Form 3160-3
(June 2015)FORM APPROVED
OMB No. 1004-0137
Expires: January 31, 2018UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
APPLICATION FOR PERMIT TO DRILL OR REENTER

1a. Type of work: ☐ DRILL ☐ REENTER		5. Lease Serial No.
1b. Type of Well: ☐ Oil Well ☐ Gas Well ☐ Other		6. If Indian, Allottee or Tribe Name
1c. Type of Completion: ☐ Hydraulic Fracturing ☐ Single Zone ☐ Multiple Zone		7. If Unit or CA Agreement, Name and No.
2. Name of Operator		8. Lease Name and Well No.
3a. Address		9. API Well No. 30-039-31467
3b. Phone No. (include area code)		10. Field and Pool, or Exploratory
4. Location of Well (Report location clearly and in accordance with any State requirements. *) At surface At proposed prod. zone		11. Sec., T. R. M. or Blk. and Survey or Area
14. Distance in miles and direction from nearest town or post office*		12. County or Parish
		13. State
15. Distance from proposed* location to nearest property or lease line, ft. (Also to nearest drig. unit line, if any)	16. No of acres in lease	17. Spacing Unit dedicated to this well
18. Distance from proposed location* to nearest well, drilling, completed, applied for, on this lease, ft.	19. Proposed Depth	20. BLM/BIA Bond No. in file
21. Elevations (Show whether DF, KDB, RT, GL, etc.)	22. Approximate date work will start*	23. Estimated duration
24. Attachments		

The following, completed in accordance with the requirements of Onshore Oil and Gas Order No. 1, and the Hydraulic Fracturing rule per 43 CFR 3162.3-3 (as applicable)

- | | |
|--|---|
| 1. Well plat certified by a registered surveyor. | 4. Bond to cover the operations unless covered by an existing bond on file (see Item 20 above). |
| 2. A Drilling Plan. | 5. Operator certification. |
| 3. A Surface Use Plan (if the location is on National Forest System Lands, the SUPO must be filed with the appropriate Forest Service Office). | 6. Such other site specific information and/or plans as may be requested by the BLM. |

25. Signature	Name (Printed/Typed)	Date
Title		
Approved by (Signature)	Name (Printed/Typed)	Date
Title		
Office		

Application approval does not warrant or certify that the applicant holds legal or equitable title to those rights in the subject lease which would entitle the applicant to conduct operations thereon.
Conditions of approval, if any, are attached.

Title 18 U.S.C. Section 1001 and Title 43 U.S.C. Section 1212, make it a crime for any person knowingly and willfully to make to any department or agency of the United States any false, fictitious or fraudulent statements or representations as to any matter within its jurisdiction.

(Continued on page 2)

*(Instructions on page 2)

Approval Date: 07/11/2024

INSTRUCTIONS

GENERAL: This form is designed for submitting proposals to perform certain well operations, as indicated on Federal and Indian lands and leases for action by appropriate Federal agencies, pursuant to applicable Federal laws and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from local Federal offices.

ITEM I: If the proposal is to redrill to the same reservoir at a different subsurface location or to a new reservoir, use this form with appropriate notations. Consult applicable Federal regulations concerning subsequent work proposals or reports on the well.

ITEM 4: Locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local Federal offices for specific instructions.

ITEM 14: Needed only when location of well cannot readily be found by road from the land or lease description. A plat, or plats, separate or on the reverse side, showing the roads to, and the surveyed location of, the well, and any other required information, should be furnished when required by Federal agency offices.

ITEMS 15 AND 18: If well is to be, or has been directionally drilled, give distances for subsurface location of hole in any present or objective productive zone.

ITEM 22: Consult applicable Federal regulations, or appropriate officials, concerning approval of the proposal before operations are started.

ITEM 24: If the proposal will involve hydraulic fracturing operations, you must comply with 43 CFR 3162.3-3, including providing information about the protection of usable water. Operators should provide the best available information about all formations containing water and their depths. This information could include data and interpretation of resistivity logs run on nearby wells. Information may also be obtained from state or tribal regulatory agencies and from local BLM offices.

NOTICES

The Privacy Act of 1974 and regulation in 43 CFR 2.48(d) provide that you be furnished the following information in connection with information required by this application.

AUTHORITY: 30 U.S.C. 181 et seq., 25 U.S.C. 396; 43 CFR 3160

PRINCIPAL PURPOSES: The information will be used to: (1) process and evaluate your application for a permit to drill a new oil, gas, or service well or to reenter a plugged and abandoned well; and (2) document, for administrative use, information for the management, disposal and use of National Resource Lands and resources including (a) analyzing your proposal to discover and extract the Federal or Indian resources encountered; (b) reviewing procedures and equipment and the projected impact on the land involved; and (c) evaluating the effects of the proposed operation on the surface and subsurface water and other environmental impacts.

ROUTINE USE: Information from the record and/or the record will be transferred to appropriate Federal, State, and local or foreign agencies, when relevant to civil, criminal or regulatory investigations or prosecution, in connection with congressional inquiries and for regulatory responsibilities.

EFFECT OF NOT PROVIDING INFORMATION: Filing of this application and disclosure of the information is mandatory only if you elect to initiate a drilling or reentry operation on an oil and gas lease.

The Paperwork Reduction Act of 1995 requires us to inform you that:

The BLM connects this information to an evaluation of the technical, safety, and environmental factors involved with drilling for oil and/or gas on Federal and Indian oil and gas leases. This information will be used to analyze and approve applications. Response to this request is mandatory only if the operator elects to initiate drilling or reentry operations on an oil and gas lease. The BLM would like you to know that you do not have to respond to this or any other Federal agency-sponsored information collection unless it displays a currently valid OMB control number.

BURDEN HOURS STATEMENT: Public reporting burden for this form is estimated to average 8 hours per response, including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding the burden estimate or any other aspect of this form to U.S. Department of the Interior, Bureau of Land Management (1004-0137), Bureau Information Connection Clearance Officer (WO-630), 1849 C Street, N.W., Mail Stop 401 LS, Washington, D.C. 20240.

CONDITIONS OF APPROVAL

Operators: Robert L. Bayless Producer LLC & Blackhawk Energy Corporation
Well Name: La Jara Federal 1-2 #001H Natural Gas Wells and SJ-15 ROSA 181 to LA JARA CDP Temporary Water Line Project
EA Number: DOI-BLM-NM-F010-2023-0061-EA
Inspection Date: April 20, 2023
Lease Number: NMNM010431

The following conditions of approval will apply to the La Jara Federal 1-2 #001H Natural Gas Wells and SJ-15 ROSA 181 to LA JARA CDP Temporary Water Line Project well pad, access road and pipeline and other associated facilities, unless a particular Surface Managing Agency or private surface owner has supplied to Bureau of Land Management and the operator a contradictory environmental stipulation. The failure of the operator to comply with these requirements may result in the assessment of liquidated damages or penalties pursuant to 43 CFR 3163.1 or 3163.2.

Disclaimers: BLM's approval of the APD does not relieve the lessee and operator from obtaining any other authorizations that may be required by the BIA, Navajo Tribe, State, or other jurisdictional entities.

Copy of Plans: A complete copy of the APD package, including Surface Use Plan of Operations, Bare Soil Reclamation Plan, Plan of Development (if required), Conditions of Approval, Cultural Resource Record of Review, Cultural Resources Compliance Form (if required), and Project Stipulations (if required) shall be at the project area at all times and available to all persons.

Review of NEPA documents: It is the responsibility of the operator to follow all the design features, best management practices, and mitigation measures as contained in the Environmental Assessment DOI-BLM-NM-F010-2023-0061-EA, which contains additional design features and best management practices that must be followed. Copies of the EA, Decision Record, and Finding of No Significant Impact may be obtained from the BLM FFO public room, or online at: [EplanningUi \(blm.gov\)](#).

Best Management Practices (BMPs): Farmington Field Office established environmental Best Management Practices (BMP's) will be followed during construction and reclamation of well site pads, access roads, pipeline ties, facility placement or any other surface disturbing activity associated with this project. Bureau wide standard BMP's are found in the Gold Book, Fourth Edition-Revised 2007 and at [The Gold Book | Bureau of Land Management \(blm.gov\)](#). Farmington Field Office BMPs are integrated into the Environmental Assessment, Surface Use Plan of Operations, Bare Soil Reclamation Plan, and COAs.

Construction, Production, Facilities, Reclamation & Maintenance

Construction & Reclamation Notification: The operator or their contractor will contact the Bureau of Land Management, Farmington Field Office Environmental Protection Staff (505) 564-7600 or by email, at least 48 hours prior to any construction or reclamation on this project.

Production Facilities: Design and layout of facilities will be deferred until an onsite with BLM-FFO surface protection staff is conducted to determine the best location. Bayless and BHEC or their contractor will contact the Bureau of Land Management, Farmington Field Office, Surface, and Environmental Protection Staff (505) 564-7600 to schedule a facility layout onsite.

Berms: Berms or firewalls will be constructed around all storage facilities sufficient in size to contain the storage capacity of 110% of the largest tank, or 110% of the combined capacity of tanks if a rupture could drain more than one tank. Berm walls will be compacted with appropriate equipment to assure proper

construction. Metal containment barriers, used for secondary containment, will be properly installed, per the manufacturer directions.

Painting of Equipment: Within 90 days of installation, all above ground structures not subject to safety requirements shall be painted by the Holder to blend with the natural color of the landscape. A reflective material may be used to reduce hazards that may occur when such structures are near roads. Otherwise, the paint use shall be a non-glare, non-reflective, non-chalking color of: **Juniper Green**

Staking: The holder shall place slope stakes, culvert location and grade stakes, and other construction control stakes as deemed necessary by the authorized officer to ensure construction in accordance with the plan of development. If stakes are disturbed, they shall be replaced before proceeding with construction.

Weather: No construction or routine maintenance activities shall be performed during periods when the soil is too wet to adequately support construction equipment. If such equipment creates ruts in excess of 6 inches deep, the soil shall be deemed too wet.

Stockpile of Soil: The top 6 inches of soil material will be stripped and stockpiled in the construction zones around the pad [construction zones may be restricted or deleted to provide resource avoidance]. The stockpiled soil will be free of brush and tree limbs, trunks and roots. The stockpiled soil material will be spread on the reclaimed portions of the pad [including the cut and fill slopes] prior to re-seeding. Spreading shall not be done when the ground or topsoil is frozen or wet.

Storage Tanks: All open top permanent production or storage tanks regardless of diameter made of fiberglass, steel, or other material used for the containment of oil, condensate, produced water and or other production waste shall be screened, netted, or otherwise covered to protect migratory birds and other wildlife from access.

Compressors: Compressor units on this well location not equipped with a drip pan for containment of fluids shall be lined with an impervious material at least 8 mils thick and a 12-inch berm. The compressor will be painted to match the well facilities. Any variance to this will be approved by the Authorized Officer (AO). Noise mitigation may be required at the time of compressor installation.

Culverts: Silt Traps/Bell Holes will be built upstream of all culvert locations.

Driving Surface Area: All activities associated within the construction, operation, maintenance, and abandonment of the well location is limited to areas approved in the APD or ROW permit. During the production of the well, vehicular traffic is limited to the daily driving surface area established during interim reclamation construction operations. This area typically forms a keyhole or teardrop driving surface from which all production facilities may be serviced or inspected. A v-type ditch will be constructed on the outside of the driving surface to further define the driving surface and to deter vehicular traffic from entering onto the interim reclamation areas.

Contouring of Cut and Fill Slopes: The interim cut and fill slope grade shall be as close to the original contour as possible. To obtain this ratio, pits and slopes shall be back sloped into the pad during interim reclamation. Only subsurface soil and material shall be utilized in the contouring of the cut and fill slopes. Under no circumstances shall topsoil be utilized as substrate material for contouring of cut and fill slopes.

Maintenance: In order to perform subsequent well operations, right-of-way (ROW) operations, or install new/additional equipment, it may be necessary to drive, park, and operate on restored, interim vegetation within the previously disturbed area. This is generally acceptable provided damage is promptly repaired and reclaimed following use. Where vehicular travel has occurred as a "convenience" and interim reclamation/vegetation has been compromised, immediate remediation of the affected areas is required. Additionally, where erosion has occurred and compromised the reclamation of the well location, the

affected area must be promptly remediated so that future erosion is prevented, and the landform is stabilized.

Layflat Lines: Layflat lines used for development of the wells may be on the ground for a maximum of 6 months and shall be retrieved within 30 days of ending completion operations. If the layflat lines are needed for longer than 6 months or cannot be retrieved within 30 days of ending completion operations, a Sundry NOI shall be submitted to the BLM FFO for review and decision that includes a rationale for the time extension.

“Hotwork” and Construction Affecting Fire Safety: The holder or its contractors will notify the BLM of any fires and comply with all rules and regulations administered by the BLM concerning the use, prevention and suppression of fires on federal lands, including any fire prevention orders that may be in effect at the time of the permitted activity. The holder or its contractors may be held liable for the cost of fire suppression, stabilization and rehabilitation. In the event of a fire, personal safety will be the first priority of the holder or its contractors.

