Administrative Order IPI-444  
September 18, 2013

Mr. David Stewart  
OXY USA Inc.  
PO Box 50250  
Midland, TX 79710

**RE: Injection Pressure Increase**  
Disposal Permit: SWD-616  
Pool: SWD; Bell Canyon-Cherry Canyon  
Red Tank 35 Federal Well No. 3      API 30-025-33149  
Unit L, Sec 35, T22S, R32E, NMPM, Lea County, New Mexico

Dear Mr. Stewart:

Reference is made to your request on behalf of OXY USA Inc. (OGRID 16696) received by the Division on August 2, 2013, to increase the maximum allowed surface tubing pressure on the above named well.

This well was permitted by the Division for water disposal in the Bell Canyon and upper Cherry Canyon formations of the Delaware Mountain Group by Division administrative Order SWD-616 approved December 27, 1995. That permit allowed disposal into the Bell Canyon and upper Cherry Canyon formations from approximately 4950 feet to 6252 feet. The Division allowed a maximum disposal pressure of 990 psi with administrative Order SWD-616.

It is our understanding that this well will not take a sufficient volume of fluid at the current pressure limit and a higher pressure limit is needed. It is also understood that an increase will not result in the fracturing of the formation and confining strata.

Based on a step rate test for this well run June 28, 2013, you are hereby authorized to inject at the following maximum surface tubing pressure:

**Red Tank 35 Federal Well No. 3      API 30-025-33149      1300 psi**

This approval is based on the provision that the tubing size, packer setting depth and completion interval for this well does not change. Any future requested pressure increase will require resubmission of additional data and a new step-rate test. The Division Director retains the right to require at any time wireline verification of completion and packer setting depths in this well. This approval is subject to your

being in compliance with all other Division rules, including but not limited to Division Rule 19.15.5.9 NMAC.

The Division Director may rescind this permitted injection pressure increase if it becomes apparent that the injected fluid is not being confined to the permitted disposal interval or is endangering any fresh water aquifer.

Sincerely,

JAMI BAILEY  
Director
