacted by a Release using the New Mexico EMNRD OCD's NMAC 19.15.29 *Releases* as guidance.
- The final excavation area measured approximately 113 feet wide and 289 feet long at the maximum extents, with depths ranging from 1.5 to 6 feet bgs.
- Based on laboratory analytical results, the final composite soil samples collected from the excavation floor and sidewalls, and the final delineation samples outside of the impacted area did not exhibit benzene, total BTEX, TPH GRO/DRO/MRO or chloride concentrations above the applicable NMOCD Closure Criteria.
- Once the areas were brought back to original grade, a BLM-approved seed mixture was sown into the surface of the backfill for re-vegetation per the above stated Reclamation Plan.

Based on field observations and laboratory analytical results, no additional investigation or corrective action appears warranted at this time.

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Good morning,

On behalf of Oxy USA Inc, Ensolum, LLC would like to request a Closure Criteria Variance for the NIMITZ MDP1 13 1 Federal Com. #171H (Incident ID: nAPP2336151910) and for the NIMITZ MDP1 13 1 Federal Com. #311H (Incident ID: nAPP2400330251), which are roughly 0.15 miles apart from each other.

NIMITZ MDP1 13 1 Federal Com. #171H (Incident ID: nAPP2336151910)

- A flow line rupture resulted in the release of 12 barrels of oil and 41 barrels of produced water. Oxy immediately recovered 3 barrels of oil and recovered 10 barrels of produced water. The Site will be vertically and laterally delineated per NMAC 19.15.29.

NIMITZ MDP1 13 1 Federal Com. #311H (Incident ID: nAPP2400330251)

- A flow line rupture resulted in the release of 50 barrels of oil and 10 barrels of produced water. Oxy immediately recovered 20 barrels of oil and recovered 5 barrels of produced water. The Site will be vertically and laterally delineated per NMAC 19.15.29.

Attached is groundwater research from the area surrounding the release. All nearby USGS and NMOSE wells indicate depth to groundwater greater than 100 feet bgs. The nearest borehole with depth to groundwater data is located 0.62 miles west of each release area and has a recorded total depth of the well at 105 feet bgs with no groundwater encountered from January 2022.

Due to the regional depth to groundwater being greater than 100 feet bgs and the site being in low potential karst area, Ensolum requests a Closure Criteria Variance to reflect groundwater > 100 feet as shown in Table 1 of 19.15.29.12 NMAC for any off-pad remediation greater than 4 feet bgs.

Kelly,

The largest variance confirmation floor sample size that the OCD can currently grant is 400 ft2. The variance is approved for 400 ft2 floor confirmation samples. The release area will still need confirmation sidewall samples representing no more than 200 ft2. Please include this e-mail correspondence in the remediation and/or closure report.

Subject: [EXTERNAL] Sampling Variance Request for NIMITZ MDP1 13 1 Federal Com. #311H (Incident ID: nAPP2400330251)

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

On behalf of Oxy USA, Inc. (Oxy), Ensolum, LLC (Ensolum) requests a variance from the 200 square feet sampling requirement cited in 19.15.29.12 (D)(1)(c). Ensolum requests an alternate of 800 square feet, five-point composite samples collected from the Site. The current excavation extent is approximately 26,236 square feet, which would roughly equal 131 composite samples collected per the 200 square feet sampling requirement. If approved, the 800 square foot variance would decrease the number of samples collected to approximately 33 samples.

Attached is a Site Map depicting the site characterizations for the surrounding area. Previous correspondence and approval from the OCD are attached for the prior variance request regarding a DTW well located approximately 0.62 miles west of the Site documenting the regional depth to groundwater being greater than 100 feet bgs and the site being in low potential karst area.

With the provided information, Ensolum kindly asks that the OCD will acknowledge acceptance of this variance request. If you have any questions, please call or email.

Thank you,

Good Afternoon,

On behalf of Oxy USA Inc, Ensolum, LLC would like to request a 90-day extension for the NIMITZ MDP1 13 1 Federal Com. #311H (nAPP2400330251). Excavation activities are currently being conducted at the Site and require more time due to multiple aboveground flowlines within the vicinity of the release hindering the use of mechanical equipment for digging purposes. I have attached a few representative photos of the area. Please let us know if you have any questions.

Thank you,

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	12/31/2023
On what date will (or did) the final sampling or liner inspection occur	05/10/2024
On what date will (or was) the remediation complete(d)	05/10/2024
What is the estimated surface area (in square feet) that will be reclaimed	25752
What is the estimated volume (in cubic yards) that will be reclaimed	2643
What is the estimated surface area (in square feet) that will be remediated	25752
What is the estimated volume (in cubic yards) that will be remediated	2643

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed. The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
