Notice of Intent

Sundry ID: 2706571

Type of Submission: Notice of Intent

Type of Action: Workover Operations

Date Sundry Submitted: 12/09/2022

Time Sundry Submitted: 06:26

Date proposed operation will begin: 12/23/2022

Procedure Description: Please see attached workover procedure for a water shutoff.

Surface Disturbance

Is any additional surface disturbance proposed?: No

Water Shut Off

12/9/2022

Hold PJSM prior to beginning any and all operations. Properly document all operations via the JSA process. Ensure that all personnel onsite abide by HEC safety protocol, including PPE, housekeeping, and standard guidelines.

Verify cathodic protection is off and wellhead instrumentation is properly disconnected from the wellhead. Comply with all NMOCD, BLM, and HEC safety and environmental regulations.

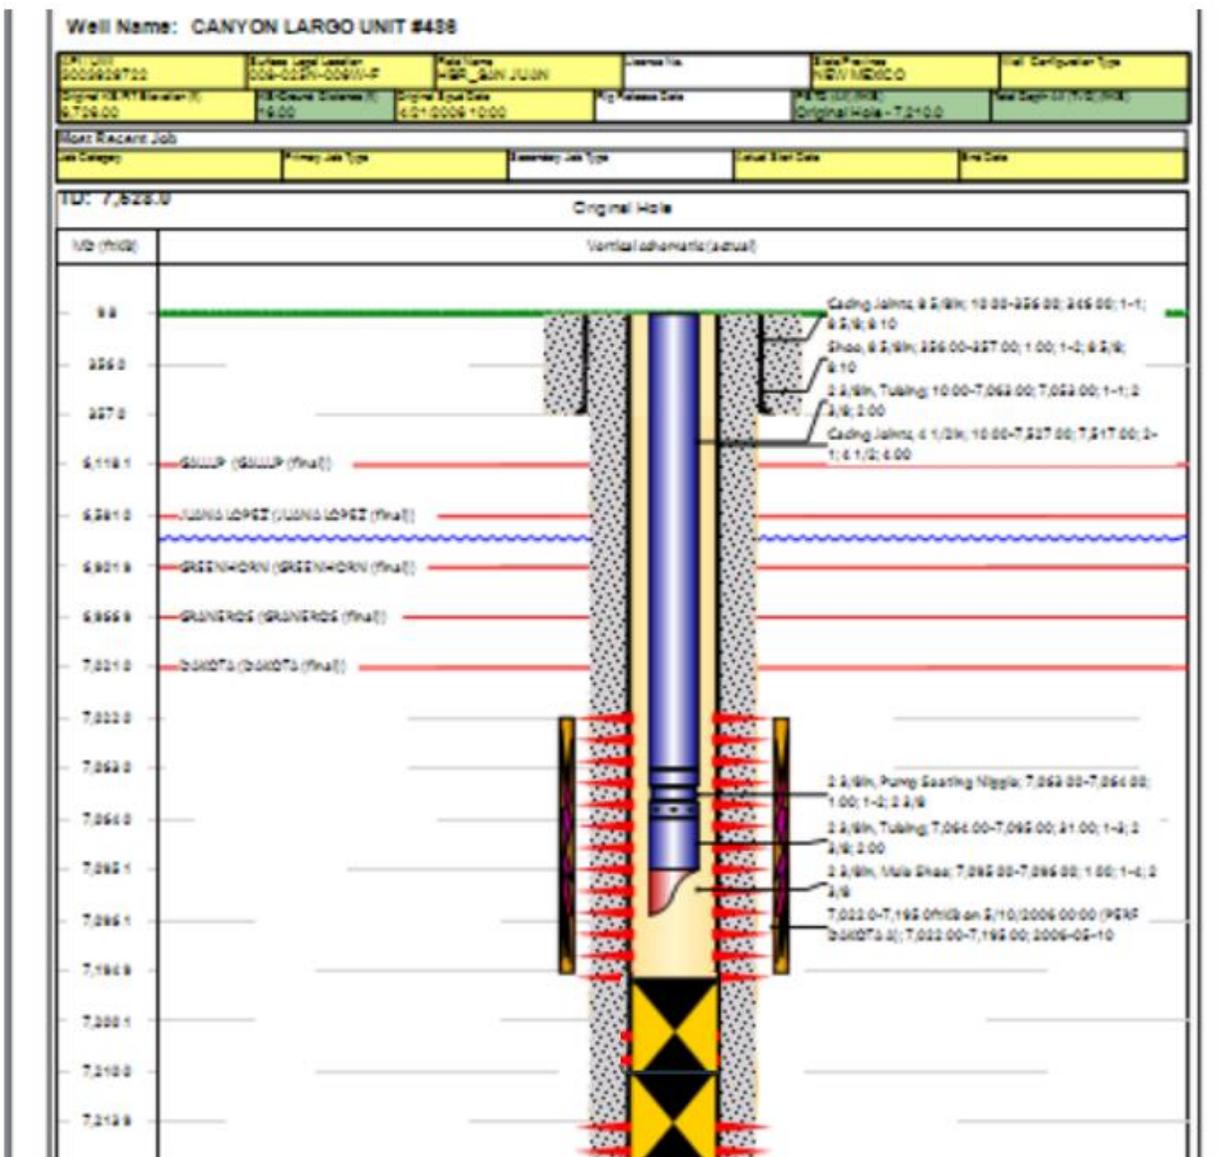

Verify there is no H2S present prior to beginning operations. If any H2S is present, take the necessary actions to ensure that the location is safe prior to beginning operations.

Observe and record pressures across all string daily, prior to beginning operations.
Remember to notify NMOCD 24 hours prior to starting operations on location.

Prior Cement work in June of 2022 was partially successful in isolating water from lower completion. Well was RTP'd but water production was still elevated from target rate indicating cement plug was imperfect. We plan to cleanout to CIBP at 7187' and set a new CIBP directly above to completely shut off water.

Procedure:

1. MIRU PU and ancillary equipment
2. POOH with tubing and scan, replace bad pipe with YB tubing
3. Make up cleanout BHA and RIH to 7187'
4. POOH with assembly and PU CIBP
5. Trip in hole and set CIBP between 7195' and 7186' (below bottom perf and above existing plug)
6. POOH with setting tool and RIH with production string to +/- 7095' (same depth)
7. Notify operations team and return well to production