The holder or its contractors shall:

1. Operate all internal and external combustion engines (including off-highway vehicles, chainsaws, generators, heavy equipment, etc.) with a qualified spark arrester. Qualified spark arresters are maintained and not modified and meet the Society of Automotive Engineers (SAE) Recommended Practices J335 or J350. Refer to 43 CFR §8343.1.
 - a. *Refueling of any combustible engine equipment must be minimum of 3 meters away from any ignition source (open flame, smoking, etc.).*
2. Maintain and clean all equipment regularly to remove flammable debris buildup and prevent fluid leaks that can lead to ignitions.
3. Carry at least one shovel or wildland fire hand tool (combi, Pulaski, McLeod) per person working, minimum 5 gallons of water, and a fire extinguisher rated at a minimum as ABC - 10 pound on each piece of equipment and each vehicle.
4. When conducting “hotwork” such as, but not limited to welding, grinding, cutting, spark-producing work with metal, work that creates hot material or slag; choose an area large enough to contain all hot material that is naturally free of all flammable vegetation or remove the flammable vegetation in a manner compliant with the permitted activity. If adequate clearance cannot be made, wet an area large enough to contain all hot material prior to the activity and periodically throughout the activity to reduce the risk of wildfire ignition. Regardless of clearance, maintain readiness to respond to an ignition at all times. In addition, keep one hand tool per person and at least one fire extinguisher ready, minimum, as specified earlier (#3) during this activity.
5. Keep apprised of current and forecasted weather at <https://www.weather.gov/abq/forecasts-fireweather-links> and fire conditions at www.wfas.net and take additional fire precautions when fire danger is rated High or greater. Red Flag Warnings are issued by the National Weather Service when fire conditions are most dangerous, and ignitions escape control quickly. Extra precautions are required during these warnings such as additional water, designate a fire watch/patrol and tools. If work is being conducted in an area that is not clear of vegetation within 50 feet of work area; then, when fire danger is rated High or greater and 1. There is a predicted Red Flag warning for your area or 2. If winds are predicted to be greater than 10 mph, stop all hotwork activities for the day at 10 am.
6. In the event of an ignition, initiate fire suppression actions in the work area to prevent fire spread to or on federally administered lands. If a fire spreads beyond the capability of workers with the stipulated tools, all will cease fire suppression action and leave the area immediately via pre-identified escape routes.
7. Call **911** or the **Taos Interagency Fire Dispatch Center (575-758-6208)** immediately of the location and status of any fire.

AND

Notify the respective BLM field office for which the permit or contract was issued immediately of the incident.

Farmington Field Office at 505-564-7600

Noxious Weeds

Inventory the proposed site for the presence of noxious and invasive weeds. Noxious weeds are those listed on the New Mexico Noxious Weed List and USDA's Federal Noxious Weed List. The New Mexico Noxious Weed List or USDA's Noxious Weed List can be updated at any time and should be regularly check for any changes. Invasive species may or may not be listed as a noxious weed but have been identified to likely cause economic or environmental harm or harm to human health. The following noxious weeds have been identified as occurring on lands within the boundaries of the Farmington Field Office (FFO). There are numerous invasive species on the FFO such as Russian thistle (*Salsola spp.*) and field bindweed (*Convolvulus arvensis*).

Russian Knapweed (<i>Centaurea repens</i>)	Musk Thistle (<i>Carduus nutans</i>)
Bull Thistle (<i>Cirsium vulgare</i>)	Canada Thistle (<i>Cirsium arvense</i>)
Scotch Thistle (<i>Onopordum acanthium</i>)	Hoary Cress (<i>Cardaria draba</i>)
Perennial Pepperweed (<i>Lepidium latifolium</i>)	Halogeton (<i>Halogeton glomeratus</i>)
Spotted Knapweed (<i>Centaurea maculosa</i>)	Dalmation Toadflax (<i>Linaria genistifolia</i>)
Yellow Toadflax (<i>Linaria vulgaris</i>)	Camelthorn (<i>Alhagi pseudalhagi</i>)
African Rue (<i>Peganum harmala</i>)	Salt Cedar (<i>Tamarix spp.</i>)
Diffuse Knapweed (<i>Centaurea diffusa</i>)	Leafy Spurge (<i>Euphorbia esula</i>)

- a. Identified weeds will be treated prior to new surface disturbance if determined by the FFO Noxious Weed Coordinator. A Pesticide Use Proposal (PUP) must be submitted to and approved by the FFO Noxious Weed Coordinator prior to application of pesticide. The FFO Noxious Weeds Coordinator (505-564-7600) can provide assistance in the development of the PUP.
- b. Vehicles and equipment should be inspected and cleaned prior to coming onto the work site. This is especially important on vehicles from out of state or if coming from a weed-infested site.
- c. Fill dirt or gravel may be needed for excavation, road construction/repair, or for spill remediation. If fill dirt or gravel will be required, the source shall be noxious weed free and approved by the FFO Noxious Weed Coordinator.
- d. The site shall be monitored for the life of the project for the presence of noxious weeds (includes maintenance and construction activities). If weeds are found the FFO Coordinator shall be notified at (505) 564-7600 and provided with a Weed Management Plan and if necessary, a Pesticide Use Proposal (PUP). The FFO Coordinator can provide assistance developing the Weed Management Plan and/or the Pesticide Use Proposal.
- e. Only pesticides authorized for use on BLM lands would be used and applied by a licensed pesticide applicator. The use of pesticides would comply with federal and state laws and used only in accordance with their registered use and limitations. Bayless and BHEC's weed-control contractor would contact the BLM-FFO prior to using these chemicals.
- f. Noxious/invasive weed treatments must be reported to the FFO Noxious Weed

Coordinator. A Pesticide Use Report (PUR) is required to report any mechanical, chemical, biological, or cultural treatments used to eradicate, and/or control noxious or invasive species. Reporting will be required quarterly and annually or per request from the FFO Noxious Weed Coordinator.

Bare ground vegetation trim-out: If bare ground vegetation treatment (trim-out) is desired around facility structures, the operator will submit a bare ground/trim-out design included in their Surface Use Plan of Operations (SUPO). The design will address vegetation safety concerns of the operator and BLM while minimizing impacts to interim reclamation efforts. The design must include what structures to be treated and buffer distances of trim-out. Pesticide use for vegetation control around anchor structures is not approved. If pesticides are used for bare ground trim-out, the trim-out will not exceed three feet from the edge of any eligible permanent structure (i.e., well heads, fences, tanks). Additional distance/areas may be requested and must be approved by the FFO authorized officer. The additional information below must also be provided to the FFO:

- a. Pesticide use for trim out will require a Pesticide Use Proposal (PUP). A PUP is required *prior* to any treatment and must be approved by the FFO Noxious Weed Coordinator. Only pesticides authorized for use on BLM lands would be used and applied by a licensed pesticide applicator. The use of pesticides would comply with federal and state laws and used only in accordance with their registered use and limitations. Bayless and BHEC's weed-control contractor would contact the BLM-FFO prior to using these chemicals and provide Pesticide Use Reports (PURs) post treatment.
- b. A Pesticide Use Report (PUR) or a Biological Use Report (BUR) is required to report any chemical, or biological treatments used to eradicate, or control vegetation on site. Reporting will be required quarterly and annually or per request from the FFO Noxious Weed Coordinator.

Paleontology

Any paleontological resource discovered by the Operator, or any person working on his behalf, on public or Federal land shall be immediately reported to the Authorized Officer. Holder shall suspend all operations in the immediate area of such discovery until written authorization to proceed is issued by the Authorized Officer. An evaluation of the discovery will be made by the Authorized Officer to determine appropriate actions to prevent the loss of significant scientific values. The Holder will be responsible for the cost of evaluation and any decision as to proper mitigation measures will be made by the Authorized Officer after consulting with the Holder.

Visual Resources

Dark Sky COAs need to be applied to existing lighting, which is not dark sky friendly and to any additional lights added as part of pad expansion. All permanent lighting will use full cutoff luminaires, which are fully shielded (i.e., not emitting direct or indirect light above an imaginary horizontal plane passing through the lowest part of the light source). All permanent lighting will be pointed straight down at the ground in order to prevent light spill to the sides. All permanent lighting will be 4000° Kelvin or less with 3000° Kelvin preferred. Warmer light colors are less noticeable by humans and cause less impact to wildlife. All permanent lighting will be controlled by a switch and/or timer which allows the lights to be turned on when workers are on location during dark periods but will keep the lights off the majority of the time.

Wildlife Resources

Wildlife: F-4 Timing Limitation Stipulation-Important Seasonal Wildlife Habitat Rosa Mesa Wildlife SDA. No surface use is allowed during the following time period: December 1 - March 31.

Hazards: Wildlife hazards associated with the proposed project would be fenced, covered, and/or contained in storage tanks, as necessary.

Migratory Bird: Migratory nest survey stipulations. Once drilling and completion activities are complete, any open water that could be harmful to birds and wildlife. must be covered, screened, or netted to prevent entry.

Threatened, Endangered or Sensitive Species: If, in operations the operator/holder discovers any Threatened, Endangered, or Sensitive species, work in the vicinity of the discovery will be suspended and the discovery promptly reported to the BLM-FFO T&E specialist at (505) 564-7600. The BLM-FFO will then specify what action is to be taken. Failure to notify the BLM-FFO about a discovery may result in civil or criminal penalties in accordance with The Endangered Species Act (as amended).

Nesting: If a bird nest containing eggs or young is encountered in the path of construction the operator will cease construction and consult with BLM to determine appropriate actions.

Livestock Grazing: Cattle are in allotment between 5/1 and 10/31. Industry may need to coordinate with permittee if concerns of livestock in area during construction.

Soil, Air, Water

Land Farming: No excavation, remediation or closure activities will be authorized without prior approval, on any federal or Indian mineral estate, federal surface, or federal ROW. A Sundry Notice (DOI, BLM Form 3160-5) must be submitted with an explanation of the remediation or closure plan for on-lease actions.

Emission Control Standard: Compressor engines 300 horsepower or less used during well production must be rated by the manufacturer as emitting NOx at 2 grams per horsepower hour or less to comply with the New Mexico Environmental Department, Air Quality Bureau's guidance.

Waste Disposal: All fluids (i.e., scrubber cleaners) used during washing of production equipment, including compressors, will be properly disposed of to avoid ground contamination, or hazard to livestock or wildlife.

Cultural Resources

Non-Permitted Disturbance: Construction, construction maintenance or any other activity outside the areas permitted by the APD will require additional approval and may require a new cultural survey and clearance.

Employee Education: All employees of the project, including the Project Sponsor and its contractors and sub-contractors will be informed that cultural sites are to be avoided by all personnel, personal vehicles, and company equipment. They will also be notified that it is illegal to collect, damage, or disturb cultural resources, and that such activities are punishable by criminal and or administrative penalties under the provisions of the Archaeological Resources Protection Act (16 U.S.C. 470aa-mm) when on federal land and the New Mexico Cultural Properties Act NMSA 1978 when on state land.

Discovery of Cultural Resources in the Absence of Monitoring: Discovery of Cultural Resources in the Absence of Monitoring: If, in its operations, operator/holder discovers any previously unidentified historic or prehistoric cultural resources, then work in the vicinity of the discovery will be suspended and the discovery promptly reported to BLM Field Manager. BLM will then specify what action is to be taken. If there is an approved "discovery plan" in place for the project, then the plan will be executed. In the absence of an approved plan, the BLM will evaluate the significance of the discovery in accordance with 36 CFR Section 800.13, in consultation with the appropriate State or Tribal Historic Preservation Officer(s) and Indian tribe(s) that might attach religious and cultural significance to the affected property,

or in accordance with an approved program alternative. Minor recordation, stabilization, or data recovery may be performed by BLM or a third party acting on its behalf, such as a permitted cultural resources consultant. If warranted, more extensive **archaeological or alternative mitigation**, likely implemented by a permitted cultural resources consultant, may be required of the operator/holder prior to allowing the project to proceed. Further damage to significant cultural resources will not be allowed until any **mitigations determined appropriate through the agency's Section 106 consultation are completed.** Failure to notify the BLM about a discovery may result in civil or criminal penalties in accordance with the Archeological Resources Protection Act (ARPA) of 1979, as amended, **the Native American Graves Protection and Repatriation Act (NAGRPA) of 1990, as amended, and other applicable laws.**

Discovery of Cultural Resources during Monitoring: If monitoring confirms the presence of previously unidentified historic or prehistoric cultural resources, then work in the vicinity of the discovery will be suspended and the monitor will promptly report the discovery to the BLM Field Manager. BLM will then specify what action is to be taken. **If there is an approved "discovery plan" in place for the project, then the plan will be executed. In the absence of an approved plan, the BLM will evaluate the significance of the discovery in accordance with 36 CFR Section 800.13, in consultation with the appropriate State or Tribal Historic Preservation Officer(s) and Indian tribe(s) that might attach religious and cultural significance to the affected property, or in accordance with an approved program alternative.** Minor recordation, stabilization, or data recovery may be performed by BLM or a third party acting on its behalf, such as a permitted cultural resources consultant. **If warranted, more extensive archaeological or alternative mitigation, likely implemented by a permitted cultural resources consultant, may be required of the operator/holder prior to allowing the project to proceed. Further damage to significant cultural resources will not be allowed until any mitigations determined appropriate through the agency's Section 106 consultation are completed.**

Damage to Sites: If, in its operations, operator/holder damages, or is found to have damaged any previously documented or undocumented historic or prehistoric cultural resources, excluding "discoveries" as noted above, the operator/holder agrees at his/her expense to have a permitted cultural resources consultant prepare a BLM approved damage assessment and/or data recovery plan. The operator/holder agrees at his/her expense to implement a **mitigation** that the agency finds appropriate given the significance of the site, which the agency determines in consultation with the appropriate State or Tribal Historic Preservation Officer(s) and Indian tribe(s) that might attach religious and cultural significance to the affected property. **This mitigation may entail execution of the data recovery plan by a permitted cultural resources consultant and/or alternative mitigations.** Damage to cultural resources may result in **civil or criminal penalties in accordance with the Archeological Resources Protection Act (ARPA) of 1979, as amended, the Native American Graves Protection and Repatriation Act (NAGRPA) of 1990, as amended, and other applicable laws.**

See below additional cultural stipulations.

