Introduction

Standard Safety and Supply (Standard) on behalf of OXY USA INC. (Oxy) is pleased to submit this Site Characterization and Deferral Request. Based on the Notification of Release (nAPP2523751217) the spill was discovered on August 25th, 2025, and was attributed to equipment failure. There was an approximate net loss of two (2) barrels (bbl) of crude oil and two (2) bbl of produced water. During remedial activities there was an additional spill from the facility. Based on the Notification of Release (nAPP2530734932), the spill was discovered on November 2nd, 2025, and was attributed to equipment failure. There was an approximate net loss of ten (10) bbl of produced water. Attachment B: Figure 1 depicts the Site with respect to the nearest town and Figure 2 depicts the topographic features in the area.

Site Characterization

Based on a site characterization desktop review the area is within a Low Karst area. Furthermore, there are no receptors [significant watercourse, lakebed, playa, sinkhole, an occupied residence, school, hospital, institution, church, freshwater spring for domestic or stock watering purposes, other fresh water well/spring, municipal water boundary, wetland, subsurface mine, and/or an unstable area] within the specified distance set forth in the New Mexico Administrative Code 19.15.29.12. The groundwater is estimated to be between fifty-one (51) to one hundred (100) ft below ground surface (bgs). However, since there are no known water wells within the specified half (0.5) mile radius, the following closure criteria will be utilized.

NMAC Closure Criteria Remediation and Reclamation (NMAC 19.15.29.12 & 19.15.29.13)					
depths in feet (ft)	Benzene	BTEX	TPH (GRO-DRO)	TPH (GRO-DRO-MRO)	Chloride
0-Max depth (ft)	10 mg/kg	50mg/kg	---*	100 mg/kg	600 mg/kg
* Value must not exceed TPH (GRP-DRO-MRO) value					

The documentation used to characterize the site can be found in the report under Attachment C: Site Characterization.

Initial Assessment

On September 16, 2025, Standard performed an initial assessment to characterize impacts. Nine (9) horizontal sample points (H-1 to H-9) were collected at surface (0) depth to half a foot (0.5) ft bgs. Six (6) vertical samples points (V-1 to V-6) were collected from surface (0) to two (2) ft bgs in one (1) ft intervals. Soil samples were placed into lab provided containers, onto ice then transported to Eurofins in Carlsbad, New Mexico, for the analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX 8021B), Total Petroleum Hydrocarbons (TPH 8015M) and chloride (SM4500 Cl-B). Proper chain-of-custody was followed during the collection and delivery of the samples to the laboratory. Analytical results indicated that horizontal delineation was achieved, however vertical delineation was not achieved due to TPH impacts identified at the deepest sample interval.

On September 30, 2025, Standard returned to the site to continue with vertical delineation efforts. One (1) vertical sample point (V-3) was re-installed starting at two (2) ft bgs and collected at one (1) ft intervals. Soil samples were submitted to Cardinal for the analysis of BTEX, TPH, and chloride. Analytical results indicated that vertical delineation was achieved.

The delineation data can be found in this report under Attachment A: Table 1 Delineation Assessment Analytical Data Table and the lab report and chain of custody can be found under Attachment E: Laboratory Analytical Method Documentation with Chain-of-Custody.

The delineation sample locations are located under Attachment B: Figure 3 Delineation Assessment Map while photographs of the impacted area are under Attachment D: Photographic Log.

Remedial Action Activities and Confirmation Sampling

Oxy contracted Standard to begin remedial action activities at the Site on October 23, 2025, to remove the impacted soils identified in previous delineation efforts.

On December 5th, 2025, Standard was onsite to perform a confirmation sampling event where eighty (80) base samples (CS-1 to CS-80), nineteen (19) sidewall samples (SW-1 to SW-19) were collected. Analytical results indicated that chloride and TPH impacts were still present at the site.

On January 22nd, 2026, after further excavation an additional eleven (11) sidewall samples (SW-10, SW-12, SW-14, SW-21, SW-25, SW-26, SW-27, SW-30, SW-31, SW-32, and SW-33) and thirteen (13) base samples (CS-5, CS-36, CS-46, CS-47, CS-50, CS-52, CS-53, CS-55, CS-56, CS-58, CS-71, CS-78, CS-80) were recollected and one (1) additional base sample (CS-81) was collected. Analytical results indicated that all samples were below NMOCD closure criteria.

