Procedure Description: RIH w/ Perf guns. Perforate 8518'-8524' 3 SPF (18 shots). Perforate 8420'-8430' 3 SPF (30 shots). Perforate 7328'-7336' 3 SPF (24 shots). (Existing perfs: 7408'-7428' (40 shots), 8478'-8494' (32 shots), 8498'-8502' (8 shots). TOC @ 4730'.) RIH w/ 2 7/8" tubing and packers. Isolate perf clusters and pump 2000 gal of 15% HCl into each of the 6 zones. Swab test each perf cluster to determine productivity and oil cut. Frac bottom perf cluster (8518'-8524') w/ 12,000 gal gel w/ 20,000# 20/40 Ottawa and 10,000# 20/40 RC. Frac middle perf cluster (8420'-8430') w/ 25,000 gal gel w/ 60,000# 20/40 Ottawa and 10,000# 20/40 RC. Frac top perf cluster (7328'-7336') w/ 20,000 gal gel w/ 45,000# 20/40 Ottawa and 10,000# 20/40 RC. No change in field and pool. No change in TD. See attached wellbore diagrams.

Surface Disturbance

Is any additional surface disturbance proposed?: No

Section 3 - Certifications Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal:

Departor will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system; or

□ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. If Operator checks this box, Operator will select one of the following:

Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or

Venting and Flaring Plan. □ Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including:

- (a) power generation on lease;
- (b) power generation for grid;
- (c) compression on lease;
- (d) liquids removal on lease;
- (e) reinjection for underground storage;
- (f) reinjection for temporary storage;
- (g) reinjection for enhanced oil recovery;
- (h) fuel cell production; and
- (i) other alternative beneficial uses approved by the division.

Section 4 - Notices

- 1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:
- (a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or
- (b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.
- 2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

VI. Separation Equipment

An existing 3-phase separator on Harvard's Tomcat 17 Federal 1 pad in P-17-23s-32e will be used. Separated gas will then be piped into an existing DCP pipeline on the same pad. Tomcat 21 Federal 8 and Tomcat 17 Federal 1 pads are connected by an existing flowline.

VII. Operational Practices

NMAC 19.15.27.8 (A) Venting & Flaring of Natural Gas

1. Harvard Petroleum Company, LLC will comply with NMAC 19.15.27.8 – venting and flaring of gas during drilling, completion, or production that constitutes waste as defined in 19.15.2 is banned.

NMAC 19.15.27.8 (B) Venting & Flaring During Drilling

- 1. Harvard Petroleum Company, LLC will capture or combust gas if technically feasible during drilling operations using best industry practices.
- 2. A flare stack with a 100% capacity for expected volume will be set on the pad \geq 100 feet from the nearest well head and storage tank.
- 3. In an emergency, Harvard Petroleum Company, LLC will vent gas in order to avoid substantial impact. Harvard Petroleum Company, LLC will report vented or flared gas to the NMOCD.

NMAC 19.15.27.8 (C) Venting & Flaring During Completion or Recompletion

- 1. Facilities will be built and ready from the first day of flowback
- 2. Test separator will be properly separate gas and liquids. Temporary test separator will be used initially to process volumes. In addition, separator will be tied into flowback tanks which will be tied into the gas processing equipment for sale down a pipeline.
- 3. Should the facility not be ready to process gas, or the gas does not meet quality standards, then storage tanks will be set that are tied into gas busters or a temporary flare to manage all gas. This flare would meet the following requirements:
 - a) An appropriately sized flare stack with an automatic igniter
 - b) Harvard Petroleum Company, LLC analyzes gas samples twice a week
 - c) Harvard Petroleum Company, LLC flows the gas into a gathering line as soon as the line specifications are met
 - d) Harvard Petroleum Company, LLC provides the NMOCD with pipeline specifications and natural gas data.

