Subject: Change of setting depth CIBP on the Ballard #9

Ms. Monica,

This morning 6/23/23 we attempted to run a 2.75" gauge ring in our 3-1/2" casing string, first run we made it to 197' and became stuck, we pumped 1 bbls water and worked it free, we then pumped 16 bbls fluid after pulling the gauge ring tool to surface, a subsequent run was to a depth of 1911', a call was made to Hilcorp Engineer Michael Wissing, then a discussion was held with onsite BLM rep Wanda Weatherford who then called her engineer Ken Rennick, a call was made to you explaining the situation and requesting a setting of the CIBP @ 1911', after approval from Yourself, Onsite BLM Rep Wanda Weatherford and Michael Wissing I made the final decision to set the CIBP @ 1911', after running the CIBP we were unable to go below 1903', quick confer with the onsite BLM rep and I made the decision to put the CIBP @ 1903'

1. Set CIBP set at 1903' (not 2023' as planned) due to casing issues
2. Complete CBL.
3. Perform casing test 650 psi for 10 minutes, no pressure loss, witnessed by Wanda Weatherford BLM onsite rep.

Thank you!

Steve Gathings
