Objective: Cement squeeze thief zones (Zn2C & upper Zn3E) to reduce gas breakthrough and improve offset oil production.

This is an updated job plan to a previously approved NOI (Action ID # 508976 on 9/26/25). While performing the well workover job to repair a casing leak, we were unable to back of joints below the casing leak ~ 85' from surface. Unable to back off at the collar @ 116'. In consultation with NMOCD (Barbara Lydick) the plan forward is to circulate cement down the casing up the surface valve to repair the leak, then drill out cement, and test casing. Please see detailed planned procedure and current/proposed wellbore diagrams attached.
