**RE: 4th Quarter 2013 Groundwater Monitoring Results
DCP Midstream, LP J-4-2 Pipeline Release (1RP-1728)
Unit C, Section 27, Township 19 South, Range 35 East
Lea County, New Mexico**

Dear Mr. Lowe:

DCP Midstream, LP (DCP) is pleased to submit for your review, a copy of the 4th Quarter 2013 Groundwater Monitoring Results for the DCP J-4-2 Pipeline Release located in Lea County, New Mexico (Unit C, Section 27, Township 19 South, Range 35 East).

If you have any questions regarding the report, please call at 303-605-1718 or e-mail me swathers@dcpmidstream.com.

Sincerely

DCP Midstream, LP

Stephen Weathers, PG
Principal Environmental Specialist

1. Introduction

This report summarizes the groundwater monitoring and remediation activities conducted during the fourth quarter of 2013 at the J-4-2 pipeline release (Site) in Lea County, New Mexico (Figure 1). Tasman Geosciences, LLC (Tasman) conducted these activities on behalf of DCP Midstream, LP (DCP). The field activities described herein were performed on December 3, 2013 with the purpose of monitoring groundwater flow, quality, and assessing the presence of light non-aqueous phase liquid (LNAPL) hydrocarbons within the Site subsurface. The data collected during the reporting period were used to develop a groundwater elevation figure, an analytical results figure, and LNAPL/groundwater elevation versus time graphs to evaluate current conditions at the Site.

2. Site Location and Background

The Site is located in the northeastern quarter of the northwestern quarter (Unit C) of Section 27, Township 19 South, Range 35 East approximately 3 miles south of the intersection of US Highway 82 and State Highway 483. The area is sparsely populated and land use is primarily associated with livestock grazing and oil and gas production and gathering.

Based on findings from previous Site investigations, a natural gas condensate release was reported at the Site on August 3, 2005. Environmental Plus Incorporated (EPI) of Eunice, New Mexico, performed initial Site investigation activities. EPI reported that the spill was limited to an approximate area of 2,800 square feet and it did not migrate to any surface water features. EPI installed monitoring wells MW-1, MW-2, and MW-3 as a part of the initial soil and groundwater characterization effort in February 2006. Monitoring wells MW-4, MW-6, MW-7, and MW-8 were installed in September 2006 as part of a Site investigation completed by American Environmental Consulting. Installation of monitoring well MW-5 was not completed during this event due to refusal while advancing the borehole. Groundwater samples collected in 2006 from the newly installed wells indicated that dissolved phase petroleum hydrocarbons and chloride had impacted groundwater at the Site in the vicinity of monitoring wells MW-1 and MW-2. In addition, LNAPL was detected at monitoring wells MW-1 and MW-2.

3. Groundwater Monitoring

This section describes the field and laboratory activities performed during the fourth quarter 2013 groundwater monitoring event. Monitoring activities included Site-wide groundwater gauging and groundwater sampling. Figure 2 illustrates the groundwater monitoring network utilized to perform these activities at the Site.

3.1 Groundwater and LNAPL Elevation Monitoring

Groundwater and LNAPL levels were measured in order to evaluate hydraulic characteristics and provide information regarding seasonal fluctuations of groundwater elevation at the Site. During the fourth quarter 2013, groundwater levels were measured at seven monitoring well locations.

Groundwater levels were measured on the north side of the well casing to the nearest 0.01-foot using an oil-water interface probe (IP). Groundwater level data were later converted to elevation (feet above mean sea level [AMSL]). LNAPL levels, where indicated by the IP, were also recorded.

Groundwater elevation measurements collected during the reporting period as well as historical elevations are presented in Table 1, and a fourth quarter 2013 groundwater elevation contour map is illustrated in Figure 3. Groundwater elevations ranged from 3,703.64 feet AMSL at monitoring well MW-8 to 3,707.54 feet AMSL at monitoring well MW-4. As illustrated in Figure 3, groundwater flow at the Site generally trends to the southeast with a gradient of approximately 0.0051 foot per foot between monitoring wells MW-4 and MW-8.

