Santa Fe, NM 87505

Form C-103
Revised July 18, 2013

WELL API NO. 30-015-23612
5. Indicate Type of Lease STATE ☐ FEE ☑
6. State Oil & Gas Lease No.

SUNDRY NOTICES AND REPORTS ON WELLS
(DO NOT USE THIS FORM FOR PROPOSALS TO DRILL OR TO DEEPEN OR PLUG BACK TO A DIFFERENT RESERVOIR. USE "APPLICATION FOR PERMIT" (FORM C-101) FOR SUCH PROPOSALS.)

7. Lease Name or Unit Agreement Name: Pardue Farms 26
1. Type of Well: Oil Well ☑ Gas Well ☐ Other
8. Well Number
2. Name of Operator: CHEVRON MIDCONTINENT, L.P.
9. OGRID Number: 24133
3. Address of Operator: 6301 Deauville BLVD, Midland, TX 79706
10. Pool name or Wildcat: Loving, Brushy Canyon, East
4. Well Location
Unit Letter F : 2080 feet from the NORTH line and 1980 feet from the WEST line
Section 26 Township 23S Range 28E NMPM County EDDY
11. Elevation *(Show whether DR, RKB, RT, GR, etc.)* 3017' GL

12. Check Appropriate Box to Indicate Nature of Notice, Report or Other Data

NOTICE OF INTENTION TO:				SUBSEQUENT REPORT OF:			
PERFORM REMEDIAL WORK	☐	PLUG AND ABANDON	☑	REMEDIAL WORK	☐	ALTERING CASING	☐

PULL OR ALTER CASING	☐	MULTIPLE COMPL	☐	CASING/CEMENT JOB	☐		
DOWNHOLE COMMINGLE	☐						
CLOSED-LOOP SYSTEM	☐						
OTHER:	☐			OTHER:			☐

Notify OCD 24 hrs. prior to any work done

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

1. MIRU P&A equipment
2. RIH with pressure tested workstring to tag barrier in place from prior Temporary Abandonment. Cmt tagged at 5676'.
3. Pressure test casing per procedure
4. Notify NMOCD of casing test results.
5. Spot 25 sacks Class C cement from 4690' to 4390' (isolate Brushy Canyon)
6. Perforate at 3475'. Squeeze 102 sacks Class C cement from 3475' to 2931'. (isolate Cherry Canyon, 7" shoe) WOC & Tag
7. Perforate at 2640'. Squeeze 96 sacks Class C cement from 2640' to 2140'. (isolate Bell Canyon, Lamar, Base salt)
8. WOC, tag, pressure test
9. Perforate at 580'. Establish circulation. Circulate 93 sacks Class C cement from 580' to surface. (top salt, 10-3/4" shoe, FW)
10. RDMOL.
11. Surface restoration crew to cut wellhead, cap well per NMOCD guidelines.

All cement plugs calculated using 1.32 yield Class C cement. 10% excess per 1000ft was used for perf & squeeze calculations.

Spud Date: | Rig Release Date:

****SEE ATTACHED COA's****

Must be plugged by 10/29/2022

I hereby certify that the information above is true and complete to the best of my knowledge and belief.

For State Use Only

APPROVED BY: TITLE Staff Manager DATE 10/29/2021
Conditions of Approval (if any):

CONDITIONS FOR PLUGGING AND ABANDONMENT

OCD - Southern District

The following is a guide or checklist in preparation of a plugging program, this is not all inclusive and care must be exercised in establishing special plugging programs in unique and unusual cases, **Notify NMOCD District Office II at (575)-748-1283 at least 24 hours before beginning work. After MIRU rig will remain on well until it is plugged to surface. OCD is to be notified before rig down. Company representative will be on location during plugging procedures.**

1. A notice of intent to plug and abandon a wellbore is required to be approved before plugging operations are conducted. A cement evaluation tool is required in order to ensure isolation of producing formations, protection of water and correlative rights. A cement bond log or other accepted cement evaluation tool is to be provided to the division for evaluation if one has not been previously run or if the well did not have cement circulated to surface during the original casing cementing job or subsequent cementing jobs. Insure all bradenheads have been exposed, identified and valves are operational prior to rig up.
2. Closed loop system is to be used for entire plugging operation. Upon completion, contents of steel pits are to be hauled to a permitted disposal location.
3. Trucking companies being used to haul oilfield waste fluids to a disposal – commercial or private – shall have an approved NMOCD C-133 permit. A copy of this permit shall be available in each truck used to haul waste products. It is the responsibility of the operator as well as the contractor, to verify that this permit is in place prior to performing work. Drivers shall be able to produce a copy upon request of an NMOCD Field inspector.
4. Filing a subsequent C-103 will serve as notification that the well has been plugged.
5. A final C-103 shall be filed (and a site inspection by NMOCD Inspector to determine if the location is satisfactorily cleaned, all equipment, electric poles and trash has been removed to Meet NMOCD standards) before bonding can be released.
6. If work has not begun within 1 Year of the approval of this procedure, an extension request must be file stating the reason the well has not been plugged.
7. **Squeeze pressures are not to exceed 500 psi, unless approval is given by NMOCD.**
8. Produced water **will not** be used during any part of the plugging operation.
9. Mud laden fluids must be placed between all cement plugs mixed at 25 sacks per 100 bbls of water.
10. All cement plugs will be a minimum of 100' in length or a minimum of 25 sacks of cement, whichever is greater. 50' of calculated cement excess required for inside casing plugs and 100% calculated cement excess required on outside casing plugs.
11. **Class 'C' cement will be used above 7500 feet.**
12. **Class 'H' cement will be used below 7500 feet.**
13. **A cement plug is required to be set 50' above and 50' below, casing stubs, DV tools, attempted casing cut offs, cement tops outside casing, salt sections and anywhere the casing is perforated, these plugs require a 4 hour WOC and then will be tagged**
14. **All Casing Shoes Will Be Perforated 50' below shoe depth and Attempted to be Squeezed, cement needs to be 50' above and 50' Below Casing Shoe inside the Production Casing.**

