1.0 Introduction

Crain Environmental (CE), on behalf of FAE II Operating, LLC (FAE), has prepared this Remediation Summary and Closure Request with Deferral for the crude oil releases at Lamunyon 56/Central Tank Battery (Site), located approximately 10 miles southeast of Eunice in Unit Letter A, Section 28, Township 23S, Range 37E, Lea County, New Mexico. The global positioning system (GPS) coordinates for the Site are 32.279867, -103.163569. The property surface rights are privately owned. Land use in the Site vicinity is primarily oil and gas production activity and cattle grazing. The location of the Site is depicted on Figure 1.

2.0 Background

On April 29, 2024, a release from a storage tank at the Lamunyon #56 (Central Tank Battery) was discovered. As a result of overflow of the tank, approximately 150 barrels (bbls) of crude oil were released. Immediately following the release, the area was secured, a vacuum truck was mobilized to the Site, and the tank was repaired. The released fluid covered a surface area of approximately 3,828 square feet (ft²). Approximately 145 bbls of fluid were recovered. Impacted soil was removed from the surface and hauled to an NMOCD approved disposal facility. The surface extent of the release is depicted on Figure 2.

A Notification of Release (NOR) was submitted to the New Mexico Oil Conservation Division (NMOCD) on April 30, 2024, and Incident #nAPP2412157442 was assigned.

On October 3, 2024, the NMOCD approved an extension request until December 27, 2024, to submit a Site Characterization Report and Remediation Workplan (Workplan). On December 19, 2024, the NMOCD approved a 90-day extension for submitting the Workplan by March 17, 2025. On March 14, 2025, a Site Characterization Report and Remediation Workplan (Workplan) was submitted to the NMOCD. The Workplan was approved by the NMOCD on April 22, 2025.

On July 22, 2025, a Remediation Summary and Closure Report (Report) was submitted to the NMOCD. On August 1, 2025, the Report was denied for the following reasons:

- There have been no delineation soil samples collected near and around the storage tank – the source of the release - to the vegetated area of concern. Samples must be collected in this area in question. No liner inspection was conducted nor photos of the lined containment provided in report. Provide an explanation to the OCD on how 150 bbls of crude oil flowed into this area as displayed in the sampling diagram in Figure 2 of the report. The OCD notes that there is no indication that there was an oil release, only potholes in the photos from a piece of heavy equipment. Lastly, the OCD notes that there are several incidents adjacent to this one that remain open, which include: nRM2033632817, nOY1831238090, and nSAP0334425865. These incidents are also required to be addressed as they remain open and have significant overlap with the incident in question, nAPP2412157442 Lamunyon #056.
- The photo with the water level interface probe must be retaken with a clear photo and measurement displayed, as it is unclear from the photo provided what that measurement is. It is preferred that the well construction documents be provided with the information. The photos do not convey any kind of scrape to the surface of the soil where contamination occurred. Provide a

revised remediation plan to include a liner inspection report to the OCD no later than thirty (30) days from receipt of this determination, 9/01/2025.

On August 28, 2025, a 90-day extension request to submit a revised workplan was submitted to the NMOCD. The extension was approved on August 28, 2025, with a new due date of December 1, 2025. Appendix A provides a copy of NMOCD correspondence.

A Revised Site Characterization Report and Remediation Workplan (Workplan) for Incident Numbers nAPP2412157442, nOY1831238090, nRM2033632817, and nSAP0334425865 was submitted for each Incident on November 30, 2025. The NMOCD approved the Workplan for each incident on December 3, 2025 with the following conditions:

- The Revised Site Characterization Report and Remediation Work Plan is approved to include the following conditions. 1. Confirmation samples from the walls and base must be sampled for ALL constituents listed in Table 1. of 19.15.29 NMAC, as benzene and BTEX are present and measurable in TH-27. 2. It is noted on page 8 of the PDF that CP 00375 was not properly capped when measured. Please note that any groundwater well utilized by direct water level measurement for future incidents must be properly capped and in good condition or may be subject to not being accepted. 3. Horizontal and vertical delineation may be achieved through excavation activities as proposed in the work plan. 4. At this time, the 180-day extension request is not approved, as the furthest out OCD will approve extension requests are in 90-day increments. Please submit a closure report to the OCD in 90 days, no later than 03/09/2026.