3.2 Groundwater Quality Monitoring

Groundwater level and total well depth was measured at each of the Site monitoring wells prior to collecting groundwater samples. A minimum of three well casing volumes of groundwater were purged from the subject well prior to the collection of groundwater samples. Groundwater samples were collected using dedicated polyethylene bailers, placed in clean laboratory supplied containers, packed in an ice-filled cooler, and maintained at approximately four degrees Celsius ($^{\circ}\text{C}$) for transportation. Groundwater samples were then shipped under chain-of-custody procedures to Accutest Laboratories (Accutest) in Wheat Ridge, Colorado, for analysis.

Water quality samples were collected from seven wells and were submitted for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) by United States Environmental Protection Agency (USEPA) Method 8260B, and chloride by USEPA Method 300.

Table 2 summarizes BTEX and chloride concentrations in groundwater samples collected during the reporting period in addition to concentrations from the previous four quarters. Historical analytical results up to and including the December 2013 event are contained in Appendix A. Laboratory analytical reports for the fourth quarter event are included in Appendix B. Analytical results are summarized in Figure 4. During the fourth quarter 2013, BTEX concentrations were below laboratory detection limits at the seven Site sample locations. Chloride was detected in all of the monitoring wells with concentrations ranging from 345 milligrams per liter (mg/L) in MW-8 to 2,370 mg/L in MW-2.

3.3 Data Quality Assurance / Quality Control

A trip blank, matrix spike / matrix spike duplicate (MS/MSD) and field duplicate (MW-1) were collected during the sampling event. The data were reviewed for compliance with the analytical method and the

associated quality assurance/quality control (QA/QC) procedures. All samples were analyzed using the correct analytical methods and within the correct holding times. Chain of custody forms were in order and properly executed and indicate that samples were received at the proper temperature with no headspace. All data were reported using the correct method number and reporting units. The trip blank was fully in control, having no detections of target analytes.

The duplicate sample collected at MW-1 was in compliance with the QA/QC standard. MW-1 and duplicate samples both returned BTEX concentrations below laboratory detection limits.

The overall QA/QC assessment of the data, based on the data review, indicate that both field precision and overall data precision and accuracy are acceptable.

4. Remediation Activities

LNAPL has historically been detected in monitoring wells MW-1 and MW-2. However, LNAPL has not been detected in MW-1 since December 2011 and LNAPL was not detected in MW-2 during the reporting period. Site remediation activities and LNAPL trends are discussed further in the following subsections.