On February 6th, 2026, after further excavation and horizontal expansion of sidewalls, five (5) additional sidewalls were collected (SW-20, SW-23, SW-24, SW-28, SW-29); eleven (11) base samples (CS-2, CS-3, CS-9, CS-10, CS-16, CS-17, CS-18, CS-27, CS-28, CS-31, and CS-32) were recollected and seven (7) additional base samples (CS-82 through CS-88) were collected. Analytical results indicated that all samples were below NMOCD closure criteria.

Soil samples were jarred in lab provided containers, placed on ice then transported under proper chain-of-custody to Cardinal Laboratories in Hobbs, New Mexico for the analysis of BTEX, TPH, and chloride. Analytical results indicated that all final samples were below closure criteria for the Site.

Soil samples were collected as a five-point composite and represented an area no greater than 200 square feet. There was an estimated fourteen hundred and sixty-nine (1,469) cubic yards of impacted material that was excavated and transported off to the closest approved disposal facility.

After all confirmation and deferral samples were collected and the liner in the secondary containment was repaired and pressure-washed, Standard performed a liner inspection on May 29th, 2026. The liner was clear of any fluids, staining or contaminants. The liner integrity was intact and had no rips, tears, cracks, holes, or other forms of unrepaired damage. During previous liner inspections, liner damage was observed on March 25th, 2026, and subsequently repaired. Standing rainwater was observed during inspections conducted on May 13th, 2026, and May 26th, 2026. Photographs taken during the liner inspections can be found under Attachment D: Photographic Log.

The confirmation sampling data can be found in this report under Attachment A: Table 2 Confirmation Sampling Analytical Data Table and the lab report and chain of custody can be found under Attachment E: Laboratory Analytical Method Documentation with Chain-of-

Custody. The confirmation sample locations are located under Attachment B: Figure 4 Confirmation Sampling Map while photographs of the excavation area and inspected secondary lined containment are under Attachment D: Photographic Log.

Deferral Request

On February 26th, 2026, February 27th, 2026, and March 9th, 2026, three (3) vertical delineation sample points (i.e., D-1 through D-3) were installed with a hand auger in areas inaccessible for further excavation to accurately calculate the cubic yardage of remaining contaminants. All vertical samples were fully delineated. The deferral sampling data can be found in this report under Attachment A: Table 3 Deferral Samples Analytical Data Table and the lab report and chain of custody can be found under Attachment E: Laboratory Analytical Method Documentation with Chain-of-Custody.

On behalf of the operator, Standard respectfully requests for deferral of remediation within the direct vicinity of production and storage equipment including tank batteries and associated flowlines. The contamination is fully delineated vertically and horizontally in sample points D-1 through D-3 at depths between surface (0) and four (4) ft bgs and does not cause an imminent risk to human health, the environment, or ground water. The remaining affected soil is completely confined to the areas where remediation would cause significant deconstruction of the facility. The deferral sample locations are located under Attachment B: Figure 5 Deferral Map while photographs of the deferral areas are under Attachment D: Photographic Log.

The remaining soil impacts consisting of approximately three (3,000) square feet and three hundred and eighty-nine (389) cubic yards will be addressed during the facility decommissioning phase in accordance with 19.15.29.12 and 19.15.29.13 NMAC, once the site is no longer being used for oil and gas operations. A closure report detailing the final remediation and reclamation efforts and following confirmation sampling activities will be submitted to NMOCD upon the completion of the future work.

Hi Kenny,

I thought these areas were excavated to 2’ as that is what is listed by the lab data. So were they excavated to 3’?

Shelly,

I am so sorry for missing that. It has been quite the Monday at the office. Here is the updated table 2 with the corrected depths for CS-52, CS-53, CS-55, and CS-56

Hi Kenny,

I see that two of the four areas I requested have been addressed. CS 52-53 and CS55-56 are still labeled as 3' excavations but in Table and on Lab data they say they were excavated to 2' depth. Can you confirm and update?

Kind regards,

Shelly

Hi Kenny,

I am reviewing the deferral requests for the above incidents and have noticed excavation depth discrepancies between Table 2 and the Figures provided. If you could, please update whichever one is incorrect to reflect the correct depths and email them to me when corrected that would be appreciated.

