FAE II Operating LLC
State A A/C 2 #066 **R-22349**
Pool: [24130] Eunice; Seven Rivers-Queen, South
Lea County, New Mexico

Dear Mr. Gebremichael,

FAE II Operating LLC ("Forty Acres"; OGRID No. 329326), as current operator of the State A A/C 2 Waterflood Project (**R-22349**), requests administrative approval to increase the surface injection pressure for the State A A/C 2 #066, API # 30-025-28275.

On September 28th, 2023, Forty Acres conducted a step rate injection test on the State A A/C 2 #66. The performed step rate test indicates a surface fracture pressure of 1575 psi (0.4234 psi/ft). Attached for your review is the Renegade Wireline report of the step rate test performed on the State A A/C 2 #66. Based on the results of the step rate test, Forty Acres, hereby requests authority to increase maximum surface injection pressure to 1575 psi for the State A A/C 2 #66. Additionally, if the IPI is approved Forty Acres requests the approval of the (0.4234 psi/ft) injection gradient to be extended to the adjacent injection wells within the same interval as the State A A/C 2 #66 and also under the same injection authority order **R-22349**. The adjacent wells are the State A A/C 2 #64 (30-025-28273), State A A/C 2 #69 (30-025-28278), State A A/C 2 #70 (30-025-28279), State A A/C 2 #65 (30-025-28274), State A A/C 2 #68 (30-025-28277), State A A/C 2 #71 (30-025-28280), State A A/C 2 #67(30-025-28276), and State A A/C 2 #72 (30-025-28281). 5. On September 15, 1970, the OCC entered Order No. R-3200-A in Case No. 4418 to substitute six injection wells for the wells originally approved in Order No. R-3200.

6. On September 6, 1983, the OCD approved administrative order WFX-518 to expand injection with the following wells: the State A Account 2 No. 65, the State A Account 2 No. 67, the State A Account 2 No. 69 and the State A Account 2 No. 71. Order WFX-518 identified the project as the Sun State A Account 2 Waterflood Project in South Eunice Seven Rivers-Queen Pool and limited injection into only the Queen formation.

7. On September 11, 1984, the OCD approved administrative order WFX-530 to authorize injection with the following wells: the State A A/C 2 No. 64, the State A A/C 2 No. 66, the State A A/C 2 No. 68, State A A/C 2 No. 70, and the State A A/C 2 No. 72. Order WFX-530 identified the waterflood as the South Eunice Seven Rivers-Queen Waterflood Project and approved injection into the Seven River and Queen formations.

8. FAE acquired the project in June 2021 and became the designated operator of the waterflood project.

9. The injection authority for individual wells has expired due to inactivity; however, production did not lapse in the unit during this same time period and the waterflood remains intact as statutory unit.

10. FAE now seeks an order to reinstate the injection authority the following four wells previously approved for injection in the initial enhanced recovery project now proposed as the Blackbeard North Waterflood Project.

	Well Name and Number	Location Within Township 22 South, Range 36 East, NMPM	Proposed Interval (ft.)

(b)	State A A/C 2 No. 67 (API 30-025-28276)	2615' FSL & 1345' FWL, Unit K, Sec. 9	3660 to 3850
(c)	State A A/C 2 No. 69 (API 30-025-28278)	2615' FSL & 1295' FEL, Unit I, Sec. 8	3700 to 3890

11. FAE additionally seeks approval to convert the following four producing wells to injection wells as part of the Blackbeard North Waterflood Project.

12. Applicant appeared at the hearing through counsel and presented evidence to the effect that:

a. The project area will contain the original 2,080 acres of State trust land approved in Order No. R-3200 for the waterflood operation.

b. The project area is within a single state lease where FAE owns approximately 95.7 percent of the working interest with the remaining working interest owned by a single operator.

c. The proposed perforated injection interval in the eight wells ranges from 3660 feet to 3890 feet within the Seven Rivers and Queen formations. The injector wells will inject fluids through a plastic-lined, 2.375-inch tubing set in a packer that is within 100 feet of the top perforation.

d. The source of the water to be injected will be produced water from other Seven Rivers and Queen wells drilled on the lease and is not expected to cause compatibility issues.