4.1 LNAPL Collection Bailer

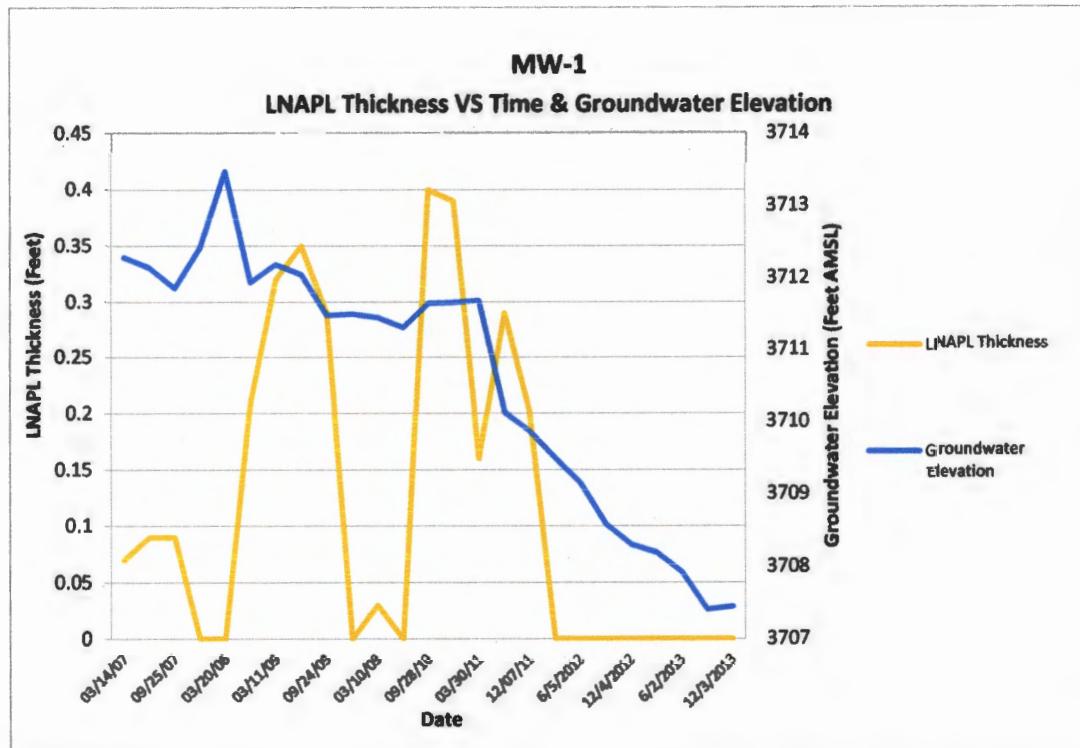

The LNAPL passive recovery bailer was removed from MW-2 during the second quarter 2013 to allow for LNAPL recharge and to obtain an accurate thickness of free phase hydrocarbons within the well. During the fourth quarter, LNAPL was not observed in MW-2 and the LNAPL passive recovery bailer has not been re-deployed in that well.

4.2 Vacuum Enhanced LNAPL Recovery

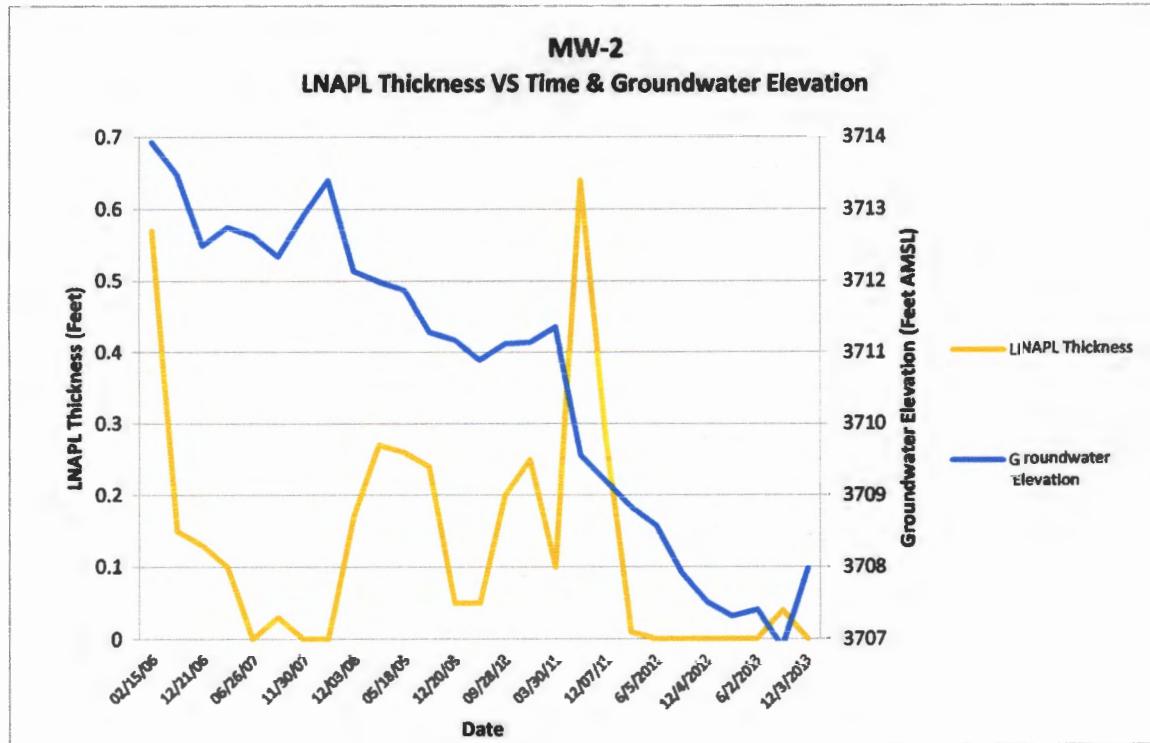

During the fourth quarter 2013 monitoring event, Tasman conducted a vacuum enhanced fluid recovery (EFR) event at MW-2. Approximately 1,260 gallons of groundwater was recovered during the approximate 8-hour event and was subsequently disposed of at the Cooper Disposal Facility in Hobbs, New Mexico.

4.3 LNAPL Trends

As illustrated in the graphs below, the LNAPL thickness in MW-1 and MW-2 does not appear to exhibit any seasonal fluctuation trends or a relationship to groundwater levels. However, LNAPL was not detected in either well during the fourth quarter 2013 event.