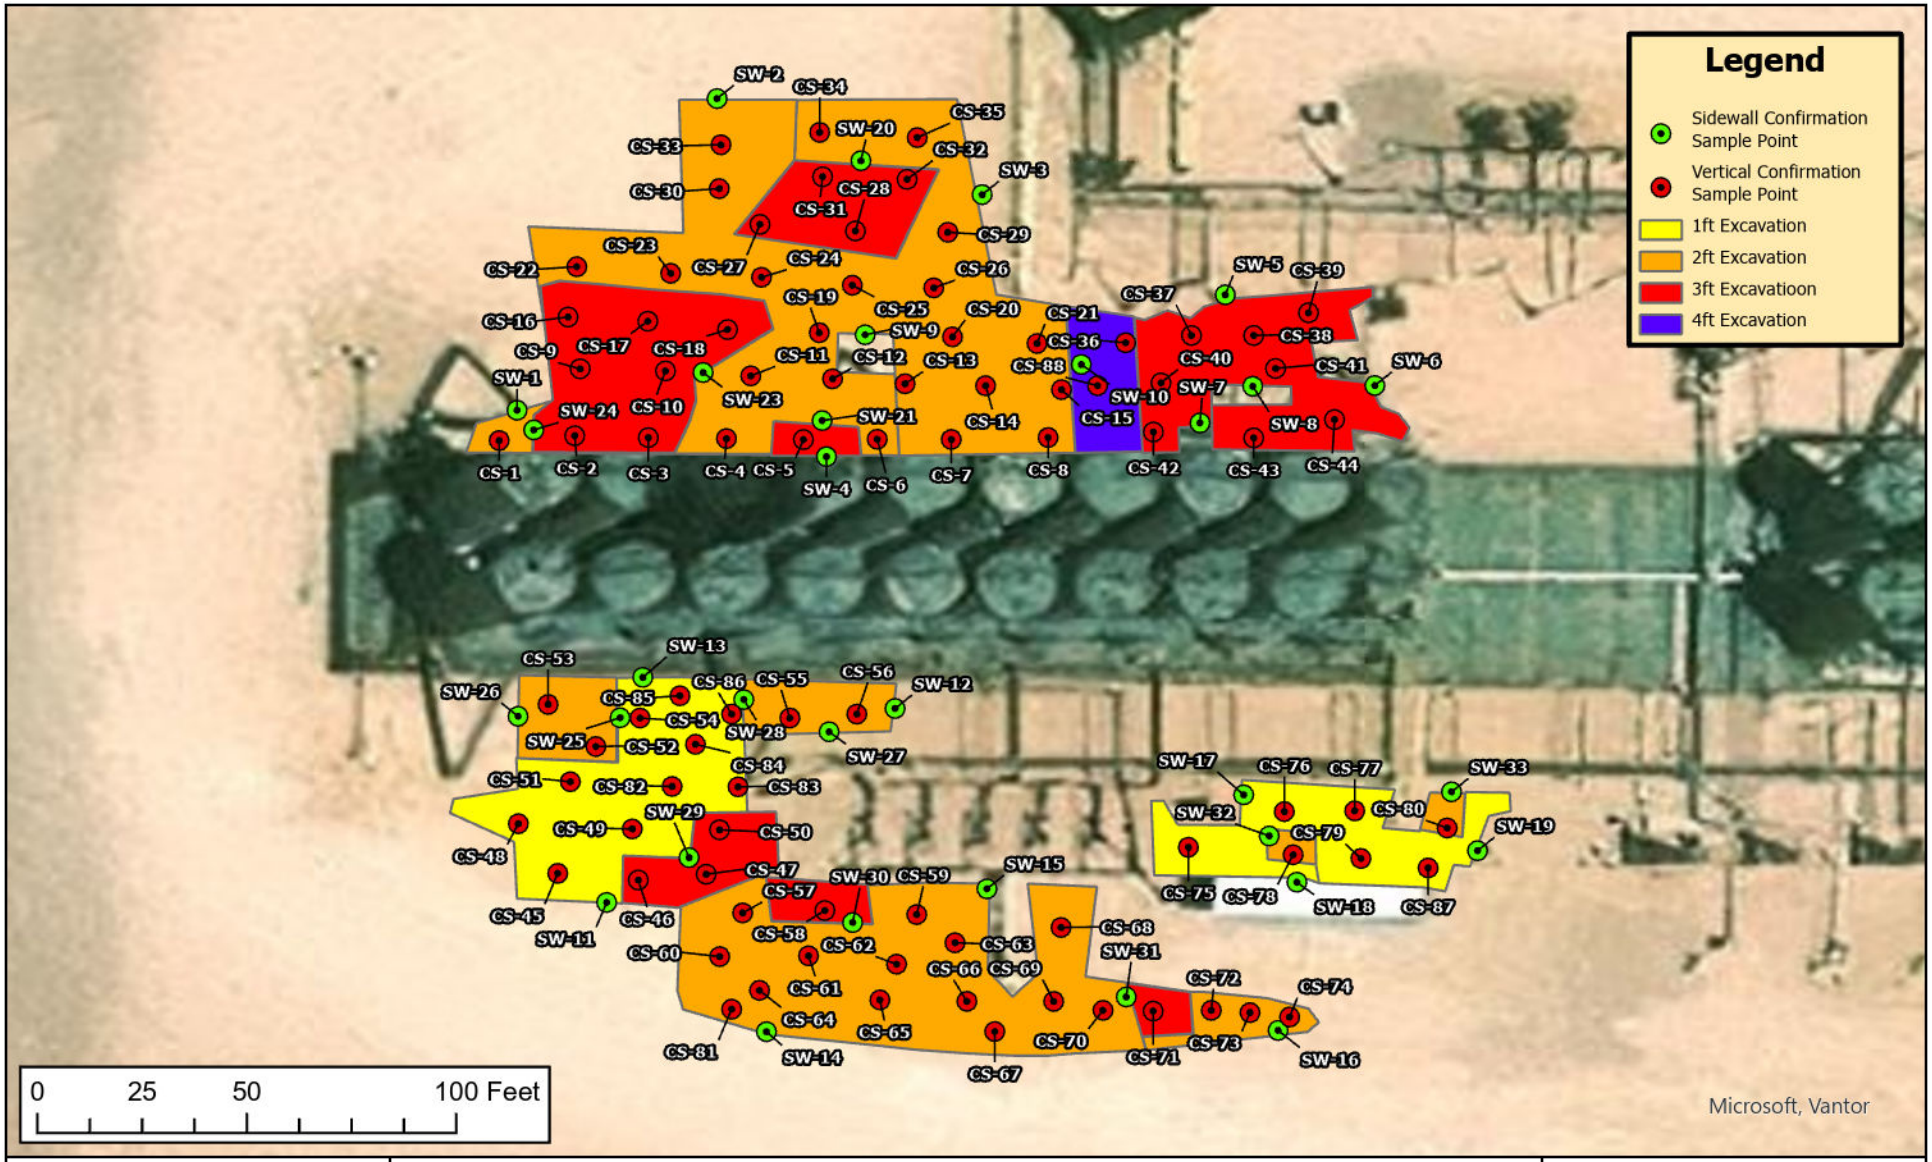

Referring to Figure 4, the 2 ft excavation north of tank battery says it was 1' when referring to all the bottom sample data.