On March 5, 2026, FAE II requested a 90-day extension for each incident to complete remediation activities. The request was approved by NMOCD on March 6, 2026, with a new deadline of June 8, 2026.

On June 8, 2026, NMOCD was notified that the Closure Report was in progress but would be submitted after the deadline of June 8, 2026. Upon receipt of all waste manifests, this Remediation Summary and Closure Request with Deferral is being submitted in accordance with 19.15.29.11 New Mexico Administrative Code (NMAC). Appendix A provides copies of NMOCD communication.

3.0 NMOCD Closure Criteria

Cleanup standards for produced water spills are provided in 19.15.29 NMAC. The cleanup standards (described in the rule as "Closure Criteria") are based primarily on depth to groundwater but are also based on other criteria. Three different Closure Criteria are provided in the rule. The most stringent apply to sites where groundwater is found within 50 feet of the ground surface or if the release occurred within one of the following areas:

- Within 300 feet of any continuously flowing watercourse or any other significant watercourse.
- Within 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary highwater mark).
- Within 300 feet from an occupied permanent residence, school, hospital, institution or church.
- Within 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes.
- Within 1,000 feet of any fresh water well or spring.

- Within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978 as amended.
- Within 300 feet of a wetland.
- Within the area overlying a subsurface mine.
- Within an unstable area such as a karst formation.
- Within a 100-year floodplain.

CE reviewed available information to determine the Closure Criteria for the Site. The findings of this evaluation are summarized below.

3.1 Groundwater Evaluation

A review of the New Mexico Office of the State Engineer (NMOSE) records indicated there is one water well located within 0.5 mile of the Site (CP 00375 POD 1) drilled to a depth of 160 feet below ground surface (bgs); however, a date of installation and a depth to groundwater was not provided. NMOSE records indicated that five additional wells are located within 1 mile of the Site (CP 00480 POD 1, CP 00440 POD 1, CP 01555 POD 1, CP 01555 POD 2, and CP 00407); however, only well CP 00480 POD 1 provided an installation date (April 14, 1968) and a depth to groundwater (600 feet bgs). A review of the United State Geological Survey (USGS) database indicated one water well was located within 0.5 mile of the Site (Well 32167103094301). Depth to groundwater in the USGS well was last measured on January 15, 1976 and recorded a water level of 93.35' below ground surface (bgs). All wells within a 1-mile radius are listed in the table below. Figure 3 provides 0.5-mile radius and a 1-mile radius circles around the Site and shows the locations of each well. A NMOSE Point of Diversion Summary for each well and groundwater data for USGS Well 32167103094301 is provided in Appendix B.

On April 23, 2025, well CP 00375 POD 1 was located. The top of the casing was open, and an interface probe was used to check for water. A total depth of 80' bgs was measured with the probe, and no groundwater was present. Photographic documentation is provided in Appendix C.

3.2 Surface Features and Other Development

CE reviewed recent aerial photographs, topographic maps, the NMOSE Point of Discharge (POD) GIS website, and information available from the Lea County, New Mexico Central Appraisal District website. As shown on Figure 1, the Site is **not** located:

- Within 300 feet of any continuously flowing watercourse or any other significant watercourse.
 - o No continuously flowing watercourses (rivers, streams, arroyos, etc.) are apparent within 300 feet of the Site in the topographic map (Figure 1).
- Within 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary highwater mark).
 - o The topographic map (Figure 1) indicates there is not a lakebed, sinkhole or playa lake located within 200 feet of the Site.
- Within 300 feet from an occupied permanent residence, school, hospital, institution or church.
 - o The Site Location Map (Figure 1) and information available from the Lea County, New Mexico Central Appraisal District do not show or list any permanent residence, school, hospital, institution or church located within 300 feet of the Site.
- Within 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes.
 - o No wells or springs located within 500 feet of the Site appear in any of the NMOSE records reviewed by CE.
- Within 1,000 feet of any fresh water well or spring.
 - o No freshwater wells or springs located within 1,000 feet of the Site appear in any of the records reviewed by CE.
- Within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978 as amended.
 - o Based on the property and other records review by CE, the Site is not located in incorporated municipal boundaries or within a defined municipal fresh water well field.
- Within the area overlying a subsurface mine.
 - o Based on the property and other records reviewed by CE, the Site is not located within an area overlying a subsurface mine.