Groundwater elevations have exhibited a steady decrease in elevation over time, whereas product thickness has fluctuated sporadically over time with no apparent correlation to groundwater elevation.

5. Conclusions

Dissolved phase hydrocarbon concentrations did not exceed laboratory detection limits in the 7 sampled locations during the reporting period.

Groundwater elevations continue to exhibit a declining trend at the Site and the fourth quarter monitoring event did not deviate significantly from that observation. Ongoing quarterly groundwater sampling will provide for continued monitoring of Site conditions, BTEX concentrations, and LNAPL trends.

6. Recommendations

Based on evaluation of fourth quarter 2013 and historical Site observations and monitoring results, recommendations for future activities include:

- Continued quarterly groundwater elevation collection and groundwater sampling at the monitoring locations illustrated on Figure 2.
- Discontinue quarterly EFR activities at the Site.

Tables

MW-8	12/3/2013	33.68			38.58	3737.32	3703.64	0.02
Average change in groundwater elevation since the previous monitoring event								0.02

Notes:

Depths measured from the north edge of the well casing.

Total depths were collected and recorded during the fourth quarter 2013 monitoring event.

TOC elevations for monitoring wells MW-4, MW-6, MW-7, & MW-8 were calculated by adding the PVC stick-up length (in feet) to the surveyed ground surface elevations (in feet amsl). Changes in groundwater elevation calculated by subtracting the measurement collected during the previous monitoring even from the measurement collected during the most recent monitoring event.

MW-6 was not measured due to an obstruction of sediment fines at 31.15 feet bgs.

Monitoring well location MW-5 was not installed due geologic refusal that was encountered during drilling activities.

Data presented for all other well locations includes previous four sampling events, when available. Historic groundwater elevation data for these locations may be found in Appendix B. Sample locations are shown on Figure 2 and a groundwater elevation contour map is shown on Figure 3

amsl - feet above mean sea level.

TOC - top of casing

* Groundwater elevation was corrected for product thickness using the following calculation:

Groundwater elevation = (TOC Elevation - Measured Depth to Water) + (LNAPL Thickness in Well * LNAPL Density)

LNAPL density was assumed to be approximately 0.75 grams per cubic centimeter

MW-8	12/3/2013	<0.001	<0.002	<0.002	<0.003	345	

Notes:

The environmental cleanup standards for water that are applicable to this site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards.

Data presented for all other well locations includes previous four sampling events, when available. Historic groundwater analytical results for these locations may be found in Appendix A.

Bold red values indicate an exceedance of the NMWQCC groundwater standards for the Site.

MW-6 was not sampled during the fourth quarter 2012 due to an obstruction in the well.