e. The waterflood will be injecting into the Seven River-Queen reservoir interval which consists primarily of sandstones interbedded with dolomites and anhydrites. The log shows the interval top at 3640 feet and the top is sealed by a low porosity/low permeability non-oil bearing Seven Rivers carbonate layer. The bottom of the interval is sealed by a low porosity/low permeability section of the Grayburg carbonate.

f. Productive porosity typically ranges from 10% to 20% and averages around 16% throughout the interval.

g. There is no evidence of open faults of hydrological connection between the proposed injection zone and underground sources of drinking water.

h. Six freshwater wells were identified within one mile of the proposed injection wells. Applicant provided analyses from two freshwater wells representative of shallow

groundwater.

- i. Applicant proposes a maximum daily injection rate of 1,000 barrels of water per day (“BWPD”) with an expected maximum injection pressure of 700 pounds per square inch (“PSI”).
 - j. The Applicant identified wells that penetrate the injection interval within the one-half mile Area of Review (“AOR”) for each of the proposed eight injection wells and provided detailed wellbore information for the plugged and abandoned wells.
 - k. The Applicant states that the injection interval is confined by an upper and lower low porosity and permeability barriers which will keep the injected fluids from migrating out of the formation.
 - l. The proposed construction of the proposed injection wells will isolate and protect the underground sources of drinking water (“USDWs”).
 - m. The Applicant provided evidence of proper notification of this application to all "affected persons" and a notice of publication in a newspaper of general circulation in the county.
 - n. The Applicant stated that the conversion of the proposed wells from production to injection was proper for the waterflood and with the new configuration would increase the Estimated Ultimate Recovery for the project by an additional 1,900,000 barrels of oil.
13. No other party appeared at the hearing, or otherwise opposed the granting of this application.
14. The application describes the proposed injection interval as follows:

“The “unitized interval” was defined by Order R-12496-A as the South Eunice pool which has a depth of 3,269’ to 3,983’ in State A A/C2-39 (API:3002508858) log.”

[Item 8 of the Self-Affirmed Statement of Steven Lehrbass, Director of Land, provided at hearing and Item 4 of Exhibit B, the Self-Affirmed Statement of Jessica LaMarro, Geologist, provided in the hearing application.]

OCD review of the referenced order, Order No. R-12496-A, found no relevancy with the proposed waterflood and the related usage of the log cited for determination of the interval. Based on the testimony at hearing, the target for the waterflood was described as *“the lower part of the Seven Rivers and the Upper Queen seems to be the main injection interval in the south, and in the north it seems to be the upper to middle part of the Queen.”*

OCD review of Division and Commission cases identified the following as relevant for the determination of the “unitized interval” for this waterflood project: Commission Order No. R-520; Case No. 673; Commission Order No. R-3800; Case No. 3531; Commission Order No. R-3800-A; Case No. 4418; Division Order No. R-7678; Case No. 8312; and Division Order No. R-9503; Case No. 10269.

CONCLUSION OF LAW

15. The application has been duly filed under the provisions of 19.15.26.8 NMAC and FAE has presented satisfactory evidence that all requirements prescribed in 19.15.26.8 NMAC have been met.

16. The waterflood unit has maintained production retaining the designation of a statutory unit while losing authority to inject due to abandonment under 19.15.26.12 NMAC based on the inactivity of all approved injection wells within the unit.

17. The construction plans for four of the proposed injection wells provided in the application are protective of USDWs.

18. All wells that penetrate the proposed injection interval within a one-half mile AOR of the proposed injection wells are adequately cased and cemented to isolate and confine the injected fluid within the permitted injection interval.

19. The vertical limits for the waterflood should be consistent with Eunice;Seven Rivers-Queen, South pool as provided in Commission Order No. R-3800 and as defined in Ordering Paragraph (6) of Commission Order No. R-520.

20. Approval for conversion of producing wells in the project area to injection wells should have construction that conforms to the vertical limits of the waterflood.

21. The OCD is responsible for the orderly development and production of hydrocarbon resources including the authority to regulate the disposition of produced water as described in NMSA 1978, Section 70-2-12(B)(15). It is obligated to prevent waste, to protect correlative rights, and to protect human health and the environment.