3.3 Wetlands, Floodplain, and Karst Geology

A review of the United States Fish and Wildlife Service (USFWS) wetlands map indicated the Site is not located within 300 feet of a wetland. The New Mexico Bureau of Land Management (BLM) karst potential map indicates the Site is located within a "low karst potential" area. Finally, review of the Federal Emergency Management Act (FEMA) floodplain map indicates the release at the Site is located outside of a 100-year floodplain. Figures 4, 5, and 6 depict the USFWS map, the FEMA floodplain map, and the karst potential map, respectively.

3.4 Closure Criteria Currently Assumed Applicable to the Site

From the surface to a depth of 4' bgs, the most stringent NMOCD Closure Criteria will apply. As depth to groundwater was measured in well CP 00375 to be greater than 80' bgs, and USGS well 32167103094301 reported a depth to groundwater of 93.35' bgs in 1976, the moderately stringent Closure Criteria (associated with depths of 51 to 100' bgs) will apply at soil depths greater than 4' bgs. A summary of the Closure Criteria is provided in the table below and in Table 1.

NMOCD Closure Criteria

Constituent of Concern		Closure Criteria Based on Depth to Groundwater (mg/kg)		
		≤ 50 feet bgs	51 feet to 100 feet bgs	> 100 feet bgs
Chloride (EPA 300)		600	10,000	20,000
TPH (EPA 8015M)	GRO + DRO + MRO	100	2,500	2,500
	GRO + DRO	NA	1,000	1,000
Total BTEX (EPA 8021 or 8260)		50	50	50
Benzene (EPA 8021 or 8260)		10	10	10

Notes: NA = not applicable GRO = gasoline range organics
 bgs = below ground surface DRO = diesel range organics
 mg/kg = milligrams per kilogram TPH = total petroleum hydrocarbons
 MRO = motor oil range organics BTEX = benzene, toluene, ethylbenzene, and total xylenes
 Green highlighted cells denote applicable Closure Criteria for depths of 0-4' bgs.
 Blue highlighted cells denote applicable Closure Criteria for depths greater than 4' bgs.

4.0 Site Assessment/Characterization Results

As per 19.15.29.11 NMAC, a Site Characterization Report will have the components described in Sections 4.1 through 4.5 of this document.

4.1 Site Map

As required by 19.15.29.11 NMAC, a scaled diagram showing significant Site infrastructure, sample point locations, and known subsurface features such as utilities is provided as Figure 2.

4.2 Depth to Groundwater

As discussed in Section 3.1, the exact depth to groundwater beneath the Site is unknown; however, based on a physical measurement to 80' bgs in well CP 00375 POD 1 on April 23, 2025, NMOSE and USGS records, depth to groundwater is estimated be between 50' and 100' bgs at the Site.

4.3 Wellhead Protection Area

The 0.5-mile and 1-mile wellhead protection areas are shown on Figure 3. There were no other water sources, springs, or other sources of freshwater extraction identified within 0.5-mile of the Site.

4.4 Distance to Nearest Significant Watercourse

The horizontal distance to the nearest significant watercourse as defined in Subsection P of 19.15.17.7 NMAC is greater than 0.5-mile from the Site.

4.5 Summary of Remediation Activities

Following approval of the Revised Site Characterization Report and Remediation Workplan on December 3, 2025, excavation was continued until final five-point confirmation samples collected from the bottom and sidewalls of the excavation(s) reported TPH, BTEX, and chloride concentrations below the Closure Criteria in all areas where excavation could safely be conducted (around tanks, treaters, flow lines, and other ancillary equipment).

All confirmation samples were collected pursuant to 19.15.29.12(D) NMAC, and were placed in clean glass sample jars, properly labeled, immediately placed on ice and hand delivered to Eurofins Environment Testing (Eurofins) in Midland, Texas under proper chain-of-custody control. All samples were analyzed for TPH by Environmental Protection Agency (EPA) SW-846 Method 8015 Modified, for BTEX by EPA SW-846 Method 8021B, and for chlorides by Method EPA Method 300.0.

Table 1 provides a summary of the laboratory results. Figure 2 shows the sample locations. Photographic documentation is provided in Appendix C. Laboratory reports and chain-of-custody documentation are provided in Appendix D.

Referring to Table 1, all final confirmation samples reported TPH, BTEX, and chloride concentrations below the Closure Criteria.