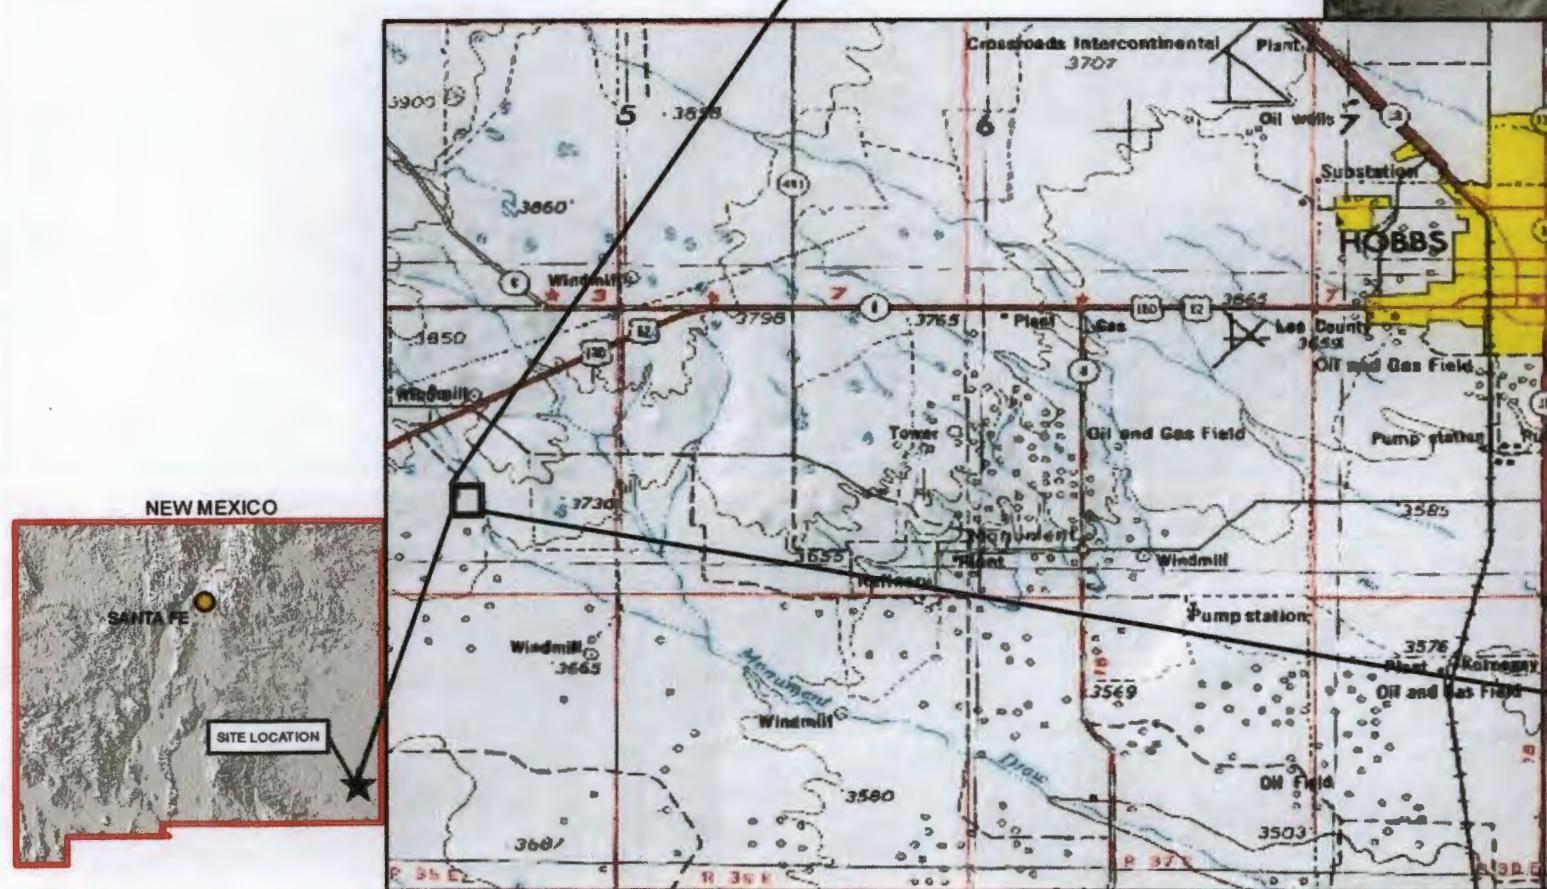

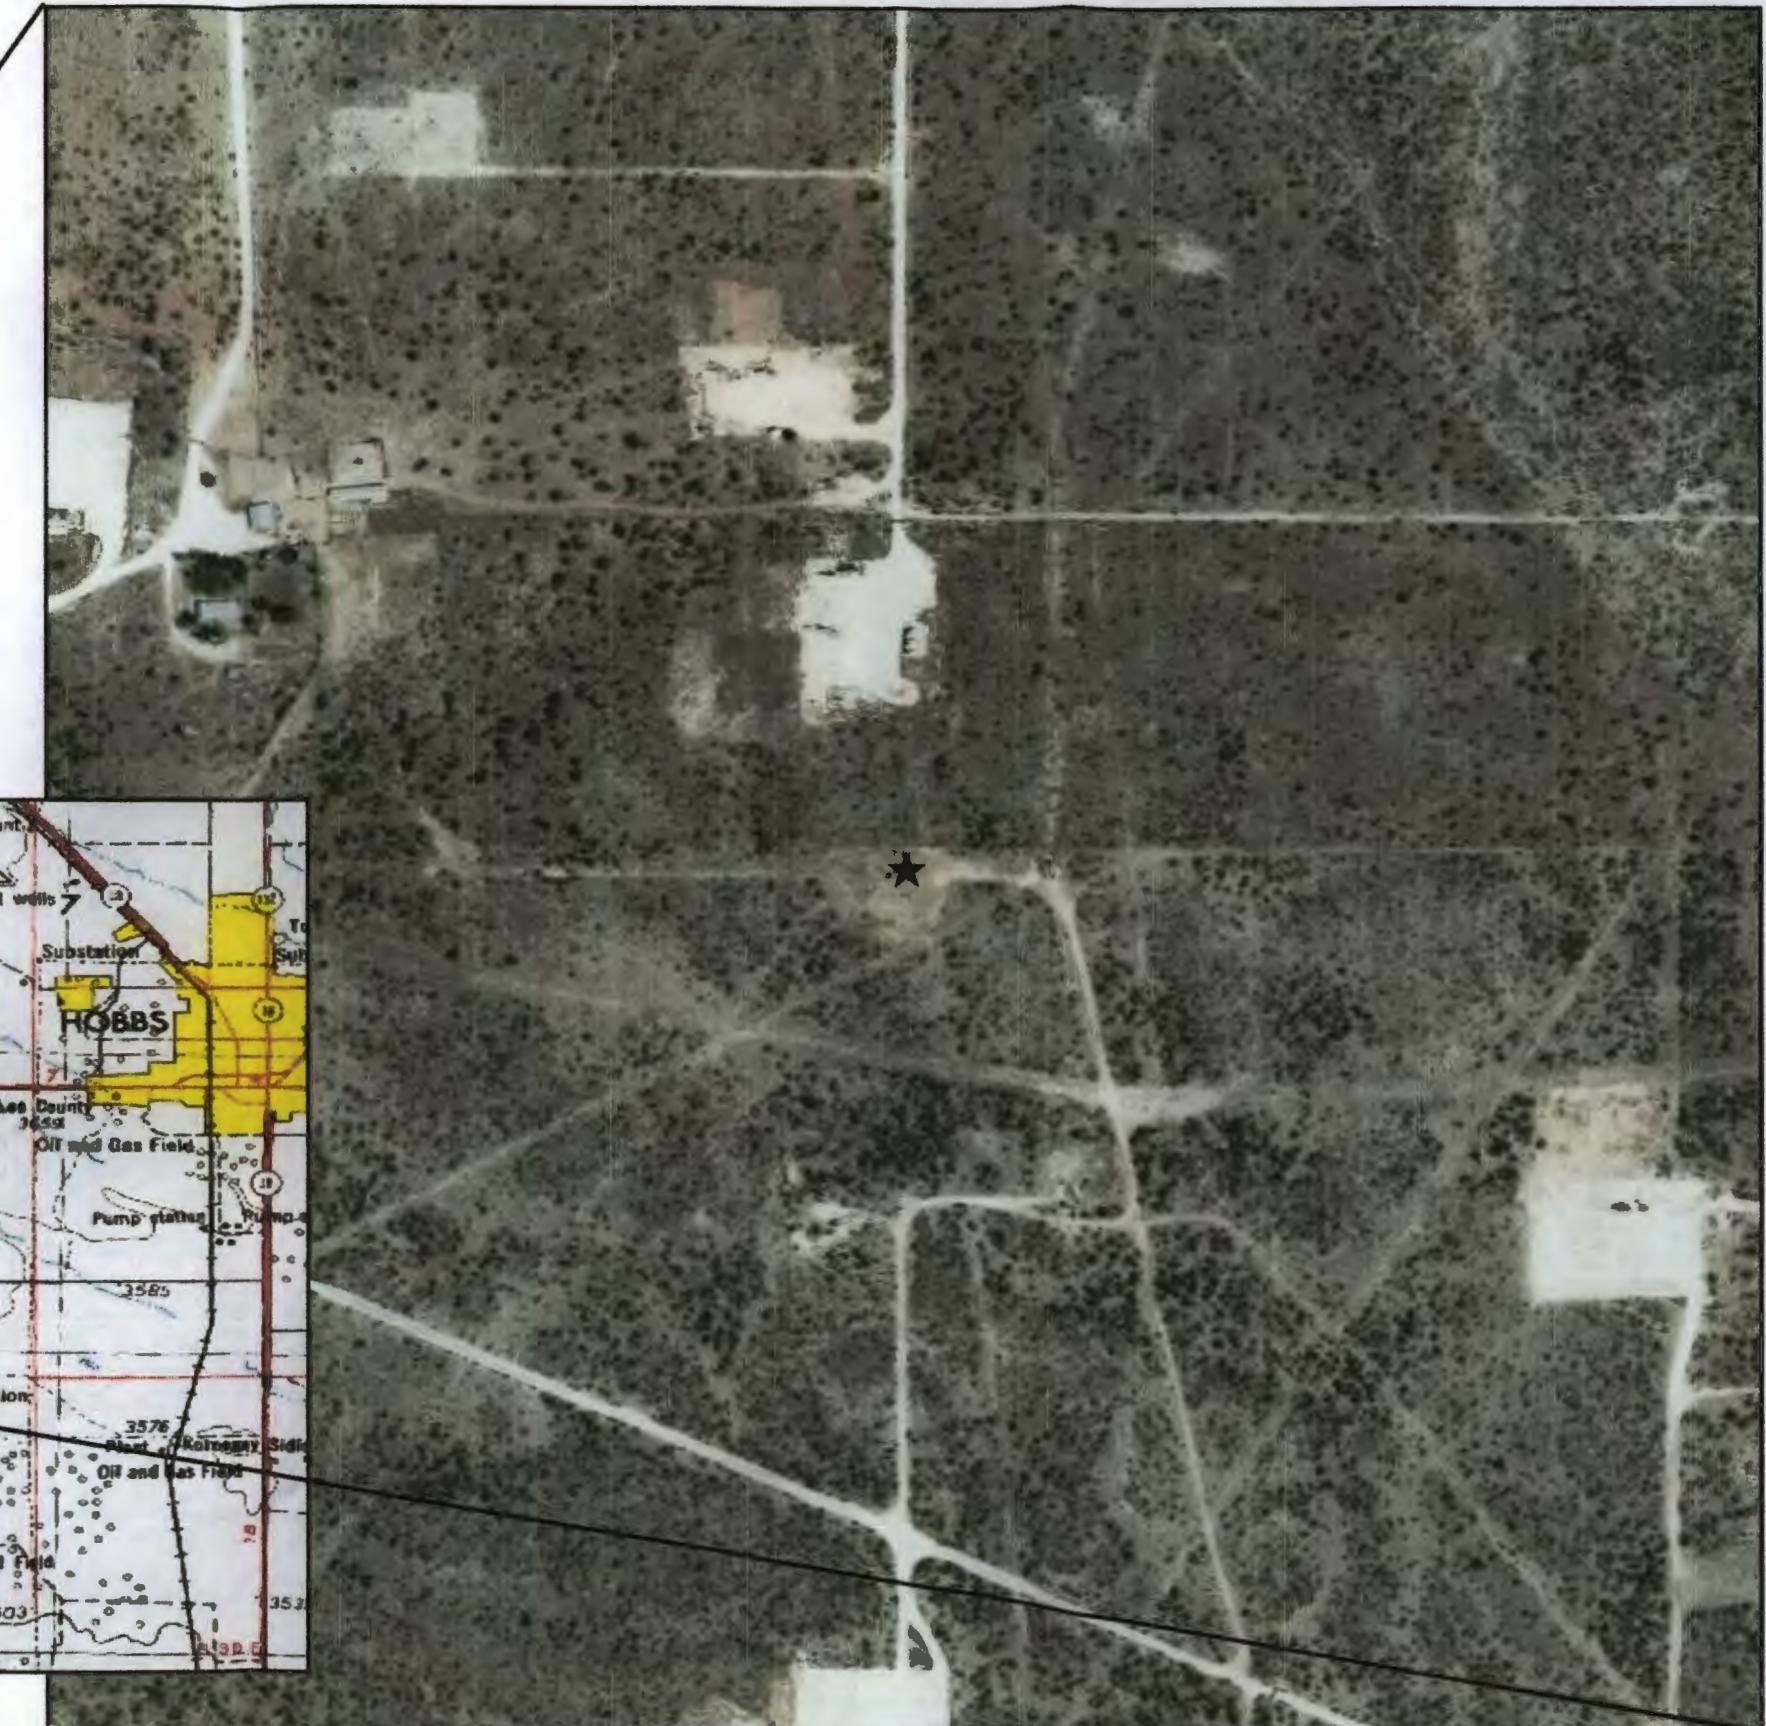

Sample locations are shown on Figure 2 and analytical results are illustrated on Figure 4.

* Chlorides are subject to the National Secondary Drinking Water Regulations (NSDWR) secondary maximum contaminant levels (SMCLs) and not an enforceably regulated constituent. The 250 mg/L standard is established only as a guideline to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor.

LNAPL = Light Non-Aqueous Phase Liquid

mg/L = milligrams per liter.

