13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Report for the Month ending August 31, 2023 Pursuant to Workover C-103 for Linam AGI #1 and AGI #2

This is the 136th monthly submittal of data as agreed between DCP and OCD relative to injection pressure, TAG temperature and casing annulus pressure and bottom hole data for Linam AGI #1. Since the data for both wells provide the best overall picture of the performance of the AGI system, the data for both wells are analyzed and presented herein even though that analysis is required only on a quarterly basis for AGI #2.

All flow this month was directed to AGI #2. Injection parameters being monitored for AGI #1 (currently static) were as follows (Figures 1, 2, 3, 4): Average Injection Rate 0 scf/hr, Average TAG Injection Pressure: 1,286 psig, Average TAG Temperature: 88 °F, Average Annulus Pressure: 45 psig, Average Pressure Differential: 1,241 psig. Bottom hole (BH) sensors provided the average BH pressure for the entire period of 4,260 psig and BH temperature of 138 °F (Figures 8 and 9). The BH pressure is clearly quickly responding to the switchover to AGI #2. The BH pressure decreased significantly from last month, in keeping with the previous observations when AGI #1 was idle. This is a very good indication of the continued resilience of the injection zone.

The recorded injection parameters for AGI #2 for the month were: Average Injection Rate 162,885 scf/hr (AGI #2 was the only well used this month), Average Injection Pressure: 1,473 psig, Average TAG Temperature: 102 °F, Average Annulus Pressure: 3 psig, Average Pressure Differential: 1,470 psig (Figures 5, 6, 7).

The Linam AGI #1 and AGI #2 wells are serving as a safe, effective and environmentally friendly system to dispose of, and permanently sequester, Class II wastes consisting of H_2S and CO_2. The Linam AGI Facility permanently sequestered 5,005 Metric Tons of CO_2 for this month. The two wells provide the required redundancy to the plant that allows for operation with disposal to either or both wells. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