NMAC 19.15.27.8 (D) Venting & Flaring During Production

Harvard Petroleum Company, LLC will not vent or flare natural gas except:

- 1. During an emergency or malfunction
- 2. To unload or clean-up liquid holdup in a well to atmospheric pressure, provided
 - a) Harvard Petroleum Company, LLC does not vent after the well achieves a stabilized rate and pressure
 - b) Harvard Petroleum Company, LLC will be on-site while unloading liquids by manual purging and take all reasonable actions to achieve a stabilized rate and pressure as soon as possible
 - c) Harvard Petroleum Company, LLC will optimize the system to minimize gas venting if the well is equipped with a plunger lift or auto control system
 - d) Best management practices will be used during downhole well maintenance.
- 3. During the first year of production from an exploratory well provided
 - a) Harvard Petroleum Company, LLC receives approval from the NMOCD
 - b) Harvard Petroleum Company, LLC stays in compliance with NMOCD gas capture requirements
 - c) Harvard Petroleum Company, LLC submits an updated C-129 form to the NMOCD
- 4. During the following activities unless prohibited
 - a) Gauging or sampling a storage tank or low-pressure production vessel
 - b) Loading out liquids from a storage tank
 - c) Repair and maintenance
 - d) Normal operation of a gas-activated pneumatic controller or pump
 - e) Normal operation of a storage tank but not including venting from a thief hatch
 - f) Normal operation of dehydration units
 - g) Normal operations of compressors, engines, turbines, valves, flanges, & connectors
 - h) During a bradenhead, packer leakage test, or production test lasting <24 hours
 - i) When natural gas does not meet the gathering line specifications
 - j) Commissioning of pipes, equipment, or facilities only for as long as necessary to purge introduced impurities.

NMAC 19.15.27.8 (E) Performance Standards

- 1. Harvard Petroleum Company, LLC will use a safety factor to design the separation and storage equipment. The equipment will be routed to a vapor recovery system and use a flare as back up for startup, shutdown, maintenance, or malfunction of the VRU system.
- 2. Harvard Petroleum Company, LLC will install a flare that will handle the full volume of vapors from the facility in case of VRU failure. It will have an auto-ignition system.
- 3. Flare stacks will be appropriately sized and designed to ensure proper combustion efficiency
 - a) Flare stacks installed or replaced will be equipped with an automatic ignitor or continuous pilot.

- b) Previously installed flare stacks will be retrofitted within 18 months of May 25, 2021, with an automatic ignitor, continuous pilot, or technology that alerts Harvard Petroleum Company, LLC to flare malfunction.
- c) Flare stacks replaced after May 25, 2021, will be equipped with an automatic ignitor or continuous pilot if at a well or facility with an average production of ≤60 Mcfd of natural gas.
- d) Flare stacks will be located >100 feet from well head and tanks and securely anchored.
- 4. Harvard Petroleum Company, LLC will conduct an AVO inspection on all components for leaks and defects every week.
- 5. Harvard Petroleum Company, LLC will make and keep records of AVO inspections available to the NMOCD for at least 5 years.
- 6. Harvard Petroleum Company, LLC may use a remote or automated monitoring technology to detect leaks and releases in lieu of AVO inspections with prior NMOCD approval.
- 7. Facilities will be designed to minimize waste.
- 8. Harvard Petroleum Company, LLC will resolve emergencies as promptly as possible.

