- **Date and time that flaring occurs:** 4/18/2026 @ 10:40 am
- **Estimated Volume of flaring: 114.45** mcf, 12 hours and 47 minutes estimated
- **Cause and Nature of flaring: On April 18, 2026, the EVLRP facility experienced a flaring event resulting from multiple compressor shutdowns. Compressor #60 initially tripped due to a high lube oil post-temperature shutdown. Shortly thereafter, Compressor #1 shut down on a high coolant outlet temperature. Following restart attempts, Compressor #60 subsequently tripped again on a second-stage rod load high shutdown, later attributed to faulty valves.**
- **Steps taken to limit duration and magnitude of venting: EPN Flare is only used during upsets and emergencies. The flare is operated with best management practices during flaring events. This event was beyond operations control.**
- **Corrective actions taken to eliminate the cause and recurrence of: Operations shut in the RWA wells, completed repairs and restarted the compressors.**
