Our present depth is 2105'. Our proposed depth was originally 2600'. Because of extreme hole problems including lost circulation, stuck drill pipe and stuck logging tools the hole is in very bad shape. Accordingly we have been unable to DST or otherwise evaluate several zones of interest. We therefore request permission to run intermediate 5 1/2" casing and cement from T.D. to 1150' with 285 sacks of cement. We will then proceed to drill to 2600' or approximately 250' into the Chinle Shale. This will enable us to understand and evaluate the total Cretaceous section. After perforating and taking formation samples at selected intervals between 1150' and 2105' we will cut and pill the casing and plug and abandon the well.

We intend to plug and abandon this strat test as soon as possible. Our total depth is 2105'. In accordance with your instructions we will place a 100 foot cement plug from 2105' to 2005' at the bottom of the hole. We will place 100 foot cement plugs in the casing from 950' to 1050' and from 250' to 350'. We will also place a 5 sack cement plug at the surface.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