22. To prevent waste of oil and gas and protect correlative rights, the re-instatement of the injection authority of the waterflood project should be approved for the injection wells used in prior waterflood operations.

ORDER

1. The application of FAE II Operating, LLC (“FAE” or “Operator”) to authorize injection wells for enhanced oil recovery within the existing waterflood **is hereby approved**. The operation is designated the **Blackbeard North Waterflood Project** (“Project”) and has the same authority for enhanced recovery in the Seven Rivers and Queen formations as approved in Order No. R-3800.

2. The unit area (or “project area”), comprised of 2,080 acres (more or less) of State trust lands located in Lea County, New Mexico, shall remain unchanged as approved in Order No. R-3800 and as described in Findings Paragraph (4).
3. FAE II Operating, LLC (OGRID No. 329326) is hereby designated the operator of the project.
4. The “unitized interval” remains the Eunice; Seven Rivers-Queen, South pool (pool code: 21430) as approved in Order No. R-3800 and as originally defined in Ordering Paragraph (6) of Commission Order No. R-520. Vertical extent of the unitized interval for the purpose of correlation in the project area is from the upper contact of the Seven Rivers formation at a depth of 3320 feet to the upper contact of the Grayburg formation at a depth of 3983 feet as measured on the electric log called “Schlumberger Resistivity-Self Potential Log” ran in March 1949, on the Texas and Pacific Coal and Oil Company’s State A A/C 2 Well No. 39 (API No. 30-025-08588) located in Unit C, Section 9, Township 22 South, Range 36 East, NMPM, Lea County, New Mexico.
5. The unitized interval **shall not include** the Jalmat;Tan-Yates-7 Rvrs (gas) pool (pool code: 79240) or the Jalmat;Tan-Yates-7 Rvrs (oil) pool (pool code: 33820). Any operation of the Project, either injection or production, in these pools is not approved by this order.
6. The application of FAE to inject produced water into the Seven Rivers and Queen formations **is hereby approved** for the following eight wells:

7. FAE shall be required to complete the following activities prior to the commencing injection for the wells listed in Ordering Paragraph (5):

a. FAE shall confirm the total depth of the well by wireline verification. The Operator shall submit this information with either the Form C-103 Subsequent Report or Form C-105 required following the remedial work for conversion to injector; and

b. Any open perforations into the Yates formation shall be sealed by means of squeezed cement or equivalent method as approved by OCD. This remedial action is identified for the following wells: State A A/C 2 No. 67 (API 30-025-28276); State A A/C 2 No. 70 (API 30-025-28279) and State A A/C 2 No. 72 (API 30-025-28281). Failure to seal the Yates formation shall void the injection authority approved for these wells.

8. Any existing well (active or plugged) approved for injection under this order or succeeding administrative expansion order shall complete the following requirements prior to the installation of the tubing and packer set:

a. Conduct a successful pressure test of the production casing following procedures provided in 19.15.16.10(I) NMAC; and

b. Obtain a new cement bond log ("CBL") from surface to the top of the top perforation of the approved injection interval. A copy of the CBL shall be submitted electronically to the OCD Engineering Bureau email attached to a Form C-103.

If either the pressure test fails or the CBL demonstrates inadequate cement to protect shallow USDW, the operator shall be required to conduct corrective action on the well until the integrity issue is addressed and approved by the OCD.

9. The Operator shall take all steps necessary to ensure that the injected fluid enters only the injection interval and is not permitted to escape to other formations or onto the surface from injection, production, or plugged and abandoned wells.

10. The injection wells shall be equipped with a pressure control device or acceptable substitute that will limit the maximum surface injection pressure ("MSIP") for produced water listed in Ordering Paragraph (5) with an injection rate not to exceed 1000 BWPD.

11. The Director shall have the authority to administratively authorize an increase in MSIP upon a showing supported by an approved Step-Rate Test that such higher pressure will not result in fracturing of the injection formation or confining strata. This test may also be used to administratively increase the daily injection volumes along with a demonstration that the increase volume shall benefit the waterflood operation.