Referring to Figure 2, samples S-4 and S-5 were originally sidewall samples that were removed as the excavation area continued to the east. Additionally, deferral is being requested in the areas of sidewall samples S-17, S-18, S-91, S-92 and bottom/delineation samples TH-18, TH-19, and TH-27. Details of the deferral area(s) are included in Section 5.0.

The excavation north of the heater treaters measured 18' x 48' and covered a surface area of 864 square feet (ft²). The excavation north of the storage tanks measured 10' x 30' and covered a surface area of 300 ft². The excavation at the southeast corner of the location (TH-15/B-7, etc.) measured 6' x 35' and covered a surface area of 210 ft². The excavation south of the treaters (B-9, etc.) measured 12' x 46' and covered a surface area of 552 ft², and the excavation to the west of that (B-12, etc.) measured 13' x 13' and covered a surface area of 169 ft². The main excavation covered a surface area of 20, 231 ft². The total surface area remediated was 22,326 ft².

From January to March, 2026, approximately 5,520 cubic yards of excavated soil were hauled to disposal at J&L Landfarm. Waste Tickets are provided in Appendix E.

4.6 Laboratory Analytical Data Quality Assurance/Quality Control Results

Data reported in Job Numbers 880-64034-1, 880-69097-1, 880-69913-1, and 880-71425-1 generated by Eurofins, was reviewed to ensure that reported analytical results met data quality objectives. It was determined by quality control data associated with analytical results that reported concentrations of target analytes are defensible and that measurement data reliability is within the expected limits of sampling and analytical error. All analytical results are usable for characterization of soil at the Site. The laboratory analytical results are provided in Appendix D.

5.0 Deferral and Closure Request

All final five-point confirmation samples collected from the bottom and sidewalls of the excavation(s) reported TPH, BTEX, and chloride concentrations below the Closure Criteria in all areas where excavation could safely be conducted (around tanks, treaters, flow lines, and other ancillary equipment). Table 1 provides a summary of the laboratory results. Figure 2 shows the sample locations and areas proposed for deferral of remediation until time of abandonment of the tank battery.

All impacted soil that could safely be removed from the tank battery area was excavated and disposed. From January to March, 2026, approximately 5,520 cubic yards of excavated soil were hauled to disposal at J&L Landfarm. Waste Manifests are provided in Appendix E.

Deferral is requested in the areas of sidewall samples S-17, S-18, S-91, S-92 and bottom/delineation samples TH-18, TH-19, and TH-27.

Delineation of the impacted soil inside the water tank area is provided by sidewall sample points S-13, S-14, S-15, S-16, S-17, S-18, S-39, S-40, S-41, S-42, S-43, S-44, S-89, S-90, S-91, and S-92. The area proposed for deferral of remediation at the water tank measures 45' x 32' and covers a surface area of 1,440 ft². Sidewall samples show that vertical delineation of impacted soil in the battery area is achieved at a depth of approximately 6' below ground surface (bgs).

Horizontal delineation of the impacted soil inside the ancillary equipment area is provided by sample points S-55, S-56, S-95, S-96, S-81, S-68, S-69, and TH-33. Vertical delineation is provided by TH-18. The area proposed for deferral measures 120' x 75' and covers a surface area of 9,000 ft².

The concentrations of TPH and chlorides remaining in place do not pose an imminent risk to human health, the environment, or groundwater as the source of the release(s) have been repaired, a major portion of affected soil has been removed, and depth to groundwater is at least 80 feet bgs.

The main excavation covered a surface area of 20, 231 ft². The total surface area remediated was 22,326 ft². From January to March, 2026, approximately 5,520 cubic yards of excavated soil were hauled to disposal at J&L Landfarm. Waste Tickets are provided in Appendix E.

Upon approval of Closure/Deferral by the NMOCD, the excavated areas will be backfilled to grade with non-impacted similar material obtained from a landowner pit. At least one soil sample will be collected from the backfill material, and the sample will be analyzed for TPH, BTEX, and chlorides. Pursuant to 19.15.29.13 NMAC, the impacted surface areas will be restored to pre-release conditions, and surface grading and contouring will be performed to prevent erosion and ponding, promote stability, and preserve storm water flow patterns. As all excavated areas are within an active tank battery location, topsoil will not be used for backfilling, and seeding will not be conducted.

FAE respectfully requests that deferral of the proposed areas be approved until time of abandonment of the tank battery and associated components, and that closure be approved for Incident #s nAPP2412157442, nOY1831238090, nRM2033632817, and nSAP0334425865.

