re: 2026 1<sup>st</sup> Quarterly Summary Report  
TNM SPS-11  
NMOCD No App2109538554 SRS # TNM SPS-11

Dear Ms. Hudgens:

Roux Associates, Inc. (Roux) is pleased to submit the attached quarterly summary report, which summarizes the 1<sup>st</sup> quarter activities at the TNM SPS-11 Site for SRS# TMN SPS-11. These groundwater monitoring activities are reported annually to the New Mexico Oil Conservation Division (NMOCD), Incident Number APP2109538554, GW-0140.

### 1. Project Background Information

The 2025 Annual Groundwater Monitoring Report was completed and submitted to the NMOCD for their review and approval.

The recommendations outlined in the 2025 Annual Groundwater Monitoring Report are presented below:

- Continue groundwater sampling according to the sampling schedule from all onsite monitor wells which do not exhibit measurable thickness of PSH. Groundwater samples will be submitted for BTEX and PAH analysis using methods 8260D and EPA SW846-8270C, 3510, respectively. PAH analysis will be performed on the applicable wells per NMOCD requirements.
- Continue to evaluate benzene concentrations to determine if the dissolved-phase plume is delineated, stable, and/or decreasing in monitor wells at the Site.
- Low flow sampling from select monitor wells (upgradient, within, and downgradient of the affected groundwater) and analyze for geochemical (natural attenuation) parameters, including field testing for geochemical parameters, such as DO, NO<sub>3</sub><sup>-</sup>, SO<sub>4</sub><sup>2-</sup>, and Fe<sup>2+</sup>.
- Include analysis for chlorides and total dissolved solids (TDS) during one round of low flow sampling to address an NMOCD comment on the originally submitted Stage 2 Abatement Plan and further characterize Site groundwater conditions.
- Continued evaluations by MKTT to demonstrate stable to decreasing benzene trends for each well with detections.
- Continue PSH recovery activities to generate sufficient data to support initiation of MKTT and evaluate PSH thickness trends at wells with detections, including assessment of PSH depletion and potential migration.
- Plug and abandon monitor wells with limited or absent water columns (MW-10, MW-16, MW-17, MW-18, MW-19, MW-21, MW-23, MW-24, MW-25, MW-26, MW-29, MW-30, MW-31, MW-33, and MW-38) and install select replacement monitor wells (MW-10, MW-17, MW-18, MW-

4185.0009H104/LR

Karolanne Hudgens

2

19, MW-24, MW-26, and MW-33) to better intersect the saturated zone, improve downgradient groundwater monitoring coverage, and confirm dissolved-phase plume stability.

## 2. 1<sup>st</sup> Quarter Summary

The 1<sup>st</sup> quarter groundwater sampling event took place on March 18, 2026. Groundwater flow during the 1<sup>st</sup> quarter was generally flowing to the southeast and radially around monitor well MW-35 at 0.013 ft/ft (Figure 3A). Well MW-10 was not sampled due to having insufficient groundwater volume for sampling. The summary of analytical results from the March 2026 sampling event are included in this quarterly report.

Groundwater samples were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) by NMWQCC Human Health Standards. A summary of the laboratory analytical results is shown in Table 2 and Figure 4A. Roux can provide a copy of the analytical report upon request.

**MW-4** – During the March 2026 sampling event, PSH was observed during gauging actives, however PSH was not present after development of the monitor well, and therefore a sample was collected. Benzene concentrations exceeded the NMOCD Human Health Standard of 0.01 mg/L with a concentration of 1.44 mg/L. Ethylbenzene exceeded the NMOCD Human Health Standard of 0.75 mg/L with a concentration of 2.02 mg/L, and total xylene exceeded the NMOCD Human Health Standard of 0.62 mg/L with a concentration of 1.44 mg/L. Toluene concentrations were reported below the laboratory method detection limit (MDL).

**MW-6** – BTEX concentrations were reported below the laboratory MDLs.

**MW-7** – During the March 2026 sampling event, PSH was observed during gauging actives, however PSH was not present after development of the monitor well, and therefore a sample was collected. Benzene concentrations exceeded the NMOCD Human Health Standard of 0.01 mg/L with a concentration of 0.891 mg/L. Ethylbenzene exceeded the NMOCD Human Health Standard of 0.75 mg/L with a concentration of 2.06 mg/L and total xylene was detected at a concentration below the NMOCD Human Health Standard. Toluene concentrations were reported below the laboratory MDL.

**MW-9** – BTEX concentrations were reported below the laboratory MDLs.

**MW-11** – During the March 2026 sampling event, PSH was observed during gauging actives, however PSH was not present after development of the monitor well, and therefore a sample was collected. Benzene concentrations exceeded the NMOCD Human Health Standard of 0.01 mg/L with a concentration of 0.456 mg/L. Ethylbenzene and total xylene was detected at a concentration below the NMOCD Human Health Standard. Toluene concentrations were reported below the laboratory MDL.

**MW-14** – BTEX concentrations were reported below the laboratory MDLs.

**MW-26** – BTEX concentrations were reported below the laboratory MDLs.

**MW-28** – BTEX concentrations were reported below the laboratory MDLs.

**MW-34** – BTEX concentrations were reported below the laboratory MDLs.

**MW-35** – BTEX concentrations were reported below the laboratory MDLs.

**MW-36** – BTEX concentrations were reported below the laboratory MDLs.

**MW-40** – BTEX concentrations were reported below the laboratory MDLs.

### 3. PSH Observations

PSH is currently present in MW-2, MW-4, MW-7, MW-10, and MW-11 as of the March 16<sup>th</sup> gauging and recovery event with thicknesses ranging from a sheen to 1.02 ft of PSH. A total of approximately 8.45 gallons of PSH and 82.30 gallons of groundwater were recovered during the first quarter of 2026.

Roux conducted groundwater gauging of monitor wells and PSH recovery bi-weekly to monitor groundwater behavior and PSH trends. Groundwater elevation data supporting these observations are presented in Table 1 and Appendix 1: Table 1.

### 4. Mann-Kendall

Mann-Kendall statistical analysis and trends will be calculated at the end of the year to determine plume stability and trends for the site.

### 5. Schedule for 2026

The first groundwater gauging and sampling event was conducted on March 18, 2026.

Roux will continue groundwater sampling from wells quarterly during the 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup> quarters. Annual groundwater sampling of all wells will be conducted during the 2<sup>nd</sup> quarter sampling event. Annual sampling will include sampling for BTEX and PAH at applicable wells. All appropriate notifications will be completed prior to groundwater sampling activities. Pace Analytical laboratories will be utilized for sample analysis.

If you have any questions or concerns regarding this submittal, please contact Kathleen Buxton via telephone at (979) 997-2338 or via email at [kbuxton@rouxinc.com](mailto:kbuxton@rouxinc.com).

Sincerely,

**ROUX ASSOCIATES, INC.**

Notes: ND = Not Detected

Elevations of the potentiometric surface were calculated using a PSH specific gravity of 0.85 gram/cubic centimeter (g/cc).

As of October 25, 2025, Roux was retained by Plains for consulting services for the Site. Historical gauging and analytical data prior to October 25, 2025 were collected and interpreted by previous environmental consultants.

Notes: ND = Not Detected  
 Elevations of the potentiometric surface were calculated using a PSH specific gravity of 0.85 gram/cubic centimeter (g/cc).  
 As of October 25, 2025, Roux was retained by Plains for consulting services for the Site. Historical gauging and analytical data prior to October 25, 2025 were collected and interpreted by previous environmental consultants.