12. The Operator shall provide written notice on Form C-103 to OCD E-Permitting and notify

Case No. 22133

Order No. R-22349

Page 8 of 9

the OCD Engineering Bureau by email of the submittal at least 48 hours in advance of the date and time that any mechanical integrity pressure test will be conducted.

13. Injection shall be accomplished through plastic-lined tubing installed in a packer set in the production casing to provide a proper seal while being as close as practical to the uppermost injection perforations. The limit for the upper placement of the packer in the production casing shall be no greater than 100 feet above the true vertical depth of the uppermost perforation.

14. The casing-tubing annulus shall be filled with an inert fluid. Operator shall continuously monitor the annulus including a gauge attached to the annulus in order to detect leakage in the casing, tubing or packer.

15. The injection wells shall pass a mechanical integrity test prior to recommencement of injection under this order and prior to resumption of injection each time either the packer is unseated or tubing is removed. All testing procedures and schedules shall conform to the requirements of Rule 19.15.26.11(A) NMAC. The OCD Director retains the right to require at any time wireline verification of completion and packer setting depths.

16. The Operator shall immediately notify the appropriate OCD Inspection Supervisor and OCD Engineering Bureau by email of the failure of the tubing, casing or packer in either injection well, or the leakage of water, oil, gas or other fluid from or around any producing or abandoned well within one-half mile of an injection well and shall take all steps as may be timely and necessary to correct such failure or leakage. If the monitoring system indicates communication of the tubing with the annulus due to loss of mechanical integrity, the operator shall immediately proceed to shut-in the injection well and notify the appropriate OCD Inspections Supervisor and OCD Engineering Bureau by email.

17. The Operator shall provide written notice using Form C-103 to OCD E-Permitting and notify the OCD Engineering Bureau by email of the submittal no later than two (2) business days following the date on which injection commenced into the wells.

18. The Project shall be governed by Rules 19.15.26.8 through 19.15.26.15 NMAC. The operator shall submit monthly reports of the injection operations on Form C-115, in accordance with Rules 19.15.26.13 and 19.15.7.28 NMAC.

19. The injection authority granted herein shall terminate one year after the effective date of this order if the operator has not commenced injection operations; provided, however, the OCD, upon written request by the Operator filed prior to the expiration of the one-year time period, may grant an extension for good cause.

20. The injection authority granted herein shall be subject to 19.15.26.12(C)(1) NMAC [Abandonment of injection authority]. If necessary due to operational requirements that all injection wells in the Project are simultaneously not injecting for a continuous one-year period, the Operator shall maintain the injection authority of the order by requesting an extension as provided in 19.15.26.12(C)(2) NMAC.

21. The OCD Director may administratively authorize alternative or additional injection

Case No. 22133
Order No. R-22349
Page 9 of 9

wells within the project area as provided in 19.15.26.8 NMAC.

22. The injection authority granted under this order is not transferable except upon OCD approval. The OCD may require the operator to demonstrate mechanical integrity of any injection well that will be transferred prior to approving transfer of authority to inject.

23. The Operator shall provide written notice to the OCD upon permanent cessation of injection into the Project.

24. The conversion of the following production wells to injection wells shall null and void previously approved administrative orders approving commingling of production in the well:

- a. For the State A A/C 2 No. 67 (API 30-025-28276), administrative order DHC-4443, approved on August 19, 2011, is null and void; and
- b. For the State A A/C 2 No. 70 (API 30-025-28279), administrative order DHC-4395, approved on May 29, 2011, is null and void.

25. This order does not relieve the operator of responsibility should its operations cause any actual damage or threat of damage to protectable fresh water, human health or the environment; nor does it relieve the operator of responsibility for complying with applicable OCD rules or other state, federal or local laws or regulations.

26. Upon failure of the operator to conduct operations (1) in such manner as will protect fresh water or (2) in a manner consistent with the requirements in this order, the OCD may, after notice and hearing (or without notice and hearing in event of an emergency, subject to the provisions of NMSA 1978 Section 70-2-23), terminate the injection authority granted herein.

27. Jurisdiction of this case is retained for the entry of such further orders as the OCD may deem necessary.