Discovery of Cultural Resources in the Presence or Absence of Monitoring: If any previously unidentified historic or prehistoric cultural resources are discovered during construction or project operations, work in the vicinity of the discovery will be suspended and the discovery will promptly be reported to the BLM Field Manager.

Note: If there are questions about these stipulations, contact Kim Adams (BLM) at 505.564.7683 or kadams@blm.gov.

CULTURAL RESOURCE STIPULATIONS
Farmington Field Office
BLM Report Number: 2024(I)015F

Project Name: La Jara Federal 1-2 Unit 001H Well Pad and Associated Facilities.

Project Sponsor: Bayless Energy Production Co.

1. SITE PROTECTION AND EMPLOYEE EDUCATION:

All employees of the project, including the Project Sponsor and its contractors and sub-contractors will be informed that cultural sites are to be avoided by all personnel, personal vehicles and company equipment. They will also be notified that it is illegal to collect, damage, or disturb cultural resources, and that such activities are punishable by criminal and or administrative penalties under the provisions of the Archaeological Resources Protection Act (16 U.S.C. 470aa-mm) when on federal land and the New Mexico Cultural Properties Act NMSA 1978 when on state land.

2. ARCHAEOLOGICAL MONITORING IS REQUIRED:

A copy of these stipulations will be supplied to the archeological monitor at least two working days prior to the start of construction activities. No construction activities, including vegetation removal, may begin before the arrival of the archaeological monitor.

The monitor will:

- Observe all surface disturbing activities within 100' of LA115065.
- Ensure that all disturbance associated with the boring under LA115065 remains at least 20 ft from any cultural deposits.
- Submit a report of the monitoring activities within 30 days of completion of monitoring unless other arrangements are made with the BLM. These stipulations must be attached to the report.

Note: If there are questions about these stipulations, contact Kim Adams (BLM) at 505.564.7683 or kadams@blm.gov.

For Official Use Only: Disclosure of site locations prohibited (43 CFR 7.18)

***Above Data Required on Well Sign**

GENERAL REQUIREMENTS FOR OIL AND GAS OPERATIONS ON FEDERAL AND INDIAN LEASES

The following special requirements apply and are effective when **checked**:

- A. ☒ Note all surface/drilling conditions of approval attached.
- B. ☒ The required wait on cement (WOC) time will be a minimum of 500 psi compressive strength at 60 degrees. Blowout preventor (BOP) nipple-up operations may then be initiated
- C. ☒ Test all casing strings below the conductor casing to .22 psi/ft. of casing string length or 1500 psi, whichever is greater, but not to exceed 70% of the minimum internal yield (burst) for a minimum of 30 minutes. If pressure declines more than 10 percent in 30 minutes, corrective action shall be taken.
- D. ☒ Communitization Agreement covering the acreage dedicated to this well must be filed for approval with the Bureau of Land Management, New Mexico State Office, Reservoir Management Group, 301 Dinosaur Trail, Santa Fe, New Mexico 87508.
The effective date of the agreement must be **prior** to any sales.
- E. ☐ The use of co-flex hose is authorized contingent upon the following:
 1. From the BOP to the choke manifold: the co-flex hose must be hobbled on both ends and saddle to prevent whip.
 2. From the choke manifold to the discharge tank: the co-flex hoses must be as straight as practical, hobbled on both ends and anchored to prevent whip.
 3. The co-flex hose pressure rating must be at least commensurate with approved BOPE.

INTERIOR REGION 7 • UPPER COLORADO BASIN

COLORADO, NEW MEXICO, UTAH, WYOMING

I. GENERAL

- A. Full compliance with all applicable laws and regulations, with the approved Permit to drill, and with the approved Surface Use and Operations Plan is required. Lessees and/or operators are fully accountable for the actions of their contractors and subcontractors. Failure to comply with these requirements and the filing of required reports will result in strict enforcement pursuant to 43 CFR 3163.1 or 3163.2.
- B. Each well shall have a well sign in legible condition from spud date to final abandonment. The sign should show the operator's name, lease serial number, or unit name, well number, location of the well, and whether lease is Tribal or Allotted, (See 43 CFR 3162.6(b)).
- C. A complete copy of the approved Application for Permit to Drill, along with any conditions of approval, shall be available to authorized personnel at the drill site whenever active drilling operations are under way.
- D. For Wildcat wells only, a drilling operations progress report is to be submitted, to the BLM-Field Office, weekly from the spud date until the well is completed and the Well Completion Report is filed. The report should be on 8-1/2 x 11 inch paper, and each page should identify the well by; operator's name, well number, location and lease number.
- E. As soon as practical, notice is required of all blowouts, fires and accidents involving life-threatening injuries or loss of life. (See NTL-3A).
- F. BOP equipment (except the annular preventer) shall be tested utilizing a test plug to full working pressure for 10 minutes. No bleed-off of pressure is acceptable. (See 43 CFR 3172.6(b)(9)(ii)).
- G. The operator shall have sufficient weighting materials and lost circulation materials on location in the event of a pressure kick or in the event of lost circulation. (See 43 CFR 3172.8(a)).
- H. The flare line(s) discharge shall be located not less than 100 feet from the well head, having straight lines unless turns are targeted with running tees, and shall be positioned downwind of the prevailing wind direction and shall be anchored. The flare system shall have an effective method for ignition. Where noncombustible gas is likely or expected to be vented, the system shall be provided supplemental fuel for ignition and to maintain a continuous flare. (See 43 CFR 3172.8(b)(7)).
- I. Prior approval by the BLM-Authorized Office (Drilling and Production Section) is required for variance from the approved drilling program and before commencing plugging operations, plug back work, casing repair work, corrective cementing operations, or suspending drilling operations indefinitely. Emergency approval may be obtained orally, but such approval is contingent upon filing of a Notice of Intent sundry within three business days. **Any changes to the approved plan or any questions regarding drilling operations should be directed to BLM during regular business hours at 505-564-7600. Emergency program changes after hours should be directed to Virgil Lucero at 505-793-1836.**
- J. **The Inspection and Enforcement Section (I&E), phone number (505-564-7750) is to be notified at least 24 hours in advance of BOP test, spudding, cementing, or plugging operations so that a BLM representative may witness the operations.**

- K. Unless drilling operations are commenced within two years, approval of the Application for Permit to Drill will expire. A written request for a two-year extension may be granted if submitted prior to expiration.
- L. From the time drilling operations are initiated and until drilling operations are completed, a member of the drilling crew or the tool pusher shall maintain rig surveillance at all times, unless the well is secured with blowout preventers or cement plugs.
- M. If for any reason, drilling operations are suspended for more than 90 days, a written notice must be provided to this office outlining your plans for this well.
- N. **Commingling:** No production (oil, gas, and water) from the subject well should start until Sundry Notices (if necessary) granting variances from applicable regulations as related to commingling and off-lease measurement are approved by this office.

II. REPORTING REQUIREMENTS

- A. For reporting purposes, all well Sundry notices, well completion and other well actions shall be referenced by the appropriate lease, communitization agreement and/or unit agreement numbers.
- B. The following reports shall be filed with the BLM-Authorized Officer online through AFMSS 2 within 30 days after the work is completed.
 - 1. Provide complete information concerning.
 - a. Setting of each string of casing. Show size and depth of hole, grade and weight of casing, depth set, depth of all cementing tools that are used, amount (in cubic feet) and types of cement used, whether cement circulated to surface and all cement tops in the casing annulus, casing test method and results, and the date work was done. Show spud date on first report submitted.
 - b. Intervals tested, perforated (include size, number and location of perforations), acidized, or fractured; and results obtained. Provide date work was done on well completion report and completion sundry notice.
 - c. Subsequent Report of Abandonment, show the way the well was plugged, including depths where casing was cut and pulled, intervals (by depths) where cement plugs were replaced, and dates of the operations.
 - 2. Well Completion Report will be submitted with 30 days after well has been completed.
 - a. Initial Bottom Hole Pressure (BHP) for the producing formations. Show the BHP on the completion report. The pressure may be: 1) measured with a bottom hole bomb, or; 2) calculated based on shut in surface pressures (minimum seven day buildup) and fluid level shot.
 - 3. Submit a cement evaluation log if cement is not circulated to surface.
- C. Production Startup Notification is required no later than the 5th business day after any well begins production on which royalty is due anywhere on a lease site or allocated to a lease site or resumes production in the case of a well which has been off production for more than 90 days. The operator shall notify the Authorized Officer by letter or Sundry Notice, Form 3160-5, or orally to be followed

by a letter or Sundry Notice, of the date on which such production has begun or resumed. CFR 43 3162.4-1(c).

III. DRILLER'S LOG

The following shall be entered in the daily driller's log: 1) Blowout preventer pressures tests, including test pressures and results, 2) Blowout preventer tests for proper functioning, 3) Blowout prevention drills conducted, 4) Casing run, including size, grade, weight, and depth set, 5) How pipe was cemented, including amount of cement, type, whether cement circulated to surface, location of cementing tools, etc., 6) Waiting on cement time for each casing string, 7) Casing pressure tests after cementing, including test pressure and results, and 8) Estimated amounts of oil and gas recovered and/or produced during drill stem test.

IV. GAS FLARING

Gas produced from this well may not be vented or flared beyond an initial, authorized test period of * Days or 50 MMCF following its (completion)(recompletion), whichever first occurs, without the prior, written approval of the authorized officer. Should gas be vented or flared without approval beyond the test period authorized above, you may be directed to shut-in the well until the gas can be captured or approval to continue venting or flaring as uneconomic is granted. You shall be required to compensate the lessor for the portion of the gas vented or flared without approval which is determined to have been avoidably lost.

*30 days, unless a longer test period is specifically approved by the authorized officer. The 30-day period will commence upon the first gas to surface.

V. SAFETY

- A. All rig heating stoves are to be of the explosion-proof type.
- B. Rig safety lines are to be installed.
- C. Hard hats and other Personal Protective Equipment (PPE) must be utilized.

VI. CHANGE OF PLANS OR ABANDONMENT

- A. Any changes of plans required to mitigate unanticipated conditions encountered during drilling operations, will require approval as set forth in Section 1.F.
- B. If the well is dry, it is to be plugged in accordance with 43 CFR 3162.3-4, approval of the proposed plugging program is required as set forth in Section 1.F. The report should show the total depth reached, the reason for plugging, and the proposed intervals, by depths, where cement plugs are to be placed, type of plugging mud, etc. A Subsequent Report of Abandonment is required as set forth in Section II.B.1c.
- C. Unless a well has been properly cased and cemented, or properly plugged, the drilling rig must not be moved from the drill site without prior approval from the BLM-Authorized Officer.

Operator Certification Data Report

07/11/2024

Operator

I hereby certify that I, or someone under my direct supervision, have inspected the drill site and access route proposed herein; that I am familiar with the conditions which currently exist; that I have full knowledge of state and Federal laws applicable to this operation; that the statements made in this APD package are, to the best of my knowledge, true and correct; and that the work associated with the operations proposed herein will be performed in conformity with this APD package and the terms and conditions under which it is approved. I also certify that I, or the company I represent, am responsible for the operations conducted under this application. These statements are subject to the provisions of 18 U.S.C. 1001 for the filing of false statements.