Notes:
The environmental cleanup standards for water that are applicable to this site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards.

Monitoring well location MW-5 was not installed due geologic refusal that was encountered during drilling activities.

Data presented for all other well locations includes previous four sampling events, when available.

Sample locations are shown on Figure 2 and analytical results are illustrated on Figure 4.

* Chlorides are subject to the tier Secondary Drinking Water Regulations (NSDWR) secondary maximum contaminant levels (SMCLs) and not an enforceably regulated constituent. The 250 mg/L LNAPL = Light Non-Aqueous Phase Liquid

mg/L = milligrams per liter.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: DCP Midstream, LP

Job No D53202

Site: TASMCOA:DCP J-4-2

Report Date 12/11/2013 9:53:27 AM

On 12/06/2013, 8 sample(s), 1 Trip Blank(s), and 0 Field Blank(s) were received at Accutest Mountain States (AMS) at a temperature of 2.1 °C. The samples were intact and properly preserved, unless noted below. An AMS Job Number of D53202 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ	Batch ID: V6V1247
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D53202-7MS, D53202-7MSD were used as the QC samples indicated.
- D53202-6, D53202-5: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.

Wet Chemistry By Method EPA 300.0/SW846 9056

Matrix AQ	Batch ID: GP11537
------------------	--------------------------

- All samples were prepared and analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D53085-1MS, D53085-1MSD were used as the QC samples for the Chloride analysis.

AMS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting AMS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

AMS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by AMS indicated via signature on the report cover.

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: D53202

Client: TASMEN GEOSCIENCES LLC

Immediate Client Services Action Required: No

Date / Time Received: 12/6/2013 10:30:00 AM

No. Coolers: 1

Client Service Action Required at Login: No

Project: DCP-J-4-2

Airbill #'s: Fedex

Cooler Security

- | | | | |
|---------------------------|--|-----------------------|--|
| 1. Custody Seals Present: | <input checked="" type="checkbox"/> <input type="checkbox"/> | 3. COC Present: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. Custody Seals Intact: | <input checked="" type="checkbox"/> <input type="checkbox"/> | 4. Smpl Dates/Time OK | <input checked="" type="checkbox"/> <input type="checkbox"/> |

Sample Integrity - Documentation

- | | |
|--|--|
| 1. Sample labels present on bottles: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. Container labeling complete: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 3. Sample container label / COC agree: | <input checked="" type="checkbox"/> <input type="checkbox"/> |

Y or N

- | |
|--|
| <input checked="" type="checkbox"/> <input type="checkbox"/> |
| <input checked="" type="checkbox"/> <input type="checkbox"/> |
| <input checked="" type="checkbox"/> <input type="checkbox"/> |

Cooler Temperature

- | | |
|------------------------------|--|
| 1. Temp criteria achieved: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. Cooler temp verification: | Infrared gun |
| 3. Cooler media: | ice (bag) |

Sample Integrity - Condition

- | | |
|----------------------------------|--|
| 1. Sample rcvd within HT: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. All containers accounted for: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 3. Condition of sample: | Intact |

Y or N

- | |
|--|
| <input checked="" type="checkbox"/> <input type="checkbox"/> |
| <input checked="" type="checkbox"/> <input type="checkbox"/> |
| Intact |

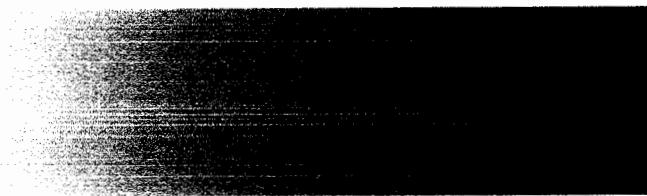

Quality Control Preservation

- | | |
|---------------------------------|---|
| 1. Trip Blank present / cooler: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. Trip Blank listed on COC: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 3. Samples preserved properly: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 4. VOCs headspace free: | <input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> |

Sample Integrity - Instructions

- | | |
|---|---|
| 1. Analysis requested is clear: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 2. Bottles received for unspecified tests | <input type="checkbox"/> <input checked="" type="checkbox"/> |
| 3. Sufficient volume rec'd for analysis: | <input checked="" type="checkbox"/> <input type="checkbox"/> |
| 4. Compositing instructions clear: | <input type="checkbox"/> <input type="checkbox"/> <input checked="" type="checkbox"/> |