16. When setting the top out cement plug in production, intermediate and surface casing, wellbores should remain full at least 30 minutes after plugs are set
17. **A CIBP is to be set within 100' of production perforations, capped with 100' of cement, WOC 4 hours and tag.**
18. A CIBP with 35' of cement may be used in lieu of the 100' plug if set with a bailer. This plug will be placed within 100' of the top perforation, **(WOC 4 hrs and tag).**
19. No more than **3000' is allowed between cement plugs in cased hole and 2000' in open hole.**
20. Some of the Formations to be isolated with cement plugs are: These plugs to be set to isolate formation tops
    A) Fusselman
    B) Devonian
    C) Morrow
    D) Wolfcamp
    E)Bone Springs
    F) Delaware
    G) Any salt sections
    H) Abo
    I) Glorieta
    J) Yates.
    K)**Potash---**(In the R-111-P Area (Page 3 & 4), a solid cement plug must be set across the salt section. Fluid used to mix the cement shall be saturated with the salts that are common to the section penetrated and in suitable proportions, not more than 3% calcium chloride (by weight of cement) will be considered the desired mixture whenever possible, **WOC 4 hours and tag, this plug will be 50' below the bottom and 50' above the top of the Formation.**
21. **If cement does not exist behind casing strings at recommended formation depths,** the casing can be cut and pulled with plugs set at recommended depths. If casing is not pulled, perforations will be shot and cement squeezed behind casing, WOC and tagged. These plugs will be set 50' below formation bottom to 50' above formation top inside the casing

DRY HOLE MARKER REQUIRMENTS

The operator shall mark the exact location of the plugged and abandoned well with a steel marker not less than four inches in diameter, 3' below ground level with a plate of at least ¼" welded to the top of the casing and the dry hole marker welded on the plate with the following information welded on the dry hole marker:

1. Operator name 2. Lease and Well Number 3.API Number 4. Unit Letter 5. Quarter Section (feet from the North, South, East or West) 6. Section, Township and Range 7. Plugging Date 8. County (SPECIAL CASES)-------AGRICULTURE OR PRARIE CHICKEN BREEDING AREAS

In these areas, a below ground marker is required with all pertinent information mentioned above on a plate, set 3' below ground level, a picture of the plate will be supplied to NMOCD for record, the exact location of the marker (longitude and latitude by GPS) will be provided to NMOCD (We typically require a current survey to verify the GPS)

Pardue Farms 26-3 Short Procedure

API: 30-015-23612

All cement plugs are based on 1.32 yield for Class C for plugs shallower than 7,500'

Notes

- Well was temporarily abandoned on 6/25/2018 with CIBP and cement at 5676' tag depth
- Casing was pressure tested to 560 psi – test good

Rig and/or CTU Scope of Work – refer to rig specific or CTU specific rig up procedures. The procedure below focuses on barriers to be placed in wellbore.

1. Contact NMOCD 24 hours in advance.
2. MIRU P&A equipment
    a. Field operations have documented NO H2S in the field. Scavenger and intrinsically safe fans WILL NOT be required for this job.
3. Check pressure on all casing strings. Verify no pressure and observe well for 15 minutes to verify no flow.
4. Kill well as per SOP if previous barriers are leaking
5. N/D wellhead (rig only) and N/U BOP.
6. Pressure test BOP to 250 psi low and 1,000 psi or MASP (whichever is larger) for 5 minutes each.
    a. On a chart, no bleed off accepted.
7. TIH with pressure tested tubulars and tag CIBP/cmt at 5676' (previous tag depth from subsequent C103 for temporary abandonment in 2018)
8. Pressure test casing to 1500 psi for 15 minutes. Report results to NMOCD and discuss potential to waive WOC times for balanced plugs leading up to first perf & squeeze.
9. Isolate Brushy Canyon
    a. Spot 25 sacks Class C cement from 4,690' to 4,330'
    b. Minimum tag depth 4,590' (if required; tag depth 100' above formation top)
10. Isolate Cherry Canyon
    a. Perforate at 3475'
    b. Squeeze 102 sacks Class C cement from 3,475' to 2,931'
    c. Minimum tag depth 3375' (100' above formation top)
11. Isolate Bell Canyon, Lamar LS, base of salt
    a. Perforate at 2640'
    b. Squeeze 96 sacks Class C cement from 2640' to 2140'
    c. WOC, tag, pressure test
    d. Minimum tag depth for NMOCD purposes 2540' (100' above formation top)
12. Conduct bubble test for 30 minutes after isolating Bell Canyon.
    a. If bubble test fails, plan to cut and pull 5-1/2" casing
    b. Ultimate goal is to address failed test prior to fresh water depths
    c. Confirm forward plan with engineer and request forward plan approval with NMOCD

13. Isolate top of salt, FW zones
    a. Perforate at 580’
    b. Circulate 93 sacks Class C cement from 580’ to surface
    c. Top of salt at 400’
    d. Fresh water depths appx 100’
14. Verify cement to surface.
15. RDMO.
16. Surface restoration crew to cut wellhead, cap well per regulatory guidelines