RE: Designation of Permit Agent
Robert L. Bayless, Producer
Notice of Stakings
Applications for Permit to Drill
Right-of-Ways
Sundry Notices
Authorized Agency – All BLM New Mexico Offices

Dear Mr. Fields:

Robert L. Bayless, Producer hereby designates Upstream Petroleum Management, Inc.: Kimberly J. Rodell, Andrea J. Gross, Mitchell R. Dix, and Angela Callaway as authorized agents for matters relative to Notice of Stakings, Applications for Permit to Drill, Rights-of-Ways, Sundry Notices, and regulatory matters associated with Robert L. Bayless, Producer's oil and gas drilling, completion, and production activities for the State of New Mexico.

All matters regarding drilling, completion, production and regulatory compliance will be handled through the Robert L. Bayless, Producer's office.

Should you have any questions relative to this authorization, please feel free to contact me by phone at 505-326-2659 or by e-mail at kmccord@rlbayless.com, at your convenience.

Sincerely,

Kevin McCord
Operations Manager

Section 2 - Blowout Prevention

Pressure Rating (PSI): 5M

Rating Depth: 7455

Equipment: Annular preventer, pipe ram, blind ram, and, if conditions warrant, as specified by the authorized officer, another pipe ram shall also be required, a second pipe ram preventer shall be used with a tapered drill string, drilling spool, or blowout preventer with 2 side outlets (choke side shall be a 3-inch minimum diameter, kill side shall be at least 2-inch diameter), 3 inch diameter choke line, 2 choke line valves (3 inch minimum), kill line (2 inch minimum), 2 chokes with 1 remotely controlled from rig floor (refer to diagram in attachment 1), 2 kill line valves and a check valve (2 inch minimum), upper kelly cock valve with handle available, when the expected pressures approach working pressure of the system, 1 remote kill line tested to stack pressure (which shall run to the outer edge of the substructure and be unobstructed), lower kelly cock valve with handle available, safety valve(s) and subs to fit all drill string connections in use, inside BOP or float sub available, pressure gauge on choke manifold, all BOPE connections subjected to well

Operator Name: ROBERT L BAYLESS PRODUCER LLC**Well Name:** LA JARA FED 1-2**Well Number:** 001H

pressure shall be flanged, welded, or clamped, fill-up line above the uppermost preventer. The 13-5/8" 5M will be used for the surface and intermediate sections and 11" 5M will be used for the production section. Both BOP Diagrams are attached.

Requesting Variance? YES

Variance request: Pursuant to Onshore Order No. 2 Section III, Subsection B(i), Formation Integrity Tests (FIT) must be performed on either exploratory wells or any well permitted to utilize 5M BOPE. Bayless requests a variance to this rule, by not performing an FIT test at the surface casing shoe as it is common to encounter zones in formations below the shoe that fail at a lower Equivalent Mud Weight (EMW) than a typical FIT test. An FIT would be planned after drilling out the intermediate casing shoe, to be tested to 13 lb/gal.

Testing Procedure: THE BOPE will be tested to 250psi (Low) for 5 minutes and 5000psi (High) for 10 minutes prior to drilling out surface and intermediate casing. Annular preventer will be tested to 50% of rated working pressure and maintained for at least 10 minutes. A BOPE testing unit will be utilized with a chart recorder and appropriate test plug for testing. BOP equipment will be tested every 30 days, after any repairs are made to the BOP equipment, and after the BOP equipment is subjected to pressure. Annular preventers will be functionally operated at least once per well. Pipe and blind rams shall be activated each trip but not more than once a day. The New Mexico Oil and Gas Conservation Commission and the BLM will be notified 24 hours in advance of testing of BOPE. All tests and inspection will be recorded and logged with time and results. A full BOP test will be conducted when initially installed for the first well on the pad or if seals subject to test pressure are broken, following related repairs and at a minimum 30 day intervals. A BOPE shell test only will be conducted for subsequent wells on the pad when seals that are subject to pressure have not been broken or repaired and fall within the 30 day interval of first full test. All casing strings will be pressure tested to 0.22 psi/ft or 1500 psi, whichever is greater, not to exceed 70% of internal yield of the casing. All testing procedures will be in accordance with all the requirements per the Onshore Order 2.

Rating		12,640	psig
S.F.		3.2	
Design Consideration #2: Maximum Surface Treating Pressure During Frac Operations			
MATP:		11,491	psig
Rating		12,640	psig
S.F.		1.1	
Tensile Design:			
Designed on Air Weight * Buoyancy			
Load = $(7455\text{ft} \times 20 \text{ lb/ft} \times 0.822) + 100,000 \text{ lbs (OPM)}$		222,560	lbs
Rating		667,000	lbs
S.F.		3.0	
Overpull with SF = $667000 \text{ lbs} / 1.3 - 122560 \text{ lbs}$		390,517	lbs

*Production casing - Run 5-1/2" casing with cement nose guide float shoe, 5-1/2" full or pup joint as necessary, landing collar, 5-1/2" full or pup joints as necessary, at least one (1) RSI (rapid stage initiator or sliding sleeve) positioned inside the applicable production area. Centralizer program will be determined by wellbore conditions. Production casing to be pressure tested during completion operations with frack stack installed.

Robert L. Bayless Producer LLC**La Jara Fed 1-2 001H****Casing and Safety Factor Calculations**

Intermediate Casing Calculations:

Intermediate Casing @ 6700' MD; 9.625in 43.5# N-80			
Maximum Anticipated Mud Weight at Total Depth		9.40 ppg	
Maximum Anticipated Equivalent Fm Pressure at Production Total Depth		12.5 ppg	
Maximum Surface Treating Pressure for Fracture Operations		11,491	psi
Assumed Gas Gradient for Production Operations		.115 psi/ft	
Collapse Design:			
Designed on evacuated casing properties with 9.4 ppg drilling fluid density with no internal back-up			
Load = $9.4 * 0.052 * 6527'$		3,190	psig
Rating		3,810	psig
S.F.		1.19	
Burst Design:			
Assume kick with partially evacuated hole and influx gradient of 0.22 psi/ft			
(Calculations assumes shoe will not break down)			
MASP (Load) = $7455\text{ft} * (0.65 - 0.22) \text{ psi/ft}$		3,199	psig
Rating		6,330	psig
S.F.		2.0	
Tensile Design:			
Designed on Air Weight * Buoyancy			
Load = $(6700\text{ft} * 43.5 \text{ lb/ft} * 0.86) + 100,000 \text{ lbs (OPM)}$		350,647	lbs
Rating		825,000	lbs
S.F.		2.4	
Overpull with SF = $825000 \text{ lbs} / 1.3 - 250647 \text{ lbs}$		383,968	lbs

*Intermediate casing - 9-5/8" cement nose guide shoe with a self-fill insert float. Place float collar one (1) joint above the shoe. Install one (1) centralizer on each of the bottom three (3) joints and one standard centralizer every three (3) joints to 2500ft. Run one (1) centralizer at 2500ft, 2300ft, 2000ft, 1500ft, and 1000ft. Optional DV tools two (2) will be strategically placed above loss circulation zones anticipated in the Mesaverde and Fruitland Coal. Optional use of cancellation plugs for DV tools may be used if losses while cementing are not encountered.

The proposed casing and cementing program has been designed to protect and/or isolate all usable water zones, potentially productive zones, lost circulation zones, abnormally pressured zones, and any prospectively valuable deposits of minerals. Any isolating medium other than cement shall receive approval prior to use.

The surface casing shall be set at **320'** and cemented back to surface. Cementing to surface will isolate all potential fresh water zones.

Intermediate casing shall be kept full while running in the hole in mitigate collapse potential. Intermediate casing will be cemented back into surface casing via primary single stage or two/three-stage cement job. Estimated placement of the stage collars will be at **~5100ft MD and 3671ft MD** with 3-5 cement baskets run immediate below the collar to aid in cement lift in the second-third stages. If cement does not circulate to the DV tool(s) or to surface, a CBL will be run to determine the top of cement.

Production casing is designed to have cement lifted at least 100' above the intermediate casing shoe. A CBL, or alternatively, a temperature survey will be used to determine top of cement. A pressure actuated toe sleeve would be run above the float collar in the production section to aid in wireline pump down and stage 1 preparation of hydraulic stimulation.

2. Proposed Casing and Cementing Program

A. Casing Program: All New

CEMENTING VOLUME DESIGN CLARIFICATIONSSurface Casing @ 320'

*Slurry designed from surface TD to surface. Volume assumes 17-1/2" hole plus 25% excess.

Intermediate Casing

*Slurry designed from intermediate TD to surface. Volume assumes 12-1/4" hole plus 30% excess.

Production Casing

*Slurry designed to cover at least 100ft into the intermediate casing shoe. 8-3/4" hole size and 25% excess was used to volume calculations.

CEMENT CALCULATIONS AND MINIMUM REQUIREMENTS

*Cement calculations are used to estimate the required volume of cement. However, the final cement job design will depend on the conditions at the well site.

*The actual volumes of cement needed will be calculated based on the on-site conditions. All cement slurries used will meet or exceed the minimum requirements set by the BLM and the New Mexico Oil Conservation Division.

*The specific cement slurries used will either be those listed above or equivalent slurries, depending on the service provider selected. Please note that the cement yields may vary depending on the type of slurries used.

*To ensure sufficient cement strength, all waiting on cement times shall be a minimum of 8 hours or adequate to achieve a minimum of 500 psi compressive strength at the casing shoe prior to drilling out.

FLOAT EQUIPMENT

*Surface casing - 13-3/8" notched regular pattern guide shoe. Run one (1) standard centralizer on each of the bottom three (3) joints of surface casing.

*Intermediate casing - 9-5/8" cement nose guide shoe with a self-fill insert float. Place float collar one (1) joint above the shoe. Install one (1) centralizer on each of the bottom three (3) joints and one standard centralizer every three (3) joints to 2500ft. Run one (1) centralizer at 2500ft, 2300ft, 2000ft, 1500ft, and 1000ft. Optional DV tools two (2) will be strategically placed above loss circulation zones anticipated in the Mesaverde and Fruitland Coal. Optional use of cancellation plugs for DV tools may be used if losses while cementing are not encountered.

*Production casing - Run 5-1/2" casing with cement nose guide float shoe, 5-1/2" full or pup joint as necessary, landing collar, 5-1/2" full or pup joints as necessary, at least one (1) RSI (rapid stage initiator or sliding sleeve) positioned inside the applicable production area. Centralizer program will be determined by wellbore conditions. Production casing to be pressure tested during completion operations with frack stack installed.

Casing String			
Size (in)	Weight (lb/ft)	Grade	Connection

3. Pressure Control Equipment (5,000 psi Schematic Attached)

THE BOPE will be tested to 250psi (Low) for 5 minutes and 5000psi (High) for 10 minutes prior to drilling out surface and intermediate casing. Annular preventer will be tested to 50% of rated working pressure and maintained for at least 10 minutes. A BOPE testing unit will be utilized with a chart recorder and appropriate test plug for testing. BOP equipment will be tested every 30 days, after any repairs are made to the BOP equipment, and after the BOP equipment is subjected to pressure. Annular preventers will be functionally operated at least once per well. Pipe and blind rams shall be activated each trip but not more than once a day. The New Mexico Oil and Gas Conservation Commission and the BLM will be notified 24 hours in advance of testing of BOPE. All tests and inspection will be recorded and logged with time and results. A full BOP test will be conducted when initially installed for the first well on the pad or if seals subject to test pressure are broken, following related repairs and at a minimum 30 day intervals. A BOPE shell test only will be conducted for subsequent wells on the pad when seals that are subject to pressure have not been broken or repaired and fall within the 30 day interval of first full test.

All casing strings will be pressure tested to 0.22 psi/ft or 1500 psi, whichever is greater, not to exceed 70% of internal yield of the casing.

All other requirements from Onshore Orders #2 III.A.2.i.(i-xi) will be adhered to during well construction.

4. Mud Program

Interval	Mud Weight*	Fluid Loss	Viscosity	Mud Type
0' - 320'	8.35 - 9.0	NC	20 - 80	Water
320' - 6700'	6.0 - 9.4	6 - NC	30 - 100	Water
6700' - TD	11.0 - 13.0	4 - 10	30 - 45	Invert Emulsion (OBM)

LSND mud (WBM) will be used to drill the 17-1/2" surface hole as well as the 12-1/4" directional intermediate hole. Mud systems with designed and appropriately sized LCM will be considered in the intermediate section to reduce hydrostatic pressure on weaker coal and sandstone formations. Oil based mud (OBM) will be used to drill the 8-3/4" curve and lateral portion of the wellbore. Treat for lost circulation as necessary. Obtain 100% returns prior to cementing. Notify operation engineer of any mud losses. Mud weights of up to 13.0 lb/gal will be used as necessary to maintain sufficient overbalance to reservoir pressure.

Managed pressure drilling equipment for the production section will be utilized to minimize the equivalent circulating density in the production section.

Sufficient mud material(s) to maintain mud properties, control lost circulation and contain a blowout will be available at the well site during drilling operations.