Good evening, Mike -

Excavation and disposal of impacted soil at FAE II Lamunyon 56 (CTB) has been conducted, and initial confirmation samples were collected from the bottom and sidewalls of the excavation on March 2, 2026. We are awaiting laboratory results to determine if additional excavation is needed.

As a report is due to OCD on March 9, 2026, FAE II respectfully requests a 90-day extension to complete remediation activities for the four Incidents (nSAP0334425865, nOY1831238090, nRM2033632817, and nAPP2412157442) at the Site, and submit Closure Reports for each Incident.

Please let me know if you have any questions or need additional information at this time.

Thank you,
Cindy Crain

Good morning, Cindy

The request for a 90-day extension to complete remediation for the four incidents below is approved. Please be advised that this will be the last extension approval due to the age of these historic releases and inactivity for remediation of these incidents. I will update each incident file to reflect these changes to include the new deadline, which is now Monday, 06/08/2026.

Kind regards,

Job Narrative 880-64034-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 10/20/2025 2:05 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was -6.5°C.

Diesel Range Organics

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-122021 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour limit, therefore the data has been qualified and reported. The associated sample is:(CCV 880-122021/6).

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-121694 and analytical batch 880-122021 was outside acceptance criteria. Job Narrative

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 3/3/2026 1:21 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was -1.2°C.

GC VOA

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-133853 and analytical batch 880-134031 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-134078 and analytical batch 880-134134 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
880-69913-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 3/23/2026 12:33 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.3°C.

GC VOA

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-135896 and analytical batch 880-135981 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-135896 and 880-135897 and analytical batch 880-135981 was outside the upper control limits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: TH-20 (4.1') (880-69913-6), S-8 (0-4.1') (880-69913-8), S-9 (0-4.1') (880-69913-9) and TH-28 (5.5') (880-69913-14). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015B NM: Surrogate recovery for the following samples were outside control limits: TH-33 (1') (880-69913-2), TH-33 (2') (880-69913-3), (LCS 880-135696/2-A), (MB 880-135696/1-A), (890-9684-A-10-A) and (890-9684-A-10-C MSD). Evidence of matrix interferences is not obvious.

Method 8015B NM: Surrogate recovery for the following samples were outside control limits: (880-69913-A-13-B MS) and (880-69913-A-13-C MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015B NM: Surrogate recovery for the following sample was outside control limits: S-5 (0-5.5') (880-69913-16). Evidence of matrix interferences is not obvious.

Method 8015B NM: Surrogate recovery for the following sample was outside control limits: TH-29 (6.5') (880-69913-15). Evidence of matrix interferences is not obvious.

Method 8015B NM: Surrogate recovery for the following sample was outside control limits: TH-28 (5.5') (880-69913-14). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
880-71425-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 4/24/2026 1:26 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

GC VOA

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-139543 and analytical batch 880-139718 was outside the upper control limits.

Method 8021B: The matrix spike (MS) recoveries for preparation batch 880-139543 and analytical batch 880-139718 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: B-85 (880-71425-162) and B-91 (880-71425-168). Evidence of matrix interferences is not obvious.

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-139549 and analytical batch 880-139722 was outside the upper control limits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: B-44 (880-71425-121), B-46 (880-71425-123), B-50 (880-71425-127), B-52 (880-71425-129), B-56 (880-71425-133), B-62 (880-71425-139) and B-63 (880-71425-140). Evidence of matrix interferences is not obvious.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-139548 and analytical batch 880-139723 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: S-80 (880-71425-61), S-81 (880-71425-62), S-82 (880-71425-63), S-83 (880-71425-64), S-84 (880-71425-65), S-85 (880-71425-66), S-86 (880-71425-67), S-87 (880-71425-68), S-88 (880-71425-69), S-89 (880-71425-70), S-90 (880-71425-71), S-91 (880-71425-72), S-93 (880-71425-74), S-94 (880-71425-75), S-95 (880-71425-76), S-96 (880-71425-77), B-1 (880-71425-78), B-2 (880-71425-79), B-4 (880-71425-81), B-5 (880-71425-82), B-6 (880-71425-83), B-7 (880-71425-84), B-8 (880-71425-85), B-9 (880-71425-86), B-10 (880-71425-87), B-11 (880-71425-88), B-12 (880-71425-89), B-13 (880-71425-90), B-14 (880-71425-91), B-15 (880-71425-92), B-16 (880-71425-93), B-17 (880-71425-94), B-18 (880-71425-95), B-19 (880-71425-96), B-20 (880-71425-97), B-21 (880-71425-98), B-22 (880-71425-99), B-23 (880-71425-100), (CCV 880-139739/20), (CCV 880-139739/33), (CCV 880-139739/51), (LCS 880-139547/1-A), (LCSD 880-139547/2-A), (880-71425-A-61-C MS), (880-71425-A-81-C MS) and (880-71425-A-81-D MSD). Evidence of matrix interferences is not obvious.