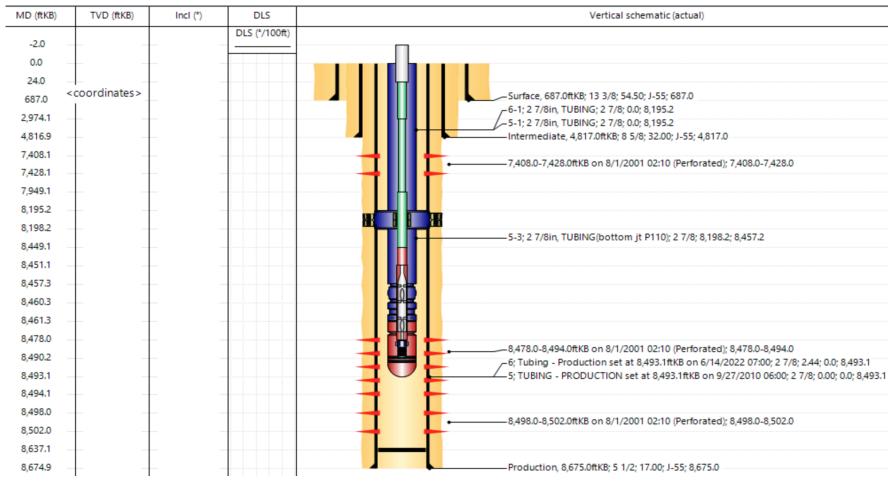

NMAC 19.15.27.8 (F) Measuring or Estimating Vented & Flared Natural Gas

- 1. Harvard Petroleum Company, LLC will have meters on both the low and high-pressure sides of the flares. Volumes will be recorded in the SCADA system.
- 2. Harvard Petroleum Company, LLC will install equipment to measure the volume of flared natural gas that has an average production of >60 Mcfd.
- 3. Harvard Petroleum Company, LLC's measuring equipment will conform to industry standards.
- 4. Measurement system will be designed such that it cannot be bypassed except for inspections and servicing the meters.
- 5. Harvard Petroleum Company, LLC will estimate the volume of vented or flared gas using a methodology that can be independently verified if metering is not practicable due to low flow rate or pressure.
- 6. Harvard Petroleum Company, LLC will estimate the volume of vented and flared gas based on the results of an annual GOR test for wells that do not require measuring equipment reported on form C-116.
- 7. Harvard Petroleum Company, LLC will install measuring equipment whenever the NMOCD determines that metering is necessary.

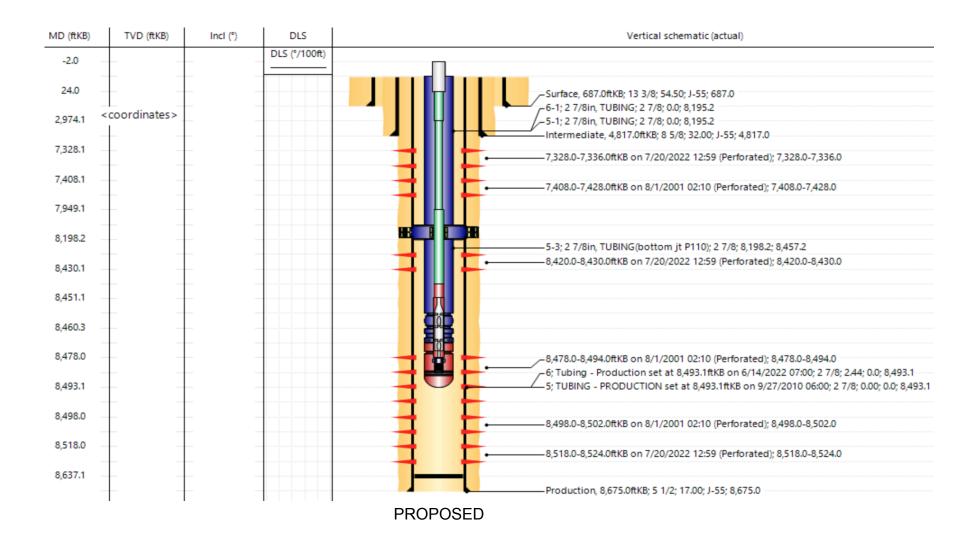

VIII. Best Management Practices

Harvard Petroleum Company, LLC will minimize venting during maintenance by:

- 1. System will be designed and operated to route storage tank and process equipment emissions to the VRU. If the VRU is not operable, then vapors will be routed to the flare.
- 2. Scheduling maintenance for multiple tasks to minimize the need for blowdowns.
- 3. After completion of maintenance, gas will be flared until it meets pipeline specifications.