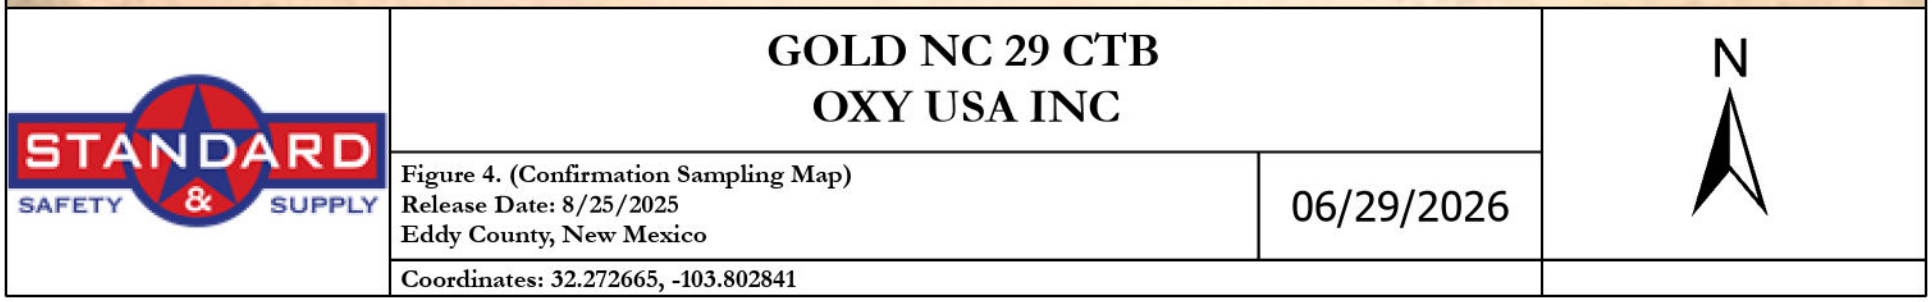

South of the tank battery the locations of CS-52-53 and CS-55-56 are marked as being excavated to 3' however Table data shows excavations of 2' occurring here. In addition, the area marked as a 2' excavation which encompasses samples CS 59-CS 70 is marked as 2' but should be 1'.

