You are allowed to mix the contents of the pit on 1929-221J to dilute the concentration down to below 3000 mg/Kg. Maximum mixing ration is 3:1. This should get it down below acceptable limit.

When you get ready to close these pits, may I have a tentative schedule? I would like to be out there.

Ed,
Here are the temporary pit content composite test results for the first three wells. It appears that two of them are within the limits and one exceeds the limits.
