UPSET VENTING EVENT SPECIFIC JUSTIFICATIONS FORM

API #: 30-025-45960

Operator: OXY USA, Inc.

Well Name: Avogato 30-31 State Com 24H

Vent Date: 04/03/2026

Duration of Event: 1 Hour 28 Minutes

MCF Vented: 54

Start Time: 04:10 PM

End Time: 05:38 PM

Cause: Venting > Well Integrity Test

Method of Vented Gas Measurement: Allocated Vent Calculation

1. Reason why this event was beyond Operator's control:

In this instance, a scheduled well tubing integrity test was conducted to evaluate the condition of the tubing and verify the safety and reliability of the well, ensuring there were no leaks present. The vented amount was limited because the tube was not fully depressurized to zero, in order to minimize venting.

2. Steps Taken to limit duration and magnitude of venting or flaring:

In this instance, a scheduled well tubing integrity test was conducted to evaluate the condition of the tubing and verify the safety and reliability of the well, ensuring there were no leaks present. The vented amount was limited because the tube was not fully depressurized to zero, in order to minimize venting.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

No corrective actions are needed to prevent venting during a well tubing integrity test, as venting is essential for removing trapped air or gas from the tube. This ensures accurate pressure readings for leak detection, prevents over-pressurizing the tube casing, and allows for safe release of pressure after testing.