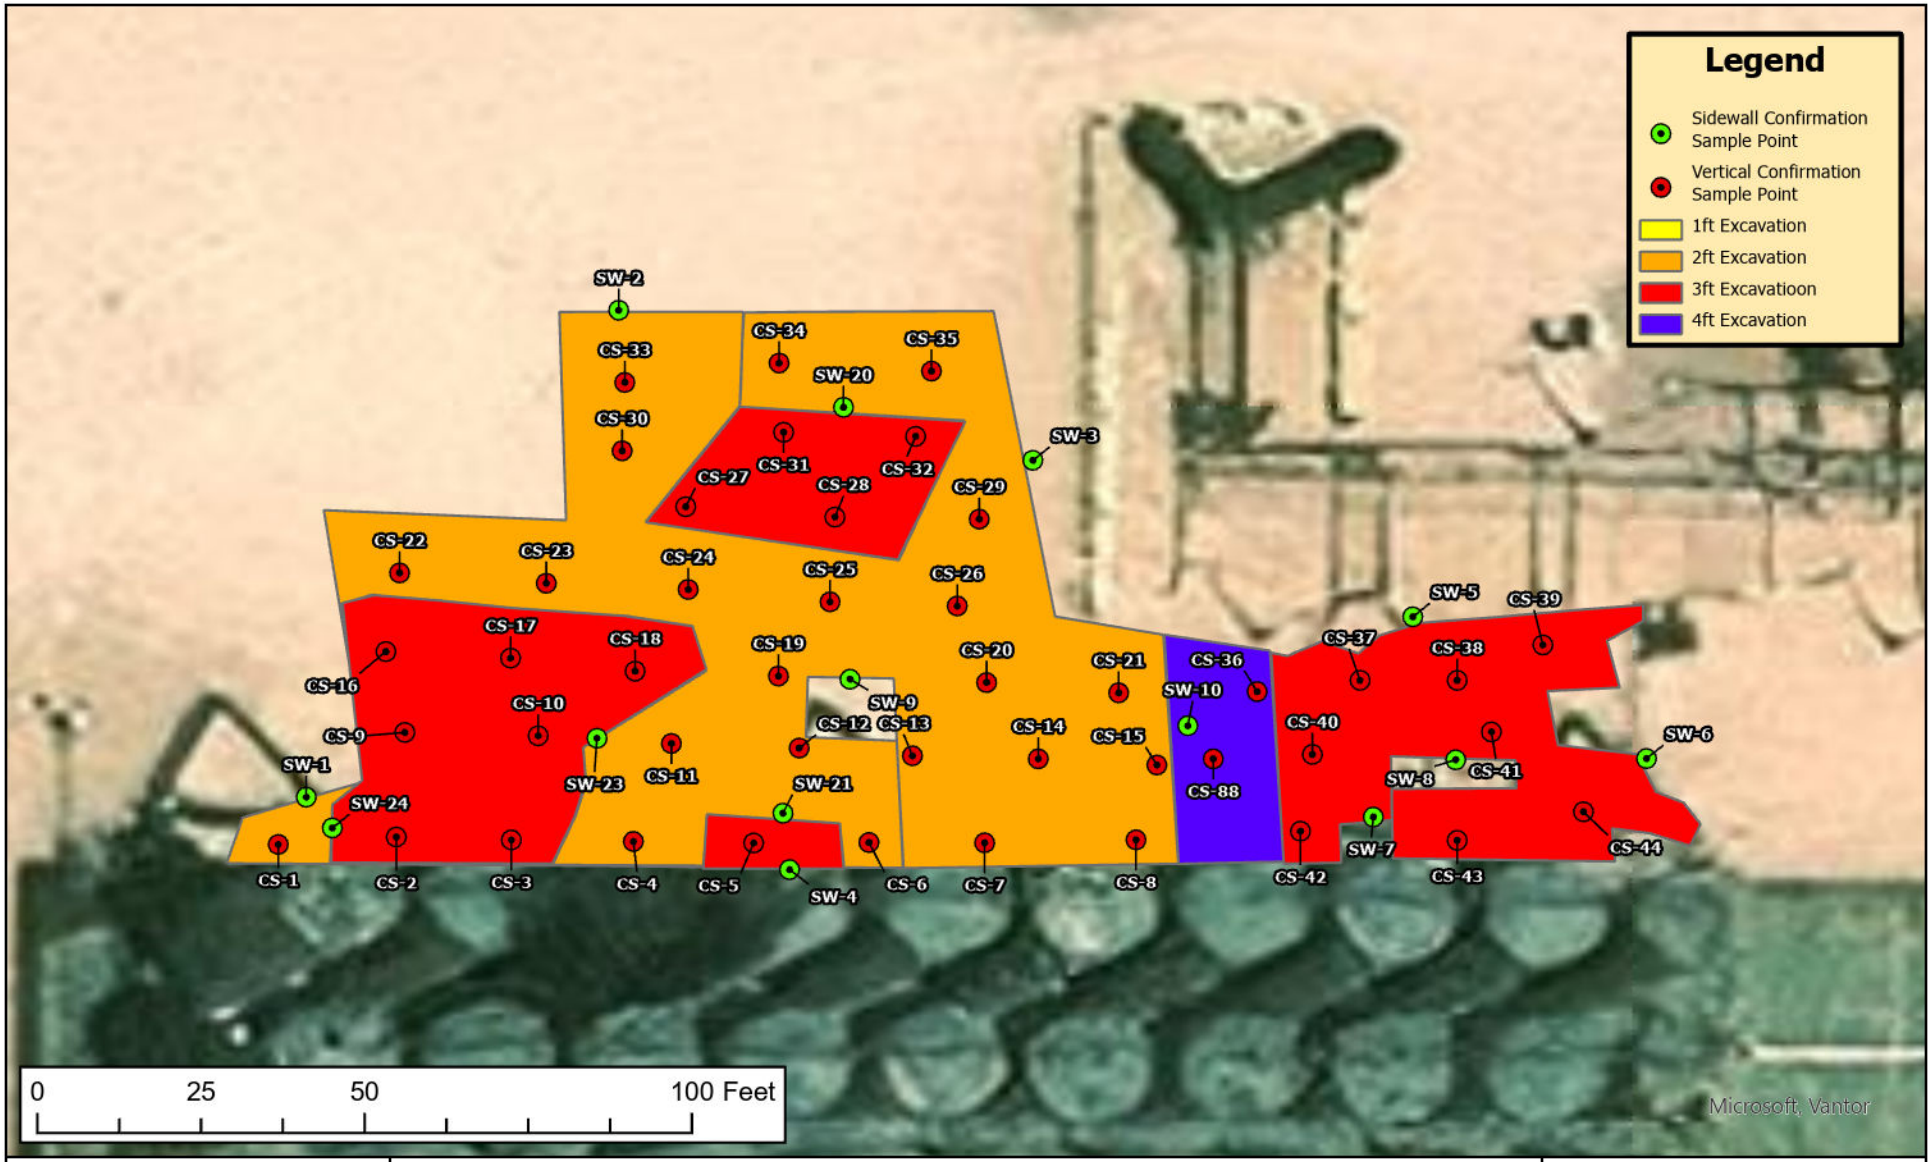

Kind regards,

Shelly

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response	
The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	*Not answered.*
Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.	

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
