Subject: Lea/Lovington Refinery (AP-110) and Soil Reuse Requests

Mike and Robert:

Good afternoon. The New Mexico Oil Conservation Division has been receiving several soil reuse requests with Navajo Refining Company (NRC) utilizing various soil screening limits to conclude that soils removed from tanks, pits, etc. are ok to reuse on-site for berms, etc.

WQCC Regulations (see below) list water quality criteria in either ug/L or mg/L units and not soil media units. Therefore, has utilized various EPA, NMED, etc. SSLs to form the basis for on-site reuse of soil media with comparison against the SSLs. Arsenic typically does not meet the SSLs. OCD notices NRC uses a DAF of 20 on the above mentioned SSLs.

OCD has allowed a DAF of 20 when multiplied again the water criteria below to generate soil media criteria based on its water quality standards, but not a DAF applied to SSLs. In addition, anywhere there is the presence of toxic pollutants, reuse of soils may not be appropriate.

How can NRC meet OCD criteria for reuse? One method may be to separate good soil media from bad and sample the good (bad soil too if NRC wants to double check) soils for comparison against OCD's criteria below to receive approval for reuse.

I recommend that NRC schedule a telephone conference call to determine exactly what OCD requires for soil reuse. OCD understands the large volumes of soils that may be required to be disposed at approved and/or permitted OCD Facilities. However, the present rationale for NRC's proposed reuse of soil media requires further communication to derive an OCD protocol for what is acceptable for reuse at refineries.

Thank you.

WW. "toxic pollutant" means a water contaminant or combination of water contaminants in concentration(s) which, upon exposure, ingestion, or assimilation either directly from the environment or indirectly by ingestion through food chains, will unreasonably threaten to injure human health, or the health of animals or plants which are commonly hatched, bred, cultivated or protected for use by man for food or economic benefit; as used in this definition injuries to health include death, histopathologic change, clinical symptoms of disease, behavioral abnormalities, genetic mutation, physiological malfunctions or physical deformations in such organisms or their offspring; in order to be considered a toxic pollutant a contaminant must be one or a combination of the potential toxic pollutants listed below and be at a concentration shown by scientific information currently available to the public to have potential for causing one or more of the effects listed above; any water contaminant or combination of the water contaminants in the list below creating a lifetime risk of more than one cancer per 100,000 exposed persons is a toxic pollutant:

20.6.2.3103 STANDARDS FOR GROUND WATER OF 10,000 mg/l TDS CONCENTRATION OR

LESS: The following standards are the allowable pH range and the maximum allowable concentration in ground water for the contaminants specified unless the existing condition exceeds the standard or unless otherwise provided in Subsection D of Section 20.6.2.3109 NMAC. Regardless of whether there is one contaminant or more than one contaminant present in ground water, when an existing pH or concentration of any water contaminant exceeds the standard specified in Subsection A, B, or C of this section, the existing pH or concentration shall be the allowable limit, provided that the discharge at such concentrations will not result in concentrations at any place of withdrawal for present or reasonably foreseeable future use in excess of the standards of this section. These standards shall apply to the dissolved portion of the contaminants specified with a definition of dissolved being that given in the publication "*methods for chemical analysis of water and waste of the U.S. environmental protection agency*," with the exception that standards for mercury, organic compounds and non-aqueous phase liquids shall apply to the total unfiltered concentrations of the contaminants.

A. Human Health Standards-Ground water shall meet the standards of Subsection A and B of this section unless otherwise provided. If more than one water contaminant affecting human health is present, the toxic

pollutant criteria as set forth in the definition of toxic pollutant in Section 20.6.2.1101 NMAC for the combination of contaminants, or the Human Health Standard of Subsection A of Section 20.6.2.3103 NMAC for each contaminant shall apply, whichever is more stringent. Non-aqueous phase liquid shall not be present floating atop or immersed within ground water, as can be reasonably measured.

Re: Fire Water Pond and Fire Water Pipeline Repair Soil Stockpile Characterization and Management, Navajo Refining Company, Lea Refinery, Lovington, New Mexico, AP-110

Dear Mr. Chavez:

On behalf of Navajo Refining Company (NRC), TRC Environmental Corporation (TRC) is submitting this letter to document the characterization and management of soil excavated and stockpiled during construction and repair activities at the NRC Lea Refinery (refinery) located near Lovington, Lea County, New Mexico.

Approximately 1,350 cubic-yards of soil was excavated and stockpiled during construction of the refinery fire water pond in 2011. The fire water pond is located along the eastern refinery boundary. Approximately 475 yards of soil was excavated and stockpiled during repair of a fire water pipeline in 2013. The damaged portion of the fire water pipeline is located near Tank T-1210. The fire water pond and damaged portion of the fire water pipeline are located far from the refinery process and product storage areas, as well as areas of known product releases. Neither stockpile is associated with drilling fluid, produced water, refinery effluent water, or other liquid oilfield waste. Therefore, we believe the excavated soil is a good candidate for reuse. Composite soil samples were collected from each stockpile on December 2, 2013, for characterization analysis to determine if the soil can be used at the refinery as fill material and/or to build and reinforce berms.

