For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion. **Wellbore Diagrams attached.**

Zia AGI#1 MAOP 2,233 psig NMOCC Order R-13809 / Zia AGI D#2 MAOP 5,208 psig NMOCC Order R-14207

Quarterly Report for the period from April 1 to June 30, 2023 (Q2) Pursuant to NMOCC Orders 13809 and 14207 for Zia AGI #1 and AGI D#2, respectively.

This report includes the data and analysis of surface injection pressure, TAG temperature, casing annular pressure as well as downhole injection pressure, temperature, and annular pressure for the Zia AGI#1 and for the Zia AGI D#2 for Q2 2023. AGI D#2 is the primary well for this facility with the Zia AGI#1 to be used only as a redundant and backup well. Based on data for surface injection/annular pressure and their current MITs both wells continue to show excellent integrity. For this quarter, the values for injection parameters are generally stable and yielded the following results which are graphed in detail in attached Figures 1 through 10. All the values presented below are averages for the static conditions in the AGI #1 since the well was not in operation for the entire reporting period. Only AGI D#2 was operated during this quarter and its average values represent the normal operational condition of the well. Average injection rates for AGI D#2 have increased slightly (8.03 vs 7.95 MMSCFD) from the previous quarter. Injection to AGI D#2 was shut down from June 13-14 for a scheduled plant turnaround for maintenance.

AGI#1 Surface Measurements (inactive): Average TAG Line Pressure: 7 psig, Average Annular Pressure: 319 psig, Average Pressure Differential: -312psig, Average Tag Line Temperature: 95°F, Average TAG injection rate: 0.00 MMSCFD (not in use this quarter).
AGI#1 Downhole Measurements (inactive): Average bottom hole pressure: 3,274 psig, Average annular bottom hole pressure: 2,285 psig, Average annular bottom hole temperature: 98°F, Average bottom hole TAG Temperature: 98°F (all unchanged since 2021).
AGI D#2 Surface Measurements: Average TAG Injection Pressure: 1,989 psig, Average Annular Pressure: 324 psig, Average Pressure Differential: 1,666 psig, Average Tag Temperature: 120°F, Average TAG injection rate: 8.03 MMSCFD.
AGI D#2 Downhole Measurements: Average bottom hole pressure 6,591 psig, Average bottom hole TAG Temperature: 167°F.
Only AGI D#2 was operated during this reporting period.

Note that the injection rate for AGI D#2 for the quarter is slightly higher than last quarter. This resulted in a commensurate increase in bottom hole pressure which has also increased. The well is behaving appropriately with concurrent changes in injection pressure and annular pressure.

The data gathered throughout this quarter demonstrate the correlative behavior of the annular pressure with the flowrate, injection pressure and temperature confirming that both wells have good integrity and are functioning appropriately within the requirements of their respective NMOCC orders. No mechanical changes to the either well or wellhead have been made since the last quarterly report. Well AGI D#2 displays excellent reservoir characteristics easily accommodating the required volumes of TAG from the facility. This well will be used as the primary disposal well for the facility with the AGI #1 well being operated as needed to confirm functionality and to allow for any required future maintenance on the AGI D#2 well.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