*Mud weights reflect the true Equivalent Circulating Density (ECD) experienced in the wellbore.

5. Auxiliary Equipment

1. Upper Kelly cock (lower Kelly cock – to be available on rig floor)
2. Inside BOP or stab-in valve (available on rig floor)
3. Mud Monitoring will be visually observed.
4. Gas detectors will be used during surface and production hole drilling.

6. Evaluation Program

Logs: LWD GR from surface casing to TD
CBL/CCL/GR: ~60deg to 500ft above TOC in production casing

Mudlogging None from KOP to production TD

The proposed Evaluation Program may change at the discretion of the well-site geologist.

Completion procedures will be determined after reviewing data. Whether the well is completed as a dry hole or as a producer, the Well Completion Report and Log will be submitted not later than thirty (30) days after the completion of the well or after completion of operations being performed.

7. Abnormal Conditions

1. Pressures: Mancos is abnormal at .65 psi/ft gradient
2. Temperatures: No abnormal temperatures are anticipated.
3. H₂S: No H₂S has been encountered in or known to exist in the general area.
4. Estimated bottom-hole pressure: 4846 psi

Formation Integrity Testing

Pursuant to Onshore Order No. 2 Section III, Subsection B(i), Formation Integrity Tests (FIT) must be performed on either exploratory wells or any well permitted to utilize 5M BOPE. Bayless requests a variance to this rule, by not performing an FIT test at the surface casing shoe as it is common to encounter zones in formations below the shoe that fail at a lower Equivalent Mud Weight (EMW) than a typical FIT test.

An FIT would be planned after drilling out the intermediate casing shoe, to be tested to 13 lb/gal.

La_Jara_Fed_1_2_Water_Source_Map_Revised_043024_20240502124901.pdf

Water source comments: Robert Bayless will be using the proposed La Jara Water Pond that is located to the west of the proposed wellpad. The water pond is located on private surface. Each well drilling and completion will use approximately 75 acre-ft of fresh water. Fresh water has been contracted from San Juan Water Haulers Association who has rights from the Jicarilla Nation (confirmation of volume for first wells

Operator Name: ROBERT L BAYLESS PRODUCER LLC

Well Name: LA JARA FED 1-2

Well Number: 001H

attached) at the Navajo Dam Reservoir. Water will be transferred and stored onsite in two freshwater storage ponds. Frac tanks may be used on well pad for buffer for Hydraulic Fracturing pumps. Water will be transferred from Navajo Dam Reservoir to location ponds using a combination of existing pipelines owned by Enterprise Products and Black Hawk Energy Corporation and by temporary lay flat-water lines. Deisel powered centrifugal pumps will be used to pump the water. Water will be pumped from the Rosa 181 take point. Using 12 inch lay flat water lines and pumps, the water will then travel south along the existing roads and pipeline to the La Jara CDP where it will enter the existing Black Hawk Energy Corporation Cabresto 12 inch pipeline. The water will then be transported using the existing and proposed pipelines for drilling and completions. (See attached Map). San Juan Water Haulers Association has agreed to provide 180 acre feet of water rights for industrial use in connection with oil and gas drilling.

Section 10 - Plans for Surface Reclamation

Type of disturbance: New Surface Disturbance

Multiple Well Pad Name: La Jara Fed

Multiple Well Pad Number: 1-2

Recontouring

Drainage/Erosion control construction: Straw wattles are to be installed around areas of the wellpad. The cut slopes on the wellpad are not to be graded to a smooth surface, but are to be left in a roughened condition. Any other combination of the following Best Management Practices may also be installed for erosion control methods; Diversion Ditches, Water Bars, Road Surface Slope, Drainage Dips, Roadside Ditches, Turnouts, Wing Ditches, Road Crowning, Culverts, Berms, Silt Fence, Straw Bales, Straw Crimping, Surface Roughening, Catch Basins, Sediment Traps, Permanent Vegetation, Existing Vegetation and Mulching. The BMP selection will be determined on an individual basis and as site conditions dictate.

Drainage/Erosion control reclamation: Earthen berms are to be placed at the top of cut slopes. An earthen berm is to be placed on the perimeter of the wellpad to fill sections to divert run-off from fill slopes to minimize erosion. The graded slopes are to be left in a rough condition to minimize wind and water erosion. At the completion of the facilities installation, the stockpiled material for the production equipment dikes will no longer exist. Straw wattles are to be installed and maintained. Any other combination of the following Best Management Practices may be installed for erosion control methods; Diversion Ditches, Water Bars, Road Surface Slope, Drainage Dips, Roadside Ditches, Turnouts, Wing Ditches, Road Crowning, Culverts, Berms, Silt Fence, Straw Bales, Straw Crimping, Surface Roughening, Catch Basins, Sediment Traps, Permanent Vegetation, Existing Vegetation and Mulching. The BMP selection will be determined on an individual basis and as site conditions dictate.

Well pad proposed disturbance (acres): 5.97	Well pad interim reclamation (acres): 1.37	Well pad long term disturbance (acres): 4.6
Road proposed disturbance (acres): 0.5	Road interim reclamation (acres): 0	Road long term disturbance (acres): 0
Powerline proposed disturbance (acres): 0	Powerline interim reclamation (acres): 0	Powerline long term disturbance (acres): 0
Pipeline proposed disturbance (acres): 7.41	Pipeline interim reclamation (acres): 0.43	Pipeline long term disturbance (acres): 6.98
Other proposed disturbance (acres): 0	Other interim reclamation (acres): 0	Other long term disturbance (acres): 0
Total proposed disturbance: 13.879999999999999	Total interim reclamation: 1.8	Total long term disturbance: 11.58

Disturbance Comments:

Reconstruction method: Final reconstruction will include all disturbed areas, including roads, pads, production facilities, and interim reclaimed areas will be recontoured to the contour existing prior to initial construction or a contour that blends indistinguishably with the surrounding landscape. Re-salvaged topsoil will be spread evenly over the entire disturbed site to ensure successful revegetation. To help mitigate the contrast of recontoured slopes, reclamation will include measures to feather cleared lines of vegetation and to save and redistribute cleared trees, woody debris, and large rocks over recontoured cut/fill slopes.

Topsoil redistribution: Salvaging and spreading topsoil will not be performed when the ground or topsoil is frozen or too wet to adequately support construction equipment. If such equipment creates ruts in excess of four (4) inches deep, the soil will be deemed too wet. Distribute topsoil evenly over the location, and seed according to the seed mixture. The access road and location shall be ripped or disked prior to seeding. Perennial vegetation must be established. Additional work shall be required in case of seeding failures, etc.

Soil treatment: Earthwork for interim and final reclamation will be completed within six (6) months of well completion or plugging (weather permitting).

Existing Vegetation at the well pad:

Existing Vegetation at the well pad

Seedbed prep: Initial seedbed preparation will consist of backfilling, leveling, and ripping all compacted

Operator Name: ROBERT L BAYLESS PRODUCER LLC**Well Name:** LA JARA FED 1-2**Well Number:** 001H

areas. Final seedbed preparation will consist of contour cultivating to a depth of 4 to 6 inches within 24 hours prior to seeding. Seeding will be conducted no more than 24 hours following completion of final seedbed preparation. A certified weed-free seed mix to meet reclamation standards will be used. The seed mix will be used on all disturbed surfaces including all roads and cut/fill slopes.

Seed BMP: All disturbed areas, including roads, pads, production facilities, and interim reclaimed areas will be recontoured to the contour existing prior to initial construction or a contour that blends indistinguishably with the surrounding landscape. Re-salvaged topsoil will be spread evenly over the entire disturbed site to ensure successful revegetation. To help mitigate the contrast of recontoured slopes, reclamation will include measures to feather cleared lines of vegetation and to save and redistribute cleared trees, woody debris, and large rocks over recontoured cut/fill slopes.

Seed method: Final seedbed preparation will consist of contour cultivating to a depth of 4 to 6 inches within 24 hours prior to seeding. Seeding will be conducted no more than 24 hours following completion of final seedbed preparation. A certified weed-free seed mix to meet reclamation standards will be used. The seed mix will be used on all disturbed surfaces including all roads and cut/fill slopes.

Existing invasive species? N

Existing invasive species treatment description:

Existing invasive species treatment

Weed treatment plan description: Annual or noxious weeds shall be controlled on all disturbed areas. A weed monitoring and control program will be implemented beginning the first growing season and throughout the life of the well. Noxious weeds that have been identified during construction and monitoring will be promptly treated and controlled. A Pesticide Use Permit will be acquired from the BLM/USFS prior to the use of herbicides. All construction and reclamation equipment will be cleaned prior to use to reduce the potential for introduction of noxious weeds or other undesirable non-native species. The operator will coordinate all weed and insect control measures with the BLM/USFS, state and/or local management agencies. Reclamation equipment will be cleaned before moving the equipment onto the location and will be cleaned again before leaving the location.

Weed treatment plan

Monitoring plan description: Reclaimed areas will be monitored annually. Actions will be taken to ensure that reclamation standards are met as quickly as reasonably practical. Reclamation monitoring will be documented in a reclamation report and submitted to the Authorized Officer. The report will document compliance with all aspects of the reclamation objectives and standards, identify whether the reclamation objectives and standards are likely to be achieved in the near future without additional actions, and identify actions that have been or will be taken to meet the objectives and standards. The report will also include acreage figures for: Initial Disturbed Acres; Successful Interim Reclaimed Acres; and Successful Final Reclaimed Acres.

Monitoring plan

Success standards: Reclamation will be considered successful if the following criteria are met: 70 percent of pre-disturbance cover; 90 percent dominate species (the vegetation will consist of species included in the seed mix and/or occurring in the surrounding natural vegetation); and erosion features are equal to or less than surrounding area.

Pit closure description: No pits are being used.

Pit closure attachment:

Map Unit Description: Sparham clay loam, saline, sodic, bottomland, 0 to 3 percent slopes---
Carson National Forest, New Mexico, Part of Rio Arriba County

Carson National Forest, New Mexico, Part of Rio Arriba County

SzB—Sparham clay loam, saline, sodic, bottomland, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 2tl8q
Elevation: 6,560 to 7,400 feet
Mean annual precipitation: 12 to 16 inches
Mean annual air temperature: 45 to 49 degrees F
Frost-free period: 100 to 130 days
Farmland classification: Not prime farmland

Map Unit Composition

Sparham, saline, sodic, bottomland, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Sparham, Saline, Sodic, Bottomland

Setting

Landform: Flood plains, drainageways
Landform position (three-dimensional): Talf, dip
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Alluvium derived from sandstone and shale

Typical profile

A - 0 to 2 inches: clay loam
C1 - 2 to 35 inches: clay
C2 - 35 to 80 inches: clay

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.01 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: NoneRare
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Gypsum, maximum content: 2 percent
Maximum salinity: Moderately saline to strongly saline (8.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum: 30.0
Available water supply, 0 to 60 inches: Moderate (about 6.6 inches)

Map Unit Description: Sparham clay loam, saline, sodic, bottomland, 0 to 3 percent slopes---
Carson National Forest, New Mexico, Part of Rio Arriba County

Description of Vosburg

Setting

Landform: Valley sides
Landform position (three-dimensional): Rise
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Alluvium derived from sandstone and shale

Typical profile

A - 0 to 3 inches: fine sandy loam
Bt - 3 to 25 inches: sandy clay loam
Btk1 - 25 to 35 inches: sandy clay loam
Btk2 - 35 to 80 inches: sandy clay loam

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.21 to 0.71 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: High (about 11.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e

Map Unit Description: Vosburg-Millpaw complex, 2 to 8 percent slopes---Carson National Forest, New Mexico, Part of Rio Arriba County

Hydrologic Soil Group: C
Ecological site: R036XB006NM - Loamy
Hydric soil rating: No

Description of Millpaw

Setting

Landform: Valley floors
Landform position (three-dimensional): Talf
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Alluvium derived from sandstone and shale

Typical profile

A - 0 to 3 inches: loam
Bt - 3 to 23 inches: clay loam
Btk - 23 to 80 inches: clay loam

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.21 to 0.71 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum: 3.0
Available water supply, 0 to 60 inches: High (about 11.2 inches)

Interpretive groups

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Parkelei

Setting

Landform: Hills

Landform position (two-dimensional): Summit

Landform position (three-dimensional): Crest

Down-slope shape: Convex

Across-slope shape: Convex

Parent material: Alluvium derived from sandstone and shale

Typical profile

A - 0 to 2 inches: fine sandy loam

Bt - 2 to 38 inches: sandy clay loam

Bk - 38 to 80 inches: sandy loam

Properties and qualities

Slope: 2 to 10 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Well drained

Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.21 to 0.71 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Calcium carbonate, maximum content: 10 percent

Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)

Available water supply, 0 to 60 inches: High (about 9.6 inches)

Map Unit Description: Parkelei-Menefee-Vessilla complex, 2 to 20 percent slopes---Carson
National Forest, New Mexico, Part of Rio Arriba County

