**CAUTION:** External sender. DO NOT open links or attachments from UNKNOWN senders.

A Bradenhead test was witnessed on the above well by Deputy Oil and Gas Inspector Jason Heslop.

The initial bradenhead pressure was 78 psi and the production casing was 78 psi. Direct communication was observed, the production casing fell while the bradenhead was open. The bradenhead flowed for the entire 30 min test. 5 min shut in was 2 psi. Gas analysis and wellbore schematic have been received. Gas appears to be similar on the bradenhead and the production casing.