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-139546 and 880-139547 and analytical batch 880-139739 was outside the upper control limits.

Method 8021B: LCSD biased low for Toluene. Since only an acceptable LCS is required per the method, the LCS shows recovery for the batch therefore the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015B NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-138992 and 880-138993 and analytical batch 880-139700 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015B NM: The continuing calibration verification (CCV) associated with batch 880-139700 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is:(CCV 880-139700/110).

Method 8015B NM: Surrogate recovery for the following samples were outside control limits: B-53 (880-71425-130), B-54 (880-71425-131) and B-55 (880-71425-132). Evidence of matrix interferences is not obvious.

Method 8015B NM: Surrogate recovery for the following samples were outside control limits: B-43 (880-71425-120), B-44 (880-71425-121) and B-48 (880-71425-125). Evidence of matrix interferences is not obvious.

Method 8015B NM: Surrogate recovery for the following samples were outside control limits: B-74 (880-71425-151), (LCSD 880-138992/3-A) and (880-71425-A-117-B MS). Evidence of matrix interferences is not obvious.

Method 8015B NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-138994 and analytical batch 880-139702 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015B NM: LCS biased low. Since only an acceptable LCS or LCSD is required per the method, the LCSD shows recovery for the batch therefore the data has been qualified and reported.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	More info needed to determine if this will be treated as a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (?) reported amounts release resulting in negative volume.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

QUESTIONS

Deferral Requests Only	
<i>Only answer the questions in this group if seeking a deferral upon approval this submission. Each of the following items must be confirmed as part of any request for deferral of remediation.</i>	
Requesting a deferral of the remediation closure due date with the approval of this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Is the remaining contamination in areas immediately under or around production equipment where remediation could cause a major facility deconstruction	Yes
Please list or describe the production equipment and how (re)moving the equipment would cause major facility deconstruction	The areas proposed for deferral of remediation include a water storage tank on the west portion of the facility, and numerous heater treaters, flowlines, and ancillary equipment on the east portion of the facility. To conduct remediation in those areas, all equipment would need to be dismantled or removed, and all wells to the facility would have to be shut in.
What is the remaining surface area (in square feet) that will still need to be remediated if a deferral is granted	10440
What is the remaining volume (in cubic yards) that will still need to be remediated if a deferral is granted	1546
<i>Per Paragraph (2) of Subsection C of 19.15.29.12 NMAC if contamination is located in areas immediately under or around production equipment such as production tanks, wellheads and pipelines where remediation could cause a major facility deconstruction, the remediation, restoration and reclamation may be deferred with division written approval until the equipment is removed during other operations, or when the well or facility is plugged or abandoned, whichever comes first.</i>	
Enter the facility ID (f#) on which this deferral should be granted	FTO1511157910 LAMUNYONCTB
Enter the well API (30-) on which this deferral should be granted	Not answered.
Contamination does not cause an imminent risk to human health, the environment, or groundwater	True
<i>Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.</i>

Remediation Closure Request	
<i>Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.</i>	
Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	22326
What was the total volume (cubic yards) remediated	5520
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	22326
What was the total volume (in cubic yards) reclaimed	5520
Summarize any additional remediation activities not included by answers (above)	Upon approval of Closure/Deferral by the NMOCD, the excavated areas will be backfilled to grade with non-impacted similar material obtained from a landowner pit. At least one soil sample will be collected from the backfill material, and the sample will be analyzed for TPH, BTEX, and chlorides. Pursuant to 19.15.29.13 NMAC, the impacted surface areas will be restored to pre-release conditions, and surface grading and contouring will be performed to prevent erosion and ponding, promote stability, and preserve storm water flow patterns. As all excavated areas are within an active tank battery location, topsoil will not be used for backfilling, and seeding will not be conducted.
<i>The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.</i>	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