NRCS Map Unit PmF

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 4c

Hydrologic Soil Group: C

Ecological site: R036XB006NM - Loamy

Hydric soil rating: No

Description of Menefee

Setting

Landform: Hills

Landform position (two-dimensional): Shoulder

Landform position (three-dimensional): Side slope

Down-slope shape: Convex

Across-slope shape: Convex

Parent material: Residuum weathered from shale and/or slope
alluvium derived from shale

Typical profile

A - 0 to 3 inches: clay loam

AC - 3 to 9 inches: clay loam

Cr - 9 to 60 inches: bedrock

Properties and qualities

Slope: 5 to 20 percent

Depth to restrictive feature: 8 to 20 inches to paralithic bedrock

Drainage class: Well drained

Capacity of the most limiting layer to transmit water (Ksat): Low to
moderately high (0.00 to 0.28 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Calcium carbonate, maximum content: 15 percent

Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0
mmhos/cm)

Sodium adsorption ratio, maximum: 5.0

Available water supply, 0 to 60 inches: Very low (about 1.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 7s

Hydrologic Soil Group: D

Ecological site: F036XA001NM - Pinyon Upland

Hydric soil rating: No

RE: Application for Permit to Drill – BLM
Robert L. Bayless, Producer LLC
La Jara Fed 1-2 Wellpad
La Jara 1-2 001H: APD ID 10400091600 - Submitted
La Jara 1-2 002H: APD ID: TBD – Not Yet Submitted
La Jara 1-2 003H: APD ID: TBD – Not Yet Submitted
Sec. 1 T29N R4W (H.E.S. 281)
Rio Arriba County, New Mexico
Surface: Fee

Dear Ms. Joe:

The Application for Permit to Drills (APD) the above captioned well is being filed via the AFMSS II electronic filing system on behalf of Robert L. Bayless Producer LLC (Bayless). One payment of Eleven Thousand Eight Hundred Five Dollars (\$11,805.00) was paid directly to www.pay.gov via credit card for the filing fee. A copy of the payment receipt has been included in the filing.

This APD BLM filing contains the following attachments: Designation of Permit Agent Letter, Well Location Plat, Lease Plat, two 5M BOP Diagrams, Casing Safety Calculations, Horizontal Plan, Access Road and Pipeline Map, Existing Wells Map and Table, Water Transportation Map, Wellsite Layout Drawings, Wellpad NRCS Map Unit Description and Plant Composition for Access Road, NRCS Map Unit Description and Plant Composition for Wellpad, NRCS Map Unit Description and Plant Composition for Pipeline, Pipeline Map (Option 2), Self-Certification for Wellpad and Access Road, BLM Payment Receipt, and Letter to BLM dated June 2, 2023.

The La Jara Fed 1-2 wellpad is located in Sec. 1 T29N R4W (H.E.S. 281) was surveyed on July 27, 2022, by Jason C. Edwards, surveyor.

All wells will be co-located on one common wellpad with enough room to accommodate 16 wells. All wells planned or existing are listed below including the applied for well.

**STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES
DEPARTMENT**

**IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
DIVISION TO CONSIDER:**

**Case No. 22918
Order No. R-22406**

**APPLICATION OF ROBERT L. BAYLESS, PRODUCER LLC TO REVOKE
ORDER NO. R-14686 AND APPROVE THE LA JARA (MANCOS) UNIT AS
AMENDED, RIO ARRIBA COUNTY, NEW MEXICO**

ORDER OF THE DIVISION

BY THE DIVISION:

The Director of the New Mexico Oil Conservation Division (“OCD”), having heard this matter through a Hearing Examiner on July 7, 2022, and after considering the testimony, evidence, and the recommendations of the Hearing Examiner,

FINDS THAT:

- (1) Due public notice has been given, and the OCD has jurisdiction of this case and its subject matter.
- (2) The La Jara Mancos Unit (“Initial Unit”) was approved by the OCD on May 21, 2018, though Order No. R-14686 issued in Case No. 15946. Robert L. Bayless, Producer LLC (“Bayless” or “Applicant”) was designated the unit operator for the Initial Unit. The Initial Unit consisted of the Mancos formation underlying 10,878.58 acres of the following lands situated in Rio Arriba County, New Mexico.

Township 29 North, Range 4 West, NMPM

Section 1: All
Section 2: All
Section 11: All
Section 12: All
Section 13: All
Section 14: All
Section 20: All
Section 21: All
Section 22: All

Case 22918

R-22406

Page 2 of 4

Section 23: All
Section 24: All
Section 25: All
Section 26: All
Section 27: All
Section 28: All
Section 29: All
Section 32: All

(3) Order No. R-14686 required the Unit Operator to provide inter-well communication data within the Initial Unit to the Aztec District office of the Division no later than 18 months after its effective date.

(4) Applicant did not develop the Initial Unit as it was initially approved. Applicant is now seeking approval from the U.S. Bureau of Land Management ("BLM") of a new La Jara Mancos Unit ("Unit") consisting of 4,160 acres of the following lands situated in Rio Arriba County, New Mexico ("Unit Area"):

Township 29 North, Range 4 West, NMPM

Section 22: All
Section 23: All
Section 24: All
Section 25: All
Section 26: All
Section 27: All
Section 28: E/2

(5) Applicant is seeking to have Order No. R-14686 revoked.

(6) Unitized Interval: The unitized interval for the Unit is the Mancos Shale Formation, which is defined as the stratigraphic equivalent of the base of the Point Lookout Sandstone of the Mesa Verde Group or top of the Mancos formation at a measured depth of 6,824 feet to the base of the Mancos formation or top of the Dakota Sandstone at a measured depth of 8,586 feet in the San Juan 29-4 Unit No. 24 well located in the NW/4 NE/4 of Section 8 of Township 29 North, Range 4 West, N.M.P.M. in Rio Arriba County, New Mexico (API No. 30-039-22844).

(7) Applicant presented testimony and exhibits as follows:

a. The Unit is a proposed federal exploratory unit and the entirety of the Mancos formation will be unitized.

Case 22918

R-22406

Page 3 of 4

- b. The Unit is comprised of seven (7) tracts of which seven (7) are federal tracts, zero (0) are state tracts, and zero (0) are fee tracts.
- c. The Unit obligation well is the La Jara 26-3 No. 1H well, a horizontal well with a surface location in the NW/4 NE/4 of Section 26 of Township 29 North, Range 4 West (API No. 30-039-31365) and a bottomhole location in the SE/4 SW/4 of Section 21, of Township 29 North, Range 4 West. The well will be completed in the Basin Mancos Pool (Pool Code 97232).
- e. Applicant presented the proposed Unit Agreement ("Unit Agreement"). The Unit Agreement designates Applicant as the Unit Operator and has provisions for expansion or contraction of the Unit.
- f. Applicant has received a logical designation letter from the BLM, indicating the land proposed for unitization is logically subject to exploration and development. The BLM assigned NMNM 105770971 as the case serial number to the Unit.
- g. Notice was provided of this application to the record title owners, royalty owners and overriding royalty owners within the Unit Area.
- h. The stipulation within Order No. R-14686 that required the Unit Operator to provide inter-well communication data within the Unit to the Aztec District Office of the Division no later than 18 months after its effective date is no longer necessary.
- (8) No other party appeared at the hearing or otherwise opposed this application.
- (9) All proposed unit acreage appears prospective for recovery of oil and gas from the target formations under the concept proposed by the Applicant. These acres should be unitized and should equally share in the benefits from future oil and gas recovery.
- (10) The approval of the Unit will serve to prevent waste and protect correlative rights within the lands assigned to the Unit Area.

IT IS THEREFORE ORDERED THAT:

- (1) OCD recommends approval of the Unit.
- (2) Order No. R-14686 is hereby revoked.
- (3) The Unit Area comprises 4,160 acres situated in Rio Arriba County, New Mexico and described above.
- (4) This Order shall become effective upon the signature of all parties to the Unit Agreement.

Case 22918

R-22406

Page 4 of 4

(5) OCD recognizes that Robert L. Bayless, Producer LLC (OGRID No. 150182) is designated the Unit Operator under the Unit Agreement.

(6) Upon the approval of the Unit Agreement and filing of the Unit Agreement with the OCD, the Unit Area will be recognized by the OCD as a “unitized area” as provided in 19.15.16 NMAC.

(7) The Unit Operator will ensure that the names of the Unit wells are uniform and include the name of the Unit.

(8) The plan contained in the Unit Agreement for the development and operation of the above-described Unit Area is hereby approved in principle; provided, however, notwithstanding any of the provisions contained in the Unit Agreement, this approval shall not be considered as waiving or relinquishing, in any manner, any right, duty, or obligation that is now, or may hereafter be, vested in the OCD to supervise and control operations for the unit and production of oil and gas therefrom.

(9) The Unit Operator shall file with the OCD the fully executed Unit Agreement within 30 days of the effective date of the Unit Agreement. In the event of (a) subsequent joinder by any other party, (b) expansion or contraction of the Unit Area, (c) change of Unit Operator, or (d) termination of the Unit or Unit Agreement, the Unit Operator shall file with OCD, within 30 days after approval or notification of BLM, the amended Unit Agreement or other documentation reflecting the changes.

(10) All filings required by this Order shall be submitted to the OCD Engineering Bureau (OCD.Engineer@emnrd.nm.gov). OCD may notify the Unit Operator of any changes to the filing process without need to amend this Order.

(11) Jurisdiction of this case is retained for the entry of such further orders as the OCD may deem necessary.

RE: Application for Permit to Drill – BLM
Robert L. Bayless, Producer LLC

La Jara Fed 1-2 Wellpad

La Jara 1-2 001H: APD ID 10400091600 – **Response to Deficiency**

La Jara 1-2 002H: APD ID: 10400094740 –Previously Submitted

La Jara 1-2 003H: APD ID: 10400094811 –Previously Submitted

Sec. 1 T29N R4W (H.E.S. 281)
Rio Arriba County, New Mexico
Surface: Fee

Dear Ms. Joe:

The Application for Permit to Drill (APD) the above captioned well is being resubmitted via the AFMSS II electronic filing system on behalf of Robert L. Bayless Producer LLC (Bayless). This resubmission is in response to the deficiency letter dated September 6, 2023.

This APD BLM filing contains the following attachments: Designation of Permit Agent Letter, Well Location Plat, Lease Plat, two 5M BOP Diagrams, Revised Casing Safety Calculations, Horizontal Plan, Access Road and Pipeline Map, Existing Wells Map and Table, Water Transportation Map, Revised Wellsite Layout Drawings, Wellpad NRCS Map Unit Description and Plant Composition for Access Road, NRCS Map Unit Description and Plant Composition for Wellpad, NRCS Map Unit Description and Plant Composition for Pipeline, Pipeline Map (Option 2), Self-Certification for Wellpad and Access Road, BLM Payment Receipt, letter to BLM dated September 27, 2023, and Response to Deficiency letter to BLM dated October 2, 2023.

The La Jara Fed 1-2 wellpad is located in Sec. 1 T29N R4W (H.E.S. 281) was surveyed on July 27, 2022, by Jason C. Edwards, surveyor.

All wells will be co-located on one common wellpad with enough room to accommodate 16 wells. All wells planned or existing are listed below including the applied for wells.

La Jara Fed 1-2 001H

The original APD was submitted on July 3, 2023. The BLM APD 10-Day letter dated September 6, 2023, was received via email in our office. Below are the well deficiencies and the responses to them.

ADDENDUM – Incomplete/Deficient

ADDENDUM – Deficient

Surface Comments

Well Site Layout Deficiency:

Onshore Order #1 Section III-4(i) Well Site Layout:"...The operator must submit a plat of a scale of not less than 1 inch = 50 feet showing the location and orientation of: Topsoil and or spoil material stockpiles".

Revised Wellsite Layout Drawings have been attached to the AFMSS form.

SUPO Review: Other submitted information are inadequate and/or incomplete Onshore Order #1 Section III-4 SUPO attachment is missing. Attach SUPO pdf

The Surface Use Plan has been attached in Section 12 of the SUPO even though the AFMSS form has been designed to replace the SUPO.

Engineering Comments

Casing design information is inadequate and/or incomplete Missing information on centralization of casing strings. Include somewhere the plan for centralization for all casing strings, as a reminder 43 CFR 3172.7(b)(6) Surface casing shall have centralizers on the bottom 3 joints of the casing (a minimum of 1 centralizer per joint, starting with the shoe joint).

Casing Design Pages with centralizer information have been revised and attached to the AFMSS form.

Cementing design information is inadequate and/or incomplete Section 4 - Cement has intermediate casing cement job getting cement to surface. Based on BLM calculations cement will not reach surface. The volume of cement to be pumped is 1817 cuft for the intermediate string, but a calculated minimum of 2130 cuft needs to be pumped to get cement to surface. Either fix volumes of cement to be pumped for the intermediate string or fix the estimated cement top MD for the intermediate. Or provide calculations to prove that the volume of cement to be pumped is actually sufficient.

