CHEVRON REQUESTS THE FOLLOWING:

- After finding tubing-casing communication from the troubleshooting efforts, Chevron decided to pull the tubing on the Gravitass well. The tubing has been pulled out of the hole and Chevron set an RBP at 13,859'. Chevron pressure tested the casing to 3000 psi for 15 minutes with 0 psi leak-off. The issue was confirmed to be a packer leak as the pressure tests prove casing integrity.
- Plan forward is to run in hole with a new permanent packer within 100' of the permitted interval top (13,900'). The new packer will be set above the existing packer at 13,909'.
- Before running back in with tubing, Chevron will run a mechanical caliper log on the casing as well as a USIT log to determine cement quality behind pipe.
- Chevron plans to continue to monitor the intermediate casing pressure as it is now plumbed into the real time monitoring software. The pressure tests have confirmed there is no pressure communication between the production casing and the intermediate casing.