The composite samples were analyzed for metals, total petroleum hydrocarbons – gasoline range organics, diesel range organics, and motor oil range organics [TPH-(GRO/DRO/MRO)], volatile organic chemicals (VOCs), and chloride. The samples were additionally analyzed for semi-volatile organic chemicals (SVOCs) and arsenic by synthetic-precipitation leaching procedure (SPLP). The results of the laboratory analysis and recommendation for reuse are provided below.

ANALYTICAL RESULTS

Laboratory analytical results for the December 2013 composite soil samples are summarized in Table 1. The results were compared to the following: (1) 20 times the United States Environmental Protection Agency (USEPA) maximum toxicity characteristic leaching concentrations in accordance with 40 Code of Federal Regulations (CFR) 261.24; (2) the chemical-specific New Mexico Environment Department (NMED) Soil Screening Levels (SSLs); and (3) the New Mexico Oil Conservation District (NMOCD) Remedial Action Levels (RALs). The laboratory analytical results indicated the following:

- None of the concentrations exceeded 20 times the maximum toxicity characteristic waste concentrations.
- None of the concentrations exceeded the SSLs under the industrial/occupational or construction worker exposure scenarios.
- Only arsenic exceeded the SSL of 0.262 mg/kg for the leaching to groundwater pathway at concentrations of 4.11 milligrams per kilogram (mg/kg) in the fire water pond stockpile sample and 4.36 mg/kg in the fire water pipeline repair stockpile. The samples were additionally analyzed for SPLP arsenic to evaluate the leaching potential of arsenic. The arsenic SPLP results of 0.00881 milligrams per liter (mg/L) for the fire water pond stockpile and 0.0318 mg/L for the fire water pipeline repair stockpile are well below the Water Quality Control Commission (WQCC) human health groundwater standard of 0.10 mg/L.
- None of the concentrations exceeded the NMOCD RALS.

The laboratory analytical reports are provided in Attachment A.

RECOMMENDATION

The characterization analytical results indicate the soil excavated and stockpiled during construction of the refinery fire water pond and repair of the fire water pipeline is not a toxicity characteristic waste and does not pose a risk to human health under the leaching to groundwater pathway and industrial/occupational or construction worker exposure scenarios.

NRC requests that OCD provide a determination as to whether the soil excavated and stockpiled during construction of the refinery fire water pond and repair of the fire water pipeline is an oilfield waste. Pending such a determination, it is proposed that the soil remain at the refinery to be used as fill material and/or to build and reinforce berms.

Re: Leaking Water Line Soil Pile

Work Order: 1312110

Dear Robert,

ALS Environmental received 1 sample on 03-Dec-2013 09:11 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 24.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "Sonia West".

Electronically approved by: Jumoke M. Lawal

Re: Leaking Water Line Soil Pile

Work Order: 1312518

Dear Robert,

ALS Environmental received 1 sample on 02-Dec-2013 09:11 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 19.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

Electronically approved by: Dayna.Fisher

Case Narrative

This report contains additional analyses per your request on December 12, 2013 via e-mail. The laboratory analyzed your sample Leaking Water Line Soil Pile for SPLP Arsenic and Total Semivolatiles. The sample was originally reported as ALS Workorder Number 1312110.

Batch 7536, Semivolatile Organics 8270, Sample 1312437-03B: MS/MSD are for an unrelated sample

Re: Fire Water Pond Soil Pile

Work Order: 1312112

Dear Robert,

ALS Environmental received 1 sample on 03-Dec-2013 09:11 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 24.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature of 'Sonia West'.

Electronically approved by: Jumoke M. Lawal

Case Narrative

Batch 75170, TPH DRO/ORO 8015, Sample 1312185-02B: MS/MSD are for an unrelated sample.

Batch 76125, Total Metals 6020, Sample Fire Water Pond Soil Pile (1312112-01A): MS/MSD recoveries were outside of the control limits due to matrix interference.

Batch R158249, Volatile Organics 8260, Sample 1312172-05A: MS/MSD are for an unrelated sample.

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
µg/Kg	Micrograms per Kilogram
mg/Kg	Milligrams per Kilogram

Re: Fire Water Pond Soil Pile

Work Order: 1312519

Dear Robert,

ALS Environmental received 1 sample on 03-Dec-2013 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 19.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "Sonia West".

Electronically approved by: Dayna.Fisher

Case Narrative

This report contains additional analyses per your request on December 12, 2013 via e-mail. The laboratory analyzed your sample Fire Water Pond Soil Pile for SPLP Arsenic and Total Semivolatiles. The sample was originally reported as ALS Workorder Number 1312112.

Batch 75336, Semivolatile Organics 8270, Sample 1312437-03B: MS/MSD are for an unrelated sample.

Date: 31-Dec-13

Client: Navajo Refining Company
Project: Fire Water Pond Soil Pile
WorkOrder: 1312519

QUALIFIERS, ACRONYMS, UNITS

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
µg/Kg	Micrograms per Kilogram
mg/L	Milligrams per Liter