The cement has been updated for the intermediate string in the AFMSS form.

Geologic Comments

There is no Operator Drill Plan attached to the APD as required in Onshore Order 1.III.D.3.a-i.

The Drilling Program has been attached in Section 8 of the Drilling section even though the AFMSS form has been designed to replace the Drilling Program.

Please use the revised information. Everything else in the APD will remain the same.

RE: Application for Permit to Drill – BLM
Robert L. Bayless, Producer LLC

La Jara Fed 1-2 Wellpad

La Jara 1-2 001H: APD ID 10400091600 – **Response to Deferral Letter**

La Jara 1-2 002H: APD ID: 10400094740 – **Response to Deferral Letter**

La Jara 1-2 003H: APD ID: 10400094811 – **Response to Deferral Letter**

Sec. 1 T29N R4W (H.E.S. 281)

Rio Arriba County, New Mexico

Surface: Fee

Dear Ms. Joe:

The Applications for Permits to Drill (APD) the above captioned wells are being resubmitted via the AFMSS II electronic filing system on behalf of Robert L. Bayless Producer LLC (Bayless). This resubmission is in response to the deferral letters dated April 12, 2024.

This APD BLM filing contains the following attachments: Designation of Permit Agent Letter, Well Location Plat, Lease Plat, two 5M BOP Diagrams, Revised Casing Safety Calculations, Horizontal Plan, Drilling Plan 010924, Access Road and Pipeline Map 120523, Existing Wells Map and Table, Water Transportation Map Revised 041624, Revised Wellsite Layout Drawings, Wellpad NRCS Map Unit Description and Plant Composition for Access Road, NRCS Map Unit Description and Plant Composition for Wellpad, Self-Certification for Wellpad and Access Road, BLM Payment Receipt, Surface Use Plan Master document Revised 040424, Pipeline Specifications and Pipeline Plats dated 032924, letter to BLM dated September 27, 2023, Response to Deficiency letter to BLM dated October 2, 2023, and Response to Deficiency letter to BLM dated November 14, 2023, Response to Deficiency letter to BLM dated December 6, 2023, Letter to BLM dated January 9, 2024, letter to BLM dated April 4, 2024, and letter to BLM dated April 16, 2024.

The La Jara Fed 1-2 wellpad is located in Sec. 1 T29N R4W (H.E.S. 281) was surveyed on July 27, 2022, by Jason C. Edwards, surveyor.

All wells will be co-located on one common wellpad with enough room to accommodate 16 wells. All wells planned or existing are listed below including the applied for wells.

La Jara Fed 1-2 001H
La Jara Fed 1-2 Future well
La Jara Fed 1-2 Future well
JIC 29-04-01 Future well
JIC 29-04-01 Future well
JIC 29-04-01 Future well

The La Jara Fed 1-2 001H was originally submitted on July 3, 2023. The La Jara Fed 1-2 002H and 003H were submitted on September 28, 2023. The BLM APD Deferral letters dated April 12, 2024, was received via email in our office. The APD's were returned via Deferral to allow the Operator to revise water transportation verbiage in the SUPO. All changes to the SUPO have been made to all three La Jara Fed APD's.

Please use the revised information. Everything else in the APD will remain the same.

Please send a copy of all correspondence to Upstream Petroleum Management, Inc. at 7000 S. Yosemite St. Suite 290B, Englewood, CO 80112. Please contact Angela Callaway at 214-364-3713 or Kim Rodell or at 303-942-0506, or acallaway@upstreampm.com or krodell@upstreampm.com, respectively, if you have any questions.

Your early attention to this application is greatly appreciated. Thank you for your assistance.

Sincerely,

A handwritten signature in blue ink that reads "Angela G. Callaway". The signature is fluid and cursive, with the first name "Angela" being more prominent.

Angela G. Callaway
Permit Agent for Robert L. Bayless, Producer LLC

Enclosures

cc: Robert L. Bayless, Producer LLC

La Jara Fed 1-2 Wellpad
Sec. 1 T29N R4W H.E.S. 281
Rio Arriba County, New Mexico
Surface: Fee

**MULTI-WELLPAD
SURFACE USE PLAN OF OPERATIONS**

This multi-well pad will be utilized by both Robert L. Bayless Producer, LLC and Jicarilla Apache Energy Corporation for drilling all 16 wells on the wellpad.

Pursuant to Onshore Order No. 1 (43 CFR 3160), this Surface Use Plan of Operations (SUPO) has been prepared for the Bureau of Land Management (BLM) Farmington Field Office as part of the Applications for Permits to Drill (APDs) wells on the La Jara Fed 1-2 multi-well pad. The information provided to the BLM is to give an accurate account of the proposed action.

WELL LOCATION AND INTRODUCTION:

Three (3) wells, La Jara Fed 1-2 001H, La Jara Fed 002H, and La Jara Fed 003H, were initially staked on July 27, 2002, by Jason C. Edwards, surveyor, on a site that was geologically and topographically acceptable. A total of 16 wells will be drilled from this wellpad as indicated on the construction layout drawings.

A Notice of Staking was submitted to BLM in Farmington on March 22, 2023 for the initial locations. An onsite meeting was held on April 20, 2023. Present were Emmanuel Adeyoye - BLM; Ron Kellermueller – New Mexico Department of Game and Fish, JJ Miller – United States Forest Service, Billy Schnieder and John D. Thomas –Bayless. Requirements were discussed at the onsite meeting. All associated facilities for all wells will also be contained on this multi-well pad.

1) EXISTING ROADS

- A) This wellpad is located in Rio Arriba New Mexico. From the intersection of US Hwy 550 & US Hwy 64 in Bloomfield, NM, travel easterly on US Hwy 64 for 50.1 miles to Mile Marker 114.4 to the existing access road on right-hand side which continues for 490' to La Jara Fed 1-2 wellpad.
- B) These wells are exploratory wells.
- C) Existing roads within 1.0 miles consist of US Highway 64 which will provide access to the proposed location.
- D) Existing roads will be maintained in the same or better condition using best management practices and surface operating standards and guidelines for oil and gas (Gold Book).
- E) Private surface roads that are part of the access to reach this location will be maintained to BLM Manual section 9113 standards. Maintenance will be done prior to the commencement of operations and will continue until final abandonment and reclamation of the wellpad.
- F) BLM Best Management Practices (BMPs) as outlined in the "Surface Operating Standards and Guidelines for Oil and Gas Exploration and Development" (the Gold Book) will be utilized for all construction and operational activity related to this facility.

- G) On April 20, 2023, an onsite inspection was conducted. The Surface Owner requested that the existing access road be re-routed around the southern edge of location, and across the large wash. The road will be improved on the southern edge of the wash heading to the southwest. A 24' cattle guard will be added at the entrance to the property with a double gate. New Mexico Department of Transportation (NMDOT) will administrate any improvements to the pull-off of Highway 64.

2) **NEW OR RECONSTRUCTED ACCESS ROADS**

- A) There are no new roads needed for this location.

3) **LOCATION OF EXISTING WELLS**

Oil and Gas Wells: See AFMSS attachments.

Water Wells : None.

LOCATION OF EXISTING PRODUCING FACILITIES

There are currently no production facilities on this location. If the well is completed as a producer, production facilities will be engineered and implemented at that time. Operations will follow 43 CFR 3160 and a Sundry Notice on Form 3160-5 will be submitted with construction facilities prior to commencing any construction activities.

4) **LOCATION OF EXISTING AND/OR PROPOSED PRODUCTION FACILITIES**

- A) BLM will be contacted prior to construction of production facilities. A Sundry Notice (SN) will be filed if requested by BLM.
- B) Please see AFMSS attachments.
- C) The facilities will be constructed on the wellpad.
- D) Traveled portion of wellpad will be gravel surfaced. If necessary, additional surfacing material will be obtained from commercial sources or an approved borrow area. Construction and maintenance will not be performed when the ground or topsoil is frozen or too wet to adequately support construction equipment. If such equipment creates ruts in excess of four (4) inches deep, the soil will be deemed too wet.
- E) Production equipment will be painted light reflective colors to limit evaporation and waste of liquid hydrocarbons. All above ground permanent structures will be painted to blend with the surrounding landscape. The color specified at the BLM onsite will be Juniper Green.
- F) Production facilities may vary according to the actual reservoir and will be engineered upon completion of well tests. Production facilities will be clustered and placed away from cut/fill slopes to allow the maximum recontouring of cut/fill slopes. To reduce the view of production facilities from visibility corridors and private residences, facilities will not be placed in visually exposed locations (such as ridgelines and hilltops).
- G) A berm will be constructed around the tanks. The berm materials will be constructed of suitable materials and impermeable to the fluid contained. The berms will have sufficient volume to contain a minimum of 110% of the total volume of the largest tank containing liquid hydrocarbons within the facility/battery and sufficient freeboard to contain precipitation, unless more stringent protective requirements are deemed necessary by the Authorized Officer.
- H) If the well is a producer all production facilities will be authorized by a SN.

SURFACE USE PLAN OF OPERATIONS
La Jara Fed 1-2 Wellpad

- I) There will be a total of 7,768.70' of new pipelines on both fee and United States Forest Service (USFS) – Carson National Forest. Of that 663.9' of new pipelines will be on fee surface (Eleanor Trujillo); 1,938.8' of new pipelines within the Carson Forest (USFS) ROW (1,565' of pipelines which will follow Forest Service Road 310 and 169.5' which will bore under Highway 64 and 204.3' alongside Hwy 64 in the ROW); and 5,166' of new pipelines on fee surface (Blackhawk Energy) to the existing Cabresto pipeline connection point. Please see AFMSS attachments for pipeline plats.

Pipeline Length (ft)	Location	Surface Owner
663.9'	T29N R4W Sec. 1: HES 281	Eleanor Trujillo - Fee
	Temporary Use Area #3	Eleanor Trujillo – Fee (Boring equipment only. 0.26 acres)
	Temporary Use Area #2	Eleanor Trujillo – Fee (Boring equipment only. 0.06 acres)
1,769.3'	T30N R4W Sec. 36: Lot 9 T29N R4W Sec.1 Lot 6	US Forest Service
169.5'	T29N R4W	US Forest Service Bore under Highway 64; Not included in surface disturbance acreage.
	Temporary Use Area #1	US Forest Service – Boring equipment only. 0.11 acres)
5,166.0'	T30N R4W Sec. 36: HES 285	Blackhawk Energy - Fee
7,768.7'		Total Pipeline Construction

5) **LOCATION AND TYPES OF WATER SUPPLY**

- A) Operators will be using the proposed La Jara Water Pond that is located to the west of the proposed wellpad for construction, drilling, dust suppression and completion operations. The water pond is located on private surface.
- B) Anticipated water use: Anticipated water use of approximately 600,000 barrels.
- C) Each well drilling and completion will use approximately 75 acre-ft of fresh water. Fresh water has been contracted from San Juan Water Haulers Association who has rights from the Jicarilla Nation (confirmation of volume for first wells attached) at the Navajo Dam Reservoir. Water will be transferred and stored onsite in two freshwater storage ponds. Frac tanks may be used on well pad for buffer for Hydraulic Fracturing pumps. Water will be transferred from Navajo Dam Reservoir to location ponds using a combination of existing pipelines owned by Enterprise Products and Black Hawk Energy Corporation and by temporary lay flat-water lines. Deisel powered centrifugal pumps will be used to pump the water. Water will be pumped from the Rosa 181 take point. Using 12 inch lay flat water lines and pumps, the water will then travel south along the existing roads and pipeline to the “La Jara CDP” where it will enter the existing Black Hawk Energy Corporation Cabresto 12 inch pipeline. The water will then be transported using the existing and proposed pipelines for drilling and completions. (See attached Map).
- D) See AFMSS attachments.
- E) San Juan Water Haulers Association has agreed to provide 180-acre feet of water rights for industrial use in connection with oil and gas drilling.

6) SOURCE OF CONSTRUCTION MATERIALS

- A) Construction materials will consist of native materials from borrow ditches and location areas.
- B) Surfacing materials will be obtained from available permitted sources, if needed, and consist of pit gravel. A contractor/source has not been determined or contracted yet for this location.

7) METHODS FOR HANDLING WASTE DISPOSAL

- A) Drilling
 - A closed loop system will be utilized. Drilling fluids will be disposed of at a commercial disposal facility. Total amount of drilling water will be approximately 5,000 bbls. Drilling is anticipated to take 10-15 days for a total of 330-500 bbl per day until the drilling has been completed.
- B) Completions/Stimulation
 - Completion fluid amount is only calculated for the time the completion procedure occurs. Once the completion procedure is done, there will be no additional waste for completion/stimulation. Completion is anticipated to take four to six days. Completion fluids will be hauled to a commercial disposal facility.
 - Amount of waste is anticipated to be 800 bbls and disposed of daily.
- C) Flowback
 - Flowback water will be contained in a holding tank and subsequently hauled to a commercial disposal facility.
 - Amount of waste is anticipated to be 400 barrels and disposed of daily.
- D) Sewage
 - Portable toilets will be provided and maintained as needed.
- E) Garbage
 - Garbage and other solid waste will be contained in a portable trash cage which will be totally enclosed with small mesh wire.
 - Waste will be disposed of weekly by 3rd party contractors.
- F) Produced Water
 - Produced water will be contained in tanks during completion and testing. Once testing is completed the produced water will be hauled to a commercial disposal facility.
 - Anticipated amount of produced water is 800 bbls and will be disposed of daily.
- G) Reserve Pit
 - There is no reserve pit
- H) Cutting Area
 - The steel cuttings pit and closed loop system will contain the drilling fluids including salts and chemicals. Cuttings will be treated in the drying cutting area before being hauled to Industrial Ecosystems Industries on Crouch Mesa.
- I) Upon release of the drilling rig, rathole and mousehole will be filled. Debris and equipment not required for production will be removed.

8) **ANCILLARY FACILITIES**

No ancillary facilities will be necessary.

9) **WELLSITE LAYOUT**

A) See AFMSS attachments.

10) **PLANS FOR SURFACE RECLAMATION: New Surface Disturbance**

A) Drainage/Erosion Control construction:

- Straw wattles are to be installed around areas of the wellpad. The cut slopes on the wellpad are not to be graded to a smooth surface but are to be left in a roughened condition. Any other combination of the following Best Management Practices may also be installed for erosion control methods; Diversion Ditches, Water Bars, Road Surface Slope, Drainage Dips, Roadside Ditches, Turnouts, Wing Ditches, Road Crowning, Culverts, Berms, Silt Fence, Straw Bales, Straw Crimping, Surface Roughening, Catch Basins, Sediment Traps, Permanent Vegetation, Existing Vegetation and Mulching. The BMP selection will be determined on an individual basis and as site conditions dictate.

B) Drainage/Erosion Control Reclamation

- Earthen berms are to be placed at the top of cut slopes. An earthen berm is to be placed on the perimeter of the wellpad to fill sections to divert run-off from fill slopes to minimize erosion. The graded slopes are to be left in a rough condition to minimize wind and water erosion. At the completion of the facilities installation, the stockpiled material for the production equipment dikes will no longer exist. Straw wattles are to be installed and maintained. Any other combination of the following Best Management Practices may be installed for erosion control methods; Diversion Ditches, Water Bars, Road Surface Slope, Drainage Dips, Roadside Ditches, Turnouts, Wing Ditches, Road Crowning, Culverts, Berms, Silt Fence, Straw Bales, Straw Crimping, Surface Roughening, Catch Basins, Sediment Traps, Permanent Vegetation, Existing Vegetation and Mulching. The BMP selection will be determined on an individual basis and as site conditions dictate.

C) Wellpad Proposed Disturbance/Interim Reclamation/Long Term Reclamation

D) Disturbance Comments: Reconstruction Method:

- Final reconstruction will include all disturbed areas, including roads, pads, production facilities, and interim reclaimed areas will be recontoured to the contour existing prior to initial construction or a contour that blends indistinguishably with the surrounding landscape. Re-salvaged topsoil will be spread evenly over the entire disturbed site to ensure successful revegetation. To help mitigate the contrast of recontoured slopes, reclamation will include measures to feather cleared lines of vegetation and to save and redistribute cleared trees, woody debris, and large rocks over recontoured cut/fill slopes.
- Topsoil redistribution: Salvaging and spreading topsoil will not be performed when the ground or topsoil is frozen or too wet to adequately support construction equipment. If such equipment creates ruts in excess of four (4) inches deep, the soil will be deemed too wet. Distribute topsoil evenly over the location, and seed according to the seed

mixture. The access road and location shall be ripped or disked prior to seeding. Perennial vegetation must be established. Additional work shall be required in case of seeding failures, etc.

- Soil treatment: Earthwork for interim and final reclamation will be completed within six (6) months of well completion or plugging (weather permitting).

E) Please see AFMSS attachments.

F) Seeding

- Seedbed prep: Initial seedbed preparation will consist of backfilling, leveling, and ripping all compacted areas. Final seedbed preparation will consist of contour cultivating to a depth of 4 to 6 inches within 24 hours prior to seeding. Seeding will be conducted no more than 24 hours following completion of final seedbed preparation. A certified weed-free seed mix to meet reclamation standards will be used. The seed mix will be used on all disturbed surfaces including all roads and cut/fill slopes.
- Seed BMP: All disturbed areas, including roads, pads, production facilities, and interim reclaimed areas will be recontoured to the contour existing prior to initial construction or a contour that blends indistinguishably with the surrounding landscape. Re-salvaged topsoil will be spread evenly over the entire disturbed site to ensure successful revegetation. To help mitigate the contrast of recontoured slopes, reclamation will include measures to feather cleared lines of vegetation and to save and redistribute cleared trees, woody debris, and large rocks over recontoured cut/fill slopes.
- Seed method: Final seedbed preparation will consist of contour cultivating to a depth of 4 to 6 inches within 24 hours prior to seeding. Seeding will be conducted no more than 24 hours following completion of final seedbed preparation. A certified weed-free seed mix to meet reclamation standards will be used. The seed mix will be used on all disturbed surfaces including all roads and cut/fill slopes.
- Weed treatment plan description: Annual or noxious weeds shall be controlled on all disturbed areas. A weed monitoring and control program will be implemented beginning the first growing season and throughout the life of the well. Noxious weeds that have been identified during construction and monitoring will be promptly treated and controlled. A Pesticide Use Permit will be acquired from the BLM/USFS prior to the use of herbicides. All construction and reclamation equipment will be cleaned prior to use to reduce the potential for introduction of noxious weeds or other undesirable non-native species.
- The operator will coordinate all weed and insect control measures with the BLM/USFS, state and/or local management agencies. Reclamation equipment will be cleaned before moving the equipment onto the location and will be cleaned again before leaving the location.
- Success standards: Reclamation will be considered successful if the following criteria are met: 70 percent of predisturbance cover; 90 percent dominate species (the vegetation will consist of species included in the seed mix and/or occurring in the surrounding natural vegetation); and erosion features are equal to or less than surrounding area.

SHEET 11 OF 15
FILENAME: 2441GPI0

ROBERT L. BAYLESS, PRODUCER LLC LA JARA FED 1-2 #001H
STATE HIGHWAY #64 CROSSING - PLAN/PROFILE DRAWING
LOCATED IN NW/4 NE/4 (aka LOTS 6 & 7) OF SECTION 1, T29N, R4W
NMPM, RIO ARriba COUNTY, NEW MEXICO

NCE SURVEYS IS NOT LIABLE FOR LOCATION OF UNDERGROUND UTILITIES OR PIPELINES.
CONTRACTOR SHOULD CONTACT ONE-CALL FOR LOCATION OF ANY MARKED OR UNMARKED UNDERGROUND
UTILITIES OR PIPELINES ON WELLPAD AND/OR ACCESS ROAD AT LEAST TWO WORKING DAYS PRIOR TO CONSTRUCTION.

La Jara Fed 1-2 Wellpad: Pipeline Specifications

12" Line

12" Gas transportation pipeline (Private Surface: Eleanor Trujillo and Blackhawk Energy):

Diameter:	12-1/2" O.D. (12" nominal)
Wall Thickness:	0.375"
Grade:	"B" FBE coated linepipe w/ welded or beveled connection
Design Pressure:	790 psi (test)
Actual Pressure:	630 psi
Pressure Test Fluid:	Natural gas from well
Field Test Pressure:	
Pipeline Depth:	Surface
Anticipated Operating Temperature:	100°

12" Line

12" Water transportation pipeline (Private Surface: Eleanor Trujillo and Blackhawk Energy):

Diameter:	12-3/4" O.D. (12" nominal)
Wall Thickness:	1.159"
Grade:	DR-11 High Density Polyethylene connection
Design Pressure:	200 psi (test)
Actual Pressure:	200 psi
Pressure Test Fluid:	Water for Drilling/Frac
Field Test Pressure:	
Pipeline Depth:	Surface
Anticipated Operating Temperature:	60°

16" Line

16" Gas transportation pipeline (Bore and Trenched Section on USFS):

Diameter:	16" O.D. (16" nominal)
Wall Thickness:	0.562"
Grade:	"B" FBE coated linepipe w/ welded or beveled connection
Design Pressure:	1,870 psi (test)
Actual Pressure:	1,500 psi
Pressure Test Fluid:	Hydrotest
Field Test Pressure:	
Pipeline Depth:	48" – 60"
Anticipated Operating Temperature:	100°

16" Line

16" Water transportation pipeline (Bore and Trenched Section on USFS):

Diameter:	16" O.D. (16" nominal)
Wall Thickness:	1.455"
Grade:	DR-11 High Density Polyethylene
Design Pressure:	200 psi (test)
Actual Pressure:	200 psi
Pressure Test Fluid:	Water for Drilling/Frac
Field Test Pressure:	
Pipeline Depth:	48" – 60"
Anticipated Operating Temperature:	60°

PWD Data Report

07/11/2024

APD ID: 10400091600

Submission Date: 06/02/2023

Operator Name: ROBERT L BAYLESS PRODUCER LLC

Well Name: LA JARA FED 1-2

Well Number: 001H

Well Type: CONVENTIONAL GAS WELL

Well Work Type: Drill

Section 1 - General

Would you like to address long-term produced water disposal? NO

Section 2 - Lined

Would you like to utilize Lined Pit PWD options? N

Produced Water Disposal (PWD) Location:

PWD surface owner:

PWD disturbance (acres):

Lined pit PWD on or off channel:

Lined pit PWD discharge volume (bbl/day):

Lined pit

Pit liner description:

Pit liner manufacturers

Precipitated solids disposal:

Describe precipitated solids disposal:

Precipitated solids disposal

Lined pit precipitated solids disposal schedule:

Lined pit precipitated solids disposal schedule

Lined pit reclamation description:

Lined pit reclamation

Leak detection system description:

Leak detection system

Operator Name: ROBERT L BAYLESS PRODUCER LLC

Well Name: LA JARA FED 1-2

Well Number: 001H

Lined pit Monitor description:

Lined pit Monitor

Lined pit: do you have a reclamation bond for the pit?

Is the reclamation bond a rider under the BLM bond?

Lined pit bond number:

Lined pit bond amount:

Additional bond information

Section 3 - Unlined

Would you like to utilize Unlined Pit PWD options? N

Produced Water Disposal (PWD) Location:

PWD disturbance (acres):

PWD surface owner:

Unlined pit PWD on or off channel:

Unlined pit PWD discharge volume (bbl/day):

Unlined pit

Precipitated solids disposal:

Describe precipitated solids disposal:

Precipitated solids disposal

Unlined pit precipitated solids disposal schedule:

Unlined pit precipitated solids disposal schedule

Unlined pit reclamation description:

Unlined pit reclamation

Unlined pit Monitor description:

Unlined pit Monitor

Do you propose to put the produced water to beneficial use?

Beneficial use user

Estimated depth of the shallowest aquifer (feet):

Does the produced water have an annual average Total Dissolved Solids (TDS) concentration equal to or less than that of the existing water to be protected?

TDS lab results:

Geologic and hydrologic

State

Unlined Produced Water Pit Estimated

Unlined pit: do you have a reclamation bond for the pit?

Operator Name: ROBERT L BAYLESS PRODUCER LLC

Well Name: LA JARA FED 1-2

Well Number: 001H

Is the reclamation bond a rider under the BLM bond?

Unlined pit bond number:

Unlined pit bond amount:

Additional bond information

Section 4 -

Would you like to utilize Injection PWD options? N

Produced Water Disposal (PWD) Location:

PWD surface owner:

PWD disturbance (acres):

Injection PWD discharge volume (bbl/day):

Injection well mineral owner:

Injection well type:

Injection well number:

Injection well name:

Assigned injection well API number?

Injection well API number:

Injection well new surface disturbance (acres):

Minerals protection information:

Mineral protection

Underground Injection Control (UIC) Permit?

UIC Permit

Section 5 - Surface

Would you like to utilize Surface Discharge PWD options? N

Produced Water Disposal (PWD) Location:

PWD surface owner:

PWD disturbance (acres):

Surface discharge PWD discharge volume (bbl/day):

Surface Discharge NPDES Permit?

Surface Discharge NPDES Permit attachment:

Surface Discharge site facilities information:

Surface discharge site facilities map:

Section 6 -

Would you like to utilize Other PWD options? N

Produced Water Disposal (PWD) Location:

PWD surface owner:

PWD disturbance (acres):

Other PWD discharge volume (bbl/day):

Operator Name: ROBERT L BAYLESS PRODUCER LLC

Well Name: LA JARA FED 1-2

Well Number: 001H

Other PWD type description:

Other PWD type

Have other regulatory requirements been met?
